Indoor Air Monitoring for Methane General Notes

1.) The Binghamton Plaza site is underlain by approximately 30 feet of municipal waste and incinerator ash. Methane gas (generated by the decomposing waste) has been found to exist in soil gas at elevated concentrations throughout the site.

2. The purpose of this inspection is to verify that methane gas is not present at concentrations that pose a risk to building occupants in Buildings 1 through 30. Active methane monitoring systems/alarms exist in Buildings 31, 32 and 33 and are monitored as part of ongoing Site O&M.

Monitoring Protocol

1.) A properly calibrated portable handheld methane meter should be used to monitor indoor air in the buildings shown on the embedded plan. The monitoring of Buildings 20 and 24 should be conducted above the floor hatches that are used to access the crawl space as shown on the plan. The hatches should remain closed.

2.) The meter should be capable of measuring methane concentrations in percent of the Lower Explosive Limit (LEL).

3.) Methane concentrations should be recorded on this form with any other pertinent information.

4.) Any detections of methane should be immediately reported to the party responsible for implementing the SMP, to determine the proper course of action.

Binghamton Plaza - Field Inspection Form
Site-wide Cap and Cover Systems
Site Schematic

Site use Note: The entire site has been remediated to commercial use with the exception of the hatched area shown in the above plan. This hatched area has been remediated to restricted-residential use.

Descriptions of Cap and Cover Systems

1.) Pre-Remediation Cap Areas (gray): This area includes all areas that were covered with pavement, concrete or building footprints prior to remediation in Oct. 2014.

2.) Post-Remediation Soil Cover (green): This area was covered during the Oct. 2014 remediation with at least 12" of clean soil over an orange construction fence demarcation layer.

3.) Post-Remediation Asphalt Cover (pink): These areas were not paved prior to the October 2014 remedial action. The remedial action included the installation of a 6-inch thick asphalt cover system.

Inspection Criteria: Inspect all cap and cover systems for evidence of erosion, significant cracking, sinking or heaving. If the potential for exposure to underlying soil and or waste material exists, note the locations on the embedded map, photograph the area and describe the degradation on this form.

Inspection Results

Cap/Cover Type	Intact? (Y/N)	Repairs Needed? (Y/N)	General Notes
Pre-Remediation Cap Areas (gray)	YES	No	Site has large divits and pot holes.
Post-Remediation Soil Cover (green)	YES	No	N/A
Post-Remediation Asphalt Cover (pink)	YES	No	N/A

General Site Condition and Use Inspection Questionnaire

1.) Is the site use consistent with the land use restrictions (i.e. restricted residential and commercial)? YES X / NO_____.
If no, describe.

2.) Are all monitoring well flush mount manholes intact and in good condition? YES_____/ NO X. If not, specify which monitoring well, photograph the degradation and describe.

3.) Have any new buildings been constructed? YES_____ / NO X.
If so, describe.

4.) Have any buildings been removed? YES_____ / NO X.
If so, describe.

General Notes

1.) The Binghamton Plaza site is underlain by approximately 30 feet of municipal waste and incinerator ash. The existing paved areas, concrete slabs, landscaped areas and building footprints function as a continuous cap and cover system for these waste materials.

2.) The purpose of this inspection is to verify that they are intact and preventing exposures to the underlying soil and waste materials buried at the Site.

3.) If the cap and/or cover systems are compromised to an extent that they can no longer prevent exposures to the underlying soil and/or waste materials, repairs must be completed consistent with the Site Management Plan.

4.) This inspection form also includes general site use items to verify that site use restrictions are being followed.
