Worksheet #: 568736

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used

Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 568732

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

RE: SGS – Dayton, Job # JD13677 – Reissues

Dear Mr. Yannacone,

The final report for SGS jobs number JD13677 has been edited to reflect corrections to the final results. These edits have been incorporated into the revised report which is attached.

Specifically, the samples receitp summary has been corrected and resubmitted. The attached revised report incorporates these revisions.

SGS apologizes for this occurrence and for any inconvenience this situation may have caused. Please contact me if I can be of further assistance in this matter.

Sincerely,

Report Department

SGS North America Inc.

CONTINUOUS SERVICE IMPROVEMENT!

Our goal is to continuously improve our service to you. Please share your ideas about how we can serve you better at EHS.US.CustomerCare@sgs.com. Your feedback is appreciated!

Organics ND = Not detected above the MDL

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Hampton Clarke-Veritech	**Job No**	JD13677
Site:	Project # 0092427	**Report Date**	10/9/2020 2:32:48 PM

On 09/25/2020, 7 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. A SGS North America Inc. Job Number of JD13677 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

MS Volatiles By Method TO-15

Matrix: AIR **Batch ID:** V3W2884

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD13677-2DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Matrix: AIR **Batch ID:** V3W2885

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD13673-1DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

QA/QC Review of Hexavalent Chromium Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082707

5 Soil Samples, 1 Equipment Blank,
and 1 Field Blank
Collected August 26, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The samples were analyzed within the USEPA holding times.

Initial and Continuing Calibration Verification: The percent recoveries for hexavalent chromium (Cr6+) were within laboratory QC limits (90-110%).

Blanks: The analyses of initial and continuing calibration, method, field, and equipment blanks reported Cr6+ as not detected.

Spike Sample Recovery: The percent recoveries for Cr6+ were within QC limits (75-125%) for aqueous batch MS/MSD sample AD18895-007. The %R for soluble Cr6+ was within laboratory QC limits (75-125%) for soil batch spike sample AD18918-003.

The %R for insoluble Cr6+ was below laboratory QC limits (85-115%), but not below 10% for soil batch spike sample AD18918-003. Positive results for Cr6+ should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Duplicates: The relative percent difference (RPD) for Cr6+ was below the allowable maximum (20%) for aqueous batch MS/MSD sample AD18895-007, as required. The RPD for Cr6+ was below the allowable maximum (35%) for soil batch duplicate sample AD18918-003, as required.

Laboratory Control Sample: The percent recoveries for Cr6+ were within QC limits (75-125%) for the aqueous LCS. The percent recoveries for soluble and insoluble Cr6+ were within laboratory QC limits (80-120%) for the soil LCS.

Data Usability Summary Report for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082707

5 Soil Samples, 1 Equipment Blank,
1 Field Blank, and 1 Trip Blank
Collected August 26, 2020

Prepared by: Donald Anné
November 9, 2020

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 4 soil samples, 1 equipment blank, 1 field blank, and 1 trip blank analyzed for volatiles; the results for 5 soil samples, 1 equipment blank, and 1 field blank analyzed for total metals, cyanide, and hexavalent chromium; and the results of 5 soil samples analyzed for TCLP metals.

The overall performances of the analyses are acceptable. Hampton-Clarke Analytical & Field Services did fulfill the requirements of the analytical methods.

The data are acceptable with some minor issues that are identified in the accompanying data validation reviews. The following data were flagged:

- Positive volatile results for methylene chloride were qualified as "not detected" (U) in samples HRPB-10, HRPB-7, and HRPB-9 because the level reported in the samples were not significantly greater than (more than 10 times) the highest associated blank level.

- The positive volatile result for chloroform was qualified as "not detected" (U) in sample HRPB-9 because the level reported in the sample was not significantly greater than (more than 5 times) the highest associated blank level.

- The positive TCLP metal results for barium were qualified as estimated (J) in all 5 soil samples because the %D for barium was above the allowable maximum in the associated soil serial dilution sample and the sample results were above the RL.

- The positive metal results for barium were qualified as estimated, biased low (J-) in all 5 soil samples because 2 of 2 percent recoveries for barium were below control limits and 1 below 10% in the associated soil batch MS/MSD sample.

- The positive metal results for manganese were qualified as estimated (J) in all 5 soil samples because the relative percent difference for manganese was above the allowable maximum in the associated soil batch MS/MSD sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive metal results for lead were qualified as estimated (J) in all 5 soil samples because the relative percent difference for lead was above the allowable maximum in the associated soil batch duplicate sample.

- The positive total metal results for chromium were qualified as estimated (J) in all 5 soil samples because the %D for chromium was above the allowable maximum in the associated soil batch serial dilution sample and the sample results were above the RL.

- The "not detected" results for hexavalent chromium were qualified as estimated (UJ) in all 5 soil samples because the percent recovery for insoluble hexavalent chromium was below QC limits, but not below 10% in the associated soil batch spike sample.

All data are considered usable, with estimated (J, J-, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Total Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082707

5 Soil Samples, 1 Equipment Blank,
and 1 Field Blank
Collected August 26, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The sample was analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration, preparation, equipment, and field blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable target metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: Two of two percent recoveries (%Rs) for barium were below control limits (75-125%) and 1 below 10% for soil MS/MSD batch sample AD18955-001. Positive results for barium should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in associated soil samples.

Two of two %Rs for arsenic were above control limits for aqueous batch MS/MSD sample AD18954-002. Positive results for arsenic should be considered estimated, biased high (J+) in associated aqueous samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20%) for aqueous batch duplicate sample AD18954-002 and aqueous batch MS/MSD sample AD18954-002, as required.

The RPD for lead was above the allowable maximum (35%) for soil batch duplicate sample AD18955-001. The RPD for manganese was above the allowable (35%) for soil batch MS/MSD sample AD18955-003. Positive results for lead and manganese should be considered estimated (J) in associated soil samples.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil samples LCS MR 85229, LCS 85229, LCS MR 85228, and LCS 85228 and aqueous samples LCS MR 85230 and LCS 85230.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

ICP Serial Dilution: The %Ds for applicable metals were below the allowable maximum (10%) for aqueous batch serial dilution sample AD18954-002, as required.

The %Ds for chromium and selenium were above the allowable maximum (15%) for soil batch serial dilution sample AD18955-001. Positive results for chromium and selenium that are above the RLs should be considered estimated (J) in associated soil samples.

QA/QC Review of Total Cyanide Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082707

5 Soil Samples, 1 Equipment Blank,
and 1 Field Blank
Collected August 26, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within NJDEP holding times.

Initial and Continuing Calibration Verification: The percent recoveries for total cyanide were within control limits (85-115%).

Blanks: The analyses of initial calibration and continuing calibration, method, field, and equipment blanks reported total cyanide as not detected.

Spike Sample Recovery: The percent recoveries for total cyanide were within QC limits (75-125%) for aqueous batch MS/MSD sample AD18945-007 and soil batch MS/MSD sample AD18955-001.

Laboratory Duplicates: The relative percent difference for total cyanide was below the allowable maximum (20%) for aqueous batch MS/MSD sample AD18945-007, as required. The relative percent difference for total cyanide was below the allowable maximum (35%) for soil batch MS/MSD sample AD18955-001, as required.

Laboratory Control Sample: The percent recoveries for total cyanide were within QC limits (80-120%) for aqueous sample LCSW-1504 and soil sample LCSS-2412.

QA/QC Review of 8260 Volatile Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082707

4 Soil Samples, 1 Equipment Blank,
1 Field Blank, and 1 Trip Blank
Collected August 26, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The %RSDs for applicable compounds were below the method maximum, as required. The average RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 for GCMS_2 on 08-26-20. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010for all others) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 on 08-28-20 (2M141350.D). The %Ds for dichlorodifluoromethane, bromomethane, and vinyl chloride were above the method maximum on 08-28-20 (2M141350.D). The %Ds for dichlorodifluoromethane, 1,1,2-trichloro-1,2,2-trifluoromethane, 1,1-dichloroethene, and bromoform were above the method maximum on 08-31-20 (6M131882.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided the RRFs are not below 0.010.

The RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010 for all others), as required.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Ds for dichlorodifluoromethane, bromomethane, and vinyl chloride were above the allowable maximum (20%) on 08-28-20 (2M141350.D). The %Ds for dichlorodifluoromethane, 1,1,2-trichloro-1,2,2-trifluoromethane, 1,1-dichloroethene, acrolein, 1,4-dioxane, and bromoform were above the allowable maximum (20%) on 08-31-20 (6M131882.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the daily blanks reported target compounds as not detected. Equipment blank EB contained traces of chloroform (1.5 ug/L) and methylene chloride (5.9 ug/L). Positive results for methylene chloride that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples. Positive results for chloroform that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times for samples were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for soil samples, equipment blank, field blank, and trip blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for spiked compounds were below the allowable maximums, but 6 of 194 percent recoveries were above QC limits in soil batch MS/MSD sample AD18955-001. No action is taken on batch MS/MSD data alone to qualify or reject an entire set of samples.

Laboratory Control Sample: The percent recovery (%R) for 2-chloroethylvinylether was above QC limits for aqueous sample MBS87436. Positive results for 2-chloroethylvinylether should be considered estimated, biased high (J+) in associated aqueous samples.

The %Rs for dichlorodifluoromethane, acrolein, 2-chloroethylvinylether, and bromoform were above QC limits for soil sample MBS87762. Positive results for these compounds should be considered estimated, biased high (J+) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 11.02

Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Form 6
Initial Calibration

Method: EPA 8260C

Instrument: GCMS_2

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 11.02

Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

QA/QC Review of TCLP Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082707

5 Soil Samples
Collected August 26, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were extracted and analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TCLP metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration and preparation blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable TCLP metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: The percent recoveries for applicable metals were within control limits (75-125%) for soil TCLP batch spike sample AD18923-001.

Laboratory Duplicates: The analysis of soil TCLP batch duplicate sample was acceptable.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil TCLP samples LCS 85218 and LCS MR 85218. The relative percent differences for target metals were below the allowable maximum (20%) for soil TCLP sample LCS MR 85218, as required.

ICP Serial Dilution: The %D for barium was above the allowable maximum (10%) for soil batch TCLP serial dilution sample AD18923-001. Positive results for barium that are the RL should be considered estimated (J) in associated soil samples.

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Mr. Stefan Truex, P.G.
Senior Project Geologist
HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park, New York 12065

Re: Data Validation Report
Duofold – Ilion, NY
August-September 2020 Ground Water, Soil, and Soil Vapor Sampling Events

Dear Mr. Truex:

The data usability summary reports (DUSRs) and supporting documentation have been sent via e-mail for the Duofold, August-September 2020 ground water, soil, and soil vapor sampling events. The data for Hampton-Clarke Analytical & Field Services lab numbers 0082303, 0082707, 0091006, 0091007, 0091101, and 0092507, and SGS North America, Inc job number JD13677 were mostly acceptable, with issues that are identified in the DUSRs and validation summaries. There were data qualified as unusable, rejected (R) in the data pack 0092507. The DUSR and QA/QC review outline the reasons for qualifying data rejected (R). The data is rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of data validation acronyms and qualifiers is attached to assist you in interpreting the data validation reviews. If you have any questions concerning the work to be performed, please contact me at (518) 348-6995. Thank you for the opportunity to assist HRP Associates, Inc.

Sincerely,
Alpha Geoscience

Donald Anné

QA/QC Review of Hexavalent Chromium Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082803

2 Soil Samples and 1 Field Duplicate
Collected August 27, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The samples were analyzed within the USEPA holding times.

Initial and Continuing Calibration Verification: The percent recoveries for hexavalent chromium (Cr6+) were within laboratory QC limits (90-110%).

Blanks: The analyses of initial and continuing calibration and method blanks reported Cr6+ as not detected.

Spike Sample Recovery: The percent recovery (%R) for Cr6+ was within laboratory QC limits (75-125%) for soil batch spike sample AD18918-003.

The %R for insoluble Cr6+ was below laboratory QC limits (85-115%), but not below 10% for soil batch spike sample AD18918-003. Positive results for Cr6+ should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Duplicates: The relative percent difference for Cr6+ was below the allowable maximum (35%) for soil batch duplicate sample AD18918-003, as required.

Field Duplicates: The analyses of soil field duplicate pair HRPB-3/DUPLICATE reported Cr6+ as not detected; therefore, a valid relative percent difference could not be calculated. The analyses for the field duplicate pair were acceptable.

Laboratory Control Sample: The percent recovery for Cr6+ was within laboratory QC limits (80-120%) for the soil LCS.

Data Usability Summary Report for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082803

2 Soil Samples, 1 Field Duplicate,
and 1 Trip Blank
Collected August 27, 2020

Prepared by: Donald Anné
November 9, 2020

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 2 soil samples, 1 field duplicate, and 1 trip blank analyzed for volatiles, and the results for 2 soil samples and 1 field duplicate analyzed for total metals, TCLP metals, total cyanide, and hexavalent chromium.

The overall performances of the analyses are acceptable. Hampton-Clarke Analytical & Field Services did fulfill the requirements of the analytical methods.

The data are acceptable with some minor issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The positive volatile results for tetrachloroethene were qualified as estimated (J) in samples HRPB-3 and DUPLICATE because the relative percent difference for tetrachloroethene was above the allowable maximum in the soil field duplicate pair HRPB-3/DUPLICATE.

- The positive total metal results for barium were qualified as estimated, biased low (J-) in samples HRPB-3, HRPB-2, and DUPLICATE because 2 of 2 percent recoveries for barium were below control limits and 1 below 10% in the associated soil MS/MSD sample.

- The positive total metal results for lead were qualified as estimated (J) in samples HRPB-3, HRPB-2, and DUPLICATE because the relative percent difference for lead was above the allowable maximum in the associated soil duplicate sample.

- The positive total metal results for manganese were qualified as estimated (J) in samples HRPB-3, HRPB-2, and DUPLICATE because the relative percent difference for manganese was above the allowable maximum in the associated soil MS/MSD sample.

- The positive total metal results for chromium were qualified as estimated (J) in samples HRPB-3, HRPB-2, and DUPLICATE because the %D for chromium was above the allowable maximum in the associated soil serial dilution sample and the sample results were above the RL.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive total metal results for arsenic, nickel, and trivalent chromium were qualified as estimated (J) in samples HRPB-3 and DUPLICATE because the relative percent differences for arsenic, nickel, and trivalent chromium were above the allowable maximum in the soil field duplicate pair HRPB-3/DUPLICATE.

- The "not detected" results for hexavalent chromium were qualified as estimated (UJ) in samples HRPB-3, HRPB-2, and DUPLICATE because the percent recovery for insoluble hexavalent chromium was below QC limits, but not below 10% in the associated soil batch spike sample.

All data are considered usable, with estimated (J, J-, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of 8260 Volatile Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082803

2 Soil Samples, 1 Field Duplicate,
and 1 Trip Blank
Collected August 27, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The %RSDs for applicable compounds were below the method maximum, as required. The average RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 for GCMS_11 on 08-17-20. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010for all others) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 on 08-31-20 (11M82272.D). The %Ds for dichlorodifluoromethane, trichlrofluoromethane, and trichloroethene were above the method maximum on 08-31-20 (11M82272.D). The %Ds for dichlorodifluoromethane, 1,1,2-trichloro-1,2,2-trifluoromethane, 1,1-dichloroethene, and bromoform were above the method maximum on 08-31-20 (6M131882.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided the RRFs are not below 0.010.

The RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010 for all others), as required.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Ds for dichlorodifluoromethane, trichlorofluoromethane, 1,4-dioxane, and trichloroethene were above the allowable maximum (20%) on 08-31-20 (11M82272.D). The %Ds for dichlorodifluoromethane, 1,1,2-trichloro-1,2,2-trifluoromethane, 1,1-dichloroethene, acrolein, 1,4-dioxane, and bromoform were above the allowable maximum (20%) on 08-31-20 (6M131882.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the daily and trip blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times for samples were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples and trip blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximums, but 2 of 2 percent recoveries (%Rs) for 2-chloroethylvinylether and bromoform, and 1 of 2 %Rs for dichlorodifluoromethane were above QC limits in soil MS/MSD sample HRBP-3. The analysis of sample HRPB-3 reported these compounds as "not detected"; therefore, no action is taken.

Laboratory Control Sample: The percent recovers (%Rs) for dichlorodifluoromethane, acrolein, 2-chloroethylvinylether, and bromoform were above QC limits for soil sample MBS87762. Positive results for these compounds should be considered estimated, biased high (J+) in associated soil samples.

The %R for 2-chloroethylvinylether was above QC limits for aqueous sample MBS87763. Positive results for 2-chloroethylvinylether should be considered estimated, biased high (J+) in associated aqueous samples.

Field Duplicates: The relative percent difference for tetrachloroethene was above the allowable maximum (35%) for soil field duplicate pair HRPB-3/DUPLICATE (attached table). Positive results for tetrachloroethene should be considered estimated(J) in samples HRPB-3 and DUPLICATE.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of 8260 Volatile Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082803

2 Soil Samples, 1 Field Duplicate,
and 1 Trip Blank
Collected August 27, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The %RSDs for applicable compounds were below the method maximum, as required. The average RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 for GCMS_11 on 08-17-20. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010for all others) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 on 08-31-20 (11M82272.D). The %Ds for dichlorodifluoromethane, trichlrofluoromethane, and trichloroethene were above the method maximum on 08-31-20 (11M82272.D). The %Ds for dichlorodifluoromethane, 1,1,2-trichloro-1,2,2-trifluoromethane, 1,1-dichloroethene, and bromoform were above the method maximum on 08-31-20 (6M131882.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided the RRFs are not below 0.010.

The RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010 for all others), as required.

www.alphageoscience.com

The %Ds for dichlorodifluoromethane, trichlorofluoromethane, 1,4-dioxane, and trichloroethene were above the allowable maximum (20%) on 08-31-20 (11M82272.D). The %Ds for dichlorodifluoromethane, 1,1,2-trichloro-1,2,2-trifluoromethane, 1,1-dichloroethene, acrolein, 1,4-dioxane, and bromoform were above the allowable maximum (20%) on 08-31-20 (6M131882.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the daily and trip blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times for samples were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples and trip blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximums, but 2 of 2 percent recoveries (%Rs) for 2-chloroethylvinylether and bromoform, and 1 of 2 %Rs for dichlorodifluoromethane were above QC limits in soil MS/MSD sample HRBP-3. The analysis of sample HRPB-3 reported these compounds as "not detected"; therefore, no action is taken.

Laboratory Control Sample: The percent recovers (%Rs) for dichlorodifluoromethane, acrolein, 2-chloroethylvinylether, and bromoform were above QC limits for soil sample MBS87762. Positive results for these compounds should be considered estimated, biased high (J+) in associated soil samples.

The %R for 2-chloroethylvinylether was above QC limits for aqueous sample MBS87763. Positive results for 2-chloroethylvinylether should be considered estimated, biased high (J+) in associated aqueous samples.

Field Duplicates: The relative percent difference for tetrachloroethene was above the allowable maximum (35%) for soil field duplicate pair HRPB-3/DUPLICATE (attached table). Positive results for tetrachloroethene should be considered estimated(J) in samples HRPB-3 and DUPLICATE.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 9.249
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8260C

Form 6
Initial Calibration

Instrument: GCMS_11

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 9.249
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8260C

Form 6
Initial Calibration

Instrument: GCMS_11

S-Surrogate Compound I-Internal Standard Compound

N/O or N/Q - Not applicable for this run C1-Compound %Diff exceeds limits ** - No limit specified in method

Note: 8260/8270 limits are compared against the %DIFF/R.F. 625 limits are compared against the %DIFF.

624 limits are compared against the concentration found. 524.2 limits are compared against the %DIFF

QA/QC Review of TCLP Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0082803

2 Soil Samples and 1 Field Duplicate
Collected August 27, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were extracted and analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TCLP metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration and preparation blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable TCLP metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: The percent recoveries for applicable metals were within control limits (75-125%) for soil TCLP MS/MSD sample HRPB-3.

Laboratory Duplicates: The relative percent differences for applicable metals were below the allowable maximum (35%) for soil TCLP duplicate sample HRPB-3 and soil TCLP MS/MSD sample HRPB-3, as required.

Field Duplicates: The relative percent difference for barium was below the allowable maximum (30%) for soil field duplicate pair HRPB-3/DUPLICATE (attached table), as required.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil TCLP samples LCS 85218 and LCS MR 85218. The relative percent differences for target metals were below the allowable maximum (20%) for soil TCLP sample LCS MR 85218, as required.

ICP Serial Dilution: The %D for barium as below the allowable maximum (10%) for soil TCLP batch serial dilution sample HRPB-3, as required.

QA/QC Review of Hexavalent Chromium Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091006

7 Soil Samples, 1 Field Duplicate,
and 1 Equipment Blank
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The samples were analyzed within the USEPA holding times.

Initial and Continuing Calibration Verification: The percent recoveries for hexavalent chromium (Cr6+) were within laboratory QC limits (90-110%).

Blanks: The analyses of initial and continuing calibration, method, and equipment blanks reported Cr6+ as not detected.

Spike Sample Recovery: The percent recoveries for Cr6+ were within QC limits (75-125%) for aqueous batch MS/MSD sample AD19182-001.

The %Rs for soluble and insoluble Cr6+ were below laboratory QC limits (85-115%), but not below 10% for soil spike sample SS-5B. Positive results for Cr6+ should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Duplicates: The relative percent difference (RPD) for Cr6+ was below the allowable maximum (20%) for aqueous batch MS/MSD sample AD18895-007, as required. The RPD for Cr6+ was below the allowable maximum (35%) for soil batch duplicate sample AD18918-003, as required.

Field Duplicates: The relative percent difference for Cr6+ was above the allowable maximum (35%) for soil field duplicate pair SS-5B/DUPLICATE (attached table). Positve results for Cr6+ should be considered estimated (J) in samples SS-5B and DUPLCATE.

Laboratory Control Sample: The percent recoveries for Cr6+ were within QC limits (75-125%) for the aqueous LCS. The percent recoveries for soluble and insoluble Cr6+ were within laboratory QC limits (80-120%) for the soil LCS.

Data Usability Summary Report for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091006

7 Soil Samples, 1 Field Duplicate,
and 1 Equipment Blank
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 7 soil samples, 1 field duplicate, and 1 equipment blank analyzed for total metals, TCLP metals, total cyanide, and hexavalent chromium.

The overall performances of the analyses are acceptable. Hampton-Clarke Analytical & Field Services did fulfill the requirements of the analytical methods.

The data are acceptable with some minor issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The positive total metal results for chromium were qualified as estimated, biased low (J-) in all 7 soil samples and field duplicate except sample SS-10A because 1 of 2 percent recoveries for chromium was below control limits, but not below 10% in the associated soil MS/MSD sample.

- The positive total metal results for silver were qualified as estimated, biased low (J-) in samples Duplicate, SS-5A, and SS-5B because 1 of 2 percent recoveries for silver was below control limits, but not below 10% in the associated soil MS/MSD sample.

- The "not detected" total metal results for chromium was qualified as estimated (UJ) in sample SS-10A because 1 of 2 percent recoveries for chromium was below control limits, but not below 10% in the associated soil MS/MSD sample.

- The "not detected" total metal results for silver were qualified as estimated (UJ) in samples SS-9, SS-10A, SS-10B, and SS-3B because 1 of 2 percent recoveries for silver was below control limits, but not below 10% in the associated soil MS/MSD sample.

- The positive total metal results for barium and lead were qualified as estimated (J) in all 7 soil samples and field duplicate because the relative percent differences for barium and lead were above the allowable maximum in the associated soil duplicate sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive total metal results for mercury were qualified as estimated (J) in samples SS-5B and Duplicate because the relative percent difference for mercury was above the allowable maximum in the soil field duplicate pair SS-5B/Duplicate.

- The positive results for hexavalent chromium were qualified as estimated, biased low (J-) in samples Duplicate and SS-5B because the percent recoveries for soluble and insoluble hexavalent chromium were below QC limits, but not below 10% in the associated soil spike sample.

- The "not detected" results for hexavalent chromium were qualified as estimated (UJ) in samples SS-9, SS-5A, SS-3A, SS-10A, SS-10B, and SS-3B because the percent recoveries for soluble and insoluble hexavalent chromium were below QC limits, but not below 10% in the associated soil spike sample.

All data are considered usable, with estimated (J, J-, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Total Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091006

7 Soil Samples, 1 Field Duplicate,
and 1 Equipment Blank
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The sample was analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration, preparation, and equipment blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable target metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: One of two percent recoveries (%Rs) for chromium and silver were below control limits (75-125%), but not below 10% for soil MS/MSD sample SS-5B. Positive results for chromium and silver should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

The %Rs for target metals were within control limits for aqueous batch MS/MSD sample AD19206-004.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20%) for aqueous batch duplicate sample AD18954-002 and aqueous batch MS/MSD sample AD18954-002, as required. The RPDs for applicable metals were below the allowable (35%) for soil MS/MSD sample SS-5B, as required.

The RPDs for barium and lead were above the allowable maximum (35%) for soil duplicate sample SS-5B. Positive results for barium and lead should be considered estimated (J) in associated soil samples.

Field Duplicates: The relative percent difference for mercury was above the allowable maximum (35%) for soil field duplicate pair SS-5B/Duplicate (attached table). Positive results for mercury should be considered estimated(J) in samples SS-5B and Duplicate.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil samples LCS MR 85270, LCS 85270, LCS MR 85269, and LCS 85269 and aqueous samples LCS MR 85272 and LCS 85272.

ICP Serial Dilution: The %Ds for applicable metals were below the allowable maximum (10%) for soil serial dilution sample SS-5B, as required.

The %D for potassium was above the allowable maximum (15%) for aqueous batch serial dilution sample AD19206-001. Positive results for potassium that are above the RLs should be considered estimated (J) in associated soil samples.

QA/QC Review of Total Cyanide Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091006

7 Soil Samples, 1 Field Duplicate,
and 1 Equipment Blank
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within NJDEP holding times.

Initial and Continuing Calibration Verification: The percent recoveries for total cyanide were within control limits (85-115%).

Blanks: The analyses of initial calibration and continuing calibration, method, and equipment blanks reported total cyanide as not detected.

Spike Sample Recovery: The percent recoveries for total cyanide were within QC limits (75-125%) for aqueous batch MS/MSD sample AD19136-001 and soil MS/MSD sample SS-5B.

Laboratory Duplicates: The relative percent difference for total cyanide was below the allowable maximum (20%) for aqueous batch MS/MSD sample AD18945-007, as required. The relative percent difference for total cyanide was below the allowable maximum (35%) for soil MS/MSD sample SS-5B, as required.

Field Duplicates: The analyses of soil field duplicate pair SS-5B/Duplicate reported total cyanide as not detected; therefore, a valid relative percent difference could not be calculated. The analyses for the field duplicate pair were acceptable.

Laboratory Control Sample: The percent recoveries for total cyanide were within QC limits (80-120%) for aqueous sample LCSW-1505 and soil sample LCSS-2420.

7 Soil Samples, 1 Field Duplicate,
and 1 Equipment Blank
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within NJDEP holding times.

Initial and Continuing Calibration Verification: The percent recoveries for total cyanide were within control limits (85-115%).

Blanks: The analyses of initial calibration and continuing calibration, method, and equipment blanks reported total cyanide as not detected.

Spike Sample Recovery: The percent recoveries for total cyanide were within QC limits (75-125%) for aqueous batch MS/MSD sample AD19136-001 and soil MS/MSD sample SS-5B.

Laboratory Duplicates: The relative percent difference for total cyanide was below the allowable maximum (20%) for aqueous batch MS/MSD sample AD18945-007, as required. The relative percent difference for total cyanide was below the allowable maximum (35%) for soil MS/MSD sample SS-5B, as required.

Field Duplicates: The analyses of soil field duplicate pair SS-5B/Duplicate reported total cyanide as not detected; therefore, a valid relative percent difference could not be calculated. The analyses for the field duplicate pair were acceptable.

Laboratory Control Sample: The percent recoveries for total cyanide were within QC limits (80-120%) for aqueous sample LCSW-1505 and soil sample LCSS-2420.

QA/QC Review of TCLP Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091006

7 Soil Samples, 1 Field Duplicate,
and 1 Equipment Blank
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were extracted and analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TAL metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration, preparation, and equipent blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable TAL metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: The percent recoveries for applicable metals were within control limits (75-125%) for soil TCLP MS/MSD sample SS-5B.

Laboratory Duplicates: The RPDs for applicable metals were below the allowable (35%) for soil TCLP MS/MSD sample SS-5B, as required.

Field Duplicates: The relative percent difference for barium was below the allowable maximum (30%) for soil field duplicate pair SS-5B/Duplicate (attached table), as required.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil TCLP samples LCS 85267 and LCS MR 85267. The relative percent differences for target metals were below the allowable maximum (20%) for soil TCLP sample LCS MR 85267, as required.

ICP Serial Dilution: The %Ds for applicable metals were below the allowable maximum (10%) for soil TCLP serial dilution sample SS-5B, as required.

QA/QC Review of Hexavalent Chromium Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091007

2 Soil Samples
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The samples were analyzed within the USEPA holding times.

Initial and Continuing Calibration Verification: The percent recoveries for hexavalent chromium (Cr6+) were within laboratory QC limits (90-110%).

Blanks: The analyses of initial and continuing calibration and method blanks reported Cr6+ as not detected.

Spike Sample Recovery: The percent recoveries soluble and insoluble Cr6+ were below laboratory QC limits (85-115%), but not below 10% for soil batch spike sample AD. Positive results for Cr6+ should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Duplicates: The RPD for Cr6+ was below the allowable maximum (35%) for soil batch duplicate sample AD19159-004, as required.

Laboratory Control Sample: The percent recoveries for soluble and insoluble Cr6+ were within laboratory QC limits (80-120%) for the soil LCS.

Data Usability Summary Report for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091007

2 Soil Samples
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 2 soil samples analyzed for total metals, TCLP metals, total cyanide, and hexavalent chromium.

The overall performances of the analyses are acceptable. Hampton-Clarke Analytical & Field Services did fulfill the requirements of the analytical methods.

The data are acceptable with some minor issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The positive total metal results for chromium were qualified as estimated, biased low (J-) in samples HRPB-5 and HRPB-6 because 1 of 2 percent recoveries for chromium was below control limits, but not below 10% in the associated soil batch MS/MSD sample.

- The "not detected" total metal results for silver were qualified as estimated, biased low (J-) in samples HRPB-5 and HRPB-6 because 1 of 2 percent recoveries for silver was below control limits, but not below 10% in the associated soil batch MS/MSD sample.

- The positive total metal results for barium and lead were qualified as estimated (J) in samples HRPB-5 and HRPB-6 because the relative percent differences for barium and lead were above the allowable maximum in the associated soil batch duplicate sample.

- The "not detected" results for hexavalent chromium were qualified as estimated (UJ) in samples HRPB-5 and HRPB-6 because the percent recoveries for soluble and insoluble hexavalent chromium were below QC limits, but not below 10% in the associated batch soil spike sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

All data are considered usable, with estimated (J, J-, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

Spike Sample Recovery: One of two percent recoveries (%Rs) for chromium and silver were below control limits (75-125%), but not below 10% for soil batch MS/MSD sample AD19159-004. Positive results for chromium and silver should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable (35%) for soil batch MS/MSD sample AD19159-004, as required.

The RPDs for barium and lead were above the allowable maximum (35%) for soil batch duplicate sample AD19159-004. Positive results for barium and lead should be considered estimated (J) in associated soil samples.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil samples LCS MR 85270, LCS 85270, LCS MR 85269, and LCS 85269.

ICP Serial Dilution: The %Ds for applicable metals were below the allowable maximum (10%) for soil batch serial dilution sample AD19159-004, as required.

QA/QC Review of Total Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091007

2 Soil Samples
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The sample was analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration and preparation blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable target metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: One of two percent recoveries (%Rs) for chromium and silver were below control limits (75-125%), but not below 10% for soil batch MS/MSD sample AD19159-004. Positive results for chromium and silver should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable (35%) for soil batch MS/MSD sample AD19159-004, as required.

The RPDs for barium and lead were above the allowable maximum (35%) for soil batch duplicate sample AD19159-004. Positive results for barium and lead should be considered estimated (J) in associated soil samples.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil samples LCS MR 85270, LCS 85270, LCS MR 85269, and LCS 85269.

ICP Serial Dilution: The %Ds for applicable metals were below the allowable maximum (10%) for soil batch serial dilution sample AD19159-004, as required.

Lab Project No: 0091007

2 Soil Samples
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within NJDEP holding times.

Initial and Continuing Calibration Verification: The percent recoveries for total cyanide were within control limits (85-115%).

Blanks: The analyses of initial calibration and continuing calibration and method blanks reported total cyanide as not detected.

Spike Sample Recovery: The percent recoveries for total cyanide were within QC limits (75-125%) for soil batch MS/MSD sample AD19145-001.

Laboratory Duplicates: The relative percent difference for total cyanide was below the allowable maximum (35%) for soil batch MS/MSD sample AD19145-001, as required.

Laboratory Control Sample: The percent recovery for total cyanide was within QC limits (80-120%) for soil sample LCSS-2418.

QA/QC Review of TCLP Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091007

2 Soil Samples
Collected September 9, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were extracted and analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TCLP metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration, preparation, and equipment blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable TCLP metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: The percent recoveries for applicable metals were within control limits (75-125%) for soil batch TCLP MS/MSD sample AD19159-004.

Laboratory Duplicates: The RPDs for applicable metals were below the allowable (35%) for soil batch TCLP MS/MSD sample AD19159-004, as required.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil TCLP samples LCS 85267 and LCS MR 85267. The relative percent differences for target metals were below the allowable maximum (20%) for soil TCLP sample LCS MR 85267, as required.

ICP Serial Dilution: The %Ds for applicable metals were below the allowable maximum (10%) for soil batch TCLP serial dilution sample AD19159-004, as required.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil TCLP samples LCS 85267 and LCS MR 85267. The relative percent differences for target metals were below the allowable maximum (20%) for soil TCLP sample LCS MR 85267, as required.

ICP Serial Dilution: The %Ds for applicable metals were below the allowable maximum (10%) for soil batch TCLP serial dilution sample AD19159-004, as required.

QA/QC Review of Hexavalent Chromium Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091101

13 Soil Samples
Collected September 10, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The samples were analyzed within the USEPA holding times.

Initial and Continuing Calibration Verification: The percent recoveries for hexavalent chromium (Cr6+) were within laboratory QC limits (90-110%).

Blanks: The analyses of initial and continuing calibration, method, and equipment blanks reported Cr6+ as not detected.

Spike Sample Recovery: The percent recoveries for Cr6+ were below laboratory QC limits (85-115%), but not below 10% for soil batch spike samples AD19159-004 and AD19290-002. Positive results for Cr6+ should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Duplicates: The relative percent differences for Cr6+ were below the allowable maximum (35%) for soil batch duplicate samples AD19159-004 and AD19290-002, as required.

Laboratory Control Sample: The percent recoveries for soluble and insoluble Cr6+ were within laboratory QC limits (80-120%) for the soil LCS.

Data Usability Summary Report for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091101

13 Soil Samples and 1 Trip Blank
Collected September 10, 2020

Prepared by: Donald Anné
November 9, 2020

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 1 soil sample and 1 trip blank analyzed for volatiles, and the results for 13 soil samples analyzed for total metals, TCLP metals, total cyanide, and hexavalent chromium.

The overall performances of the analyses are acceptable. Hampton-Clarke Analytical & Field Services did fulfill the requirements of the analytical methods.

The data are acceptable with some minor issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The "not detected" volatile results for 18 compounds were qualified as estimated (UJ) in sample HRPB-1 because the area of the internal standard used to quantitate these results was below control limits, but not below 25% in the sample.

- The positive total metal results for beryllium were qualified as estimated, biased low (J-) in all 13 soil samples because 2 of 2 percent recoveries for beryllium were below control limits, but not below 10% in the associated soil MS/MSD sample.

- The positive total metal results for nickel were qualified as estimated, biased high (J+) in all 13 soil samples because 1 of 2 percent recoveries for nickel was above control limits in the associated soil MS/MSD sample.

- The "not detected" results for hexavalent chromium were qualified as estimated (UJ) in all 13 soil samples because the percent recoveries for soluble and insoluble hexavalent chromium were below QC limits, but not below 10% in the associated soil batch spike samples.

All data are considered usable, with estimated (J+, J-, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Total Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091101

13 Soil Samples
Collected September 10, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: The sample was analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration and preparation blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable target metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: Two of two percent recoveries (%Rs) for beryllium were below control limits (75-125%), but not below 10% for soil MS/MSD sample SS-4A. Positive results for beryllium should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

One of two %Rs for nickel was above control limits (75-125%) for soil MS/MSD sample SS-4A. Positive results for nickel should be considered estimated, biased high (J+) in associated soil samples.

Laboratory Duplicates: The relative percent difference for nickel was above the allowable (35%) for soil MS/MSD sample SS-4A. Positive results for nickel should be considered estimated (J) in associated soil samples.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil samples LCS MR 85279, LCS 85279, LCS MR 85280, and LCS 85280.

ICP Serial Dilution: The %D for beryllium was above the allowable maximum (15%) for soil serial dilution sample SS-4A. Positive results for beryllium that are above the RLs should be considered estimated (J) in associated soil samples.

QA/QC Review of Total Cyanide Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091101

13 Soil Samples
Collected September 10, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within NJDEP holding times.

Initial and Continuing Calibration Verification: The percent recoveries for total cyanide were within control limits (85-115%).

Blanks: The analyses of initial calibration and continuing calibration, method, and equipment blanks reported total cyanide as not detected.

Spike Sample Recovery: The percent recoveries for total cyanide were within QC limits (75-125%) for aqueous batch MS/MSD samples AD19177-002, AD19217-001 and AD19214-001.

Laboratory Duplicates: The relative percent differences were below the allowable maximum (35%) for soil batch MS/MSD samples AD19177-002, AD19217-001 and AD19214-001, as required.

Laboratory Control Sample: The percent recoveries for total cyanide were within QC limits (80-120%) for soil samples LCSS-2421, LCSS-2422, and LCSS-2423.

QA/QC Review of 8260 Volatile Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091101

1 Soil Sample and 1 Trip Blank
Collected September 10, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The %RSDs for applicable compounds were below the method maximum, as required. The average RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 for GCMS_11 on 09-11-20. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010for all others) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 on 09-14-20 (11M82702.D). The RRF for acetone was below the method minimums, but not below 0.010 on 09-17-20 (6M132533.D). The %Ds for dichlorodifluoromethane, cis-1,2-dichloroethene, carbon tetrachloride, 4-methyl-2-pentanone, bromoform, styrene, m&p-xylene, o-xylene, and 1,4-dichlorobenzene were above the method maximum on 9-17-20 (6M132533.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided the RRFs are not below 0.010.

The RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010 for all others), as required.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %D for 1,4-dioxane was above the allowable maximum (20%) on 09-14-20 (11M82702.D). The %Ds for dichlorodifluoromethane, cis-1,2-dichloroethene, 1,4-dioxane, carbon tetrachloride, 2-chloroethylvinylether, 4-methyl-2-pentanone, bromoform, styrene, m&p-xylene, o-xylene, and 1,4-dichlorobenzene were above the allowable maximum (20%) on 09-17-20 (6M132533.3D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the daily and trip blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard retention times for samples were within control limits. One of three internal standard areas (I3) for sample HRPB-1 was below control limits, but not below 25%. Positive results that are quantitated using internal standard I3 should be considered estimated, biased high (J+) and "not detected" results estimated (UJ) in sample HRPB-1.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil sample and trip blank.

Matrix Spike/Matrix Spike Duplicate: Three of ninety-seven relative percent differences for spiked compounds were above the allowable maximums, but 15 of 194 percent recoveries were above QC limits in soil batch MS/MSD sample AD19283-006. No action is taken on batch MS/MSD data alone to qualify or reject an entire set of samples.

Laboratory Control Sample: The percent recovers (%Rs) for target compounds were within QC limits for aqueous sample MBS87835.

The %Rs for 1,1,2-trichloro-1,2,2-trifluoroethane, acrolein, methyl-t-butyl ether, 2-chloroethylvinylether, and bromoform were above QC limits for soil sample MBS89300. Positive results for these compounds should be considered estimated, biased high (J+) in associated aqueous samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

0091101 0152

Method: EPA 8260C

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Avg Rsd: 9.934

Note:

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8260C

QA/QC Review of TCLP Metals Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0091101

13 Soil Samples
Collected September 10, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were extracted and analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TCLP metals were within control limits (90-110% all metals except Hg, 80-120% for Hg).

Blanks: The analyses for initial and continuing calibration, and preparation blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable TCLP metals were within control limits (80-120%) for ICS AB samples.

Spike Sample Recovery: The percent recoveries for applicable metals were within control limits (75-125%) for soil TCLP spike sample SS-4A.

Laboratory Duplicates: The RPD for barium was below the allowable (35%) for soil TCLP duplicate sample SS-4A, as required.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil TCLP samples LCS 85281 and LCS MR 85281. The relative percent differences for target metals were below the allowable maximum (20%) for soil TCLP sample LCS MR 85281, as required.

ICP Serial Dilution: The %D for barium was below the allowable maximum (10%) for soil TCLP serial dilution sample SS-4A, as required.

Data Usability Summary Report for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0092507

10 Ground Water Samples, 1 Field Duplicate,
1 Field Blank, 1 Equipment Blank, and 1 Trip Blank
Collected September 21-23, 2020

Prepared by: Donald Anné
November 9, 2020

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 10 ground water samples, 1 field duplicate, 1 equipment blank, 1 field blank, and 1 trip blank analyzed for volatiles.

The overall performances of the analyses are acceptable. Hampton-Clarke Analytical & Field Services did fulfill the requirements of the analytical methods.

The data are acceptable with some minor issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The "not detected" volatile results for 2-chlorethylvinylether were qualified as estimated (UJ) in samples DF-MW-2, DF-MW-7, HRP-MW-3, TB-092320, EB-092320, and FB-092320 because the percent recoveries for 2-chlorethylvinylether were below QC limits, but not below 30% in the associated aqueous LCSs.

- The "not detected" volatile results for bromomethane were qualified as estimated (UJ) in samples HRP-MW-2, TMW-2, and DUP because the percent recovery for bromomethane was below QC limits, but not below 30% in the associated aqueous LCS.

- The "not detected" volatile results for 2-butanone were qualified as rejected, unusable (R) in samples DF-MW-8 and TMW-1 because the percent recovery for 2-butanone was below QC limits and below 30% in the associated aqueous LCS.

- The "not detected" volatile results for dichlorodifluoromethane and chloromethane were qualified as rejected, unusable (R) in samples HRP-MW-2, TMW-2, and DUP because the percent recoveries for dichlorodifluoromethane and chloromethane were below QC limits and below 30% in the associated aqueous LCS.

- The "not detected" volatile result for 2-chlorethylvinylether was qualified as rejected, unusable (R) in sample DF-MW-10 because the percent recoveries for 2-chlorethylvinylether were below QC limits and below 30% in the aqueous MS/MSD.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The "not detected" volatile result for vinyl chloride was qualified as rejected, unusable (R) in sample HRP-MW-2 because the percent recovery for vinyl chloride was below QC limits and below 30% in the associated aqueous LCS.

- Positive volatile results for vinyl chloride were qualified as "estimated, biased low" (J-) in samples TMW-2 and DUP because the percent recovery for vinyl chloride was below QC limits and below 30% in the associated aqueous LCS.

- The positive volatile results for tetrachloroethene were qualified as estimated (J) in samples HRP-MW-1 and DUP because the relative percent difference for tetrachloroethene was above the allowable maximum in the aqueous field duplicate pair HRP-MW-1/DUP.

All data that are not qualified rejected, unusable (R) are considered usable, with estimated (J, J-, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of 8260 Volatile Data for
Hampton-Clarke Analytical & Field Services
Lab Project No: 0092507

10 Ground Water Samples, 1 Field Duplicate,
1 Field Blank, 1 Equipment Blank, and 1 Trip Blank
Collected September 21-23, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The %RSDs for applicable compounds were below the method maximum, as required. The average RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 for GCMS_2 on 09-09-20. The average RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 for GCMS_11 on 09-11-20. The average RRF for acetone was below the method minimums, but not below 0.010 for GCMS_2 on 09-29-20. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010 for all others) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for acetone and 2-butanone were below the method minimums, but not below 0.010 on 09-28-20 (11M83268.D). The RRF for acetone was below the method minimums, but not below 0.010 on 09-28-20 (2M142440.D). The RRF for acetone was below the method minimums, but not below 0.010 on 09-30-20 (2M142518.D). The RRF for acetone was below the method minimums, but not below 0.010 on 10-01-20 (2M142561.D). The RRF for acetone was below the method minimums, but not below 0.010 on 10-02-20 (2M142629.D). The %Ds for bromomethane, 1,1,2,2-tetrachlroethane, styrene, m&p-xylene, and isopropylbenzene were above the method maximum on 08-31-20 (2M142440.D). The %Ds for dichlorodifluoromethane and vinyl chloride were above the method maximum on 10-02-20 (2M142629.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided the RRFs are not below 0.010.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The RRFs for target compounds were above the allowable minimums (0.001 for 1,4-dioxane, 0.010 for all others), as required.

The %Ds for acrolein, 1,4-dioxane, and 2-chloroethylvinylether were above the allowable maximum (20%) on 09-28-20 (11M83268.D). The %Ds for bromomethane, 2-chloroethylvinylether, 1,1,2,2-tetrachlroethane, styrene, m&p-xylene, isopropylbenzene, n-ptopylbenzene, and 1,3,5-trimethylbenzene were above the allowable maximum (20%) on 09-28-20 (2M142440.D). The %Ds for dichlorodifluoromethane, vinyl chloride, acrolein, and 2-chlorethylvinylether were above the allowable maximum (20%) on 10-02-20 (2M142629.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the daily and field blanks reported target compounds as not detected. Trip blank TB-092320 contained a trace of acetone (12 ug/L). Equipment blank EB-092320 contained a trace of methylene chloride (7.8 ug/L). Positive results for methylene chloride and acetone that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times for samples were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples, field blank, equipment blank, and trip blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximums; 1 of 2 percent recoveries (%Rs) for 1,4-dioxane was above QC limits; and 2 of 2 %Rs for 2-chloroethylvinylether were below QC limits and below 30% in aqueous MS/MSD sample DF-MW-10. The result for 2-chloroethylvinylether should be considered rejected, unusable (R) in sample DF-MW-10.

Laboratory Control Sample: The percent recoveries (%Rs) for 2-chloroethylvinylether were above QC limits for aqueous sample MBS89395, MBS89398, and MBS89414. Positive results for 2-chloroethylvinylether should be considered estimated, biased high (J+) in associated aqueous samples.

The %Rs for 2-chloroethylvinylether were below QC limits, but not below 30% for aqueous samples MBS89372 and MBS89382. The %R for bromomethane was below QC limits, but not below 30% for aqueous sample MBS89414. Positive results for these compounds should be considered estimated, biased low (J-) and not detected results rejected, unusable (R) in associated aqueous samples.

The %R for 2-butanone was below QC limits and below 30% for aqueous sample MBS89395. The %Rs for dichlorodifluoromethane, chloromethane, and vinyl chloride were below QC limits and below 30% for aqueous sample MBS89414. Positive results for these compounds should be considered estimated, biased low (J-) in associated aqueous samples.

Field Duplicates: The relative percent difference for tetrachloroethene was above the allowable maximum (20%) for aqueous field duplicate pair HRP-MW-1/DUP (attached table). Positive results for tetrachloroethene should be considered estimated(J) in samples HRP-MW-1 and DUP.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Volatiles

Calculations for Field Duplicate Relative Percent Difference (RPD)
SDG No. 0092507

S1= HRP-MW-1 **S2=** DUP

Analyte	S1	S2	RPD (%)	
benzene	0.77	0.79	3%	
cis-1,2-dichloroethene	300	290	3%	
tetrachloroethene	1.9	1.5	24%	*
trans-1,2-dichloroethene	11	11	0%	
trichloroethene	210	200	5%	
vinyl chloride	13	12	8%	

* RPD is above the allowable maximum (20%).

All results are in ug/L.

Bold numbers were values that are below the CRQL or above the high standard.
ND - Not detected.
NC - Not calculated, both results must be within the linear range for valid RPDs to be calculated.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 10.30

Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

0092507 0205

Avg Rsd: 10.30

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note:

Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

0092507 0206

Method: EPA 8260C

Avg Rsd: 10.08

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note:

Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Data Usability Summary Report for Eurofins
SGS North America Inc. Job No: JD13677

7 Soil Vapor Samples
Collected September 22, 2020

Prepared by: Donald Anné
November 9, 2020

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of TO-15 volatile analyses for 7 soil vapor samples.

The overall performances of the analyses are acceptable. SGS North America, Inc. did fulfill the requirements of the analytical method.

The data are acceptable with minor issues that are identified in the accompanying data validation review. The following data were qualified:

- The positive volatile results for isopropyl alcohol and ethanol were qualified as "estimated" (J) in all 7 soil vapor samples because the %RSDs for isopropyl alcohol and ethanol were above the allowable maximum for the associated initial calibration.

All data are considered usable, with estimated (J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method TO-15 Volatiles Data
for SGS North America Inc. Job No: JD13677

7 Soil Vapor Samples
Collected September 22, 2020

Prepared by: Donald Anné
November 9, 2020

Holding Times: Samples were analyzed within the EPA recommended holding times.

Canister Pressure: The sample canisters reported residual vacuum upon receipt at the laboratory as required by the method.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for isopropyl alcohol and ethanol were above the allowable maximum (30%) for GCMS3W on 09-17-20. Positive results for isopropyl alcohol and ethanol should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (30%), as required.

Blanks: The analyses of method blank reported target compounds as not detected. The analyses of the cleaned canisters reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil vapor samples.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum and the surrogate recoveries were within QC limits for the air/vapor samples V3W2884-BS/BSD and V3W2885-BS/BSD.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Laboratory Duplicate Sample: The relative percent differences for applicable compounds were below the allowable maximum for the soil vapor duplicate sample HRP-2 and soil vapor batch duplicate sample JD13673-1.

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Canister Pressure: The laboratory reported samples with a residual vacuum, as required.
