Anthony Bollasina, P.G.  
Assistant Geologist - Bureau D, Section D  
New York State Department of Environmental Conservation  
625 Broadway, 12<sup>th</sup> Floor  
Albany, NY 12204

**RE: Weekly Progress Report (Week 16: August 22-26, 2022)  
EJ Victory Building – 59 Lester Avenue, Johnson City, Broome County, New York  
NYSDEC Site Number: C704060**

Dear Mr. Bollasina:

On behalf of EJ Victory Building, LLC, NEU-VELLE, LLC (NEU-VELLE) has prepared this Weekly Progress Update to summarize the work performed from August 22-26, 2022 at the EJ Victory Building project located at 59 Lester Avenue in the Village of Johnson City, New York (New York State Department of Environmental Conservation [NYSDEC] Brownfield Cleanup Program [BCP] Site #C704060).

## **SCOPE OF WORK**

### **GENERAL PROTOCOLS**

Whenever potentially-contaminated soil was being handled (excavated, staged, backfilled, etc.), NEU-VELLE observed the activities, noted any staining, odors, or sheens, screened soils for volatile vapors with a photo-ionization detector (PID), and conducted air monitoring for volatile vapors and particulates at locations upwind and downwind of the Work Area in accordance with the project's Community Air Monitoring Program (CAMP). Real-time air monitoring results were reported using telemetry technology coupled with instrument-supported (EnviroNet) software. Real-time alerts were programmed to notify NEU-VELLE personnel (via text message) when action levels were exceeded.

### **WORK ZONE #1 – HELEN DRIVE EXCAVATIONS**

The activities that occurred along Helen Drive (on the south side of the Site) consisted of excavations associated with the installation of water lines, sanitary sewer lines, storm sewer lines, electrical conduit, and light poles; and grading / leveling for upcoming parking lot and roadway construction.

## WORK ZONE #2 – AVENUE C EXCAVATIONS

No remediation / excavation activities occurred along Avenue C (on the north side of the Site) during the reporting period.

## OBSERVATIONS

The following observations were noted during the reporting period:

- Wind strength and direction was variable. NEU-VELLE attempted to accurately place the upwind and downwind air monitoring stations, and frequently re-assessed the prevailing wind direction. However, the presence of the large subject building was conducive to swirling winds, and winds sometimes blew in the opposite direction for short periods of time.
- Construction activities unrelated to remediation (movement of large motorized lifts, forklifts, bobcats, etc., dumping of materials within dumpsters, etc.) created visible dust for short periods of time. This dust primarily consisted of fine powder created by the heavy equipment pulverizing stone on the asphalt roadways, and was exacerbated by sunny conditions, winds, and low humidity. Areas within the remediation work zone were wetted by use of a garden hose, as needed.
- The following CAMP air monitoring alerts were triggered during the reporting period. None of the alerts were associated with remediation activities.
  - At around noon on Tuesday August 23, the “Stop Work” level for VOCs was exceeded. It appeared the Work Zone #1 Downwind PID was malfunctioning, so it was replaced with the “roaming” PID. The malfunctioning PID was re-calibrated, and was reinstalled in the monitoring station at approximately 2:00 in the afternoon. Note that no triggers were activated while the roaming PID was in the monitoring station.
  - Throughout the day on Wednesday August 24, the Work Zone #1 Downwind PID kept spiking at levels above 1,000 ppm. At first it was assumed that the PID was malfunctioning. However, it was determined that PVC pipe occurring nearby (within the building) was causing the spikes. The downwind monitoring station was placed further away from the building (near the eastern property border) and PID readings normalized.
- Upon setup in the morning of Monday August 22, heavy rains entered the sampling tube of the Work Zone #1 Downwind PID. While the PID was taken offline and allowed to dry, the “roaming” PID was used in its place (manually observed). All manual readings on the roaming/downwind PID were 0.0 ppm. The original PID was reinstalled approximately 2 hours later.

## UPCOMING WORK

It is anticipated that excavations associated with the installation of water lines, sanitary sewer lines, storm sewer lines, and electrical conduit will occur during the following week, along with asphalt removal and grading/leveling activities in the roadways and parking lots.

---

**CLOSING**

If you have any questions or comments pertaining to this report, please call me at (315) 345-1649 or e-mail me at [rmckenna@neu-velle.com](mailto:rmckenna@neu-velle.com).

Sincerely,

NEU-VELLE, LLC

Richard D. "Rico" McKenna  
Senior Project Manager

Albert G. Lyons, Jr., P.E.  
Principal
