1.0 EXECUTIVE SUMMARY

This Periodic Review Report (PRR) was prepared by ARM Group LLC (ARM), on behalf of Binghamton Plaza, Inc. (BPI) for The Binghamton Plaza (Brownfield Cleanup Program Site No. C704049). This is the ninth PRR prepared for Binghamton Plaza since the implementation of the Site Management Plan (SMP) in December 2014, (the first was submitted in June 2016) and covers the 2024/2025 compliance period.

The Binghamton Plaza (the Site) was developed in the 1960s as a multi-tenant commercial strip-mall, consisting of several tax parcels. The five Site structures were built over a pre-existing landfill that operated until the early 1960s as a disposal site for raw and incinerated municipal waste, generated by the City of Binghamton. The Site has been investigated and remediated under the New York State (NYS) Brownfield Cleanup Program (BCP) and is currently being managed under a SMP. The majority of the Site is zoned for commercial use. The portion of the Site occupied by a daycare facility is zoned for restricted residential use.

Detectable concentrations of regulated substances remain in the fill material, soil, and groundwater at the Site. In addition, soil gas at the Site contains methane and low concentrations of volatile organic compounds (VOCs). Potential exposure to this residual contamination is mitigated by the components of the Institutional and Engineering Controls (IC/ECs) in place at the Site. The following summarizes these components:

- Potential exposures to impacted soil and fill material are prevented through the placement and maintenance of a cap/cover system.
- Consumption of impacted groundwater is prevented by restricting groundwater use within the Site.
- Passive and active vapor intrusion mitigation systems are present and maintained/ monitored in all onsite structures.
- Indoor air sampling and analysis is currently performed on an annual basis (per NYSDEC approval on March 25, 2022) in Building 31. The reduction in sampling frequency was granted following the completion of additional vapor intrusion mitigation in Building 31 and the submission of a formal reduction request on March 21, 2022. The SMP was amended accordingly to reflect the changes to annual sampling. The indoor air monitoring results summarized in this PRR include results from January 2025.

The SMP has been effective in helping to meet remedial objectives for the Site, and it will continue to be effective with continued implementation. The following summarizes prior

instances of non-compliance and describes the corrective measures implemented to correct the deficiencies.

- During the preparation of the 2016 PRR, one area of non-compliance with the SMP was identified. This non-compliance pertained to the semi-annual indoor air sampling and analysis program for the daycare facility. For both monitoring events in 2015, the indoor and outdoor air samples were collected above the breathing zone and were thus not consistent with NYSDOH requirements. To address this issue, the May 2016 semi-annual indoor/outdoor air sampling event accounted for the correction in sampling height, as per the Corrective Measures Work Plan (CMWP), provided in Section 3.2.1 of the July 2016 PRR. Since that time, the sampling height has been consistent for all subsequent sampling events and there have been no identified instances of non-compliance with the SMP with regard to sampling height.
- As detailed in the 2021 PRR submittal, significant modifications were made to the vapor intrusion mitigation engineering controls implemented at Building 31. The modifications were made to eliminate the occasional presence of trichloroethylene (TCE) in indoor air at concentrations exceeding background concentrations and indoor guidance values. The modification to the vapor intrusion mitigation system included the installation of flowable fill beneath the building slab to reduce/eliminate positive sub-slab pressures and enhance the performance of the existing sub-slab depressurization system. In addition, the soil cover system in Area 9 was breached during emergency utility repairs in November 2020. The cover system was subsequently repaired and certified through field investigation and laboratory analysis of existing and imported fill materials. Both instances of non-compliance were addressed in CMWPs. The vapor intrusion CMWP was approved in December 2019. The CMWP for the Area 9 soil cover system was approved in April 2021.

The asphalt cap and soil cover systems functioned as intended throughout the most recent compliance period. Inspections of the property showed that the cap/cover system remains intact, with some potholes and other areas of asphalt degradation observed. The asphalt cap underwent repairs in June 2025. The Operations and Maintenance Plan is being fully implemented and is functioning as intended.

This PRR is being submitted along with a complete “Institutional and Engineering Controls Certification Form.” The Certification Form is submitted in both electronic and paper formats to the NYSDEC.

2.0 INTRODUCTION

This PRR was prepared by ARM on behalf of BPI. The submission of a PRR is a required reporting element of the SMP, which was developed for the Site under the NYS BCP. The Site was investigated and remediated in accordance with Brownfield Cleanup Agreement Index #B7-0702-05-08, Site #C704049, which was executed on February 8, 2006, and last amended on January 23, 2014. The Site was issued a Certificate of Completion (COC) in December 2014, following the completion of Site remediation and acceptance of the Site's Final Engineering Report by the NYSDEC. The management of the Site under the SMP was initiated following receipt of the COC in December 2014 and is ongoing. This PRR summarizes the Site activities undertaken in late 2024 and within the first 8 months of 2025, to comply with the SMP (which was amended in March 2022). The compliance inspections and monitoring were conducted in December 2024 and January 2025 (to satisfy the annual winter indoor air monitoring), in July 2025 (to satisfy the Spring 2025 inspections), and in May 2025 to satisfy the 5-year groundwater monitoring requirement. Supporting data and inspection information is provided chronologically in Appendices A, B, and C. Appendix D provides the completed IC/EC Certification Forms.

2.1 Site Description and History

The Binghamton Plaza Site is an approximately 21.5-acre property, located at 33 West State Street, in an urban area of the City of Binghamton, Broome County (Figure 1). It is comprised of several tax parcels. The Site is a commercial property and contains a large strip mall, with an adjacent building and three satellite buildings. The two strip mall buildings are divided into a total of 30 tenant spaces. The tenant spaces and satellite buildings are designated as shown on Figure 2. The vast majority of the Site is covered by pavement or buildings. A levee for the Chenango River defines the western Site boundary.

The Site is zoned for commercial use, and most of the Site is currently used for commercial purposes; however, one of the satellite buildings is occupied by a daycare facility. The parcel that contains the daycare building is designated as restricted residential, due to its use as a daycare facility. Most of the tenants of the strip mall include retail establishments and restaurants. The Site is bounded by the Chenango River to the west, residential properties to the northeast and east, a park to the north, and commercial properties to the south and southeast.

From 1946 until 1957, the Site was used as a landfill for municipal solid waste by the City of Binghamton. In 1957, a municipal solid waste incinerator was constructed near the Site. From 1957 until the early 1960s, incinerator ash was disposed of at the Site. Raw municipal waste was also disposed of at the Site. The existing commercial plaza was constructed in the 1960s.

2.2 Site Investigations/Remedy Performance

ARM investigated soil, fill material, groundwater, surface water, sediment, and soil vapor quality during the course of Remedial Investigation activities at the Site. Soil, fill material, groundwater, and soil vapor were found to be the environmental media with discernable impacts from prior Site activities. The following summarizes the pertinent Remedial Investigation findings and the performance of the associated remedies over the compliance period.

The fill material, which consists of incinerated and raw municipal waste, contained low level concentrations of VOCs, Semi-VOCs (SVOCs), and metals. Three VOCs, two SVOCs, and five metals were detected above the applicable NYSDEC soil cleanup objectives (SCOs). The concentrations of most of the detected compounds were not significantly elevated, and appear to be distributed throughout the waste material. Native silt and sand, present beneath the fill (waste) material, was sampled and found to contain VOCs and SVOCs, at trace concentrations not exceeding their respective SCOs, with the exception of Acetone. All other concentrations were below their applicable SCOs. The cap/cover system prevented direct contact with these impacted media throughout the compliance period and is functioning as designed, based on periodic Site inspections.

Site investigations have found that the primary contaminants of concern in groundwater at the Site are metals and the SVOC acenaphthene, which were detected at concentrations slightly higher than groundwater standards. Potential exposure to impacted groundwater was prevented throughout the compliance period by enforcement of the groundwater use restrictions, applied to the Site by the Environmental Easement.

Impacts to soil vapor from methane and VOCs have been identified as vapor intrusion concerns for onsite buildings. Engineering controls, including passive and active sub-slab depressurization/venting systems, are inspected and maintained at all Site buildings. Annual indoor air sampling and analysis is conducted in buildings with restricted-residential use designation. Active methane alarms and/or periodic methane monitoring are used to monitor methane concentrations in all Site buildings. These activities were conducted consistent with the SMP throughout the compliance period. Indications of unacceptable risk from vapor intrusion were not identified; However, TCE was historically reported at concentrations that exceed background concentrations in the daycare building (Building 31). While the concentrations of TCE have typically remained below the Indoor Air Guidance Value (IAGV) of 2 $\mu g/m^3$, samples collected in October 2018, December 2019 and May 2020 exhibited concentrations that slightly exceeded the IAGV of 2 $\mu g/m^3$. In response, the NYSDOH and NYSDEC requested that additional action be taken to reduce the concentrations of TCE, given the sensitive population consistently present in the building. The recommendation from the NYSDOH and NYSDEC to

take additional mitigative actions was presented in a letter, dated May 5, 2017. Following receipt of the request, BPI began evaluating potential actions to enhance the existing mitigation system in Building 31 or relocate the daycare operation. Ultimately, supplemental mitigation measures were implemented in September 2020 as discussed in Section 3.2.

3.0 INSTITUTIONAL CONTROL/ENGINEERING CONTROL COMPLIANCE

3.1 Institutional Control

An Environmental Easement is the Institutional Control implemented at the Site. The Environmental Easement serves to: (1) implement, maintain, and monitor Engineering Control systems; (2) prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination; and (3) limit the use and development of the Site to commercial uses only, except for the areas designated as restricted residential use. The Environmental Easement enforces the implementation of the SMP. The maintenance, monitoring, and inspections required under the SMP were conducted consistent with the SMP throughout the compliance period.

3.2 Engineering Controls

Active SSD systems are only installed in Buildings 31, 32, and 33. At the time of SSD system installation, Building 31 was being utilized as a daycare center and remains as such today. Building 32 is currently operating as a convenience store/delicatessen. Building 33 is a small drive-through bank branch. Consistent with the modified SMP (March 2022), indoor air is sampled, analyzed, and reported on an annual basis for Building 31. As discussed previously, the SMP was modified to reduce the indoor air sampling frequency from quarterly to annual in early 2022. The first annual sampling event occurred in December 2022. However, in October 2022 an unplanned sampling event was conducted to evaluate indoor air quality following an inadvertent SSD fan stoppage. The most recent complete indoor air sampling event was conducted in January 2025 as per the modified SMP to satisfy the annual (heating season) indoor air monitoring requirement.

Indoor air samples are analyzed for VOCs, using either EPA Method TO-15 or TO-17. All samples collected during the current compliance period were analyzed using method TO-15. In addition, methane gas detectors and alarms are maintained in each satellite building (Buildings 31, 32, and 33). Table 1 presents a summary of the indoor and outdoor ambient air quality results obtained from the sampling event in January 2025. The Category B laboratory analytical data package for this monitoring event is provided in Appendix A, along with its associated Data Usability Summary Report (DUSR). All analytical data was determined to be valid and usable with minor qualifications. Electronic Data Deliverables (EDDs) were also prepared and submitted for the indoor air monitoring event consistent with NYSDEC environmental data submission requirements.

Operations and Maintenance (O&M) inspections are conducted annually on the SSD systems and alarm systems. Based on these inspections, all SSD systems are currently functioning properly

and maintaining sufficient negative sub-slab pressures with the exception of the prior January 2024 blower fan malfunction described above.

It is important to note that the SSD system in Building 31 did not consistently maintain negative sub-slab pressures prior to the September 2020 flowable fill material placement. As previously discussed, indoor air concentrations of TCE were occasionally above typical background concentrations in Building 31 until the additional mitigation measures/enhancements were implemented. Previously, TCE concentrations had remained below the IAGV of 2 $\mu g/m^3$ except for the sampling events from October 2018, December 2019 and May 2020. Until the additional mitigation measures were implemented, significant positive sub-slab pressures prevented the sub-slab depressurization system from maintaining sufficiently negative sub-slab pressures. This condition likely allowed limited vapor intrusion to occur, which possibly caused or contributed to the elevated TCE concentrations present in indoor air. BPI evaluated potential actions to enhance the existing mitigation system in Building 31 or to relocate the daycare operation. Based on this evaluation it was determined that additional sub-slab depressurization would not likely be beneficial or create the desired reduction in TCE concentrations in indoor air. Therefore, it was proposed to inject flowable concrete fill into the void spaces below Building 31 to essentially seal the vapor migration pathways contributing to the positive sub-slab pressures.

Additionally, there are passive sub-slab ventilation systems present in the main strip mall buildings at the Site (Buildings 1-28 and Buildings 29 and 30). These passive ventilation systems were present prior to the Site entering the BCP. Vented crawl spaces are present beneath the floors of Buildings 1-28, and passive sub-slab venting systems are present in Buildings 29 and 30. These passive ventilation systems were inspected and monitored in January 2025 and July 2025 and found to be functioning properly. Field monitoring with a handheld Methane meter did not indicate the presence of detectable concentrations of methane at the monitoring locations established in these buildings.

Potential exposure to residual contamination in soil fill material at the Site is prevented by a soil cover and asphalt cap cover system placed over the Site. This cover system is comprised of a minimum of 12 inches of clean soil, asphalt pavement, concrete-covered sidewalks, or concrete building slabs. The soil and pavement cover system is inspected semi-annually, to ensure that it is intact and effective in preventing exposures to potentially impacted fill material and/or soil. The semi-annual inspection reports evaluate and document the integrity of this engineering control. The asphalt cap and soil cover systems functioned as intended throughout this latest compliance period. Periodic inspections of the property show that the cap/cover systems remained intact throughout the compliance period, with some minor potholes and other areas of asphalt degradation. The asphalt cap underwent repairs in June 2025. The Operations and Maintenance Plan is being fully implemented and is functioning as intended.

Consistent with the SMP, groundwater monitoring was conducted in May 2025. Groundwater was initially monitored at the Site in 2008, during the Remedial Investigation. This was the fourth time that groundwater monitoring was performed at the Site. Table 2 presents a summary of groundwater elevations and monitoring well construction information. Table 3 includes the four sets of groundwater monitoring data (2008, 2015, 2020 and 2025). The monitoring well network includes seven shallow wells and four deep wells. The shallow wells monitor perched groundwater within the waste/fill material, while the deep wells monitor the local water table aquifer. Consistent with the 2008, 2015 and 2020 monitoring events, a sufficient quantity of water was not present in any of the shallow monitoring wells to collect representative samples. Therefore, only the deep monitoring wells were sampled. In addition, MW-4S could not be located at the time of monitoring in May 2025 due to a significant thickness of gravel accumulation. Figure 3 depicts groundwater elevation contours based on the groundwater elevations in the deep monitoring wells. Consistent with the 2020 monitoring event, groundwater flows from east to west, toward the Chenango River.

The 2025 groundwater analysis was generally consistent with 2020. Indications of significant groundwater contamination are not present. With the exception of chloroform in MW-2D, no VOCs, SVOCs or polychlorinated biphenyls (PCBs) were detected above groundwater standards. Chloroform has been periodically detected at concentrations below the groundwater standard of 7 ug/L. This is the first time this VOC has been detected at a concentration exceeding 7 ug/L, with a reported concentration of 12 ug/L. Given that MW-2D is located hydrogeologically upgradient of the Site, the presence of this compound may be related to an off-site source. In addition, chloroform is a disinfection byproduct that is commonly found in groundwater as a result of leaking potable water piping and sewer lines. It is suspected that upgradient water and wastewater conveyance piping may be the source of or contributing to the presence of chloroform in groundwater at the Site. A source of chloroform has not been identified at the Site during prior site characterization. All total metals concentrations were reported at or below current groundwater standards. The groundwater quality will continue to be monitored every five years, per the SMP. The Category B analytical data package and DUSR for the May 2025 groundwater monitoring are included as Appendix B. The data validation recommended minor changes to the laboratory results; however, the data is considered usable. Additionally, EDDs were also prepared and submitted for the groundwater monitoring event consistent with NYSDEC environmental data submission requirements.

The next event is planned to occur in 2030, consistent with the monitoring schedule of the SMP.

3.3 IC/EC Certification

Based upon the results of the inspection and monitoring activities conducted during the 2024/2025 compliance period, and the evaluation of the IC/EC components of the SMP, it appears that the remedies in place at the Site are performing effectively. Appendix D provides a complete IC/EC certification statement.

4.0 MONITORING PLAN COMPLIANCE

4.1 Components of Monitoring Plan

The components of the monitoring plan include the mechanisms, sampling and inspection frequency, and matrices. They are presented in the table below.

Monitoring Program	Frequency*	Matrix	Analysis
Asphalt Cover	Semi-Annual	Pavement Cap	Visual Inspection
Soil Cover	Semi-Annual	Clean Fill Cover	Visual Inspection
Indoor Air	Annual (Indoor Air Sampling and Analysis) / Semi-annual (Methane Monitoring)	Air	TO-17 or TO-15, methane monitoring
Groundwater	First 6 months	Water	USEPA Methods VOCs and SVOCs by SW-8260 & 8270, PCBs 8082, RCRA Metals Methods 6010 and 7470, and NYSDEC Part 360 "Routine Parameters"
Groundwater	Every 5 years	Water	USEPA Methods VOCs and SVOCs by SW-8260 &8270, RCRA Metals USEPA Methods 6010 and 7470, Total Phenolics USEPA Method 420

4.2 Summary of Monitoring Plan

The monitoring that has occurred since the implementation of the SMP is as follows; Refer to Appendices A through D for all supporting documentation and data.

Type of Event	Quarterly	Semi-Annual	Annual	First 6 Months of SMP Implementation (2015)	Within First Year (every 5 thereafter)	Notes
Groundwater Sampling				X (May 2015)	X	Includes MW inspection.
Monitoring Well Inspection		X		X	X	Inspect integrity of well casings and covers.
Cover System Inspection		X				Includes soil cover and MW inspection.
Methane Monitoring		X				Bldgs. 1 through 30.

Type of Event	Quarterly	Semi-Annual	Annual	First 6 Months of SMP Implementation (2015)	Within First Year (every 5 thereafter)	Notes
Indoor Air Sampling (TO-15)			X			Bldg. 31 and Outdoor ambient Air sampling also performed.
Passive Ventilation Inspection			X			Bldgs. 1 through 30; Methane Monitoring; Ensure clear vent intake systems.
SSD System Inspection			X			Bldgs. 31, 32, and 33; Perform smoke tests and pressure readings; Test methane gas alarms.

In summary, in April and July 2025, the cap/cover system was inspected, the monitoring well integrity was assessed, and methane monitoring was performed. The winter 2025 cap/cover system was inspected in April 2025 due to snow cover during the January 2025 monitoring activities. The passive and active ventilation systems were inspected and assessed in all onsite buildings in January and July 2025. In addition, indoor/outdoor air quality monitoring was performed at Building 31 in January 2025. Methane concentrations are continually monitored in Buildings 31, 32, and 33, by the permanently installed Methane Monitoring/alarm systems installed in these buildings. Groundwater was sampled in May 2025.

4.3 Comparisons with Remedial Objectives

Remedial Action Objectives (RAOs) were developed for the Site during the Alternatives Analysis and Remedial Action Work Plan (dated January 2014) for groundwater, soil vapor, and soil/fill material.

The RAOs for groundwater include:

- Prevent contact with, or ingestion of, groundwater with concentrations exceeding groundwater standards for drinking water.
- Prevent inhalation of volatiles from contaminated groundwater.
- Restore groundwater concentrations to pre-release levels, to the extent practicable.
- Mitigate or prevent the discharge of contaminants to surface water.
- Mitigate or remove the source of groundwater contamination, to the extent feasible.

- These RAOs were achieved during this reporting period utilizing the enforced Environmental Easement placed on the Site and the groundwater monitoring, which was recently performed in May 2025. Groundwater monitoring will be performed again in 2030.
- The RAOs for soil vapor include:
- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor migration into buildings at a Site.

These RAOs were achieved during this reporting period using SSD systems as the Engineering Control, in conjunction with the Institutional Control (Environmental Easement), which ensures the implementation of the SMP (including the Operations and Maintenance Plan) for the operation of the SSD systems in Buildings 31, 32, and 33. Additionally, the passive ventilation systems of Buildings 3, 15, 20, 24, 29, and 30 are mitigating the potential for soil vapor intrusion into those buildings. The long-term monitoring and maintenance of these systems will ensure that the systems are working properly and the RAOs will continue to be met. As described previously, the persistent presence of TCE in the indoor air of Building 31 was addressed by placing flowable concrete fill in the void spaces below the slab in Building 31. This mitigation measure effectively enhanced the performance of the existing SSD system. The Building 31 SSD system is now maintaining sufficient negative sub-slab pressures. TCE was not detected in Building 31 indoor air during the January 2025 monitoring event as shown on Table 1.

The RAOs for soil include:

- Prevent ingestion/direct contact with contaminated soil.
- Mitigate or prevent inhalation of, or exposure from, contaminants volatilizing from contaminants in soil.
- Mitigate or prevent migration of contaminants that would result in groundwater or surface water contamination.

These RAOs were achieved during this reporting period. The soil cover/cap system is a permanent Engineering Control, designed to achieve these RAOs. This Engineering Control, in conjunction with the Institutional Control (Environmental Easement), ensures the implementation of the SMP (including the Operations and Maintenance Plan) for the proper maintenance of the soil cover/cap system.

5.0 OPERATIONS AND MAINTENANCE COMPLIANCE

5.1 Components of Operations and Maintenance Plan

The components of the Operation and Maintenance Plan include inspection and (possible) maintenance of the following active and passive engineering controls: The SSD systems, the passive sub-slab ventilation systems, the methane alarms, and the soil/cap cover system. The annual Operations and Maintenance of these systems was completed by Keystone Environmental Services in December 2024, April 2025 and July 2025. The inspection report prepared by Keystone Environmental Services for the January/April 2025 and by CRT Environmental Solutions for the July 2025 Operations and Maintenance event are included in Appendices A and C, respectively.

5.2 Summary and Evaluation of Remedial Systems

For the maintenance of the SSD systems, the annual inspection process can include the collection of pressure readings below the building slabs, smoke testing to visually verify the pressure differential, the collection of manometer readings at each suction drop, inspection of the fans for mechanical operation, noise and vibration, ensuring that all piping supports are properly anchored, and checking that there are no cracks in the walls and floors. Additionally, the Methane gas alarms are inspected and checked for proper operation.

The passive sub-slab ventilation systems are evaluated annually by inspecting the crawlspace intakes and rooftop vents for Buildings 1 through 28, and the six rooftop vents for Buildings 29 and 30. These vents are checked for possible blockages, which could restrict air flow.

The soil/cap cover system is inspected semi-annually, to ensure that it is preventing exposures to the underlying soil and fill materials. The inspection includes looking for evidence of settling, cracking, soil disturbance, and any other signs which may indicate that the cover has been breached. Additionally, the integrity of the monitoring well protective casings is inspected, in conjunction with the cover system inspection, and their condition is noted. If needed, the cover system is repaired, similar to routine parking lot maintenance, which will include sealing cracks, filling larger cracks/holes with asphalt and, if needed, adding additional soil cover.

During this reporting period, the engineering controls were inspected and maintained as needed, in accordance with the Operations and Maintenance Plan of the SMP. While the cap/cover system was found to be intact during both inspection events, the following issues were identified; Refer to Appendices A and C for additional details.

- Potholes and other areas of asphalt degradation were observed during the cap inspections. Repairs were performed in June 2025.
- A few missing monitoring well surface cap bolts were observed, in addition to a few missing well covers. Additionally, a few monitoring wells were buried under loose gravel and will were cleared away in July 2025. BPI was notified of these conditions.

The Operation and Maintenance Plan was followed throughout the compliance period.

6.0 PERIODIC REVIEW REPORT CONCLUSIONS/RECOMMENDATIONS

6.1 Compliance with the SMP

The components of the SMP include:

1. Institutional Control
   a. Environmental Easement: The requirements are being met.

2. Engineering Controls
   a. Sub-Slab Depressurization Systems: The SSD systems are performing as designed with periodic maintenance.
   b. Soil Cover/Pavement Cap System: The cap/cover system is meeting its requirements. Minor potholes and surface degradation were noted during the inspections. The cap/cover system remained intact throughout the compliance period.
   c. Passive Sub-slab Ventilation Systems: The crawl space ventilation systems are functioning properly. Methane monitoring was performed as required and Methane was not detected at any of the monitoring stations.

3. Monitoring Plan
   a. Cover System Monitoring: The cover system (both soil and asphalt) is performing as expected and the inspections have not revealed any deficiencies.

   b. Groundwater Monitoring: The onsite monitoring wells were sampled in May 2015, 2020 and 2025. The next groundwater monitoring event will be conducted in 2030, consistent with the schedule of the SMP. All groundwater monitoring results obtained in May 2025 were generally consistent with prior events. Significant impacts to groundwater or notable trends were not identified.

   c. Indoor Air Quality Monitoring: The indoor air quality was monitored once in Building 31 during the compliance period. All samples were analyzed by EPA Method TO-15. The samples did not contain concentrations of VOCs in excess of current NYSDOH IAGVs.

4. Operation and Maintenance Plan
   a. Engineering Controls: All the requirements have been met for the compliance period.

6.2 Performance and Effectiveness of the Remedy

Based upon the results of monitoring and inspections completed at the Site during the current compliance period and the evaluation of the IC/EC components of the SMP, the remedy in place at the Site is performing effectively.

The Environmental Easement, which is the Institutional Control for the Site, is being enforced and is effective in continued implementation of the SMP and its components.

Additionally, for the Engineering Controls, the SSD systems are operating and functioning as designed in Buildings 31, 32, and 33. Negative sub-slab pressures beneath Building 31 have been achieved and TCE in indoor air has not been detected above the IAGV of 2.0 µg/m^3 since the placement of flowable fill in September 2020. The passive ventilation systems in Buildings 1 through 30 are functioning properly. The soil cover/pavement cap system is effectively limiting exposure to the underlying contaminated soil and fill material. The thickness and quality of soil cover system at Area 9 was verified in July 2021 following disturbance and repairs in November 2020. Routine repairs to the asphalt cap were last completed in June 2025.

6.3 Future PRR Submittals

This is the ninth PRR submittal following the SMP approval. The next submittal is anticipated in late August 2026.

Trichlorofluoromethane	1.57	1.58	1.52	1.47	NA

Notes

< - Less than laboratory reporting limit.

All VOC results are in micrograms per cubic meter (ug/m3).

J+ = Estimated value, but the result may be biased high

(a) value has been corrected from its original based on data validation

See laboratory analytical report for full list of analyzed compounds.

NA = Not Applicable

Keystone Environmental Indoor/Outdoor Air Quality Analytical Results & OM&M Inspection Report (December 2024, January 2025 & April 2025)

August 19, 2025

Douglas Schott, P.G.
ARM Group LLC
515 South Franklin Street
West Chester, PA 19382

Re: Data Usability Summary Report – Alpha Analytical – January 2025 Samples

Dear Mr. Schott:

The evaluation of analytical data for volatile organics analyses by Alpha Analytical for four air samples from the Binghamton Plaza Kmart site, which were reported in a single data package under Job No. L2500525, has been completed. The data package was received by ddms, inc. (ddms) for review, and the following samples were reported:

IA-1 IA-2 OA-1 OA-2

Analyses were performed in accordance with USEPA Method TO-15, full scan and Selected Ion Monitoring (SIM) modes. Results for vinyl chloride, 1,1-dichloroethene, cis-1,2-dichloroethene, 1,1,1-trichloroethane, carbon tetrachloride, trichloroethene, and tetrachloroethene in IA-1, IA-2, OA-1, and OA-2 were reported from the SIM analyses, and all other results for these samples were reported from the full-scan analyses.

ddms' review was performed in accordance with the analytical method, ddms Standard Operating Procedure (SOP) ECS-SOP-1, "Validation of Volatile Organics in Air Samples by Method TO-15 and TO-17," and "DER-10/Technical Guidance for Site Investigation and Remediation." Professional judgment was applied as necessary and appropriate. Qualifiers consistent with those defined by EPA Region 2 were applied as applicable.

Below is the Data Usability Summary Report (DUSR) associated with these samples.

	Data Usability Summary Report	
1.	Is the data package complete as defined under the requirements for the most current DEC ASP Category B or USEPA CLP data deliverables?	Yes
2.	Have all holding times been met?	Yes
3.	Do all the QC data; blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?	No
4.	Have all of the data been generated using established and agreed upon analytical protocols?	Yes
5.	Does an evaluation of the raw data confirm the results provided in the data summary sheet and the quality control verification forms?	Yes
6.	Have the correct data qualifiers been used and are they consistent with the most current DEC ASP?	Yes

	Data Usability Summary Report	
7.	Have any quality control (QC) exceedances been specifically noted in the DUSR and has the corresponding QC summary sheet from the data package been attached to the DUSR?	Yes

Based on the data review effort, sample results were determined to be valid as reported, with the following exceptions:

- Results for benzyl chloride and 1,2,4-trichlorobenzene in all field samples were qualified as estimated (UJ) due to high %RSD.
- Results for benzyl chloride in all field samples were qualified as estimated (UJ) due to high variability between the IC and the ICV.
- Results for acetone in all field samples and results for ethanol in IA-1, IA-2 and OA-2 were qualified as estimated (J+) due to high %D in the CCV. Results may be biased high.
- Results for acetone in all field samples and results for ethanol in IA-1, IA-2 and OA-2 were qualified as estimated (J+) due to high LCS %R.

All qualifiers applied as a result of the validation process are reflected on the Analytical Reports included as Attachment A to this report. Qualifier definitions are also provided in this attachment. A copy of the laboratory case narrative and chain of custody record are provided in Attachment B.

The following components were reviewed, where applicable:

- Chain of custody
- Receiving conditions
- Holding times
- Sample integrity
- Analyte lists
- Reporting limits
- Requested method
- Units
- Sample related quality control data:
  - Blanks
  - Laboratory control sample (LCS)/LCS duplicate (LCSD) recoveries
  - Internal standard areas
  - Duplicates
- Instrument related quality control data:
  - Instrument tunes
  - Calibration summaries

The following sections of this report detail the reasons qualifiers were applied to the sample results. Each parameter section discusses the quality control (QC) excursions that impacted

sample results. Where a quality indicator was deemed acceptable after thorough review, no further discussion is included in this report. Detailed findings are included for each quality element that impacted the usability of the reported results. Additional information or explanation is included as needed, to provide support for decisions made, based on the validator's best professional judgment.

Where a result was qualified J+ and J, or J- and J, the J qualifier takes precedence. Where a result was qualified biased high and low for differing data quality excursions, the final qualifier is J, with indeterminate bias.

Documentation:

The data package was determined to be a complete Category B data package, based on the completeness check performed.

Holding Times, Preservation, Sample Integrity:

A copy of the applicable chain of custody record was included in the data package, documenting a sample collection date of January 2, 2025. The samples were received by the laboratory on January 6 and 7, 2025. All samples were analyzed within the analytical method-required holding time.

A. Volatile Organic Compounds – Full Scan

1. Calibrations

IC was performed on December 20, 2024, on instrument AIRLAB16. Documentation of all IC standards was included in the data package, and all relative response factors (RRFs) and percent relative standard deviation (%RSD) values were correctly calculated and reported. All RRFs were greater than the minimum acceptance limit of 0.05, and all %RSD values were less than the maximum acceptance limit of 30%, except for benzyl chloride (41.57%) and 1,2,4-trichlorobenzene (42.11%). Results for benzyl chloride and 1,2,4-trichlorobenzene in all field samples were qualified as estimated (UJ) due to high %RSD.

An ICV standard was analyzed after the IC. RRFs were greater than the minimum acceptance limit, and percent differences (%Ds) were less than 30%, except for benzyl chloride (32.3%). Results for benzyl chloride in all field samples were qualified as estimated (UJ) due to high variability between the IC and the ICV.

A continuing calibration (CC) standard was analyzed prior to the site sample analyses on January 18, 2025. All RRFs in the CC standard were acceptable (QC ≥0.05 RRF). The %Ds were acceptable (QC ≤30%D), except for freon-114 (33.9%), ethanol (32.5 %), acetone (33.7 %) ethyl acetate (30.2%), bromodichloromethane (30.6 %), dibromochloromethane (32.4%), bromoform (39.2 %), benzyl chloride (32.3%), and naphthalene (46.3%). The high responses suggest the potential for reporting false positives or sample results that are biased high. Since freon-114, ethyl acetate, bromodichloromethane, dibromochloromethane, bromoform, benzyl chloride and maphthalene were not detected in any of the field samples, no action was necessary based on

the high %Ds. Results for acetone in all field samples and results for ethanol in IA-1, IA-2 and OA-2 were qualified as estimated (J+) due to high %D in the CCV. Results may be biased high.

2. Laboratory Control Sample (LCS)

An LCS was prepared and analyzed with the samples. Recoveries of all target compounds in the LCS were acceptable (QC 70-130%), except for freon-114 (134%), ethanol (132%), acetone (134%), dibromochloromethane (132%), bromoform (139%), benzyl chloride (132%) and naphthalene (150%). Results for acetone in all field samples and results for ethanol in IA-1, IA-2 and OA-2 were qualified as estimated (J+) due to high LCS %R. Non detected results were not qualified.

B. Volatile Organic Compounds – SIM

1. Calibrations

IC was performed on December 20, 2024, on instrument AIRLAB16. Documentation of all IC standards was included in the data package, and all RRFs and %RSD values were correctly calculated and reported. All RRFs were greater than the minimum acceptance limit of 0.05, and all %RSD values were less than the maximum acceptance limit of 30%. No qualification was necessary.

An ICV standard was analyzed after the IC. RRFs were greater than the minimum acceptance limit, and %Ds were less than 30%. No qualification was necessary.

A CC standard was analyzed prior to the site sample analyses on January 18, 2025. All RRFs and %Ds in the CC standard were acceptable (QC ≥0.05 RRF, ≤30%D). No qualification was necessary.

Please feel free to contact me at (651) 583-8724 or astults@ddmsinc.com if you have any questions regarding this data package review report or need further information.

Kind regards,

de maximis Data Management Solutions, Inc.

EPA Qualifier Definitions

U	**The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.**
J	**The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.**
J+	**The result is an estimated quantity, but the result may be biased high.**
J-	**The result is an estimated quantity, but the result may be biased low.**
NJ	**The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.**
UJ	**The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.**
R	**The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.**

LABORATORY CASE NARRATIVE AND
CHAIN OF CUSTODY RECORD
Laboratory Job No. L2500525

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on December 23, 2024. The canister certification data is provided as an addendum.

The WG2021062-3 LCS recovery associated with L2500525-01 through -04 is above the upper 130% acceptance limit for dibromochloromethane (132%), bromoform (139%), benzyl chloride (132%), and naphthalene (150%). All samples associated with this LCS do not have reportable amounts of this analyte.

The WG2021062-3 CC recovery associated with L2500525-01 through -04 are above the upper 130% acceptance limit for Ethanol and Acetone. Any samples associated with this CC that have reportable amounts of these analyte will be reported with high bias.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on December 23, 2024. The canister certification data is provided as an addendum.

The WG2021062-3 LCS recovery associated with L2500525-01 through -04 is above the upper 130% acceptance limit for dibromochloromethane (132%), bromoform (139%), benzyl chloride (132%), and naphthalene (150%). All samples associated with this LCS do not have reportable amounts of this analyte.

The WG2021062-3 CC recovery associated with L2500525-01 through -04 are above the upper 130% acceptance limit for Ethanol and Acetone. Any samples associated with this CC that have reportable amounts of these analyte will be reported with high bias.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J Anderson Report Date: 01/20/25

Title: Technical Director/Representative

DATA PACKAGE GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: Data Usability Report

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

ND or U - Not detected at the reporting limit (RL) for the sample.

TYPICAL INSTRUMENT PARAMETERS

Volatile Organics Instruments

Volatile Organics:

Instrument: Agilent 7890 GC/5975C MSD	Columns (length x ID x df):
Trap: Supelco K Trap (VOACARB 3000)	RTX-VMS 20m x 0.18mm x 1um
Concentrator: EST Encon (or equivalent)	RTX-VMS 30m x 0.25mm x 1.4um
Autosampler: EST Centurion (or equivalent)	RTX-502.2 40m x 0.18mm x 1um
Purge time: 11 min	

Volatile Organics: VPH

Instrument: Agilent 6890 (or equivalent)	Column Type: Restek RTX 502.2
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 105 Meters
Concentrator: EST Encon (or equivalent)	df: 3.00 um
Autosampler: EST Centurion (or equivalent)	ID: 0.53mm

Volatile Organics: PIANO

Instrument: Agilent 7890 GC/5975C MSD	Column Type: DB-VRX
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 60 Meters
Concentrator: Tekmar Velocity / EST Encon	df: 1.40 um
Autosampler: Varian Archon / EST Centurion	ID: 0.25 mm
Purge time: 11 min	Desorb: 1 min

Volatile Organics: Dissolved Gas

Instrument: Agilent 7890 (or equivalent) with FID/TCD	
	Column Type: Haysep S Column
	Column Length: 2 Meters packed (100/200 mesh)
Autosampler: LEAP Headspace	Purge time: 0.6 min

Volatile Organics in Air Instruments

Volatile Organics in Air:

Instruments: Agilent 6890 GC / 5975 MSD Shimadzu QP2010-SE / QP2020

Concentrator: Entech 7100A or 7200	Column Type: Restek RTX-1
Autosampler: Entech 7016CA or 7016D	Column Length: 60 Meters
	df: 1.00 um
	ID: 0.25 mm or 0.32 mm

Trap 1: Glass Bead: manufacturer-Entech: 20 cm packing material
Trap 2: Tenax: manufacturer-Entech: 20 cm packing material

Semivolatile Organics Instruments - Westborough

Semivolatile Organics (Acid/Base/Neutral Extractables):

Instrument: Agilent 5973N MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.32 um
Column Length: 30 Meters	ID: 0.25 mm

Polynuclear Aromatic Hydrocarbons by 8270 SIM:

Instrument: Agilent 5973 MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

175	4.0 - 9.0% of mass 174	4.8 (7)1
176	93.0 - 101% of mass 174	65.1 (95.3)1
177	5.0 - 9.0% of mass 176	4.4 (6.7)2

1-Value is % of mass 174 2-Value is % of mass 176

This Check Applies to the following Samples, MS, MSD, Blanks, and Standards:

Client Sample ID	Lab Sample ID	File ID	Analysis Date/Time

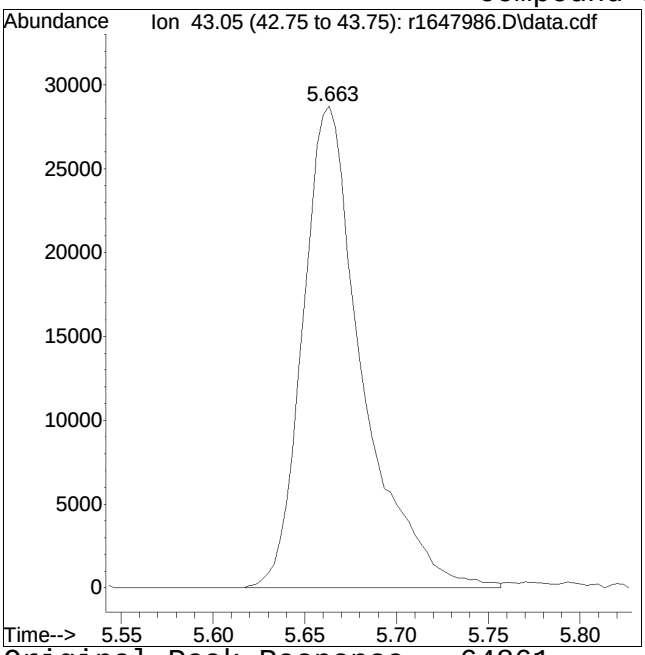
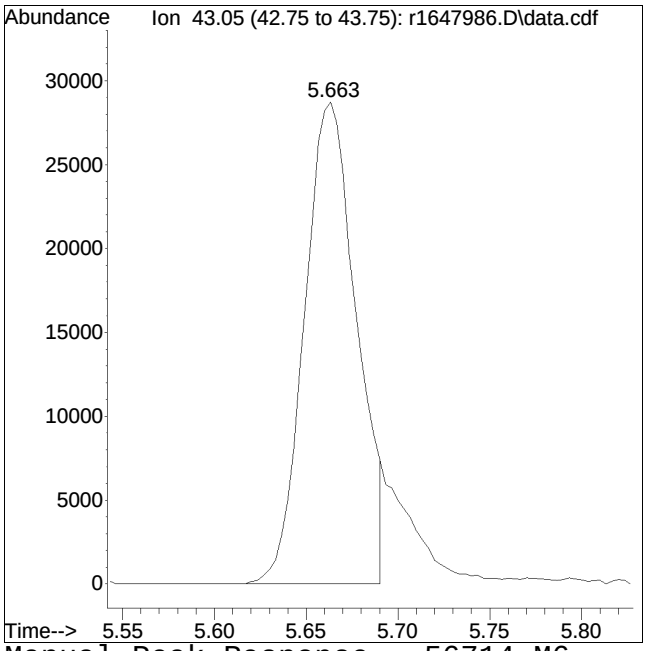
Date Inj'd : 1/18/2025 5:33 PM Instrument :
Sample : L2500525-03,3,250,250 Quant Date : 1/19/2025 11:55 am

Compound #19: acetone



Original Peak Response = 64861



Manual Peak Response = 56714 M6

M6 = Misassignment of peak valley by automated integration (poor split of 2 peaks).

Manual Integration Report

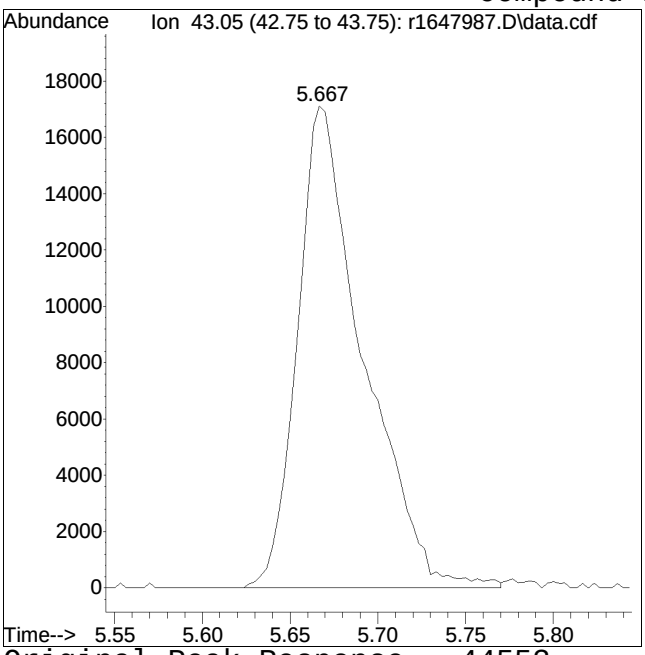
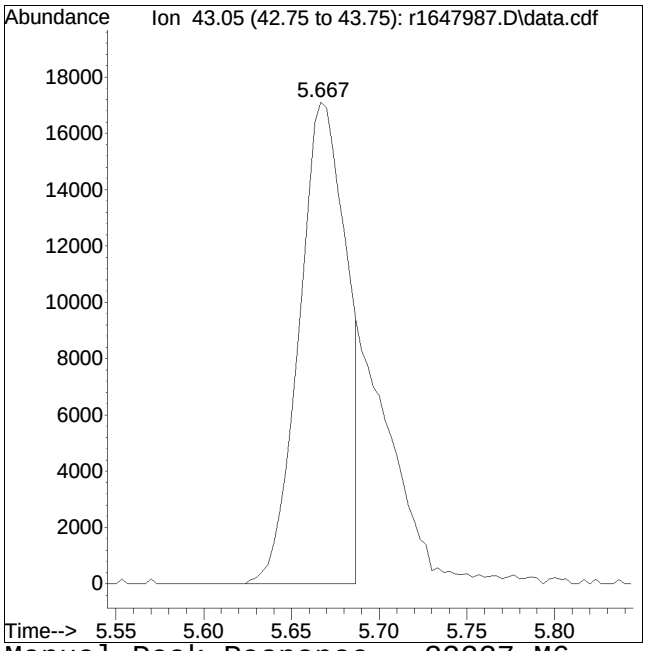
Sample : L2500525-04,3,250,250 Quant Date : 1/19/2025 11:58 am

Compound #19: acetone



Original Peak Response = 44553



Manual Peak Response = 32237 M6

M6 = Misassignment of peak valley by automated integration (poor split of 2 peaks).

Manual Integration Report

Manual Integration Report

Data Path : X:\Airlab\Data\Airlab16\20QMethod : TFS16_241219.M
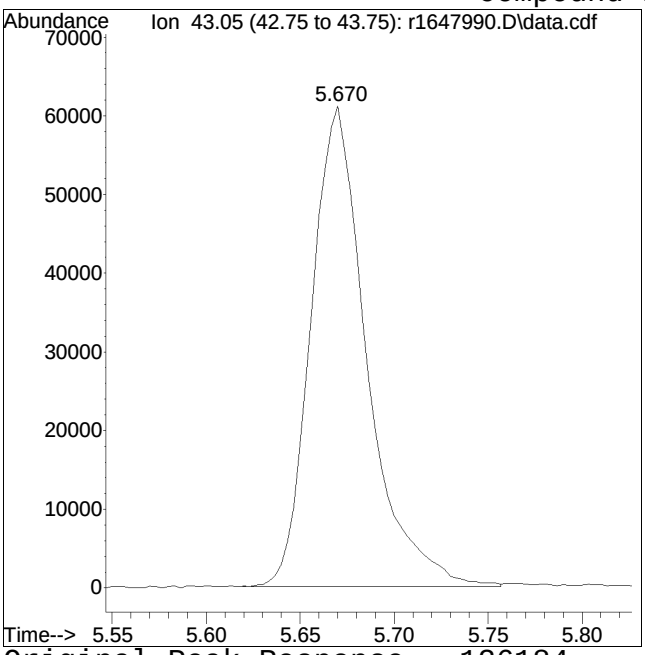
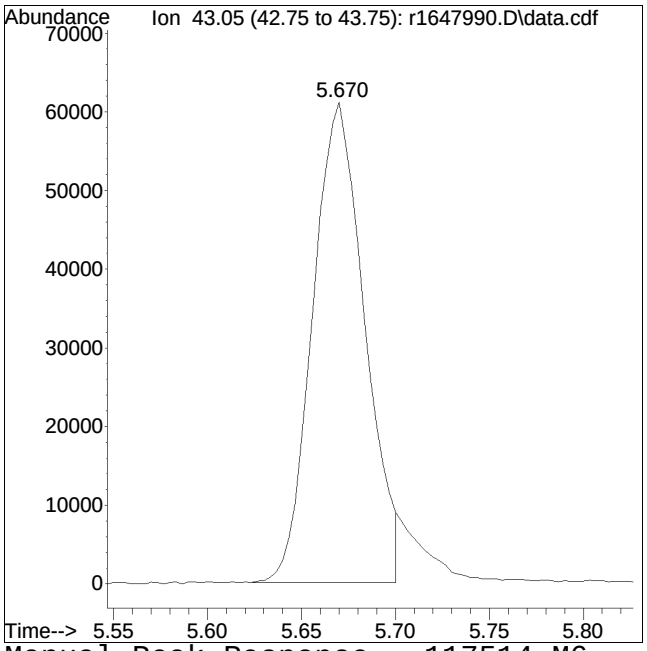
Data File : r1647990.D Operator : AIRLAB16:BJB
Date Inj'd : 1/18/2025 8:12 PM Instrument :
Sample : L2500525-02,3,250,250 Quant Date : 1/19/2025 12:07 pm

Compound #19: acetone



Original Peak Response = 126184



Manual Peak Response = 117514 M6

M6 = Misassignment of peak valley by automated integration (poor split of 2 peaks).

Manual Integration Report

Data Path : X:\Airlab\Data\Airlab16\20QMethod : TFS16_241219.M
Data File : r1647990.D Operator : AIRLAB16:BJB

Sample : WG2021062-5,3,250,250 Quant Date : 1/19/2025 12:15 pm

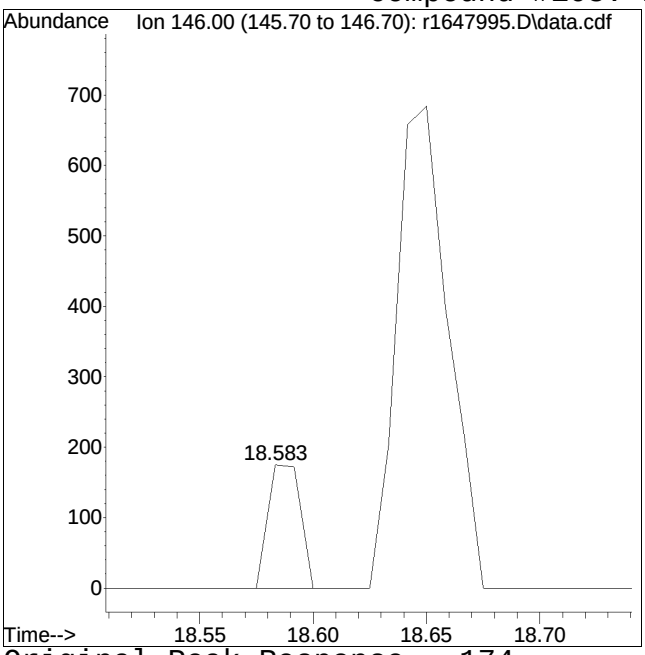
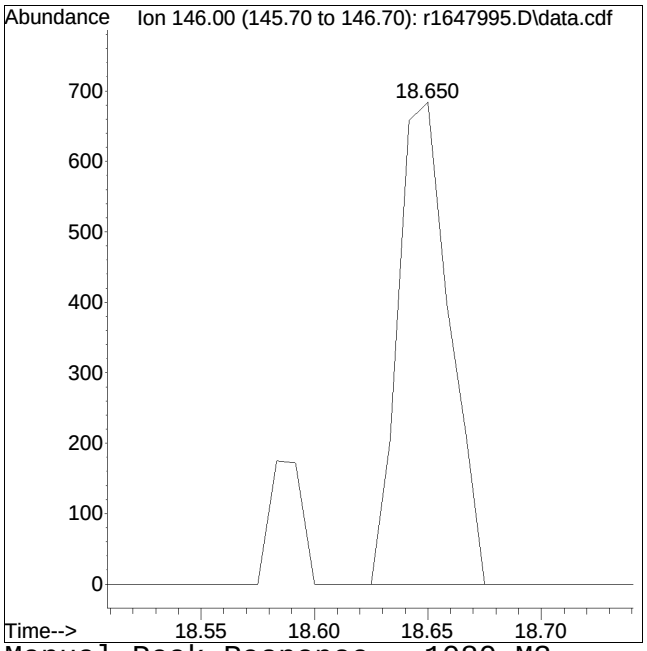
Compound #103: 1,4-dichlorobenzene





Original Peak Response = 174 Manual Peak Response = 1080 M3
M3 = Misidentification of the peak (i.e. 1,4-dichlorobenzene identified as 1,3-dichlorobenzene), or misidentification from 2 partially resolved peaks not being split.

Calculation of Volatile Organic Compounds in Air

The instrument will calculate the concentration (ppbv). If the sample is diluted (DF), the result is multiplied by the DF to generate the final result.

Result, ppbv = C_s x DF
Where:
C_s = Concentration of sample (ppbv)
DF = Dilution Factor

Calculation of Instrument Dilution Factor

For dilutions, smaller sample volumes (< 250mL) are analyzed. The smallest volume that can be analyzed with accuracy is 10 mL.

Samples that arrive at the laboratory with pressures below -15 inches Hg must be pressurized with zero air to greater than -15 inches Hg. This pressurization results in a dilution factor.

Calculation of Dilution Factor
$DF = V_{cf} / V_{ci}$
Where:
V_{ci} = volume of air in canister prior to pressurization, L
P =

Conversion of ppbv to ug/m^3
ug/m^3 = (ppbv) * MW / 24.47
Where:
24.47 = molar gas constant (g/g-mole)
MW = molecular weight of the compound of interest

Dilution Factor for Pressurization of Subatmospheric Samples: Three Steps

Step 1: Calculate the volume in the canister prior to pressurization (Assume a 2.7 liter canister is used).

Dilution Factor for Pressurization of Subatmospheric Samples: Three Steps

Step 1: Calculate the volume in the canister prior to pressurization (Assume a 2.7 liter canister is used).

$V_{ci} = 2.7 * Pl/14.696$

Step 2: Calculate the volume in the canister after pressurization.

$V_{cf} = 2.7 * PF/14.696$

Step 3: Calculate the dilution factor.

$DF = V_{cf} / V_{ci}$

Where:

V_{ci} = volume of air in canister prior to pressurization, L
PI = pressure reading of canister prior to pressurization (psia)
V_{cf} = volume of air in canister after pressurization, L
PF = pressure reading of canister after pressurization (psia)
DF = dilution factor
14.696 = atmospheric pressure (psia)

m/e	Ion Abundance Criteria	%Relative Abundance
50	8.0 - 40.0% of mass 95	14.8
75	30.0 - 66.0% of mass 95	37.3
95	Base Peak, 100% relative abundance	100
96	5.0 - 9.0% of mass 95	6.6
173	Less than 2.0% of mass 174	0.4 (.6)1
174	50.0 - 120.0% of mass 95	68.4
175	4.0 - 9.0% of mass 174	4.8 (7)1
176	93.0 - 101% of mass 174	65.1 (95.2)1
177	5.0 - 9.0% of mass 176	4.4 (6.7)2

1-Value is % of mass 174 2-Value is % of mass 176

This Check Applies to the following Samples, MS, MSD, Blanks, and Standards:

Client Sample ID	Lab Sample ID	File ID	Analysis Date/Time

Compound #57: tetrachloroethene

Original Peak Response = 543 Manual Peak Response = 494 M4
M4 = Poor automated baseline construction.

Calculation of Volatile Organic Compounds in Air

The instrument will calculate the concentration (ppbv). If the sample is diluted (DF), the result is multiplied by the DF to generate the final result.

Result, ppbv = C_s x DF
Where:
C_s = Concentration of sample (ppbv)
DF = Dilution Factor

Calculation of Instrument Dilution Factor

For dilutions, smaller sample volumes (< 250mL) are analyzed. The smallest volume that can be analyzed with accuracy is 10 mL.

Samples that arrive at the laboratory with pressures below -15 inches Hg must be pressurized with zero air to greater than -15 inches Hg. This pressurization results in a dilution factor.

Calculation of Dilution Factor
$DF = V_{cf} / V_{ci}$
Where:
V_{ci} = volume of air in canister prior to pressurization, L
P =

Conversion of ppbv to ug/m^3
ug/m^3 = (ppbv) * MW / 24.47
Where:
24.47 = molar gas constant (g/g-mole)
MW = molecular weight of the compound of interest

Dilution Factor for Pressurization of Subatmospheric Samples: Three Steps

Step 1: Calculate the volume in the canister prior to pressurization (Assume a 2.7 liter canister is used).

Dilution Factor for Pressurization of Subatmospheric Samples: Three Steps

Step 1: Calculate the volume in the canister prior to pressurization (Assume a 2.7 liter canister is used).

$V_{ci} = 2.7 * Pl/14.696$

Step 2: Calculate the volume in the canister after pressurization.

$V_{cf} = 2.7 * PF/14.696$

Step 3: Calculate the dilution factor.

$DF = V_{cf} / V_{ci}$

Where:

V_{ci} = volume of air in canister prior to pressurization, L
PI = pressure reading of canister prior to pressurization (psia)
V_{cf} = volume of air in canister after pressurization, L
PF = pressure reading of canister after pressurization (psia)
DF = dilution factor
14.696 = atmospheric pressure (psia)

Re: Site Management Plan Compliance Task Requirements – Fall of 2024 Services
Binghamton Plaza Property
Binghamton, New York
KES Project No.: 426.01214.10

Dear Mr. Tomasulo:

Reference is made to our May 9, 2024, proposal to perform sampling and inspection services at the above noted project site.

Attached please find the following Appendices providing Fall of 2024 services:

- Appendix A – Semi-Annual Composite Cover System Inspection (includes Site Wide Cap and Cover Systems Field Inspection Form, Photograph Documentation and a Monitoring Well Location Map identifying monitoring well conditions).
- Appendix B – Semi-Annual Methane Monitoring (includes Indoor Air Monitoring for Methane Field Inspection Form and Photograph Documentation).
- Appendix C – Annual TO-15 Air Sample Results – Building No. 31 (includes Air Sampling Results, Structure Sampling and Building Inventory Field Forms).
- Appendix D – Annual Passive Ventilation System Inspection – Building No.'s 1-30 (includes Periodic Operations Visit Form and Photograph Documentation).
- Appendix E – Annual Sub-Slab Depressurization System Operation and Maintenance Inspection–Building No.'s 31-33 (includes Periodic Operations Visit Form and Photograph Documentation).

We hope that this information is beneficial, and we appreciate the opportunity to be of continued service to you on this project. If you have any questions regarding the enclosed documentation, please do not hesitate to contact our office.

Sincerely,

Christian Tarnowski

Christian R. Tarnowski
Senior Environmental Hygienist

Appendix A

Semi-Annual Composite Cover System Inspection

(Includes: Site Wide Cap and Cover System Field Inspection Form, Photograph Documentation and a Monitoring Well Location Map identifying well conditions)

Binghamton Plaza - Field Inspection Form
Site-wide Cap and Cover Systems
Site Schematic

Site use Note: The entire site has been remediated to commercial use with the exception of the hatched area shown in the above plan. This hatched area has been remediated to restricted-residential use.

Descriptions of Cap and Cover Systems

1) Pre-Remediation Cap Areas (gray): This area includes all areas that were covered with pavement, concrete or building footprints prior to remediation in Oct. 2014.

2) Post-Remediation Soil Cover (green): This area was covered during the Oct 2014 remediation with at least 12" of clean soil over an orange construction fence demarcation layer

3.) Post-Remediation Asphalt Cover (pink): These areas were not paved prior to the October 2014 remedial action The remedial action included the installation of a 6-inch thick asphalt cover system.

Inspection Criteria: Inspect all cap and cover systems for evidence of erosion, significant cracking, sinking or heaving. If the potential for exposure to underlying soil and or waste material exists, note the locations on the embedded map, photograph the area and describe the degradation on this form.

Inspection Results

Cap/Cover Type	Intact? (Y/N)	Repairs Needed? (Y/N)	General Notes
Pre-Remediation Cap Areas (gray)	Yes	Yes	Repair potholes - Refer to Photos
Post-Remediation Soil Cover ~~(green)~~ Pink	Yes	No	100% Stabilization Achieved
Post-Remediation Asphalt Cover (green)	Yes	No	100% Stabilization Achieved

General Site Condition and Use Inspection Questionnaire

1.) Is the site use consistent with the land use restrictions (i e. restricted residential and commercial)? YES_X_ / NO_____.
If no, describe.

2.) Are all monitoring well flush mount manholes intact and in good condition?
YES_____/ NO_X_ If not, specify which monitoring well, photograph the degradation and describe.

3.) Have any new buildings been constructed? YES_____ / NO_X_.
If so, describe.

4.) Have any buildings been removed? YES_____ / NO_X_.
If so, describe.

General Notes

1.) The Binghamton Plaza site is underlain by approximately 30 feet of municipal waste and incinerator ash. The existing paved areas, concrete slabs, landscaped areas and building footprints function as a continuous cap and cover system for these waste materials.

2.) The purpose of this inspection is to verify that they are intact and preventing exposures to the underlying soil and waste materials buried at the Site

3.) If the cap and/or cover systems are compromised to an extent that they can no longer prevent exposures to the underlying soil and/or waste materials, repairs must be completed consistent with the Site Management Plan.

4) This inspection form also includes general site use items to verify that site use restrictions are being followed.

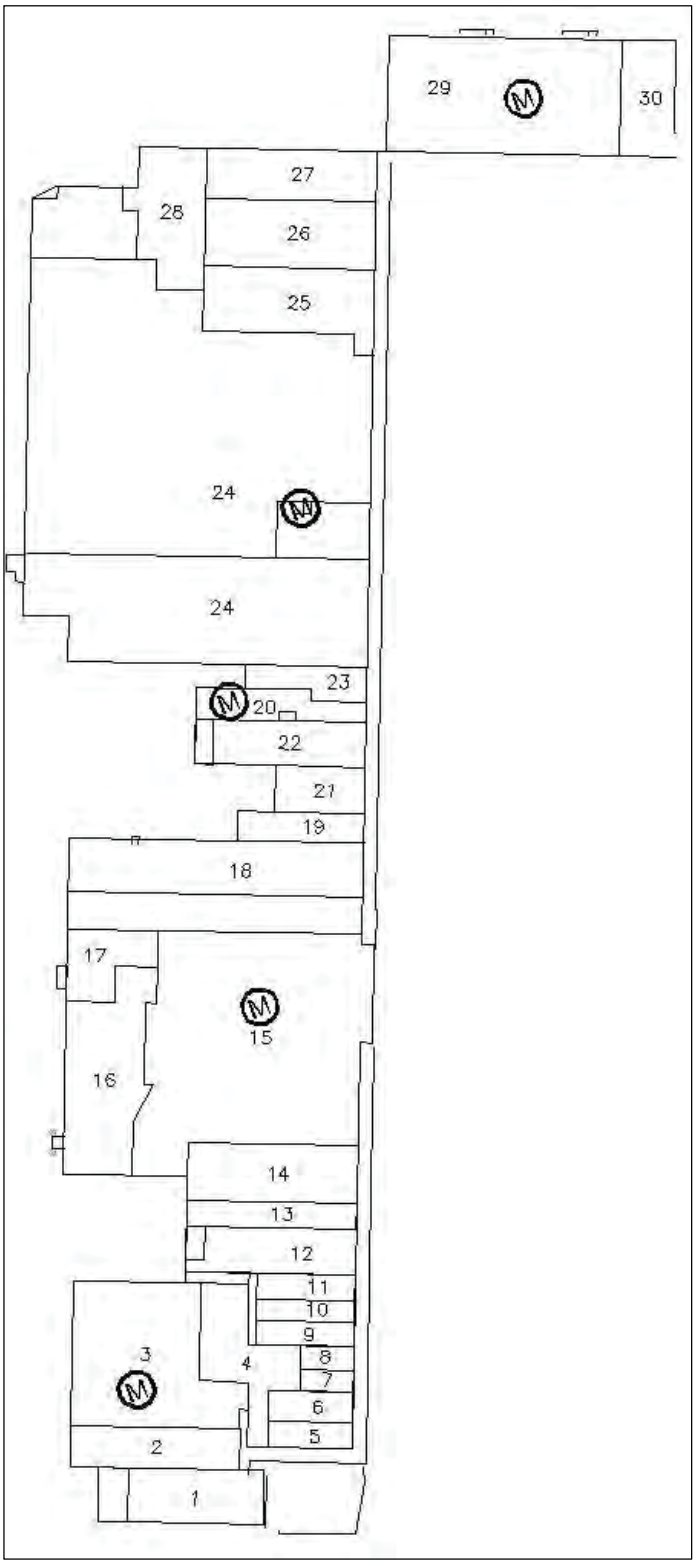
Semi-Annual Methane Monitoring

(Includes: Indoor Air Monitoring Form, Methane Field Inspection Form and Photograph Documentation)

Binghamton Plaza - Field Inspection Form
Indoor Air Monitoring for Methane (Buildings 1 - 30)
Building Schematic



Methane Meter Calibration Log

Meter Make and Model: RKI GX-6000

Field Calibration: N/A

Factory Calibration: 12/7/2024

Field Inspection Form
Indoor Air Monitoring for Methane (Buildings 1 - 30)
Binghamton Plaza - Site Management Plan (Appendix G)
Inspection Frequency: Semi-Annual

Indoor Air Monitoring for Methane General Notes

1.) The Binghamton Plaza site is underlain by approximately 30 feet of municipal waste and incinerator ash. Methane gas (generated by the decomposing waste) has been found to exist in soil gas at elevated concentrations throughout the site.

2. The purpose of this inspection is to verify that methane gas is not present at concentrations that pose a risk to building occupants in Buildings 1 through 30. Active methane monitoring systems/alarms exist in Buildings 31, 32 and 33 and are monitored as part of ongoing Site O&M.

Inspection Results

Building Location	Odors (Y/N)	Methane Concentration (% LEL)	Specific Notes
3	N	0.0 %	N/A
15	N	0.0 %	N/A
20	N	0.0 %	N/A

29	N	0.0 %	N/A

General Notes

3	N/A
15	N/A
20	N/A
24	N/A
29	N/A

Monitoring Protocol

1.) A properly calibrated portable handheld methane meter should be used to monitor indoor air in the buildings shown on the embedded plan. The monitoring of Buildings 20 and 24 should be conducted above the floor hatches that are used to access the crawl space as shown on the plan. The hatches should remain closed.

2.) The meter should be capable of measuring methane concentrations in percent of the Lower Explosive Limit (LEL).

3.) Methane concentrations should be recorded on this form with any other pertinent information.

4.) Any detections of methane should be immediately reported to the party responsible for implementing the SMP, to determine the proper course of action.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Lab Number: L2500525
Report Date: 01/20/25

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on December 23, 2024. The canister certification data is provided as an addendum.

The WG2021062-3 LCS recovery associated with L2500525-01 through -04 is above the upper 130% acceptance limit for dibromochloromethane (132%), bromoform (139%), benzyl chloride (132%), and naphthalene (150%). All samples associated with this LCS do not have reportable amounts of this analyte.

The WG2021062-3 CC recovery associated with L2500525-01 through -04 are above the upper 130% acceptance limit for Ethanol and Acetone. Any samples associated with this CC that have reportable amounts of these analyte will be reported with high bias.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	BINGHAMTON PLAZA	**Lab Number:**	L2500525
Project Number:	0426.01214.10	**Report Date:**	01/20/25

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	BINGHAMTON PLAZA	**Lab Number:**	L2500525
Project Number:	0426.01214.10	**Report Date:**	01/20/25

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Pace Analytical Services performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Pace Analytical Services shall be to re-perform the work at it's own expense. In no event shall Pace Analytical Services be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Pace Analytical Services.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility – 8 Walkup Dr. Westborough, MA 01581
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol, Azobenzene; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility – 320 Forbes Blvd. Mansfield, MA 02048
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
MADEP-APH.
Nonpotable Water: EPA RSK-175 Dissolved Gases
Biological Tissue Matrix: EPA 3050B

Mansfield Facility – 120 Forbes Blvd. Mansfield, MA 02048
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Nonpotable Water: EPA RSK-175 Dissolved Gases

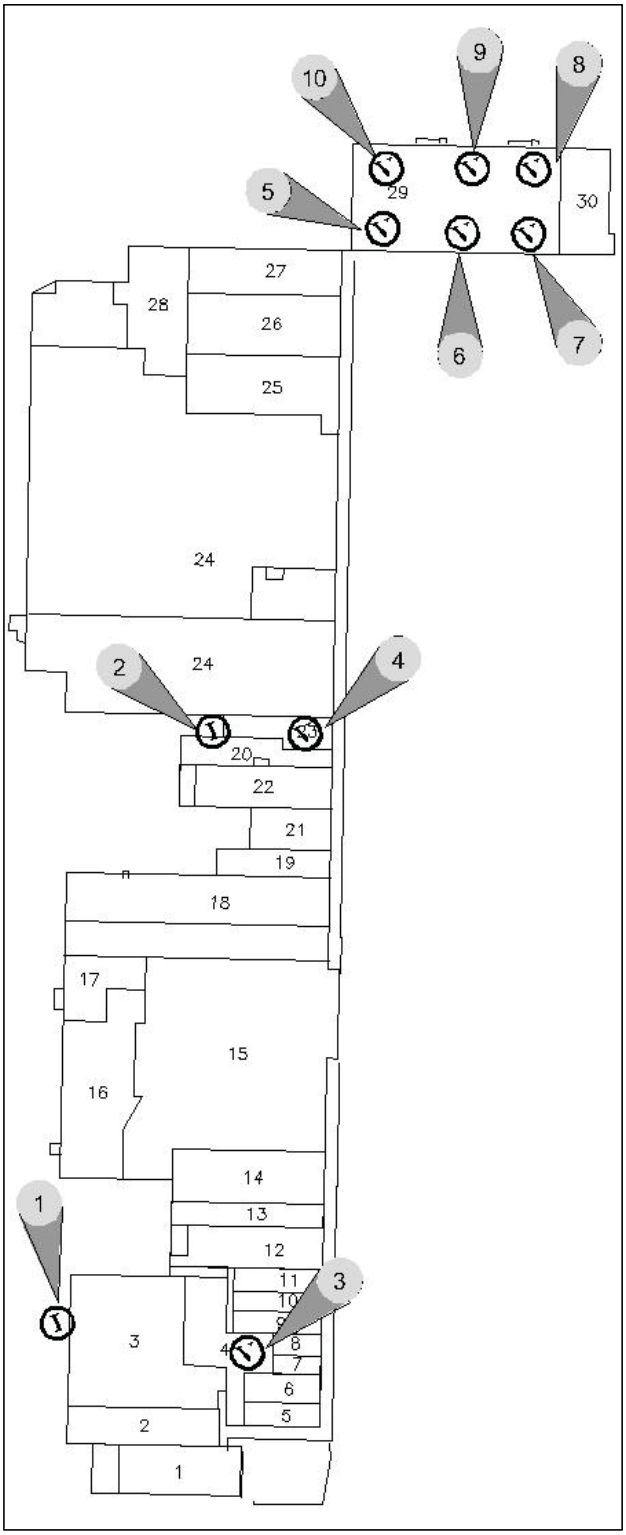
Annual Passive Soil Vapor Ventilation System Inspections – Buildings 1-30

(Includes: Periodic Operations Visit Form and Photograph Documentation)

Binghamton Plaza
Passive Ventilation Systems
Building Schematic



Descriptions of Passive Ventilation Systems

1.) Locations 1 and 2 are fresh air intakes for the crawl space beneath Buildings 1 through 28. They are steel "goose-neck" air intakes that extend several feet above grade. Can be inspected from the ground.

2.) Locations 3 and 4: Rooftop exhaust vents that exhaust air from the crawl space beneath Buildings 1 through 28. Must access roof with a ladder to inspect these.

3.) Locations 5 through 10 are rooftop vents that exhaust air from the subslab of Buildings 29 and 30. Can be inspected from the ground.

Inspection Criteria: Passive air intakes and vents must be in place without significant blockages or damage that could restrict airflow.

Inspection Results

Inspection Location	Intact? (Y/N)	Blockages? (Y/N)	Repairs Needed? (Y/N)	General Notes
1	Y	N	Y	Ripped Screen
2	Y	N	Y	Damaged Duct / No Screen
3	Y	N	N	No Roof Access
4	Y	N	N	No Roof Access
5	Y	N	N	No Interior Access (N I A)
6	Y	N	N	N I A
7	Y	N	N	N I A
8	Y	N	N	N I A
9	Y	N	N	N I A
10	Y	N	N	N I A

General Notes

1.) The Binghamton Plaza site is underlain by approximately 30 feet of municipal waste and incinerator ash. The passive crawlspace and sub-slab ventilation systems were designed prevent methane and/or contaminated soil vapors from entering the onsite buildings.

2.) The purpose of this inspection is to verify that these ventilation systems are intact and functioning.

3.) If the passive ventilation systems are compromised to an extent that they can no longer function properly, repairs must be completed to restore their full functionality.

APPENDIX B

Groundwater Analytical Results
(May 2025)

August 20, 2025

Douglas Schott, P.G.
ARM Group, LLC
515 South Franklin Street
West Chester, PA 19382

Re: Data Usability Summary Report – Eurofins Lancaster Laboratories – May 2025 Samples

Dear Mr. Schott:

The evaluation of analytical data for organic and inorganic analysis parameters by Eurofins Lancaster Laboratories for five groundwater samples, one equipment blank, and one trip blank from the Binghamton Plaza Kmart site, which were reported in a single data package under Job No. 410-225004-1, has been completed. The data package was received by ddms, inc. (ddms) for review, and the following samples were reported:

MW-2D	MW-3D	MW-6D	MW-7D	MW-8
EB	Trip Blank			

Analyses were performed in accordance with the following methods:

Volatile Organic Compounds (VOCs)	SW846 Method 8260D
Semivolatile Organic Compounds (SVOCs)	SW846 Method 8270D
EDB, DBCP, and 1,2,3-TCP	SW846 Method 8011
Total and Dissolved Metals	SW846 Method 6010D
Total and Dissolved Mercury	SW846 Method 7470A
Total Phenols	USEPA 420.4

ddms' review was performed, to the extent possible, in accordance with the analytical methods, applicable ddms Standard Operating Procedures, and "DER-10/Technical Guidance for Site Investigation and Remediation." Professional judgment was applied as necessary and appropriate. Qualifiers consistent with those defined by EPA Region 2 were applied.

Below is the Data Usability Summary Report (DUSR) associated with these samples.

Data Usability Summary Report	
1. Is the data package complete as defined under the requirements for the most current DEC ASP Category B or USEPA CLP data deliverables?	Yes
2. Have all holding times been met?	Yes
3. Do all the QC data; blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?	No – See Following Sections
4. Have all of the data been generated using established and agreed upon analytical protocols?	Yes

Data Usability Summary Report	
5. Does an evaluation of the raw data confirm the results provided in the data summary sheet and the quality control verification forms?	Yes
6. Have the correct data qualifiers been used and are they consistent with the most current DEC ASP?	Yes
7. Have any quality control (QC) exceedances been specifically noted in the DUSR and has the corresponding QC summary sheet from the data package been attached to the DUSR?	Yes

Based on the data review effort, results are usable, with the following qualifications:

SVOCs

- The result for di-n-octyl phthalate in sample MW-2D was qualified as estimated (UJ) due to CCV %D outside of acceptable QC limits.
- Results for all target compounds in all samples were qualified as estimated (J, UJ) due to low recoveries of both acid and base-neutral surrogates.
- Results for the fluorene and pyrene in samples MW-6D and MW-8 were qualified as not detected (U) at the reporting limit (RL) due to associated method blank contamination.
- Results for 3,3'-dichlorobenzidine, 4-nitrophenol, caprolactam, hexachlorocyclopentadiene and phenol in sample MW-2D and results for 2,4-dinitrophenol, 2-chlorophenol, 2-methylphenol, 2-nitrophenol, 3,3'-dichlorobenzidine, 4-chloro-3-methylphenol, 4-chloroaniline, 4-methylphenol, 4-nitrophenol, caprolactam, dimethyl phthalate, hexachlorocyclopentadiene, hexachloroethane and phenol in samples MW-3D, MW-6D, MW-7D, MW-8 and EB were qualified as estimated (UJ) due to low LCS %R.
- Results for 4-Chloroaniline and hexachloroethane in sample MW-2D were qualified as estimated (UJ) due to low LCSD %R.
- Results for 2,4,5-trichlorophenol, 2,4,6-trichlorophenol, 2,4-dimethylphenol, 2,4-dichlorophenol, 2-methylphenol, 2-nitroaniline, 2-nitrophenol, 3,3'-dichlorobenzidine, 3-nitroaniline, 4-chloro-3-methylphenol, 4-chloroaniline, 4-methylphenol, 4-nitroaniline, 4-nitrophenol, atrazine, benzaldehyde, butylbenzylphthalate, caprolactam, di-n-octyl phthalate, diethyl phthalate, dimethyl phthalate, hexachlorocyclopentadiene, hexachloroethane, pentachlorophenol, and phenol in MW-3D were qualified as estimated (UJ) due to low MS and/or MSD recoveries and/or imprecision between MS and MSD results.

Metals

- The result for chromium in sample MW-2D was qualified as not detected (U) at the RL due to method blank contamination.

All qualifiers applied as a result of the validation process are reflected on the Analytical Reports included as Attachment A to this report. Qualifier definitions are also provided in the attachment. Copies of the laboratory case narrative and chain of custody record are provided in Attachment B. Pages from the data package illustrating the exceedances that resulted in qualification of results are included as Attachment C.

The following components were reviewed, where applicable:

- Chain of custody
- Receiving conditions
- Holding times
- Sample integrity
- Analyte lists
- Reporting limits
- Requested method
- Units
- Sample related quality control data:
    - Blanks
    - LCS/LCSD recoveries
    - Internal standard areas
    - Duplicates
- Instrument related quality control data:
    - Instrument tunes
    - Calibration summaries

In the remaining sections of this report, all quality excursions resulting in qualified data are discussed.

When a sample result is qualified estimated 'J' in addition to estimated 'J+' or 'J-' or is qualified both 'J+' and 'J-', the 'J' qualifier takes precedence and the bias is indeterminate. When a sample result is rejected (R), the 'R' qualifier takes precedence over any previous qualification.

Documentation: A completeness review of the data package was performed, and the data package was determined to be a complete Category B data package.

Samples MW-6D and MW-8 were reextracted and reanalyzed for SVOC analysis due to poor surrogate recovery. Surrogate recovery from the reextracted analysis was still outside of QC limits and reextracted samples were ran outside of holding time. The provided EDD marked the reextracted analysis samples as not reportable, therefore this data review used the initial analysis results of SVOC for samples MW-6D and MW-8.

Holding Times, Preservation, Sample Integrity:

A copy of the applicable chain of custody record was included in the data package, documenting collection dates of May 29 and 30, 2025. The samples were received by the laboratory on May 30, 2025. The cooler temperatures on receipt of the samples (5.9°C; criterion <10°C) were acceptable. All samples were analyzed within analytical method required holding time.

A. Volatile Organic Compounds

1. Calibration

Two initial calibrations (ICs), performed on April 7, 2025 and April 22, 2025, were reported in support of the samples associated with this data set. Documentation of all individual IC standards was present in the data package, and average relative response factor (RRF) as well as percent relative standard (%RSD) values were correctly calculated and accurately reported. All %RSD values were below the maximum acceptance limit (20%), and average RRF values were greater than the minimum acceptance limit (0.05).

An ICV standard was analyzed after each IC. The %Ds for the ICV standard were less than 20%. Average RRF values were greater than the minimum acceptance limit of 0.05 for all analytes.

Two CCV standards were reported across the data set. Results for the CC standards were acceptable (QC ≤20%D), with the following exceptions:

Analyte	%D	Associated Samples	Qualfier Applied
CCVIS 410-655353/4 // 06/10/2025 @ 13:22			
Chloromethane	+20.2	EB MW-2D MW-6D MW-7D MW-8 MW-3D	None
Carbon Disulfide	+22.1		
CCVIS 410-656473/3 // 06/12/2025 @ 09:28			
Acetone	+29.5	Trip Blank	None

Since the %D were high and none of the above analytes were detected in any of the associated samples, no action was necessary on this basis.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD)

Sample MW-3D was prepared as an MS/MSD pair. MS/MSD %Rs and relative percent differences (RPDs) between MS and MSD results were acceptable (validation limits 70-130%R; <30 RPD), with the following exceptions:

Analyte	MS %R	MSD %R	RPD	Qualifier Applied
1,1-Dichloroethene	140	143	a	None
Carbon Disulfide	145	149	a	
Chloromethane	132	134	a	
Cyclohexane	139	140	a	
Vinyl Chloride	131	135	a	

No detects of the above analytes were found in the parent sample MW-3D, therefor no qualification was deemed necessary.

B. Semivolatile Organic Compounds

1. Calibration

Six initial calibrations (ICs), performed on April 9, 2025, April 10, 2025, May 1, 2025, May 7, 2025, May 22, 2025, and May 30, 2025 were reported in support of the samples associated with this data set. Documentation of all individual IC standards was present in the data package, and average relative response factor (RRF) as well as percent relative standard (%RSD) values were correctly calculated and accurately reported. All %RSD values were below the maximum acceptance limit (20%), and average RRF values were greater than the minimum acceptance limit (0.05).

An ICV standard was analyzed after each IC. Average RRF values were greater than the minimum acceptance limit of 0.05 for all analytes and the %Ds for the ICV standard were less than 20% with exception of the following:

Analyte	**%D**	**Associated Samples**	**Qualfier Applied**
ICV 410-651088/12 // 05/31/2025 @ 02:04			
3,3'-Dichlorobenzidine	+34.1	MW-6D RE MW-8 RE	None
ICV 410-641051/12 // 05/08/2025 @ 03:22			
3,3'-Dichlorobenzidine	+40.9	MW-3D MW-6D MW-7D MW-8 EB	None

Since the %D were high and none of the above compounds were detected in any of the associated samples, no action was necessary on this basis.

Six CCV standards were reported across the data set. Results for the CC standards were acceptable (QC ≤20%D), with the following exceptions:

Analyte	**%D**	**Associated Samples**	**Qualfier Applied**
CCVIS 410-653692/2 // 06/05/2025 @ 21:20			
Di-n-octyl phthalate	-23.7	MW-2D	UJ

The result for di-n-octyl phthalate in sample MW-2D was qualified as estimated (UJ) due to CCV %D outside of acceptable QC limits.

2. Surrogates

Surrogate compounds 2-fluorophenol (2FP), phenol-d_5 (PHL), nitrobenzene-d_5 (NBZ), 2-fluorobiphenyl (FBP), 2,4,6-tribromophenol (TBP), and terphenyl-d_{14} (TPHd14) were used. The laboratory-specified acceptance limits for the surrogates are overly wide and low; therefore, validation limits of 70-130% were applied. Surrogate percent recoveries (%Rs) were acceptable, with the following exceptions:

Sample	2FP	PHL	NBZ	FBP	TBP	TPHd14	Qualifier Applied
MW-2D	44	47	25	47	65	17	J, UJ
MW-3D	50	a	30	61	61	18	J, UJ
MW-6D	2	a	0.9	a	50	13	J, UJ
MW-7D	36	a	15	60	61	10	J, UJ
MW-8	59	a	37	a	49	24	J, UJ
EB	60	62	28	51	a	18	J, UJ

a = Acceptable

Results for all target compounds in all samples were qualified as estimated (J, UJ) due to low recoveries of both acid and base-neutral surrogates.

3. Blanks

Three method blanks were prepared and analyzed with the samples. One equipment blank (EB) was submitted with the field samples. No detections were reported in the equipment blank. The following detections were reported in the method blank:

Blank	Analyte	Concentration (µg/L)	Affected Samples	Qualifier Applied
MB 410-653575/1-A	Acenaphthene	0.456	MW-3D MW-6D MW-7D MW-8 EB	None
	Fluorene	0.814		U, None
	Pyrene	0.232		

Results for the fluorene and pyrene in samples MW-6D and MW-8 were qualified as not detected (U) at the RL due to associated method blank contamination.

4. Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)

Three LCS were prepared and analyzed with the site samples, along with one LCSD associated with LCS 410-653019. The laboratory-specified acceptance limits for the LCS are overly wide and low; therefore, validation limits of 70-130% were applied. LCS %Rs were acceptable, with the following exceptions:

Analyte	LCS %R	LCSD %R	Affected Samples	Qualifier Applied
LCS 410-653019/2-A // LCSD 410-653019/3-A				
3,3'-Dichlorobenzidine	61	56	MW-2D	UJ
4-Chloroaniline	a	69		
4-Nitrophenol	56	46		
Caprolactam	29	25		
Hexachlorocyclopentadiene	63	59		
Hexachloroethane	a	59		
Phenol	49	50		
LCS 410-653575/2-A				
2,4-Dinitrophenol	67	na	MW-3D MW-6D MW-7D MW-8 EB	UJ
2-Chlorophenol	68	na		
2-Methylphenol	63	na		
2-Nitrophenol	67	na		
3,3'-Dichlorobenzidine	65	na		
4-Chloro-3-methylphenol	69	na		
4-Chloroaniline	61	na		
4-Methylphenol	53	na		
4-Nitrophenol	41	na		
Caprolactam	21	na		
Dimethyl phthalate	61	na		
Hexachlorocyclopentadiene	61	na		
Hexachloroethane	64	na		
Phenol	38	na		

a = acceptable
na = not applicable

Results for 3,3'-dichlorobenzidine, 4-nitrophenol, caprolactam, hexachlorocyclopentadiene and phenol in sample MW-2D and results for 2,4-dinitrophenol, 2-chlorophenol, 2-methylphenol, 2-nitrophenol, 3,3'-dichlorobenzidine, 4-chloro-3-methylphenol, 4-chloroaniline, 4-methylphenol, 4-nitrophenol, caprolactam, dimethyl phthalate, hexachlorocyclopentadiene, hexachloroethane and phenol in samples MW-3D, MW-6D, MW-7D, MW-8 and EB were qualified as estimated (UJ) due to low LCS %R.

Results for 4-Chloroaniline and hexachloroethane in sample MW-2D were qualified as estimated (UJ) due to low LCSD %R.

5. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Sample MW-3D was prepared as an MS/MSD pair. MS/MSD %Rs and relative percent differences (RPDs) between MS and MSD results were acceptable (validation limits 70-130%R; <30 RPD), with the following exceptions:

Analyte	MS %R	MSD %R	RPD	Qualifier Applied
2,4,5-Trichlorophenol	a	a	21	UJ
2,4,6-Trichlorophenol	a	a	22	
2,4-Dimethylphenol	37	44	a	

Analyte	MS %R	MSD %R	RPD	Qualifier Applied
2,4-Dichlorophenol	66	a	a	
2-Methylphenol	55	62	a	
2-Nitroaniline	a	a	21	
2-Nitrophenol	66	a	22	
3,3'-Dichlorobenzidine	57	66	a	
3-Nitroaniline	64	a	29	
4-Chloro-3-methylphenol	57	69	27	
4-Chloroaniline	47	64	31	
4-Methylphenol	44	51	a	
4-Nitroaniline	68	a	26	
4-Nitrophenol	42	48	a	
Atrazine	a	a	23	
Benzaldehyde	68	a	a	
Butylbenzylphthalate	66	a	a	
Caprolactam	18	23	27	
Di-n-octyl phthalate	a	a	31	
Diethyl phthalate	a	a	24	
Dimethyl phthalate	59	a	22	
Hexachlorocyclopentadiene	67	a	a	
Hexachloroethane	62	68	a	
Pentachlorophenol	54	59	a	
Phenol	33	40	a	

Results for 2,4,5-trichlorophenol, 2,4,6-trichlorophenol, 2,4-dimethylphenol, 2,4-dichlorophenol, 2-methylphenol, 2-nitroaniline, 2-nitrophenol, 3,3'-dichlorobenzidine, 3-nitroaniline, 4-chloro-3-methylphenol, 4-chloroaniline, 4-methylphenol, 4-nitroaniline, 4-nitrophenol, atrazine, benzaldehyde, butylbenzylphthalate, caprolactam, di-n-octyl phthalate, diethyl phthalate, dimethyl phthalate, hexachlorocyclopentadiene, hexachloroethane, pentachlorophenol, and phenol in MW-3D were qualified as estimated (UJ) due to low MS and/or MSD recoveries and/or imprecision between MS and MSD results.

C. Ethylene Dibromide, 1,2-Dibromo-3-chloropropane & 1,1,2,2-Tetrachloroethane

1. Calibration

One initial calibration (IC) was performed on June 4, 2025, and was reported in support of the samples associated with this data set. Documentation of all individual IC standards was present in the data package, and average relative response factor (RRF) as well as percent relative standard (%RSD) values were correctly calculated and accurately reported. All %RSD values were below the maximum acceptance limit (20%).

An ICV standard was analyzed after the IC. The %Ds for the ICV standard were less than 20%.

Four CCV standards were reported across the data set. Results for the CC standards were

acceptable (QC ≤20%D), with the following exceptions:

Analyte	Column 1 %D	Column 2 %D	Associated Samples	Qualfier Applied
	CCVIS 410-654000/37 // 06/06/2025 @ 21:57			
1,2-Dibromo-3-Chloropropane	+30.1	+23.9	EB MW-2D MW-6D MW-7D MW-8 MW-3D	None

Since the %Ds were high on both columns and 1,2-dibromo-3-chloropropane was not detected in any of the associated samples, no action was necessary on this basis.

D. Metals

1. Blanks

Initial calibration blanks (ICB) and continuing calibration blanks (CCB) were analyzed at appropriate frequencies throughout both analysis series. Two method blanks (MBs) were prepared and analyzed with the samples. One EB was submitted with the samples. The following detects were in the method blank:

Analyte	Concentration (ug/L)	Affected Samples	Qualifier
MB 410-654487/1-A			
Chromium	0.627	MW-2D MW-3D MW-6D MW-7D MW-8 EB	U, None

The result for chromium in sample MW-2D was qualified as not detected (U) at the RL due to method blank contamination.

E. Mercury

Results for all target analytes in the metals analyses were determined to be usable as reported by the laboratory. No qualification of data was applied as a result of the data review.

F. Total Phenols

Results for total phenol in these analyses were determined to be usable as reported by the laboratory. No qualification of data was applied as a result of the data review.

Please feel free to contact me at (651) 583-8724 or astults@ddmsinc.com if you have any questions regarding this data package review report or need further information.

Regards,

de maximis Data Management Solutions, Inc.

EPA Qualifier Definitions

U	**The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.**
J	**The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.**
J+	**The result is an estimated quantity, but the result may be biased high.**
J-	**The result is an estimated quantity, but the result may be biased low.**
NJ	**The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.**
UJ	**The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.**
R	**The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.**

LABORATORY CASE NARRATIVE AND
CHAIN OF CUSTODY RECORD
Laboratory Job No. 410-225004-1

Job Narrative
410-225004-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/30/2025 4:43 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.9°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed on 410-655353 is compliant under 8260C/D method criteria for Chloromethane . The software does not display the % Drift data to the whole number as is listed in the method (i.e. limit of 20%). When applying the evaluation to a whole number, the check passes the criteria with a value of 20% Drift.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-655353 recovered above the upper control limit for 4-Methyl-2-pentanone and Carbon disulfide. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-656473 recovered above the upper control limit for Acetone. Non-detections of the affected analytes are reported. Any detections are considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in batch 410-653692 was below the method criteria for the following analyte(s): Di-n-octyl phthalate. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 410-653692 was below the method criteria for the following analyte(s): Di-n-octyl phthalate. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) associated with batch 410-653809 recovered above the upper control limit for bis(1-chloroispropyl)ether. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E: The initial calibration verification (ICV) result for batch 410-653809 was above the upper control limit. The affected analyte is: 3,3'-Dichlorobenzidine. Sample results were non-detects, and have been reported as qualified data.

Method 8270E: Acenaphthene, Fluorene and Pyrene were detected above the method detection limit (MDL) in the method blank associated with preparation batch 410-653575 and analytical batch 410-653809 as well as in the following samples: MW-6D (410-225004-3) and MW-8 (410-225004-5). All affected samples were re-extracted and/or re-analyzed outside of holding time. Both sets of data have been reported.

Method 8270E: Surrogate recovery for the following sample was outside control limits: MW-6D (410-225004-3). Re-

extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8011: The surrogate recovery for the blank associated with preparation batch 410-653819 and analytical batch 410-654000 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Eurofins Lancaster Laboratories Environment Testing, LLC

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Job Narrative
410-225004-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/30/2025 4:43 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.9°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed on 410-655353 is compliant under 8260C/D method criteria for Chloromethane . The software does not display the % Drift data to the whole number as is listed in the method (i.e. limit of 20%). When applying the evaluation to a whole number, the check passes the criteria with a value of 20% Drift.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-655353 recovered above the upper control limit for 4-Methyl-2-pentanone and Carbon disulfide. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-656473 recovered above the upper control limit for Acetone. Non-detections of the affected analytes are reported. Any detections are considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in batch 410-653692 was below the method criteria for the following analyte(s): Di-n-octyl phthalate. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 410-653692 was below the method criteria for the following analyte(s): Di-n-octyl phthalate. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) associated with batch 410-653809 recovered above the upper control limit for bis(1-chloroispropyl)ether. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E: The initial calibration verification (ICV) result for batch 410-653809 was above the upper control limit. The affected analyte is: 3,3'-Dichlorobenzidine. Sample results were non-detects, and have been reported as qualified data.

Method 8270E: Acenaphthene, Fluorene and Pyrene were detected above the method detection limit (MDL) in the method blank associated with preparation batch 410-653575 and analytical batch 410-653809 as well as in the following samples: MW-6D (410-225004-3) and MW-8 (410-225004-5). All affected samples were re-extracted and/or re-analyzed outside of holding time. Both sets of data have been reported.

Method 8270E: Surrogate recovery for the following sample was outside control limits: MW-6D (410-225004-3). Re-

extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8011: The surrogate recovery for the blank associated with preparation batch 410-653819 and analytical batch 410-654000 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
cn	Refer to Case Narrative for further detail
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
cn	Refer to Case Narrative for further detail
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
cn	Refer to Case Narrative for further detail
J	Indicates an Estimated Value for TICs
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Richard Zimmerman - Operations Tech I

Date Mixed: 04-Sep-2024 **Balance Serial #** 1128353505

Dillan Murphy - Operations Technician I

Date Passed: 06-Sep-2024

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Date Mixed: 20-Aug-2024 **Balance Serial #** B345965662

Dillan Murphy - Operations Technician I

Date Passed: 22-Aug-2024

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Michael Maye - Operations Tech I

Date Mixed: 20-Jan-2025 **Balance Serial #** 1128353505

Dillan Murphy - Operations Technician I

Date Passed: 24-Jan-2025

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Ethan Winiarski - Operations Tech I

Date Mixed: 01-Apr-2024 **Balance Serial #** 1128342314

Dillan Murphy - Operations Technician I

Date Passed: 03-Apr-2024

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Date Passed: 18-Oct-2023

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Russ Bookhamer - Operations Technician I

Date Mixed: 15-May-2024 **Balance Serial #** B442140311

Jennifer Pollino - Operations Tech III - ARM QC

Date Passed: 17-May-2024

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Date Passed: 30-May-2024

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Date Mixed: 30-Apr-2024 **Balance Serial #** B707717271

Dillan Murphy - Operations Technician I

Date Passed: 02-May-2024

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$x_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\ (u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$x_{CRM/RM} = (X_a)\ (u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

6.1 This standard is intended for the calibration of analytical instruments and validation of analytical methods as appropriate. This CRM may be used in connection with EPA Methods 6010, 6020 (all versions), Standard Methods 3120 B and USP <232> / ICH Q3D.

6.2 For products attaining traceability through Inorganic Ventures' Primary Certified Reference Materials (PCRM™) see the Limited License to Use PCRM™ in the Inorganic Ventures Terms and Conditions of Sale, https://www.inorganicventures.com/terms-and-conditions-sale. The Terms and Conditions contain information on the use of materials traceable to PCRM™ certified reference materials. This Limited License agreement is especially pertinent for laboratories accredited under ISO:17034.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

Note: This solution contains Silver (Ag), please refer to our Sample Preparation Guide for more information (https://www.inorganicventures.com/sample-preparation-guide/samples-containing-silver)

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

April 01, 2024

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **April 01, 2029**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

Thermo Fisher Scientific's Quality System has been found to conform to Quality Management System Standard ISO9001:2015 by SAI Global Certificate Number CERT – 0120633

This is to certify that units of the lot number below were tested and found to comply with the specifications of the grade listed. Certain data have been supplied by third parties. Thermo Fisher Scientific expressly disclaims all warranties, expressed or implied, including the implied warranties of merchantability and fitness for a particular purpose. Products are for research use or further manufacturing. Not for direct administration to humans or animals. It is the responsibility of the final formulator and end user to determine suitability based upon the intended use of the end product. Products are tested to meet the analytical requirements of the noted grade. The following information is the actual analytical results obtained.

Catalog Number	S271	Quality Test / Release Date	07/29/2024
Lot Number	243064		
Description	SODIUM CHLORIDE, CERTIFIED A.C.S.		
Country of Origin	United States	Suggested Retest Date	Jul/2029
Chemical Origin	Inorganic-non animal		
BSE/TSE Comment	No animal products are used as starting raw material ingredients, or used in processing, including lubricants, processing aids, or any other material that might migrate to the finished product.		
Comment	This material does not contain any BPA (Bisphenol A), phthalates/phthalate esters or animal derived substances.

CPI INTERNATIONAL

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: 4400-10PPM331-100

Mercury (Hg) – 10 µg/mL

Lot #: 1452342

Matrix: 2% HNO_3

*Expiration Date: 10 February 2026

Element	Certified Concentration & Uncertainty
Hg	10.00 ± 0.05 µg/mL (w/v)
	10.00 ± 0.05 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034**, **ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 10 µg/mL by gravimetric methods using single-element concentrate. The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3133**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Trace Concentrations (µg/L)

Ag	<0.5	Co	<1	Ge	<0.5	Lu	<0.2	P	<100	Sb	<0.5	Te	<1

Cd	<0.5	Ga	<0.5	Li	<2	Os	<0.5	Ru	1	Tb	<0.5	Zn	<2
Ce	<0.2	Gd	<0.2										

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution until the date shown above or ***12 Months** from the date opened, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO 17034, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (QSR Certificate Number QSR-1034).

ACCREDITED Testing Laboratory Certificate 883.01
ACCREDITED Reference Material Producer Certificate 883.02

2.0 PRODUCT DESCRIPTION

Product Code:	Multi Analyte Custom Grade Solution
Catalog Number:	6020ICS-9A
Lot Number:	U2-MEB731104
Matrix:	2% (v/v) HNO3
Value / Analyte(s):	21 215 µg/mL ea: Chloride, 3 000 µg/mL ea: Calcium, 2 500 µg/mL ea: Iron, Sodium, 2 000 µg/mL ea: Carbon, 1 000 µg/mL ea: Aluminum, Phosphorus, Sulfur, Potassium, Magnesium, 20 µg/mL ea: Molybdenum, Titanium

3.0 CERTIFIED VALUES AND UNCERTAINTIES

ANALYTE	CERTIFIED VALUE	ANALYTE	CERTIFIED VALUE
Aluminum, Al	1 000 ± 3 µg/mL	Calcium, Ca	3 001 ± 13 µg/mL
Carbon, C	2 001 ± 4 µg/mL	Chloride, Cl	21 230.0 ± 100.0 µg/mL
Iron, Fe	2 501 ± 11 µg/mL	Magnesium, Mg	1 000 ± 4 µg/mL
Molybdenum, Mo	20.01 ± 0.11 µg/mL	Phosphorus, P	1 000 ± 4 µg/mL
Potassium, K	1 000 ± 4 µg/mL	Sodium, Na	2 501 ± 11 µg/mL
Sulfur, S	1 001 ± 4 µg/mL	Titanium, Ti	20.01 ± 0.15 µg/mL

Density: 1.052 g/mL (measured at 20 ± 4 ºC)

Assay Information:

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\ (u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\ (u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

CRM/RMs are tested for trace metallic impurities by Axial ICP-OES and ICP-MS. The result from the most sensitive method for each element, is reported below. Solutions tested by ICP-MS were analyzed in an ULPA-Filtered Clean Room. An ULPA-Filter is 99.9985% efficient for the removal of particles down to 0.3 µm.

6.0 INTENDED USE

6.1 This standard is intended for the calibration of analytical instruments and validation of analytical methods as appropriate. This CRM may be used in connection with EPA Methods 6010, 6020 (all versions), Standard Methods 3120 B and USP <232> / ICH Q3D.

6.2 For products attaining traceability through Inorganic Ventures' Primary Certified Reference Materials (PCRM™) see the Limited License to Use PCRM™ in the Inorganic Ventures Terms and Conditions of Sale, https://www.inorganicventures.com/terms-and-conditions-sale. The Terms and Conditions contain information on the use of materials traceable to PCRM™ certified reference materials. This Limited License agreement is especially pertinent for laboratories accredited under ISO:17034.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

March 20, 2023

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **March 20, 2028**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\ (u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\ (u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Certified Abundance:

IV's Certified Abundance

Isotope	Atom %
Uranium 238U	99.6 ± 0.1
Uranium 235U	0.42 ± 0.05

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

6.1 This standard is intended for the calibration of analytical instruments and validation of analytical methods as appropriate. This CRM may be used in connection with EPA Methods 6010, 6020 (all versions), Standard Methods 3120 B and USP <232> / ICH Q3D.

6.2 For products attaining traceability through Inorganic Ventures' Primary Certified Reference Materials (PCRM™) see the Limited License to Use PCRM™ in the Inorganic Ventures Terms and Conditions of Sale, https://www.inorganicventures.com/terms-and-conditions-sale. The Terms and Conditions contain information on the use of materials traceable to PCRM™ certified reference materials. This Limited License agreement is especially pertinent for laboratories accredited under ISO:17034.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

January 25, 2023

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **January 25, 2028**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma\{(w_i)^2\ (u_{char\ i})^2\}]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\ (u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Certified Abundance:

IV's Certified Abundance

Isotope	Atom %
Uranium 238U	99.8 ± 0.1
Uranium 235U	0.19 ± 0.05

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

6.1 This standard is intended for the calibration of analytical instruments and validation of analytical methods as appropriate. This CRM may be used in connection with EPA Methods 6010, 6020 (all versions), Standard Methods 3120 B and USP <232> / ICH Q3D.

6.2 For products attaining traceability through Inorganic Ventures' Primary Certified Reference Materials (PCRM™) see the Limited License to Use PCRM™ in the Inorganic Ventures Terms and Conditions of Sale, https://www.inorganicventures.com/terms-and-conditions-sale. The Terms and Conditions contain information on the use of materials traceable to PCRM™ certified reference materials. This Limited License agreement is especially pertinent for laboratories accredited under ISO:17034.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

HF Note: This standard should not be prepared or stored in glass.

Note: This solution contains Silver (Ag), please refer to our Sample Preparation Guide for more information (https://www.inorganicventures.com/sample-preparation-guide/samples-containing-silver)

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

October 31, 2024

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **October 31, 2029**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

Thermo Fisher Scientific's Quality System has been found to conform to Quality Management System Standard ISO9001:2015 by SAI Global Certificate Number CERT – 0120633

This is to certify that units of the lot number below were tested and found to comply with the specifications of the grade listed. Certain data have been supplied by third parties. Thermo Fisher Scientific expressly disclaims all warranties, expressed or implied, including the implied warranties of merchantability and fitness for a particular purpose. Products are for research use or further manufacturing. Not for direct administration to humans or animals. It is the responsibility of the final formulator and end user to determine suitability based upon the intended use of the end product. Products are tested to meet the analytical requirements of the noted grade. The following information is the actual analytical results obtained.

Catalog Number	A300	Quality Test / Release Date	09/11/2023
Lot Number	233289		
Description	SULFURIC ACID, ACS grade		
Country of Origin	United States	Suggested Retest Date	Sep/2028
Chemical Origin	Inorganic-non animal		
BSE/TSE Comment	No animal products are used as starting raw material ingredients, or used in processing, including lubricants, processing aids, or any other material that might migrate to the finished product.		

N/A			
Result Name	Units	Specifications	Test Value
APPEARANCE		REPORT	Colorless and free from suspended or insoluble matter
AMMONIUM (NH4)	ppm	<= 2	<1
ARSENIC (As)	ppm	<= 0.01	<0.001
ASSAY	w/w %	Inclusive Between 95.0 - 98.0	96.5
CHLORIDE	ppm	<= 0.2	<0.1
COLOR	APHA	<= 10	<10
HEAVY METALS (as Pb)	ppm	<= 1	<0.005
IDENTIFICATION	PASS/FAIL	= PASS TEST	PASS TEST
IRON (Fe)	ppm	<= 0.2	<0.2
MERCURY (Hg)	ppb	<= 5	<5
NITRATE (NO3)	ppm	<= 0.5	<0.1
RESIDUE AFTER IGNITION	ppm	<= 5	<3
SUBSTANCES REDUCING KMNO4	ppm	<= 2	<2.0

Harout Sahagian - Quality Control Supervisor - Fair Lawn

Note: The data listed is valid for all package sizes of this lot of this product, expressed as an extension of this catalog number listed above.
If there are any questions with this certificate, please call at (800) 227-6701.
*Based on suggested storage condition.

Certified Reference Material

ANAB ACCREDITED REFERENCE MATERIAL PRODUCER AR-1463
ANAB ACCREDITED TESTING LABORATORY AT-1339
ilac-MRA

Component	CAS #	Purity % (GC/FID)	Prepared Concentration[2] (µg/mL)	Certified Analyte Concentration[1] (µg/mL)
1,1,2,2-Tetrachloroethane	79-34-5	98.3	200.6	197.2

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[2] All weights are traceable through NIST, Test No. 684/289871-17

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

trans-1,4-Dichloro-2-butene	0.2393 0.3302	0.2519 0.3232	+++++	0.2999	0.2984	Ave		0.2905				12.8		20.0			
1,2,3-Trichloropropane	0.3188 0.3296	0.3199 0.3139	+++++	0.3379	0.3112	Ave		0.3219				3.1		20.0			

Note: The M1 coefficient is the same as Ave RRF for an Ave curve type. RSD is calculated for Ave curve types. RSE is used for all other types.

FORM VI
GC/MS VOA BY INTERNAL STANDARD - INITIAL CALIBRATION DATA
CURVE EVALUATION

Lab Name: Eurofins Lancaster Laboratories Environment Testing, LLC Job No.: 410-225004-1 Analy Batch No.: 627062

SDG No.:

Instrument ID: 15830 GC Column: R-624SilMS 3 ID: 0.25(mm) Heated Purge: (Y/N) N

Calibration Start Date: 04/07/2025 15:24 Calibration End Date: 04/07/2025 17:19 Calibration ID: 71472
