RE: Remedial Investigation Report
2 Halsey Road (8273 Halsey Road)
Whitesboro, New York
(HRP #WHI6533.RA)

Dear Mr. Folsom:

Attached is the Draft Remedial Investigation Report for 2 Halsey Road (8273 Halsey Road), Whitesboro New York.

If you have any questions or require additional information, please feel free to contact HRP at (518) 877-7101.

Sincerely,

Mark E. Wright, CSP, PG
Project Manager

Mark Wright - Project Manager

1.0 INTRODUCTION

This Remedial Investigation (RI) report presents the results of the investigations completed by HRP Associates, Inc. (HRP) at the subject site located at 2 Halsey Road (8273 Halsey Road), Whitesboro, New York (hereinafter referred to as the Site). The Site location is depicted on Figure 1. This RI report was prepared pursuant to an order on consent between the New York State Department of Environmental Conservation (NYSDEC) and the property owner, Turbine Engine Components Technologies – Utica Corporation (TECT Utica Corporation), to assess impacts related to the historical release of chlorinated volatile organic compounds (CVOCs) at the Site. The Site is a current and historical manufacturer of metal parts.

Interpretations presented within this report are based primarily on the investigations performed by HRP between February 2020 and September 2021 as described herein. Site history and background information were compiled by HRP based on review of previous environmental investigation reports. Applicable data from available previous investigations conducted at the Site have been included in sections of this report.

1.1 Report Organization

The text of this report is divided into seven sections. Immediately following the text are the tables, figures, and appendices. A summary of each report section is provided below.

Section 1.0 Introduction: The purpose of the RI report; the report organization; the Site background including Site description, Site history, summary of previous relevant studies, areas requiring further investigation; and scope of work are discussed.

Section 2.0 Physical Characteristics of the Study Area: Includes results of field activities to determine physical characteristics, including surface features, geology, and hydrogeology.

Section 3.0 Study Area Investigations: Summarizes field activities associated with the RI, including soil investigations, groundwater investigations, soil vapor investigations, and ecological investigations.

Section 4.0 Discussion of Results: Presents the results of RI organized by environmental media, including the degree of impacts in relation to relevant standards, criteria, and guidance (SCGs) and an assessment of contaminant fate and transport.

Section 5.0 Qualitative Human Health Exposure Assessment: Presents the results of a general human health and environmental impact assessment completed at the Site. The assessment identifies potential contamination sources and exposure pathways.

Section 6.0 Fish and Wildlife Resources Impact Analysis: Includes discussion of applicability of a Fish and Wildlife Resources Impact Analysis and potential ecological impacts of contaminants of concern from the Site.

Section 7.0 Conclusions: Presents a discussion of conclusions for the Site.

Section 8.0 Recommendations: Presents HRP's recommendations for the Site.

Section 9.0 References: Provides references to technical documents used in the preparation of this report.

1.2 Purpose and Objectives

The purpose of the RI is to characterize on-site environmental media and work to define the nature and extent of on-site CVOC impacts. In accordance with NYSDEC's *DER-10, Technical Guidance for Site Investigation and Remediation*, dated May 2010 (DER-10), the primary objectives of the RI are to:

- Delineate the areal and vertical extent of contaminants in media at the Site;
- Determine the surface and subsurface characteristics of the Site, including topography, geology, and hydrogeology, including depth to groundwater and groundwater flow gradients;
- Identify the sources of contamination, the migration pathways, and actual or potential receptors of contaminants on or through air, soil, bedrock, sediment, groundwater, surface water, utilities, and structures at the Site;
- Use the Fish and Wildlife Resource Impact Analysis (FWRIA) Decision Key included in DER-10 Appendix 3c to determine if the FWRIA is needed for the Site and complete FWRIA as applicable, based on the Decision Key;
- Collect and evaluate all data necessary to assess the actual and potential threats to public health and the environment; and
- Collect the data necessary to evaluate releases to an environmental medium and develop remedial alternative(s) to address the release.

1.3 Site Description

The Site is located at 2 Halsey Road (8273 Halsey Road), Village of Whitesboro, Oneida County, New York, and of two parcels of land identified as 316.000-1-2.1 and 316.000-1-2.4 on the Whitestown tax map. The 170.59-acre Site consists of two parcels of land, improved by three buildings and a shed totaling 249,725 square feet.

Site buildings consist of the following:

- *Manufacturing/Office Building (Main Building):* a single-story manufacturing building totaling approximately 238,725 square feet that includes a basement under the central portion of the manufacturing area of the building referred to as the "Hoffman basement". The remainder of the manufacturing portion of the building is constructed as slab-on-grade.

- *Chemical Storage Building:* a single-story oil/coolant storage building totaling approximately 6,400 square feet constructed as slab-on-grade.
- *Compressor Building:* a single-story building housing compressors used to generate shop air for the facility, totaling approximately 4,600 square feet constructed as slab-on-grade.

A Site plan depicting site features is presented as Figure 2A. Several above ground storage tanks (ASTs) related to the manufacturing process are located on the east side of the manufacturing/office building with contents including water, wastewater, nitric acid, liquid argon, liquid nitrogen, and waste oil. Other structures east of the main building include storage trailers and a shed housing equipment associated with a former groundwater remediation system. Two former waste oil underground storage tanks (USTs) and a former solvent recycling AST were located to the west of the compressor building and were reportedly removed in the 1990s. The locations of the former waste oil USTs are shown on Figure 2B within the HR-1 area. HRP reviewed all available documents and found no record of solvent storage onsite apart from the solvent recycling tank. No tank closure documents were available for HRP to review.

A former on-site wastewater treatment plant (WWTP), located near the northwestern boundary of the Site, was in operation from 1950 to 1970 before it was replaced with an updated wastewater treatment system in 1970. The former WWTP is shown on Figure 2C. The current wastewater treatment system is located in the eastern portion of the Site near the main building.

A guard shed is located on the west side of the main building. An employee parking lot is located west of the main building across from Gibson Road. The employee parking lot and driveways surrounding the main building are paved with asphalt. An underground, multi-weir oil/water separator which services the Site's stormwater system is located on the western edge of employee parking area. An electrical substation is present northwest of the main building along Gibson Road. The remaining unimproved portions of the Site are forested or cleared.

The Site is zoned for industrial use, and surrounding properties include industrial, commercial, and residential uses. Properties surrounding the Site and their approximate distances to the Site buildings are described below. The Site boundaries and surrounding land use are depicted on Figure 3.

North:
- 5175 Gibson Road: Whitestown Park - a town park (1,300 feet north); and
- 5170 Gibson Road: a two-story residence (1,350 feet north).

South:
- 8282 Halsey Road: Oneida Research Services, Inc. and ICON Laboratory Services, two buildings on a commercial property (550 feet south and 750 feet south respectively).

East:
- 8389 Clark Mills Road: a two-story residence (1,100 feet east); and
- 8399 Clark Mills Road: a two-story residence (1,200 feet east).

West:
- 8249 Halsey Road: a single-story residence (480 feet southwest); and
- 8243 Halsey Road: a single-story residence (600 feet southwest).

1.4 Site History

The Site is currently and has historically been used for manufacturing of aerospace parts. The original manufacturing building was erected in 1956 and was used for light industrial manufacturing by the Turbine Part Division and the Metals Division of the Utica Drop Forge Co. An office area, on the south side of the building was added in 1961. Subsequent additions were added in 1966, 1969, 1989, 1990, and 1996 as the building expanded production areas to the north. Beginning in the mid-1990s the company was consolidated into Turbine Engine Components Technologies (TECT, aka TECT Utica Corporation), which manufactured precision-engineered aerospace components through February 2020, at which time TECT was acquired by Whitcraft. The Site is currently occupied by Turbine Engine Components Technologies – Utica Corporation and the current operations conducted at the Site remain similar to the manufacturing operations conducted by TECT. Current Site operations include the following processes related to the manufacture of metal parts including: milling, cutting, welding, chemical etching, electrical forging, descaling (also known as "Virgo"), ceramic spraying, finishing, and fluorescent penetrant testing. Ancillary Site operations include Electro Discharge Machining, general building, machinery, and equipment maintenance, and transfer of raw materials using propane-powered forklifts.

The facility conducts on-site wastewater treatment prior to discharging process wastewater to the municipal sewer. Wastewater treatment sludge and spent filters are disposed of as F006 hazardous waste. A former WWTP in use from the 1950s until the early 1970s was located on the western portion of the Site, in the forested area west of Gibson Road. According to available documentation, the former WWTP consisted of two concrete grit chambers, a 50,000-gallon steel settling tank, two 240 square foot sludge drying beds, and a concrete block pump house. Structures associated with the former WWTP were reportedly removed in 1995.

The Site is currently and has historically been classified as a Large Quantity Generator (LQG) under the Resource Conservation and Recovery Act (RCRA). Current waste streams generated by manufacturing processes include used cutting oils, metal swarf, wastewater, wastewater treatment sludge, Virgo sludge and ceramic paint waste. Waste cleaning solvents including trichloroethylene (TCE) were generated at the Site until the early 1990s. According to Phase I ESAs previously conducted at the Site, TCE was historically used in three degreasers and an evaporator reportedly located in the southwestern portion of the main building. Historical documentation (2004 Haley & Aldrich Phase I ESA) identified that former employees reported that there were no sub-grade pits associated with the former degreasers.

1.5 Previous Investigations

Numerous environmental investigations and remedial actions were completed at the Site (primarily by ERM-Northeast, Inc. [ERM]) during the 1990s and early 2000s. Soil samples collected throughout the previous investigations were analyzed for Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Total Petroleum Hydrocarbons (TPH), Polychlorinated Biphenyls (PCBs) and Metals. Groundwater samples collected during the previous investigations were analyzed for VOCs and SVOCs. The results of these investigations were used to develop the conceptual site model and focus the sample analyses on the CVOCs as the primary constituents of interest identified

at the site during the RI. The results of the previous investigations are discussed below. In addition to ERM's investigative and remedial actions, Phase I ESAs were completed for the Site in 1990 by Groundwater Technology Inc., in 2001 by GaiaTech, in 2004 by Haley & Aldrich, in 2013 by AEI Consultants, and in 2015 by Ramboll Environ. Summaries of the environmental investigations and remedial actions conducted on the Site are provided below:

Draft Environmental Site Assessment performed by Groundwater Technology Inc., (GTI) dated August 1990

A Phase I/II ESA conducted for Kirkpatrick & Lockhart and Instoria Inc./Providential Ltd (former Site owner) included Phase I ESA records review and Phase II ESA soil, surface water and groundwater sampling activities. The Phase I/II report details regarding the remedial measures and the associated monitoring well construction logs were not available for HRP to review. The description of this report was provided in the "previous investigation summary" sections of the 2001 and 2004 Phase I reports.

Specific environmental concerns identified in the 1990 GTI Phase 1 ESA included:

- Reported presence of PCBs in Electrical Discharge Machining (EDM) basement;
- Surficial petroleum soil staining noted near two former waste oil USTs, a former solvent recycling AST and the boiler house (later renamed the compressor building) in the eastern portion of the Site. The area adjacent to the boiler house was later identified in 1993 ERM report as HR-1;
- Surficial petroleum staining was also observed adjacent to the oil storage building (later renamed the chemical storage building) and oil-water separator areas. The oil-water separator area was later identified in 1993 ERM report as HR-5;
- VOCs detected in groundwater monitoring wells installed onsite (Area later identified in 1993 ERM report as HR-3);
- VOCs detected in soils at the former wastewater treatment plant (Area later identified in 1993 ERM report as HR-4); and
- Potential residential receptors of groundwater contamination downgradient of the Site, at the Strezpek and Vierow residences, on Halsey Road. The residences are now currently serviced by the municipal water supply.

Nine permanent Site monitoring wells MW-1 through MW-6 (formerly GT-1 through GT-6) and MW-7A through MW-7C were installed by GTI as part of this effort. All wells were developed by bailing 10 well volumes at least 24 hours after installation and at least 7 days prior to sampling.

The two waste oil USTs and the solvent recycling AST located along the western side of the compressor building were reported removed by GTI. No tank closure documentation was available for HRP to review. The stained surface soil overlaying the USTs was removed and backfilled with No. 2 stone. The stained soil was placed in a 3-foot-high pile near the southeast corner of the compressor building in the vicinity of MW-2. GTI installed horizontal and vertical piping within the pile to ventilate the impacted soil as part of a remedial measure. The soil pile was referred to as a bio land farm in subsequent reports. The specifications of the bio land farm were not available for HRP to review.

Environmental Investigation Report prepared by ERM Northeast, Inc., (ERM) dated November 1993

The purpose of this investigation was to further assess environmental conditions on the Site. Based on the 1990 GTI report, ERM identified five areas for additional environmental investigation which were the focus of this 1993 report, as follows:

- Compressor Building area and adjacent Soil Pile (HR-1);
- Drum Storage Area (HR-2);
- Area Southeast of Manufacturing Building (HR-3);
- Former Wastewater Treatment Plant Area (HR-4); and
- Oil/Water Separator Area (HR-5).

All ERM soil sample locations are shown on Figure 2B.

HR-1

ERM investigated the 3-foot-high soil pile located in the vicinity of MW-2 and adjacent to the compressor building. ERM collected 13 soil samples at depth intervals ranging from 0-3 feet from five soil borings. A selection of the soil samples was evaluated for VOCs (2), PCBs (4) and Total TPH (12). Adirondack Environmental Services Inc., (AES) analyzed the samples for VOCs via EPA method 8240, PCBs via EPA method 8080, and TPH via EPA method 418.1. Sample BB-02-B (1-2 feet below grade [ft bg]) had a reported 1,2-cis-Dichlorenthene (1,2-cis-DCE) concentration of 0.78 milligram per kilogram (mg/kg). BB-01-A (0-1 ft bg) was reportedly non-detect for VOCs. Reported sample concentrations of TPH ranged from non-detect to 95,500 mg/kg. All samples evaluated for PCBs were reportedly non-detect.

ERM investigated the soils on the western side of the compressor building in the area of the former waste oil USTs and solvent recycling AST. Four soil borings (WOTA-01 to WOTA-04) were advanced to a depth of 3 ft bg and two borings (WOTA-05 and WOTA-06) were advanced to a depth of 6 ft bg. Soil samples were collected at 1-foot intervals from each boring (24 samples in total). A selection of the soil samples was analyzed for VOCs (1), PCBs (2), TPH (6) and metals (2). AES analyzed the samples for VOCs via EPA method 8240, PCBs via EPA method 8080, TPH via EPA method 418.1, metals via EPA Method 6010, mercury via EPA method 7471 and thallium via EPA method 7841. All soil samples evaluated for VOCs and PCBs were reportedly non-detect. Reported sample concentrations of TPH ranged from 53 mg/kg to 641 mg/kg. The two samples (WOTA-04-B [1-2 ft bg] and WOTA-06-B [1-2 ft bg]) evaluated for metals had reported concentrations of barium (16.9 and 23.5 mg/kg), chromium (10.4 and 6.25 mg/kg) and lead (5 and 6.5 mg/kg) respectively.

HR-2

ERM collected 16 soil samples (ranging in depth from 0-3 ft bg) from 4 boring locations within the drum storage area (HR-2). A selection of these samples was evaluated for VOCs (1), PCBs (1) and TPH (4). AES analyzed the samples for VOCs via EPA method 8240, PCBs via EPA method 8080 and TPH via EPA method 418.1. Sample DSA-04-B (0.5-1 ft bg) had a reported TCE concentration of 0.035 mg/kg. All four of the sampled analyzed for TPH had reported detection above 100 mg/kg

and ranged in concentration from 278 to 26,600 mg/kg. All samples evaluated for PCBs were reportedly non-detect.

HR-3

ERM installed six additional permanent groundwater monitoring wells (designated MW-8 through MW-13) across the Site to supplement the existing well network. The groundwater monitoring wells were installed via a motorized drill rig equipped with a hollow-stem auger which was advanced through the overburden materials. All wells were constructed using 2-inch schedule 40 PVC risers with 0.01 inch slotted PVC well screens. Wells MW-08, MW-09 and MW-11 were constructed with 10-foot screens. Reduced overburden thickness in portions of the Site resulted in truncated well screens for MW-10 (3 feet), MW-12 (8 feet) and MW-13 (5 feet). All wells were screened across the water table. A medium grained sand pack was placed around the screen annulus and extended at least 1 foot above the screened interval. A 1-foot-thick bentonite seal was placed above the sand pack and hydrated before the remaining space around the well casing was filled with grout. Each well was finished with an expandable j-plug and a protective 3-foot steel riser pipe. ERM well construction logs are provided in Appendix B.

ERM measured the depth to water for all onsite wells before the groundwater sample collection. ERM conducted a relative elevation survey of the onsite wells using a 100-foot arbitrary datum and determined the Site had a southwestern groundwater flow direction. Groundwater sampling was conducted to characterize the condition of the overburden aquifer at the Site. The depth to groundwater ranged from 1.24 to 10.87 ft bg across the site. Each well was bailed of five well volumes before the groundwater sample was collected. The groundwater samples were submitted to AES for laboratory analysis of VOCs via EPA method 624. The reported concentrations of total VOCs in groundwater were generally non-detect west, south and north of the facility. Total VOCs in groundwater east of the facility ranged from 5 to 10,876 micrograms per liter (ug/L).

HR-4

ERM investigated groundwater near the former Wastewater Treatment Plant (WWTP), identified as "HR-4". Groundwater samples were collected from MW-7A, MW-7B, and MW-7C and were submitted to AES for laboratory analysis of VOCs via EPA method 624. The reported total VOC groundwater concentrations from the three wells ranged from non-detect to 47 ug/L.

HR-5

ERM collected surface water samples from the influent (1) and effluent (2) sides of the oil/water separator (OWS) (HR-5). A surface water sample was also collected from the stream on the downgradient side of the OWS. The four surface water samples were submitted to AES for laboratory analysis of VOCs by EPA method 624. The influent and downgradient stream surface water samples were reportedly non-detect for the evaluated compounds. One of the effluent surface water samples was also non-detect for VOCs. The final effluent surface water sample had a reported TCE concentration of 6 ug/L.

Sediment samples collected from the influent and effluent sides of the OWS were submitted to AES for analysis of VOCs, PCBs, TPH and metals (EPA methods 8240, 8080, 418.1 and 6010/7470

respectively). The sediment samples were reportedly non-detect for PCBs and VOCs. Concentrations of TPH (641 and 525 mg/kg), chromium (11.1 and 14.8 mg/kg) and lead (35 mg/kg) were reportedly detected for the influent and effluent sediment samples respectively.

Summary of ERM Findings

ERM concluded that soil in discrete portions of HR-1 and HR-2 were impacted with petroleum residuals. VOC groundwater impacts were limited to the eastern portion of the Site. The groundwater in the western, southern, and northern portions of the Site, hydraulically downgradient of the main manufacturing building were largely unaffected.

ERM provided the following recommendations for each of the investigation locations:

- HR-1 and HR- 2: Complete limited excavations in the area around the compressor building and drum storage area with confirmatory post excavation sampling;
- HR-3: The addition of groundwater control and remedial measures for the groundwater VOC impacts in southeastern portion of the Site;
- HR-4: Additional characterization of the former WWTP; and
- HR-5: Improve operation & maintenance of the OWS.

Final Report Remediation Program Outline by ERM (dated 4 October 1994, Revised 15 December 1994)

A remediation plan was developed based on the Site investigations conducted to date and it included the five areas of concern, designated HR-1 through HR-5. ERM evaluated potential remedial alternatives for each above area of concern, along with the recommended preferred remedy and associated cost estimates. The proposed remedies for each area were as follows:

- Compressor Building Soil Pile (HR-1) - excavate and dispose of TPH and VOC impacted soils offsite;
- Drum Storage Area (HR-2) - excavate and dispose of TPH and VOC impacted soils offsite;
- Area Southeast of Manufacturing Building (HR-3) - further characterize the VOC groundwater impacts and design hydraulic control measure/ remedial system;
- Former Wastewater Treatment Plant Area (HR-4) - further characterize, demolish and dispose impacted materials offsite; and
- Oil/Water Separator Area - improve operation & maintenance (HR-5).

1995 Transformer Release Report - Utica Corporation by ERM (dated June 1995, Revised September 1995)

This report documents the cleanup and closure activities associated with the 1995 transformer oil (containing PCBs) release from the Site substation. This release had an associated NYSDEC Spill File (#9416805). The ERM report states that vandalism of a release valve was the cause of the spill. The Oneida County Sheriff's Department was notified and completed an onsite investigation.

Approximately 400 to 430 gallons of PCB containing transformer fluid (PCB oil) migrated from the transformer area along a ditch to the OWS. The majority of the PCB oil was contained within the OWS, however some of the fluid reached the downgradient dry creek bed. The emergency response activities included diverting surface water drainage to isolate impacted areas, containment, and cleanup of the oil from the drainage features. The USEPA and NYSDEC were notified of the release and were consulted during the remediation of the spill. The ERM report states that Mr. William Jesmore and Mr. Daryl Swerdoski of the NYSDEC inspected the Site on April 12, 1995, reportedly approved of the work to date and agreed to the remediation plan. Mr. Howard Mason of NYSDEC Region VI was also reportedly onsite after NYSDEC was notified of the spill and remained onsite for the duration of the cleanup.

Approximately 200 gallons of PCB oil was recovered from the OWS and transformer retention basins during the initial cleanup. Remedial actions conducted by ERM in 1995 in accordance with the NYSDEC approved remediation work plan and included the following:

- All visible signs of transformer fluid were removed from the creek bed sediments and taken offsite for disposal.
- All soil and sediment with PCB concentrations in excess of 1 part per million (ppm) were removed and taken offsite for disposal.
- Soils within the secured transformer area with PCB concentrations in excess of 10 ppm were excavated and backfilled with clean gravel
- Field screening via immunoassay PCB sampling was conducted on all soil/sediment in the affected area post cleanup.
- Additionally, 10% of all field screen samples were submitted for laboratory PCB analysis via EPA method 8080.
- To prevent the movement of any residual PCBs a sump and tank were installed in the ditch, upgradient of the OWS. The underground drainage pipes and catch basins were pressure washed and all water was containerized for treatment.
- Mr. David Greenlaw, USEPA TSCA unit, approved the onsite treatment of 12,000 gallons of remedial wastewater via filtration and carbon absorption.
- The treated wastewater was sampled and had a reported PCB concentration less than 0.05 ug/L. The wastewater was discharged through the Oneida County POTW.
- Post remedial sampling was completed for soils and sediments in the affected areas. All post remedial samples had reported PCB concentrations below 0.4 ppm.
- In total, 112,009 kilograms of solid hazardous waste was transported to CWM Chemical Services, Model City, New York for disposal. An additional 75 yards of the nonhazardous solid waste was disposed of at Modern Landfill, Inc., Model City, New York.
- Liquid wastes generated during the cleanup that were unsuitable for onsite treatment were transported to Tipton Environmental Technology Inc., Tipton Missouri for disposal.

The spill file was closed on 29 May 1995 and reportedly met NYSDEC cleanup standards. The NYSDEC inspected the remediated areas and indicated that the remediation is complete and satisfactory to the NYSDEC. Post-remediation soil and sediment sampling indicated that the NYSDEC-approved remediation goals were achieved, and no further action was required.

Remedial Action Plan Report Halsey Road Facility by ERM (dated September 1995)

To further characterize the overburden aquifer VOC impacts, ERM installed a groundwater recovery well (RW-1) in 1995 in the southeast portion of the Site, downgradient of the drum storage area. ERM also installed temporary monitoring wells TMW-1 and TMW-2. TMW-1 was located in the drum storage area and TMW-2 was located between the water tank and chemical storage building in the northeast corner of the Site. ERM also installed two additional permanent monitoring wells, MW-14 and MW-15 located to the east and north, respectively of MW-2. The monitoring well construction logs for the construction of RW-1, TMW-1, TMW-2, MW-14 or MW-15 were not available for HRP to review. MW-14 and MW-15 appear to have been installed using the same procedure as MW-8 to MW-13. Temporary wells TMW-1 and TMW-2 were only sampled once (6/22/95). The temporary wells were reportedly destroyed sometime before October 1995. All wells were developed by bailing 10 well volumes at least 24 hours after installation and at least 7 days prior to sampling.

RW-1 was constructed with 4" PCV casing to a final depth of approximately 16.5 ft bg. The screen length is not known and the depth to groundwater was 3.25 ft bg when the well was gauged in 1995. After installation, ERM performed aquifer testing on RW-1 to determine the optimum rate of recovery. ERM determined that the rate of recovery of RW-1 would not be sufficient for use in a pump and treat groundwater system. The ERM report detailing the installation of the groundwater pump and treat system was not available for HRP to review but a series of as-built drawings made by ERM were used for the description of the system, which is provided below.

Before the groundwater pump and treat system was installed, ERM obtained an Oneida County groundwater discharge permit (No. GW-043) and a NYSDEC permit to construct and operate an air contaminate source (No. #6-3070-00035/00038-0).

The wastewater permit had the following requirements:

- Required semi-annual sampling for known and suspect pollutants using methods presented in 40 CFR 136 while the system is in operation
- The reports required monthly flow data
- Maximum concentration of Oil & Grease (100 milligram per liter [mg/L])
- Maximum concentration of Total Toxic Organics (2.0 mg/L)
- Maximum concentration of BTEX (2.0 mg/L)
- Maximum concentration of Benzene (0.5 mg/L)
- Maximum concentration of RCRA Hazardous Waste (Prohibited)
- Maximum %LEL (10%)

The air permit allowed the following annual emissions:

- 111,- Trichloroethane (1.1 pounds/year)
- 1,1-Dichloroethene (0.3 pounds/year)
- 1,2-Dichlorethene (63.1 pounds/year)
- Tetrachloroethene (0.7 pounds/year)
- Trichloroethene (158 pounds/year)
- Vinyl Chloride (5.5 pounds/year)

To increase the rate of recovery of groundwater from the overburden aquifer, ERM installed an approximate 125-foot long, 14-foot deep, high permeability trench oriented roughly north-south. The approximate location of the trench is depicted on Figure 2B. A new extraction well was constructed from 8″ PVC casing and was installed down gradient of the drum storage area within the trench footprint. The approximate location of the extraction well is depicted on Figure 2B. The bottom of the well casing (approximate 14 ft bg) was connected to a T-junction and a horizontal 6″ slotted ADS pipe that ran along the length of the trench. The trench was backfilled with 11 feet of No.1 stone and covered with a geotextile fabric to limit surface water intrusion. ERM installed a Grundfos 5E3 1/3 horsepower submersible pump 16″ from the bottom of the extraction well. A 2″ schedule 40 PVC pipe was connected directly to the pump and exited the 8″ well casing at approximately two feet below grade. The 2″ pipe ran horizontally to a groundwater remediation shed 6 feet from the extraction well. The location of the shed is depicted on Figure 2B. The trench was then filled to grade using crushed run aggregate.

ERM installed treatment equipment in the shed. The equipment included a multistage diffusor air stripper, shut-off values, and a flow meter. Piping was installed to convey the treated groundwater to the Oneida county permitted wastewater discharge. A vertical stack exited the top of the shed and ran along the wall of the facility to the roof (approximately 27 feet above grade). The top of the stack was covered with a galvanized rain cap. Details about the groundwater treatment system start-up, use and shutdown are provided below.

Memorandum: Utica Corporation Closure Report for HR-1, HR-2, HR-4 and HR-5 by ERM (dated 3 January 1996 Revised)

These memoranda indicate the closure status of the Site areas of environmental concern HR-1 (former boiler building soil pile), HR-2 (former drum storage area), HR-4 (Former WWTP) and HR-5 (OWS). All sample locations and excavation areas are shown on Figure 2B. The following is a summary of the information contained in the closure memoranda:

HR-1

Prior to remediation ten soil samples were collected and analyzed from HR-1 (for a combination of TPH (4), VOC (2), SVOC (2) and PCB (3) analytes) for delineation and characterization. The soil samples were submitted to AES for analysis of VOCs, SVOCs, PCBs, and TPH (EPA methods 8240, Stars 8270, 8080, and 418.1, respectively). The results indicated residual VOC and TPH-impacted soils. VOC concentrations were reportedly below the Site remedial project objectives (developed with NYSDEC TAGM #4046 soil cleanup goals). All samples were reportedly non-detect for SVOC and PCBs. Approximately 110 cubic yards (or 138 tons) of soil was removed and disposed of as non-hazardous waste at a landfill facility. Following excavation, three confirmation soil samples for TPH analysis met the Site cleanup goals and no further action was taken.

HR-2

Prior to remediation eight soil samples were collected and analyzed from HR-2 (for a combination of TPH (5), VOC (1), and SVOC (1) analytes) for delineation and characterization. The soil samples were submitted to AES for analysis of VOCs, SVOCs, and TPH (EPA methods 8240, Stars 8270, and 418.1, respectively). Sample DSA6 (0-3 ft bg) had reported concentrations of total dichloroethene (DCE) (7 ug/kg) and TCE (10 ug/kg). TPH detections ranged from 500 to 10,000 mg/kg. The results

from the 1993 and 1995 sampling events indicated TPH and VOC-impacted soils were present in the subsurface and were likely caused by a surface release of waste oil contaminated with chlorinated solvents from the drum storage area. The soils were excavated, managed, and disposed of as hazardous waste (RCRA F001) in accordance with 6 CRR-NY 371.2. In total, approximately 240 cubic yards (or 368 tons) of soil were disposed offsite as hazardous waste. Following excavation, confirmation samples were collected. Two TPH and one VOC confirmation samples exceeded the Site cleanup goals; however, Site structures and equipment limited any further excavation in these areas so no further action was taken.

HR-4

Prior to remediation, ERM collected groundwater samples from the three nearby monitoring wells MW-7A, MW-7B and MW-7C. MW-7A and MW-7C were non-detect for VOCs during each groundwater sampling event from 1993 to 1996. The groundwater sample from MW-7B collected on 6/22/1995, immediately preceding the demolition of the WWTP, had reported detections of cis-1,2-DCE (11 ug/L) and vinyl chloride (69 ug/L). ERM collected two surface soil samples from the WWTP. Sample HR4-C8 was collected near the 50,000-gallon settling tank and HR4-F3 was collected between the grit chamber and eastern sludge pit. Both samples were reportedly non-detect for CVOCs. HR4-F3 had reported VOC detections of toluene and xylene below the site cleanup objectives. ERM sampled the sludge from the eastern sludge pit and reported detections of barium, cadmium, chromium and lead. The water in the settling tank was reportedly non-detect for PCBs. The remedial effort at HR-4 included the demolition of the two 240 square foot sludge pits, the two 100 sq ft grit chambers, the 50,000-gallon settling tank and the valve pit and the disposal of residual sludge and water. The structures were disposed offsite as construction and demolition (C&D) waste. The residual water was treated onsite (to below VOC, SVOC and PCB permit thresholds) and discharged under permit to the Site's municipal sewer connection. Approximately 635 cubic yards (or 963 tons) of sludge was removed and disposed offsite as hazardous waste (RCRA F006). No soil was excavated because the confirmation samples following the removal of sludge met the remedial goals and no further action was recommended.

HR-5

The OWS had been recently cleaned and upgraded in 1995 (in response to 1995 PCB oil transformer spill) and the remedial actions taken at HR-5 included development of a Site Stormwater O&M Plan. The Site Stormwater O&M Plan was not available for HRP to review.

Memorandum - Groundwater Remediation System Startup Summary by ERM (dated 7 March 1996)

Based on the treatment system startup summary and log information present at the Site, it appears that the system was started in January 1996 and operated through 1999. Internal memos indicate that parts breakage caused the temporary shutdown of the system in April of 1998, before the system was restarted later that year. The system was shut down permanently at the end of 1999.

The treatment system water influent (prior to treatment) and effluent (after treatment) were periodically sampled and monitored over time during operation (1996-1999). Total VOC concentrations (trichloroethene, 1,1,1-trichloroethane and tetrachloroethene) ranged from 17 ug/L to 214 ug/L during the time period of March 1996 to January 1998. Reported effluent sample results

from 1996-1999 indicated that the treated water was non-detect for VOCs. Approximately 500,000 gallons of groundwater were treated from 1996-1999.

A letter from the plant engineer to the Oneida County Department of Water Quality and Pollution control dated December 4, 2001 indicated that the groundwater pump and treat system was no longer in operation since January 2000. The letter stated that groundwater sampling conducted in 2000 indicated that further testing/pumping/treatment was no longer necessary. The results of the groundwater sampling conducted in 2000 were not available for HRP to review. Following an internal environmental audit, the groundwater pump and treat system was briefly activated for a week in June 2003 to evaluate the condition of the equipment. After the system was tested, the Site environmental health and safety officer informed Oneida county that the groundwater treatment would be discontinued indefinitely, and the permit was discontinued.

Quarterly Ground Water Sampling Reports - Utica Corporation Halsey Road Facility by ERM (dated 12 December 1995 through 8 August 1997)

ERM conducted quarterly groundwater sampling for Utica Corporation from June 1995 through August 1997 as documented in the quarterly groundwater sampling reports.

Multiple Phase I reports conducted in 2001, 2004, 2013, and 2015

Information provided in the 2001, 2004, 2013, and 2015 Phase I reports indicated that three degreasers and an associated evaporator formerly operated at the Site. Limited information regarding these operations was available; however, it appears that trichloroethene (TCE) was used in the degreasers. These systems appeared to have been taken out of service and removed from the Site in the early 1990s.

Based on the 2004, 2013, and 2015 Phase I reports, previous environmental assessments identified the former Electro Discharge Machining (EDM) area as potentially using oil containing polychlorinated biphenyls (PCBs). Limited PCB sampling was reportedly conducted during a 1991 audit, which included a surface wipe sample, two oil samples, and a soil sample from an opening in the concrete floor slab. Low levels of PCBs were identified in the samples collected. The 1991 audit reportedly recommended no further action or follow-up in the EDM basement. The Phase I ESA reports generally identified Recognized Environmental Conditions (RECs) related to known groundwater impact by CVOCs, former above grade vapor degreasers, former USTs, exterior drum storage, and the former wastewater treatment plant.

1.6 Conceptual Site Model

HRP completed a Phase I ESA of the Site in January 2020. Based on the findings of the Phase I ESA, a preliminary Conceptual Site Model (CSM) was developed for the Site which identified Recognized Environmental Conditions (RECs) and Areas of Concern (AOCs) that were not fully investigated by previous investigations. In February and June of 2020 HRP conducted groundwater and soil vapor intrusion (SVI) investigations at the Site (described in the sections below). Based on the results of these investigations, HRP determined that CVOC impacts to groundwater represented the most significant potential environmental liability for the Site. Therefore, HRP revised the CSM to design a supplemental investigation focused on RECs/AOCs that could be potential soil source areas

related to the historical CVOC groundwater impacts and to further evaluate groundwater beneath the Site.

The revised CSM developed by HRP associated with CVOCs historically detected at the Site included the following RECs and AOCs at the Site:

- REC #1: CVOC-impacted shallow overburden groundwater beneath the Site
- REC #2: CVOC-impacted soil in the former drum storage area
- REC #3: CVOC-impacted soil vapor area beneath south-central portion of building
- AOC #1: Existing WWTP
- AOC #2: Former WWTP
- AOC #3: Former soil stockpile area east of the compressor building
- AOC #4: Oil-water separator
- AOC #5: Chemical storage building area
- AOC #6: Groundwater in bedrock aquifer beneath the Site

The RECs/AOCs identified in the revised CSM primarily focused on shallow soils (0-5 feet) as the release mechanisms at those areas would generally be surficial and/or shallow releases. However, deeper soils were investigated at select areas, most notably in areas near monitoring wells that have historically contained elevated CVOC concentrations. In addition, the revised CSM included the investigation of potential CVOC impacts to the bedrock aquifer as an Area of Concern (AOC) in order to evaluate the potential for vertical migration of CVOCs in groundwater.

2.0 PHYSICAL CHARACTERISTICS OF THE STUDY AREA

2.1 Topography

The Site and surrounding area are located in a flood plain formed by the confluence of Sauquoit Creek (located east of the Site), the Oriskany Creek (located west of the Site) and the Mohawk River (located north of the site). Topography of the Site is relatively flat at an elevation of approximately 610 feet above mean sea level (ft amsl). Topography of the surrounding area (within one mile of the Site) is relatively flat, sloping southwest, towards the Oriskany Creek and its tributaries. Site topography is depicted on Figure 4.

2.2 Hydrology

Surface Water

The nearest surface water bodies to the Site are tributaries to Oriskany Creek and Mud Creek. A tributary which runs west to Oriskany Creek is located approximately 1,500 feet to the southwest and downgradient of the Site. A tributary which runs east to Mud Creek is located approximately 1,900 ft to the northwest and upgradient of the Site. The Oriskany Creek and its tributaries are classified by the NYSDEC as Class "B(T)" waterbodies. The Mud Creek and its tributaries are classified as Class "C(T)" waterbodies. Waterbodies surrounding the Site are depicted on Figure 4.

According to 6 NYCRR Part 701: "The best usages of Class B waters are primary and secondary contact recreation and fishing. These waters shall be suitable for fish, shellfish and wildlife propagation and survival. The best usage of Class C waters is fishing. These waters shall be suitable for fish, shellfish and wildlife propagation and survival. The quality of a Class C waterbody shall be suitable for primary and secondary contact recreation, although other factors may limit the use for these purposes". The designation (T) indicates these waterbodies are trout waters.

Wetlands

According to the New York State Environmental Resource Mapper (NYS ERM), the nearest NYSDEC regulated wetland is located approximately 1,500 feet (0.3 miles) south of the Site and is a tributary to Oriskany Creek. The NYS ERM identifies two areas listed on the National Wetlands Inventory located within Site boundaries. The area identified as PSS1E is an approximately 5.8-acre Freshwater Forested/Shrub Wetland located approximately 100 ft northeast and upgradient of Site buildings. The area identified as PEM1E is an approximately 1.1-acre Freshwater Emergent Wetland located approximately 700 ft west of Site buildings (across Gibson Road).

According to the U.S. Fish and Wildlife Service Wetlands Inventory, the nearest federally regulated wetlands consist of and upgradient freshwater forested/shrub wetland located within the property boundaries of the Site and approximately 200 feet east of Site buildings. Samples were not collected from the wetland because of its upgradient position, located at a considerable distance from the Site's boundary, and the absence of surface migration pathways linking the Site and the wetland.

Wetlands surrounding the Site are depicted on Figure 4.

Floodplains

The Site is located in an area designated as FEMA Flood Zone 36065C0727F where base flood elevations have been determined. The Site is in an area of minimal flood hazard.

2.3 Geology

Soils and Surficial Geology

Based on observations made during on-site soil sampling, Site soils generally consists of 5-10 feet of medium sand and silt with trace gravel overlain by 3-5 feet of a gravely medium sand with some silt. Refusal was reached at a depth of 8-15 feet below grade (ft bg) across the Site during the advancement of two-inch soil borings via a motorized drill rig. The soils were consistent across the site. Geologic cross-sections prepared using information from soil borings and monitoring wells installed during on-Site investigations are shown Figures 5A-5C.

Surficial geology at the Site is mapped as oxidized, non-calcareous, fine sand to gravel (Caldwell et. al., 1986). According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey, 100% of the Site area is mapped as Udorthents smoothed 3 to 8 percent slopes.

Bedrock Geology

Bedrock was encountered at depths of 8-14 feet below grade during the installation of soil borings and groundwater monitoring wells. Based on six NX rock core samples collected from two bedrock monitoring wells installed by HRP (HRP-BR-1 and MW-6-BR), bedrock was described as gray, highly fissile shale with horizontal bedding. RQD values were determined to be zero in each of the six rock cores collected from the wells, with the exception of the core collected from HRP-BR-1 (21-25 ft bg), where a RQD of 10% was encountered. The bedrock geology is mapped as shale and siltstones associated with the Middle Ordovician Lorraine, Trenton and Black River Groups (Fisher et al., 1970).

Hydrogeology

Based on measurements collected on October 1, 2020, groundwater is present depths of 3-15 ft bg across the Site. According to the October 2020 measurements, groundwater flow is mapped as flowing to the west-southwest across the Site at a hydraulic gradient of approximately 0.015 ft/ft. The groundwater levels recorded during the RI monitoring events are summarized on Table 1 and a groundwater contour map depicting flow direction based on measurements collected on October 1, 2020 is included as Figure 6.

The closest operational public water supply wells are located at the Westmoreland Water District, approximately 3.5 miles west of the Site. Potable water at the Site and surrounding parcels is provided by a public water supply from the Hinckley Reservoir, located approximately 18 miles northeast of the Site.

3.0 STUDY AREA INVESTIGATIONS

Field work completed by HRP as presented in this RI was conducted in several mobilizations to the Site and included the following tasks:

- Installation of 55 soil borings including five soil borings installed within building interiors and 50 soil borings installed outside buildings and collection of 74 soil samples for Chlorinated Volatile Organic Compounds (CVOC) laboratory analysis (September 2020, May 2021, and September 2021);
- Installation and development of four overburden and two bedrock monitoring wells (September 2020);
- Collection of 38 groundwater samples from 20 monitoring wells for laboratory analysis for CVOCs in three sampling events (February 2020, June 2020, and October 2020); and
- Collection of 11 sub-slab soil vapor samples and three indoor air samples from the main manufacturing/office building, and collection of two outdoor air samples for VOC laboratory analysis (February and June 2020).

The investigation activities completed at the Site by HRP are summarized in the following sections by environmental media.

3.1 Utility Mark-out and Geophysical Survey

Prior to the initiation of all subsurface drilling activities (including the installation of monitoring wells and soil borings) the Site was marked out for utility clearances by New York 811 (NY811) in accordance with New York state law. In addition, since NY811 does not locate any on-site private utilities, a ground penetrating radar (GPR) and electromagnetic induction (EMI) survey of proposed soil boring and monitoring well locations was completed at the Site under HRP supervision in order to clear unmarked, underground utilities and identify subsurface anomalies (i.e., relic USTs, etc.) in the proposed work areas. The GPR/EMI survey was completed at the Site by Corbuilt, LLC (Corbuilt).

3.2 Soil Investigations

To evaluate CVOC impacts to subsurface soils, HRP conducted oversight of Glacier Drilling (Glacier) during the installation of all soil borings. Soil boring installations were completed in two mobilizations taking place in September 2020 and September 2021. Glacier installed soil borings using Geoprobe 54LT and Geoprobe 7822 DT drill rigs equipped with macrocore samplers advanced using direct push methods.

Soil boring locations were selected to evaluate identified RECs and AOCs and were based on previous soil, groundwater, and soil vapor data (collected by HRP and others). Five soil borings were installed within building interiors, including three borings installed within the interior of the main building (INT-SB-1, -2, -3) and two soil borings within the interior of the chemical storage building (INT-SB-4, -5). One exterior soil boring (OW-1) was completed using a clean stainless-steel shovel due to the presence of extensive vegetation in this area, which prevented drill rig access.

Soil boring locations are summarized in the table below. Soil boring locations are depicted on Figures 7A and 7B.

SOIL BORING LOCATION SUMMARY		
Soil Boring ID	Total Depth (ft bg)	Location/Justification
EXT-NE-1	8 †	Outside of chemical storage building; area of CVOC impacts to GW (MW-15/15R)
EXT-NE-2	8	
EXT-NE-3	10	
EXT-NE-4	9 †

SOIL BORING LOCATION SUMMARY		
Soil Boring ID	Total Depth (ft bg)	Location/Justification
FDS-8	10 †	
FDS-9	10 †	
INT-SB-1	4	Interior of main building; area of CVOC impacts to soil vapor (VP-5)
INT-SB-2	4	
INT-SB-3	8	Interior main building; area of CVOC impacts to soil vapor (VP-7)
INT-SB-4	8	Interior of chemical storage building; upgradient of CVOC impacts to GW (MW-15/15R)
INT-SB-5	8	
OW-1	2	Area of oil-water separator
HRP-BR-1*	7.5 †	Monitoring well installation downgradient of Site buildings (southwest)
HRP-2*	13 †	
MW-6BR*	13.5 †	
MW-11R*	17.5 †	Monitoring well installation downgradient of Site buildings (southeast)

Notes: *No soil samples collected; †Refusal depth of macrocore sampler

During soil boring installation, soil samples were logged and screened in 4-ft and 5-ft increments by an HRP geologist. Soil samples were logged by grain size, color, moisture, presence of fill material, and obvious physical evidence of contamination (i.e., odor, staining). A small portion (1-2 oz.) of each sample was placed in a polyethylene zip top bag and allowed to attain ambient temperature before Photo Ionization Detector (PID) headspace analysis. PID headspace analysis measurements and soil descriptions are presented on soil boring logs included in Appendix A.

A total of 74 soil samples were selected for CVOC laboratory analysis. The majority of the soil samples were collected from near surface depths (below pavement) in order to screen soils for CVOC impacts related to surface releases. Additional soil samples were collected from the saturated zone in order to screen soils for CVOC impacts related to subsurface releases. Soil samples were placed on-ice in appropriately labeled laboratory-supplied containers in accordance with standard chain-of-custody procedures and submitted to Con-Test Analytical Laboratory (Con-Test), an Environmental Laboratory Approval Program (ELAP) accredited laboratory. The soil samples were analyzed for VOCs using EPA method 8260.

3.3 Groundwater Investigations

Permanent monitoring wells MW-1 to MW-7C were installed in 1990 by GTI. Permanent monitoring wells MW-08 to MW-15 and RW-1 were installed by ERM between 1993 and 1995. Additionally, ERM installed two temporary monitoring wells TMW-1 and TMW-2 in the eastern area of the Site in 1995. During the 2020 investigation, HRP located MW-2, MW-3, MW-4, MW-6, MW-7B, MW-7C, MW-8, MW-9, MW-10, MW-12, MW-13, MW-14 and RW-1. HRP determined these wells were in good condition and were included during the groundwater sampling events. Monitoring well locations are depicted on Figures 8A and 8B.

In order to better laterally and vertically delineate CVOC impacts to Site groundwater, HRP oversaw Glacier Drilling (Glacier) during the construction of four shallow overburden groundwater monitoring wells and two bedrock monitoring wells to supplement the existing network of monitoring wells.

Overburden Monitoring Well Installation

A total of four shallow permanent overburden groundwater monitoring wells (HRP-1, HRP-2, MW-11R, and MW-15R) were constructed by Glacier in September 2020. The overburden wells were installed using a truck-mounted CME-55 drill rig equipped with a hollow-stem auger. Monitoring wells MW-11R and MW-15R were constructed to replace existing wells which could not be located. MW-11R was installed to evaluate groundwater quality downgradient of previously identified impacts in the area southeast of the main building while MW-15R was installed to evaluate groundwater quality downgradient of the chemical storage building. Monitoring wells HRP-1 and HRP-2 were installed to evaluate groundwater quality downgradient of the main building. Monitoring well locations and the interpreted groundwater flow direction are depicted on Figure 6.

Monitoring wells were constructed of two-inch diameter, schedule 40 PVC solid well pipe riser and 10-slot screen, positioned to intercept the water table. The annular space around each well screen was backfilled with filter sand and sealed with bentonite. Each well was finished with a flush mounted protective cover. Well construction logs can be found in Appendix A.

Bedrock Monitoring Well Installation

Two permanent bedrock monitoring wells (HRP-BR-1 and MW-6BR) were installed by Glacier in September 2020. The bedrock monitoring wells were installed using a truck-mounted CME-55 drill rig equipped with a hollow-stem auger and a two-inch core barrel. HRP-BR-1 and MW-6BR were respectively paired with the shallow overburden monitoring wells HRP-1 and MW-6. Both wells were installed to evaluate groundwater quality in the bedrock aquifer downgradient of the main building. Monitoring well locations are depicted on Figures 8A and 8B.

At each bedrock well the hollow-stem auger was advanced to bedrock refusal and a steel spin casing was installed 5-feet into bedrock and grouted in place. At bedrock well HRP-BR-1, a 4-inch diameter steel spin casing was used. At bedrock well MW-06BR, 4-inch and 5-inch double-lined steel spin casings were used. The grout was allowed to set for one day prior to completing the bedrock well installations. Once the grout set, 2-inch diameter rock core barrel was advanced fifteen feet into the competent rock in five-foot increments. Continuous core sections were retrieved for description, bedrock confirmation, and RQD. At each bedrock monitoring well two-inch diameter schedule 40 PVC solid well pipe riser and 10-slot screen were installed within the 4-inch diameter steel spin casing, positioned to intercept the water table. The annular space around each well screen was backfilled with filter sand and sealed with bentonite. Each well was finished with a flush mounted protective cover. Well construction logs can be found in Appendix A.

Monitoring Well Sampling

All of the newly installed wells were developed in accordance with ASTM standard Guide D 5521 at least 24 hours after installation and at least 7 days prior to sampling. Three rounds of groundwater sampling were performed at the Site in February 2020, June 2020, and October 2020. During the February 2020 and June 2020 events, sampling was performed at 14 existing monitoring wells. During the October 2020 event, sampling was performed at a total of 10 monitoring wells including the six newly installed monitoring wells and four existing monitoring wells. Prior to the sampling

event conducted in October 2020, depth to water measurements were recorded from Site monitoring wells for the purpose of developing a groundwater contour map. Groundwater elevations were measured relative to an arbitrary elevation of 100.00 using survey data from historical reports. Groundwater elevation data is presented in Table 1 and a groundwater contour map is presented in Figure 6.

Groundwater monitoring wells were sampled in general accordance with Environmental Protection Agency (EPA) low-flow techniques. Depth to water and water quality indicator parameters were measured and recorded on low-flow sampling logs included in Appendix A. Groundwater samples were collected after the readings of the water quality parameters had stabilized over time within the following prescribed ranges (percent change, ΔX%, or relative change, ΔX):

- Water depth, Δ0.3 feet,
- pH, Δ0.1S.U.,
- Temperature, Δ3%,
- Specific conductivity, Δ3%,
- Oxidation Reduction Potential (ORP), Δ10mV,
- Dissolved Oxygen (DO), Δ10%, and
- Turbidity, Δ10%.

Groundwater samples were placed in laboratory-provided and preserved bottle ware, stored on ice in coolers, and submitted under proper chain-of-custody to Con-Test. Each groundwater sample was analyzed for CVOCs via EPA Method 8260. Additionally, groundwater samples collected during the June, 2020 sampling event from MW-02, MW-03, MW-04 and MW-08 were analyzed for the CP-51 list VOCs via EPA Method 8260C-D and CP-51 list SVOCs via EPA Method 8270D-E.

The groundwater samples collected for laboratory analysis are listed in the table below. During the initial sampling event conducted in February 2020, monitoring wells MW-01 and MW-07A were determined to have been destroyed. Monitoring wells MW-11 and MW-15 were could not be located during the February 2020 sampling event and were therefore replaced by MW-11R and MW-15R as described above. Monitoring well locations are depicted on Figures 8A and 8B.

GROUNDWATER SAMPLING SUMMARY				
Monitoring Well ID	Screen Setting (ft bg)	Sample Location	Justification	Sample Date(s)
MW-2	2-14	East of compressor building	Evaluate groundwater in area of former soil stockpiles; downgradient of existing WWTP and chemical storage building	2/13/20; 6/2/20; 10/1/20
MW-3	2-14	Southeast of manufacturing building	Evaluate groundwater in area of documented CVOC impacts	2/13/20; 6/2/20; 10/1/20

GROUNDWATER SAMPLING SUMMARY				
Monitoring Well ID	Screen Setting (ft bg)	Sample Location	Justification	Sample Date(s)
MW-4	2-14	Southeast of manufacturing building	Evaluate groundwater in former drum storage area; area of documented CVOC impacts	2/13/20; 6/2/20; 10/1/20
MW-5	2-14	West of manufacturing building	Evaluate groundwater downgradient of manufacturing building (West)	2/13/20; 6/2/20; 10/1/20
MW-6	2-12	South of manufacturing building	Evaluate groundwater downgradient of manufacturing building (South)	2/13/20; 6/2/20
MW-6BR	18.75-28.75	South of manufacturing building	Evaluate bedrock aquifer groundwater downgradient of manufacturing building (South)	10/1/20
MW-7B	4-9	Cleared area west of parking lot	Evaluate groundwater downgradient of oil water separator, former WWTP	2/13/20; 6/2/20
MW-7C	4-9	Cleared area west of parking lot	Evaluate groundwater downgradient of oil water separator, former WWTP	2/13/20; 6/2/20
MW-8	4-14	Southeast of manufacturing building	Evaluate groundwater in former drum storage area	2/13/20; 6/2/20
MW-9	8.6-18.6	Southeast of manufacturing building	Evaluate groundwater in former drum storage area	2/13/20; 6/2/20
MW-10	3-6	North of manufacturing building	Evaluate groundwater upgradient of manufacturing building	2/13/20; 6/2/20
MW-11R	7.5-17.5	South of manufacturing building	Evaluate groundwater downgradient of manufacturing building (South)	10/1/20
MW-12	3-11	At southwestern Site boundary with residences (8243 & 8249 Halsey Road)	Evaluate groundwater downgradient of Site; former WWTP; upgradient of residences	2/13/20; 6/2/20

GROUNDWATER SAMPLING SUMMARY				
Monitoring Well ID	Screen Setting (ft bg)	Sample Location	Justification	Sample Date(s)
MW-13	5-10	West of parking lot near oil/water separator	Evaluate groundwater in area of oil water separator, impacts related to Site stormwater	2/13/20; 6/2/20
MW-14	7-17*	In cleared area east of Site buildings, driveways, and storage areas	Evaluate groundwater downgradient of former soil stockpile area, existing WWTP, and chemical storage building	2/13/20; 6/2/20
MW-15R	4-11	East of manufacturing building	Evaluate groundwater downgradient of chemical storage building	10/1/20
RW-1	6-16*	Southeast of manufacturing building	Evaluate groundwater in former drum storage area	2/13/20; 6/2/20
HRP-1	2.5-7.5	At southwestern Site boundary with residences (8243 & 8249 Halsey Road)	Evaluate groundwater downgradient of Site; former WWTP; upgradient of residences	10/1/20
HRP-2	2.5-12.5	West of entrance to manufacturing building, guard house	Evaluate groundwater downgradient of the Site building (Southwest)	10/1/20
HRP-BR-1	15.5-25.5	At southwestern Site boundary with residences (8243 & 8249 Halsey Road)	Evaluate bedrock aquifer groundwater downgradient of Site; former WWTP; upgradient of residences	10/1/20

Notes: *Screen interval not available from historical reports; estimated based on measured total well depth.

3.4 Soil Vapor Investigations

HRP completed a soil vapor survey in order to evaluate if the historical CVOC groundwater impacts had adversely impacted the air quality within the Site manufacturing/office building. The soil vapor survey consisted of the collection of a total of 16 air samples including 11 sub-slab soil vapor samples, three indoor ambient air samples, and two outdoor ambient air samples. An initial round of soil vapor sampling was conducted in February 2020, consisting of the collection of five sub-slab vapor samples, three indoor ambient air samples, and two outdoor ambient air samples. Based on the initial soil vapor sampling results, five additional sub-slab soil vapor samples were collected in June 2020. Sub-

slab sample locations VP-5, VP-8 and VP-10 were located in close proximity to the 3 former degreasers.

All soil vapor and ambient air samples were collected using 6-liter summa canisters outfitted with 4-hour regulators. Each sample was submitted under chain of custody to Con-Test to be analyzed for the full list of VOCs by EPA Method TO-15. SVI sampling logs, including sample start and stop times and canister pressures, are presented in Appendix A. SVI sampling locations are depicted on Figure 9.

Each soil vapor point was installed using a hammer drill to advance a ¼-inch diameter hole through the concrete slab and into sub-slab soil. Teflon or nylon-lined tubing was inserted into the drill hole, backfilled using glass beads, and sealed at the slab surface using bentonite or modeling clay. Prior to soil vapor sample collection, each vapor point was purged using a PID and a tracer gas test was performed using helium gas and a helium gas detector to test the integrity of the vapor point seal.

Soil vapor and ambient air samples are summarized on the table below.

SOIL VAPOR INTRUSION SAMPLING SUMMARY		
Sample ID	Location	Justification
VP-1	Water treatment area, northeast portion of main building (collected 2/13/2020)	Evaluate potential soil vapor impacts in northeast portion of main building
VP-2	Spray booth, northwest portion of main building (collected 2/13/2020)	Evaluate potential soil vapor impacts in northwest portion of main building
VP-3	Manufacturing area, east-central portion of main building (collected 2/13/2020)	Evaluate potential soil vapor impacts in east-central portion of main building
VP-4	Tool room, southeast portion of main building (collected 2/13/2020)	Evaluate potential soil vapor impacts in southeast portion of main building
VP-5	Main production floor, power form area, southwest portion of main building (collected 2/13/2020)	Evaluate potential soil vapor impacts in southwest portion of main building
VP-6	Manufacturing area, northeast portion of main building (collected 6/2/2020)	Evaluate potential soil vapor impacts in northeast portion of main building
VP-7	Manufacturing area, central portion of main building (collected 6/2/2020)	Evaluate potential soil vapor impacts in western portion of main building
VP-8	Manufacturing area, west-central portion of main building (collected 6/2/2020)	Evaluate potential soil vapor impacts in northwestern portion of main building
VP-9	Manufacturing area, south-central portion of main building (collected 6/2/2020)	Evaluate potential soil vapor impacts in south-central portion of main building

SOIL VAPOR INTRUSION SAMPLING SUMMARY		
Sample ID	Location	Justification
VP-10	Locker room, southern portion of main building (collected 6/2/2020)	Evaluate potential soil vapor impacts in southern portion of main building
VP-11	Manufacturing area, southeast portion of main building (collected 6/2/2020)	Evaluate potential soil vapor impacts in southeast portion of main building
INT-1	Manufacturing area, north-central portion of building (collected 2/13/2020)	Evaluate indoor air quality in manufacturing area, north-central portion of building
INT-2	Manufacturing area/inspection area, southeastern portion of main building (collected 2/13/2020)	Evaluate indoor air quality in manufacturing area, southeastern portion of building
INT-3	Office area, southern portion of main building (collected 2/13/2020)	Evaluate indoor air quality in office area, southern portion of building
EXT-UP	West of main building entrance on Gibson Road	Evaluate air quality upwind of the Site buildings/operations
EXT-DOWN	East of compressor building	Evaluate air quality downwind of the Site buildings/operations

3.5 Ecological Investigations

HRP reviewed the NYSDEC ERM online tool to identify fish and wildlife resources within a one-half mile radius of the Site. Specifically, HRP reviewed the following ERM data layers applicable to the Site FWRIA:

- Waterbody Classifications for Rivers/Streams;
- Waterbody Classifications for Lakes;
- Sate Regulated Freshwater Wetlands;
- National Wetlands Inventory;
- Significant Natural Communities; and
- Rare Plants or Animals.

In addition, HRP conducted a review of available USGS topographic maps and aerial imagery of the Site to identify areas within a half-mile radius that may provide habitat for local flora and fauna including woodlands, fields, tidal and freshwater wetlands, and streambeds. Field reconnaissance at the Site and surrounding area was also performed as part of on-site field work.

A topographic map showing fish and wildlife resource features within one-half mile of the Site is depicted on Figure 4.

4.0 DISCUSSION OF RESULTS

To identify the nature and extent of CVOC impacts at the Site, HRP submitted soil, groundwater, and air samples to Con-Test, an ELAP certified laboratory, for CVOC analysis. Laboratory results are included in Appendix B. Detected chemical compounds in the various media sampled as part of the RI and the analytical results are presented in Tables 2 through 4.

Compounds detected in the various media tested during this RI were compared to the following New York State standards, criteria, and soil guidance values (SCGs):

- NYSDEC Regulation, 6 NYCRR Subpart 375-6, "Remedial Program Soil Cleanup Objectives" which applies to the development and implementation of the remedial programs for soil and other media set forth in subparts 375-2 through 375-4 [Inactive Hazardous Waste Disposal Site Remedial Program, Brownfield Cleanup Program, and Environmental Restoration Program] and includes the soil cleanup objective tables developed pursuant to ECL 27-1415(6).

- To be consistent with the current use of the Site as an industrial metal parts manufacturer soil analytical results for this investigation were compared against NYSDEC 6 NYCRR Part 375-6 Unrestricted Use (UU), Protection of Groundwater (PGW), Commercial Use (CU), and Industrial Use (IU) Soil Cleanup Objectives (SCOs). It should be noted that UUSCOs and PGWSCOs are equivalent for each of the CVOCs detected in Site soils.

- NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1); Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations dated October 1993; Revised June 1998; ERRATA Sheet dated January 1999; Addendum dated April 2000; and Proposed Addendum dated 2021.

4.1 Subsurface Soil

Nature and Extent of Impacts

CVOCs were not detected at concentrations exceeding IUSCOs in any of the soil samples collected. CVOCs, including TCE, cis-1,2-DCE, and vinyl chloride, were detected at concentrations exceeding UU/PGW SCOs in 19 of the 74 soil samples collected. CVOCs were detected above laboratory reporting limits in 43 of the 74 soil samples collected. Soil sampling analytical results are presented on Table 2. Soil boring locations are depicted on Figure 7A and soil sample results for CVOCs exceeding UU/PGW SCOs are depicted on Figure 7B. A discussion of the analytical soil sample results collected from the individual study areas is presented below.

Chemical Storage Building

HRP collected 2 soil samples from within the chemical storage building and 18 samples from the immediate area outside of the building. All of the indoor soil samples had CVOC concentrations below UUSCOs. Five of the 18 outdoor soil samples had detected concentrations of CVOCs above the UUSCOs. The detected compounds included TCE (ND – 1,300 ug /kg), cis-1,2-DCE (ND – 19,000

ug/kg), trans-1,2-DCE (ND – 1,100 ug/kg) and vinyl chloride (ND – 1,200 ug/kg). No soil samples collected near the chemical storage building had detected concentrations of CVOCs above the CUSCOs.

Compressor Building

Soil samples were collected in 1993 by ERM on the west side of the compressor building, in the area of the former waste oil USTs and above ground solvent recycling tank (described in section 1.5). These soil samples were reportedly non-detect for VOCs and PCBs. TPH and metals were detected in multiple soil samples in this area of the Site. Sample BB-05A (0-0.5 ft bg) has a reported TPH concentration of 95,500 mg/kg. Based on the TPH results and reported surface soil staining, ERM stated that discrete areas of soil were impacted with petroleum, but this region of the Site was not indicative of a CVOC source area. The concentrations of metals in these soil samples are consistent with the Oneida County background concentration values published by the NYSDEC in Appendix D: Concentrations of Selected Analytes in rural New York State Surface Soils. The TPH sample results prompted additional soil sampling near the compressor building (described in section 1.5). Approximately 110 yards of TPH impacted soil was excavated from the eastern area of the compressor building and were disposed offsite as non-hazardous waste. ERM stated the post excavation soil samples were below the TAGM 4046 TPH cleanup goal of 500 mg/kg. The excavated area was lined with geotextile fabric and backfilled to grade with clean fill. The five soil samples collected by HRP on the east side of the compressor building completed the delineation of this area of the Site. No samples collected from this area of the Site had detected VOCs in exceedance of the UUSCOs and no staining was observed.

Ten soil samples were collected from the paved area to the south of the compressor building during the 2020 investigation. All samples had detected concentrations of CVOCs above the UUSCO with the exception of EXT-W-1 (2-4ft bg), located near the southwest corner of the compressor building. The shallow soil samples (1-4 ft bg) in this paved area collected from EXT-W-2 (1-3 ft bg), EXT-W-3 (2-4 ft bg) and EXT-W-4 (2-4 ft bg) had detected TCE concentrations (1,900 ug/kg, 1,400 ug/kg, and 500 ug/kg, respectively) above the UUSCOs. The deeper soil samples (5-8 ft bg) collected from EXT-W-3 (5-7 ft bg), EXT-W-5 (6-8 ft bg) and EXT-W-6 (5-7 ft bg) had detected TCE concentrations (520 ug/kg, 6,400 ug/kg, and 4,400 ug/kg, respectively) above the UUSCOs. The deeper sample interval for EXT-W-4, collected at a depth of 5-7 feet, had a TCE concentration below the UUSCO. None of the concentrations were above the CUSCOs.

Former Drum Storage Area

ERM collected subsurface soil samples in the former drum storage area during the 1993 and 1995 investigations (described in Section 1.5). The VOC, SVOC and TPH results from the soil samples indicated that the subsurface in the drum storage area had been impacted by a surface release of waste oil containing chlorinated solvents. ERM excavated 240 cubic yards of impacted soil and transported the material offsite for disposal as hazardous waste. Confirmatory samples collected post excavation collected from the west wall of the excavation had reported concentrations of TPH above the cleanup objective. These soils were left in place as they could not be safety removed due to Site equipment and structures near the excavation. The excavation was lined with geotextile

fabric to indicate the boundaries of the excavation. The area was then backfilled with clean fill and brought up to grade with gravel.

HRP collected multiple soil samples to complete the delineation of subsurface soil CVOC impacts in the former drum storage area. All soil samples collected along the accessible boundaries of the former drum storage area were below the VOC UUSCOs. Samples collected within the excavated portion of the drum storage area were also below the VOC UUSCOs. In total, 14 soil samples collected east and north of the former drum storage area had detected concentrations of COVCs above the UUSCOs. One sample, EXT-SW-10 (6-8 ft bg), had a detected concentration of TCE (380,000 ug/kg) in exceedance of the CUSCOs but below the IUSCOs.

Former Wastewater Treatment Plant

The former wastewater treatment plant was investigated, remediated, and demolished by ERM in 1995 (described in section 1.5). During the 2020 investigation HRP collected four soil samples from the area of the former WWTP. Samples EXT-NW-1 (1-3 ft bg), EXT-NW-2 (1-3 ft bg), and EXT-NW-3 (1-3 ft bg) were non-detect for VOCs. Sample EXT-NW-2 (5-7 ft bg) had a detected concentration of cis-1,2-DCE (200 ug/kg), below the UUSCO. Sample EXT-NW-2 (5-7 ft bg) was partially saturated due to the shallow depth to groundwater.

Oil Water Separator

ERM had investigated the sediment on the influent and effluent sides of the oil water separator and reported that it was performing at an adequate level. The OWS was cleaned and upgraded following a spill in 1995, detailed in section 1.5. During the 2020 investigation, HRP collected a surface soil sample (OWS-1 [0-2 ft bg]) from the areas immediately down gradient of the OWS. The sample was non-detect for VOCs.

Fate and Transport

Based on field observations and laboratory analytical results, the CVOC impacts identified in Site soils are not indicative of a source area or source material as defined by 6 NYCRR Part 375. No grossly contaminated soils (in the form of stained soils, elevated PID readings, or odors), non-aqueous phase liquids (NAPL), or solid/semi-solid hazardous substances were observed in Site soils during boring installation.

Chemical Storage Building

The five soil samples with CVOC concentrations in exceedance of the UUSCOs were collected at depths ranging from 5 to 11.5 ft bg, all of which are below the groundwater table (3.25 ft bg), as measured in MW-15R. The shallowest depth to water, measured on 7/23/1997, near the chemical storage building was 1.58 ft bg (MW-15/MW-15R). Neither the indoor samples, nor the samples collected immediately downgradient of the chemical storage building (INT-SB-4, INT-SB-5, EXT-NE-1, EXT-NE-2 and Ext-NE-4) had detected concentrations of CVOCs above the UUSCOs. These results indicate that the chemical storage building is not a likely source of the residual CVOC impacts detected in soil located in the immediate area around MW-15R. Sample EXT-NW-8 (8-10 ft bg) was

the only sample with a detected concentration of TCE (1,800 ug/kg) above the UUSCO. Sample EXT-NE-8 (3-5 ft bg) was collected at the groundwater interface above EXT-NE-8 (8-10 ft bg) and was non-detect for all VOC compounds. These results are not indicative of a surface release of chlorinated solvents. The likely source of the residual CVOC soil impacts is the limited cross gradient movement of dissolve phase CVOC groundwater impacts may be originating from the former drum storage area or paved area south of the compressor building.

Compressor Building

All soil samples collected from the east side of the compressor building during the 2020 investigation were either non-detect or had detected CVOC concentrations below the UUSCOs, likely due to the 1995 excavation performed by ERM in this area of the Site. The aerial and vertical distribution of CVOC soil detections in the paved area, south of the compressor building, are indicative of residual impacts related to a historical surface release of chlorinated solvents, likely in the area between EXT-W-2, EXT-W-3, and EXT-W-5. The compressor building is not the likely source of the residual CVOC impacts in this area of the Site. Three of the four samples closest to the southern portion of the compressor building, (EXT-W-1 [2-4 ft bg], EXT-W-4 [5-7 ft bg], and FB-1 [3-5 ft bg]) all had detected concentrations of TCE below UUSCOs. EXT-W-4 (2-4 ft bg) had a detected TCE concentration of 500 ug/kg, slightly above the UUSCO value of 470 ug/kg. This area of CVOC impacted soil has been fully delineated and soil samples collected in all accessible locations around the boundary of this paved area have CVOC concentrations below the UUSCOs.

Former Drum Storage Area

CVOC impacts to soil in the former drum storage area were largely confined to the saturated zone, indicating concentrations of CVOCs detected in subsurface soils are related to residual and historical groundwater impacts and not an active source. The shallowest depths to water near the former drum storage area were 3.91 ft bg (MW-8 – measured on 1/30/1996), 4.87 ft bg (MW-9 – measured on 1/30/1996) and 6.31 ft bg (MW-04 – measured on 10/20/1995). Soil impacts observed above the water table may be attributed to CVOCs in groundwater which have sorbed to soils through fluctuation of the groundwater table (i.e., groundwater smear zone). While some CVOC impacts were observed in soils above the water table, CVOC concentrations were generally greater in soils from the saturated zone. Soil samples collected from EXT-SW-10 (6-8 ft bg and 8-10 ft bg), which contained the highest TCE soil concentrations (380,000 ug/kg and 150,000 ug/kg, respectively) were collected from depths that are periodically below the groundwater table. There is no indication that CVOC impacts detected in onsite soils near the former drum storage area are migrating to the groundwater. Groundwater samples collected from wells located within and downgradient of the former drum storage area show a significant decrease in CVOC concentrations between 1996 (post groundwater pump and treat system installation) and 2020. The groundwater results for the former drum storage area are provided below. The residual CVOC impacted soil does not appear to represent an ongoing source of CVOC groundwater contamination.

Former Wastewater Treatment Plant

Based on the soil samples collected from the former WWTP, this area is not considered to be an active source of CVOCs. The shallow soil samples were non-detect for CVOCs and the deeper soil

sample (EXT-NW-2 [5-7 ft bg]) had detected CVOC concentrations below the UUSCOs. Sample EXT-NW-2 (5-7ft bg) was collected at a depth that was periodically below the groundwater table. The shallowest depths to water near the former WWTP were 3.37 ft bg (MW-7A – measured on 9/27/93), 3.57 ft bg (MW-7B – measured on 4/23/1997) and 4.16 ft bg (MW-7C – measured on 1/30/1996). The trace residual CVOC soil detections likely represent residual CVOC groundwater impacts related to the former sludge pits.

Oil Water Separator

Based on all available data collected to date, the soil in the area of the OWS is not impacted with CVOCs.

4.2 Groundwater

Nature and Extent of Impacts

CVOCs were detected in exceedance of TOGS 1.1.1 Class GA criteria in 16 of 38 groundwater samples collected. CVOCs including 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethane (1,1-DCA), trans-1,2-dichloroethylene (trans-1,2-DCE), tetrachloroethylene (PCE), TCE, cis-1,2-DCE, and vinyl chloride. CVOCs were not detected above the Class GA criteria in either of the bedrock monitoring wells (HRP-BR-1 and MW-6BR), and the overburden monitoring wells (HRP-1, HRP-2, MW-06, MW-11R and MW-12) located downgradient of the Site building. All groundwater samples collected during the June 2020 sampling event were non-detect for the CP-51 non-chlorinated VOCs and aromatic SVOCs. Sampling analytical results are presented on Table 3 and groundwater sampling locations are depicted on Figure 8A. The extent of CVOC concentrations exceeding TOGS 1.1.1 Class GA criteria is depicted on Figure 8B. A discussion of the analytical groundwater sample results, collected from wells located within the individual study areas, is presented below.

Chemical Storage Building

ERM installed MW-15 to assess the groundwater conditions downgradient of the chemical storage building. MW-15 was last sampled on 7/21/1997 and the groundwater sample had reported concentrations of TCE (30 ug/L) trans-1,2-DCE (31 ug/L) and vinyl chloride (400 ug/L). The reported total VOC concentrations and ratio of TCE to vinyl chloride in MW-15 remained relatively constant from 1995-1997. A temporary well, TMW-2, installed and sampled during the 1995 ERM investigation (described in section 1.5) was located adjacent to the southern side of the chemical storage building, directly upgradient of MW-15 (Figure 2B). This temporary well was reportedly non-detect for all VOCs. HRP was unable to locate MW-15 and installed MW-15R as a replacement during the 2020 investigation. The groundwater sample collected from MW-15R on 10/2/2020 was non-detect for TCE, and had detected concentrations of cis-1,2-DCE (3,800 ug/L) and vinyl chloride (1,300 ug/L). MW-15/MW-15R is the only well location that has shown an increase in degradation compound-CVOC concentrations compared to previous data; however, parent compound CVOcs (e.g., 1,1,1-TCA, PCE and TCE) were not detected.

Compressor Building

Groundwater CVOC concentrations in MW-02 have remained stable since 1997 and have likely reached asymptotic levels. According to the groundwater flow interpretation, shown on Figure 6, MW-02 is located upgradient of the compressor building and the paved area south of the compressor building and MW-14 is located cross-gradient of the compressor building. Historically, groundwater samples collected from MW-2 had reported concentrations of TCE, cis-1,2-DCE and vinyl chloride above the class GA groundwater criteria. The initial groundwater sample collected by ERM on 9/27/1993 had reported concentrations of TCE (1,300 ug/L), cis-1,2-DCE (8,800 ug/L) and vinyl chloride (380 ug/L). The groundwater pump and treat system was installed and operated on the Site from 1996 to 1999. MW-02 was directly upgradient of the groundwater treatment system. ERM last sampled MW-2 on 7/21/1997 and the groundwater sample had reported concentrations of TCE (48 ug/L). The groundwater samples collected by HRP on 10/2/2020 had detected concentrations of TCE (8.8 ug/L), cis-1,2-DCE (58 ug/L) and vinyl chloride (27 ug/L). The groundwater sample collected on 6/2/2020 from MW-02 was non-detect for all CP-51 non-chlorinated VOC and aromatic SVOC compounds. Groundwater samples collected from MW-14 have consistently been non-detect for VOCs.

Former Drum Storage Area

Groundwater CVOC concentrations in wells located in the former drum storage area (MW-04, MW-08, MW-09 and RW-1) and downgradient well MW-03, have also remained stable since 1997 and have likely reached asymptotic levels. Historically, groundwater samples collected from MW-03, MW-04, MW-08 and RW-1 wells had reported concentrations of primarily TCE, and other CVOCs above the class GA groundwater criteria.

Well ID	Total CVOC concentration (1997) (ug/L)	Total CVOC concentration (2020) (ug/L)
MW-03	135.7	123.9
MW-04	870	82.7
MW-08	11,000	8.2
MW-09	ND	ND
RW-1	43,000	1.1

Groundwater samples collected in 2020 from MW-03, MW-04, and MW-08 have concentrations of TCE above the Class GA criteria. The samples collected from MW-03 and MW-04 had additional CVOC compounds at detected concentrations above the Class GA criteria. The groundwater samples collected on 6/2/2020 from MW-03, MW-04 and MW-08 were non-detect for all CP-51 non-chlorinated VOC and aromatic SVOC compounds. All 2020 groundwater sample results are presented in Table 3. The groundwater samples collected on 6/2/2020 from RW-1 had a detected concentration of TCE of 1.1 ug/L, which is below the Class GA criteria. Groundwater samples collected from MW-09 have consistently been non-detect for VOCs.

Oil water Separator

Groundwater samples collected from MW-13, located in close proximity to the OWS, were reportedly non-detect for VOCs during each sampling event completed between 1993 and 1996. The groundwater samples collected during the 2020 investigation were also non-detect for VOCs. Based on all data collected to date, the groundwater in the area of the OWS was not impacted by VOCs.

Former Wastewater Treatment Plant

Following the demolition of the WWTP, ERM collected groundwater samples periodically from MW-7A, MW-7B and MW-7C from 1995 to 1997. MW-7A and MW-7C were non-detect for VOCs during each groundwater sampling event from 1995 to 1996. On 4/23/1997 ERM collected the final groundwater sample from MW-7B. The sample had reported detections of TCE (12 ug/L) and vinyl chloride (62 ug/L). HRP collected samples from MW-7B and MW-7C during the 2020 site investigation. MW-7A was not located during the investigation. The TCE and cis-1,2-DCE concentrations were detected above TOGS 1.1.1 Class GA criteria in MW-7C.

Downgradient Overburden and Bedrock Groundwater

Groundwater samples collected from downgradient overburden monitoring wells HRP-1, HRP-2, MW-06, MW-12, and MW-11R had concentrations that were below the class GA criteria for all analyzed VOC compounds. Groundwater samples collected from all onsite bedrock wells (MW-6BR and HRP-BR-1) were non-detect for all analyzed VOC compounds.

Fate and Transport

Based on laboratory analytical results from the three 2020 groundwater sampling events, CVOC impacts are not migrating downgradient of the Site through the overburden or bedrock aquifers. The TCE concentrations in groundwater have significantly decreased across the entire Site. Other CVOC concentrations related to the breakdown of TCE (cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride) have significantly decreased in the majority of onsite monitoring wells.

Chemical Storage Building

The 2020 groundwater sample results indicate that the TCE groundwater impacts have degraded to its daughter products (1,2-cis-DCE and vinyl chloride). No shallow soil samples above the water table (0-3 ft bg) in the northeast portion of the Site had detected COVC concentrations above the UUSCOs, indicating no evidence of a localized surface release of chlorinated solvents in this area. The groundwater sample collected in 1995 from TMW-2, occurred before the groundwater pump and treat system was active and represents the onsite groundwater conditions before the CVOC source was remediated. The non-detect groundwater sample from TMW-2, located directly downgradient from the chemical storage building and upgradient from MW-15 delineates the northeastern boundary of the CVOC groundwater impacts. The reported results from TMW-2 and the soil samples collected by HRP in 2020 show that the chemical storage building is not a source of CVOC subsurface impacts. The reduction in TCE (from 39 ug/L to ND) indicates current CVOC groundwater concentrations are indicative of residual groundwater impacts and not an ongoing source.

Limited cross gradient migration of the dissolved phase CVOC groundwater plume, likely originating from the southeast source areas, has impacted the soil and groundwater near MW-15R. The area around MW-15R has periodically been hydraulically downgradient of the CVOC source area due to seasonal variations in groundwater elevations observed between 1993 and 2020. As indicated above, MW-15/MW-15R is the only well location that has shown an increase in CVOC concentrations for degradation-related constituents compared to previous data. The groundwater sample collected from MW-15R on 10/2/2020 represents the first and only sample collected from the well post installation/development. When the groundwater field parameters stabilized for MW-15R during the October 2020 sample event, the turbidity was recorded as 60 NTU. All other wells that were sampled during that event had recorded turbidities of 5-10 NTU across the Site. The soil samples collected from the MW-15R boring (MW-15R [8-10 ft bg] and MW-15R [10-11.5 ft bg]) (both depths below the groundwater interface in this area of the Site which is 3.25 ft bg) had detected concentrations of cis-1,2-DCE and vinyl chloride above the UUSCOs and laboratory reporting limit respectively. Therefore, the suspended solids in the relatively turbid groundwater sample collected from MW-15R may have contributed to the groundwater CVOC concentrations detected. A groundwater sample with lower turbidity could potentially have lower CVOC concentrations. MW-15R should be re-developed prior to any additional sampling, to determine if the cis-1,2-DEC and vinyl chloride concentrations are representative of current aquifer conditions. MW-15R represents the northern boundary of the CVOC plume, and the plume does not appear to have migrated past the northern side of the main manufacturing building. Based upon existing field data, the groundwater samples collected from MW-01 and MW-10, located cross-gradient of MW-15R, were consistently reported as non-detect for VOCs from 1993-1996. Groundwater samples collected from MW-10 on 2/13/2020 and 6/2/2020 during the 2020 investigation were both non-detect for VOCs. HRP could not locate MW-01 during the 2020 investigation.

Compressor Building

The detected TCE concentration in MW-02 has decreased from 48 ug/L in 1997 to 8.8 ug/L in 2020 and indicates that no CVOC source material is likely present in the vicinity of the compressor building based upon existing data. The concentrations of cis-1,2-DCE and vinyl chloride detected in each of the three sampling events conducted by HRP in 2020 also show a steady decrease in CVOCs. The sample results indicate that CVOCs in groundwater are naturally attenuating via the natural degradation of TCE and its daughter products. The CP-51 VOC and SVOC non-detect groundwater sample results further support the current CSM that residual soil impacts are not partitioning to the onsite groundwater. Soil historically impacted with TPH in this area of the Site was remediated to the TAGM 4046 standard of 500 mg/kg. Residual TPH soil impacts at concentrations below 500 mg/kg may be present in this region of the Site, however no petroleum related compounds were detected in the groundwater sample collected from MW-02. The 2020 CP-51 VOC and SVOC MW-02 groundwater sample results are in good agreement with groundwater samples collected by ERM from 1995-1997 which were also consistently non-detect for all non-chlorinated VOC compounds.

Former Drum Storage Area

The groundwater samples collected from wells located within the former area of influence of the pump and treat system and associated subsurface trench had a four-order-of-magnitude decrease in CVOC concentrations since 1997. The total COVC concentration detected in RW-1 decreased from

43,000 ug/L to 1.1 ug/L over a 23-year period (1997-2020). The analytical groundwater results do not indicate that the residual CVOC soil impacts in the former drum storage area are being partitioned to groundwater. The total CVOC concentrations in monitoring wells located in the immediate area down/cross gradient of the EXT-SW-10, (MW-04, MW-08, MW-09 and RW-1) have either significantly decreased or have remained non-detect. The groundwater results strongly suggest that the CVOC impacts are being attenuated via reductive dechlorination and will likely continue to decrease over time due to the absence of an ongoing CVOC source.

There is no evidence of petroleum related groundwater impacts in the former drum storage area. Historically, all wells in the former drum storage area were consistently non-detect for non-chlorinated VOCs. The CP-51 VOC and SVOC groundwater samples collected from MW-03, MW-04 and MW-08 were also non-detect. These historical and recent groundwater results indicate that the petroleum impacts observed near the former USTs on the west side of the compressor building were limited to the surface soils and do not indicate a significant petroleum release.

Oil Water Separator and Former WWTP

The groundwater samples collected from MW-13, located immediately downgradient of the OWS indicate that this region of the Site is not adversely impacted by CVOCs. The CVOC detected concentrations in samples collected from MW-7C do not appear to be related to the CVOC impacts identified in the area east of the Site building. This is supported by multiple rounds of samples from MW-7B and MW-13 (located between MW-7C and the Site building) in which CVOCs were not detected. Trace amounts of chlorinated solvents may have reached the former WWTP and could have been released to the subsurface via the sludge drying pits. The WWTP was remediated in 1995 by ERM and any potential CVOC source material was likely removed during the demolition of the sludge pits. The residual CVOC impacts detected in groundwater samples collected from MW-7C are not indicative of an ongoing source and are unlikely to migrate off-site based upon existing data.

Downgradient Overburden and Bedrock Groundwater

All groundwater samples collected from the overburden monitoring wells located downgradient of the main Site building (MW-06, MW-11R, MW-12, HRP-1 and HRP-2) and all bedrock wells (HRP-BR-1 and MW-06-BR) showed no evidence of CVOC impacts. Groundwater samples collected during previous investigations (1993-1997) from MW-06, MW-11 and MW-12 have consistently been reported as non-detect for VOCs. These results indicate that no offsite migration of CVOCs has occurred based upon existing data.

4.3 Soil Vapor

Nature and Extent of Impacts

VOCs were detected in each of the 16 air samples collected including the 11 sub-slab soil vapor samples, three indoor ambient air samples, and two outdoor ambient air samples. For the 2/2020 SVI sampling event, TCE and cis-1,2-DCE were detected at concentrations of 140 micrograms per cubic meter (µg/m^3) and 36 µg/m^3 respectively in soil vapor sample VP-5 and 0.8 and 1 µg/m^3 in VP-1. Samples VP-1 and VP-5 were collected from active manufacturing areas. For the 6/2020 SVI

sampling event, TCE was detected at a concentration of 1.1 µg/m^3 in sample VP-10. Sample VP-10 was collected from the office area. TCE and cis-1,2-DCE were not detected in any other soil vapor samples. TCE was detected at a concentration of 2.3 µg/m^3 in indoor air sample INT-3, located in the same office area as VP-10. TCE and cis-1,2-DCE were not detected for any other indoor air samples. Vinyl chloride was not detected in any of the air samples collected. Soil vapor sample results are presented on Table 4 and soil vapor and air sample locations are depicted on Figure 9.

The SVI sampling results were in compliance with the NYSDOH SVI matrix with the exception of VP-5. However, the Site is an active industrial facility and is within compliance of the Occupational Safety and Health Administration (OSHA) permissible exposure limits (PELs) in any of the indoor air samples collected. The NYSDOH indoor air criteria should not be applied to this facility/Site.

Fate and Transport

Four of the CVOCs detected in the SVI samples, (1,1,1-TCA, TCE, Carbon Tetrachloride and cis-1,2-DCE), are listed in the 2017 NYSDOH Soil Vapor/Indoor Air Matrix. Based on the SVI results, only sample VP-5, with a concentration of 140 ug/m3 for TCE, would trigger a NYSDOH recommendation for mitigation. During the subsequent soil vapor sampling event, samples VP-9, VP-10, and VP-11 were collected in close proximity to sample VP-5. Both VP-9 and VP-11 were non-detect for TCE, while sample VP-10, located less than 80 feet downgradient from VP-5, had a detected TCE concentration of 1.1 ug/m3. Indoor soil boring locations INT-SB-1 (1-3 ft bg) and INT-SB-2 (1-3 ft bg) had detected TCE concentrations of 14 ug/kg and 12 ug/kg, respectively, significantly below the UUSCO threshold of 470 ug/kg. These findings collectively indicate that there is no evidence of a surface or near-surface release of TCE within the building.

Upon thorough examination of available historical Site documentation, it was determined that Freon 113 was not used in any on-site industrial processes. The indoor soil boring locations INT-SB-1 (1-3 ft bg) and INT-SB-2 (1-3 ft bg) were non-detect for Freon 113. The groundwater sample collected from HRP-2, the downgradient monitoring well closest to VP-5, was also non-detect for Freon 113. All indoor air samples were also non-detect for Freon 113. Consequently, the indoor air, groundwater, and soil sample findings in close proximity to VP-5, which exhibited a concentration of 56,000 ug/m3 for Freon 113, do not suggest a surface or near-surface release of Freon 113. Subsequent sub-slab soil vapor samples located near VP-5 (VP-9, VP-10, and VP-11) indicated significantly lower concentrations of Freon 113 (1,000 ug/m3, 190 ug/m3, and non-detect, respectively). These results support the conclusion that the elevated Freon 113 concentration observed in VP-5 was likely an anomalous result.

The history of the Site's use of chlorinated solvents (which was discontinued in the 1990s), and the nature and extent of CVOC concentrations in soil and groundwater are indicative of residual impacts from historical spills, and not an ongoing release. Further, there is no evidence of groundwater impact at downgradient locations in shallow or deeper groundwater at the Site and no evidence of off-site migration of Site-related CVOCs. Therefore, with no evident migration of CVOCs in the subsurface there is no apparent source of future migration of CVOC concentrations to off-site properties through soil vapor and this potential exposure pathway is not anticipated.

5.0 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT

A qualitative human health exposure assessment was performed to evaluate the potential risk (if present) to receptors from Site-related contaminants. This assessment was performed for current and future conditions.

An exposure pathway describes how an individual may be exposed to contaminants originating from the Site. As defined by the NYSDEC, an exposure pathway has five elements: 1) a contaminant source, 2) contaminant release and transport mechanisms, 3) a point of exposure, 4) a route of exposure, and 5) a receptor population. An exposure pathway is complete when all five elements of an exposure pathway exist. An exposure pathway is considered a potential pathway when one or more of the elements currently does not exist but could in the future.

Exposure assessments are discussed below, organized by environmental media.

5.1 Soil

The five exposure pathway elements for on-site soils are evaluated below:

Exposure Pathway Element	Analysis
Contaminant Source	CVOC impacts to Site soils have been thoroughly delineated and are limited to subsurface soils, the majority of which are under paved surfaces. CVOC impacts to soil are not indicative of source material as defined by 6 NYCRR Part 375 and are likely related to residual CVOC impacts in Site groundwater.
Contaminant Release and Transport Mechanism	Contaminants in on-site soils could transport to an exposed population via volatilization into the soil vapor or leaching into the groundwater.
Point of Exposure	There is currently no direct exposure pathway to impacted soils as impacts are limited to subsurface soils, the majority of which are under paved surfaces and no intrusive activities are occurring on-site that disturb soils and generate inhalable dust. During possible future development or remedial activities, specifically disturbance of soils, the potential for exposures to subsurface and surface soils would increase for on-site workers, utility workers, trespassers, and visitors.
Route of Exposure	Potential routes of exposure to soils include dermal contact, ingestion, and inhalation of soil particulates.
Receptor Population	The Receptor population is limited to future Site workers.

Based on the above analysis an exposure pathway is not expected to exist unless future construction activities take place which disturb on-site subsurface soils.

5.2 Groundwater

The five exposure pathway elements for the overburden and bedrock groundwater on and around the Site are evaluated below:

Exposure Pathway Element	Analysis
Contaminant Source	CVOC impacts to groundwater are generally limited to the overburden aquifer in the area southeast of the manufacturing building and are understood to be residual impacts related to historical releases. CVOC impacts have not been identified in bedrock groundwater.
Contaminant Release and Transport Mechanism	Groundwater flows west-southwest at a hydraulic gradient of 0.015 ft/ft; however, based on the nature and extent of CVOC impacts during 2020 sampling events, CVOCs are not migrating off-site and are not expected to migrate off-site based on decades of monitoring that demonstrates a stable to shrinking plume exhibiting degradation of parent compounds indicative of natural attenuation. During transport it is expected that the concentrations of contaminants in the groundwater will reduce due to natural attenuation and dilution.
Point of Exposure	There is currently no direct exposure pathway to groundwater contamination at or around the Site. The Site and surrounding area are served by public drinking water sourced from Hinckley Reservoir located approximately 18 miles northeast of the Site and the closest operational public water supply wells are located at the Westmoreland Water District, approximately 3.5 miles west of the Site. Receptors could come into contact with on-site groundwater if private wells are installed at impacted locations on the property. An additional potential exposure exists if ground intrusive activities are completed at the Site. During possible future development or during remedial action, the potential for direct exposure to impacted groundwater would increase for on-site workers.
Route of Exposure	Potential routes of exposure to groundwater include dermal contact and ingestion of groundwater.
Receptor Population	The receptor population is limited to future Site workers or occupants.

Based on the above analysis an exposure pathway is not expected to exist unless on-site construction activities take place in which impacted groundwater is encountered or if a new water supply well is constructed in an impacted area at the Site.

5.3 Soil Vapor

The five exposure pathway elements for the soil vapor on and around the Site are evaluated below:

Exposure Pathway Element	Analysis
Contaminant Source	Based on compounds detected, CVOC impacts exist in soil vapor beneath the slab of the main Site building.
Contaminant Release and Transport Mechanism	Based on groundwater results from monitoring wells downgradient/crossgradient of on-site CVOC detections, CVOC impacts are not migrating to off-site groundwater. There are no identified preferential vapor migration pathways that would facilitate transport of vapor phase CVOCs from locations underneath the Site building or identified impacted groundwater to off-site properties. Therefore, without a source of CVOC migration (e.g., in groundwater or soil vapor) to off-site properties soil vapor migration onto off-site properties is not anticipated.
Point of Exposure	Data collected to date indicates soil vapor intrusion may be occurring in some areas of the building; however, low detections of CVOCs detected in indoor air samples were below OSHA PEL air quality standards applicable to the Site.
Route of Exposure	Potential routes of exposure to soil vapor includes the inhalation of contaminants in indoor air.
Receptor Population	The receptor population is limited to Site workers and occupants, visitors, and future Site workers or occupants.

Based on the above analysis an exposure pathway is expected to exist; however, based on all available data collected, no impacts to indoor air above acceptable standards exist.

6.0 FISH AND WILDLIFE RESOURCES IMPACT ANALYSIS

HRP's review of the NYSDEC ERM and other available maps and resources identified the following ecologically significant areas within a one-half mile radius of the Site.

- Two areas listed on the National Wetlands Inventory are located within Site boundaries. The area identified as PSS1E is an approximately 5.8-acre Freshwater Forested/Shrub Wetland located approximately 100 ft northeast and upgradient of Site buildings. The area identified as PEM1E is an approximately 1.1-acre Freshwater Emergent Wetland located approximately 700 ft west of Site buildings (across Gibson Road).

- An unnamed tributary which runs west to Oriskany Creek is located approximately 1,500 feet to the southwest and downgradient of the southern Site boundary.

- An unnamed tributary which runs east to Mud Creek is located approximately 1,900 ft to the northwest and upgradient of the eastern Site boundary.

- A state regulated freshwater wetland, identified as UW-8, is located approximately 1,500 feet south of the southern Site boundary.

The Site and surrounding area are located in a semi-rural setting and ecological features are limited to wooded areas with the exception of the National Wetland Inventory areas stated above. Based on the nature and extent of soil and groundwater contamination, the ecologically significant areas described above are not close enough to the Site to be impacted.

A topographic map showing fish and wildlife resource features within one-half mile of the Site is depicted on Figure 4.

Based on the absence of surface water bodies, wetlands, and ecologically significant areas in proximity of the Site, as determined pursuant to NYSDEC's DER-10 Section 3.10.1(c)(1), a Fish and Wildlife Resources Impact Analysis is not required as part of this RI.

7.0 CONCLUSIONS

Data collected to date over decades indicates the Site has been impacted by historical releases of CVOCs, the impacts are limited in extent, and the CVOC impacts have not and will not migrate off the Site. Based on the investigations completed by HRP between February 2020 and September 2021, the CVOC impacts are well delineated and do not pose a threat to human health and the environment. This is supported by the following conclusions:

- CVOC impacts identified at the Site can be attributed to historical releases of chlorinated solvents.
    - Although the exact sources and dates of spills are unknown, data collected over a period from circa 1990 to date indicate the release is related to historical operations conducted in the areas of the chemical storage building, former drum storage area, and the area southeast of the manufacturing building where historical groundwater remediation was completed. Remediation was also completed in the former WWTP area of the Site.
    - The Site has operated as an industrial metal manufacturer from 1956 to present and used chlorinated solvents in machining, degreasing, and etching of metal parts until the 1990s.
    - A comparison of groundwater analytical data from the three sampling events conducted in 2020 to historical results demonstrates a substantial reduction in CVOC concentrations in Site groundwater from peak concentrations in the 1990s. According to historical reports, TCE in groundwater ranged up to 43,000 µg/L in 1997. During 2020 sampling events TCE was detected at a maximum concentration of 62 µg/L. The reduction in CVOC concentrations in groundwater may be attributed to the discontinued use of chlorinated solvents and improved housekeeping, the completion of remedial excavations in the 1990s, operation of the groundwater pump and treat system from 1996 to 1999, and the natural attenuation of CVOC concentrations.
    - The concentrations of CVOC breakdown products (cis-1,2-DCE and vinyl chloride) detected in groundwater, relative to concentrations of TCE, are indicative of historical impacts undergoing degradation. This is most notable in groundwater analytical results from MW-02 in which cis-1,2-DCE and vinyl chloride concentrations were an order of magnitude greater than TCE concentrations and in MW-15R where the breakdown products were present in elevated concentrations, but TCE was not detected.
    - Based on field observations and laboratory analytical results, the CVOC impacts identified in Site soils are not indicative of a source area or source material as defined by 6 NYCRR Part 375. No grossly contaminated soils (in the form of stained soils, elevated PID readings, or odors), non-aqueous phase liquids (NAPL), or solid/semi-solid hazardous substances were observed in Site soils during boring installation.

CVOC impacts to soil were largely confined to the saturated zone, indicating concentrations of CVOCs detected in subsurface soils are related to groundwater impacts and not an active surface release. While some CVOC impacts were observed in soils above the water table, CVOC concentrations were generally greater in soils from the saturated zone. Impacts observed above the water table may be attributed to CVOCs in groundwater which have sorbed to soils through fluctuation of the groundwater table (i.e. groundwater smear zone).

- Site CVOC impacts have been well delineated and are not a threat to human health and the environment.

  Soil

  - CVOC impacts to Site soils have been thoroughly delineated and are limited to subsurface soils, the majority of which are under paved surfaces. The results of soil sampling in 2020 and 2021 do not indicate a current surface source of impact. Therefore, the only exposure pathway to soil impacts would be through excavation activities. No exposure pathway to soil impacts reasonably exists to off-site receptors. Additionally, CVOC concentrations were not detected in soils above IU SCOs, the most appropriate SCO for Protection of Public Health at the Site.

  Groundwater

  - CVOC impacts to Site groundwater have been well delineated over a period of decades of monitoring, are generally limited to the area east and southeast of the main building and impacted groundwater is not migrating off-site. This is evidenced by groundwater analytical results (below SCGs or non-detect) from monitoring wells in downgradient and cross gradient directions to the west, southwest, and southeast.
  - Results from two bedrock monitoring wells installed downgradient of the Site building confirm CVOC impacts are not migrating to the bedrock aquifer or off-site through the bedrock aquifer.
  - Results from monitoring wells along the southwestern Site boundary confirm CVOCs are not migrating beneath off-site residential properties located at 8243 and 8249 Halsey Road.
  - Isolated detections of CVOCs in MW-7C do not appear to be related to CVOC impacts in the area of the Site building. This is evidenced by multiple rounds of sampling conducted in 2020 which indicate CVOCs were not detected in monitoring wells located between the Site building and MW-7C. Two rounds of sampling conducted at MW-7C in 2020 indicate low concentrations of CVOCs which exceed SCGs. Based on the concentrations detected and non-detect results at nearby MW-7B, these impacts are not expected to extend off-site.
  - The closest operational public water supply wells are located at the Westmoreland Water District, approximately 3.5 miles west of the Site. Potable water at the Site and surrounding parcels is provided by a public water supply from the Hinckley Reservoir, located approximately 18 miles northeast of the Site. Therefore, no exposure pathway

to groundwater impacts reasonably exists to Site occupants/workers or off-site receptors.

Soil Vapor

- Based on the compounds detected, CVOC impacts in soil vapor beneath the slab of the main Site building appear to be related to impacts to Site soil and groundwater. Low detections of CVOCs in indoor air samples were below OSHA PEL air quality standards applicable to the Site.
- Based on groundwater results from monitoring wells downgradient/cross-gradient of on-site CVOC detections, CVOC impacts are not migrating through off-site groundwater. There are no other identified preferential vapor migration pathways. Therefore, soil vapor migration onto off-site properties is not anticipated.

8.0 RECOMMENDATIONS

Based on the characterization of Site CVOC detections as residual impacts associated with historical releases, the limited extent of impacts in the area of the Site building, the limited exposure pathways to potential receptors, and the current and foreseeable use of the property as an active manufacturing facility, HRP recommends the implementation of institutional controls as the best approach to Site management. HRP recommends the following elements be implemented as Site institutional controls:

- An environmental easement should be established for the Site. The environmental easement would outline allowable uses for the Site property, prohibit use of Site groundwater for potable purposes, and require preparation of a Site Management Plan (SMP).
- A SMP should be prepared to outline Site institutional controls and means and methods for their implementation. The SMP should include management plans for soil and groundwater to be implemented in the event of future Site excavation work as well as a groundwater monitoring plan intended to establish a schedule and methods for monitoring CVOC impacts to Site groundwater in order to monitor natural attenuation and ensure off-site migration is not occurring.

Legend

<1	Parameter not detected above the laboratory reporting limit
<1	Indicates the laboratory method detection limit is greater than one or more applicable comparison criteria
1	Parameter reported above the laboratory method detection limit but below the applicable regulatory standard/criterion
1	Parameter reported at a concentration greater than NY-375-6-SCO Unrestricted Use/Protection of Groundwater
1	Parameter reported at a concentration greater than NY-375-6-SCO Protection of Public Health - Commericial
1	Parameter reported at a concentration greater thanNY-375-6-SCO Protection of Public Health Industrial

Notes:
ft bg = feet below grade
ug/kg = micrograms per kilogram

						Soil sampling to 11.0' bgs	
						Drive 4" casing to 13.0' bgs	
						HQ core from 13.0' to 28.5'	
						Drive 4" casing to 23.0'	
28.5'						B.O.B.. installed a 2" PVC Monitoring Well at 25' using:	
						Threaded Plug	
						10' Screen, .010 Slot	
						18' PVC Riser	
						Expandable Gripper	
						2 Sand, 50 lb bag from 28.5' to 15.0'	
						Bentonite from 15.0' to 13.0'	
						Grout from 13.0' to grade	
						8" Road Box	
						1 Concrete Mix, 80 lb bags	

Driller: Alan Augustine
Assistant: Samuel Taylor
Soils Engineer: Lauren Buffone

Proportions used trace= 0-10%, little = 10.20%, some = 20.35%, and = 35.50%

Sample Type:
C = Cored W = Washed
SS = Split Spoon
UP = Undisturbed Piston

Cohesionless Density
0-10 Loose
10-30 Med. Comp
30-50 Dense

Total Footage:
Earth Boring Ft. 28.5
Rock Coring Ft.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C-D

Qualifications:

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

1,2,3-Trichlorobenzene
20B0715-01[RW-1], 20B0715-02[MW-2], 20B0715-03[MW-3], 20B0715-04[MW-4], 20B0715-05[MW-5], 20B0715-06[MW-6], 20B0715-07[MW-7B], 20B0715-08[MW-7C], 20B0715-09[MW-8], 20B0715-10[MW-9], 20B0715-11[MW-10], 20B0715-12[MW-12], 20B0715-13[MW-13], 20B0715-14[MW-14], 20B0715-15[DUP], 20B0715-16[TB], 20B0715-17[EB], 20B0715-18[DUP-2], B252470-BLK1, B252470-BS1, B252470-BSD1

1,2,4-Trichlorobenzene
20B0715-01[RW-1], 20B0715-02[MW-2], 20B0715-03[MW-3], 20B0715-04[MW-4], 20B0715-05[MW-5], 20B0715-06[MW-6], 20B0715-07[MW-7B], 20B0715-08[MW-7C], 20B0715-09[MW-8], 20B0715-10[MW-9], 20B0715-11[MW-10], 20B0715-12[MW-12], 20B0715-13[MW-13], 20B0715-14[MW-14], 20B0715-15[DUP], 20B0715-16[TB], 20B0715-17[EB], 20B0715-18[DUP-2], B252470-BLK1, B252470-BS1, B252470-BSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

20B0715-02[MW-2]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2,3-Trichlorobenzene
20B0715-01[RW-1], 20B0715-02[MW-2], 20B0715-03[MW-3], 20B0715-04[MW-4], 20B0715-05[MW-5], 20B0715-06[MW-6], 20B0715-07[MW-7B], 20B0715-08[MW-7C], 20B0715-09[MW-8], 20B0715-10[MW-9], 20B0715-11[MW-10], 20B0715-12[MW-12], 20B0715-13[MW-13], 20B0715-14[MW-14], 20B0715-15[DUP], 20B0715-16[TB], 20B0715-17[EB], 20B0715-18[DUP-2], B252470-BLK1, B252470-BS1, B252470-BSD1, S045756-CCV1

1,2,4-Trichlorobenzene
20B0715-01[RW-1], 20B0715-02[MW-2], 20B0715-03[MW-3], 20B0715-04[MW-4], 20B0715-05[MW-5], 20B0715-06[MW-6], 20B0715-07[MW-7B], 20B0715-08[MW-7C], 20B0715-09[MW-8], 20B0715-10[MW-9], 20B0715-11[MW-10], 20B0715-12[MW-12], 20B0715-13[MW-13], 20B0715-14[MW-14], 20B0715-15[DUP], 20B0715-16[TB], 20B0715-17[EB], 20B0715-18[DUP-2], B252470-BLK1, B252470-BS1, B252470-BSD1, S045756-CCV1

1,3,5-Trichlorobenzene
20B0715-01[RW-1], 20B0715-02[MW-2], 20B0715-03[MW-3], 20B0715-04[MW-4], 20B0715-05[MW-5], 20B0715-06[MW-6], 20B0715-07[MW-7B], 20B0715-08[MW-7C], 20B0715-09[MW-8], 20B0715-10[MW-9], 20B0715-11[MW-10], 20B0715-12[MW-12], 20B0715-13[MW-13], 20B0715-14[MW-14], 20B0715-15[DUP], 20B0715-16[TB], 20B0715-17[EB], 20B0715-18[DUP-2], B252470-BLK1, B252470-BS1, B252470-BSD1, S045756-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromomethane
B252470-BS1, B252470-BSD1, S045756-CCV1

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA TO-15

Qualifications:

E

Reported result is estimated. Value reported over verified calibration range.

Analyte & Samples(s) Qualified:

Ethanol
B252689-DUP1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

20B0716-02[VP-2], 20B0716-03[VP-3], 20B0716-04[VP-4], 20B0716-05[VP-5]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
E	Reported result is estimated. Value reported over verified calibration range.
RL-11	Elevated reporting limit due to high concentration of target compounds.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C-D

Qualifications:

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

20F0191-01[MW-02]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Chloromethane

20F0191-01[MW-02], 20F0191-02[MW-03], 20F0191-03[MW-04], 20F0191-04[MW-05], 20F0191-05[MW-06], 20F0191-06[MW-07B], 20F0191-07[MW-07C], 20F0191-08[MW-08], 20F0191-09[MW-09], 20F0191-10[MW-10], 20F0191-11[MW-12], 20F0191-12[MW-13], 20F0191-13[MW-14], 20F0191-14[RW-1], 20F0191-15[Dup], 20F0191-16[EB], 20F0191-17[TB], B259366-BLK1, B259366-BS1, B259366-BSD1, S049132-CCV1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA TO-15

Qualifications:

L-03

Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

1,2-Dichloropropane
20F0192-01[VP-6], 20F0192-02[VP-7], 20F0192-03[VP-8], 20F0192-04[VP-9], 20F0192-05[VP-10], 20F0192-06[VP- 11], 20F0192-07[BL-1 trip blank], B259797-BLK1, B259797-BS1

4-Methyl-2-pentanone (MIBK)
20F0192-01[VP-6], 20F0192-02[VP-7], 20F0192-03[VP-8], 20F0192-04[VP-9], 20F0192-05[VP-10], 20F0192-06[VP- 11], 20F0192-07[BL-1 trip blank], B259797-BLK1, B259797-BS1

Heptane
20F0192-01[VP-6], 20F0192-02[VP-7], 20F0192-03[VP-8], 20F0192-04[VP-9], 20F0192-05[VP-10], 20F0192-06[VP- 11], 20F0192-07[BL-1 trip blank], B259797-BLK1, B259797-BS1

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

4-Methyl-2-pentanone (MIBK)
20F0192-01[VP-6], 20F0192-02[VP-7], 20F0192-03[VP-8], 20F0192-04[VP-9], 20F0192-05[VP-10], 20F0192-06[VP- 11], 20F0192-07[BL-1 trip blank], B259797-BLK1, B259797-BS1, S049253-CCV1

Hexachlorobutadiene
20F0192-01[VP-6], 20F0192-02[VP-7], 20F0192-03[VP-8], 20F0192-04[VP-9], 20F0192-05[VP-10], 20F0192-06[VP- 11], 20F0192-07[BL-1 trip blank], B259797-BLK1, B259797-BS1, S049253-CCV1

V-06

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

Ethanol
20F0192-01RE2[VP-6], 20F0192-02RE2[VP-7], 20F0192-03RE2[VP-8], 20F0192-04RE2[VP-9], 20F0192-05RE2[VP-10], 20F0192-06RE2[VP- 11], B259797-BS1, S049253-CCV1

Z-01

Compound fails the method requirement of 70-130% recovery for the LCS. Is classified by the lab as a difficult compound and passes the in house limits of 50-150%.

Analyte & Samples(s) Qualified:

Cyclohexane
20F0192-01[VP-6], 20F0192-02[VP-7], 20F0192-03[VP-8], 20F0192-04[VP-9], 20F0192-05[VP-10], 20F0192-06[VP- 11], 20F0192-07[BL-1 trip blank], B259797-BLK1, B259797-BS1

Ethanol
20F0192-01RE2[VP-6], 20F0192-02RE2[VP-7], 20F0192-03RE2[VP-8], 20F0192-04RE2[VP-9], 20F0192-05RE2[VP-10], 20F0192-06RE2[VP-11], B259797-BS1

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.

L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
Z-01	Compound fails the method requirement of 70-130% recovery for the LCS. Is classified by the lab as a difficult compound and passes the in house limits of 50-150%.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C-D

Qualifications:

RL-13

Elevated reporting limit due to high concentration of non-target compounds.

Analyte & Samples(s) Qualified:

20F0194-01[MW-2]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Methyl tert-Butyl Ether (MTBE)
20F0194-01[MW-2], 20F0194-02[MW-3], 20F0194-03[MW-4], 20F0194-04[MW-8], B259365-BLK1, B259365-BS1, B259365-BSD1, S049126-CCV1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
RL-13	Elevated reporting limit due to high concentration of non-target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C-D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Bromochloromethane
B266758-BS1, B266758-BSD1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromochloromethane
B266758-BS1, B266758-BSD1, S052551-CCV1

V-36

Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Dichlorodifluoromethane (Freon 12
B266758-BS1, B266758-BSD1, S052551-CCV1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C-D

Qualifications:

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

trans-1,4-Dichloro-2-butene
20I1074-03[EXT-NW-2 (5-7)], 20I1074-11[EXT-W-2 (1-3)], B266979-BLK1, B266979-BS1, B266979-BSD1

RL-13

Elevated reporting limit due to high concentration of non-target compounds.

Analyte & Samples(s) Qualified:

20I1074-11[EXT-W-2 (1-3)]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2,3-Trichlorobenzene
20I1074-17[EXT-SW-1 (2-4)], B267040-BLK1, B267040-BS1, B267040-BSD1, S052658-CCV1

1,2,4-Trichlorobenzene
20I1074-17[EXT-SW-1 (2-4)], B267040-BLK1, B267040-BS1, B267040-BSD1, S052658-CCV1

1,3,5-Trichlorobenzene
20I1074-17[EXT-SW-1 (2-4)], B267040-BLK1, B267040-BS1, B267040-BSD1, S052658-CCV1

Chloromethane
20I1074-03[EXT-NW-2 (5-7)], 20I1074-11[EXT-W-2 (1-3)], B266979-BLK1, B266979-BS1, B266979-BSD1, S052668-CCV1

Dichlorodifluoromethane (Freon 12
20I1074-01[EXT-NW-1 (1-3)], 20I1074-02[EXT-NW-2 (1-3)], 20I1074-04[EXT-NW-3 (1-3)], 20I1074-05[OW-1 (0-2)], 20I1074-06[MW-15R (2-4)], 20I1074-07[MW-15R (8-10)], 20I1074-08[MW-15R (10-11.5)], 20I1074-09[EXT-NE-3 (2-4)], 20I1074-10[EXT-W-1 (2-4)], 20I1074-12[FB-1 (3-5)], 20I1074-13[FB-2 (1-3)], 20I1074-14[FB-2 (8-10)], 20I1074-15[FB-3 (2-4)], 20I1074-16[FB-4 (1-3)], 20I1074-17[EXT-SW-1 (2-4)], 20I1074-18[EXT-SW-2 (1-3)], 20I1074-19[EXT-SW-3 (1-3)], 20I1074-20[EXT-SW-4 (2-4)], B267026-BLK1, B267026-BS1, B267026-BSD1, B267040-BLK1, B267040-BS1, B267040-BSD1, S052656-CCV1, S052658-CCV1

trans-1,3-Dichloropropene
20I1074-03[EXT-NW-2 (5-7)], 20I1074-11[EXT-W-2 (1-3)], B266979-BLK1, B266979-BS1, B266979-BSD1, S052668-CCV1

trans-1,4-Dichloro-2-butene
20I1074-03[EXT-NW-2 (5-7)], 20I1074-11[EXT-W-2 (1-3)], B266979-BLK1, B266979-BS1, B266979-BSD1, S052668-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromochloromethane
B267026-BS1, B267026-BSD1, S052656-CCV1

Methylene Chloride
B267026-BS1, B267026-BSD1, B267040-BS1, B267040-BSD1, S052656-CCV1, S052658-CCV1

V-34

Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Chloromethane
20I1074-03[EXT-NW-2 (5-7)], 20I1074-11[EXT-W-2 (1-3)], B266979-BLK1, B266979-BS1, B266979-BSD1, S052668-CCV1

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
RL-13	Elevated reporting limit due to high concentration of non-target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

con-test® ANALYTICAL LABORATORY
39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

SW-846 8260C-D

Qualifications:

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

trans-1,4-Dichloro-2-butene
20I1075-03[EXT-SW-6 (3-5)], B266979-BLK1, B266979-BS1, B266979-BSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

20I1075-03[EXT-SW-6 (3-5)]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2,3-Trichlorobenzene

trans-1,3-Dichloropropene
20I1075-03[EXT-SW-6 (3-5)], B266979-BLK1, B266979-BS1, B266979-BSD1, S052668-CCV1

trans-1,4-Dichloro-2-butene
20I1075-03[EXT-SW-6 (3-5)], B266979-BLK1, B266979-BS1, B266979-BSD1, S052668-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromochloromethane
B267026-BS1, B267026-BSD1, S052656-CCV1

Methylene Chloride
B267026-BS1, B267026-BSD1, B267040-BS1, B267040-BSD1, S052656-CCV1, S052658-CCV1

V-34

Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Chloromethane
20I1075-03[EXT-SW-6 (3-5)], B266979-BLK1, B266979-BS1, B266979-BSD1, S052668-CCV1

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C-D

Qualifications:

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

trans-1,4-Dichloro-2-butene

20J0184-01[MW-02], 20J0184-02[MW-03], 20J0184-03[MW-04], 20J0184-04[MW-05], 20J0184-05[MW-6BR], 20J0184-06[MW- 11R], 20J0184-07[MW-15R], 20J0184-08[HRP-1], 20J0184-09[HRP-2], 20J0184-10[HRP-BR-1], 20J0184- 11[TB], B268011-BLK1, B268011-BS1, B268011-BSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

20J0184-07[MW-15R]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Chloromethane

20J0184-01[MW-02], 20J0184-02[MW-03], 20J0184-03[MW-04], 20J0184-04[MW-05], 20J0184-05[MW-6BR], 20J0184-06[MW- 11R], 20J0184-07[MW-15R], 20J0184-08[HRP-1], 20J0184-09[HRP-2], 20J0184-10[HRP-BR-1], 20J0184- 11[TB], B268011-BLK1, B268011-BS1, B268011-BSD1, S053116-CCV1

trans-1,3-Dichloropropene

20J0184-01[MW-02], 20J0184-02[MW-03], 20J0184-03[MW-04], 20J0184-04[MW-05], 20J0184-05[MW-6BR], 20J0184-06[MW- 11R], 20J0184-07[MW-15R], 20J0184-08[HRP-1], 20J0184-09[HRP-2], 20J0184-10[HRP-BR-1], 20J0184- 11[TB], B268011-BLK1, B268011-BS1, B268011-BSD1, S053116-CCV1

trans-1,4-Dichloro-2-butene

20J0184-01[MW-02], 20J0184-02[MW-03], 20J0184-03[MW-04], 20J0184-04[MW-05], 20J0184-05[MW-6BR], 20J0184-06[MW- 11R], 20J0184-07[MW-15R], 20J0184-08[HRP-1], 20J0184-09[HRP-2], 20J0184-10[HRP-BR-1], 20J0184- 11[TB], B268011-BLK1, B268011-BS1, B268011-BSD1, S053116-CCV1

V-34

Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Chloromethane

20J0184-01[MW-02], 20J0184-02[MW-03], 20J0184-03[MW-04], 20J0184-04[MW-05], 20J0184-05[MW-6BR], 20J0184-06[MW- 11R], 20J0184-07[MW-15R], 20J0184-08[HRP-1], 20J0184-09[HRP-2], 20J0184-10[HRP-BR-1], 20J0184- 11[TB], B268011-BLK1, B268011-BS1, B268011-BSD1, S053116-CCV1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C-D

Qualifications:

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

21E1512-10[EXT-NE-8 (8-10)], 21E1512-13[EXT-W-3 (1-3)], 21E1512-15[EXT-W-4 (2-4)]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

trans-1,4-Dichloro-2-butene

21E1512-01[EXT-NE-4 (3-5)], 21E1512-03[EXT-NE-5 (1-3)], 21E1512-04[EXT-NE-5 (5-7)], 21E1512-05[EXT-NE-6 (3-5)], 21E1512-07[EXT-NE-7 (1-3)], 21E1512-09[EXT-NE-8 (3-5)], 21E1512-11[EXT-NE-9 (3-5)], 21E1512-12[EXT-NE-9 (5-7)], 21E1512-16[EXT-W-4 (5-7)], 21E1512-18[TRIP BLANK], B282927-BLK1, B282927-BS1, B282927-BSD1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Hexachlorobutadiene

B282904-BS1, B282904-BSD1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C-D

Qualifications:

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Chloroethane
B289675-BS1

trans-1,4-Dichloro-2-butene
B289675-BS1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

21I0174-01[EXT-W-5 (6-8)], 21I0174-03[EXT-W-6 (5-7)], 21I0174-07[EXT-SW-8 (8-10)], 21I0174-10[EXT-SW-10 (6-8)], 21I0174- 11[EXT-SW-10 (8-10)], 21I0174-19[DUP]

RL-13

Elevated reporting limit due to high concentration of non-target compounds.

Analyte & Samples(s) Qualified:

21I0174-08[EXT-SW-9 (2-4)], 21I0174-09[EXT-SW-9 (6-8)]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Dichlorodifluoromethane (Freon 12
21I0174-04[EXT-SW-7 (1-3)], 21I0174-05[EXT-SW-7 (5-7)], 21I0174-12[EXT-SW-11 (2-4)], 21I0174-13[EXT-SW-11 (8-10)], 21I0174-14[EXT-SW-12 (2-4)], 21I0174-15[EXT-SW-12 (4-6)], 21I0174-16[EXT-SW-13 (1-3)], 21I0174-17[EXT-SW-13 (8-10)], 21I0174-18[TB], B289676-BLK1, B289676-BS1, B289676-BSD1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromochloromethane
B289675-BS1, B289675-BSD1

Chloroethane
B289675-BS1, B289675-BSD1

trans-1,4-Dichloro-2-butene
B289675-BS1, B289675-BSD1

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.
RL-13	Elevated reporting limit due to high concentration of non-target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
