Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
24I0294-01	SB-49 (27-30)	2 oz. WM Clear Glass Cool to 4° C
24I0294-02	SB-48 (28-31)	2 oz. WM Clear Glass Cool to 4° C
24I0294-03	SB-51 (2-4)	2 oz. WM Clear Glass Cool to 4° C
24I0294-04	SB-51 (10-13)	8 oz. WM Clear Glass Cool to 4° C
24I0294-07	RB_9.5.24	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Technical Report

prepared for:

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Report Date: 09/12/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24I0221

Report Date: 09/12/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24I0221

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 05, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24I0221

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

24I0221-05	SB-61 (2-5)	4 oz. WM Clear Glass Cool to 4° C
24I0221-07	SB-29 (1-4)	4 oz. WM Clear Glass Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 03, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24I0046

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
24I0046-01	SB-42 (20-23)	2 oz. WM Clear Glass Cool to 4° C
24I0046-02	SB-25 (1-3)	2 oz. WM Clear Glass Cool to 4° C
24I0046-03	RB_8.30.24	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
24I0046-04	SB-52 (25-27)	2 oz. WM Clear Glass Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Report Date: 09/06/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24H2129

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 30, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24H2129

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

VOA-E	The concentration reported for this analyte is an estimated value above the linear range of the instrument for EPA SW846-5035/8260 (>200ppb). Re-analysis using 5035/8260 medium level prep. resulted in a detection below the reporting limit (<500ppb).
VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-HI	The internal std associated with this target compound did not meet acceptance criteria (area >200% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 29, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24H2011

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By: 

Date: 09/06/2024

Cassie L. Mosher
Laboratory Manager

Sample and Data Qualifiers Relating to This Work Order

VOA-E	The concentration reported for this analyte is an estimated value above the linear range of the instrument for EPA SW846-5035/8260 (>200ppb). Re-analysis using 5035/8260 medium level prep. resulted in a detection below the reporting limit (<500ppb).
VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
P	This qualifier indicates the compound detected exhibited greater than 40% between the quantitation and confirmatory columns.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-HI	The internal std associated with this target compound did not meet acceptance criteria (area >200% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis

Low Bias — Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 27, 2024 and listed below. The project was identified as your project: **HER1510.P2 Remington Arms**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24H1788

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

24H1788-05	SB-5 (17.5-20)	2 oz. WM Clear Glass Cool to 4° C
24H1788-06	RB_8.26.24	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Groundwater Laboratory Analytical Reports

Technical Report

prepared for:

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Report Date: 10/14/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24I1810

Report Date: 10/14/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24I1810

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 30, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24I1810

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

See attach	See attached
S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-PR	Sample was prepared outside of the recommended holding time.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Laboratory Results for: 24I1810

Dear Reporting,

Enclosed are the results of the sample(s) submitted to our laboratory October 05, 2024
For your reference, these analyses have been assigned our service request number **R2409958.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Meghan Pedro

ALS Environmental

Client: York Analytical Laboratories, Inc.
Project: 24I1810
Sample Matrix: Water

Service Request: R2409958
Date Received: 10/05/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.
Manual Integrations may have been used in the quantitation of the results in this report. Manual Integrations are readily identified in the raw data on the Quantitation Reports (Organics) by the automatic placement of an “m” next to the sample result. For Ion Chromatography, the manual integrations are identified by the automatic placement of “manipulated” or "manually integrated" in the upper left corner of the chromatogram (Hexavalent Chromium) or “M” by the result in the “Type” column (anions). The reason for the manual integration is noted on the “after” chromatogram, which is found with the original chromatogram and quantitation report. All integrations follow the lab SOP ADM-INT “Manual Integration.”

Sample Receipt:

Ten water samples were received for analysis at ALS Environmental on 10/05/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by Meghan Pedro Date 10/11/2024

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Texas ID#T104704581
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

PREPARATION METHODS

The preparation methods associated with this report are found in these tables unless discussed in the case narrative.

INORGANIC

Water/Liquid Matrix

Analytical Method	Preparation Method
200.7	200.2
200.8	200.2
6010C or 6010D	3005A/3010A
6020A or 6020B	ILM05.3
9034 Sulfide Acid Soluble	9030B
SM 4500-CN-N-2016 Amenable and Residual Cyanide	SM 4500-CN-G and SM 4500-CN-B,C-2016
SM 4500-CN-E WAD Cyanide	SM 4500-CN-I

Solid/Soil/Non-Aqueous Matrix

Analytical Method	Preparation Method
6010C or 6010D	3050B
6020A or 6020B	3050B
6010C or 6010D TCLP (1311) extract	3005A/3010A
6010C or 6010D SPLP (1312) extract	3005A/3010A
7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Technical Report

prepared for:

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Report Date: 10/14/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24I1803

Report Date: 10/14/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24I1803

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 30, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24I1803-01	Remington_IDW	Water	09/27/2024	09/30/2024

General Notes for York Project (SDG) No.: 24I1803

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

24I1803-01	Remington_IDW	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
Ja	Estimated value due to either being a
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
F-01	> 200
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

GLOSSARY OF TERMS

(Not all these terms may be used in this document)

CCB .....Continuing Calibration Blank
CCV .....Continuing Calibration Verification Standard
CLP.....Contract Laboratory Program
Coeff.....Coefficient (Correlation)
Diff.....Difference (%)
DUSR.....Data Usability Summary Report
EPA .....U.S. Environmental Protection Agency
FAP .....Field Activities Plan
GC-MS.....Gas Chromatograph/Mass Spectrometer
HT .....Hold Time
ICB .....Initial Calibration Blank
ICP-MS.....Inductively Coupled Plasma – Mass Spectroscopy
ICS.....Interference Check Sample
ICV .....Initial Calibration Verification
IS.....Internal Standard
LCS.....Laboratory Control Sample
MB .....Method Blank
MDL .....Method Detection Limit
MS .....Matrix Spike
MSD .....Matrix Spike Duplicate
NA.....Not Applicable
NYSDEC.....New York State Department of Environmental Conservation
PARCC.....Precision, Accuracy, Representation, Completeness & Comparability
PCBs.....Polychlorinated biphenyl (Aroclors)
PFAS.....Perfluoroalkyl Substances
PRDL .....Project Required Detection Limit
QA.....Quality Assurance
QAPP.....Quality Assurance Project Plan
QC.....Quality Control
RF.....Response Factor
Rec.....Recovery
RL.....Reporting Limit
RPD .....Relative Percent Difference
RSD .....Relative Standard Deviation
SCG .....Standard Criteria or Guidance
SD .....Serial Dilution

GLOSSARY OF TERMS (Cont.)

SDG.....Sample Delivery Group
SVOC.....Semi-Volatile Organic Compounds
TOC.....Total Organic Carbon
USEPA.....United States Environmental Protection Agency
VOC.....Volatile Organic Compounds

DATA USABILITY SUMMARY REPORT

This Data Usability Summary Report (DUSR) is for borehole soil samples collected from August 26 through September 16, 2024, at the Remington Arms Site in Ilion, New York. These samples were collected, analyzed, and validated using the Generic Field Activities Plan (FAP) for Work Assignments (HRP, 2019b), Generic Quality Assurance Project Plan (QAPP) for Work Assignments (HRP, 2019a), and the Target Brownfield Sites, Herkimer County, NY – Generic QAPP 5-9-24 Addendum: Remington Arms Multiple Parcels, Ilion, New York (HRP, 2024). Samples were collected by HRP Associates, Inc.

Inorganic, organic and physical constituents for these samples were validated using EPA guidelines for data validation, including Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use (EPA, 2009), National Functional Guidelines for Inorganic Superfund Method Data Review (EPA, 2020a), National Functional Guidelines for Organic Superfund Method Data Review (EPA, 2020b). The validation level used to review this data was the New York State Department of Environmental Conservation (NYSDEC) Category B procedure (EPA Stage 3), according to the QAPP.

Samples were analyzed for physical, inorganic and organic constituents by York Analytical Laboratories, Inc. in Stratford, Connecticut, using work orders 24H1788, 24H2011, 24H2129, 24I0046, 24I0221, 24I0294, 24I0746, 24I0791, 24I0889, and 24I1005.

The sample delivery groups (SDG), and analytical methods are listed in Table A-1. Data validation codes and definitions are listed in Table A-2, and a summary of qualified data is in Table A-3. Table A-4 summarized the precision, accuracy, representation, completeness & comparability (PARCC) for this sample event's data. These tables are in Appendix A.

Detailed field and laboratory Quality Assurance/Quality Control (QA/QC) summary forms and tables are in Appendix B.

Other issues that were noted during this data review:

- Detected results for methods SW8260 (VOC), and SW8270 (SVOC) were reported down the method detection limit (MDL). Detected results for all other methods were reported down to the laboratory's reporting limits.
- Trip blanks were not submitted for this sampling event. Therefore, possible low-level cross-contamination during shipping could not be measured.
- Field notes were not submitted for this sampling event. Stations where field duplicate samples were collected were obtained by an email from the project manager.

- Field rinsate blanks results were not used to qualify data. However, the detections were noted in the report.
- The sample containers used to ship samples for method SW8260 (VOC) analyses were glass jars, not hermetically sealed vials (trap and seal containers), as required by preparation method SW5035A. This is a common occurrence and with the laboratory's input, no action was taken.

Conclusion

Of 10879 measurements, 10785 (99.1%) of the data reviewed for the August/September 2024 Remington Arms borehole soil sampling event, were acceptable and can be used for the purpose they were intended, if qualified data (1354 measurements) are used with caution. Ninety-four (94) measurements were rejected due to gross QC exceedances. These measurements should not be used for the purpose of this project.

Data Validation Report by: Linda L. Tangen

Contractor Review: Cassy George

Table A-4 PARCC Summary Table
Remington Arms - Soil Boring Project
August/September 2024 Sampling Event

Precision Objective

QC Type	# of Results Out of Control Limits	# of Qualifiers
Field Duplicates	35	52
Lab Duplicates	104	64
Total	**139**	**116**

Accuracy Objective

QC Type	# of Results Out of Control Limits	# of Qualifiers
Results <PQL and > MDL	119	92
Holding Time	0	0
Calibration	45	11
Initial Calibration Verification	86	0
Continuing Calibration Verification	329	809
Field Blanks	65	0
Lab Blanks	22	6
Interference Check Sample	0	0
Laboratory Control Sample	198	136
Matrix Spike Sample (Recoveries)	70	24
Serial Dilution Sample	14	9
Surrogates	41	75
Internal Standards	15	76
Total	**1004**	**1238**

***Notes:** One detected result that was originally qualified by laboratory as less than the reporting limit,

Representative Objective

A project specific sampling and analysis plan was not available, therefore project required sampling sites
Proper sampling and analytical procedures used for this sampling event.

Completeness Objective

# of Planned Measurements	# of Rejected (or anomalous) Measurements	% Completeness
10879	**94**	**99.1%**

Comparability Objective

Data results were reported in standard units
Data were qualified according to QAPP and EPA guidelines
Analysis were performed accoring to QAPP and EPA accepted methods.

Sensitivity Objective

Data were reported using the proper detection limits except for parameters noted in Table B-3.
Data were reported down to the method detection limit (MDL) for methods SW8260 (VOC) and SW8270 (SVOC). Detected results that were greater than the MDL but less than the laboratory quantitative reporting limit (RL), were qualified with "J" by the laboratory (119 results). Of the 119 results, 92 remained qualified "J", while the remaining results were qualified for other QC exceedances. Refer to Table B-4 for a list of these results.

Unqualified Data Percentage

Field QA/QC Summary

Description	Comments
Field Instrument Calibration	Not Required for solids.
Field Measurements Stabilized	Not Required for solids.
Project Required Field Parameters Measured	Not Required for solids.
Project Required Stations Sampled	Yes
Samples Preserved and Packaged Correctly	Soil samples collected for VOC analyses were shipped in glass jars instead of a hermetically sealed "purge and trap" vial as required by EPA method SW846-5035A. Results accepted without qualifiers for this deviation from sampling protocol.
Chain of Custodies Properly Filled Out	Yes
Rinsate Blanks	65 detected results / 0 qualifiers. See Table B-1.
Field Duplicate	35 out of QC / 52 qualifiers. See Table B-2.
Trip Blank	Not submitted for analysis. With input from the laboratory, no action was taken.

Overall Data Assessment and Other Issues

Overall Assessment of Inorganic Data	Of 10879 measurements, 1354 were qualified, of these, 94 results were rejected. 99.1% of the data can be used for the purposes of this project, if qualified data are used with caution. The data validation qualifier and definitions are in Table A-2. The qualified data are reported in Table A-3. These tables are in Appendix A.
Other Issues	Detected results for methods SW8260 (VOC), and SW8270 (SVOC) were reported down the method detection limit (MDL). Detected results for all other methods were reported down to the laboratory's reporting limits.
	Trip blanks were not submitted for this sampling event. Therefore, low level cross-contamination in the field and shipping could not be measured.
	Field notes were not submitted for this sampling event. Stations where field duplicate samples were collected were obtained by an email from the project manager.
	Field rinsate blanks were not used to qualify data. However, the detections were noted in the report.
	The sample containers used to ship samples for method SW8260 (VOC) analyses were 4-ounce glass jars, not hermetically sealed vials (trap and seal containers), as required by preparation method SW5035A. This is a common occurrence and with the laboratory's input, no action was taken.

Notes:

1) Associated results were reported as non-detected. No action taken.

2) Associated results were qualified for another CCV.

3) Subsequent CCV was within control limits. Sample results were not affected.

Notes:

1) Associated sample results were non-detects.

2) Target analyte was not detected in the following CCB

3) Associated sample results were greater than 10 X the blank value.

4) Associated sample results were already qualified for another QC exceedance.

Table 9a. LCS Frequency That Were Not Met

Analytical Batch	Reason For Not Meeting Required Frequency	LCS ID	Parameter	Assoc. Sample Batch (Lab Code Prefix)
Method SW8270				
24I0221	LCS was analyzed on a different instrument than the associated sample	BI40424-BS1 and BSD1	All SVOC	RB_9.3.24
24I0294	Almost all the SVOCs recoveries for the LCS were less than the QC range limit. It was determined that the exceedances were due to an analytical anomaly. LCS not used to evaluate accuracy for associated samples	BI40637-BS1 (A BS duplicate was not analyzed)	All SVOC	SB-49 (27-30), SB-48 (28-31), SB-51 (2-4), SB-51 (10-13), SB-20 (1-2.5), SB-21 (1-2.5)
24I0746	LCS' were analyzed in different analytical batchs than the associated SDG samples.	BI41021-BS1, BI41292-BS1, BI41045-BS1	All SVOC	SB-62 (2-5),SB-28 (0.5-2),SB-63 (10-12),SB-17 (25-28),RB_9.9.24 2, SB-19 (1-3),SB-18 (2-5),SB-18 (2-5) ,SB-DUP-2,SB-62 (2-5),SB-DUP-2,SB-23 (18-21) ,SB-23 (18-21),SB-9 (17-20),SB-10 (23-26),SB-11 (20-23),SB-32 (10-12) ,SB-34 (25-27),SB-33 (8-10),SB-62 (2-5),SB-28 (0.5-2),SB-63 (10-12), SB-17 (25-28), RB_9.9.24 2,SB-19 (1-3) ,SB-18 (2-5),SB-DUP-2 ,SB-23 (18-21) ,SB-9 (17-20) ,SB-10
24I1005	LCS' were analyzed in different analytical batchs than the associated SDG samples.	BI41338-BS1	All SVOC	SB-39 (1.5-3.5), SB-37 (2.5-3.5, SB-38 (3-5), CS-1, CS-2, CS-3, CS-4

				N-Nitrodimethylamine	0	10-124	1 R (5)

Note:

1) Associated results were less than the MDL.

2) LCS evaluation is not required according to data validation guidelines (EPA, 2020b). Therefore *SVOC* LCS guidelines were used for evaluation purposes. However, associated sample results qualified "UJ" instead of "R", as required for SVOC data.

3) Associated sample results were already flagged for the paired LCS or LCSD recovery exceedance.

4) Associated samples were qualified for another QC sample exceedance.

5) The rejected results were associated with rinsate blanks only.

6) LCS exceedance minor. No action taken.

Table 10a. Laboratory Duplicate Frequency Omissions

SDG	Reason For Not Meeting Required Frequency	Duplicate Sample	Parameter	Assoc. Samples (Lab Code Suffix)
Method SW6010				
24H2129	A lab duplicate was not analyzed for associated samples		All ICP Metals	SB-47 (25-27), SB-45 (28-30), SB-46 (20-23)
24I1005	A lab duplicate was not analyzed for associated samples		All ICP Metals	SB-39 (1.5-3.5), SB-37 (2.5-3.5, SB-38 (3-5), CS-1, CS-2, CS-3, CS-4, BS-4
Method SW6020				
24H2129	A lab duplicate was not analyzed for associated samples		All ICP-MS Metals	RB_8.30.24
24I1005	A lab duplicate was not analyzed for associated samples		All ICP-MS Metals	RB_9.16.24
Method SW7473				
24H2129	A lab duplicate was not analyzed for associated samples		All Mercury	SB-47 (25-27), SB-45 (28-30), SB-46 (20-23)
24I0791	A lab duplicate was not analyzed for associated samples		Mercury	RB_9.12.24
Method SW8081				
24I1005	A lab duplicate was not analyzed for associated samples		All Pesticides	RB_9.16.24, CS-1, CS-2, CS-3, CS-4
Method SW8151				
24I0791	A lab duplicate was not analyzed for associated samples		All Herbicides	RB_9.12.24
Method SW8260				
24I079, 24I0889	A lab duplicate was not analyzed for associated samples		All VOC	RB_9.12.24; RB_9.13.24
Method SW8270				
24H2011	Using professional judgement it was determined that LCS Duplicate data were anomalous.	BI40129-BSD1	All SVOC	RB_8.28.24
24H2129, 24I0046	Using professional judgement it was determined that original LCS data used to compare with the LCS duplicate were anomalous.	BI10224 - BS2	All SVOC	RB_8.29.2,RB_8.30.24
24I0221	LCS duplicate was analyzed on a different instrument that the associated sample.	BI40424-BSD1	All SVOC	RB_9.3.24

***Notes:**

1) Associated results for the MS source sample were not detected above the MDL. Qualifiers not required.

2) It was determined that the exceedances were associated to the paired LCS or LCS duplicate (or MS/MS duplicate) only. Duplicate measurements were not used to evaluate precision for the this analytical batch. It was noted that only field rinsate blanks were affected by these omissions.

3) Associated results were already qualified for another QC exceedance.

Notes:

1) Associated sample results were already flagged for the paired MS or MSD recovery exceedance.

2) Associated sample results were already flagged for another QC sample exceedance.

3) Associated sample results were less than the MDL.

4) Less stringent QC limits were used for soil samples as noted in the EPA data validation guidelines.

5) Associated sample(s) was diluted. Matrix Spike recovery not used for evaluation purposes.

24I0889	SB-43 (13-15)	24I0889-04	9/24/24	Nitrobenzene-d5	125	22-108	0 (3)

Notes:

1) Using professional judgement, it was determined that this exceedance did not affect the associated sample results. Exceedance was minor and all the associated results were reported as non-detected, including a duplicate of this sample.

2) Associated compounds were not detected. No action taken.

3) Sample results were already qualified for another QC exceedance.

4) Associated sample was diluted. Surrogate recovery not used.

Table B-14. Internal Standard Exceedances

SDG	Field Sample ID	Lab Sample ID	Analysis Date	Surrogate	Area %	Area% Limits	#Flags
Method SW8260							
24H2011	SB-14 (12-15)	24H2011-07	9/3/24	1,2-Dichlorobenzene-d4	256	50-200	0 (1)

24I0046	SB-25 (1-3)	24I0046-02	9/5/24	1,2-Dichlorobenzene-d4	44	50-200	4 UJ
24I1005	SB-39 (1.5-3.5)	24I1005-01	9/25/24	Chlorobenzene-d5	32	50-200	14 UJ
				1,2-Dichlorobenzene-d4	12	50-200	2 J+; 4 R
Method SW8270							
24I0221	RB_9.3.24	24I0221-04	9/10/24	1,4-Dichlorobenzene-d4	3	50-200	All R (2)
				Napthalene-d8	3	50-200	All R (2)
				Acenaphthene-d10	4	50-200	All R (2)
				Phenanthrene-d10	3	50-200	All R (2)
				Chrysene-d12	3	50-200	All R (2)
				Perylene-d12	3	50-200	All R (2)
24I0221	SB-60 (3-6)	24I0221-02	9/11/24	Napthalene-d8	210	50-200	0 (1)
				Acenaphthene-d10	294	50-200	0 (1)
				Chrysene-d12	209	50-200	0 (1)
				Perylene-d12	229	50-200	0 (1)

1) Associated results were not detected.

2) All results were rejected for the sample (total of 51 R) due to the extremely low %Areas for all of the internal standards. In additional the RT time shift was greater than 30 secs the RT for the associated CCV. It was noted that this sample was a rinsate blank.

DATA USABILITY SUMMARY REPORT

This Data Usability Summary Report (DUSR) is for groundwater well construction samples collected on September 26 and 27, 2024, at the Remington Arms Site in Ilion, New York. These samples were collected, analyzed, and validated using the Generic Field Activities Plan (FAP) for Work Assignments (HRP, 2019b), Generic Quality Assurance Project Plan (QAPP) for Work Assignments (HRP, 2019a), and the Target Brownfield Sites, Herkimer County, NY – Generic QAPP 5-9-24 Addendum: Remington Arms Multiple Parcels, Ilion, New York (HRP, 2024). Samples were collected by HRP Associates, Inc.

Inorganic, organic and physical constituents for these samples were validated using EPA guidelines for data validation, including Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use (EPA, 2009), National Functional Guidelines for Inorganic Superfund Method Data Review (EPA, 2020a), National Functional Guidelines for Organic Superfund Method Data Review (EPA, 2020b). The validation level used to review this data was the New York State Department of Environmental Conservation (NYSDEC) Category B procedure (EPA Stage 3), according to the QAPP.

Samples were analyzed for physical, inorganic and organic constituents by York Analytical Laboratories, Inc. in Stratford, Connecticut, using work orders 24I1803 AND 24I1810; and ALS Environmental Laboratories, Inc. in Rochester, New York, using work orders: R2409957 and R2409958.

The sample delivery groups (SDG), and analytical methods are listed in Table A-1. Data validation codes and definitions are listed in Table A-2, and a summary of qualified data is in Table A-3. Table A-4 summarized the precision, accuracy, representation, completeness & comparability (PARCC) for this sample event's data. These tables are in Appendix A.

Detailed field and laboratory Quality Assurance/Quality Control (QA/QC) summary forms and tables are in Appendix B.

Other issues that were noted during this data review:

- Detected results for methods SW8260 (VOC) and SW8270 (SVOC) were reported down to the method detection limit (MDL). Detected results less than the laboratories reporting limits (RL) but greater than the MDL were given an analytical qualifier of "J" by the laboratory. In addition, these data were given a validation flag of "J", if the results were not qualified for other QC exceedances.
- Detected results for method SW6020 (metals) were reported down to the MDL by the laboratory. However, the project's QAPP stated that metals should be reported down to the RL, not the MDL. To adhere to the project's SAP, the detected results that were less than the RL

were reported as undetected (U) at the RL. All undetected (U) data were reported at the RL. This was done so the data's comparability can be consistent throughout the project.

- Trip blanks were not submitted for this sampling event. Therefore, possible low-level cross-contamination during shipping could not be measured.
- Field notes were not submitted for this sampling event. The station where the field duplicate sample was collected was obtained by an email from the project manager.
- The original laboratory reports from the York laboratory did not contain Category B QC data for the metal analyses. These were subcontracted to ALS Analytical Laboratories. York requested Category B QC data from ALS and the report was revised to include these data.
- Due to a dry well, station MW-7 was not sampled as stated in the project's SAP.

Conclusion

Of 1783 measurements, 1766 (99.0%) of the data reviewed for the September 2024 Remington Arms Groundwater Well Construction Sampling event, were acceptable and can be used for the purpose they were intended, if the qualified data (243 measurements) are used with caution. Seventeen (17) measurements were rejected due to gross QC exceedances. These measurements should not be used for the purpose of this project.

Table A-2. Data Validation Codes and Definitions
Remington Arms - Groundwater Well Project
September 2024 Sampling Event

Qualifier	Description
J	Estimated value
J-	Estimated with negative bias
J+	Estimated with positive bias
R	Rejected data
UJ	True result is estimated to be less than the reported value

Table A-4 PARCC Summary Table
Remington Arms - Groundwater Well Samples
September 2024 Sampling Event

Precision Objective

QC Type	# of Results Out of Control Limits	# of Qualifiers
Field Duplicates	1	6
Lab Duplicates	2	0
Total	**3**	**6**

Accuracy Objective

QC Type	# of Results Out of Control Limits	# of Qualifiers
Results <PQL and > MDL	13	8
Holding Time	11	11 (1)
Calibration	16	0
Initial Calibration Verification	37	0
Continuing Calibration Verification	38	167
Field Blanks	5	0
Lab Blanks	10	5
Interference Check Sample	0	0
Laboratory Control Sample	20	46 (2)
Matrix Spike Sample (Recoveries)	18	0
Serial Dilution Sample	0	0
Surrogates	6	0
Internal Standards	0	0
Total	**174**	**237**

Notes:

1) All results (11) were rejected (flagged with "R") due to excessive hold time.

2) Of the qualified results, 6 were rejected (flagged with "R") due to excessive QC exceedances.

Representative Objective

Proper sampling and analytical procedures used for this sampling event.

Completeness Objective

# of Planned Measurements	# of Rejected (or anomalous) Measurements	% Completeness
1783	**17**	**99.0%**

Comparability Objective

- Data results were reported in standard units.
- Data were qualified according to QAPP and EPA guidelines.
- Analysis were performed accoring to QAPP and EPA accepted methods.
- Detected results for method SW6020 (metals) were reported down to the MDL by the laboratory. However, the project's QAPP stated that metals should be reported down to the RL, not the MDL. To adhere to the project's SAP, the detected results that were less than the RL were reported as undetected (U) at the RL. All undetected (U) data were reported at the RL. This was done so the data's comparability can be consistent throughout the project.

Sensitivity Objective

- Data were reported using the proper detection limits except for parameters noted in Table B-4.
- Data were reported down to the method detection limit (MDL) for methods SW8260 (VOC) and SW8270 (SVOC). Detected results that were greater than the MDL but less than the laboratory quantitative reporting limit (RL), were qualified with "J" by the laboratory (13 results). Of the 13 results, 8 remained qualified "J", while the other results were qualified for other QC exceedances. Refer to Table B-5 for a list of these results.

Unqualified Data Percentage

# of Measurements	Total Measurements Qualified	% Not Qualified
1783	**243**	**86.4%**

FIELD QA/QC SUMMARY

Description	Comments
Field Instrument Calibration	Field notes were not included with data package.
Field Measurements Stabilized	Field notes were not included with data package.
Project Required Field Parameters Measured	Field notes were not included with data package.
Project Required Stations Sampled	No, MW-7 was not sampled due to a dry well.
Samples Preserved and Packaged Correctly	Yes
Chain of Custodies Properly Filled Out	Yes
Rinsate Blanks	5 detected results / 0 qualifiers. See Table B-1.
Field Duplicate	1 out of QC / 6 qualifiers. See Table B-2.
Trip Blank	Not submitted for analysis. With input from the laboratory, no action was taken.

Overall Data Assessment and Other Issues

Overall Assessment of Inorganic Data	Of 10879 measurements, 1354 were qualified, of these, 94 results were rejected. 99.1% of the data can be used for the purposes of this project, if qualified data are used with caution. The data validation qualifier and definitions are in Table A-2. The qualified data are reported in Table A-3. These tables are in Appendix A.
Other Issues	Detected results for methods SW8260 (VOC), and SW8270 (SVOC) were reported down the method detection limit (MDL). Detected results for all other methods were reported down to the laboratory's reporting limits.
	Trip blanks were not submitted for this sampling event. Therefore, low level cross-contamination in the field and shipping could not be measured.
	Field notes were not submitted for this sampling event. Stations where field duplicate samples were collected were obtained by an email from the project manager.
	Field rinsate blanks were not used to qualify data. However, the detections were noted in the report.
	The sample containers used to ship samples for method SW8260 (VOC) analyses were 4-ounce glass jars, not hermetically sealed vials (trap and seal containers), as required by preparation method SW5035A. This is a common occurrence and with the laboratory's input, no action was taken.

Table B-1. Rinsate Blank Detections

Blank Type	Sample Code	Lab Code	Submit Date	Parameter	Unit	MDL(1)	RL(1)	Blank Result	5 X Blank	Flags
Method SW8060										
Rinsate	Rinsate Blank 1	24I1810-06	9/26/24	Bromodichloromethane	ug/L	0.245	0.5	1.34	6.7	0 (4)
				Chloroform	ug/L	0.243	0.5	15.6	78	0 (4)
Rinsate	Rinsate Blank 2	24I1810-10	9/27/24	1,2,4-Trimethylbenzene	ug/L	0.31	0.5	0.33 J	1.65	0 (3)
				Bromodichloromethane	ug/L	0.245	0.5	1.62	8.1	0 (4)
				Chloroform	ug/L	0.243	0.5	16.4	82	0 (4)

***Notes:**

1) MDL = Method Detection Limit.

2) Laboratory's Quantitative Reporting Limit

3) Detected blank result was less than the RL and therefore, no action was taken.

4) Associated results were less than the MDL. No field cross-contamination apparent.

				N-Nitrosodimethylamine	0	10-124	1 R
				Pentachlorophenol	177	10-156	0 (4)

Note:

1) LCS evaluation is not required according to data validation guidelines (EPA, 2020b). Therefore *SVOC* LCS guidelines were used for evaluation purposes. However, associated sample results qualified "UJ" instead of "R", as required for SVOC data.

2) Associated sample results were already flagged for the paired LCS or LCSD recovery exceedance.

3) Associated sample results were qualified for another QC sample exceedance.

4) Associated sample results were non-detects.

Table 11a. Laboratory Duplicate Frequency Omissions

SDG	Reason For Not Meeting Required Frequency	Duplicate Sample	Parameter	Assoc. Samples (Lab Code Suffix)
Method SW8082				
24I1803	A lab duplicate was not analyzed for the SDG.		All PCBs	Remington_IDW
Method SW8270				
24I1803	Lab duplicate was analyzed on a different instrument than the associated sample	BJ40212-BS1	All SVOC	Remington_IDW

Table B-11b. Laboratory Duplicate Exceedances

SDG	Analytical Batch	Dup Sample Code	Analysis Date	Parameter	RPD or Diff	RPD or Diff Limit	# of Flags
Method SW8260							
24I1810	BJ40119	BJ40119-BSD1	10/3/24	Acrolein	189	30	0 (1)
Method SW8270							
24I1810	BJ40053	BJ40053-MSD1	10/2/24	All SVOCs	>30	30	0 (2)

Notes:

1) Associated results were already qualified for another QC exceedance.

2) It was determined that the exceedances were associated to the paired MS/MS duplicate only.

Table 12a. Matrix Spike Frequency Omissions

SDG	Reason for Not Meeting Frequency Requirements	Parameter	Assoc. Samples
Method SW6020			
24I1803	No SDG MS sample analyzed	All Metals	Remington-IDW
24I0810	No SDG MS sample analyzed	All Metals	MW-1 through MW-6, MW-7, MW-9, DUP-1
Method SW8270			
24H1803	No SDG MS sample analyzed	All SVOC	Remington-IDW
24H1810	MS samples were not analyzed in the same analytical batches as the associated SDG samples. The results were not used for evaluation purposes.	All SVOC	MW-1 through MW-6, MW-7, MW-9, DUP-1

Table B-12b. Matrix Spike Recovery Exceedances

SDG	Analytical Batch	Source Sample Code	MS Sample Code	Analysis Date	Parameter	% Recovery	QC Rec %	# of Flags
Method SW8260								
24I1810	S4J0211	MW-1	BJ40053-MS1	10/2/24	1,2,4-Trimethylbenzene	71.1	72-129	0 (1)
					1,2-Dichloropropane	75.2	77-121	0 (1)
					1,3-Dichlorobenzene	67.7	74-119	0 (1)
					1,4-Dichlorobenzene	68.3	70-124	0 (1)
					Acetone	169	13-149	0 (1)
					Bromochloromethane	70.3	75-121	0 (1)
					Chlorobenzene	75.3	81-117	0 (1)
					Chloroform	69.6	80-124	0 (1)
					cis-1,2-Dichloroethylene	68.5	76-125	0 (1)
					Methyl tert-butyl ether	67.5	75-128	0 (1)
					Methylcyclohexane	62.5	70-130	0 (1)
					n-Butylbenzene	60.4	61-138	0 (1)
					Tetrachloroethylene	40	64-139	0 (1)
					trans-1,2-Dichloroethylene	73.5	79-131	0 (1)
24I1810	S4J0211	MW-1	BJ40053-MSD1	10/2/24	1,1,2,2-Tetrachloroethane	130	74-121	0 (2)
					Acetone	249	13-149	0 (3)
					Dichlorodifluoromethane	174	30-147	0 (2)
					Tetrachloroethylene	60.5	64-139	0 (2)

Notes:

1) MS recovery was not used. Using professional judgement, the results for the MS were deemed anomalous and therefore, could not be used to evaluate inter-parameter interferences. However, the associated MS duplicate recoveries were used to evaluate the inter-parameter interferences.

2) Associated sample results were less than the MDL.

3) Associated sample results were already flagged for another QC sample exceedance.

Table B-13. Surrogate Exceedances (Organics)

DATA USABILITY SUMMARY REPORT

This Data Usability Summary Report (DUSR) is for borehole soil samples collected from August 26 through September 16, 2024, at the Remington Arms Site in Ilion, New York. These samples were collected, analyzed, and validated using the Generic Field Activities Plan (FAP) for Work Assignments (HRP, 2019b), Generic Quality Assurance Project Plan (QAPP) for Work Assignments (HRP, 2019a), and the Target Brownfield Sites, Herkimer County, NY – Generic QAPP 5-9-24 Addendum: Remington Arms Multiple Parcels, Ilion, New York (HRP, 2024). Samples were collected by HRP Associates, Inc.

Inorganic, organic and physical constituents for these samples were validated using EPA guidelines for data validation, including Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use (EPA, 2009), National Functional Guidelines for Inorganic Superfund Method Data Review (EPA, 2020a), National Functional Guidelines for Organic Superfund Method Data Review (EPA, 2020b). The validation level used to review this data was the New York State Department of Environmental Conservation (NYSDEC) Category B procedure (EPA Stage 3), according to the QAPP.

Samples were analyzed for physical, inorganic and organic constituents by York Analytical Laboratories, Inc. in Stratford, Connecticut, using work orders 24H1788, 24H2011, 24H2129, 24I0046, 24I0221, 24I0294, 24I0746, 24I0791, 24I0889, and 24I1005.

The sample delivery groups (SDG), and analytical methods are listed in Table A-1. Data validation codes and definitions are listed in Table A-2, and a summary of qualified data is in Table A-3. Table A-4 summarized the precision, accuracy, representation, completeness & comparability (PARCC) for this sample event's data. These tables are in Appendix A.

Detailed field and laboratory Quality Assurance/Quality Control (QA/QC) summary forms and tables are in Appendix B.

Other issues that were noted during this data review:

- Detected results for methods SW8260 (VOC), and SW8270 (SVOC) were reported down the method detection limit (MDL). Detected results for all other methods were reported down to the laboratory's reporting limits.
- Trip blanks were not submitted for this sampling event. Therefore, possible low-level cross-contamination during shipping could not be measured.
- Field notes were not submitted for this sampling event. Stations where field duplicate samples were collected were obtained by an email from the project manager.

- Field rinsate blanks results were not used to qualify data. However, the detections were noted in the report.
- The sample containers used to ship samples for method SW8260 (VOC) analyses were glass jars, not hermetically sealed vials (trap and seal containers), as required by preparation method SW5035A. This is a common occurrence and with the laboratory's input, no action was taken.

Conclusion

Of 10879 measurements, 10785 (99.1%) of the data reviewed for the August/September 2024 Remington Arms borehole soil sampling event, were acceptable and can be used for the purpose they were intended, if qualified data (1354 measurements) are used with caution. Ninety-four (94) measurements were rejected due to gross QC exceedances. These measurements should not be used for the purpose of this project.

Data Validation Report by: Linda L. Tangen

Table A-4 PARCC Summary Table
Remington Arms - Soil Boring Project
August/September 2024 Sampling Event

Precision Objective

QC Type	# of Results Out of Control Limits	# of Qualifiers
Field Duplicates	35	52
Lab Duplicates	104	64
Total	**139**	**116**

Accuracy Objective

QC Type	# of Results Out of Control Limits	# of Qualifiers
Results <PQL and > MDL	119	92
Holding Time	0	0
Calibration	45	11
Initial Calibration Verification	86	0
Continuing Calibration Verification	329	809
Field Blanks	65	0
Lab Blanks	22	6
Interference Check Sample	0	0
Laboratory Control Sample	198	136
Matrix Spike Sample (Recoveries)	70	24
Serial Dilution Sample	14	9
Surrogates	41	75
Internal Standards	15	76
Total	**1004**	**1238**

***Notes:** One detected result that was originally qualified by laboratory as less than the reporting limit,

Representative Objective

A project specific sampling and analysis plan was not available, therefore project required sampling sites
Proper sampling and analytical procedures used for this sampling event.

Completeness Objective

# of Planned Measurements	# of Rejected (or anomalous) Measurements	% Completeness
10879	**94**	**99.1%**

Comparability Objective

Data results were reported in standard units
Data were qualified according to QAPP and EPA guidelines
Analysis were performed accoring to QAPP and EPA accepted methods.

Sensitivity Objective

Data were reported using the proper detection limits except for parameters noted in Table B-3.
Data were reported down to the method detection limit (MDL) for methods SW8260 (VOC) and SW8270 (SVOC). Detected results that were greater than the MDL but less than the laboratory quantitative reporting limit (RL), were qualified with "J" by the laboratory (119 results). Of the 119 results, 92 remained qualified "J", while the remaining results were qualified for other QC exceedances. Refer to Table B-4 for a list of these results.

Unqualified Data Percentage

# of Measurements	Total Measurements Qualified	% Not Qualified
10879	**1354**	**87.6%**

Field QA/QC Summary

Description	Comments
Field Instrument Calibration	Not Required for solids.
Field Measurements Stabilized	Not Required for solids.
Project Required Field Parameters Measured	Not Required for solids.
Project Required Stations Sampled	Yes
Samples Preserved and Packaged Correctly	Soil samples collected for VOC analyses were shipped in glass jars instead of a hermetically sealed "purge and trap" vial as required by EPA method SW846-5035A. Results accepted without qualifiers for this deviation from sampling protocol.
Chain of Custodies Properly Filled Out	Yes
Rinsate Blanks	65 detected results / 0 qualifiers. See Table B-1.
Field Duplicate	35 out of QC / 52 qualifiers. See Table B-2.
Trip Blank	Not submitted for analysis. With input from the laboratory, no action was taken.

Overall Data Assessment and Other Issues

Overall Assessment of Inorganic Data	Of 10879 measurements, 1354 were qualified, of these, 94 results were rejected. 99.1% of the data can be used for the purposes of this project, if qualified data are used with caution. The data validation qualifier and definitions are in Table A-2. The qualified data are reported in Table A-3. These tables are in Appendix A.
Other Issues	Detected results for methods SW8260 (VOC), and SW8270 (SVOC) were reported down the method detection limit (MDL). Detected results for all other methods were reported down to the laboratory's reporting limits.
	Trip blanks were not submitted for this sampling event. Therefore, low level cross-contamination in the field and shipping could not be measured.
	Field notes were not submitted for this sampling event. Stations where field duplicate samples were collected were obtained by an email from the project manager.
	Field rinsate blanks were not used to qualify data. However, the detections were noted in the report.
	The sample containers used to ship samples for method SW8260 (VOC) analyses were 4-ounce glass jars, not hermetically sealed vials (trap and seal containers), as required by preparation method SW5035A. This is a common occurrence and with the laboratory's input, no action was taken.

Notes:

1) Associated sample results were non-detects.

2) Target analyte was not detected in the following CCB

3) Associated sample results were greater than 10 X the blank value.

4) Associated sample results were already qualified for another QC exceedance.

Table 9a. LCS Frequency That Were Not Met

Analytical Batch	Reason For Not Meeting Required Frequency	LCS ID	Parameter	Assoc. Sample Batch (Lab Code Prefix)
Method SW8270				
24I0221	LCS was analyzed on a different instrument than the associated sample	BI40424-BS1 and BSD1	All SVOC	RB_9.3.24
24I0294	Almost all the SVOCs recoveries for the LCS were less than the QC range limit. It was determined that the exceedances were due to an analytical anomaly. LCS not used to evaluate accuracy for associated samples	BI40637-BS1 (A BS duplicate was not analyzed)	All SVOC	SB-49 (27-30), SB-48 (28-31), SB-51 (2-4), SB-51 (10-13), SB-20 (1-2.5), SB-21 (1-2.5)
24I0746	LCS' were analyzed in different analytical batchs than the associated SDG samples.	BI41021-BS1, BI41292-BS1, BI41045-BS1	All SVOC	SB-62 (2-5),SB-28 (0.5-2),SB-63 (10-12),SB-17 (25-28),RB_9.9.24 2, SB-19 (1-3),SB-18 (2-5),SB-18 (2-5) ,SB-DUP-2,SB-62 (2-5),SB-DUP-2,SB-23 (18-21) ,SB-23 (18-21),SB-9 (17-20),SB-10 (23-26),SB-11 (20-23),SB-32 (10-12) ,SB-34 (25-27),SB-33 (8-10),SB-62 (2-5),SB-28 (0.5-2),SB-63 (10-12), SB-17 (25-28), RB_9.9.24 2,SB-19 (1-3) ,SB-18 (2-5),SB-DUP-2 ,SB-23 (18-21) ,SB-9 (17-20) ,SB-10
24I1005	LCS' were analyzed in different analytical batchs than the associated SDG samples.	BI41338-BS1	All SVOC	SB-39 (1.5-3.5), SB-37 (2.5-3.5, SB-38 (3-5), CS-1, CS-2, CS-3, CS-4

24I0791	BH41202	BH41202-BS2	9/20/24	Hexachlorobenzene	10	23-124	1 R (5)
				N-Nitrodimethylamine	0	10-124	1 R (5)

Note:

1) Associated results were less than the MDL.

2) LCS evaluation is not required according to data validation guidelines (EPA, 2020b). Therefore *SVOC* LCS guidelines were used for evaluation purposes. However, associated sample results qualified "UJ" instead of "R", as required for SVOC data.

3) Associated sample results were already flagged for the paired LCS or LCSD recovery exceedance.

4) Associated samples were qualified for another QC sample exceedance.

5) The rejected results were associated with rinsate blanks only.

6) LCS exceedance minor. No action taken.

Table 10a. Laboratory Duplicate Frequency Omissions

SDG	Reason For Not Meeting Required Frequency	Duplicate Sample	Parameter	Assoc. Samples (Lab Code Suffix)
Method SW6010				
24H2129	A lab duplicate was not analyzed for associated samples		All ICP Metals	SB-47 (25-27), SB-45 (28-30), SB-46 (20-23)
24I1005	A lab duplicate was not analyzed for associated samples		All ICP Metals	SB-39 (1.5-3.5), SB-37 (2.5-3.5, SB-38 (3-5), CS-1, CS-2, CS-3, CS-4, BS-4
Method SW6020				
24H2129	A lab duplicate was not analyzed for associated samples		All ICP-MS Metals	RB_8.30.24
24I1005	A lab duplicate was not analyzed for associated samples		All ICP-MS Metals	RB_9.16.24
Method SW7473				
24H2129	A lab duplicate was not analyzed for associated samples		All Mercury	SB-47 (25-27), SB-45 (28-30), SB-46 (20-23)
24I0791	A lab duplicate was not analyzed for associated samples		Mercury	RB_9.12.24
Method SW8081				
24I1005	A lab duplicate was not analyzed for associated samples		All Pesticides	RB_9.16.24, CS-1, CS-2, CS-3, CS-4
Method SW8151				
24I0791	A lab duplicate was not analyzed for associated samples		All Herbicides	RB_9.12.24
Method SW8260				
24I079, 24I0889	A lab duplicate was not analyzed for associated samples		All VOC	RB_9.12.24; RB_9.13.24
Method SW8270				
24H2011	Using professional judgement it was determined that LCS Duplicate data were anomalous.	BI40129-BSD1	All SVOC	RB_8.28.24
24H2129, 24I0046	Using professional judgement it was determined that original LCS data used to compare with the LCS duplicate were anomalous.	BI10224 - BS2	All SVOC	RB_8.29.2,RB_8.30.24
24I0221	LCS duplicate was analyzed on a different instrument that the associated sample.	BI40424-BSD1	All SVOC	RB_9.3.24
24I0221	A lab duplicate was not analyzed for associated samples		All SVOC	SB-49 (27-30), SB-48 (28-31), SB-51 (2-4), SB-51 (10-13), SB-20 (1-2.5), SB-21 (1-2.5), RB_9.5.24
24I0746	MS duplicates were run in different analytical batches from the associated SDG samples. The results were not used for evaluation purposes.	BI41021-MSD, BI41292-MSD1	All SVOC	12),SB-17 (25-28),RB_9.9.24 2, SB-19 (1-3),SB-18 (2-5),SB-18 (2-5) ,SB-DUP-2,SB-62 (2-5),SB-DUP-2,SB-23 (18-21) ,SB-23 (18-21),SB-9 (17-20),SB-10 (23-26),SB-11 (20-23),SB-32 (10-12) ,SB-34 (25-27),SB-33 (8-10),SB-62 (2-5),SB-28 (0.5-2),SB-63 (10-12), SB-17 (25-28), RB_9.9.24 2,SB-19 (1-3) ,SB-18 (2-5),SB-DUP-2 ,SB-23 (18-21) ,SB-9 (17-20) ,SB-10 (23-26)

***Notes:**

1) Associated results for the MS source sample were not detected above the MDL. Qualifiers not required.

2) It was determined that the exceedances were associated to the paired LCS or LCS duplicate (or MS/MS duplicate) only. Duplicate measurements were not used to evaluate precision for the this analytical batch. It was noted that only field rinsate blanks were affected by these omissions.

3) Associated results were already qualified for another QC exceedance.

Notes:

1) Using professional judgement, it was determined that this exceedance did not affect the associated sample results. Exceedance was minor and all the associated results were reported as non-detected, including a duplicate of this sample.

2) Associated compounds were not detected. No action taken.

3) Sample results were already qualified for another QC exceedance.

4) Associated sample was diluted. Surrogate recovery not used.

Table B-14. Internal Standard Exceedances

SDG	Field Sample ID	Lab Sample ID	Analysis Date	Surrogate	Area %	Area% Limits	#Flags
Method SW8260							
24H2011	SB-14 (12-15)	24H2011-07	9/3/24	1,2-Dichlorobenzene-d4	256	50-200	0 (1)

				Chrysene-d12	209	50-200	0 (1)
				Perylene-d12	229	50-200	0 (1)

1) Associated results were not detected.

2) All results were rejected for the sample (total of 51 R) due to the extremely low %Areas for all of the internal standards. In additional the RT time shift was greater than 30 secs the RT for the associated CCV. It was noted that this sample was a rinsate blank.
