ES EXECUTIVE SUMMARY

The following provides a brief summary of the controls implemented for the Site, as well as the inspections, monitoring, maintenance and reporting activities required by this Site Management Plan:

Site Identification:	Site No. C704032, Ash Road Properties, 221 Sycamore Road, Vestal, New York
Institutional Controls:	1. The property may be used for commercial use;
	<p>The Controlled Property may be used for Commercial as described in 6NYCRR Part 375-1.8 (g)(2)(iii) and Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv), although land is subject to local zoning laws.</p> <p>The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the Broome County Department of Health to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department.</p> <p>Groundwater and other environmental or public health monitoring must be performed as defined by the SMP.</p> <p>Data and information pertinent to the Site Management of the Controlled Property must be reported at the frequency and in a manner defined by the SMP.</p> <p>All future activities on the property that will disturb remaining contaminated material must be conducted in accordance with the SMP.</p> <p>Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP.</p> <p>Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical components of the remedy shall be performed as defined in the SMP.</p> <p>Access to the property must be provided to agents, employees or other representatives of the State of New</p>

Site Identification:	Site No. C704032, Ash Road Properties, 221 Sycamore Road, Vestal, New York	
	<p>York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by this Environmental Easement.</p> <p>The Controlled Property shall not be used for Residential or Restricted Residential purposes as defined in 6NYCRR Part 375-1.8(g)(2)(i) and (ii).</p> <p>The potential for vapor intrusion must be evaluated for any buildings developed in the area within the IC boundaries, and any potential impacts that are identified must be monitored or mitigated.</p>	
Engineering Controls:	There are currently no ECs at the Site.	
Inspections:		Annually
Monitoring:		
Groundwater Monitoring Wells MW-01, MW-02S, MW-09S and MW-10S		August, 2015 September 2015 March 2016 September 2016
Reporting:		September 2015
Periodic Review Report		Annually

Further descriptions of the above requirements are provided in detail in the later sections of this Site Management Plan.

1.0 INTRODUCTION

1.1 General

This Site Management Plan (SMP) is a required element of the remedial program for the Ash Road Properties located in the Town of Vestal, New York (hereinafter referred to as the “Site”). See Figure 1. The Site is currently in the New York State (NYS) Brownfield Cleanup Program (BCP) Site No. 704032 which is administered by New York State Department of Environmental Conservation (NYSDEC).

West Covina Royale, LP entered into a Brownfield Cleanup Agreement (BCA), on July 6, 2010 with the NYSDEC to remediate the site. A figure showing the site location and boundaries of this site is provided in Figure 2. The boundaries of the site are more fully described in the metes and bounds site description that is part of the Environmental Easement provided in Appendix B.

After completion of the remedial work, some contamination was left at this site, which is hereafter referred to as “remaining contamination”. Institutional Controls (ICs) have been incorporated into the site remedy to control exposure to remaining contamination to ensure protection of public health and the environment. An Environmental Easement granted to the NYSDEC, and recorded with the Broome County Clerk, requires compliance with this SMP and all ECs and ICs placed on the site.

This SMP was prepared to manage remaining contamination at the site until the Environmental Easement is extinguished in accordance with ECL Article 71, Title 36. This plan has been approved by the NYSDEC, and compliance with this plan is required by the grantor of the Environmental Easement and the grantor’s successors and assigns. This SMP may only be revised with the approval of the NYSDEC.

It is important to note that:

- This SMP details the site-specific implementation procedures that are required by the Environmental Easement. Failure to properly implement the SMP is a violation of the Environmental Easement, which is grounds for revocation of the Certificate of Completion;
- Failure to comply with this SMP is also a violation of Environmental Conservation Law, 6NYCRR Part 375 and the BCA, (Index #C704032-05-10; Site #704032) for the site, and thereby subject to applicable penalties.

All reports associated with the site can be viewed by contacting the NYSDEC or its successor agency managing environmental issues in New York State. A list of contacts for persons involved with the site is provided in Appendix A of this SMP.

This SMP was prepared by GeoLogic NY, Inc., on behalf of West Covina Royale, LP, in accordance with the requirements of the NYSDEC's DER-10 ("Technical Guidance for Site Investigation and Remediation"), dated May, 2010, and the guidelines provided by the NYSDEC. This SMP addresses the means for implementing the ICs and/or ECs that are required by the Environmental Easement for the site.

1.2 Revisions

Revisions to this plan will be proposed in writing to the NYSDEC's project manager. Revisions will be necessary upon, but not limited to, the following occurring: a change in media monitoring requirements, upgrades to or shut-down of a remedial system, post-remedial removal of contaminated sediment or soil, or other significant change to the site conditions. In accordance with the Environmental Easement for the site, the NYSDEC will provide a notice of any approved changes to the SMP, and append these notices to the SMP that is retained in its files.

1.3 Notifications

Notifications will be submitted by the property owner to the NYSDEC, as needed, in accordance with NYSDEC's DER-10 for the following reasons:

- 60-day advance notice of any proposed changes in site use that are required under the terms of the BCA, 6NYCRR Part 375 and/or Environmental Conservation Law.
- 7-day advance notice of any field activity associated with the remedial program.
- 15-day advance notice of any proposed ground-intrusive activity pursuant to the Excavation Work Plan.
- Notice within 48-hours of any damage or defect to the foundation, structures or EC that reduces or has the potential to reduce the effectiveness of an EC, and likewise, any action to be taken to mitigate the damage or defect.
- Verbal notice by noon of the following day of any emergency, such as a fire; flood; or earthquake that reduces or has the potential to reduce the effectiveness of ECs in place at the site, with written confirmation within 7 days that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.
- Follow-up status reports on actions taken to respond to any emergency event requiring ongoing responsive action submitted to the NYSDEC within 45 days describing and documenting actions taken to restore the effectiveness of the ECs.

Any change in the ownership of the site or the responsibility for implementing this SMP will include the following notifications:

- At least 60 days prior to the change, the NYSDEC will be notified in writing of the proposed change. This will include a certification that the prospective purchaser/Remedial Party has been provided with a copy of the Brownfield Cleanup Agreement (BCA), and all approved work plans and reports, including this SMP.
- Within 15 days after the transfer of all or part of the site, the new owner's name, contact representative, and contact information will be confirmed in writing to the NYSDEC.

A full listing of site-related contact information is provided in Appendix A. The information on this table will be updated as necessary to provide accurate contact information.

2.0 SUMMARY OF PREVIOUS INVESTIGATIONS & REMEDIAL ACTIONS

2.1 Site Location and Description

The site is located in Town of Vestal, Broome County, New York and is identified as Section 158.10 Block 2 and Lot 13 on the Broome County Tax Map (see Figure 3). The site, a portion of the tax parcel encompassing approximately 1.557-acre area-is bounded by Lowes Home Center parking lot to the north, Ash Road to the south, a residential mobile home park to the east, and Sycamore Road to the west (see Figure 2 – Site Layout Map). The boundaries of the site are more fully described in Appendix B –Environmental Easement. The owner of the site parcel at the time of issuance of this SMP is:

Vestal Retail Center, LLC

2.2 Physical Setting

2.2.1 Land Use

The site consists of a parking area for Lowe’s Home Center. The Site is zoned commercial and is currently utilized for parking.

The properties adjoining the site and in the neighborhood surrounding the Site primarily include commercial and residential properties. The properties immediately south of the Site include commercial properties; the properties immediately north of the Site include commercial properties; the properties immediately east of the Site include residential properties; and the properties to the west of the Site include commercial properties.

2.2.2 Geology

The site is located in the Susquehanna River Basin within the Susquehanna River Valley. The Susquehanna River is located about 2,000 feet north of the site. Surficial deposits beneath the site are mapped as sand and gravel glacial outwash that is covered by 5 to 15 feet of fine sand and silt in low lying areas. Underlying bedrock is mapped as West Falls Group shale and siltstone. Depth to bedrock is anticipated to be at least 75 feet below ground surface in the general vicinity of the site. Subsurface evaluations that have been completed at the site have encountered stratified sands, with variable silt and gravel content and a buried organic silt layer.

A geologic cross section is shown in Figure 4. Borings, monitoring wells and sample locations are shown on Figure 6. Site specific boring and monitoring well logs are provided in Appendix C.

2.2.3 Hydrogeology

The site overlies the NYSDEC Endicott-Johnson City Area Primary Water Supply Aquifer. The general direction of mapped groundwater flow within the aquifer is to the northwest toward the Susquehanna River. The local direction of groundwater flow at the site is also to the northwest, as determined during recent and previous evaluations at the site. Groundwater has been encountered within 15 feet below ground surface.

There is an intermittent stream located along the north side of the site. The streambed was channelized through a culvert during the development of the Lowe's Home Center, and underlies the Lowe's parking lot. This channel flows from east to west across the northern limits of the site, and receives storm water runoff from the Lowe's paved parking area.

A groundwater contour map is shown in Figure 5. Groundwater elevation data is provided in Table 1. Groundwater monitoring well logs are provided in Appendix C.

2.3 Investigation and Remedial History

The following narrative provides a remedial history timeline and a brief summary of the available project records to document key investigative and remedial milestones for the site.

Remedial Investigations and Interim Remedial Measure have been performed to characterize the nature and extent of contamination at the Site. The results of the remedial investigation are described in detail in the following reports:

- Site Characterization Report, Ash Road Site (7-04-032), Vestal, New York prepared by EA Engineering, P.C. (EA) for NYSDEC, dated September 2009.
- Remedial Investigation and Interim Remedial Measures Report, Ash Road Properties, 221 Sycamore Road, Town of Vestal, NY prepared by GeoLogic NY, Inc. November 2013.
- Progress Reports, Ash Road Properties, 221 Sycamore Road, Town of Vestal, NY prepared by GeoLogic NY, Inc. date November 2013, March 2014 and June 2014.
- Alternative Analysis Report, Ash Road Properties, 221 Sycamore Road, Town of Vestal, NY prepared by GeoLogic NY, Inc., dated February 2014, revised October 2014.
- Remedial Action Work Plan, Ash Road Properties, 221 Sycamore Road, Town of Vestal, NY prepared by GeoLogic NY, Inc., dated February 2015.

The site was formerly occupied by two businesses, Town Square Body Shop and Hall Plumbing. Town Square Body Shop performed auto-body repairs as well as automotive painting, washing and waxing. The Hall Plumbing building was occupied by a contractor's office and warehouse.

2.3.1 Site-Related Soil

On-site soils were analyzed for volatile organic compounds, semi-volatile organic compounds, PCBs, heavy metals and pesticides. Soil were only impacted by volatile organic

compounds, specifically the primary contaminant of concern (COC), tetrachloroethene (PCE) and its transformation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC).

A well define contaminant source area reported pre-excavation PCE concentrations ranging from 100 ug/kg to 240 mg/kg. The data supports that the source was from a surface release of PCE.

An interim remedial measure was implemented and the contaminated soil was removed, to the extent feasible, via excavation. Contaminant concentration post-excavation were below the commercial use Soil Cleanup Objectives (SCO). The table below summarizes all soil contaminant concentrations pre-and post-excavation activities.

Table 2-1
Soil Contaminant Concentration Summary

Contaminant	Concentration Range Detected [ppm]	Restricted SCO¹ [ppm]	No. of Excursions	No. Exceeding Restricted SCO⁽¹⁾
<i>Tetrachloroethene</i>	0.01823 to 240	1.3	23	5
<i>Trichloroethene</i>	0.0031J to 1.0	0.470	23	1
<i>cis-1,2-Dichloroethene</i>	0.003J to 9.4	0.250	23	4
<i>Vinyl Chloride</i>	0.011U to 0.03	0.02	23	1

1 SCO – Part 375-6.8 (b) Restricted Soil Cleanup Objective for the Protection of Groundwater

Contaminant concentration post-excavation were all below the SCOs for Commercial Use.

2.3.2 Site-Related Groundwater

Elevated concentrations of the COCs that exceed the Standards, Criteria and Guidances (SCGs) have been detected in groundwater at the site. PCE, TCE, DCE and VC have been detected in groundwater at concentrations exceeding their respective groundwater standards (5 parts per billion (ppb) for PCE, TCE and DCE; and 2 ppb for VC). Maximum

concentrations of PCE, TCE, DCE and VC in groundwater are 42,000 ppb, 7,100 ppb, 15,000 ppb and 2,900 ppb, respectively.

The number of samples analyzed, the range in COC concentrations observed, and the number of samples that exceeded the SCG are summarized on the following table.

**Table 2-2
Groundwater Contaminant Summary**

Contaminant	Concentration Range [ppb]	SCG [ppb]	No. of Excursions	No. Exceeding SCG
<i>COCs</i>				
<i>Tetrachloroethene</i>	1U to 42,000	5	73	32
<i>Trichloroethene</i>	1U to 7,100	5	73	24
<i>cis-1,2-Dichloroethene</i>	1U to 15,000	5	73	23
<i>Vinyl Chloride</i>	1U to 2,900	2	71	13

2.3.3 Site-Related Soil Vapor

The potential for soil vapor intrusion resulting from the presence of site-related COCs in soil and groundwater was evaluated. The maximum concentrations of PCE, TCE, DCE and VC in soil vapor were 60, 590, 600 and 110 micrograms per cubic meter, respectively.

The COCs detected in the soil vapor samples were also detected in the groundwater samples historically collected at the site. Both the soil vapor and groundwater samples data indicate the transformation of tetrachloroethene is occurring in both groundwater and soil media.

2.4 Remedial Action Objectives

The Remedial Action Objectives (RAOs) for the Site as listed in the Decision Document dated April 2015 are as follows:

2.4.1 Groundwater

RAOs for Public Health Protection

- Prevent ingestion of groundwater with contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles from contaminated groundwater.

RAOs for Environmental Protection

- Restore groundwater aquifer to pre-disposal/pre-release conditions, to the extent practicable.
- Remove the source of ground or surface water contamination.

2.4.2 Soil

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure from contaminants volatilizing from contaminants in soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

2.4.3 Soil Vapor

RAOs for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at a site.

2.5 Remaining Contamination

2.5.1 Soil

As noted in Section 2.3.1, soils on the site were only impacted by volatile organic compounds, specifically the primary COC, tetrachloroethene (PCE) and its transformation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC).

Figure 6 summarize the results of the concentrations of the primary contaminants of concern that remain in soils after completing the interim remedial action that exceed the SCOs for the Protection of Groundwater. All contaminant concentrations are below the SCOs for Commercial Use.

2.5.2 Groundwater

Elevated concentrations of PCE, TCE, DCE and VC remain in groundwater at concentrations exceeding their respective groundwater standards. Table 2 summarized contaminant concentration for groundwater samples collected just prior to the commencement of the June 2015 injection event, and approximately one month after completion of the June 2015 injection event.

2.5.3 Soil Vapor

Soil vapor has been found to be impacted by site-related contaminants. Maximum concentrations of PCE, TCE, DCE and VC in soil vapor are 90, 590, 600 and 110 ug/m³. The areas of soil vapor contamination appear to be associated to areas of groundwater contamination.

Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development, and will need to be evaluated at that time.

3.0 INSTITUTIONAL AND ENGINEERING CONTROL PLAN

3.1 General

Since remaining contamination exists at the site, Institutional Controls (ICs) are required and future Engineering Controls (ECs) may be required to protect human health and the environment. This IC/EC Plan describes the procedures for the implementation and

management of all IC/ECs at the site. The IC/EC Plan is one component of the SMP and is subject to revision by the NYSDEC.

This plan provides:

- A description of all IC/ECs on the site;
- The basic implementation and intended role of each IC/EC;
- A description of the key components of the ICs set forth in the Environmental Easement;
- A description of the controls to be evaluated during each required inspection and periodic review;
- A description of plans and procedures to be followed for implementation of IC/ECs, such as the implementation of the Excavation Work Plan (EWP), provided in Appendix D, for the proper handling of remaining contamination that may be disturbed during maintenance or redevelopment work on the site; and
- Any other provisions necessary to identify or establish methods for implementing the IC/ECs required by the site remedy, as determined by the NYSDEC.

There are currently no Engineering Controls at the site or currently required by the NYSDEC Decision Document, dated April 2015. ECs may be required in the future, if there is a change in site use, and a building is constructed on the site.

3.2 Institutional Controls

A series of ICs is required by the Decision Document to: (1) prevent future exposure to remaining contamination; and, (2) limit the use and development of the site to commercial and industrial uses only. Adherence to these ICs on the site is required by the Environmental Easement and will be implemented under this SMP. ICs identified in the Environmental Easement and Decision Document may not be discontinued without an amendment to or extinguishment of the Environmental Easement. The IC boundaries are shown on Figures 2 and 7. These ICs are:

- The Controlled Property may be used for Commercial as described in 6NYCRR Part 375-1.8 (g)(2)(iii) and Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv), although land is subject to local zoning laws.
- The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the Broome County Department of Health to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department.
- Groundwater and other environmental or public health monitoring must be performed as defined by the SMP.
- Data and information pertinent to the Site Management of the Controlled Property must be reported at the frequency and in a manner defined by the SMP.
- All future activities on the property that will disturb remaining contaminated material must be conducted in accordance with the SMP.
- Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP.
- Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical components of the remedy shall be performed as defined in the SMP.
- Access to the property must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by this Environmental Easement.
- The Controlled Property shall not be used for Residential or Restricted Residential purposes as defined in 6NYCRR Part 375-1.8(g)(2)(i) and (ii).
- The potential for vapor intrusion must be evaluated for any buildings developed in the area within the IC boundaries, and any potential impacts that are identified must be monitored or mitigated.

3.3 Engineering Controls

There are currently no ECs on the site or required; the site is occupied by a parking lot.

4.0 MONITORING AND SAMPLING PLAN

4.1 General

This Monitoring and Sampling Plan describes the measures for evaluating the overall performance and effectiveness of the remedy. This Monitoring and Sampling Plan may only be revised with the approval of the NYSDEC. Details regarding the sampling procedures, data quality usability objectives, analytical methods, etc. for all samples collected as part of site management for the site are included in the Field Sampling & Quality Assurance Project Plan provided in Appendix E.

This Monitoring and Sampling Plan describes the methods to be used for:

- Sampling and analysis of all appropriate media (e.g., groundwater, indoor air, soil vapor, soils);
- Assessing compliance with applicable NYSDEC SCGs, particularly groundwater standards and Part 375 SCOs for soil; and
- Evaluating site information periodically to confirm that the remedy continues to be effective in protecting public health and the environment;

To adequately address these issues, this Monitoring and Sampling Plan provides information on:

- Sampling locations, protocol and frequency;
- Analytical sampling program requirements;
- Inspection and maintenance requirements for monitoring wells;
- Monitoring well decommissioning procedures; and
- Annual inspection and periodic certification.

Reporting requirements are provided in Section 7.0 of this SMP.

4.2 Site – wide Inspection

Site-wide inspections will be performed during the specified sampling and monitoring events noted in Table 4-1, and then annually, thereafter. Modification to the frequency or duration of the inspections will require approval from the NYSDEC. Site-wide inspections will also be performed after all severe weather conditions that may affect ECs or monitoring devices. During these inspections the following information will be recorded in field books, and copies will be provided to NYSDEC.

- Compliance with all ICs, including site usage;
- An evaluation of the condition and continued effectiveness of ECs, if present;
- General site conditions at the time of the inspection;
- The site management activities being conducted including, where appropriate, confirmation sampling and a health and safety inspection; and
- Confirm that site records are up to date.

Reporting requirements are outlined in Section 7.0 of this plan.

Inspections will also be performed in the event of an emergency. If an emergency, such as a natural disaster or an unforeseen failure of any of the ECs occurs that reduces or has the potential to reduce the effectiveness of ECs in place at the site, verbal notice to the NYSDEC must be given by noon of the following day. In addition, an inspection of the site will be conducted within 5 days of the event to verify the effectiveness of the IC/ECs implemented at the site by a qualified environmental professional, as determined by the NYSDEC. Written confirmation must be provided to the NYSDEC within 7 days of the event that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.

4.3 Post-Remediation Media Monitoring and Sampling

Sampling locations, required analytical parameters and schedule are provided in Table 4.1 – Post Remediation Groundwater Sampling Requirements and Schedule below. Modification to the frequency or sampling requirements will require approval from the NYSDEC.

Table 4-1
Post Remediation Groundwater Sampling Requirements and Schedule

Sampling Location	Analytical Parameters	Schedule
	EPA 8260 TCL - Volatiles	
MW-01, MW-02S, MW-09S, MW-10S	X	August, 2015,
	X	September 2015
	X	March 2016
	X	September 2016

Detailed sample collection and analytical procedures and protocols are provided in Appendix E – Field Sampling & Quality Assurance Project Plan

4.3.1 Groundwater Sampling

Groundwater monitoring will be performed at the frequency noted in Table 4.1. Modification to the frequency or sampling requirements will require approval from the NYSDEC. This SMP will be modified to reflect changes in sampling plans approved by the NYSDEC.

Monitoring wells have been installed to monitor on-site groundwater conditions at the site. The monitoring well constructions details are present on the Boring and Monitoring Well Logs in Appendix C, and elevation construction data has been summarized on Table 2, Groundwater Elevations.

If biofouling or silt accumulation occurs in the on-site monitoring wells, the wells will be physically agitated/surged and redeveloped. Additionally, monitoring wells will be properly decommissioned and replaced, if an event renders the wells unusable.

Repairs and/or replacement of wells in the monitoring well network will be performed based on assessments of structural integrity and overall performance.

The NYSDEC will be notified prior to any repair or decommissioning of any monitoring well for the purpose of replacement, and the repair or decommissioning and replacement process will be documented in the subsequent Periodic Review Report (PRR). Well decommissioning without replacement will be done only with the prior approval of the NYSDEC. Well abandonment will be performed in accordance with NYSDEC's guidance entitled "CP-43: Groundwater Monitoring Well Decommissioning Procedures." Monitoring wells that are decommissioned because they have been rendered unusable will be replaced in kind in the nearest available location, unless otherwise approved by the NYSDEC.

Deliverables for the groundwater monitoring program are specified in Section 7.0 – Reporting Requirements.

4.3.2 Monitoring and Sampling Protocol

All sampling activities will be recorded in a field book. Other observations (e.g., groundwater monitoring well integrity, etc.) will be noted in the field book, and copies of this data will be available to NYSDEC.

5.0 OPERATION AND MAINTENANCE PLAN

5.1 General

The site remedy does not currently rely on any mechanical systems, such as groundwater treatment systems, sub-slab depressurization systems or air sparge/soil vapor

extraction systems to protect public health and the environment. Therefore, the operation and maintenance of such components is not included in this SMP.

6.0 PERIODIC ASSESSMENTS/EVALUATIONS

6.1 Climate Change Vulnerability Assessment

Increases in both the severity and frequency of storms/weather events, an increase in sea level elevations along with accompanying flooding impacts, shifting precipitation patterns and wide temperature fluctuation, resulting from global climactic change and instability, have the potential to significantly impact the performance, effectiveness and protectiveness of a given site and associated remedial systems. Vulnerability assessments provide information so that the site and associated remedial systems are prepared for the impacts of the increasing frequency and intensity of severe storms/weather events and associated flooding.

The site does not have any remedial system components or engineering controls. The site is vacant of buildings and is currently a parking lot.

A summary of vulnerability assessments will not be conducted for the site during periodic assessments, beyond those discussed in Section 4.2.

6.2 Green Remediation Evaluation

NYSDEC's DER-31 Green Remediation requires that green remediation concepts and techniques be considered during all stages of the remedial program including site management, with the goal of improving the sustainability of the cleanup and summarizing the net environmental benefit of any implemented green technology.

Remediation has been completed at this property, and no buildings or engineering controls are present, therefore green remediation evaluations will not be part of site management or a requirement for the PRR process.

6.3 Remedial System Optimization

A Remedial Site Optimization (RSO) study will be conducted any time that the NYSDEC or the remedial party requests in writing that an in-depth evaluation of the remedy is needed. An RSO may be appropriate if any of the following occur:

- The remedial actions have not met or are not expected to meet RAOs in the time frame estimated in the Decision Document;
- The management and operation of the remedial system is exceeding the estimated costs;
- The remedial system is not performing as expected or as designed;
- Previously unidentified source material may be suspected;
- Plume shift has potentially occurred;
- Site conditions change due to development, change of use, change in groundwater use, etc.;
- There is an anticipated transfer of the site management to another remedial party or agency; and
- A new and applicable remedial technology becomes available.

An RSO will provide a critique of a site's conceptual model, give a summary of past performance, document current cleanup practices, summarize progress made toward the site's cleanup goals, gather additional performance or media specific data and information and provide recommendations for improvements to enhance the ability of the present system to reach RAOs or to provide a basis for changing the remedial strategy.

The RSO study will focus on overall site cleanup strategy, process optimization and management with the intent of identifying impediments to cleanup and improvements to site operations to increase efficiency, cost effectiveness and remedial time frames. Green remediation technology and principals are to be considered when performing the RSO.

7.0 REPORTING REQUIREMENTS

7.1 Site Management Reports

All site management inspection, maintenance and monitoring events will be recorded in field books, and copies provided to NYSDEC.

All applicable inspection forms and other records, including media sampling data and system maintenance reports, generated for the site during the reporting period will be provided in electronic format to the NYSDEC in accordance with the requirements of the PRR.

Table 7.1
Schedule of Inspection Reports

Task/Report	Reporting Frequency*
Periodic Review Report	Annually, or as otherwise determined by the Department

* The frequency of events will be conducted as specified until otherwise approved by the NYSDEC.

All inspections reports will include, at a minimum:

- Date of event or reporting period;
- Name, company, and position of person(s) conducting monitoring/inspection activities;
- Description of the activities performed;
- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents noted (included either on the checklist/form or on an attached sheet);
- Type of samples collected (e.g., sub-slab vapor, indoor air, outdoor air, etc);
- Copies of all field forms completed (e.g., well sampling logs, chain-of-custody documentation, etc.);

- Sampling results in comparison to appropriate standards/criteria;
- A figure illustrating sample type and sampling locations;
- Copies of all laboratory data sheets and the required laboratory data deliverables required for all points sampled (to be submitted electronically in the NYSDEC-identified format);
- Any observations, conclusions, or recommendations; and
- A determination as to whether contaminant conditions have changed since the last reporting event.

Routine maintenance event reporting forms will include, at a minimum:

- Date of event;
- Name, company, and position of person(s) conducting maintenance activities;
- Description of maintenance activities performed;
- Any modifications to the system;
- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents noted (included either on the checklist/form or on an attached sheet); and,
- Other documentation such as copies of invoices for maintenance work, receipts for replacement equipment, etc., (attached to the checklist/form).

Non-routine maintenance event reporting forms will include, at a minimum:

- Date of event;
- Name, company, and position of person(s) conducting non-routine maintenance/repair activities;
- Description of non-routine activities performed;
- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents (included either on the form or on an attached sheet); and
- Other documentation such as copies of invoices for repair work, receipts for replacement equipment, etc. (attached to the checklist/form).

Data will be reported in digital format as determined by the NYSDEC. Currently, data is to be supplied electronically and submitted to the NYSDEC EQuISTM database in accordance with the requirements found at this link <http://www.dec.ny.gov/chemical/62440.html>.

7.2 Periodic Review Report

A PRR will be submitted to the Department beginning sixteen (16) months after the Certificate of Completion is issued. After submittal of the initial PRR, the next PRR shall be submitted annually to the Department or at another frequency as may be required by the Department. In the event that the site is subdivided into separate parcels with different ownership, a single PRR will be prepared that addresses the site described in Appendix B - Environmental Easement. The report will be prepared in accordance with NYSDEC's DER-10 and submitted within 30 days of the end of each certification period. Media sampling results will also be incorporated into the PRR. The report will include:

- Identification, assessment and certification of all ICs required by the remedy for the site.
- Results of the required annual site inspections and severe condition inspections, if applicable.
- All applicable site management forms and other records generated for the site during the reporting period in the NYSDEC-approved electronic format, if not previously submitted.
- A summary of any discharge monitoring data and/or information generated during the reporting period, with comments and conclusions.
- Data summary tables and graphical representations of contaminants of concern by media (groundwater, soil vapor, etc.), which include a listing of all compounds analyzed, along with the applicable standards, with all exceedances highlighted. These will include a presentation of past data as part of an evaluation of contaminant concentration trends.
- Results of all analyses, copies of all laboratory data sheets, and the required laboratory data deliverables for all samples collected during the reporting period

will be submitted in digital format as determined by the NYSDEC. Currently, data is supplied electronically and submitted to the NYSDEC EQuISTM database in accordance with the requirements found at this link: <http://www.dec.ny.gov/chemical/62440.html>.

- A site evaluation, which includes the following:
 - The compliance of the remedy with the requirements of the site-specific Decision Document;
 - Any new conclusions or observations regarding site contamination based on inspections or data generated by the Monitoring and Sampling Plan for the media being monitored;
 - Recommendations regarding any necessary changes to the Monitoring and Sampling Plan; and
 - Trends in contaminant levels in the affected media will be evaluated to determine if the remedy continues to be effective in achieving remedial goals as specified by the Decision Document.
 - The overall performance and effectiveness of the remedy.

7.2.1 Certification of Institutional and Engineering Controls

At the end of each certifying period, as determined by the NYSDEC, the following certification will be provided to the Department:

“For each institutional control identified for the site, I certify that all of the following statements are true:

- *The institutional control employed at this site is unchanged from the date the control was put in place, or last approved by the Department;*
- *Nothing has occurred that would impair the ability of the control to protect the public health and environment;*
- *Nothing has occurred that would constitute a violation or failure to comply with any site management plan for this control;*
- *Access to the site will continue to be provided to the Department to evaluate the remedy, including access to evaluate the continued maintenance of this control;*

- *If a financial assurance mechanism is required under the oversight document for the site, the mechanism remains valid and sufficient for the intended purpose under the document;*
- *Use of the site is compliant with the environmental easement.*
- *The information presented in this report is accurate and complete.*

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class “A” misdemeanor, pursuant to Section 210.45 of the Penal Law. I, [name], of [business address], am certifying as [Owner or Owner’s Designated Site Representative] or [and I have been authorized and designated by all site owners to sign this certification] for the site.”

The signed certification will be included in the Periodic Review Report.

The Periodic Review Report will be submitted, in electronic format, to the NYSDEC Central Office, Regional Office in which the site is located and the NYSDOH Bureau of Environmental Exposure Investigation. The Periodic Review Report may need to be submitted in hard-copy format, as requested by the NYSDEC project manager.

7.3 Corrective Measures Work Plan

If any component of the remedy is found to have failed, or if the periodic certification cannot be provided due to the failure of an institutional or engineering-control, a Corrective Measures Work Plan will be submitted to the NYSDEC for approval. This plan will explain the failure and provide the details and schedule for performing work necessary to correct the failure. Unless an emergency condition exists, no work will be performed pursuant to the Corrective Measures Work Plan until it has been approved by the NYSDEC.

7.4 Remedial Site Optimization Report

In the event that an RSO is to be performed (see Section 6.3), upon completion of an RSO, an RSO report must be submitted to the Department for approval. The RSO report will document the research/ investigation and data gathering that was conducted, evaluate the results and facts obtained, present a revised conceptual site model and present recommendations. RSO recommendations are to be implemented upon approval from the NYSDEC. Additional work plans, design documents, HASPs etc., may still be required to implement the recommendations, based upon the actions that need to be taken. A final engineering report and update to the SMP may also be required.

The RSO report will be submitted, in electronic format, to the NYSDEC Central Office, Regional Office in which the site is located, Site Control and the NYSDOH Bureau of Environmental Exposure Investigation.

APPENDIX B – ENVIRONMENTAL EASEMENT

**ENVIRONMENTAL EASEMENT GRANTED PURSUANT TO ARTICLE 71, TITLE 36
OF THE NEW YORK STATE ENVIRONMENTAL CONSERVATION LAW**

THIS INDENTURE made this 9th day of OCTOBER, 2015, between Owner(s) Vestal Retail Center, LLC, having an office at 5150 Overland Avenue, Culver City, California 90230, County of Los Angeles, State of California (the "Grantor"), and The People of the State of New York (the "Grantee."), acting through their Commissioner of the Department of Environmental Conservation (the "Commissioner", or "NYSDEC" or "Department" as the context requires) with its headquarters located at 625 Broadway, Albany, New York 12233,

WHEREAS, the Legislature of the State of New York has declared that it is in the public interest to encourage the remediation of abandoned and likely contaminated properties ("sites") that threaten the health and vitality of the communities they burden while at the same time ensuring the protection of public health and the environment; and

WHEREAS, the Legislature of the State of New York has declared that it is in the public interest to establish within the Department a statutory environmental remediation program that includes the use of Environmental Easements as an enforceable means of ensuring the performance of operation, maintenance, and/or monitoring requirements and the restriction of future uses of the land, when an environmental remediation project leaves residual contamination at levels that have been determined to be safe for a specific use, but not all uses, or which includes engineered structures that must be maintained or protected against damage to perform properly and be effective, or which requires groundwater use or soil management restrictions; and

WHEREAS, the Legislature of the State of New York has declared that Environmental Easement shall mean an interest in real property, created under and subject to the provisions of Article 71, Title 36 of the New York State Environmental Conservation Law ("ECL") which contains a use restriction and/or a prohibition on the use of land in a manner inconsistent with engineering controls which are intended to ensure the long term effectiveness of a site remedial program or eliminate potential exposure pathways to hazardous waste or petroleum; and

WHEREAS, Grantor, is the owner of real property located at the address of 221 Sycamore Road in the Town of Vestal, County of Broome and State of New York, known and designated on the tax map of the County Clerk of Broome as tax map parcel numbers: Section 158.10 Block 2 Lot 13, being a portion of the property conveyed to Grantor by deed dated May 15, 2007 and recorded in the Broome County Clerk's Office in Liber and Page 2189/472. The property subject to this Environmental Easement (the "Controlled Property") comprises approximately 1.557 +/- acres, and is hereinafter more fully described in the Land Title Survey dated April 29, 2015 prepared by Rodney L. Carey, PLS of Keystone Associates, which will be attached to the Site Management Plan. The Controlled Property description is set forth in and attached hereto as Schedule A; and

WHEREAS, the Department accepts this Environmental Easement in order to ensure the protection of public health and the environment and to achieve the requirements for remediation established for the Controlled Property until such time as this Environmental Easement is

extinguished pursuant to ECL Article 71, Title 36; and

NOW THEREFORE, in consideration of the mutual covenants contained herein and the terms and conditions of Brownfield Cleanup Agreement Index Number: C704032-05-10, Grantor conveys to Grantee a permanent Environmental Easement pursuant to ECL Article 71, Title 36 in, on, over, under, and upon the Controlled Property as more fully described herein ("Environmental Easement")

1. Purposes. Grantor and Grantee acknowledge that the Purposes of this Environmental Easement are: to convey to Grantee real property rights and interests that will run with the land in perpetuity in order to provide an effective and enforceable means of encouraging the reuse and redevelopment of this Controlled Property at a level that has been determined to be safe for a specific use while ensuring the performance of operation, maintenance, and/or monitoring requirements; and to ensure the restriction of future uses of the land that are inconsistent with the above-stated purpose.

2. Institutional and Engineering Controls. The controls and requirements listed in the Department approved Site Management Plan ("SMP") including any and all Department approved amendments to the SMP are incorporated into and made part of this Environmental Easement. These controls and requirements apply to the use of the Controlled Property, run with the land, are binding on the Grantor and the Grantor's successors and assigns, and are enforceable in law or equity against any owner of the Controlled Property, any lessees and any person using the Controlled Property.

A. (1) The Controlled Property may be used for:

Commercial as described in 6 NYCRR Part 375-1.8(g)(2)(iii) and Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv)

(2) All Engineering Controls must be operated and maintained as specified in the Site Management Plan (SMP);

(3) All Engineering Controls must be inspected at a frequency and in a manner defined in the SMP;

(4) The use of groundwater underlying the Controlled Property is prohibited without necessary water quality treatment as determined by the NYSDOH or the Broome County Department of Health to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department;

(5) Groundwater and other environmental or public health monitoring must be performed as defined in the SMP;

(6) Data and information pertinent to Site Management of the Controlled Property must be reported at the frequency and in a manner defined in the SMP;

(7) All future activities on the Controlled Property that will disturb remaining contaminated material must be conducted in accordance with the SMP;

(8) Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP;

(9) Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical components of the remedy shall be performed as defined in the SMP;

(10) Access to the Controlled Property must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by this Environmental Easement.

B. The Controlled Property shall not be used for Residential or Restricted Residential purposes as defined in 6NYCRR 375-1.8(g)(2)(i) and (ii), and the above-stated engineering controls may not be discontinued without an amendment or extinguishment of this Environmental Easement.

C. The SMP describes obligations that the Grantor assumes on behalf of Grantor, its successors and assigns. The Grantor's assumption of the obligations contained in the SMP which may include sampling, monitoring, and/or operating a treatment system, and providing certified reports to the NYSDEC, is and remains a fundamental element of the Department's determination that the Controlled Property is safe for a specific use, but not all uses. The SMP may be modified in accordance with the Department's statutory and regulatory authority. The Grantor and all successors and assigns, assume the burden of complying with the SMP and obtaining an up-to-date version of the SMP from:

Site Control Section
Division of Environmental Remediation
NYSDEC
625 Broadway
Albany, New York 12233
Phone: (518) 402-9553

D. Grantor must provide all persons who acquire any interest in the Controlled Property a true and complete copy of the SMP that the Department approves for the Controlled Property and all Department-approved amendments to that SMP.

E. Grantor covenants and agrees that until such time as the Environmental Easement is extinguished in accordance with the requirements of ECL Article 71, Title 36 of the ECL, the property deed and all subsequent instruments of conveyance relating to the Controlled Property shall state in at least fifteen-point bold-faced type:

This property is subject to an Environmental Easement held by the New York State Department of Environmental Conservation pursuant to Title 36 of Article 71 of the Environmental Conservation

Law.

F. Grantor covenants and agrees that this Environmental Easement shall be incorporated in full or by reference in any leases, licenses, or other instruments granting a right to use the Controlled Property.

G. Grantor covenants and agrees that it shall, at such time as NYSDEC may require, submit to NYSDEC a written statement by an expert the NYSDEC may find acceptable certifying under penalty of perjury, in such form and manner as the Department may require, that:

(1) the inspection of the Controlled Property to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under the direction of the individual set forth at 6 NYCRR Part 375-1.8(h)(3).

(2) the institutional controls and/or engineering controls employed at such Controlled Property:

(i) are in-place;

(ii) are unchanged from the previous certification, or that any identified changes to the controls employed were approved by the NYSDEC and that all controls are in the Department-approved format; and

(iii) that nothing has occurred that would impair the ability of such control to protect the public health and environment;

(3) the owner will continue to allow access to the Controlled Property to evaluate the continued maintenance of such controls;

(4) nothing has occurred that would constitute a violation or failure to comply with any site management plan for such controls;

(5) the report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

(6) to the best of his/her knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and

(7) the information presented is accurate and complete.

3. Right to Enter and Inspect. Grantee, its agents, employees, or other representatives of the State may enter and inspect the Controlled Property in a reasonable manner and at reasonable times to assure compliance with the above-stated restrictions.

4. Reserved Grantor's Rights. Grantor reserves for itself, its assigns, representatives, and successors in interest with respect to the Property, all rights as fee owner of the Property, including:

A. Use of the Controlled Property for all purposes not inconsistent with, or limited by the terms of this Environmental Easement;

B. The right to give, sell, assign, or otherwise transfer part or all of the underlying fee interest to the Controlled Property, subject and subordinate to this Environmental Easement;

5. Enforcement

A. This Environmental Easement is enforceable in law or equity in perpetuity by

Grantor, Grantee, or any affected local government, as defined in ECL Section 71-3603, against the owner of the Property, any lessees, and any person using the land. Enforcement shall not be defeated because of any subsequent adverse possession, laches, estoppel, or waiver. It is not a defense in any action to enforce this Environmental Easement that: it is not appurtenant to an interest in real property; it is not of a character that has been recognized traditionally at common law; it imposes a negative burden; it imposes affirmative obligations upon the owner of any interest in the burdened property; the benefit does not touch or concern real property; there is no privity of estate or of contract; or it imposes an unreasonable restraint on alienation.

B. If any person violates this Environmental Easement, the Grantee may revoke the Certificate of Completion with respect to the Controlled Property.

C. Grantee shall notify Grantor of a breach or suspected breach of any of the terms of this Environmental Easement. Such notice shall set forth how Grantor can cure such breach or suspected breach and give Grantor a reasonable amount of time from the date of receipt of notice in which to cure. At the expiration of such period of time to cure, or any extensions granted by Grantee, the Grantee shall notify Grantor of any failure to adequately cure the breach or suspected breach, and Grantee may take any other appropriate action reasonably necessary to remedy any breach of this Environmental Easement, including the commencement of any proceedings in accordance with applicable law.

D. The failure of Grantee to enforce any of the terms contained herein shall not be deemed a waiver of any such term nor bar any enforcement rights.

6. Notice. Whenever notice to the Grantee (other than the annual certification) or approval from the Grantee is required, the Party providing such notice or seeking such approval shall identify the Controlled Property by referencing the following information:

County, NYSDEC Site Number, NYSDEC Brownfield Cleanup Agreement, State Assistance Contract or Order Number, and the County tax map number or the Liber and Page or computerized system identification number.

Parties shall address correspondence to: Site Number: C704032
Office of General Counsel
NYSDEC
625 Broadway
Albany New York 12233-5500

With a copy to: Site Control Section
Division of Environmental Remediation
NYSDEC
625 Broadway
Albany, NY 12233

All notices and correspondence shall be delivered by hand, by registered mail or by Certified mail and return receipt requested. The Parties may provide for other means of receiving and communicating notices and responses to requests for approval.

7. Recordation. Grantor shall record this instrument, within thirty (30) days of execution of

this instrument by the Commissioner or her/his authorized representative in the office of the recording officer for the county or counties where the Property is situated in the manner prescribed by Article 9 of the Real Property Law.

8. Amendment. Any amendment to this Environmental Easement may only be executed by the Commissioner of the New York State Department of Environmental Conservation or the Commissioner's Designee, and filed with the office of the recording officer for the county or counties where the Property is situated in the manner prescribed by Article 9 of the Real Property Law.

9. Extinguishment. This Environmental Easement may be extinguished only by a release by the Commissioner of the New York State Department of Environmental Conservation, or the Commissioner's Designee, and filed with the office of the recording officer for the county or counties where the Controlled Property is situated in the manner prescribed by Article 9 of the Real Property Law.

10. Joint Obligation. If there are two or more parties identified as Grantor herein, the obligations imposed by this instrument upon them shall be joint and several.

Remainder of Page Intentionally Left Blank

IN WITNESS WHEREOF, Grantor has caused this instrument to be signed in its name.

Qualified in Schenectady County
Commission Expires August 22, 2018

SCHEDULE "A" PROPERTY DESCRIPTION

**ENVIRONMENTAL EASEMENT DESCRIPTION
VESTAL RETAIL CENTER, LLC
221 SYCAMORE ROAD
TOWN OF VESTAL
BROOME COUNTY, NEW YORK STATE**

ALL THAT TRACT OR PARCEL OF LAND situate in the Vestal, County of Broome, State of New York, being a portion of the property now or formerly of Vestal Retail Center, LLC described in L. 2189 P. 472 as recorded in the Broome County Clerk's Office on May 31, 2007 (TM#158.10-2-13), bounded and described as follows:

COMMENCING at a point on the easterly boundary of Sycamore Street at its intersection with the division line between the property now or formerly of Shippers Road Management, LLC per L. 2397 P. 592 (TM# 158.10-2-9) on the north and the property now or formerly of Vestal Retail Center, LLC per L. 2189 P. 472 (TM# 158.10-2-13) on the south; thence along said easterly boundary of Sycamore Street the following five (5) courses and distances: 1) S31°41'40"E, a distance of 20.52 feet to a point; 2) S19°09'52"E, a distance of 333.22 feet to a point; 3) S84°33'02"W, a distance of 3.79 feet to a point; 4) S18°57'32"E, a distance of 347.43 feet to a point; 5) S31°01'30"E, a distance of 6.55 feet to a point, the last mentioned point being the Point of Beginning;

RUNNING THENCE and continuing S31°01'30"E along said easterly boundary of Sycamore Street, a distance of 118.78 feet to a point at its intersection with the northerly boundary of Ash Road; thence along said Ash Road the following seven (7) courses and distances:

1) On a non-tangent curve to the left having a radius of 35.00 feet, an arc length of 12.70 feet to a point, said curve being subtended by a chord having a bearing of S78°07'36"E and a length of 12.63 feet;

2) S88°31'24"E, a distance of 10.50 feet to a point;

3) On a curve to the left having a radius of 599.93 feet, an arc length of 37.67 feet to a point, the last mentioned curve being subtended by a chord having a bearing of N89°41'07"E and a length of 37.66 feet (non-tangent);

4) N75°28'03"E, a distance of 373.50 feet to a 5/8 inch rebar;

5) N77°34'03"E, a distance of 48.71 feet to a point;

6) On a non-tangent curve to the right having a radius of 40.00 feet, an arc length of 105.44 feet to a point, the last mentioned curve being subtended by a chord having a bearing of N77°34'03"E and a length of 77.46 feet;

7) N77°34'03"E, a distance of 12.08 feet to a point at its intersection with the division line between the property now or formerly of Stewart Park LLC per L. 2428 P. 114 (TM# 158.11-1-16.1) on the northeast and said Vestal Retail Center, LLC on the southwest; thence N28°14'41"W along the last mentioned division line, a distance of 129.08 feet to a point; thence through said Vestal Retail Center, LLC the following three (3) courses and distances:

1) S75°17'04"W, a distance of 210.34 feet to a point;

2) S75°50'32"W, a distance of 79.65 feet to a point;

3) S77°47'27"W, a distance of 282.94 feet to the POINT OF BEGINNING.

The above described parcel contains 67,831 square feet or 1.557 acres, more or less.

APPENDIX D – EXCAVATION WORK PLAN (EWP)

D-1 NOTIFICATION

At least 15 days prior to the start of any activity that is anticipated to encounter remaining contamination, the site owner or their representative will notify the NYSDEC. Table C-1 includes contact information for the above notification. The information on this table will be updated as necessary to provide accurate contact information. A full listing of site related contact information is provided in Appendix A.

* Note: Notifications are subject to change and will be updated as necessary.

This notification will include:

- A detailed description of the work to be performed, including the location and areal extent of excavation, plans/drawings for site re-grading, intrusive elements or utilities to be installed below the soil cover, estimated volumes of contaminated soil to be excavated and any work that may impact an engineering control;
- A summary of environmental conditions anticipated to be encountered in the work areas, including the nature and concentration levels of contaminants of concern, potential presence of grossly contaminated media, and plans for any pre-construction sampling;
- A schedule for the work, detailing the start and completion of all intrusive work;
- A summary of the applicable components of this EWP;
- A statement that the work will be performed in compliance with this EWP and 29 CFR 1910.120;
- A copy of the contractor's health and safety plan (HASP), in electronic format, if it differs from the HASP provided in Appendix F of the SMP;
- Identification of disposal facilities for potential waste streams; and
- Identification of sources of any anticipated backfill, along with all required chemical testing results.

D-2 SOIL SCREENING METHODS

Visual, olfactory and instrument-based (e.g. photoionization detector) soil screening will be performed by a qualified environmental professional during all excavations into known or potentially contaminated material (remaining contamination). Soil screening will be performed when invasive work is done and will include all excavation and invasive work performed during development, such as excavations for foundations and utility work, after issuance of the COC.

Soils will be segregated based on previous environmental data and screening results into material that requires off-site disposal and material that requires testing to determine if the material can be reused on-site as soil beneath a cover or if the material can be used as cover soil. Further discussion of off-site disposal of materials and on-site reuse is provided in Section D-7 of this Appendix.

D-3 SOIL STAGING METHODS

Soil stockpiles will be continuously encircled with a berm and/or silt fence. Hay bales will be used as needed near catch basins, surface waters and other discharge points.

Stockpiles will be kept covered at all times with appropriately anchored tarps. Stockpiles will be routinely inspected and damaged tarp covers will be promptly replaced.

Stockpiles will be inspected at a minimum once each week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the site and available for inspection by the NYSDEC.

D-4 MATERIALS EXCAVATION AND LOAD-OUT

A qualified environmental professional or person under their supervision will oversee all invasive work and the excavation and load-out of all excavated material.

The owner of the property and remedial party (if applicable) and its contractors are responsible for safe execution of all invasive and other work performed under this Plan.

The presence of utilities and easements on the site will be investigated by the qualified environmental professional. It will be determined whether a risk or impediment to the planned work under this SMP is posed by utilities or easements on the site.

Loaded vehicles leaving the site will be appropriately lined, tarped, securely covered, manifested, and placarded in accordance with appropriate Federal, State, local, and NYSDOT requirements (and all other applicable transportation requirements).

A truck wash will be operated on-site, as appropriate. The qualified environmental professional will be responsible for ensuring that all outbound trucks will be washed at the truck wash before leaving the site until the activities performed under this section are complete. Truck wash waters will be collected and disposed of off-site in an appropriate manner.

Locations where vehicles enter or exit the site shall be inspected daily for evidence of off-site soil tracking.

The qualified environmental professional will be responsible for ensuring that all egress points for truck and equipment transport from the site are clean of dirt and other materials derived from the site during intrusive excavation activities. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to site-derived materials.

D-5 MATERIALS TRANSPORT OFF-SITE

All transport of materials will be performed by licensed haulers in accordance with appropriate local, State, and Federal regulations, including 6 NYCRR Part 364. Haulers will be appropriately licensed and trucks properly placarded.

Material transported by trucks exiting the site will be secured with tight-fitting covers. Loose-fitting canvas-type truck covers will be prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.

Truck routes from the site to disposal facility(s) will be dependent upon the location of the facility. Two major truck routes from the site include transport along Route 434 or Route 44, both of which experience heavy commercial traffic, to NYS Route 17. These are the most appropriate route and takes into account: (a) limiting transport through residential areas and past sensitive sites; (b) use of city mapped truck routes; (c) prohibiting off-site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport;

Trucks will be prohibited from stopping and idling in the neighborhood outside the project site.

Egress points for truck and equipment transport from the site will be kept clean of dirt and other materials during site remediation and development.

Queuing of trucks will be performed on-site in order to minimize off-site disturbance. Off-site queuing will be prohibited.

D-6 MATERIALS DISPOSAL OFF-SITE

All material excavated and removed from the site will be treated as contaminated and regulated material and will be transported and disposed in accordance with all local, State (including 6NYCRR Part 360) and Federal regulations. If disposal of material from this site is proposed for unregulated off-site disposal (i.e. clean soil removed for development purposes), a formal request with an associated plan will be made to the NYSDEC. Unregulated off-site management of materials from this site will not occur without formal NYSDEC approval.

Off-site disposal locations for excavated soils will be identified in the pre-excavation notification. This will include estimated quantities and a breakdown by class of disposal facility if appropriate, i.e. hazardous waste disposal facility, solid waste landfill, petroleum treatment facility, C/D recycling facility, etc. Actual disposal quantities and associated documentation will be reported to the NYSDEC in the Periodic Review Report. This documentation will include: waste profiles, test results, facility acceptance letters, manifests, bills of lading and facility receipts.

Non-hazardous historic fill and contaminated soils taken off-site will be handled, at minimum, as a Municipal Solid Waste per 6NYCRR Part 360-1.2. Material that does not meet Unrestricted SCOs is prohibited from being taken to a New York State recycling facility (6NYCRR Part 360-16 Registration Facility).

D-7 MATERIALS REUSE ON-SITE

The qualified environmental professional will ensure that procedures defined for materials reuse in this SMP are followed and that unacceptable material does not remain on-site. Contaminated on-site material, including historic fill and contaminated soil, that is acceptable for reuse on-site will be placed below the demarcation layer or impervious surface, and will not be reused within a cover soil layer, within landscaping berms, or as backfill for subsurface utility lines. Material reuse on-site will comply with the requirements of NYSDEC DER-10 Section 5.4(e)4.

D-8 FLUIDS MANAGEMENT

All liquids to be removed from the site, including but not limited to, excavation dewatering, decontamination waters and groundwater monitoring well purge and development waters, will be handled, transported and disposed in accordance with applicable local, State, and Federal regulations. Dewatering, purge and development fluids will not be

recharged back to the land surface or subsurface of the site, and will be managed off-site, unless prior approval is obtained from NYSDEC.

Discharge of water generated during large-scale construction activities to surface waters (i.e. a local pond, stream or river) will be performed under a SPDES permit.

D-9 BACKFILL FROM OFF-SITE SOURCES

All materials proposed for import onto the site will be approved by the qualified environmental professional and will be in compliance with provisions in this SMP prior to receipt at the site. A Request to Import/Reuse Fill or Soil form, which can be found at <http://www.dec.ny.gov/regulations/67386.html>, will be prepared and submitted to the NYSDEC project manager allowing a minimum of 5 business days for review.

Material from industrial sites, spill sites, or other environmental remediation sites or potentially contaminated sites will not be imported to the site.

All imported soils will meet the backfill and cover soil quality standards established in 6NYCRR 375-6.7(d). Soils that meet 'exempt' fill requirements under 6 NYCRR Part 360, but do not meet backfill or cover soil objectives for this site, will not be imported onto the site without prior approval by NYSDEC. Solid waste will not be imported onto the site.

Trucks entering the site with imported soils will be securely covered with tight fitting covers. Imported soils will be stockpiled separately from excavated materials and covered to prevent dust releases.

D-10 STORMWATER POLLUTION PREVENTION

The site is approximately 1.5 acres in size. Based on current site use, it is likely that a portion of the site will remain asphalt covered to satisfy parking requirements. It is not anticipated that potential future site development will impact 1 acre or more; a Stormwater Pollution Prevention Plan will likely not be required.

Barriers and hay bale checks will be installed and inspected once a week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the site and available for inspection by the NYSDEC. All necessary repairs shall be made immediately.

Accumulated sediments will be removed as required to keep the barrier and hay bale check functional.

All undercutting or erosion of the silt fence toe anchor shall be repaired immediately with appropriate backfill materials.

Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

Erosion and sediment control measures identified in the SMP shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving waters.

Silt fencing or hay bales will be installed around the entire perimeter of the construction area.

D-11 EXCAVATION CONTINGENCY PLAN

If underground tanks or other previously unidentified contaminant sources are found during post-remedial subsurface excavations or development related construction, excavation activities will be suspended until sufficient equipment is mobilized to address the condition.

Sampling will be performed on product, sediment and surrounding soils, etc. as necessary to determine the nature of the material and proper disposal method. Chemical

analysis will be performed for a full list of analytes (TAL metals; TCL volatiles and semi-volatiles, TCL pesticides and PCBs), unless the site history and previous sampling results provide a sufficient justification to limit the list of analytes. In this case, a reduced list of analytes will be proposed to the NYSDEC for approval prior to sampling.

Identification of unknown or unexpected contaminated media identified by screening during invasive site work will be promptly communicated by phone to NYSDEC's Project Manager. Reportable quantities of petroleum product will also be reported to the NYSDEC spills hotline. These findings will be also included in the Periodic Review Report.

APPENDIX E - FIELD SAMPLING & QUALITY ASSURANCE PROJECT PLAN

Ash Road Properties
221 Sycamore Road
Broome County
Town of Vestal, New York

FIELD SAMPLING AND QUALITY ASSURANCE PROJECT PLAN
FOR THE
SITE MANAGEMENT PLAN
NYSDEC Site Number C704032

Prepared By:
GeoLogic NY, Inc.
June 2015

INTRODUCTION

This Field Sampling and Quality Assurance Project Plan is for the Site Management Plan for Ash Road Properties Brownfield Project in the Town of Vestal, Broome County, New York.

QUALITY ASSURANCE PROJECT PLAN (QAPP)

Project Description

This Sampling and Analysis Plan includes identification of sampling locations and media; methods for collection, handling, and preservation; and the protocols to be used for sample analysis. Environmental media to be sampled is groundwater. The data will be utilized to form conclusions as to the presence, transport, and fate of site specific contaminants.

Field Sampling Procedures

All sampling objectives, locations and procedures have been included as the Field Sampling Plan and described in this Sampling and Analysis Plan. Items include field measurement techniques, general field decontamination procedures, and sample acquisition and management.

Analytical Methodologies

Sampling and analysis will be performed for the Superfund Target Compound List (TCL) parameters for volatile organic compounds by EPA Method 8260. Analysis of these samples will be consistent with the NYSDEC ASP 2005, Category B requirements. Trip blanks will accompany each shipment of aqueous samples for volatile organic compounds (VOC) analysis. If several samples are collected for VOC analysis on any one day, all VOC samples will be packed in the same cooler with the trip blank. All trip blanks will be analyzed according to NYSDEC ASP (2005) protocol for volatile organics. All data will be presented in modified Category B reportables / deliverables format. Duplicate groundwater samples will be obtained

Additional groundwater analyses will be conducted to evaluate the state of the biogeochemical system post injection of the biostimulant as indicated in the Remedial Action Work Plan.

Analysis of these samples will not be consistent with the NYSDEC ASP 2005, Category B requirements

Laboratory Certification and Coordination

All chemical analyses for samples collected will be completed by Pace Analytical, a CLP laboratory capable of performing project-specific analysis indicated in the attached QA/QC requirements. The project manager will be responsible for all project-related laboratory coordination.

Analytical Quality Control

Analytical quality control will be consistent with the methodologies and quality assurance/quality control requirements in the NYSDEC ASP 2005 for EPA Method 8260, TCL analysis, only. This analytical data will be subject to data usability reviews in general accordance with NYSDEC ASP Category B reportable and deliverable formats. Data Usability Summary Reports (DUSR) will be prepared in a manner consistent with NYSDEC's Guidance for Data Deliverables and Development of Data Usability Summary Reports, NYSDEC DER-10, May 2010. The main objective of a DUSR is to determine whether the data presented meets the project-specific needs for data quality and data use.

FIELD SAMPLING PLAN

Sampling Objectives

Field sampling at the Ash Road Properties has been designed to obtain representative samples of environmental media to further assess the impact that the site may have upon human health and the environment, as well as analyzed for parameters that influence the biodegradation of the contaminant. The field sampling plan includes sampling for groundwater.

Groundwater

Monitoring wells MW-01, MW-02S, MW-09S and MW-10S are the wells that will be sampled at the frequency indicated in the Remedial Action Work Plan.

Sampling Procedures

The following sections provide procedures for collecting soil and groundwater samples.

Preparation for Sampling

The sample collection technique is of prime importance to assure the integrity of the collected sample. The following techniques include provisions so that:

- A representative sample is obtained;
- Contamination of the sample is minimized;
- The sample is properly preserved; and
- An acceptable Chain-of-Custody record is maintained.

The QA/QC Sampling Component of the Plan includes:

- Incorporation of accepted sampling techniques referenced in the sampling plan;
- Procedures for documenting any field actions contrary to the QA/QC Plan;
- Documentation of all preliminary activities such as equipment check-out, calibrations, and container storage and preparation;
- Documentation of field measurement quality control data (quality control procedures for such measurements shall be equivalent to corresponding QC procedures);
- Documentation of field activities;
- Documentation of post-field activities including sample shipment and receipt, field team debriefing, and equipment check-in;
- Generation of quality control samples including duplicate samples and trip blanks; and
- The use of these samples in the context of data evaluation with details of the methods employed (including statistical methods) and of the criteria upon which the information generated will be judged.

The personnel responsible for collection of groundwater samples will be familiar with standard sampling procedures and follow the appropriate protocol. Field records will be maintained in bound notebooks with numbered pages to document daily instrument calibration, locations sampled, field observations, and weather conditions. Each page will be dated and signed by the sampler. Each notebook will be numbered and a log of notebooks will be maintained by the project manager.

Prior to sampling, all equipment must be procured and accommodations for sample container delivery, and sample shipment must be made. The following is a list of general equipment that

would be on hand for sampling events. Special equipment for each sampling event is presented in the section describing that specific sampling event.

General Field Sampling Equipment

- Project Data Information/Plans
- Chain-of-Custody forms
- Nitrile/Vinyl gloves
- Photoionization detector (PID)
- Bio-degradable phosphate free detergent
- Coolers (with ice)
- Sample bottles
- Tap water/Distilled water

Groundwater Sample Collection

Groundwater samples will be collected using dedicated, disposable HDPE bailers following evacuation of three borehole volumes or complete purging of the well using low-flow purging techniques. All other related sampling equipment will be properly decontaminated in the field. The following equipment will be available for sampling of monitoring wells in addition to the general sampling equipment list:

- Well Data Information/Plans
- Dedicated disposable bailers/Peristaltic pump with disposable tubing
- Electronic water level indicator
- YSI Multimeter (or comparable)
- Preserved sample containers
- Nitrile/Vinyl gloves

The following steps describe the sample preparation and collection of groundwater:

1. Obtain the sampling parameters for each well to be sampled.
2. Select the appropriate sample containers for the day's sampling.
3. Unlock and remove the well cap.
4. In order to obtain a representative sample of the formation water, the well must be purged of the static water within the well. Prior to purging, the static water level within the

well must be measured and the measurement recorded in the field book. To determine the amount of water necessary to purge, find the liquid column height in the well to determine the total volume (three liquid column borehole volumes) of liquid to be purged.

5. Attach the single-use disposable nylon/polypropylene rope to the sample bailer OR attached single-use disposable tubing to the peristaltic pump.

6. Purge the well; lower bailer slowly into the well until it is below the water surface OR lower the tubing attached to the peristaltic pump and purge. Consistent with NYSDEC Guidance, purge waters will be containerized or passed through a granulated carbon filter prior to discharge to the ground surface.

7. Record the amount of water purged and the field parameter (pH, temperature, specific conductance, ORP, DO) in the field book.

8. If the well goes dry during bailing, allow for recovery and then sample.

9. Fill the appropriate sample bottles according to the sampling schedule for each well. While filling the sample bottles, record the well number, type, volume of container, and the preservatives used.

10. Volatile organic analyses samples must be free of air bubbles. When a bubble-free sample has been obtained, it must be immediately chilled.

11. Collect the duplicates. Take samples according to sampling schedule presented in the Work Plan.

12. Record all pertinent information in the field logbook (include color, odor, sediment content of sample, etc.). Any situations at the site that have the potential to interfere with the analytical results should also be recorded here.

13. Lock well, inspect well site, and note any maintenance required.

14. Dispose of potentially contaminated materials in designated containers for contaminated solids.

Duplicate samples shall be collected at least once with each field batch with a minimum of one for each twenty samples.

Field Measurement Techniques

Water Level Measurement – Water elevations will be taken on all wells prior to purging and sampling. The procedure for measuring water levels in the monitoring wells is:

- Unlock and remove well cap;
- Measure water level to nearest 0.01 foot with a water level indicator (electronic);
- Water level indicators will be decontaminated before moving to next well. The tape and cable are decontaminated by washing in a bucket of potable water-biodegradable phosphate-free detergent solution, followed by a rinse with distilled water.

Field Parameter - Multimeter – The meters will be field calibrated daily and operated in accordance with the manufacturer's instructions. .

Photoionization Detector (PID) – The PID will be calibrated daily (and more often as required by the manufacturer's data) prior to use in the field, using calibration test gases.

General Decontamination

The following procedures will be performed for the decontamination of exploration equipment, sampling equipment, and personnel after each drilling/sampling event:

Injection Equipment – To avoid cross contamination, use of a PID meter and cleaning between each sampling site will be employed on down-hole tools associated with the Geoprobe.

Reusable Equipment – The following steps will be employed to decontaminate reusable equipment:

- Rinse equipment of soil or foreign material with potable water;
- Immerse and scrub equipment with bio-degradable phosphate-free detergent and potable water;
- Immerse and scrub in a potable water rinse without detergent; and
- The decontamination wash and rinse water will not be considered hazardous unless visual inspection or monitoring by the PID and other equipment indicate that contaminants may be present. The rinse waters can be discharged on-site if they are not contaminated. If contaminants are expected to be present, the rinsate waters will be passed through granulated carbon filter before discharging to the ground surface.

Sample Containers – Upon filling and capping sample bottles, the outside of the bottle will be wiped off with a clean paper towel. These towels will be disposed of in a dedicated container for contaminated solids.

Personnel Decontamination – The following procedures will be used to decontaminate sampling personnel:

- After each sampling event chemical-resistant gloves will be disposed of in a dedicated container for contaminated solids;
- At the end of each sampling day, Tyvek™ coveralls, if used, will be disposed of in a dedicated container for contaminated solids;
- Boots will be bagged and removed from the site for cleaning; and

- Personnel will be required to follow procedures outlined in the Health and Safety Plan.

Sample Management Plan

The Sample Management Plan provides procedures to document and track samples and results obtained during this work effort. A series of pre-printed forms with the appropriate information serves as a vehicle for documentation and tracking. In order to accomplish this task, the documentation materials will include sample labels, sample characterization and Chain-of-Custody sheets, daily field reports, and a sample log.

Sample Label – A sample label will be completed for each sample obtained and will be affixed to the sample container. The label is configured in a way to address various types of mediums. Information on the label includes, at a minimum, client name, location, sample description, sample number, date, time, grab sample, composite sample, notes, and sampler's name.

Sample Characterization & Chain-of-Custody Sheet – All pertinent field information will be entered into the field book and chain-of-custody (COC) sheets. The COC sheets will include client name, sample ID, sample description, location of sample, number of containers, container type, analysis required, and preservation. The Chain-of-Custody section of the form will document the sample's pathway of sample shipment which will include names of persons delivering/receiving, dates, and times. Copies of the completed forms will be retained by the Engineer and the analytical laboratory. Chain-of-Custody sheets will be included in the laboratory data package submittal. Information regarding the well including depth to water, well volume, sample pH, temperature, turbidity, specific conductance, color, etc. will be recorded in the field book.

Sample Designation – Each sample will have a unique sample code that will include, where appropriate, the sample media, and the sample location.

Trip Blanks: TB - TB-1, TB-2, etc.

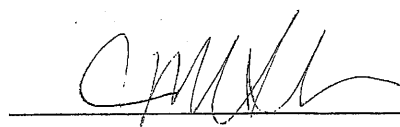

Sample Handling – Each collected sample will be dispensed into the appropriate sample containers for the type of analysis to be performed. Appropriate sample preservatives will be added to the sample containers by the contracted analytical laboratory prior to the delivery into the field, except in cases where the sample preservative must be added after sample collection.

All samples that require cool storage will be immediately placed in coolers with appropriate packaging materials so as to protect the breakage of sample containers during shipment. The sample coolers will be filled with cubed ice prior to leaving the sample collection location. Careful packaging techniques will be used to prevent sample containers from breakage during shipment. Materials such as cardboard, foam wrap, or Styrofoam may be used as packaging materials. All samples will be either hand-delivered to the contracted analytical laboratory or arrangement for pick-up by the laboratory will be made.

Revision History

Revision Number	Revision Date	Revisions made
09	02/19/09	Add signature page, effective date. Combine document into one revision. Streamline information into tables. Added continued acceptance provision. Added the appendix. Removed floor plan, instrument listing, vendor listing, approved methods, resumes, org chart to the Appendix.
10	6/14/09	Moved approval signatures to cover page. Added NYELAP to section 1.1.2. Add logbooks to table 3.0. Define temporary and archival storage. Change table 6.0 name to Bacti Reagent Grade (laboratory pure) Water. Added more details to Data Integrity procedures.
11	7/8/11	Updated Personnel. Added reference to document ADMIN001 <i>Plan for Going Out of Business or Transfer of Ownership</i> and reference to document ADMIN002 for Computers and Programs. Hardcopy of lab reports not retained, only electronic. Retain PW lead and copper records for 12 years. Master list of documents using an excel spreadsheet. Data packages burned to CD semi-annually. Ursual Middel approved lab report signatory. James Bidas approved for pesticide package review. Refrigerators 0-6.0°C. Freezers recommended -5 to -15 °C. ICV meet CCV criteria. LOD must be lower than LOQ. Updated bottle and preservation tables. Added details to housekeeping measures. Consumable storage in area of use. Control of waste room by special process supervisor or designee. QC limits generally not updated if confirmed to maintain consistency. Added policy on stress reduction and quality of work. T.O.C. updated to reflect changes. Updated Appendix.
12	8/2/11	Table 3- 12 years retention for all. 20.1.7-20.1.8 chlorine checks for DW organics. 20.1.9 and Table 8&9 -Bacteria acceptance 1-inch headspace and procedure for over filled samples. 20.1.14 and Table 9 -NW unpreserved metals – wait 24 hrs after preservation for analysis. pH 3 for 531.1 in Table 8, also added RSK to Tables 8&9. Added reference #38.
13	6/27/12	Updated to address requirements of the DoD.
14	10/13/12	Added Thomas Powell. Sec 8.4-8.4 NELAC checklist used to specify records for data review. 8.10 “QA” in LIMS means data has been reviewed and validated as correct. Table 4 record min/max temp. for weekend as backup Added DoD methods and instruments to Appendix. 18.7 added reference to current LOD/LOQ. 23.0 updated water

		supply units.27.2.1.1 get COA at purchase276.3.1if no exp. date, use 10yrs.27.10.1 record date put in service on COA. 30.10ms/msd spike. 33.1.7.1.1 review date on SOP cover35.2.9 determine time frame for CA.
15	7/5/13	JMS as Lab Director. Added to Purchasing of Services and Supplies- approved vendors. Electronic maintenance records in the LIMS. SOP retention. PT reporting on pt provider report forms and results posted to website. DOC procedure for parameters where LFBs don't apply, store electronically. Section on LIMS, EDDs & Test Reports. Updated T.O.C.
16	2/10/14	Lab name change. Changes to Personnel, organizational structure, job description, training. Removed references to DoD. T.O.C. updated to reflect changes. Updated Appendix and removed resumes.

1.0 Quality Policy Statement

Pace Analytical Services, Inc. has established systems, policies, programs, and procedures in order to assure the quality of the test results of the laboratory. Laboratory personnel are committed to exceptional professional and ethical practices and to the quality of its environmental testing in servicing its clients.

1.1 Quality System Policies and Objectives

- 1.1.1 The overall quality system objectives are documented in the quality policy statement and are issued under authority of Joann Slavin, Lab Director.
- 1.1.2 The laboratories standard of service is intended to meet or exceed the requirements of the NY ELAP, National Environmental Laboratory Accreditation Program (NELAC/TNI) and the USEPA Contract Laboratory Program.. All staff will be committed to being in compliance with these standards.
- 1.1.3 The QAM is supported by a larger collection of Standard Operating Procedures (SOPs) and documents for all programs in the laboratory.
- 1.1.4 All laboratory personnel concerned with environmental testing activities within the laboratory will familiarize themselves with the laboratories system policies and objectives.
- 1.1.5 The QA Manager will maintain evidence on file that demonstrates that each employee has read, understood, and is using the latest version of the laboratory's in-house quality documentation, which relates to his/her job responsibilities.
- 1.1.6 Opportunities for improvement of operations and processes are identified by managers on a continual basis from ongoing feedback on operations and through management reviews.
- 1.1.7 Inputs for improvement opportunities may be obtained from the following sources:
 - 1.1.7.1 Customer satisfaction surveys
 - 1.1.7.2 Employees
 - 1.1.7.3 Internal and external audits of the management system

1.1.7.4 Records of service nonconformities

1.1.8 Opportunities for improvement from daily feedback are evaluated by the General or Quality Manager(s) and are implemented through the preventative and correction action procedures.

1.1.9 Opportunities for improvement from analysis of longer-term data and trends are evaluated and implemented through the management review process.

2.0 Organization and Management Structure

2.1 Organization Chart (See the Appendix, Section 1.0)

2.2 The PASI Corporate Office centralizes company-wide accounting, business development, financial management, human resources development, information systems, marketing, quality, safety, and training activities. PASI's Director of Quality is responsible for assisting the development, implementation and monitoring of quality programs for the company. See the Appendix, Section 1.0 for the Corporate Organizational structure.

2.3 Each laboratory within the system operates with local management, but all labs share common systems and receive support from the Corporate Office.

2.4 A Senior General Manager (SGM) oversees all laboratories and service centers in their assigned region. Each laboratory or facility in the company is then directly managed by an SGM, a General Manager (GM), an Assistant General Manager (AGM), or an Operations Manager (OM). Quality Managers (QM) or Senior Quality Managers (SQM) at each laboratory report directly to the highest level of local laboratory management, however named, that routinely makes day-to-day decisions regarding that facility's operations. The QMs and SQMs will also receive guidance and direction from the corporate Director of Quality.

2.5 The SGM, GM, AGM or OM, or equivalent functionality in each facility, bears the responsibility for the laboratory operations and serves as the final, local authority in all matters. In the absence of these managers, the SQM/QM serves as the next in command. He or she assumes the responsibilities of the manager, however named, until the manager is available to resume the duties of their position. In the absence of both the manager and the SQM/QM, management responsibility of the laboratory is passed to the Technical Director, provided

such a position is identified, and then to the most senior department manager until the return of the lab manager or SQM/QM. The most senior department manager in charge may include the Client Services Manager or the Administrative Business Manager at the discretion of the SGM/GM/AGM/OM.

2.6 A Technical Director who is absent for a period of time exceeding 15 consecutive calendar days shall designate another full-time staff member meeting the qualifications of the technical director to temporarily perform this function. The laboratory SGM/GM/AGM/OM or SQM/QM has the authority to make this designation in the event the existing Technical Director is unable to do so. If this absence exceeds 35 consecutive calendar days, the primary accrediting authority shall be notified in writing.

2.7 The SQM/QM has the responsibility and authority to ensure the Quality System is implemented and followed at all times. In circumstances where a laboratory is not meeting the established level of quality or following the policies set forth in this Quality Assurance Manual, the SQM/QM has the authority to halt laboratory operations should he or she deem such an action necessary. The SQM/QM will immediately communicate the halting of operations to the SGM/GM/AGM/OM and keep them posted on the progress of corrective actions. In the event the SGM/GM/AGM/OM and the SQM/QM are not in agreement as to the need for the suspension, the Chief Operating Officer and Director of Quality will be called in to mediate the situation.

2.8 The technical staff of the laboratory is generally organized into the following functional groups:

- Organic Sample Preparation
- Wet Chemistry Analysis
- Metals Analysis
- Volatiles Analysis
- Semi-volatiles Analysis
- Radiochemical Analysis
- Microbiology

2.9 Appropriate support groups are present in each laboratory. The actual

organizational structure for PASI – Long Island is listed in the Appendix, Section 1.0. In the event of a change in SGM/GM/AGM/OM, SQM/QM, or any Technical Director, the laboratory will notify its accrediting authorities and revise the organizational chart in the Quality Assurance Manual (QAM) within 30 days. For changes in Department Managers or Supervisors or other laboratory personnel, no notifications will be sent to the laboratory's accrediting agencies; changes to the organizational chart will be updated during or prior to the annual review process. Changes or additions in these key personnel will also be noted by additional signatures on the QAM, as applicable. In any case, the QAM will remain in effect until the next scheduled revision.

3.0 Laboratory Job Descriptions

3.1 Senior General Manager

- Oversees all functions of all the operations within their designated region;
- Oversees the development of local GMs/AGMs/OMs within their designated region;
- Oversees and authorizes personnel development including staffing, recruiting, training, workload scheduling, employee retention and motivation;
- Oversees the preparation of budgets and staffing plans for all operations within their designated region;
- Ensures compliance with all applicable state, federal and industry standards;
- Works closely with Regional Sales Management.

3.2 General Manager

- Oversees all functions of their assigned operations;
- Authorizes personnel development including staffing, recruiting, training, workload scheduling, employee retention and motivation;
- Prepares budgets and staffing plans;
- Monitors the Quality Systems of the laboratory and advises the SQM/QM accordingly;

- Ensures compliance with all applicable state, federal and industry standards.

3.3 Senior Quality Manager

- Provides quality oversight for multiple laboratories where there is not a local quality manager or for labs where there are multiple and separately distinct quality systems in the same facility;
- Responsible for implementing, maintaining and improving the quality system while functioning independently from laboratory operations. Reports directly to the highest level of local laboratory facility management, however named, that routinely makes day-to-day decisions regarding laboratory operations, but receives direction and assistance from the Corporate Director of Quality;
- Ensures that communication takes place at all levels within the lab regarding the effectiveness of the quality system and that all personnel understand their contributions to the quality system;
- Monitors Quality Assurance/Quality Control activities to ensure that the laboratory achieves established standards of quality (as set forth by the Corporate Quality office). The Quality Manager is responsible for reporting the lab's level of compliance to these standards to the Corporate Director of Quality on a quarterly basis;
- Maintains records of quality control data and evaluates data quality;
- Conducts periodic internal audits and coordinates external audits performed by regulatory agencies or customer representatives;
- Reviews and maintains records of proficiency testing results;
- Maintains the document control system;
- Assists in development and implementation of appropriate training programs;
- Provides technical support to laboratory operations regarding methodology and project QA/QC requirements;
- Maintains certifications from federal and state programs;

- Ensures compliance with all applicable state, federal and industry standards;
- Maintains the laboratory training records, including those in the Learning Management System (LMS), and evaluates the effectiveness of training;
- Monitors correctives actions;
- Maintains the currency of the Quality Manual.

3.4 Quality Manager

- Responsible for implementing, maintaining and improving the quality system while functioning independently from laboratory operations.
- Reports directly to the highest level of local laboratory facility management, however named, that routinely makes day-to-day decisions regarding laboratory operations, but receives direction and assistance from the Corporate Director of Quality. They may also report to a Senior Quality Manager within the same facility;
- Ensures that communication takes place at all levels within the lab regarding the effectiveness of the quality system and that all personnel understand their contributions to the quality system;
- Monitors Quality Assurance/Quality Control activities to ensure that the laboratory achieves established standards of quality (as set forth by the Corporate Quality office). The Quality Manager is responsible for reporting the lab's level of compliance to these standards to the Corporate Director of Quality on a quarterly basis;
- Maintains records of quality control data and evaluates data quality;
- Conducts periodic internal audits and coordinates external audits performed by regulatory agencies or customer representatives;
- Reviews and maintains records of proficiency testing results;
- Maintains the document control system;
- Assists in development and implementation of appropriate training programs;
- Provides technical support to laboratory operations regarding methodology and project QA/QC requirements;

- Maintains certifications from federal and state programs;
- Ensures compliance with all applicable state, federal and industry standards;
- Maintains the laboratory training records, including those in the Learning Management System (LMS), and evaluates the effectiveness of training;
- Monitors correctives actions;
- Maintains the currency of the Quality Manual.

3.5 Quality Analyst

- Assists the SQM/QM in the performance of quality department responsibilities as delegated by the SQM/QM;
- Assists in monitoring QA/QC data;
- Assists in internal audits;
- Assists in maintaining training records;
- Assists in maintaining the document control system;

3.6 Administrative Business Manager

- Responsible for financial and administrative management for the entire facility;
- Provides input relative to tactical and strategic planning activities;
- Organizes financial information so that the facility is run as a fiscally responsible business;
- Works with staff to confirm that appropriate processes are put in place to track revenues and expenses;
- Provide ongoing financial information to the SGM/GM/AGM/OM and the management team so they can better manage their business;
- Utilizes historical information and trends to accurately forecast future financial positions;
- Works with management to ensure that key measurements are put in place to be utilized for trend analysis—this will include personnel and supply expenses, and key revenue and expense ratios;

- Works with SGM/GM/AGM/OM to develop accurate budget and track on an ongoing basis;
- Works with entire management team to submit complete and justified capital budget requests and to balance requests across departments;
- Works with project management team and administrative support staff to ensure timely and accurate invoicing.

3.7 Client Services Manager

- Oversees all the day to day activities of the Client Services Department which includes Project Management and, possibly, Sample Control;
- Responsible for staffing and all personnel management related issues for Client Services;
- Serves as the primary senior consultant to customers on all project related issues such as set up, initiation, execution and closure;
- Performs or is capable of performing all duties listed for that of Project Manager.

3.8 Project Manager

- Coordinates daily activities including taking orders, reporting data and analytical results;
- Serves as the primary technical and administrative liaison between customers and PASI;
- Communicates with operations staff to update and set project priorities;
- Provides results to customers in the requested format (verbal, hardcopy, electronic, etc.);
- Works with customers, laboratory staff, and other appropriate PASI staff to develop project statements of work or resolve problems of data quality;
- Responsible for solicitation of work requests, assisting with proposal preparation and project initiation with customers and maintain customer records;
- Mediation of project schedules and scope of work through communication with internal resources and management;

- Responsible for preparing routine and non-routine quotations, reports and technical papers;
- Interfaces between customers and management personnel to achieve customer satisfaction;
- Manages large-scale complex projects;
- Supervises less experienced project managers and provide guidance on management of complex projects;
- Arranges bottle orders and shipment of sample kits to customers;
- Verifies login information relative to project requirements and field sample Chains-of-Custody.

3.9 Project Coordinator

- Responsible for preparation of project specifications and provides technical/project support;
- Coordinates project needs with other department sections and assists with proposal preparation;
- Prepares routine proposals and invoicing;
- Responsible for scanning, copying, assembling and binding final reports;
- Other duties include filing, maintaining forms, process outgoing mail, maintaining training database and data entry.

3.10 Department Manager/Supervisor

- Oversees the day-to-day production and quality activities of their assigned department;
- Ensures that quality assurance and quality control criteria of analytical methods and projects are satisfied;
- Assesses data quality and takes corrective action when necessary;
- Approves and releases technical and data management reports;
- Ensures compliance with all applicable state, federal and industry standards.

3.11 Group Supervisor/Leader

- Trains analysts in laboratory operations and analytical procedures;
- Organizes and schedules analyses with consideration for sample holding times;
- Implements data verification procedures by assigning data verification duties to appropriate personnel;
- Evaluates instrument performance and supervises instrument calibration and preventive maintenance programs;
- Reports non-compliance situations to laboratory management including the SQM/QM.

3.12 Laboratory Analyst

- Performs detailed preparation and analysis of samples according to published methods and laboratory procedures;
- Processes and evaluates raw data obtained from preparation and analysis steps;
- Generates final results from raw data, performing primary review against method criteria;
- Monitors quality control data associated with analysis and preparation. This includes examination of raw data such as chromatograms as well as an inspection of reduced data, calibration curves, and laboratory notebooks;
- Reports data in LIMS, authorizing for release pending secondary approval;
- Conducts routine and non-routine maintenance of equipment as required;
- Performs or is capable of performing all duties associated with that of Laboratory Technician.

3.13 Laboratory Technician

- Prepares standards and reagents according to published methods or in house procedures;
- Performs preparation and analytical steps for basic laboratory methods;
- Works under the direction of a Laboratory Analyst on complex methodologies;

- Assists Laboratory Analysts on preparation, analytical or data reduction steps for complex methodologies;
- Monitors quality control data as required or directed. This includes examination of raw data such as chromatograms as well as an inspection of reduced data, calibration curves, and laboratory notebooks.

3.14 Sample Management Personnel

- Signs for incoming samples and verifies the data entered on the Chain of custody forms;
- Enters the sample information into the Laboratory Information Management System (LIMS) for tracking and reporting;
- Stages samples according to EPA requirements;
- Assists Project Managers and Coordinators in filling bottle orders and sample shipments.

3.15 Systems Administrator or Systems Manager

- Assists with the creation and maintenance of electronic data deliverables (EDDs);
- Coordinates the installation and use of all hardware, software and operating systems;
- Performs troubleshooting on all aforementioned systems;
- Trains new and existing users on systems and system upgrades;
- Maintains all system security passwords;
- Maintains the electronic backups of all computer systems.

3.16 Safety/Chemical Hygiene Officer

- Maintains the laboratory Chemical Hygiene Plan;
- Plans and implements safety policies and procedures;
- Maintains safety records;
- Organizes and/or performs safety training;
- Performs safety inspections and provides corrective/preventative actions;
- Assists personnel with safety issues.

3.17 Program Director/Hazardous Waste Coordinator (or otherwise named)

- Evaluates waste streams and helps to select appropriate waste transportation and disposal companies;
- Maintains complete records of waste disposal including waste manifests and state reports;
- Assists in training personnel on waste-related issues such as waste handling and storage, waste container labeling, proper satellite accumulation, secondary containment, etc.;
- Conducts a weekly inspection of the waste storage areas of the laboratory.

4.0 Record Retention

4.1 All records are retained as required by regulatory requirements and client contractual agreements. The system shall produce unequivocal, accurate records that document all laboratory activities.

4.2 Instrument raw data is backed up daily to the network.

4.3 The Laboratory Information Management System (LIMs) is maintained in a fireproof room. In addition, a copy of the operating system is stored off-site.

4.4 Electronic files are backed up daily to the network. (Refer to document ADMIN002 for computers and programs.)

4.5 In the case of transfer of ownership or if the lab goes out of business, all records are to be transferred to the new owner or retained by the current Lab Director for the required time period. For a more detailed documented plan for going out of business or transfer of ownership refer to document ADMIN001, *Plan for Going Out of Business or Transfer of Ownership*.

Table 1.0: Temporary Storage (held on-site)

Record	Retention	Hardcopy	Location	Organization
Current Lab Reports	10 year	No	LIMs and Network	Lab Number
Current Data Packages	3-6 months	Yes	QC Department	Alphabetized by month
Standard Operating Procedures	Current Version	Electronic Copy	LIMs and Network	Directories and Sub-directories

Completed Logbooks	1-2 years	Yes	In the lab	Numbered
Accreditation Support Data	3 years	Yes	QA Office	Study number and date
Data Integrity Issues	5 years	Yes	QA Office	Date
Employee File/ Training Records	Current Employees	Yes	QA Office	Alphabetized

Table 2.0: Archival Storage (held off-site)

Record	Retention	Hardcopy	Location	Electronic	Location
Accreditation Support Data	5 years	Yes	QA office	Yes	Computer Directories
Raw Data/ Test Report Data/Lab Reports	12 years	Yes	Off-site storage	Yes	Tape storage/ CDs
Data Integrity Issues	5 years	No	Off-site storage	Yes	Tape storage/ CDs
Method Evaluations	5 years	Yes	QA Office	NO	N/A
Water Quality Tests	12 years	Yes	Off-site Storage	Yes	Tape storage/ CDs
Drinking Water Program	10 years 12 years for lead and copper	Yes	Off-site Storage	Yes	Tape storage/ CDs
Potable and Non-Potable Water Microbiology	5 years	Yes	Off-site Storage	Yes	Tape storage/ CDs
Employee File/ Training Records	10 years	Only original SDGs folder Case files	Off-site storage	NO	NA
CLP Reports	5 years	No	N/A	Yes	Tape Storage/ CDs stored onsite

Record	Retention	Hardcopy	Location	Electronic	Location
SOPs	5 years or per regulatory or client requirements, whichever is greater.	Signature Page only	QA Office	Yes	Server Network
Completed Logbooks	12 years	Yes	Off-site storage	Yes	Tape

5.0 Document Control

5.1 All records, documents and manuals generated by the laboratory will be maintained and controlled through a document control system. The purpose of the document control system is to ensure that only the most recent versions are available to the appropriate personnel, that revisions are timely, and that the document receives the required approvals. This system allows for retrieval of information such as lab reports, raw data as well as control of manuals, documents and Standard Operating Procedures produced.

5.2 The Quality Assurance Manager or designee is responsible for the document control system and maintains a master list of the location of all documents and their current revision by using an excel spreadsheet.

5.3 Document Approval

5.3.1 The Laboratory Director/General Manager and the Quality Assurance Manager approve all newly released documents and revised documents.

5.3.2 The Laboratory Director/ General Manager and the Quality Assurance Manager approve the QAM.

5.3.3 Controlled documents will have an approval signature page and a revision change record.

5.3.4 The central repository for controlled documents is on the local server.

5.4 Revision Control

5.4.1 All documents will contain the following control information:

5.4.1.1 Document Title

5.4.1.2 Revision Date

5.4.1.3 Revision Number

5.4.1.4 Effective Date (date of approval signature)

5.5 Obsolete Documents

- 5.5.1 The Quality Assurance Manager will maintain one electronic copy of an obsolete standard operating procedure in an archive folder on the server/network.
- 5.5.2 The original hardcopy signature page from the obsolete standard operating procedure is stored in the QA Office.

5.6 Document Archive

- 5.6.1 All hardcopy records are legible.
- 5.6.2 Completed laboratory logbooks are individually numbered.
- 5.6.3 Final archival is completed by the following:
 - 5.6.3.1 Records are boxed.
 - 5.6.3.2 Each box is labeled with a consecutive number that is generated by an electronic notebook.
- 5.6.4 The electronic notebook (archival storage) serves as the index for archived items.
- 5.6.5 Items removed from archive are done using an access log that records the following:
 - Date removed
 - Requested by
 - Box Number
 - Item number and description
 - Authorized by
 - Date returned
- 5.6.6 All archived data is stored to an off site document storage facility at Central Avenue in Farmingdale, NY.
- 5.6.7 The storage facility is locked, is free of vermin and is environmentally stable in regard to temperature and humidity and is kept safe from loss.

5.7 Data Package Archive

- 5.7.1 Data packages are scanned to a file (adobe PDF format) and saved to the local and network drives.

5.7.2 Original chain-of-custody, narratives, and title and chronicle pages are removed and filed in the case file in the QC department.

5.7.3 The PDF files are burned to a CD on a semi-annual basis.

5.7.4 After 3 to 6 months, the paper copy is destroyed.

5.8 Changes to Documents

5.8.1 Changes to documents will be reviewed and approved by the same function that performed the original review.

5.8.2 Where practicable, the altered or new text shall be identified in the document or the appropriate attachments.

5.8.3 Changes to any document will be made so as not to obscure or delete the previous data entry.

5.8.4 All changes will be crossed out and the correct entry made alongside.

5.8.5 Mistakes are not erased, made illegible, or deleted.

5.8.6 All alterations to records are signed or initialed by the person making the correction.

5.8.7 The lab developed error codes will be applied to the correction to explain the change.

5.8.8 Hand amendments of standard operating procedures are only permitted by those personnel authorized to do so.

5.8.9 Hand amendments of standard operating procedures, pending the re-issue of the documents, will be clearly marked, initialed and dated.

5.8.10 The QA Manager, prior to implementation as a new or modified procedure, will approve all hand amendments.

5.9 Laboratory Logbooks

5.9.1 Templates of some logbooks are maintained in the QC department and new books are generated and issued through this department.

5.9.2 In some cases, an electronic run log is generated using the instrument software, printed out, comments written where necessary. Final storage is in a binder.

5.9.3 Logbooks are bound and the pages in all logbooks are numbered sequentially to maintain the integrity of the document.

- 5.9.4 The books are given a book number and are signed out by the QC department, which maintains a master record of all logbooks.
- 5.9.5 Upon completion, the logbook binder is labeled with the test, start and completion date, and run number and is then logged back into the electronic notebook for archiving.
- 5.9.6 Analysts are required to sign initials and date next to all analyses performed.
- 5.9.7 For GC and GC/MS, the instrument program is to be listed as well as sample ID, amount of sample injected and reason, if any, for re-analysis (under remarks).
- 5.9.8 For wet chemistry tests, all raw data used in calculations is to be recorded in the logbook.
- 5.9.9 For sample preparation, all weights and/or exact volume of sample extracted are to be listed as well as type of cleanup performed and date extracted.

5.10 Document Distribution

- 5.10.1 Only the most recent versions of SOPs and the QAM are available on the document central repository.
- 5.10.2 The central repository to be used by employees for all current versions of laboratory documents is the server/network.
- 5.10.3 The Document Control Officer in the QC Department maintains instrument and logbooks and data packages.
- 5.10.4 A signed statement is on file that demonstrates that each employee has read, understood, and is using the latest version of the laboratory's QAM documentation, which relates to his/her job responsibilities.
- 5.10.5 When revisions are made to documents such as SOPs and the QAM, affected personnel are notified by the distribution of a new certification signature page along with a summary of the changes. In some cases (as with the QAM when significant revisions are made), a lab employee meeting may take place, where the document is projected on screen to review the changes as a group.
- 5.10.6 Each analyst must certify by signature that they have read, understand

and agreed to perform the most recent version of the test method, the approved method or standard operating procedure as defined by this document control system.

6.0 Lab Approved Signatures

6.1 The Quality Assurance Manual is approved by the Laboratory Director/ General Manager and the Quality Assurance Manager.

6.2 Lab reports generated by the lab must be approved prior to release to client except if data is stamped "Preliminary Results".

6.3 The approved signatories are:

6.3.1 General Manager

6.3.2 QA Manager.

6.3.3 Project Managers

6.4 Case narratives, which are part of a data package, list any non-compliances pertaining to the package and require a signature that certifies that the analyses were performed in accordance with the said requirements.

6.4.1 The individual that reviewed the data package signs the narrative.

6.5 Data package reporters sign a form indicating that the data was reported truthfully.

6.5.1 This form is generated for each fraction and is included at the end of each data package fraction.

6.6 In the case where the person requiring a signature for the narrative or chain of custody is not present it is permitted to either sign the persons name followed by your initials or sign your name followed by "for" and the individual's name.

7.0 Data Reduction and Data Review Procedure

7.1 Laboratory validation of the data begins with the processing of data and continues through data review and reporting of analytical results.

7.2 Data processing can be performed by the analyst who obtained the data or by another analyst.

7.3 Data review starts with an analyst independent of the data acquisition and processing, reviewing (validating) the data to determine if the data processing was performed correctly. The review continues through verifying that the

reported analytical results correspond to the data acquired and processed.

7.4 Data review checklists have been developed and are used to specify which records must be included in data review. Checklists are stored on the network in O/QC/Documents and Forms.

7.4.1 There are two general checklists used which specify records to be checked.

7.4.1.1 The records specified in the NELAC Chemistry Checklist for the appropriate method must be included in the review.

7.4.1.2 Package Review Checklists are also used and are submitted in the data package, when required.

7.4.2 In addition to the items specified in the checklists, the complete data report must be checked for

7.4.2.1 Complete and accurate explanations of anomalous results, corrective action, and the use of data qualifiers in the case narrative.

7.4.2.2 Consistency with project-specific measurement quality objectives, if such exists.

7.5 In general, data will be processed by an analyst in one of the following manners:

7.5.1 manual computation of results directly on the data sheet or on calculation pages that are attached to the data sheet

7.5.2 input of raw data for computer processing

7.5.3 direct acquisition and processing of raw data by computer

7.6 If data is manually processed by an analyst, all steps in the computation shall be provided including:

7.6.1 equations used

7.6.2 the source of input parameters such as response factors (RF), dilution factors, calibration constants

7.6.3 if calculations are not performed directly on the data sheet, calculations shall be attached to the data sheets.

7.7 Analysts shall record observations about the sample and/or test conditions that may be pertinent for the reconstruction or interpretation of sample results (i.e., deviations from, additions to or exclusions from the test method, or non-

standard conditions)

7.8 Deviations that may have affected the quality of results or that are necessary for the interpretation of the test result shall be included on the test report.

7.9 Analysts enter data into the LIMS where the data is computer processed to apply final calculations if necessary.

7.9.1 In the LIMS, after a final check of results, the analyst validates the data as reviewed ("QA" the data). When validating the data, a record is electronically kept of the analyst who reviewed the data and date and time. This validation step indicates data has been reviewed and data has been validated as correct.

7.10 The samples analyzed shall be evident on the raw data and the input is signed and dated by the analyst.

7.11 If data is directly acquired from instrumentation and imported into the LIMS, the analyst shall verify that the following are correct:

7.11.1 sample numbers

7.11.2 calibration constants and RF

7.11.3 output parameters such as units and numerical values used for reporting limits .

7.12 Where manual integrations are performed, the before and after chromatograms shall be retained. The person performing the manual integration must sign and date each chromatogram and document the rationale for the integration. The use of established codes may be used to document the rationale directly on the chromatogram. This applies to all samples, QC samples and calibration standards.

8.0 LIMS, Electronic Data Deliverables and Test Reports

8.1 LIMS

8.1.1 The lab uses Omega by Khemia Laboratory Information Management System(LIMS). The system is an Access based system. The system was designed to ensure the integrity and security of the sample information. The integrity of the data is ensured throughout input, storage, transmission, and processing. The LIMS administrator maintains a logbook documenting changes to the system and the date implemented

to insure version control of the software.

- 8.1.2** The LIMS system maintains the integrity and the security of the data. The system has limited access. An individual login name and password are used to log on to the system. Passwords are encrypted. A tracking changes feature is part of the LIMS. This allows for computer documentation of changes made to analytical results in the system. This includes the change made, person that made the change.
- 8.1.3** A logging record is printed for each client grouping of samples received that day and verified by the Project Manager to verify tests selected, pricing and sample information.
- 8.1.4** The finalized data from the analyses are input into the LIMS system. The instrument's files are converted to a format compatible for import into the Omega LIMS system. Some tests without the capability of electronic output, such as many of the traditional wet chemistry parameters, require manual entry into the system. A series of EXCEL spreadsheets have been setup to aid in the entry of the data. These spreadsheets are then imported directly into the LIMS.
- 8.1.5** Once the data has been imported, the data is calculated for preparation factors, dilution factors and percent moisture. The analyst importing the files, checks the data for errors. If the data is acceptable, the analyst verifies ("QA Sequence") the data. As a secondary quality check, an automated electronic check system has been designed to run when importing any data into the LIMS. This check system will notify the user of multiple possible situations i.e., spikes/surrogates out of limits, missing data, exceeding calibration range etc. The analyst will need to then certify that the data is correct and may enter related comments. The name of analyst and a date/time stamp is recorded.
- 8.1.6** Once the data is verified a final report is generated. This data can also be accessed and generated by the Omega CLP reporting modules to provide a full data package.

8.2 Electronic Data Deliverables (EDDs)

- 8.2.1** EDDs are produced in the QC department. This data is verified by

checking for transcription errors prior to releasing the EDD either manually or by using an automated data checker. EDDs are either sent to the client via e-mail, FTP transfer or are transferred onto a disk and mailed with the data package.

8.3 Test Reports

8.3.1 Lab reports are generated by the LIMS system and contain the following information:

- 8.3.1.1 Title (e.g., "Laboratory Results");**
- 8.3.1.2 Name and address of the laboratory,**
- 8.3.1.3 Unique identification of the test report (such as work order, lab number and page numbers which are identified as a number of the total report pages (example: 1 of 20)).**
- 8.3.1.4 Client name, address, and project name if applicable**
- 8.3.1.5 Client sample ID**
- 8.3.1.6 Sample container analyzed (i.e., container1 of 2)**
- 8.3.1.7 If relevant, specific sample information**
- 8.3.1.8 Date/time of collection, collected by and date /time of receipt**
- 8.3.1.9 Date and time of prep/analysis**
- 8.3.1.10 Test method**
- 8.3.1.11 Results, units, dry or wet weight**
- 8.3.1.12 Analyst initials**
- 8.3.1.13 Electronically produced signature and title of person authorized to release report and date of issue**
- 8.3.1.14 a statement that the results relate only to the samples and analytes requested**
- 8.3.1.15 a statement that the lab is not directly responsible for the integrity of the sample before receipt at the lab and is responsible only for the certified tests requested.**
- 8.3.1.16 statement that the certificate or report shall not be reproduced except in full, without the written approval of the laboratory;**
- 8.3.1.17 statement that the Test results meet the requirements of**

NELAC unless otherwise noted.

8.3.1.18 Deviations from the test method that may affect the quality of results (i.e., non-compliant QC, non-standard conditions) and the use of qualifiers and definitions.

8.3.1.19 A statement of the estimated uncertainty of measurement only when required by client

8.3.1.20 When the test report contains results of tests performed by subcontractors, the subcontractor report will be attached and submitted to client. ,

8.3.1.21 Amendments to test reports are identified and include a report reissue date.

9.0 Data Reporting and Authorization Procedures

9.1 Completed data packages are generated in the departments.

9.2 Data reported to the clients in Massachusetts will be reported with the addition of a parameter list indicating the certified parameter list in that state.

9.3 Either the department supervisor, Quality Analyst, Laboratory Manager/Director or QA Manager, reviews all data packages.

9.4 Any deviations or non-compliances are documented in the “case narrative” written by the reviewer and /or noted with the use of data qualifiers and their definitions.

9.5 Any omissions or errors are listed and the data package is rejected and returned to the department for correction.

9.6 After corrections have been made, the reviewer verifies the corrections, the case narrative is revised as necessary, and the case narrative is signed by the reviewer.

9.7 Data shall be reported according to methodological protocols and/or client project-specific requirements, where such exists.

11.0 Traceability of Measurements

11.1 Measurement Traceability is defined as ensuring that all equipment used for environmental tests, including equipment for subsidiary measurements (e. g. for environmental conditions) having a significant effect on the accuracy or validity of the result of the environmental test or sampling shall be calibrated before being put into service and on a continuing basis.

11.2 Table 4 lists the program and verification of the measuring and testing equipment.

11.3 All measurement and support equipment are maintained in proper working order in accordance with the manufacturer instructions.

11.4 The lab utilizes an outside calibration service to perform its annual calibration of equipment and instruments.

11.5 Records of maintenance activities are kept.

11.6 During annual calibration of equipment, (depending on the severity of the

issue) item(s) that are found to be out of tolerance will undergo the following corrective actions (by sectional supervisor and management):

11.6.1 The data will be evaluated for anomalies and out of performance specifications from the last acceptable calibration.

11.6.2 Any analyses that could potentially be impacted will be reviewed to determine possible effects on reported results.

11.6.3 If reported results are affected, data must be recalled, re-reported and qualified.

Table 3: Verification of Measurement and Testing Equipment

Equipment	Requirement	Frequency	QC Limits
Analytical Balances	Calibrated by Integrated Service Solutions	Annually	Certificate of Calibration
Analytical Balances	Balance calibration check using two traceable standard weights that bracket the expected weight	Daily or before each use	$\pm 0.1\%$ or ± 0.5 mg, whichever is greater (unless method specific guidance exists)
Top-loading Balances	Calibration by Integrated Service Solutions	Annually	Certificate of Calibration
Top-loading Balances	Calibration check in-house Balance calibration check using two traceable standard weights that bracket the expected weight (micro and soils) using 150g weight	Daily or before each use	$\pm 2\%$ or ± 0.02 g, whichever is greater Must detect 0.1g at 150g load
Traceable standard	Calibrated by National	Every 5 years	Certificate of Calibration

Equipment	Requirement	Frequency	QC Limits
weights	Calibration Services		
pH meter	Calibration with standard buffers of pH 4.0 and 10.0. Slope verified with standard buffer of pH 7.0	Daily or before each use	Slope verification must be ± 0.1 pH units to proceed
Conductivity Meter	Calibration check with 0.01, 0.001, and 0.005M KCL solution	Day of use	$\pm 20\%$ of the expected value
Conductivity Meter	Cell constant determination using a 0.01M KCl solution	Annually or as needed	$\pm 1\%$ of the manufacturer's specifications
Dissolved Oxygen Meter	Calibration of Meter and probe against winkler method	Day of use	
Spectrophotometers	Verify wavelength settings using NIST traceable color standards or their equivalent	Annually	See manufacturers specifications
NIST Thermometers	Calibrated by Integrated Service Solutions	Annually, at all points of interest	Certificate of Calibration
Liquid in Glass Working Thermometers	Calibration verses the NIST.	Before first use and Annually thereafter, at temperature (s) of interest	apply correction factor. Correction factor > 1 °C should be discarded
Digital Thermometers	Must read to 3 significant figures. Calibration verses NIST	Before first use and Annually thereafter, at temperature (s) of interest.	apply correction factor
IR Thermometers	Calibration verses NIST.	Quarterly. Should be checked on day of use at single point.	apply correction factor
Dial Thermometers	Calibration	Quarterly	apply correction factor

Equipment	Requirement	Frequency	QC Limits
	verses NIST.		
Turbidimeters	Initial Calibration with formazin or AMCO-AEPA-1	Annually	Results within manufacturers specifications
Turbidimeters	Checked with a Polymer sphere standard in the range(s) of interest.	Daily or each use	Must fall within the standard control limits.
Refrigerators	Temperature checks	Daily *	0-6.0°C
Freezers	Temperature checks	Daily*	Recommended -5 to -15 °C
BOD Incubators	Temperature checks	Daily*	20°C ±1 °C
Bacteriological Incubators	Temperature Checks monitored on each shelf	Daily*	35°C ±0.5 °C
Ovens	Temperature check	Beginning and end of cycle and/or daily if left on always	Must maintain the target temperature of interest during use.
Autoclaves	Temperature Check	Beginning and end of cycle	Must maintain sterilization temperatures during the sterilization cycle. Cycle must be completed within 45 minutes when a 10-12 minute sterilization period is used.
Autoclaves	Autoclave automatic and mechanical timing device check verses a NIST digital timer.	Quarterly	Within 120 seconds
Autoclaves	Demonstration of sterilization	Biological indicators weekly OR continuous monitoring	Indicators must show sterility or continuous monitoring must indicate correct

Equipment	Requirement	Frequency	QC Limits
			temperature
Bacteriological Water Baths	Temperature check	Daily	Must maintain a temperature of $44.5^{\circ}\text{C} \pm 0.2^{\circ}\text{C}$
Volumetric Dispensing Devices	Calibrated at all levels of use	By lot before first use and Quarterly	Calculate %accuracy and %error Mean $\pm 2\%$ RSD $\leq 1\%$ (based on 10 replicate measurements)
Syringes	Certified calibrated from the vendor	NA	Store certificates
Class A and B Volumetric Labware	Volume verification	Class B: By lot before first use. Class A and B: Upon evidence of deterioration	Bias: Mean within $\pm 2\%$ of nominal volume Precision: RSD $\leq 1\%$ of nominal volume (based on 10 replicate measurements)
Non-volumetric labware (Applicable only when used for measuring initial sample volume or final extract/digestate volume)	Volume verification	By lot before first use or upon evidence of deterioration	Bias: Mean within $\pm 3\%$ of nominal volume Precision: RSD $\leq 3\%$ of stated value (based on 10 replicate measurements)

*Daily meaning 7 days/week. Staff is scheduled for weekend monitoring. Min/max thermometers are in use. In the event that personnel are unable to be at the lab for weekend monitoring, the min/max temperature will be documented.

Table 4.0: Working Thermometers

Equipment	Requirement	QA Limits
Freezer	Dedicated and calibrated. Immersed in liquid.	Graduations no greater than 1°C .
BOD Incubator	Dedicated and calibrated. Immersed in liquid.	Graduations no greater than 0.2°C
Ovens	Dedicated and calibrated. Immersed in sand.	Graduations no greater than 1.0°C

Refrigerators	Dedicated and calibrated. Immersed in liquid.	Graduations no greater than 1.0 °C
Bacteriological Air Bath Incubators	Dedicated and calibrated located on each shelf in the incubator.	Graduations no greater than 0.1 °C
Bacteriological Water Bath Incubators	Dedicated and calibrated located on each shelf in the incubator.	Graduations no greater than 0.1 °C

(Digital thermometers, thermocouples, or other similar electronic temperature measuring devices are exempt from the requirement that it be immersed in sand or liquid if the temperature measurement can be taken without altering the environment being measured)

Table 5.0: Reagent Grade (Laboratory pure) Water

Parameter	Frequency	Acceptance Criteria
Conductivity (at 25°C)	Daily or when maintenance is performed	<2 micromhos/cm at 25°C
Free residual chlorine	Monthly or when maintenance is performed	<0.1 mg/L
Standard plate count	Monthly or when maintenance is performed	<500 colonies/mL
Suitability test	Yearly or when maintenance is performed	Ratio between 0.8 to 3.0
Heavy metals	Yearly or when maintenance is performed	< 50 ug/L for each metal collectively <100 ug/L

12.0 Accredited Test Methods

12.1 See the Appendix, Section 3.0

13.0 Contract Review

13.1 Records of request, tender and contract review, including significant changes, are maintained. Records of pertinent discussions with customers relating to the customer's requirements or work during the period of execution of the contract are also maintained.

13.2 Routine Work

13.2.1 For review of routine work and other simple tasks, the date and identification of the person on the chain-of-custody who is responsible for accepting the samples is considered adequate.

13.3 Written Contract Work

13.3.1 Prior to acceptance of new written contract work, the Project Manager thoroughly reviews the requirements of the written contract to ensure that the laboratory has the appropriate facility and resources to successfully complete the project. Criteria considered includes, but it not limited to:

13.3.1.1 Methodology

13.3.1.2 Detection Limits

13.3.1.3 Project specific data reporting requirements, including:

13.3.1.3.1 Conventions for reporting results below the LOQ

13.3.1.3.2 Specifications for the use of data qualifiers

13.3.1.4 Personnel requirements

13.3.1.5 Turn-around-time

13.3.2 At this time, guidance from the various departments and/or QC and Administration are provided. If a project specific quality plan is provided, it is reviewed in the above manner.

13.3.3 After initial review by the Project Manager and subsequent review by departmental personnel, the contract is then reviewed for legal considerations. Any questions or issues may be discussed with an Officer of the Company for approval.

13.4 Questions, modifications, or changes to the contract are then discussed and resolved prior to agreeing to the terms of the contract. An amendment to the contract may be included if needed.

13.5 The mutually agreed upon contract is then signed by an authorized representative of the firm.

14.0 Review of New Work

14.1 To maintain current methodologies and implement new regulations new test methods and procedures are occasionally added to the scope of testing in the laboratory.

14.2 There are varying degrees to the addition of new work. These include:

14.2.1 The addition of an analyte to an existing method.

14.2.2 Complete start-up of an established method.

14.2.3 Analyte requested with no established method.

14.3 Addition of an Analyte to an Existing Method

14.3.1 The analytical method is reviewed to determine if its use is appropriate for the new analyte. The standard is purchased from a commercial vendor and prepared. If the analyte is available from more than one source, a second source may be purchased to verify the calibration standard. The standard is analyzed to determine its elution time in the scan.

14.3.2 A calibration curve is produced to determine linearity. If preparatory steps are required, four replicates of the standard are carried through all phases of the method. The initial start-up procedure is documented.

14.3.3 A MDL or IDL is performed and the detection limit is determined.

14.3.4 An in-house SOP is written and used by the analysts. Demonstration of capability is maintained on file.

14.3.5 If necessary, the appropriate state accreditation is sought for the additional analyte following approved state certification processes.

14.4 Complete Start-Up of an Established Method

14.4.1 The method is obtained and reviewed by the Department Supervisor, Quality Analyst or Manager or senior analyst to determine if new instrumentation or reagents/standards are required by the method.

14.4.2 If the required instrumentation is currently available in the laboratory,

the reagents, standards and other supplies are gathered/purchased.

14.4.3 If more than one analyte is quantified in the method, the analytes may be initially analyzed individually to determine elution time.

14.4.4 A second source is purchased to verify the calibration standard.

14.4.5 A calibration curve is produced to determine linearity. If preparatory steps are required, four replicates of the standard are carried through all phases of the method and compared to the established QC of the method. The initial start-up procedure is documented.

14.4.6 A MDL or IDL is performed and the detection limit is determined.

14.4.7 An in-house SOP is written and used by the analysts. Demonstration of capability is maintained on file.

14.4.8 The samples and standards and associated QC samples are carried through the procedure and the QC is compared to the method QC acceptance criteria.

14.4.9 If necessary, the appropriate state accreditation is sought for the additional analyte following approved state certification processes.

14.5 Analyte Requested with No Established Method

14.5.1 The analyte to be analyzed is researched and reviewed to determine the compound classification.

14.5.2 After the compound classification is complete, it is determined if it can be analyzed by an existing method. If not, it is determined if perhaps a modification to an existing method would allow successful determination of the compound.

14.5.3 Different approaches to testing the analyte may be tried, comparing the efficiency of the various approaches. The method that allows for acceptable precision and accuracy is used.

14.5.4 If more than one analyte is quantified in the method, the analytes may be initially analyzed individually to determine elution time.

14.5.5 If the required analytes are available from more than one source, a second source is purchased to verify the calibration standard. A calibration curve is produced to determine linearity.

14.5.6 If preparatory steps are required, four replicates of the standard are

carried through all phases of the method and compared to the established QC of the method. The initial start-up procedure is documented.

14.5.7 A MDL or IDL is performed and the detection limit is determined.

14.5.8 An in-house SOP is written and used by the analysts. Demonstration of capability is maintained on file.

14.5.9 The samples and standards and associated QC samples are carried through the procedure and the QC is compared to the method QC acceptance criteria.

14.5.10 If necessary, the appropriate state accreditation is sought for the additional analyte following approved state certification processes.

15.0 Conflict of Interest

15.1 PASI employees must avoid situations that might involve a conflict of interest or could appear questionable to others. The employee must be careful in two general areas:

15.1.1 Participation in activities that conflict or appear to conflict with the employees' PASI responsibilities.

15.1.2 Offering or accepting anything that might influence the recipient or cause another person to believe that the recipient may be influenced to behave or in a different manner than he would normally. This includes bribes, gifts, kickbacks, or illegal payments.

15.2 Employees are not to engage in outside business or economic activity relating to a sale or purchase by the Company. Other problematic activities include service on the Board of Directors of a competing or supplier company, significant ownership in a competing or supplier company, employment for a competing or supplier company, or participation in any outside business during the employee's work hours.

16.0 Confidentiality

16.1 PASI employees must not use or disclose confidential or proprietary information except when in connection with their duties at PASI. This is effective over the course of employment and for an additional period of two years thereafter.

16.2 Confidential or proprietary information, belonging to either PASI and/or its customers, includes but is not limited to test results, trade secrets, research and development matters, procedures, methods, processes and standards, company-specific techniques and equipment, marketing and customer information, inventions, materials composition, etc.

17.0 Subcontracting

17.1 Occasionally, it is necessary to subcontract samples to other approved laboratories if Pace Long Island does not perform an analysis, instruments are down, or there is a current overload of work making meeting holding times questionable.

17.2 No samples are subcontracted to an outside laboratory without prior permission of the client.

17.3 Subcontract labs must possess the appropriate certifications and accreditations for the required work.

17.4 Prior to shipping of subcontract samples, the specific client requirements are reviewed with the laboratory including:

17.4.1 Specific method requirements

17.4.2 Reporting and detection limits

17.4.3 QC requirements

17.4.4 Submission of a project QAPjP SOP, if required.

17.5 Once the requirements are reviewed with the subcontract laboratory, a copy of their state certification is reviewed and maintained on file.

17.6 All subcontract results are generated on the subcontract laboratories report forms and submitted to Pace Long Island.

17.7 Results may be transcribed onto Pace Long Island's lab report with the qualifier that an outside laboratory performed the results. The Pace Long Island laboratory report shows the test subcontracted out and has the notation "see attached".

17.8 Copies of the subcontract process are maintained in individual client files. The information need only be filled out once for an ongoing project.

17.9 Project Management maintains a file with the current laboratory certifications from the laboratories used for subcontracting. These certifications will be

updated annually.

17.10 It is the responsibility of the person providing the quote or setting up the project to notify the client that their samples will be subcontracted.

17.11 Any Pace Analytical work sent to other labs within the PASI network is handled as subcontracted work and all final reports are labeled clearly with the name of the laboratory performing the work.

17.12 Any non-TNI work is clearly identified. PASI will not be responsible for analytical data if the subcontract laboratory was designated by the customer.

18.0 MDL/DL, LOD and LOQ

18.1 A detection limit (MDL/DL) is established for each analyte-matrix-method (where appropriate), including surrogates, by the completion of an MDL Study.

18.2 The MDL study is based on the Method Detection Limit (MDL) procedure outlined in 40 CFR Part 136, Appendix B and is the analysis and statistical evaluation of seven replicates of blanks spiked with the level of the analytes of interest at estimated detection limits, for the purpose of determining the MDL levels. If an MDL study is not performed, the detection limit may be established by use of another scientifically sound procedure.

18.3 Limit of Detection (LOD): An estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte-and matrix-specific and may be laboratory-dependent. According to NELAC, the LOD equates with the MDL.

18.3.1 Once a detection limit is established, it is used to determine a Limit of Detection (LOD) for each analyte and matrix as well as for all preparatory and cleanup methods routinely used on samples. For NELAC/TNI, the LOD is the MDL.

18.3.2 The LOD must be $<$ or $=$ to the LOQ (lowest calibration standard).

18.3.3 LODs must be verified annually on instruments where results are to be reported below the LOQ.

18.3.4 LOD verifications must meet the following requirements;

- ♦ The apparent signal to noise ratio at the LOD must be at least three and the results must meet all method requirements for analyte

identification (e.g., ion abundance, second-column confirmation, or pattern recognition.) For data systems that do not provide a measure of noise, the signal produced by the verification sample must produce a result that is at least three standard deviations greater than the mean method blank concentrations.

- ♦ If a laboratory uses multiple instruments for a given method the LOD must be verified on each.
- ♦ If the LOD verification fails, then the laboratory must repeat the detection limit determination and LOD verification at a higher concentration or perform and pass two consecutive LOD verifications at a higher concentration and set the LOD at the higher concentration.

18.4 The Limit of Quantitation (LOQ) is the lowest calibration standard.

18.4.1 The LOQ and the highest calibration standard of a multi-level calibration curve establish the quantitation range. For metals analysis with a single-point calibration, the LOQ and the calibration standard establish the quantitation range, which must lie within the linear dynamic range.

18.4.2 The LOQ must be verified annually.

18.4.3 The LOQ is verified with a successful analysis of a QC sample containing the analytes of concern in each quality system matrix at a concentration of 1-2 times the LOQ.

18.5 The analysis of the LOQ is quantitative (while the LOD is qualitative). A successful LOQ verification is one where the recovery of each analyte is within the established test method acceptance criteria or client data quality objectives. In the absence of these criteria, the accuracy should fall within EPA recommended advisory limits of 50-150%.

18.6 Current LODs and LOQs can be found on the Server in O/QC/LOD_LOQ.

19.0 Measurement of Uncertainty

19.1 An estimation of uncertainty for results generated by the laboratory may be provided to the data user upon request. The estimate quantifies the error

associated with any given result at a 99% confidence interval. This estimate does not include bias that may be associated with sampling procedures. The laboratory has a procedure in place for making this estimation based on recovery data obtained from the Laboratory Control Samples. The uncertainty is a function of the standard deviation of the recoveries multiplied by the appropriate Student's t Factor at 99% confidence. Additional information pertaining to the estimation of uncertainty may be found in the latest revision of the *Procedure for the Measurement of Uncertainty SOP*. The measurement of uncertainty is provided only upon request by the customer.

20.0 Calibration and/or Verification Test Procedures

20.1 Calibration and/or verification procedures are designed to insure that the data will be of known quality and the results are appropriate for a given regulation or decision.

20.2 Raw data is retained to reconstruct the calibration used to calculate the sample result.

Table 6.0: Calibration and Verification

QC Requirement	Frequency	QC Limits	Correction
Instrument Calibration	Per the requirements of the method	Linear Regression: Correlation coefficient (r^2) >0.995 unless demonstrated that a lower r^2 can produce acceptable data. Average Response Factor: as per method requirements Calibration Factor: as per method requirements	Analysis cannot proceed unless an acceptable calibration is produced unless covered under the exceptionally permitted departures from procedure. All departures are reviewed by section supervisors. Data may be reported if determined acceptable by supervisor and will be documented in the run log.
Calibration Documentation	Each time instrument is calibrated	Labeled with the method used, instrument, date of analysis, analyte concentrations and response factor or calibration factor.	
Initial Calibration Verification (ICV) Second source	Immediately following initial	Unless specified otherwise in the analytical method, the	

QC Requirement	Frequency	QC Limits	Correction
Standard (second source must be from a different vendor except in the case of gas cylinders, where a different lot is acceptable)	calibration	measured value of the analyte must meet the criteria of the continuing calibration verification.	
Mid-point Standard	Daily or as required by analytical method		
Instrument Blank	Daily or as required by the method		
Limit of Quantitation (LOQ) Lowest Concentration Level Reported	Each Initial Calibration and verified annually	The lowest calibration standard is the lowest concentration level reported.	Results reported below this standard are considered estimated and the data are flagged with a qualifier and/or discussed in the case narrative.
Highest Level Concentration	Each Initial Calibration	The highest calibration standard is the highest concentration reported without dilution	Results reported above this standard (unless from a diluted run) are considered estimated and the data flagged with a qualifier and/or discussed in the case narrative.
Method Detection Limit (MDL)	Annually	Determined for all analytes where spiking solutions are available. The MDL must be <LOQ	Results reported down to MDL are qualified as estimated (J).
Limit of Detection (LOD)	Verified annually if results are to be reported below LOQ.	Determined for all analytes where spiking solutions are available. The LOD must be <= LOQ	Results reported between LOQ and LOD/MDL are qualified as estimated (J)

21.0 Procedures for Handling Submitted Samples

Personnel are in the laboratory: Monday to Friday 7am to 11pm

Saturday and Sunday: 9am to 3pm

If deliveries must be made later than 6pm on weekdays, or anytime on weekends, the laboratory must be contacted in advance so that arrangements can be made with our staff to ensure proper receipt of samples.

21.1 External Chain of Custody

21.1.1 Sample tracking is accomplished through the use of chains of custody.

21.1.2 A sample is considered to be in custody if it is:

- **In an individual's actual possession;**
- **In view, after being in physical possession;**
- **Locked so that no one can tamper with it, after having been in physical custody;**
- **In a secured area, restricted to authorized personnel only.**

21.1.3 All samples are handled under conditions, which avoid contamination, deterioration or damage to samples, and which secure their use for litigation purposes.

21.1.4 The chain of custody (COC) procedure begins with either sample collection or bottle preparation depending on client's needs.

21.1.5 Every sample container received shall be assigned a unique identification number that is entered on the COC.

21.1.5.1 All bottles are identified with the lab ID number and a suffix of A, B, C, D, etc. when samples are fractionated.

21.1.5.2 The total number of bottles received is entered.

21.1.5.3 If the sample is not fractionated, the bottles are all listed as A

21.1.5.4 In all cases, the total quantity of bottles is differentiated by the number of bottles as indicated by the designation "1 of 3, 2 of 3, etc." on the sample labels.

21.1.5.5 The sample container used for analysis is recorded in the LIMS.

21.1.6 The COC includes:

- **container type**
- **preservative type**
- **number of containers for each sample location (including MS/MSD, trip blank and field blank)**
- **any distinctive notification**

- signature of sampler
- receiver's signature
- date/time of relinquishment.

21.1.7 Upon receipt of the samples by a lab representative, the first "relinquished by/received by" blocks shall be completed on the COC.

21.1.8 The date and time of receipt in the lab is entered on the external COC form.

21.1.9 The shipment is checked for integrity, completeness and the samples are examined for damage.

21.1.9.1 All sample bottles are checked to verify that they are sealed properly, that they have no breakage, air bubbles (volatiles), and proper labeling.

21.1.9.2 Any shortages and damage is noted on the external COC.

21.1.9.3 If any problems occur, the project manager will be notified.

21.1.9.3.1 If the samples aren't in jeopardy of holding time exceedences, they are assigned cold storage before proceeding with sample accession until laboratory-receiving personnel receive instructions.

21.1.9.3.2 If the samples need to be analyzed immediately, the samples will be giving a laboratory number.

21.1.9.3.3 If the samples analyzed need to be re-collected, a new work order with a new number will be generated for the re-collected samples.

21.1.9.4 A sample receipt checklist is prepared in the sample-receiving department to account for any breakage or discrepancy in sample documentation, as compared to the sample shipment

21.1.10 The temperature of the cooler is checked for samples that require storage at $\leq 6^{\circ}\text{C}$.

21.1.10.1 A temperature blank is sent out with the coolers.

21.1.10.2 A 100ml plastic bottle filled with water and labeled Temperature Blank is placed in the cooler during cooler set up.

21.1.10.3 This bottle is read with the IR gun upon receipt in the lab and logged on the COC form.

21.1.10.4 Local samples may not be in transit long enough to be chilled, however there must be evidence that the preservation process has begun, such as receipt on ice.

21.1.10.5 If no temperature blank is present, a clear plastic or glass bottle may be used for the temperature blank.

21.1.10.6 Amber bottles are not to be used to check the temperature nor are vials or bottles wrapped in bubble pack.

21.1.11 A cooler checklist form is completed for samples received after normal business hours or on weekends.

21.1.11.1 The cooler temperature is checked as is the custody seal.

21.1.11.2 The COC is signed and placed back in the cooler and stored in the lab walk-in refrigerator.

21.1.12 Samples that have not been properly stored during transport to the lab will either be rejected and a resample collected or it will be noted in the LIMS, on the non-conformance report and on the final lab report.

21.1.13 A copy of the external COC is returned to the project manager.

21.1.14 The sample custodian places the original in the lab's client file.

21.1.15 The lab project manager will notify the client of non-conformances.

21.2 DC-1 Form Completion

21.2.1 If applicable to the samples received, the USEPA sample login form (Form DC-1) is completed. This form is used to document the receipt and inspection of the samples and coolers.

21.2.2 One original of the DC-1 form is required per cooler.

21.2.3 If the samples in a single cooler must be assigned to more than one Sample Delivery Group (SDG), the original DC-1 accompanies the deliverables for the SDG of the lowest Arabic number and a copy accompanies the other SDG's.

21.2.4 The copies must be stamped "COPY" and the location of the original noted on the copy.

21.2.5 The following information will be required to complete the DC-1 form:

- 21.2.5.1 Lab Name
- 21.2.5.2 Log-in data
- 21.2.5.3 Print and signature of lab personnel who received samples
- 21.2.5.4 Case number
- 21.2.5.5 SDG number
- 21.2.5.6 SAS number
- 21.2.5.7 Condition of shipping coolers
- 21.2.5.8 Sign and date air bill
- 21.2.5.9 Record the presence/absence of custody seals and their condition in item 1 of the form
- 21.2.5.10 Add pH of cyanide and metals samples as verified upon receipt in the laboratory. Cyanide must be greater than 12.
- 21.2.5.11 Record the air bill or sticker number in item 6
- 21.2.5.12 Record condition of bottles and presence or absence of sample tags in items 7 and 8 on the form
- 21.2.5.13 Review shipping documents and compare information on all documents and complete item 9
- 21.2.5.14 If there are no problems, sign, date and indicate time on the DC-1 form.
- 21.2.5.15 Record the sample tag I.D. numbers and assigned lab numbers.
- 21.2.5.16 Cross reference lab numbers with the SMO.
- 21.2.5.17 Project coordinator will document communication in the CLP communication logbook
- 21.2.5.18 Record the fraction and area stored in the sample transfer space and sign and date.

21.3 Internal Chain-of-Custody

- 21.3.1 The sample custodian assigns laboratory identification numbers to the samples and then transfers the samples to department custodians.
- 21.3.2 An internal COC form is completed with the project number, date of receipt and listing of samples by number and laboratory identification numbers.

21.3.3 The sample custodian and department custodian sign for transfer with date and time indicated.

21.3.4 The department custodian places samples in secured areas for storage.

21.3.5 The department custodian relinquishes samples to the technicians for sample preparation and/or analysis.

21.3.6 The analysts sign for the samples and extracts/digestates each time the samples exchange hands.

21.3.7 Upon completion of analysis, any remaining original sample matrix containers are returned to the appropriate sample custodian.

21.4 Internal Verification of COC Procedures

21.4.1 The sample custodian gives a copy of the external and internal COCs to the project manager as well as any information received with the sample to the document control section of the QA Department.

21.4.2 All paperwork is reviewed and checked for any transcription errors.

21.4.3 If there are any transcription errors, the sample custodian and any affected departments are contacted.

21.4.4 Verification that corrections were made properly is the responsibility of the laboratory's document control section or QA Department.

21.4.5 The samples are automatically entered into a status spreadsheet and the sample delivery group folder is prepared including all pertinent information.

21.4.6 The folder is labeled with the SDG number and filed.

21.5 Initial Sample Storage

21.5.1 All samples are stored in an area free from secondary contamination. Samples are stored separate from standards and high concentration samples and away from foodstuffs.

21.5.2 When cross contamination is a possibility, samples suspected of containing high concentrations of targeted analytes shall be isolated from other samples. Samples or extracts designated for volatile organic analysis must be segregated from other samples and extracts. Samples suspected of containing high concentrations of volatile organics shall be further isolated from other volatile organic samples.

21.5.2.1 Information is requested from the client of any known high concentration of volatile samples based upon historic information or prescreening in the field. If high concentration levels of samples are suspected, proper procedures to prevent secondary contamination during transport must be taken.

21.5.2.2 High concentration samples are segregated in a separate cooler by field personnel and sample vials or soil jars are transported in sealed zip lock bags with at least 3 ounces of activated carbon. The chain of custody form should be documented with the statement “**suspected high concentration volatile sample**”.

21.5.2.3 Upon receipt of samples in the laboratory, accessioning personnel will segregate the samples by opening the cooler in a hood in the metals digestion lab (no organic solvents are utilized in this area). All samples are taken out of the cooler, placed inside the hood and inspected for breakage, leakage etc.

21.5.2.4 The samples will be accessioned into the LIMS system with a note in the LIMS indicating that “the samples are suspected high concentration level volatiles keep separate from other samples”

21.5.3 Volatiles

21.5.3.1 Samples are stored in refrigerators in either the GC/MS or the GC lab (depending on analysis requested) at 4°C ($\pm 2^\circ\text{C}$) and are protected from light from the time of receipt until analysis.

21.5.3.2 The high concentration level volatile water sample vials are stored in the zip lock bags with at least 3 ounces of activated carbon in a sealed container.

21.5.3.2.1 These samples are stored in a separate refrigerator.

21.5.3.2.2 The refrigerator is labeled **High concentration volatile samples only** on the door.

21.5.3.2.3 A storage blank is placed in the refrigerator, if samples are present, for every batch of samples of high

concentration volatile organics received and analyzed with each batch. The storage blank is a head space free 40 ml vial filled with deionized water.

21.5.3.2.4 If samples are deemed to be high concentration after analysis, the samples will be removed from the non-high level volatile refrigerator as soon as possible after the concentration level has been determined and placed in the high concentration level refrigerator until the samples are placed in storage or flagged for disposal.

21.5.3.2.5 The concentration level of greater than 2500ppb is utilized in the lab for storage in the high concentration level refrigerator.

21.5.3.2.6 The storage blanks are used to determine if cross contamination may have occurred.

21.5.3.2.6.1 The storage blank is analyzed for the same analyte list of compounds as the samples stored in the refrigerator as well as TICs.

21.5.3.2.6.2 The sample results of the storage blank are evaluated and a form 1 issued with the concentration levels of targeted analytes as well as TICs identified. The results are submitted in the data package.

21.5.3.2.6.3 No subtraction of any blank is to be performed.

21.5.3.2.6.4 If the storage blank is contaminated, the means of sample storage needs to be reevaluated; a nonconformance report prepared and distributed for corrective action and the results shall be reported with appropriate data qualifiers.

21.5.4 BNA, Pesticide/PCB

21.5.4.1 Samples are stored in the Special Process section in refrigerators or the walk-in refrigerator at 4°C (±2°C) and are protected from light upon receipt until extraction and analysis.

21.5.4.2 After analysis, extracts and unused samples are protected from light and stored at 4°C (±2°C).

21.5.4.3 The extracts are stored in the refrigerator between the GC/MS and Special Process sections.

21.5.5 Metals

21.5.5.1 Water samples are stored in a refrigerator in the Metals section.

21.5.5.2 Soil samples are stored in a refrigerator in the metals section and maintained at 4°C (±2°C).

21.5.6 Cyanide

21.5.6.1 Samples are stored in a refrigerator at 4°C (±2°C) in the Wet Chemistry storage area.

21.5.7 All CLP samples are stored in locked refrigerators.

21.6 Final Sample Storage

21.6.1 The time that samples are held after completion of analysis is dependent on the client's requirements.

21.6.2 Some samples are stored for 6 months.

21.6.3 Most samples are stored for 60 days after report generation.

22.0 Sample Preservation, Containers, and Holding Times

A summary of preservation, container and holding times is found in Tables 7.0-9.0

22.1 Sample Preservation

22.1.1 The addition of preservative is verified upon receipt and documented.

22.1.2 The pH of all preserved samples (except volatile samples and oil and grease which are verified in the departments) are verified in the receiving department by the use of pH paper.

22.1.3 A small aliquot of sample is poured over the pH paper.

22.1.4 Do not dip the paper into the sample.

- 22.1.5 The verification of pH preservation is noted in the LIMS on the Sample Receipt Checklist.
- 22.1.6 Volatile aqueous samples are checked for proper preservative by the use of pH paper after sample analysis and recorded in the sample logbook.
- 22.1.7 Chlorine residual checks are performed for samples submitted for organic drinking water analyses using chlorine test strips.
- 22.1.8 Chlorine residual checks will take place in the departments, except for the methods that also need pH preservative verification; these will be checked in the receiving department (i.e., 525.2, 531.1, 549, 508.1).
- 22.1.9 In instances where there is unpreserved sample available to check for chlorine residual, the unpreserved bottle will be used. If no chlorine is present in that bottle, then it can be safely assumed that there is no chlorine present in any of the sample bottles for a particular location, and no further testing is required. If the unpreserved sample contains chlorine, then all bottles (524,531,549) will be checked individually for the presence of chlorine.
- 22.1.10 Bacteria samples must be received with 1-inch headspace to allow for proper mixing.
- 22.1.10.1 If a sample bottle is filled too full to allow for proper mixing, do not pour off and discard a portion of the sample. Rather, pour the entire sample into a larger sterile container, mix properly, and proceed with the analysis.
- 22.1.11 Sample preservation should be rechecked if continued preservation of the sample is in question (i.e., the sample may not be compatible with the preservation) or if deterioration of the preservation is suspected.
- 22.1.12 Tables 7.0-9..0 contain proper sample preservations.
- 22.1.13 For USEPA samples, note the pH on the DC-1 form.
- 22.1.14 Bottles without preservative will be noted on the COC and if allowable, preservative will be added at the laboratory.
- 22.1.15 Notify the project manager if preservations have been added at the

laboratory and record on sample receipt checklist.

22.1.16 If non-potable water samples submitted for metals analyses are received unpreserved, preservative may be added at the lab, however, acid must be added at least 24 hours before analysis to dissolve any metals that adsorb to the container walls.

22.1.16.1 The receiving department must note the time of preservation in the LIMS and on the sample bottle so the metals department is aware of the 24-hour time period.

22.1.16.2 Clients must be notified immediately if rush turn around time is requested (i.e., 24 TAT).

22.1.17 If sample preservations do not comply with the requirements in Table 7.0-9.0, notify the project manager immediately.

22.1.18 The client will be notified as soon as possible.

22.2 Sample Containers

22.2.1 Sample containers are usually provided by the lab, except where otherwise specified by the client.

22.2.2 Several different sampling containers may be used for one project.

22.2.3 Materials must be selected that would not result in interference with the analysis.

22.2.4 Each sample container will have a durable waterproof label, which contains all the information necessary to identify the sample.

22.2.5 New clients are given a summary of which bottle to use for what test to ensure that the correct bottle is used for the test requested.

22.2.6 The amount of information on the label may vary depending on the source and other factors, but, in general may include:

- Number of bottles per analysis
- Collector's name
- Sample location
- Date and time of collection
- Depth of sample
- Atmospheric conditions

22.2.7 The bottles used are verified as non-contaminated by monthly checking of bottles. This is done by filling the bottle with distilled water and

analyzing the water for the parameters that would normally be analyzed from that bottle.

22.2.8 This record is kept on file in the QC Department.

22.2.9 Any positive readings for any analytes are flagged and the supervisor and QA Manager are notified.

22.2.10 No bottles from the affected lot are used until the source of contamination is determined and remedied.

22.3 Holding Time Status

22.3.1 On a daily basis, holding times are monitored as a check on the different departments and the supervisors notify staff if holding times are drawing near (at least two days in advance).

22.3.2 A status report is available to all laboratory employees in the LIMs.

22.3.3 To ensure that the status report is kept current, all analysts are required to update sample status on a daily basis.

22.3.4 After completion of a project, the Package Production section coordinates collation of the data package and reviews that all required forms are included and that the package is mailed within the required time frame.

Table 7.0 Potable Water Bottle and Preservation Requirements

Analyte	Bottle	Preservation	Holding Time
<p>The information contained in this item comes from the Code of Federal Regulations (40 CFR 141).</p> <p>Note 1: Maximum holding time includes the time elapsed from collection of the sample to placement in the incubator.</p> <p>Note 2: Consumer collected samples may be left unpreserved for up to 14 days.</p> <p>Note 3: E. coli samples enumerated for reporting to EPA under the LT2 rule may be tested when the 8 hour hold time is exceeded and within 30 hours from the time of collection to set-up only when preservation is documented intact. All data generated outside of the 8 hour hold time must be qualified as such in the report to the client. No samples older than 30 hours shall be tested.</p> <p>Note 4: ELAP offers Nitrate or Nitrite only for accreditation. ELAP does not offer combined Nitrate-Nitrite. The preservation and holding time requirements for combined Nitrate-Nitrite is Cool to 4°C, H2SO4 to pH<2, and 28 days.</p> <p>Note 5: For bacteriological tests, when the sample is collected, leave ample air space in the bottle (at least 2.5 cm or 1 in) to facilitate mixing by shaking.</p>			
<p>Bacteriological Tests: Note 5</p> <p>Fully processed Drinking Water (40 CFR 141.21(f)(3)):</p>			

Analyte	Bottle	Preservation	Holding Time
Coliform (Total) and E. coli presence/absence	Sterile P,G	0.008% Na ₂ S ₂ O ₃	30 hours NOTE 1
Standard Plate Count	Sterile P,G	0.008% Na ₂ S ₂ O ₃	8 hours NOTE 1
Coliphage	P	Cool to 4°C, 0.5mL 10% Na ₂ S ₂ O ₃ per L of sample	48 hours
Surface Water (40 CFR 141.74(a)(1)):			
Coliform (Total) and E. coli enumeration	P,G	Cool to 4°C	8 hours NOTE 1, 3
Standard Plate Count	P,G	Cool to 4°C	8 hours NOTE 1
Coliphage	P	Cool to 4°C	48 hours
Inorganic Tests			
Alkalinity	P,G	Separate bottle completely filled to the exclusion of air, cool, 4°C	14 days
Metals (Sb, As, Ba, Be, Cd, Ca, Cr, Cu, Pb, Ni, Se, Ag, Na, Tl)	P,G	HNO ₃ to pH<2	6 months NOTE 2
Bromate	P,G	50 mg/L EDA	28 days
Chloride	P,G	None	28 days
Chlorite	P,G	50 mg/L EDA, Cool to 4°C	14 days
Color	P,G	Cool, 4°C	48 hours
Conductivity	P,G	Cool, 4°C	28 days
Cyanide	P,G	Cool, 4°C NaOH to pH<12 1.2 g/L ascorbic acid	14 days
Fluoride	P,G	None	28 days
Mercury	G	HNO ₃ to pH<2	28 days
Mercury	P	HNO ₃ to pH<2	28 days
Nitrate By Ion Chromatography	P,G	Cool, 4°C	48 hours NOTE 4
Nitrate Chlorinated Supplies	P,G	Cool, 4°C	14 days NOTE 4

Analyte	Bottle	Preservation	Holding Time
Nitrate Non-chlorinated Supplies	P,G	H ₂ SO ₄ to pH<2	48 hours NOTE 4
Nitrite	P,G	Cool, 4°C	48 hours
Phosphorus (as Orthophosphate)	P,G	Cool, 4°C	48 hours
Silica	P	Cool, 4°C	28 days
Sulfate	P,G	Cool, 4°C	28 days
Total Filterable Residue	P,G	Cool, 4°C	7 days
Turbidity	P,G	Cool, 4°C	48 hours
UV254 Absorbance	P,G	Cool, 4°C	48 hours
Organic Tests			
Trihalomethanes Bromodichloromethane Bromoform Chlorodibromomethane Chloroform	Glass with Teflon-lined Septum	0.008%Na ₂ S ₂ O ₃ Cool 4°C	14 days
Volatile Halocarbon and Volatile Aromatics: Methy-tert-butyl ether	Glass with Teflon-lined Septum	Na ₂ S ₂ O ₃ (10 mg/40 mL is sufficient for up to 5 ppm Cl ₂) added to empty sample bottle then add 1:1 HCl to pH<2. Cool 4°C	14 days
Microextractables: Method 504.1	Glass with Teflon-lined Septum	Cool, 4°C 3 mg Na ₂ S ₂ O ₃ per 40 ml vial	28 days
Method 505	40-ml glass vial with cap liner	3 mg Na ₂ S ₂ O ₃ Cool, 4°C	7 days
Method 506	1-L (or qt.) amber glass with TFE lined cap	60 mg Na ₂ S ₂ O ₃ Cool, 4°C	14 days until extraction, then 14 days after extraction
Method 507	1-L Borosilicate glass, graduated, with TFE lined cap	80 mg Na ₂ S ₂ O ₃ Cool, 4°C Protect from light	14 days until extraction, then 14 days after extraction

Analyte	Bottle	Preservation	Holding Time
Method 508	1-L Borosilicate glass, graduated, with TFE lined cap	80 mg Na ₂ S ₂ O ₃ Cool, 4°C Protect from light	7 days until extraction, then 14 days after extraction
Method 508A PCB's, Total as decachlorobiphenyl	1-L glass, with TFE lined cap	Cool, 4°C	14 days until extraction, then 30 days after extraction
Method 508.1	1-L glass with TFE lined cap	50 mg Na ₂ S ₂ O ₃ then 1:1 HCl to pH<2 Cool, 4°C	14 days until extraction then 30 days after extraction
Method 515.1: 515.2, 515.3 Chlorinated Acids	1-L Borosilicate glass, graduated, with TFE lined cap	80 mg Na ₂ S ₂ O ₃ Cool, 4°C Protect from light	14 days until extraction, then 14 days after extraction
Method 525.2	Refrigerated glass sample containers, sampling must be free of plastic tubing, gaskets, etc. that may leach analytes into water	Cool, 4°C Remove Cl residual; adjust pH<2 with 6 N HCl	Extract within 14 days. Analyze within 30 days of sample extraction
Method 531.1 Methylcarbamate pesticides	60-ml vial with PTFE silicone faced septa	1.8 ml acetic acid Buffer to pH 3±0.2, 4.8 mg Na ₂ S ₂ O ₃ Ship 4°C Store at -4°C.	28 days
Glyphosate	60-ml vial PTFE faced Silicone	6 mg Na ₂ S ₂ O ₃ Cool 4°C; Protect from light	14 days
Endothall	40-ml amber glass vial with TFE lined cap	Cool 4°C; Protect from light	7 days
Diquat	1-L amber plastic or silanized glass with screw cap	100 mg Na ₂ S ₂ O ₃ H ₂ SO ₄ to pH=2, Cool to 4°C, Protect from light	7 days until extraction, then 21 days after extraction

Analyte	Bottle	Preservation	Holding Time
Benzo(a)pyrene	1-L (or qt.) amber glass with TFE lined cap	100 mg Na ₂ S ₂ O ₃ 1:1 HCl to pH<2; Cool to 4°C; Protect from light	7 days until extraction then 30 (40 for Method 550.1) days after extraction
Method 551.1	60 ml glass vials Teflon lined Septum	Sodium Sulfite or Ammonium Chloride (for microextractables) , pH 4.5-5.0 with phosphate buffer Cool, 4°C	14 days until extraction, then 14 days after extraction
Method 552.1	Amber glass with TFE liner	Add NH ₄ Cl to a concentration of 100mg/L in sample; Cool 4°C	Extract within 28 days of collection. Analyze extract within 48 hours if stored at 4oC or less.
Method 552.2	Amber glass with TFE liner	Add NH ₄ Cl to a concentration of 100mg/L in sample; Cool 4°C	Extract within 28 days of collection. Analyze extract within 7 days if stored dark at 4oC or less or 14 days if 10oC or less.
Method 555	glass TFE lined	Acidify to pH2 with 1:1 HCl; Dechlorinate with 5mg NaSO ₃ per 100mL sample; Cool 4°C Protect from light	Analyze after extraction, within 14 days of collection
Dissolved Gases Method RSK-175	40 mL Glass with Teflon lined Septum	HCL to pH<2. Cool to <=6°C	14 days

Table 8.0 Non-potable Water Bottle and Preservation Requirements

Analyte	Bottle	Preservation	Holding Time
<ul style="list-style-type: none"> ♦ Note that where “Cool to $\leq 6^{\circ}\text{C}$” is stated, samples are not to be frozen. Rounding down to 6°C may not be used to meet the $\leq 6^{\circ}\text{C}$ requirement. The preservation temperature does not apply to samples that are analyzed immediately (less than 15 minutes). ♦ For bacteriological tests, when the sample is collected, leave ample air space in the bottle (at least 2.5 cm or 1 in) to facilitate mixing by shaking. ♦ For metals tests, an aqueous sample may be collected and shipped without acid preservation. However, acid must be added at least 24 hours before analysis to dissolve any metals that adsorb to the container walls. 			
Bacteriological Tests			
Coliform, Total, Fecal, and E. coli, and Enterococcus	P,G	Cool to $\leq 6^{\circ}\text{C}$	8 hours*
Coliform, Total, Fecal, and E. coli and Enterococcus in chlorinated samples	P,G	Cool to $\leq 6^{\circ}\text{C}$ 0.008% $\text{Na}_2\text{S}_2\text{O}_3$	8 hours*
Standard Plate Counts	P,G	Cool to $\leq 6^{\circ}\text{C}$, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$	8 hours*
*Maximum holding time includes the time elapsed from collection of the sample to placement into the incubator.			
Inorganic Tests			
** ELAP offers Nitrate or Nitrite only for accreditation. ELAP does not offer combined Nitrate-Nitrite. The preservation and holding time requirements for combined Nitrate-Nitrite is cool to $\leq 6^{\circ}\text{C}$, H_2SO_4 to $\text{pH} < 2$, and 28 days (40 CFR 136, Table II).			
Acidity	P, FP,G Separate bottle completely filled to the exclusion of air	Cool to $\leq 6^{\circ}\text{C}$	14 days
Alkalinity	P, FP,G Separate bottle completely filled to the exclusion of air	Cool to $\leq 6^{\circ}\text{C}$	14 days

Analyte	Bottle	Preservation	Holding Time
Metals (Al, Sb, As, Ba, Be, B, Cd, Ca, Cr, Co, Cu, Au, Fe, Pb, Mn, Mg, Mo, Ni, Pd, Pt, Ag, Tl, Sn, Ti, V)	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, H_2SO_4 to $\text{pH} < 2$	28 days
Biochemical oxygen demand	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	48 hours
Bromide	P, FP,G	None	28 days
Biochemical oxygen demand, carbonaceous	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	48 hours
Chemical oxygen demand	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, H_2SO_4 to $\text{pH} < 2$	28 days
Chloride	P, FP,G	None	28 days
Chlorine Residual	P, G	None	Analyze within 15 minutes
Chromium VI	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	24 hours
Chromium VI	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, Plus $\text{pH} 9.3-9.7$ with $(\text{NH}_4)_2\text{SO}_4$	28 Days
Color	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	48 hours
Cyanide, total and amendable to chlorination	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, NaOH to $\text{pH} > 12$, 0.6g No Sulfide	48 Hrs
Cyanide, total and amendable to chlorination	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, NaOH to $\text{pH} > 12$, 0.6g No Sulfide: Plus mitigate for interferences	14 Days
Fluoride	P	None	28 days
Hardness	P, FP,G	HNO_3 or H_2SO_4 to $\text{pH} < 2$	6 months
Hydrogen ion (pH)	P, FP,G	None	Analyze within 15 Minutes
Kjeldahl and organic nitrogen	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, H_2SO_4 to $\text{pH} < 2$	28 days
Mercury	P, FP,G	HNO_3 to $\text{pH} < 2$	28 days
Nitrate	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	48 hours
Nitrate-nitrite	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, H_2SO_4 to $\text{pH} < 2$	28 days
Nitrite	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	48 hours

Analyte	Bottle	Preservation	Holding Time
Oil and Grease	G	Cool to $\leq 6^{\circ}\text{C}$, HCl or H_2SO_4 to $\text{pH} < 2$	28 days
Organic carbon	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, HCl or H_3PO_4 , or H_2SO_4 to $\text{pH} < 2$	28 days
Orthophosphate	P, FP,G	Filter within 15 minutes, Cool to $\leq 6^{\circ}\text{C}$	48 hours
Phenols	G	Cool to $\leq 6^{\circ}\text{C}$ H_2SO_4 to $\text{pH} < 2$	28 days
Phosphorus, total	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, H_2SO_4 to $\text{pH} < 2$	28 days
Residue, Total	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	7 days
Residue, Filterable	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	7 days
Residue, Non-filterable	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	7 days
Residue, Settleable	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	7 days
Silica	P, Quartz	Cool to $\leq 6^{\circ}\text{C}$	28 days
Specific Conductance	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	28 days
Sulfate	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	28 days
Sulfide	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$, add zinc acetate plus sodium hydroxide to $\text{pH} > 9$	7 days
Surfactants	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	48 hours
Temperature	P, FP,G	None	Analyze within 15 Minutes
Turbidity	P, FP,G	Cool to $\leq 6^{\circ}\text{C}$	48 hours
Organic Tests			
Purgeable Halocarbons plus Benzyl Chloride and Epichlorohydrin	G, Teflon- lined septum	Cool to $\leq 6^{\circ}\text{C}$, Ascorbic Acid (25 mg/40 ml) for residual chlorine	14 days (7 days if not preserved)
Purgeable Aromatics	G, Teflon-lined septum	Cool to $\leq 6^{\circ}\text{C}$, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine Preserve as above and HCl to $\text{pH} < 2$	14 days (7days if not preserved)

Analyte	Bottle	Preservation	Holding Time
Acrolein and Acrylonitrile	G, Teflon-lined septum	Cool to $\leq 6^{\circ}\text{C}$, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine Preserve as above and pH to 4-5	14 days for acrylonitrile, 3 days for acrolein 14 days
Phenols	G, Teflon- lined cap	Cool to $\leq 6^{\circ}\text{C}$, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine	7 days until extraction 40 days after extraction
Benzidines	G, Teflon- lined cap	Cool to $\leq 6^{\circ}\text{C}$, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine	7 days until extraction 7 days after extraction if stored under inert gas
Phthalate Esters	G, Teflon- lined cap	Cool to $\leq 6^{\circ}\text{C}$	7 days until extraction 40 days after extraction
Nitrosamines	G, Teflon- lined cap	Cool to $\leq 6^{\circ}\text{C}$, store in dark, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine. For diphenylnitrosamine add 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ and adjust pH 7-10 with NaOH within 24 hours of sampling	7 days until extraction 40 days after extraction
Nitroaromatics and Isophorone	G, Teflon lined cap	Cool to $\leq 6^{\circ}\text{C}$, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine, store in dark	7 days until extraction 40 days after extraction
PCBs	G, Teflon-lined cap	Cool to $\leq 6^{\circ}\text{C}$	1 year until extraction 1 year after extraction

Analyte	Bottle	Preservation	Holding Time
Pesticides	G, Teflon-lined cap	Cool to $\leq 6^{\circ}\text{C}$ Cool to $\leq 6^{\circ}\text{C}$, pH 5-9, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine if aldrin is to be determined	72 hours 7 days until extraction 40 days after extraction
Polynuclear Aromatic Hydrocarbons	G, Teflon-lined cap	Cool to $\leq 6^{\circ}\text{C}$, 0.08% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine only, store in dark	7 days until extraction 40 days after extraction
Haloethers	G, Teflon-lined cap	Cool to $\leq 6^{\circ}\text{C}$, 0.008% $\text{Na}_2\text{S}_2\text{O}_3$ for residual chlorine only	7 days until extraction 40 days after extraction
Chlorinated Hydrocarbons	G-Teflon-lined cap	Cool to $\leq 6^{\circ}\text{C}$	7 days until extraction 40 days after extraction
Dissolved Gases Method RSK-175	40 mL Glass with Teflon lined Septum	HCL to pH<2. Cool to $\leq 6^{\circ}\text{C}$	14 days
<p>***When the extractable analytes of concern fall within a single chemical category, the specified preservative and maximum holding times should be observed to safeguard sample integrity. When the analytes fall within two or more chemical categories, the sample may be preserved by cooling to $\leq 6^{\circ}\text{C}$, reducing residual chlorine with 0.008% $\text{Na}_2\text{S}_2\text{O}_3$, storing in the dark, and adjusting the pH to 6-9; samples preserved in this manner may be held for 7 days before extraction and for 40 days after extraction. Exceptions to this procedure are noted in footnotes to 40 CFR 136 Table II and the approved methods.</p>			

Table 9.0 Solid/Hazardous Waste Bottle and Preservation Requirements

Analyte	Bottle	Preservation	Holding Time
<p>Note: Due to the variety of possible sample types, only generalizations can be made. Most solid samples are best preserved by refrigeration to 4°C. Analysis should begin as soon as possible. If SW846 does not list a holding time, then the holding time must not exceed the holding time listed for water samples. A complete record should be maintained on each sample to provide a history of sample handling from collection to analysis.</p>			

Analyte	Bottle	Preservation	Holding Time
HCr+6	P	≤6 °C	30 days to digestion, 7 days from extraction to analysis
Mercury	P	≤6 °C	28 days
Metals	P	None	6 months
HEM, Grease & Oil	P	≤6 °C	28 days
Cyanide	P	≤6 °C	14 days
pH	P	None	Analyze immediately
Total Organic Carbon	P	≤6 °C	28 days
Volatile Organics	P	≤6 °C	14 days
Semi-volatile Organics Pesticides Herbicides	125-mL wide-mouth glass with PTFE-lined lid	≤6 °C	Samples extracted within 14 days and extracts analyzed within 40 days following extraction
PCBs	250-mL wide-mouth glass container with PTFE-lined lid.	Cool to ≤6 °C.	Samples extracted within 14 days and extracts analyzed within 40 days following extraction

23.0 Laboratory Water Supply

23.1 The water used for reagents and blanks (trip, field, method, holding) and general laboratory procedures is derived from two sources: Aries High Purity and Thermo Scientific Barnstead Nanopure Water System

23.2 Aries High Purity Water System

23.2.1 Used for all organic work and all blanks sent to clients (field, trip).

23.2.2 GC and GC/MS sections use this water as the source for the method blanks for extractions and volatile organics.

23.2.3 The water is verified on a daily basis by the analysis of a method blank and determined to be free of organic contaminants. The resistivity is checked on a daily basis and logged into a logbook.

23.2.4 The conductivity is checked on a monthly basis and the values recorded in a notebook.

23.2.5 The cartridges are replaced when the resistivity is no longer within the allowable range (0.5 to 2.0 megohms-cm).

23.2.6 No volatile organics greater than the reporting limit can be detected in this water.

23.3 Thermo Scientific Barnstead Nanopure Water System

23.3.1 Used for all inorganic work (except for BOD)

23.3.2 The conductivity is checked daily and must be within the limits of 0.5 to 2.0 megohms/m.

23.3.3 This result will be recorded daily in a logbook.

23.4 Field and Trip Blank Sample Preparation

23.4.1 Laboratory distilled water, certified as pure, is used for all field and trip blanks.

23.4.2 This water is verified as pure by analysis prior to filling the trip and field blank bottles by analysis for volatiles, semi-volatiles and pesticide/PCBs.

23.4.3 All organic analytes must be detected at less than the reporting limit.

23.4.4 A record of this analysis is kept on file in the QC department.

23.4.5 Preservations are added to the sample containers prior to shipment.

24.0 Major Equipment and Reference Measurement Standards

24.1 Preventative Maintenance Procedures

24.1.1 The preventative maintenance procedures are designed to generate consistent production of a quality product. The proper calibration and verification of equipment is critical.

24.1.2 Preventative maintenance is important in preventing probable down time and instrument problems by instituting a proactive program to ensure that the routine maintenance procedures are performed to prevent failure of the equipment during use.

24.1.3 The calibration and maintenance on all the instruments are documented in the calibration log books and the individual instrument

maintenance logbooks (most electronic maintenance records are in the LIMS).

24.1.4 See the Appendix Section 5 for general preventative maintenance.

24.2 Responsibility for Maintenance

24.2.1 The responsibility for the preventative maintenance lies with the analyst and the supervisor of the department.

24.2.2 All staff are trained to perform routine daily maintenance on instrumentation.

24.3 Service Contracts

24.3.1 All major laboratory instrumentation is covered under service contracts from either the instrument manufacturer or an outside service organization (Compco Analytical).

24.3.2 The service agreements include preplanned service during the course of the contract to minimize downtime. Examples include:

24.3.2.1 Source Cleaning, changing pump oil, cleaning the source and other routine maintenance.

24.3.3 Trained staff observes all external source maintenance

24.3.4 Once maintenance is requested, the time frame for arrival to the site is anywhere from 48 hours to 4 days depending on the specific agreement.

24.4 Equipment Redundancy

24.4.1 All major equipment has a back-up instrument that can be used in a situation where an instrument failure occurs.

24.4.2 All GC, GC/MS, ICP instrumentation have more than one instrument available at all times.

24.4.3 Spare parts for small consumables and columns are kept on site.

24.4.4 In the event that an instrument fails and no redundant instrument is available, the client is notified and arrangements are made to subcontract the impacted samples.

24.4.5 Equipment that fails is taken out of service, clearly marked, and appropriately stored (if applicable) until it has been repaired and shown by calibration test to perform correctly.

24.5 Reference Standards

24.5.1 Reference standards are obtained or calibrated by a body that can provide traceability (National Institute of Standards and Technology(NIST)).

24.5.2 Reference standards of measurement held by the laboratory are used for calibration only and for no other purpose, unless it can be shown that their performance as reference standards would not be invalidated.

25.0 Facilities

25.1 Pace Analytical Services, Inc.(Long Island) is located at:

575 Broad Hollow Road (Route 110)

Melville, New York 11747

Exit 49 South of the Long Island Expressway (495)

25.2 The laboratory comprises approximately 10,400 square feet in size (see Floor Plan, Appendix, Section 2.0)

25.3 The laboratory is subdivided into six sections:

25.3.1 Shipping/Receiving

25.3.2 Inorganic Chemistry (Wet Chemistry)

25.3.3 Inorganic Chemistry (Metals)

25.3.4 Organic Chemistry (GC)

25.3.5 Organic Chemistry (GC/MS)

25.3.6 Organic Prep Laboratory

25.4 The laboratory is staffed by approximately 50 technically qualified scientists, technicians, and support staff whose educational backgrounds vary depending on specific job functions.

25.5 The laboratories air supply is designed to minimize cross-contamination in various lab areas (e.g. sample preparation and volatile organic analysis). The air supply is monitored via computer and records of temperature fluctuations and humidity are available.

25.5.1 Negative pressure exists between the organic prep room and the rest of the laboratory to eliminate contamination of extraction solvents in the volatile organic testing areas.

25.6 Bench tops and floors are made of impervious, smooth easily cleaned

materials.

25.7 There is at least two linear meters workspace per analyst while working.

25.8 Specific work areas are defined and access is controlled. Only authorized personnel and escorted signed-in visitors may enter the work area. This limits the access of unauthorized personnel from entering work areas with potentially hazardous chemicals.

25.9 Good housekeeping measures are employed to avoid the possibility of contamination as well as to maintain safety. Good Housekeeping is critical to a safe, efficient, clean and pleasant work environment.

25.9.1 Reducing unwanted clutter helps to avoid accidents and potential for fires.

25.9.2 Maintaining standards of housekeeping conveys a sense of professionalism to those who work in and visit the laboratory.

25.9.3 An outside service provides daily cleaning of the garbage, recyclables, cleaning of the floors and cleaning of the bathrooms and cafeteria.

25.9.4 A lab maintenance person is responsible for maintenance of the lighting, water spills and all around building issues.

25.9.5 Adequate lighting and ventilation is important for a safe work environment. Safe storage of chemicals and compressed gas cylinders must be in place to prevent accidents.

25.9.6 The use of personal protective wear such as safety glasses, gloves and lab coats are to be worn in the lab areas only, not outside the lab to prevent cross contamination.

25.9.7 Emergency equipment must be in view and easily accessible: this includes but is not limited to: telephones, eye wash stations, first aid kits, fire extinguishers, fire alarms, and spill kits.

25.9.8 Keeping the floor and bench tops free of clutter also helps in keeping the lab area safe and presentable.

26.0 Security

26.1 The entire building is equipped with a security system monitored by a private alarm company.

26.2 The laboratory area is divided into separate zones.

- 26.3 The access doors to these areas are wired with sensors so that the zones can be operated individually.
- 26.4 Each employee is assigned a FOB, which allows access to the building during a preset time schedule.
 - 26.4.1 The FOBs are codes with the analyst information and are given to each analyst.
 - 26.4.2 The number of FOBs and responsible persons is controlled.
 - 26.4.3 FOBs are signed for by each analyst and handed in to Human Resources if employment ends.
- 26.5 Access to the building is monitored both internally and by an outside security company.
- 26.6 The lab is equipped with a hand scanner that limits entry to the building to employees that have been scanned in for approved entry.
- 26.7 All other entries are made by made by either the receptionist or receiving personnel electronically opening the door.

27.0 Purchasing of Services and Supplies

- 27.1 Non-capital purchases in the laboratory are centralized.
- 27.2 Purchases of services and supplies are made from approved suppliers.
- 27.3 Suppliers are evaluated and approved for acceptability based on:
 - 27.3.1 The ability to deliver services or supplies of an adequate quality to ensure confidence in the results.
 - 27.3.2 Suppliers must be approved by the appropriate accreditation body, when applicable.
 - 27.3.3 Reference materials shall, where possible provide evidence of traceability to SI units of measurement/NIST.
 - 27.3.4 The ability to deliver parts and supplies in a timely matter
 - 27.3.5 The cost must be fair.
- 27.4 A listing of approved vendors may be found in the Appendix, Section 4.0. These vendors are identified in the LIMS, where additional information can be found.
 - 27.4.1 Each vendor is assigned a “vendor type”. Vendor types identified as “office supplies”, “courier” and “other” are not subject to the quality

evaluation of approved suppliers.

27.5 If no independent assurance of the quality is available, the lab must document that the product was inspected, calibrated or otherwise verified before use.

27.6 "Standing orders" are arranged as often as possible to ensure a constant supply of consumable materials while not requiring storage on site.

27.7 On a weekly basis, each department evaluates their needs for supplies.

27.8 A requisition for needed services or supplies is created from the approved vendor list, reviewed and verified by the department supervisors.

27.9 Requisitions are submitted to the purchasing agent.

27.10 All requisitions are approved by the Laboratory Director; dated with signature, before orders are placed

27.11 Records of all suppliers are maintained.

27.12 Records for services and supplies that may affect the quality of environmental tests must include the following (where applicable):

27.12.1 Date of receipt

27.12.2 Date opened

27.12.3 Expiration Date

27.12.3.1 If no expiration date is given, the lab will use 10 years from receipt (i.e., for certain chemicals.)

27.12.4 Source

27.12.5 Lot or serial number

27.12.6 Calibration and verification records

27.12.7 Certifications

27.13 Packing slips are checked against package content labels and matched with the purchase order.

27.14 Once accepted, the packing slip is dated and initialed as evidence of compliance.

27.15 Certificates of analysis (COA) are maintained on file after the COA is checked to ensure the received item meets the minimum specifications. COAs must also be retained for analytical columns.

27.15.1 Date received is recorded on the COA and date put into service, if

applicable.

27.16 Consumables are stored in the area of use.

28.0 Waste Generation, Storage and Disposal

28.1 Waste Storage Facility

28.1.1 The waste storage room was designed and constructed according to Article XII of the Suffolk County Sanitary Code.

28.1.2 The room includes secondary containment for 15-55 gallon drums, explosion proof lighting/HVAC systems, and a fire suppression system.

28.1.3 The storage room is located adjacent to the laboratory's eastern lobby.

28.1.4 The waste room is restricted to certain personnel and is controlled by the Organic Prep Supervisor or designee.

28.1.5 Entrance to the waste room is obtained by submitting to the Special Organic Prep Supervisor, or designee a list of types and quantities of wastes to be transferred.

28.1.6 The list is reviewed and maintained by the Organic Prep Supervisor, or designee, to document the types and quantities of wastes transferred.

28.1.7 On a weekly basis, an inspection of the storage facility is conducted and documented.

Under no circumstances are any hazardous wastes discharged into any sink or drain

28.2 Bulk and Small Quantity Hazardous Wastes

28.2.1 These wastes are initially accumulated in the section of the laboratory where they are generated.

28.2.2 Bulk wastes are initially stored in containers ranging from 1 liter to 5 gallons in size.

28.2.3 After accumulation of a maximum of 5 gallons in size, the waste is transferred to a designated 55-gallon drum in the hazardous waste storage facility by the department supervisor or authorized hazardous waste handler.

28.3 Hazardous Waste Storage

28.3.1 Major Waste is segregated into 55 gallon drums as follows:

28.3.1.1 Waste acids

28.3.1.2 Waste methylene chloride/chloroform

28.3.1.3 Waste ether

28.3.1.4 Waste granulated activated carbon

28.4 Small Quantity Waste Storage

28.4.1 Small quantity waste consists primarily of contaminated samples, prepared samples, and expired or off-spec analytical standards.

28.5 Hazardous Waste Removal

28.5.1 All hazardous waste is removed for final disposal by a fully licensed transporter and treatment, storage and storage facility (TSD).

28.5.2 During transfer of wastes from the storage room by the disposal contractor, spill control equipment is on-site to respond to potential spills.

28.5.3 All final waste is processed through physical treatment and/or incineration.

28.6 Refer to the most current version of the *Waste Disposal Manual* for a comprehensive description of the laboratory policy.

29.0 Standard Reference Materials

29.1 Solvents, Reagents, and Absorbent Check Analysis

29.1.1 All solvents, absorbent materials, and reagents are routinely demonstrated to be free from contamination under the conditions of the analysis by analyzing a reagent blank.

29.1.2 All solvents, absorbent materials and reagents are stored so as to ensure their integrity by preventing against deterioration, contamination, and loss of identity.

29.1.3 Traceability of solvents, reagents and reference materials is documented by monitoring and recording:

29.1.3.1 Date received

29.1.3.2 Date opened

29.1.3.3 Expiration date

29.1.3.4 Lot numbers

29.1.3.5 Calibration or verification records

29.1.3.6 Certifications

29.2 Reference Material Use

29.2.1 Stock Standards

29.2.1.1 All stock standards purchased, if available, are traceable to NIST (National Institute of Standards and Technology).

29.2.1.2 All stocks come with documentation from the vendor attesting to the integrity of the standard solution.

29.2.2 Volatile Organic Standards

29.2.2.1 Generally, volatile standards are replaced every month or sooner if necessary.

29.2.2.2 Gas standard solutions are replaced on a weekly basis.

29.2.3 Semi-volatile and GC/ECD

29.2.3.1 Standards are generally replaced every 6 months or sooner if necessary.

29.2.4 Metals

29.2.4.1 Stock standards are generally used up to the date of expiration.

29.2.4.2 Working standards for metals analysis are prepared on a daily basis.

29.2.5 Wet Chemistry

29.2.5.1 Stock standards are generally used up to the date of expiration.

29.2.5.2 Working standards are prepared at a frequency prescribed by the analytical method.

29.2.6 Working Solutions, Prepared reagents

29.2.6.1 In addition to items listed in Section 27.12 (where applicable) all prepared solutions and reagents must include the following:

29.2.6.1.1 Date Prepared

29.2.6.1.2 Preparer's Initials

29.3 Proficiency Samples

29.3.1 The lab participates in the NYSDOH proficiency sample program.

29.3.2 In addition, other state regulatory agencies as well as outside vendors

such as ERA, Phenova or Absolute Standards provide scheduled proficiency samples for various parameters. The vendor used must be a NELAC/TNI approved PT provider.

29.3.2.1 Other vendors are used to supplement the NYSDOH PT program for parameters not supplied by the NYSDOH that are on the laboratory's scope of accreditation (i.e., other states like NJ).

29.3.3 The NYSDOH proficiency samples are performed twice a year per matrix.

29.3.4 The samples are incorporated into the analytical system and analyzed in the same manner as normal environmental samples utilizing the same staff and methods as used for routine analysis including procedures, equipment, facilities, and frequency of analysis.

29.3.5 The results of proficiency samples are reported on the supplied PT provider report forms.

29.3.6 Results are posted on the appropriate data reporting website.

29.3.6.1 NYSDOH evaluates the data and scores are assigned to each analyte as satisfactory or unsatisfactory.

29.3.6.2 No response is required for satisfactory results.

29.3.6.3 In the case of an unsatisfactory result, a review of the test and its accompanying QC is performed and the cause of the unsatisfactory result is investigated.

29.3.6.4 A report listing the cause and the corrective action is generated. This report may be provided to the pertinent accreditation authorities, when applicable.

29.4 Double Blind Samples

29.4.1 A double blind sample is one that replicates a real environmental sample in composition and appearance.

29.4.2 Laboratory sample bottles are used to prepare whole-volume PT samples by an outside standard vendor company and usually submitted as a fictitious engineering firm.

29.4.3 The full range of services provided to the customer is checked including turn around time, correctness, and customer service.

29.4.4 A report is generated documenting the accuracy of the results submitted.

30.0 Internal Quality Control

30.1 The data acquired from QC procedures are used to estimate the quality of the data to determine the need for corrective action, and to interpret results following corrective actions that were implemented.

30.2 Details of each method stipulated QC is stated in the method standard operating procedure (SOP).

30.3 When no method limits exist, QC limits are generated in-house.

30.4 If less than 20 data points are available, interim QC limits are used, i.e., 70-130% for accuracy and $\pm 20\%$ relative percent difference for precision.

30.5 For spiking data when 20 data points become available, limits are calculated based on the mean recovery ± 3 standard deviations.

30.5.1 Results that are slightly *above* the LCS QC limit are not counted toward the allowable number of analytes outside the QC limits.

30.5.2 This situation must still be noted in the case narrative.

30.6 For duplicate data when 20 points become available, limits are calculated based on the mean of the historical difference.

30.7 Quality control measures are assessed and evaluated on an on-going basis to monitor trend analysis through control charts.

30.8 Long standing established limits are generally not updated as long as they are confirmed in order to maintain consistent Q. C.

30.9 Marginal Exceedences (ME)

30.9.1 For methods that contain a large number of analytes in the LCS, it is statistically unlikely that all analytes will be in control.

30.9.2 Upper and Lower marginal exceedence (ME) limits may be established to determine if corrective action is needed (3 standard deviation units around the mean).

30.9.3 An ME is defined as being beyond the LCS control limit but within the marginal exceedence limit.

30.9.4 The ME is calculated as being between 3 and 4 standard deviation

units around the mean.

30.9.5 Marginal exceedences must be random. If the same analyte is consistently outside the LCS control limits, the cause must be investigated.

Table 10.0: Spiking Requirements

Number of Analytes in Method	Minimum Number of Analytes to be Spiked	Number of analytes to fall outside the marginal exceedence (ME)
<10	all	0
11 to 30	80%	1
31 to 50	Spike at least 16 parameters.	2
51 to 70		3
71 to 90		4
>90		5

30.10 Matrix Spike/Matrix Spike Duplicates

30.10.1 The components to be spiked shall be as specified by the mandated test method. Any permit specified analytes, as specified by regulation or client requested analytes shall also be included.

30.10.2 If there are no specified components, the laboratory shall spike per the spiking requirements in Table 10.0. (ME do not apply).

30.10.3 The laboratory shall insure that all targeted components are included in the spike mixture over a 2-year period.

30.11 Failure to Meet QC Requirements/Customer Requirements

30.11.1 If the non-conformance requires a resampling or re-extraction, the analyst completes a form and distributes it to the QA Manager and the QC Department.

30.11.2 If there is a specific project manager, they also would receive a copy.

30.11.3 The QA department then reviews the non-compliance and takes action by either contacting the client to inform them and asking for feedback or initiating an investigation by a technical nature to determine the root cause of the problem.

30.11.4 If data must be reported even though all QC requirements were not

met, the affected sample results must be qualified in the case narrative (if applicable) or by qualifying the data on the report form.

30.12 Positive Results

30.12.1 All drinking water samples, with positive results without a historical background associated with it are re-prepped and re-analyzed for confirmation prior to reporting the result to the client.

30.12.2 A resample may be collected to confirm results, especially for SOCs.

Table 11.0: Summary of Essential QC for Chemical Analysis

REFERENCE	TYPE OF CONTROL	FREQUENCY	CRITERIA
Negative control	Method blank	1 per batch/matrix type/sample extraction or prep method	Must be less than 1/10 of regulatory level or 1/10 any positive result except for normal laboratory contaminants which are addressed in SOPs and methods.
Positive control	Matrix spikes	1 per 20 samples/matrix type/prep method	Advisory only
Positive control	Lab fortified blank	1 per batch/prep procedure	Method dependent
Positive control	Laboratory control Sample	1 per batch/prep procedure	Method dependent
Precision	Matrix spike/matrix spike duplicate or duplicates	1 per 20/ matrix /prep procedure	Advisory
Method evaluation	Demonstration of capability	Initial verification per analyst	Method dependent
Method evaluation	Calibration	Initially with daily verification	Method dependent
Method evaluation	Proficiency results	NELAC freq	NELAC spec

REFERENCE	TYPE OF CONTROL	FREQUENCY	CRITERIA
Sensitivity	Method detection limit	Yearly	Method dependent
Data reduction	Documentation	Not specified	Protocol dependent
Quality of standards and reagents	Reagent quality checks	Reagent grade	Per label
Quality of standards and reagents	Water quality checks	Bottle checks monthly	Less than reporting limit
Selectivity	Absolute retention time and relative retention time	Method dependent	Instrument dependent
Constant and consistent test conditions	Instrument stability	None specified	Method dependent
Constant and consistent test conditions	Glassware cleaning	Method dependent	Protocol dependent

Measure Taken	DFTPP Injection	Five calibration standard runs	Continuing calibration standard run	Analyze Nanopure filtered water	Run sample spiked with select standard in duplicate	Run reagent water with spiked select standard	Spike system monitoring compounds into samples, blank standards, MS, MSD,	Monitor I.S. area and RT of samples and compare samples

							MSB	
Frequency	Every 12 hours	Good until cont. calibration not met or change in system	Every 12 hours	Per Extraction batch	One per 20 samples or SDG or matrix or 7 days collection	One per 20 samples or SDG or matrix or 7 days collection	All standards, blanks, samples, MS standards, MSD, MSB	Every 12 hours
Acceptance Criteria	Ion abundance must meet ASP criteria in Table 7.3F	Maximum %RSD and minimum RRF in Table 7.3G	Maximum %D and minimum RRF in Table 7.3G	Common phthalate esters <5 x CRQL all others <CRQL	See lab established limits	See lab established limits	See lab established limits	RT: 30 seconds from Std, I.S. area: within - 50% to +100%
Corrective Action	Tune with FC 43 or PFTBA	1.New standard 2.Leak check 3.Column 4.Trap	1.Recalibrate 2.Re-do initial calibration	1.Alleviate phthalate source 2.Re-extract SDG	Advisory	1.Check spiking 2.Re-analyze 3.MS/MSD	1.Check solution 2.Check system 3.Re-analyze	1.Check solutions 2.Check system 3.Re-analyze

Table 15.0 CLP Pesticide/PCBs QC Summary

	Initial and Continuing Calibration Column Resolution	Initial Calibration Linearity	Initial and Continuous Calibration Breakdown	Matrix Spike Blank	Method Blank
Measure Taken	Initial and continuing calibration and PEM and resolution check std (RESC)	Determine linearity by analyzing min 3 levels of Std for mixture standard single level for multi-component	Initial and continuing calibration and PEM analyzed and endrin and DDT breakdown calculated in the PEM	Reagent water spiked with select list of analytes and surrogates extracted	Reagent water Spiked with surrogate
Frequency	Initially or when continuing calibration not met or major change to system	Initially or when continuing calibration not met or major change to system	Initially or when continuing calibration not met or major change to system	Each SDG or 7 days or matrix or 20 samples	Each batch of Samples Extracted
Acceptance Criteria	PEM: all peaks must be 90% resolved on columns Ind. A&B: midpoint conc. Resolution must be $\geq 90\%$ $\%D: \leq 25\%$ of true value, $\%RSD \leq 20\%$, $\%RSD$ surrog. $\leq 30\%$ except $<25\%$ - and -BHC Resc. 60% resolution Two may be out but must be $\leq 30\%$		Breakdown of DDT and endrin in the PEM $\leq 20\%$, combined breakdown $\leq 30\%$	See Lab established limits	Less than CRQL
Corrective Action	1. Change the parameter (e.g. temp. prog or flow) 2. Re-analyze	Re-calibrate	1. Clip column 2. Clean injection port area	1. Check solution 2. Check instrument response 3. Re extract and reanalyze	1. Determine cause of contamination 2. Re-extract and re-analyses

Table 16.0 Organophosphorus Pesticide QC Summary

	INITIAL CALIBRATION LINEARITY	CONTINUING CALIBRATION	SURROGATE STANDARD RECOVERY	MS/MSD	LAB FORTIFIED BLANK	METHOD BLANK
Measure Taken	Six calibration standard runs	Analyze continuing Calibration Standard	Run sample spiked With select standard In duplicate	Run sample spiked W/ select standard In duplicate	Run reagent Water spiked W/ select standard	Analyze Nanopore water
Frequency	Good until calibration not Met or change in system	Initially and after Every 10 samples	All standards, blanks, Samples, MS/MSD, LFB	One per 20 samples Or SDG, or Matrix Or 7 days collection	One per 20 samples Or SDG, or matrix Or 7 days collection	One per Extraction batch
Acceptance Criteria	%RSD < 20%	%D < 15% on quantitation column	Achieve recovery	See lab established limitable limits	See lab established limitable limits	< CRQL
Corrective Action	1.Linear regression function used 2.Or second order function 3.Or quadratic curve	1.reinject 2.new solution 3.instrument corrective action 4.analyze new initial calibration	1.Check solution 2.Check system 3.Re-analyze	Advisory	Check solution Check system Re-analyze MSB MS/MSD	Identify source Of contamination Re-analyze

Table 17.0 Herbicide QC Summary

	INITIAL CALIBRATION LINEARITY	CONTINUING CALIBRATION	SURROGATE STANDARD RECOVERY	MS/MSD	LAB FORTIFIED BLANK	METHOD BLANK
Measure Taken	Six calibration standard runs	Analyze continuing Calibration Standard	Run sample spiked With select standard In duplicate	Run sample spiked W/ select standard In duplicate	Run reagent Water spiked W/ select standard	Analyze Nanopore water
Frequency	Good until calibration not Met or change in system	Initially and after Every 10 samples	All standards, blanks, Samples, MS/MSD, LFB	One per 20 samples Or SDG, or Matrix Or 7 days collection	One per 20 samples Or SDG, or matrix Or 7 days collection	One per Extraction batch
Acceptance Criteria	%RSD < 20%	%D < 15% on quantitation column	Achieve recoveries	Lab established limits	Lab established limits	< CRQL
Corrective Action	1.Linear regression function used 2.Or second order function 3.Or quadratic curve	1.Reinject 2.new solution 3.instrument corrective action 4.analyze new initial calibration	1.Check solution 2.Check system 3.Re-analyze	Advisory	1.Check solution 2.Check system 3.Re-analyze MSB/ MS/MSD	1.Identify source of contamination 2.Re-analyze

Table 18.0 CLP-M TAL Metals QC Summary

	Verification Of Linearity At CRQL	System Evaluation Calibration	Calibration Check ICV and CCV	Instrument Blank	Spiked Sample	Duplicate	Preparation Blank	ICP Interference Check Sample	Laboratory Control Sample (CS)	ICP Serial Dilution
Measure Taken		Analyze a blank standard independenc e for calibration levels	Analyze standard independent from calibration	Analyze ICB and CCBs	Sample spiked with analytes	Analyze a sample twice	A prep blank carried through prep and analysis	Analyze ICS, ICS A and ICS B	Carry through prep. & analyze aqueous and solid LCS	Analyze a 5 fold dilution of sample that is 50x IDL
Frequency	After the ICV in each analysis	Each 24 hours of use	10% or every 2 hrs during analysis whichever is more frequent	10% or every 2 hrs during analysis whichever is more frequent	One per matrix and conc. or SDG whichever is more frequent	One per matrix and conc. or SDG which-ever is more frequent	One per SDG or with each batch of samples digested whichever is more frequent	At beginning and end of analysis run of minimum of 2x per 8- hr. whichever is more frequent	One LCS per batch digested per matrix or per SDG whichever is more frequent except Hg and Cn	If analyte conc. is at minimum of factor of 50 above IDL on each group of samples of a similar matrix or for each SDG
Acceptance Criteria	Advisory	± 5% of true value except at CRDL	See Table 7.5B	Absolute value must be less than or equal to the CRDL	Spike recov. Should be between 75- 125% except if sample conc. 4x > spike conc.	> 5x CRQL RPD 20%, < 5x CRQL or one above and one below RPD ± CRQL	The absolute value must be less than or equal to CRQL	ICS AB must be within ± 20% of true value	80–120% except Ag & Sb, soil/sed's limits provided 10/LCS	Dilution must be within 10% of the original determinat ion
Corrective Action	None	Re-calculate	1.Stop analysis 2. Correct problem 3. Re- calibrate 4. Re-analyze	1. Stop analysis 2. Correct problem 3. Re-calculate 4. Re-analyze	Flag with “N” and for non-furnace & Hg elements also perform a post-spike	Flag with “*”	If above CRDL, the lowest conc. in the smpls must be 10x blank conc. or re- digested and re-analyzed	1. Stop analysis 2. Correct problem 3. Re-calibrate 4. Re-analyze	1. Terminate 2. Correct 3. Re-digest/ re- analyze	Flag with “E”

* = If outside limits, repeat matrix spike analysis once.

31.0 Departures from Documented Policies and Procedures

31.1 All policies and procedures in place in the laboratory must be adhered.

31.2 Departures from documented policies and procedures may be permitted if approved by the QA Manager, Laboratory Manager, or Technical Manager.

31.3 This departure must be fully documented and include the reason for departure and signed and dated by either the Technical Manager, Laboratory Manager, or the QA Manager.

31.4 No departures are permitted unless this procedure is followed.

32.0 Instrument Corrective Action

32.1 Specific corrective action protocols for handling out-of-control QC are stated in each SOP.

32.2 Instrument Corrective Action

32.2.1 The analyst is responsible for reviewing the initial calibration, blank and QC check criteria for adherence to the method requirements prior to initiating sample analysis.

32.2.2 On going QC is checked by the analyst either in real time or the

following morning for an overnight run.

32.2.3 The analyst is responsible for reviewing the data in comparison with the QC of the method.

32.2.4 Analysis proceeds if all QC is met and analysis is halted if the QC requirements are not met.

32.2.5 Corrective actions are taken to correct instrument non-compliances that may include:

32.2.5.1 Checking calculation

32.2.5.2 Verification of standard

32.2.5.3 Recalibrating instrument

32.2.5.4 Baking out the instrument, etc.

32.2.6 If the corrective action doesn't correct the instrument non-compliance, the department supervisor is notified and is involved in the decision making process of corrective action.

32.2.7 If due to holding time constraints analysis must proceed, another instrument will be used if available.

32.2.8 If another instrument is not available, the QC Manager and Laboratory Manager are notified and if the QC requirement does not affect the sample results, the sample analysis may be approved and the discrepancy noted on the report or in the case narrative.

32.2.9 The QA Manager or Laboratory Manager may override the QC requirement.

32.2.10 This is documented in the run log by the initials, date and a short statement of the non-compliance and that it was approved.

32.2.11 Either the QA Manager or Laboratory Manager grants approval with the documentation in the run log only.

32.2.12 General procedures are followed to determine when departures from quality control have occurred.

32.3 Due to sampling schedule and time frame of analysis, it is not always possible to repeat the analysis if the quality control measures are not acceptable.

32.4 If a quality control measure is found to be out-of-control and the data is to be reported, all samples associated with the failed quality control measure are

reported with the data qualified.

32.4.1 This may occur by the addition of the qualifier to the result:

32.4.1.1 B – analyte detected in method blank

32.4.1.2 E – concentration level over calibration

32.4.1.3 J – estimated result

32.4.2 It may also be documenting the discrepancy in the case narrative (if it is a full data package) or by indicating the non-conformance in the remarks section in the lab report.

32.4.3 A non-conformance report is completed documenting the out-of-control QC event and stating corrective measures to prevent re-occurrence.

33.0 Systems/Internal Audits

33.1 The laboratory has a program of audits to ensure the effective operation of the quality system. Several different types of audit procedures are used in the laboratory. These include the following:

33.1.1 Non-conformance Summary Reports

33.1.1.1 This form is used intra as well as interdepartmental to note any deficiencies, systematic or human errors for specific samples.

33.1.2 LIMs Holding Time Worksheet

33.1.2.1 The ACCESS-based LIMs has the capability to monitor samples and required analyses by holding time.

33.1.2.2 A daily printout lists the sample and the date by which it must be prepared/analyzed.

33.1.2.3 This is reviewed on a daily basis by the Laboratory supervisors to ensure that holding times are met.

33.1.3 Data Package Review

33.1.3.1 All data packages are reviewed by the QA Manager, QA Analyst or departmental supervisors.

33.1.4 Internal Audit of Chain-of- Custody (COC)

33.1.4.1 The QA Manager or designated representative conducts random audits of the internal COC records.

33.1.4.2 A sample is tracked throughout the internal custody of the department to ensure consistency.

33.1.4.3 Since all COC documentation is submitted in the data packages, the COC is also reviewed at that time.

33.1.5 Internal Audit of QC Measures and Records

33.1.5.1 The QA Manager or designated representative conducts random inspections of the various laboratory departments.

33.1.5.2 This may be formal (use of checklist) or informal.

33.1.5.3 These inspections include logbook review, QC records, standard preparation logs and instrument maintenance records.

33.1.5.4 This may include retesting of samples, intralaboratory comparison of results and interlaboratory comparisons.

33.1.6 Data Package Audit

33.1.6.1 On a weekly basis, an update of the status of deliverable requirements is prepared in the QA Department and given to all managers and supervisors to monitor the progress of the data packages.

33.1.6.2 Corrective measures are taken if the department or reporting of the various components of the package is not on schedule.

33.1.7 Methods Audit

33.1.7.1 Analyst reviews of the in-house SOPs are occasionally performed to ensure compliance with the method.

33.1.7.1.1 If no updates are necessary, a review date will be recorded on the SOP cover page with reviewer's signature either manually or electronically.

33.1.7.2 The analyst will review the most recent version of the SOP and make edits if necessary to comply with the method. A new revision may be required.

33.1.8 Quality System Audit

33.1.8.1 An annual quality systems audit of technical activities is performed. These audits are designed to verify that activities are conducted in accordance with the requirements of the laboratory

quality system.

33.1.8.2 Internal audits of aspects of the quality system as well as the technical methods utilized in the laboratory are audited according to a schedule implemented by lab management for the year.

33.1.8.3 All aspects of the quality systems in the lab are audited on an annual basis by qualified personnel.

33.1.8.4 The following documents the qualifications and experience of the personnel required to conduct audits and the requirements for documenting audits and follow-up.

33.1.8.4.1 The management team of the lab will be performing the majority of the internal audits. The managers will be independent of the activity that they are auditing.

33.1.8.4.2 The training requirements and experience required for the various training activities is as follows: The staff performing the audits in the laboratory must be experienced in the area in the lab that they are auditing. Training on conducting an audit will be performed for all members of the audit team to allow for consistency. The departmental audits will be performed by individuals with expertise in those areas. The minimum requirements for experience are 5 years working in the lab area. A formalized and consistent approach to documentation of the audit findings and response is established and will be given to the audit team for use in the audit procedure.

33.1.8.4.3 The audits for method review will be a witnessing audit. The auditor will have a copy of the SOP as well as the analytical method. The analyst will perform the method witnessed by the auditor.

Questions will be raised while auditing and an assessment form will be completed by the auditor. A document of the deficiencies/deviations will be forwarded to the department supervisor for review and response. The supervisor will review the audit findings with the analysts and prepare a corrective action form for response to the audit. This will be submitted to the auditor for review and acceptance. A follow-up assessment will occur to ensure that the corrective actions have been implemented. This will also be documented and placed in the audit file. The audit file will be forwarded to the QA Manager for review and retention.

33.1.8.5 In cases where the audit identifies circumstances in which the correctness or validity of test results is questioned, the laboratory must take corrective action immediately and notify all clients whose work may have been affected.

34.0 Performance/External Audits

34.1 Several procedures are in place for monitoring the performance of the product produced by the laboratory.

34.1.1 External Data Validation

34.1.1.1 A minimum of 20% of the data packages produced by the laboratory undergo data validation by an outside service.

34.1.1.2 A report is generated listing the comments by noted by the validator.

34.1.1.3 The QA Manager responds to the comments noted by the validator, and if necessary, corrective action measures are introduced in the appropriate department.

34.1.2 Internal Data Validation

34.1.2.1 The review of the data covers:

34.1.2.1.1 appropriateness of equations used

34.1.2.1.2 correctness of numerical input

**34.1.2.1.3 numerical correctness of all calculations
(accomplished by re-performing numerical
computations)**

**34.1.2.2 The review process must be thorough enough to verify the
results.**

**34.1.2.3 If the reviewer disagrees with any part of the computations,
the reviewer marks through the number with a single line and
places the revised number above it.**

**34.1.2.4 All large corrections are returned to the analyst for
modification.**

**34.1.2.5 The originator of the data shall review any changes made by
the reviewer.**

**34.1.2.6 If the originator agrees with the change, no action is
necessary.**

**34.1.2.7 If the originator disagrees, then both the originator and
reviewer must resolve the difference so that they agree with the
result presented.**

34.1.3 Inter-Laboratory Comparison Testing Programs

**34.1.3.1 Testing in regards to blind samples or comparison of data
inter-laboratory is performed periodically.**

34.1.4 State/Federal Laboratory Audits

34.1.4.1 The laboratory is certified in several states.

**34.1.4.2 The laboratory is audited for all methods in use on an ongoing
basis.**

34.1.5 Consultant/Customer Laboratory Audits

**34.1.5.1 Clients may choose to audit the laboratory at any stage during
project development and analysis.**

34.1.6 Proficiency Sample Program

**34.1.6.1 The laboratory participates the NYSDOH Proficiency Program
as well as outside PT provider programs.**

34.1.7 Double Blind Samples

34.1.7.1 An outside supplier may be utilized to evaluate the capability of the laboratory through the use of double blind samples.

35.0 Corrective and Preventive Action

35.1 Preventive Action

35.1.1 A proactive approach is taken in regards to the initiation of preventative actions where the process includes the identification of opportunities for improvement rather than a reaction to the problem.

35.1.2 Improvements and potential sources of non-conformances, either technical or concerning the quality system, shall be identified on an ongoing basis.

35.1.3 Opportunities for improvements may be identified through management reviews/meetings, quality system reviews, internal and external audits, client feedback/customer complaints or staff observations.

35.1.4 If preventative action is required, plans will be put into place and monitored for effectiveness.

35.1.5 Some examples of preventative action are:

35.1.5.1 The use of holding time worksheets

35.1.5.2 Analyst monitoring of method QC requirements

35.1.5.3 Instrument maintenance

35.1.5.4 Column Replacement

35.1.5.5 Preparation of new solutions as needed

35.1.5.6 Checking calculations

35.1.5.7 Performing re-analysis

35.1.5.8 Schedule changes

35.1.5.9 Data Validation

35.1.5.10 Internal Audits

35.1.5.11 Non-conformance reports

35.1.5.12 Double Blind Samples

35.2 Corrective Action

35.2.1 Corrective Action is implemented to document the reasons behind and

remediation for an isolated event or a pattern of events that could potentially raise concerns about data integrity should they not be properly recorded.

35.2.2 The first step in corrective action is to identify the root causes.

35.2.2.1 Potential root causes that are evaluated are problems with:

- 35.2.2.1.1** Customer requirements
- 35.2.2.1.2** Samples
- 35.2.2.1.3** Sample specifications
- 35.2.2.1.4** Methods and procedures
- 35.2.2.1.5** Personnel skills and training
- 35.2.2.1.6** Consumable materials
- 35.2.2.1.7** Equipment
- 35.2.2.1.8** Calibration

35.2.3 Where corrective action is needed, the laboratory shall identify potential corrective actions.

35.2.4 Corrective actions are designed to select and implement the action(s) most likely to eliminate the problem and to prevent recurrence.

35.2.5 Corrective actions shall be to a degree appropriate to the magnitude and the risk of the problem.

35.2.6 The QA Manager shall document and implement any required changes resulting from corrective action investigations.

35.2.7 The QA Manager shall monitor the results to ensure that the corrective actions taken have been effective.

35.2.8 Where the identification of non-conformances or departures casts doubts on the laboratory's compliance with its own policies and procedures, or on its compliance with regulations, the laboratory shall ensure that the appropriate areas of activity are audited as soon as possible.

35.2.9 An agreed upon time frame shall be determined, as appropriate, for the completion of corrective measures. The time frame for notifying clients of events that cast doubt on the validity of results is immediately.

36.0 Quality System Report to Management

- 36.1 On an annual basis the laboratory's executive management performs a review of the laboratories quality system and environmental testing activities to ensure their continuing suitability and effectiveness, and to introduce necessary changes or improvements.
- 36.2 The review shall take account of:
 - 36.2.1 the suitability of policies and procedures
 - 36.2.2 reports from managerial and supervisory personnel
 - 36.2.3 the outcome of recent internal audits
 - 36.2.4 corrective and preventive actions
 - 36.2.5 assessments by external bodies
 - 36.2.6 the results of interlaboratory comparisons or proficiency tests
 - 36.2.7 changes in the volume and type of the work
 - 36.2.8 client feedback
 - 36.2.9 complaints
 - 36.2.10 other relevant factors, such as quality control activities, resources and staff training
- 36.3 Findings from management reviews and the actions that arise from them shall be recorded.
- 36.4 All actions will be addressed within 90 days of their identification.

37.0 Procedure for Dealing with Complaints

- 37.1 Records of all complaints received from clients or other parties are maintained as well as the investigations and potential corrective actions that arise from the complaint.
- 37.2 Customer Service/Timeliness of Reports/Invoice Issues
 - 37.2.1 Complaints that deal with responsiveness to the client are handled by laboratory staff.
 - 37.2.2 If a client complains that they have not received resolution to a complaint, the call may be forwarded to the Project Manager, QA Manager or Laboratory Manager for resolution.
 - 37.2.3 These issues are documented via email or phone log.

37.3 Quality of Product

37.3.1 All complaints received regarding the quality of the data produced are handled by the QC department.

37.3.2 The date and the name of the person receiving the complaint, source of complaint, resolution and any written material associated with the complaint are documented and kept on file in the project management department.

37.3.3 The form is completed by the individual who received the complaint and forwarded to the QA Manager for investigation.

37.3.4 The complaint is investigated by the QA officer or designee and a technical review of the suspected test is undertaken.

37.3.5 The results of the investigation are documented on a customer complaint form.

37.3.6 This information is to be used by all laboratory personnel that have contact with clients.

37.3.7 These forms need to be filled out each time there is a customer complaint (for example- late results, client left message and was not called back, etc).

37.3.8 These files are located in S:\LABSHARE\NELACLOGS\

38.0 Training and Orientation

38.1 Training for Pace employees is managed through a web-based Learning Management System. After a new employee has been instructed in matters of human resources, they are given instructional materials for the LMS and a password for access.

38.2 A new hire training checklist is provided to the new employee that lists training items for the employee to work through either independently on LMS or with their supervisor or trainer. The training items that can be completed independently include:

- Reading through applicable Standard Operating Procedures;
- Reviewing the Quality Manual and Chemical Hygiene Plan;

- Core training modules such as quality control indicators, basic laboratory skills, etc.;
- Quality Systems training including traceability of measurements, method calibration, calibration verification, accuracy, precision and uncertainty of measurements, corrective actions, documentation, and root cause analysis;
- Data Integrity/Ethics training.

38.3 The new employee's Department Supervisor provides the employee with a basic understanding of the role of the laboratory within the structure of PASI and the basic elements of that individual's position. Supervised training uses the following techniques:

- Hands-on training
- Training checklists/worksheets
- Lectures and training sessions
- Method-specific training
- Conferences and seminars
- Short courses
- Specialized training by instrument manufacturers
- Proficiency testing programs.
- On-line courses

38.4 Group Supervisors/Leaders are responsible for providing documentation of training and proficiency for each employee under their supervision. The employee's training file indicates what procedures an analyst or a technician is capable of performing, either independently or with supervision. The files also include documentation of continuing capability. Training documentation files for each person are maintained by the Quality Office either in hardcopy format or within the LMS.

38.5 All procedures and training records are maintained and available for review during laboratory audits. These procedures are reviewed/updated periodically by laboratory management.

39.0 Data Integrity System

39.1 The data integrity system at PASI provides assurances to management that a highly ethical approach is being applied to all planning, training and implementation of methods. Data integrity is crucial to the success of our company and Pace Analytical is committed to creating and maintaining a culture of quality throughout the organization. To accomplish this goal, PASI has implemented a data integrity system that encompasses the following four requirements:

39.1.1 A data integrity training program: standardized training is given to each new employee and a yearly refresher is presented to all employees. Key topics addressed by this training include:

39.1.1.1 Need for honesty and transparency in analytical reporting

39.1.1.2 Process for reporting data integrity issues

39.1.1.3 Specific examples of unethical behavior and improper practices

39.1.1.4 Documentation of non-conforming data that is still useful to the data user

39.1.1.5 Consequences and punishments for unethical behavior

39.1.1.6 Examples of monitoring devices used by management to review data and systems

39.1.2 Signed data integrity documentation for all employees: this includes a written quiz following the Ethics training session and written agreement to abide by the Code of Ethics and Standards of Conduct explained in the employee manual.

39.1.3 In-depth, periodic monitoring of data integrity including peer data review and validation, internal raw data audits, proficiency testing studies, etc.

39.1.4 Documentation of any review or investigation into possible data integrity infractions. This documentation, including any disciplinary actions involved, corrective actions taken, and notifications to customers must be retained for a minimum of five years.

39.2 PASI management makes every effort to ensure that personnel are free from any undue pressures that affect the quality of their work including commercial, financial, over scheduling, and working condition pressures.

39.3 Corporate management also provides all PASI facilities a mechanism for

confidential reporting of data integrity issues that ensures confidentiality and a receptive environment in which all employees are comfortable discussing items of ethical concern. The anonymous message line is monitored by the Corporate Director of Quality who will ensure that all concerns are evaluated and, where necessary, brought to the attention of executive management and investigated. Any Pace employee can contact corporate management to report an ethical concern by calling the anonymous hotline at 612-607-6431.

40.0 Demonstration of Capability (DOC)

- 40.1 A demonstration of capability is a procedure to establish the ability of the analyst to generate acceptable accuracy.
- 40.2 Analysts complete an initial DOC study prior to analyzing samples by a given method or when there is a change in instrument type, personnel or test method.
- 40.3 The mean recovery and standard deviation of each analyte, taken from 4 replicates of a quality control standard is calculated and compared to method criteria (if available) or in-house control limits.
 - 40.3.1 For parameters where this does not apply, the analysis of authentic samples may be analyzed by another trained analyst with statistically identical results.
- 40.4 If the parameters meet the required limits analysis may proceed.
- 40.5 If not, performance is deemed unacceptable for that parameter and corrective measures are taken to determine the problem.
- 40.6 All attempts to demonstrate capability shall be documented and available for review.
- 40.7 Analysis is not permitted until acceptable performance has been demonstrated.
 - 40.7.1 A certification statement is completed and the statement and raw data are placed in the employee files, which includes electronic files stored on the network.
 - 40.7.2 The newly trained analyst is permitted to perform sample analysis independently, still under close supervision of the instructor.
- 40.8 The QA Manager and/or Supervisors maintains all raw data associated with the DOC on file and monitors progression of training of individuals in the

various tasks.

40.8.1 Tables for the departments are maintained, reflecting the tests that can be performed by each analyst.

40.8.2 These tables are periodically updated in the computer system to provide a reference for management about capabilities of each employee to perform testing and training requirements.

40.8.3 The analyst's capabilities are verified annually (continuing demonstration of capability) by various means such as proficiency testing, Lab fortified blank analysis, blind duplicate testing or another DOC.

41.0 Policy on Stress Reduction and Quality of Work

41.1 Open communication is encouraged for all employees of the laboratory. The Human Resources Department, the QA Manager and the Laboratory Manager have an open door policy for discussion of issues and concerns.

41.2 Procedures are in place to allow the staff to be free of undue pressures and stress.

41.2.1 These include a means of technical communication to allow for the notification of noncompliant data and the corrective action needed. All analysts are empowered with a stop work authority to allow for maintenance and to notify upper management of the need for corrective action and additional support in correcting an issue.

41.2.2 The department supervisor, QA Manager, and the Technical Managers are all empowered to assist the analyst with technical issues to resolve problems.

41.2.3 A nonconformance form is filled out to allow for notification of noncompliant data and the corrective action.

41.2.4 The case narrative and comment field on lab reports allows for communication to the clients of nonconformances as well.

41.3 An additional means of reducing the stress of the work place has been implemented.

41.3.1 This includes wellness programs to allow for a change of focus from

work only to the health and well being of the person. Seminars, group fitness activities such as yoga and healthy lifestyle discussions are part of the program. Several of the seminars that have been held during the work day are as follows:

41.3.1.1 Emotional freedom: Techniques for Immediate Relief of Stress, Anxiety and Cravings, Sleepless in Long Island, Life's Simple 7: Tips for Healthier Living, Beating the Sugar Blues, Wellness from Within-The Mind Body Connection, Symptoms of heart Disease and Strokes.

41.3.1.2 The lab has implemented "fruit Wednesday" where fresh fruit is served all day to allow for a break from the routine.

41.3.1.3 These personal focuses have allowed a break from the work only mentality.

42.0 Standard Operation Procedures

42.1 Electronic copies of SOPs are available to all employees.

42.2 The SOP lists the title, revision number the effective date and signatures of the approving authority.

42.3 SOPs .

42.4 Each method SOP contains the following information or references where the information may be found.

42.5 The information listed in the SOP may not be in the following order:

42.5.1 Identification of test method

42.5.2 Applicable matrix or matrices

42.5.3 Detection limit

42.5.4 Scope and application to be analyzed

42.5.5 Summary of the test method

42.5.6 Definitions

42.5.7 Interference's

42.5.8 Safety

42.5.9 Equipment and supplies

42.5.10 Reagents and standards

42.5.11 Sample collection, preservation, and storage

- 42.5.12 Quality control**
- 42.5.13 Calibration and standardization**
- 42.5.14 Calculations**
- 42.5.15 Method performance**
- 42.5.16 Pollution prevention**
- 42.5.17 Data assessment and acceptance criteria**
- 42.5.18 Corrective action for out of control data**
- 42.5.19 Contingencies for handling out of control data**
- 42.5.20 Waste management**
- 42.5.21 References**
- 42.5.22 Any tables, diagrams, flow charts and validation data**
- 42.5.23 Equipment/instrument maintenance, computer hardware and software and troubleshooting**

- A - Receiving-3' hood
- B - Inorganic Sample Prep-8' hood
- C - Inorganic Sample Prep-4' hood
- D - Inorganic Sample Prep-8' hood
- E - None
- F - Metals Lab-4' hood
- G - Wet Chem Lab-5' hood
- H - Wet Chem Lab-5' hood
- I - Wet Chem Lab-4' hood

FUME HOODS (SPECIAL PROCESS)

- J - 8' hood Concentrations
- K - 8' hood
- L - 8' hood Auto-extractions Standard Prep
- M - 8' hood w/sink
- N - 4' hood
- O - 6' hood
- P - 6' hood Herbicide Extractions
- Q - 6' hood Soil Extractions
- R - 10' hood Atuo Extractions

Note: Limited Access Laboratories (locked) are: GC, GC/MS, Metals, Bacteriology, Special Process

Revised 4/00

APPENDIX F – HEALTH AND SAFETY PLAN

GENERAL HEALTH AND SAFETY PLAN (HASP)

HASPs take into account the specific hazards inherent to a project and presents procedures for the exclusive use of organization performing the work specified in the HASP. Due to the potential hazards of this Site and the activities that may occur thereon, it is not possible to discover, evaluate, and provide protection for all possible hazards, which may be encountered. Strict adherence to health and safety guidelines developed for the specific work to be completed at the Site, will reduce, but may not eliminate, the potential for injury at this Site.

1. SITE DESCRIPTION AND FEATURES:

The Ash Road Properties is located on Ash Road and Sycamore Road in the Town of Vestal, Broome County New York. The Ash Road Properties currently occupies a portion of the greater parking area for the Lowe's Home Center. The Property is located in a well-developed commercial district with adjacent commercial and residential properties.

Nature and Extent of Contamination: The primary contaminants of concern at the Ash Road Properties are tetrachloroethene, trichloroethene, *cis*-1,2-dichloroethene and vinyl chloride.

These contaminants have impacted groundwater and soil quality at the site. The contaminants are present in soils at the former source area at concentrations ranging from 13 mg/kg or less.

Contaminants in groundwater are present near the source area and have been at concentrations of 42 mg/L or less. Current concentrations range from about 5 mg/L or less.

2. SITE HISTORY:

Two former occupants of the Ash Road Properties include Town Square Body Shop and Hall Plumbing. Town Square Body Shop performed auto-body repairs and Hall Plumbing was a contractor's office and warehouse.

Site Geology and Hydrogeology:

The Site is located in the Susquehanna River Basin within the Susquehanna River Valley. The Susquehanna River is located about 2,000 feet north of the Site. Depth to bedrock is anticipated to be at least 75 feet below ground surface in the general vicinity of the Site. The unconsolidated deposits consist of fill or re-worked soils overlying an organic silt layer. Underlying the organic silt stratified sands, with variable silt and gravel content and a silty sand with gravel glacial till are present

The Site overlies the NYSDEC Endicott-Johnson City Area Primary Water Supply Aquifer. The general direction of mapped groundwater flow within the aquifer is to the northwest toward the Susquehanna River. The local direction of groundwater flow at the Site is also to the northwest. Groundwater has been encountered within 20 feet below ground surface.

There is an intermittent stream located along the north side of the Site. The streambed was channelized through a culvert during the development of the Lowe's Home Center, and underlies the Lowe's parking lot. This channel flows from east to west across the northern limits of the Site, and receives storm water runoff from the Lowe's paved parking area.

3. HASP-SPECIFIC TASKS:

Site Management Plan – Groundwater Monitoring

4. SITE TYPE:

STATUS		TYPE	
Active (Commercial-Retail)	X	Monitoring wells	X
Inactive		Landfill	
Secure		Industrial	
Unsecure		Petroleum	
Enclosed space		Unknown	
Remediation		Military	
Other – BCP – Site Management Plan	X	Other	

5. POTENTIAL HAZARDOUS MATERIAL SUMMARY: [Potential hazard –Shaded]

CHEMICALS	SOLIDS	SLUDGES	SOLVENTS	OILS	OTHER
Acids	Fly ash	Paints	Ketones	Oily wastes	Laboratory
Pickling Liquors	Mill or mine tailings	Pigments	Aromatics	Gasoline	Pharmaceutical
Caustics	Asbestos	Heavy Metal	Hydrocarbons	Diesel fuel	Hospital
Pesticides	Ferrous smelter	Aluminum	Alcohols	Lubricants	Radiological
Dyes / Inks	Non-ferrous smelter	Other-specify	Halogenated (chloroethenes)	Polynuclear aromatics	Municipal
Cyanides	Metals		Esters	PCB's	Construction
Phenols	Dioxins		Ethers	Heating oil	Munitions
Halogens	Other-semi-volatile coal ash related compounds		Other-specify	Other-specify	Other-Industrial Solid Waste
Other-specify					

WASTE TYPES:

	Liquid (groundwater)		Solid (soils)		Sludge		Gas		Unknown		Other-specify None
--	----------------------	--	---------------	--	--------	--	-----	--	---------	--	--------------------

WASTE CHARACTERISTICS:

	Corrosive		Toxic		Inert Gas		Flammable		Volatile		Reactive		Other-Unknown
--	-----------	--	-------	--	-----------	--	-----------	--	----------	--	----------	--	---------------

MATERIALS TO BE BROUGHT ON SITE FOR THE IDENTIFIED SPECIFIC TASKS: TBD									
Preservatives		Decontamination		Calibration		Remediation		Others	
			Liquinox		Multi-meter Calibration Solutions				
KNOWN CONTAMINANTS: No location-specific information was provided to GeoLogic									
CONTAMINANT	HIGHEST KNOWN CONCENTRATION / MEDIA			PEL / TLV		IDLH	EXPOSURE ROUTES	PHYSICAL CHARACTERISTICS SYMPTOMS	
Tetrachloroethene	Groundwater:42,000 ppb Soil: 13,000 ppb			OSHA PEL: 100 ppm – TWA 200 ppm -Ceiling 300 ppm/5min/3 hrs. max.		1000 ppm	Inhalation, Ingestion, Absorption	Colorless liquid; chloroform odor, / irritant to mucous membranes, skin irritant; headache, nausea, visual disturbance	
Trichloroethene	Groundwater: 7,100 ppb Soil: 1,000 ppb			PEL: 100 ppm – TWA 300 ppm – 5 min. peak/2 hrs. TWA 50 ppm – TWA		1000 ppm	Inhalation, Ingestion, Absorption	Colorless liquid; chloroform odor, / irritant to mucous membranes, skin irritant; headache, nausea, visual disturbance	
cis-1,2-Dichloroethene (DCE)	Groundwater:11,000 ppb Soil: 9,400 ppb			ACGIH: 5ppm		Not determined	inhalation, ingestion, skin and/or eye contact	irritation eyes, skin, throat; dizziness, headache, nausea, breathing difficulty	
Vinyl chloride	Groundwater:690 ppb Soil: 21 ppb			1ppm 5ppm (15min)		Not determined	inhalation, ingestion, skin and/or eye contact	lassitude (weakness, exhaustion); abdominal pain, gastrointestinal bleeding; enlarged liver; pallor or cyanosis of extremities; liquid: frostbite	

6. SITE HAZARD ASSESSMENT:

#	HAZARD	SITE-SPECIFIC CONDITIONS	MITIGATION METHODS	WARNINGS/SYMPTOMS	RESPONSE TO EXPOSURE
A	Heat Stress	-Vigorous physical work associated with excavation and soil staging activities -Warm temperatures -Confining personal protective equipment (PPE) such as tyvek.	-Regulate pace of work -Take regular breaks -Use shade when possible -Regular intake of cool fluids -Dress for task & conditions -Buddy system monitoring	<u>Heat stress/heat stroke</u> -Heavy perspiration -Dizziness -Nausea -Headache -Vertigo -Weakness and thirst -Heat stroke may include hot dry skin and confusion	-Rest in a cool place -Drink cool fluids -Seek immediate medical attention for heat stroke symptoms
B	Cold Stress	-Freezing temperatures during excavation activities -Exposure and wet clothing and gloves from working below the water table and during/ decontamination activities.	-Dress accordingly for task and conditions -Regulate clothing layers to keep body temp comfortable, avoid perspiration -Take breaks in warm areas -Buddy system monitoring	<u>Hypothermia and frostbite</u> -Shivering, tingling, numbness -Apathy or sleepiness, blanching or whitening of skin -Unconsciousness, tissue becomes pale and hard, frozen extremities	-Get out of the cold during the first stages of hypothermia or frostbite -Seek immediate medical attention if frostbite or advanced hypothermia is suspected
C	Explosive Flammable	N/A			
D	Oxygen Deficient	N/A			
E	Noise	TBD	-Keep a reasonable distance from noisy equipment -Hearing protection PPE -Buddy system monitoring	-Difficulty hearing normal conversation 2-3 feet away -Increased heart rate -Muscle fatigue	-Move away from noise -Use hearing protection PPE
F	Inorganic Chemicals	N/A	Avoid physical contact/ exposure when possible -Stay up-wind of work zone -Review work plans and MSDS -Use proper PPE -Monitor for exposure -Remove potentially exposed PPE and wash hands whenever leaving the work zone -Buddy system monitoring		
G	Chemical Exposure	Chlorinated	-Avoid physical contact / exposure when possible -Stay up-wind of work zone -Review work plans and MSDS -Use proper PPE -Monitor for exposure -Remove potentially exposed PPE and wash hands whenever leaving the work zone -Buddy system monitoring	-Monitoring indicates unprotected exposure above exposure limit occurred -There is physical evidence of exposure (visual or odors) -Exposure symptoms occur (see Hazardous Material Summary above)	-Stop work and leave the work zone if possible exposure is suspected. -Reevaluate exposure mitigation methods (PPE level, Methodologies, etc.) -If exposure symptoms have occurred seek medical attention immediately

SITE HAZARD ASSESSMENT CONT'D:

#	HAZARD	SITE-SPECIFIC CONDITIONS	MITIGATION METHODS	WARNINGS/SYMPTOMS	RESPONSE TO EXPOSURE
H	Motorized Traffic	Not anticipated			
I	Heavy Equipment	<u>Excavator:</u> -Crush points -Entrapment in the machinery -Hitting overhead or underground utilities	-Only operators of the equipment are allowed in the work zone unless the operator is aware of another person and is maintaining eye contact -Operators must be familiar with equipment procedures for safe operation/ emergency stop features and test daily -Equipment not attended by the operator should be shut down and locked out from operation -Proper PPE must be used	-If mitigation methods are not followed -Close calls	-Review safety procedures with all job site personnel -Seek first aid or immediate medical attention as appropriate
J	Slips & Falls	-Uneven ground surface -Tools	-Keep known walking areas free of obstructions / hazards -Identify potential hazards (cones, signage, paint, etc.) -Walk slowly, surveying the ground ahead -Wear appropriate PPE	-If mitigation methods are not followed -Close calls	-Review safety procedures with all job site personnel -Seek first aid or immediate medical attention as appropriate
K	Power and hand tools	-Electric shocks - high pressure water stream (steam cleaner) -Burns (steam cleaner) -Cuts from blades	-Only operators of the tool are allowed in the work zone unless the operator is aware of another person and is maintaining eye contact -Operators must be familiar with equipment procedures for safe operation and inspect tool, cords and GFI operation before use -Equipment not attended by the operator should be unplugged and locked out from operation -Proper PPE must be used, including safety glasses, hearing protection and appropriate gloves	-If mitigation methods are not followed -Close calls	-Review safety procedures with all job site personnel -Seek first aid or immediate medical attention as appropriate
L	Waste Handling	-Drum moving and lifting -Pinch-point -Spillage	-Use of appropriate equipment/hand carts for the moving and staging of drums -Follow proper lifting procedures -Proper PPE must be used for the handling and staging of waste		-Review safety procedures with all job site personnel -Seek first aid or immediate medical attention as appropriate

7. LEVELS OF PROTECTION: *Shade minimum PPE for each level of protection used*

D-level		D modified-level (D-M)		C-level		B-level	
	<i>Steel Toe Boots</i>		<i>All D Items Selected</i>		<i>All D Modified Selected</i>		<i>Not Used</i>
	<i>Work Gloves</i>		<i>Rubber Boots</i>		<i>Rubber Boots</i>		
	<i>Hard Hat</i>		<i>Latex/Vinyl Disposable Gloves</i>		<i>Half-face APR</i>		
	<i>Safety Glasses</i>		<i>Nitrile Gloves</i>		<i>Full-Face APR</i>		
	<i>Hearing Protection</i>		<i>Tyvek Coverall</i>		<i>Tyvek Coverall</i>		
			<i>Splash Suit</i>		<i>Splash Suit</i>		
			<i>Safety Glasses</i>		<i>Face shield</i>		
			<i>Face Shield</i>		<i>Other</i>		
			<i>Hearing Protection</i>				
			<i>Other</i>				

8. SITE WORKER & COMMUNITY AIR MONITORING PLAN (CAMP):

This air monitoring plan provides minimum information to comply with NYSDOH requirements identified in Appendix 1A of DER-10.

WORK ZONE:	For the purpose of this HASP, the Work Zones (WZ) will be defined as the area within a 10-foot radius of ongoing excavation work. All Work Zones are mobile, should be established in consideration of prevailing wind direction and will be moved as the work crew advances to new locations within the Project Site.		
SUPPORT ZONE:	Support Zones will be all areas outside of current Work Zones.		
INTRUSIVE:	For the purpose of this HASP, intrusive activities will be those that have the ability to unearth identified impacted soils.		
NON-INTRUSIVE:	Any activity, which is not defined as intrusive.		
PERIODIC MONITORING:	Monitoring at regular intervals with periods of time in between where no monitoring takes place (recording a PID reading at half-hour intervals).		
CONTINUOUS MONITORING:	Non-stop real time monitoring with equipment capable of calculating a running average over no less than 15-minute intervals and log monitoring data over no less than an 8-hour work day, which can be downloaded or printed.		
MONITORING REQUIREMENTS:	VOC MONITORING		FUGITIVE DUST & PARTICULATE MONITORING
INTRUSIVE	Photoionization detector (10.6 ev lamp)		<p>Reasonable fugitive dust suppression techniques must be employed during all site activities, which may generate fugitive dust. Dust suppression techniques may include covering soil piles, wetting of haul pathways, and the use of potable water spray during intrusive activities.</p> <p>Particulate concentrations will be measured continuously at the upwind and downwind perimeters of the Work Zone at temporary particulate monitoring stations. Real time monitoring equipment will be utilized, capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating a 15-minute period for comparison to the particulate action level.</p> <p>The action level is 150 micrograms-per-cubic-meter ($\mu\text{g}/\text{m}^3$) (15 minutes average).</p> <p>If the downwind PM-10 level is 100 $\mu\text{g}/\text{m}^3$ greater than background (upwind perimeter) for the 15-minute period or if air-borne dust is observed leaving the work area, then dust suppression techniques must be employed. Work may continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed 150 mg/m^3 above background.</p> <p>Should the action level of 150 $\mu\text{g}/\text{m}^3$ continue to be exceeded, work must stop until dust suppression techniques prove adequate or weather conditions change.</p>
	CONDITION	RESPONSE	
	<5ppm over background	-PPE Level D-M -Continuous monitoring, downwind perimeter of WZ -Continue working	
	>5 to 25ppm for less than 15 minutes	-PPE Level D-M -Continuous monitoring, downwind perimeter of WZ -Stop work, move upwind of WZ and monitor downwind concentrations	
	>5 to 25ppm for 15 minutes or more	-PPE Level C -Continuous monitoring, downwind perimeter of WZ -Respirator use review meeting -Resume work in level C	
	>25ppm	-PPE Level C -Continuous monitoring, downwind perimeter of WZ -Stop work, move upwind of WZ and monitor downwind concentrations	
NON-INTRUSIVE	<5ppm over background	-PPE Level D or D-M (see Work Task Summary) -Periodic monitoring, downwind perimeter of WZ (not required for survey work) -Continue working	Not required.
	>5ppm over background	Revert to intrusive conditions and responses	

9. DECONTAMINATION:

TYPE	METHOD	CONTAINMENT & DISPOSAL
HEAVY EQUIPMENT	Steam clean	<p>If deemed necessary, construction of equipment decontamination pad(s) for the excavator and Geoprobe equipment that comes into contact with impacted materials during excavation activities will be the same design as soil staging area(s).</p> <p>All water must be collected in secondary containment and containerized for classification and disposal.</p> <p>Soil from steam cleaned equipment will be containerized if there is evidence of contamination. If there is no apparent evidence of contamination (PID>5ppm over background, odor, sheen) then soil will be stockpiled on and covered with 10 mil polyethylene plastic for characterization and disposal.</p>
SAMPLING EQUIPMENT	Liquinox solution and tap water rinse	<p>All decontamination water from sampling equipment will be containerized on-site and classified for disposal.</p> <p>All purge water from sampling equipment will be containerized on-site and classified for disposal.</p> <p>Auger cuttings and all soil from sampling will be containerized for characterization and disposal.</p>
PERSONNEL	<p>-Remove PPE avoiding contact with skin</p> <p>-Wash hands first and then face with soap and warm water</p>	<p>Wash water for personnel will be directed to the sanitary sewer.</p> <p>All one-time use PPE will be discarded into disposable garbage bags for disposal in the Site dumpster.</p> <p>Multiple use PPE will be inspected daily and decontaminated prior to starting work each day using disposable bio-degradable wipes.</p>

10. WORK TASK SUMMARY:

This Section summarizes information from Sections 6-9 for each site specific Task.

TASK	PPE LEVEL See section 7	MONITORING	HAZARDS See Section 6	DECONTAMINATION See Section 9
1. Groundwater Monitoring	D		A, B, G,H, J	
2.				
3.				
4.				

11. SITE EMERGENCY / CONTINGENCY PLAN:

Example:

The following Site Emergency / Contingency Plan provide responses and contact information if an accident or injury should occur. All accidents or injuries must be reported within a 24-hour period to the Health and Safety Officer. This includes even minor cuts and abrasions. Failure to immediately report accidents and injuries sustained on the job may result in the loss of workers compensation and disability benefits. All employees reporting an accident or injury will be required to fill out an accident report form.

All on-site workers must become familiar with the provisions of this HASP and sign the attached Training and Acknowledgement section.

Should any worker observe hazards that are not addressed in this plan or that they are unprepared for, they should withdraw immediately and consult with the Health & Safety Officer before resuming work.

SITE EMERGENCY / CONTINGENCY PLAN CONT'D:

FIRST AID:

Example:

The safety of employees working around construction/sampling equipment should be maintained at all times. In the event that an injury or accident occurs, a first aid kit must be kept on the site within a reasonable distance of personnel at all times. Employees will have basic first aid and basic CPR training.

Seek emergency medical attention as soon as possible when appropriate. Directions to the nearest emergency medical facility and emergency phone numbers are provided below.

FIRE:

TBD

EMERGENCY CONTACT	DESCRIPTION	PHONE
Police		911
Fire Department		911
Ambulance		911
Hospital	UHS/Binghamton Memorial Regional Hospital	607-762-6000
Poison Control Center	Nationwide	800-222-1222
NYSDEC Spill Hotline	Spills must be reported within 2 hours of their discovery	800-457-7362
Medical Consultant		

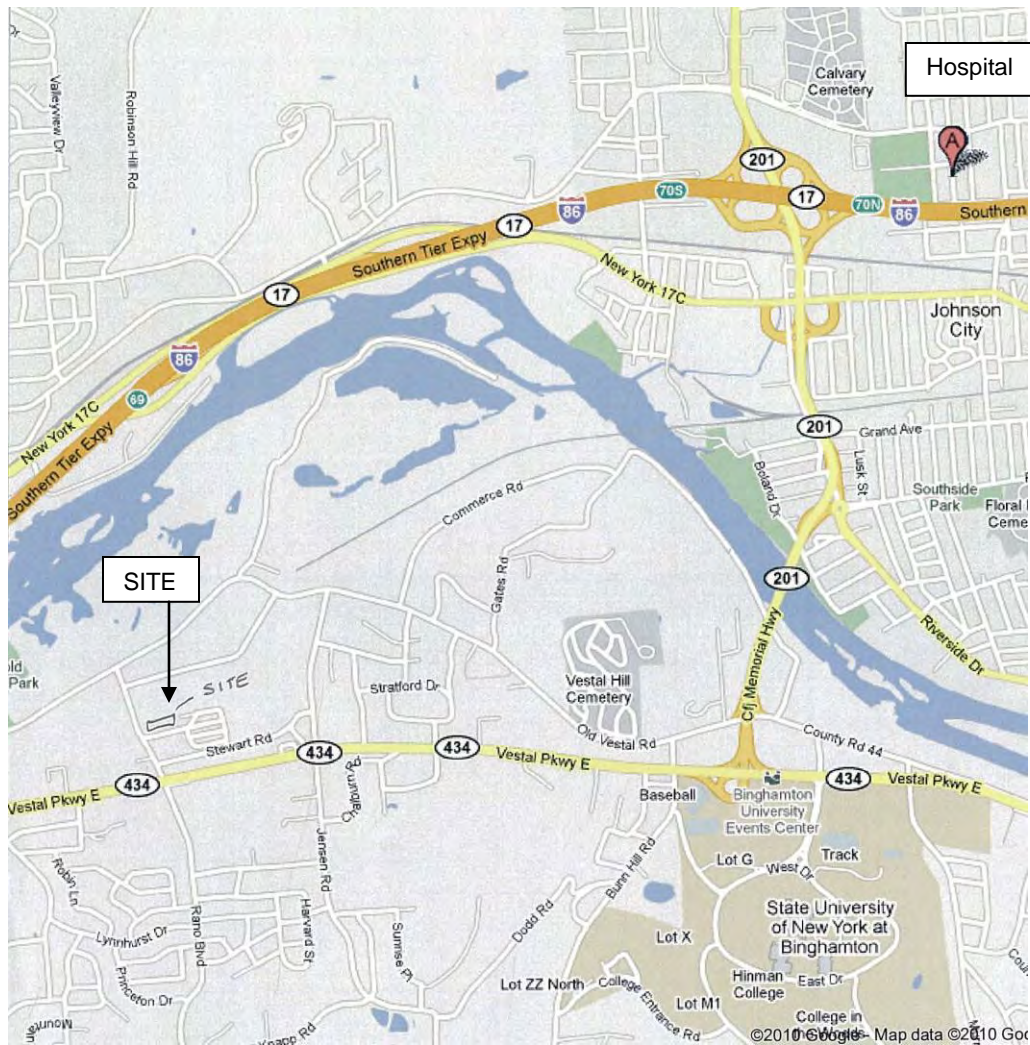

MEDICAL EMERGENCY:

United Health Services/Wilson Memorial Regional Medical
33-57 Harrison Street, Johnson City, New York
607-763-6000

Directions to hospital: Exit the site on to Sycamore Road heading south, taking a left at the traffic light on to Route 434; proceed east about 1.5 to 2 miles; enter Route 201 from the right lane and proceed north to the Route 17C exit ramp; at bottom of ramp take a right and proceed less than 1 mile; take a right on to Baldwin Street (past Harrison Street) for ambulatory services.

12. MAP TO HOSPITAL

UHS/Wilson Memorial Regional Hospital
