

June 2, 2022

Anthony Bollasina, P.G.  
Assistant Geologist - Bureau D, Section D  
New York State Department of Environmental Conservation  
625 Broadway, 12<sup>th</sup> Floor  
Albany, NY 12204

**RE: Weekly Progress Report (Week 3 - May 23-27, 2022)  
EJ Victory Building – 59 Lester Avenue, Johnson City, Broome County, New York  
NYSDEC Site Number: C704060**

Dear Mr. Bollasina:

On behalf of EJ Victory Building, LLC, NEU-VELLE, LLC (NEU-VELLE) has prepared this Weekly Progress Update to summarize the work performed from May 23-27, 2022 at the EJ Victory Building project located at 59 Lester Avenue in the Village of Johnson City, New York (New York State Department of Environmental Conservation [NYSDEC] Brownfield Cleanup Program [BCP] Site #C704060).

### **SCOPE OF WORK**

The following activities were conducted during the reporting period:

#### **GENERAL PROTOCOLS**

Whenever potentially-contaminated soil was being handled (excavated, staged, backfilled, etc.), NEU-VELLE observed the activities, noted any staining, odors, or sheens, screened soils for volatile vapors with a photo-ionization detector (PID), and conducted air monitoring for volatile vapors and particulates at locations upwind and downwind of the Work Area in accordance with the project's Community Air Monitoring Program (CAMP). Real-time air monitoring results were reported using telemetry technology coupled with instrument-supported (Environet) software. Real-time alerts were programmed to notify NEU-VELLE personnel (via text message) when action levels were exceeded.

#### **WORK ZONE #1 – SOUTHERN EXCAVATIONS**

The following excavation/trenching activities were conducted in Work Zone #1 (Helen Drive) on May 23 and 24:

- the old water main pipe was removed
- new pipe bedding (pre-approved imported stone material) was placed
- new pipe was installed
- the trench was backfilled with excavated material and topped with pre-approved imported stone material as needed

## WORK ZONE #1 – SOIL TRANSFER

Soils previously excavated during the installation of the interior drainage trench (and staged on the interior slab-on-grade) were moved to an exterior location at the eastern end of the eastern parking lot (on and covered with polyethylene sheeting) on May 25 and 26. This soil was previously tested in accordance with Part 375 standards and approved by the NYSDEC for re-use as backfill on-site.

## WORK ZONE #2 – NORTHERN EXCAVATIONS

The activities in Work Zone #2 (Avenue C) consisted of asphalt removal and excavations associated with the installation of new storm sewer catch basins.

## OBSERVATIONS

The following observations were noted during the reporting period:

- No odors, staining, or elevated PID readings were observed in soils excavated from the Helen Drive trenches.
- A limited amount of rail bedding (identified by visible tar) was observed during the excavations along Avenue C. This material was separated and placed in the staged railroad bedding pile.
- Wind strength and direction was variable. NEU-VELLE attempted to accurately place the upwind and downwind air monitoring stations, and frequently re-assessed the prevailing wind direction. However, the presence of the large subject building was conducive to swirling winds, and winds sometimes blew in the opposite direction for short periods of time.
- Construction activities unrelated to remediation (movement of large motorized lifts, forklifts, bobcats, etc., dumping of materials within dumpsters, etc.) created visible dust for short periods of time. This dust primarily consisted of fine powder created by the heavy equipment pulverizing stone on the asphalt roadways, and was exacerbated by sunny conditions, dry winds, and unusually low humidity. Areas within the remediation work zone were wetted by use of a garden hose, as needed.
- CAMP air monitoring alert notifications were limited to the following:

### Zone #1

- On the morning of May 23, the “Stop Work” level for particulates was exceeded. The elevated levels were deemed to be related to concrete grinding on the building facade. The monitoring station was moved away from the building façade, and the issue quickly resolved with the concentrations decreasing to acceptable levels.
- In the afternoon of May 26, the Action level for particulates was exceeded. The elevated concentrations were due to the end of excavations and the opening of the road to traffic. Since excavations were complete, the equipment was shut down for the day.

### Zone #2

- In the afternoon of May 24, the “Stop Work” level for particulates was exceeded. The elevated levels were due to cement trucks travelling past the monitoring station. The issue quickly resolved after the cement trucks left the area, with the concentrations decreasing to acceptable levels.

- In the afternoon of May 26, the Action level for particulates was exceeded. The elevated concentrations were due to the end of excavations and the opening of the road to traffic. Since excavations were complete, the equipment was shut down for the day.
- Other notes related to CAMP monitoring include:
  - Early on the morning of May 23, it was observed that the Zone #1 Upwind PID and DustTrack were not communicating with the Netronix modem. A loose USB cable was identified and the problem was corrected.
  - At around noon on May 26, it was observed that the Zone #1 PIDs were recording but not communicating with the Nextronix modem. The PIDs were re-started and began communicating with the modem.
  - On May 25, the Zone #2 Downwind PID was recording but not communicating with the Nextronix modem. The communication issue was not noticed until the end of the day. Since the handheld/roaming PID used in Zone #2 did not register any detectable VOC concentrations for ambient air, and no exceedances of VOC action levels have been noted so far during the project, this issue is not of significant consequence (also see note below regarding the downloading of all data).
  - On May 27, the Zone #2 Upwind PID was malfunctioning (reading VOC concentrations >100 ppm) and therefore, was turned off. The “handheld/roaming” PID from Zone #1 was placed in the monitoring station and frequently observed, during which it was noted that the VOC levels on this PID did not exceed 1.0 ppm (since this PID was not synched with this modem, the results did not transfer to the telemetry software). Since the downwind VOC concentrations did not exceed 0.4 ppm, this issue was not of consequence.
  - Note that at the end of the project, all recorded data from the CAMP monitoring equipment (even if it wasn’t communicating with the Netronix modem) will be downloaded directly from each unit and included within the Final Engineering Report.

The following activities are anticipated to occur during the next week:

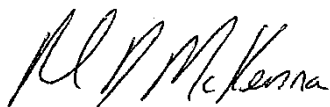

- Continuation of the storm sewer excavations/installations along Avenue C.
- Installation of underground electrical vaults along Helen Drive.
- Continuation of the water main excavations/installations along Helen Drive.
- Waste characterization analysis results are expected for the gasoline-contaminated soils and railroad bedding. Upon receipt, the landfill’s waste profile form will be completed and submitted to the landfill for their approval. If the soils are accepted and schedule allows, the soils will be disposed at the landfill.
- Supply chain issues have resulted in a shortage of new water main pipe, which is limiting the associated work along Helen Drive and Avenue C. This work will re-commence upon delivery of new water pipe.
- Construction associated with the renovation of the subject building (unrelated to remediation) will continue to be coordinated with remedial efforts.

**CLOSING**

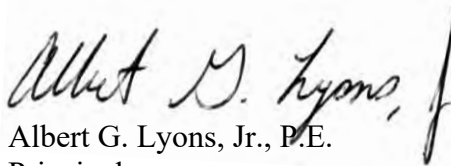

If you have any questions or comments pertaining to this proposal, please call me at (315) 345-1649 or e-mail me at [rmckenna@neu-velle.com](mailto:rmckenna@neu-velle.com).

Sincerely,

NEU-VELLE, LLC

Richard D. "Rico" McKenna  
Senior Project Manager
