Anthony Bollasina, P.G.
Assistant Geologist - Bureau D, Section D
New York State Department of Environmental Conservation
625 Broadway, 12th Floor
Albany, NY 12204

**RE: Weekly Progress Report (Week 5: June 6-10, 2022)
EJ Victory Building – 59 Lester Avenue, Johnson City, Broome County, New York
NYSDEC Site Number: C704060**

Dear Mr. Bollasina:

On behalf of EJ Victory Building, LLC, NEU-VELLE, LLC (NEU-VELLE) has prepared this Weekly Progress Update to summarize the work performed from June 6-10, 2022 at the EJ Victory Building project located at 59 Lester Avenue in the Village of Johnson City, New York (New York State Department of Environmental Conservation [NYSDEC] Brownfield Cleanup Program [BCP] Site #C704060).

SCOPE OF WORK

The following activities were conducted during the reporting period.

GENERAL PROTOCOLS

Whenever potentially-contaminated soil was being handled (excavated, staged, backfilled, etc.), NEU-VELLE observed the activities, noted any staining, odors, or sheens, screened soils for volatile vapors with a photo-ionization detector (PID), and conducted air monitoring for volatile vapors and particulates at locations upwind and downwind of the Work Area in accordance with the project's Community Air Monitoring Program (CAMP). Real-time air monitoring results were reported using telemetry technology coupled with instrument-supported (Environet) software. Real-time alerts were programmed to notify NEU-VELLE personnel (via text message) when action levels were exceeded.

WORK ZONE #1 – HELEN DRIVE (SOUTHERN) EXCAVATIONS

The activities in Work Zone #1 (Helen Drive) consisted of:

- Asphalt removal continued to near the east end of the building.
- Water line installation continued between Avenues A and B.
- Two storm sewer catch basins were installed near the western end of the building.

WORK ZONE #2 – AVENUE C (NORTHERN) EXCAVATIONS

The activities in Work Zone #2 (Avenue C) consisted of:

- Asphalt removal and trench excavations associated with the installation of new storm sewer piping and catch basins in the western portion of the Work Zone.

- Removal and temporary staging of railroad ties encountered in the western portion of the Work Zone
- Backfilling of the newly-constructed loading dock.

STAGED CONTAMINATED SOILS

The piles of gasoline-contaminated soils and railroad bedding remain (covered with polyethylene sheeting). The Site Contractor (Pritchard Property Development) is currently coordinating hauling services with their insurance company.

OBSERVATIONS

The following observations were noted during the reporting period:

- A small volume of gasoline-contaminated soil was encountered directly below the asphalt near the western end of the building (associated with Spill #22-01296). This soil was removed and staged in the existing contaminated soil pile.
- Wind strength and direction was variable. NEU-VELLE attempted to accurately place the upwind and downwind air monitoring stations, and frequently re-assessed the prevailing wind direction. However, the presence of the large subject building was conducive to swirling winds, and winds sometimes blew in the opposite direction for short periods of time.
- Construction activities unrelated to remediation (movement of large motorized lifts, forklifts, bobcats, etc., dumping of materials within dumpsters, etc.) created visible dust for short periods of time. This dust primarily consisted of fine powder created by the heavy equipment pulverizing stone on the asphalt roadways, and was exacerbated by sunny conditions, winds, and low humidity. Areas within the remediation work zone were wetted by use of a garden hose, as needed.

- CAMP air monitoring alert notifications were limited to the following:

Work Zone #1

- No alerts were activated during the reporting period.

Work Zone #2

- Early in the morning of June 7, the Action level for particulates was exceeded. The elevated concentrations were due to nearby traffic at the beginning of the workday. The issue quickly resolved after the traffic passed.
- On PID Twice during the week (June 7 Zone #1 Downwind and June 9 Zone #2 Downwind), PIDs were recording but not communicating with the Nextronix modem. The communication issues were not noticed until the end of each day.
 - Since the handheld/roaming PID used in the affected zones did not register any detectable VOC concentrations for ambient air, and no exceedances of VOC action levels have been noted so far during the project, this issue is not of significant consequence
 - Note that at the end of the project, all recorded data from the CAMP monitoring equipment (even if it wasn't communicating with the Netronix modem) will be downloaded directly from each unit and included within the Final Engineering Report.

The following activities are anticipated to occur during the next week:

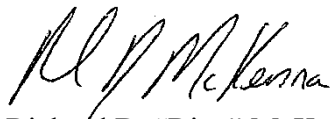

- Continuation of the storm sewer excavations/installations along Avenue C.
- Continuation of water line excavations/installations along Helen Drive.
- Upon receipt of the Hauler's licensing information, the landfill's waste profile form will be completed and submitted to the landfill for their approval. If the soils are accepted and schedule allows, the soils will be disposed at the landfill.
- Construction associated with the renovation of the subject building (unrelated to remediation) will continue to be coordinated with remedial efforts.

CLOSING

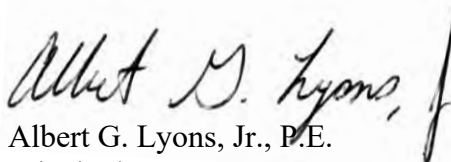

If you have any questions or comments pertaining to this proposal, please call me at (315) 345-1649 or e-mail me at rmckenna@neu-velle.com.

Sincerely,

NEU-VELLE, LLC

Richard D. "Rico" McKenna
Senior Project Manager

Albert G. Lyons, Jr., P.E.
Principal
