**RE: Weekly Progress Report (Week 25: October 24-28, 2022)
EJ Victory Building – 59 Lester Avenue, Johnson City, Broome County, New York
NYSDEC Site Number: C704060**

Dear Mr. Bollasina:

On behalf of EJ Victory Building, LLC, NEU-VELLE, LLC (NEU-VELLE) has prepared this Weekly Progress Update to summarize the work performed from October 24-28, 2022 at the EJ Victory Building project located at 59 Lester Avenue in the Village of Johnson City, New York (New York State Department of Environmental Conservation [NYSDEC] Brownfield Cleanup Program [BCP] Site #C704060).

SCOPE OF WORK

No excavation/remediation work occurred from Wednesday October 26 through Friday October 28, 2022.

GENERAL PROTOCOLS

Whenever potentially-contaminated soil was being handled (excavated, staged, backfilled, etc.), NEU-VELLE observed the activities, noted any staining, odors, or sheens, screened soils for volatile vapors with a photo-ionization detector (PID), and conducted air monitoring for volatile vapors and particulates at locations upwind and downwind of the Work Area(s) in accordance with the project's Community Air Monitoring Program (CAMP). The locations of the monitoring stations are presented on the daily CAMP Monitoring Logs provided in Appendix C. Real-time air monitoring results were reported using telemetry technology coupled with instrument-supported (EnviroNet) software. Real-time alerts were programmed to notify NEU-VELLE personnel (via text message) when action levels were exceeded.

WORK ZONE #1 – HELEN DRIVE

The activities that occurred along Helen Drive (on the south side of the Site) during the reporting period consisted of limited excavations associated with electric conduit and the installation of a retention pond. Also, monitoring wells within Work Zone #1 were decommissioned.

WORK ZONE #2 – AVENUE C

The activities that occurred along Avenue C (on the north side of the Site) during the reporting period consisted of the installation of fencing along the northern property border (fence posts were driven). In consultation with the NYSDOH, it was agreed that CAMP monitoring was not required for driven fence posts, as long as no visible dust was being emitted by the operation.

Also, monitoring wells within Work Zone #2 were decommissioned.

OBSERVATIONS

The following observations were noted during the reporting period:

- Wind strength and direction was variable. NEU-VELLE attempted to accurately place the upwind and downwind air monitoring stations, and frequently re-assessed the prevailing wind direction. However, the presence of the large subject building was conducive to swirling winds, and winds sometimes blew in the opposite direction for short periods of time.
- Construction activities unrelated to remediation (movement of large motorized lifts, forklifts, bobcats, etc., dumping of materials within dumpsters, etc.) created visible dust for short periods of time. This dust primarily consisted of fine powder created by the heavy equipment pulverizing stone on the asphalt roadways, and was exacerbated by sunny conditions, winds, and low humidity. Areas within the remediation work zone were wetted by use of a garden hose, as needed.
- No CAMP air monitoring alerts were triggered during the reporting period.
- No visible dust was observed during the driving of fence posts.

UPCOMING WORK

No excavation/remediation work is anticipated for the remainder of the construction project. If other excavation/remediation work does occur, NEU-VELLE will observe the work and CAMP monitoring will be performed.

CLOSING

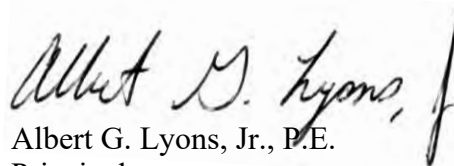

If you have any questions or comments pertaining to this report, please call me at (315) 345-1649 or e-mail me at rmckenna@neu-velle.com.
