Sample and Data Qualifiers Relating to This Work Order

VOA-HDSP	Sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).-NON-COMPLIANT
VOA-Air	Air bubbles were present in vial upon receipt by lab.
S-08	The recovery of this surrogate was outside of QC limits.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
IS-01	This internal standard did not meet acceptance criteria. The sample was reanalyzed to confirm matrix interference. The associated compounds have been flagged IS-HI or IS-LO accordingly.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-NFD	NFDHA was extracted outside of the 3-day holding time established by 1633A. NFDHA is not a regulated analyte, and does not have a toxicity factor or corresponding EPA Regional Screening Level. These results should not impact data usability
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
/\	Analyte is not certified but the state of sample origination offer certification for the Analyte

CLP Flags

J	Estimated Value. Result is above the Method Detection Limit (MDL) but below the Reporting Limit (RL).
B	Blank Contamination. The analyte was also detected in the method blank.
U	Not Detected. The analyte was not detected above the reporting limit
E	Exceeds Calibration range. Result is above the instruments' linear calibration range.
D	Diluted sample result. The sample was diluted before analysis.
H	Holding time exceeded. The sample was anlayzed after the recommended/required holding time.
P	Poor Precision / duplicate variance. Indicates poor agreement between duplicates (e.g. matrix spike duplicates or lab duplicates).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.

MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Trip Blank received, not listed on the COC. Added to end of the workorder.

Poughkeepsie NY, 12603
Attention: Aaron Rubinstein

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 01, 2026 and listed below. The project was identified as your project: **20240228- 1 North Depot Street, Binghamton NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for Project (SDG) No.: 26D0086

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NYDOH-NY10854, NJDEP-CT005, PADEP-68-04440, CTDPH-PH0840; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NYDOH-NY12058, NJDEP-NY037, CTDPH-PH0837, NHDES-NH2097, MDDEP-375, PADEP-68-06231.

NYSDOH-NY12058	NYSDOH NELAC/ELAP Program - Queens	NY ELAP-12058	04/01/2026

Sample and Data Qualifiers Relating to This Work Order

/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.

CLP Flags

B	Blank Contamination. The analyte was also detected in the method blank.
D	Diluted sample result. The sample was diluted before analysis.
E	Exceeds Calibration range. Result is above the instruments' linear calibration range.
H	Holding time exceeded. The sample was anlayzed after the recommended/required holding time.
J	Estimated Value. Result is above the Method Detection Limit (MDL) but below the Reporting Limit (RL).
N	Tentatively Identified Compound (TIC). The compound is presumptively identified but not confirmed with a standard.
P	Poor Precision / duplicate variance. Indicates poor agreement between duplicates (e.g. matrix spike duplicates or lab duplicates).
U	Not Detected. Analyte not detected above laboratory's established reporting limit.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Revision Description: This report has been revised to update the reporting units.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 31, 2026 and listed below. The project was identified as your project: **20240228- 1 North Depot Street, Binghamton NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for Project (SDG) No.: 26C1722

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NYDOH-NY10854, NJDEP-CT005, PADEP-68-04440, CTDPH-PH0840; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NYDOH-NY12058, NJDEP-NY037, CTDPH-PH0837, NHDES-NH2097, MDDEP-375, PADEP-68-06231.

Sample and Data Qualifiers Relating to This Work Order

/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
QC-LCS	LCS/LCS Dup recovery was above laboratory control limits. Sample does not contain any target compounds; therefore sample results are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
S-08	The recovery of this surrogate was outside of QC limits.
S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
VOA-Air	Air bubbles were present in vial upon receipt by lab.

CLP Flags

B	Blank Contamination. The analyte was also detected in the method blank.
D	Diluted sample result. The sample was diluted before analysis.
E	Exceeds Calibration range. Result is above the instruments' linear calibration range.
H	Holding time exceeded. The sample was anlayzed after the recommended/required holding time.
J	Estimated Value. Result is above the Method Detection Limit (MDL) but below the Reporting Limit (RL).
N	Tentatively Identified Compound (TIC). The compound is presumptively identified but not confirmed with a standard.
P	Poor Precision / duplicate variance. Indicates poor agreement between duplicates (e.g. matrix spike duplicates or lab duplicates).
U	Not Detected. Analyte not detected above laboratory's established reporting limit.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Lab recieved TB vials (-33) with significant headspace. These were lab supplied TB sets, the issue was brought to bottle preperation departments attention.

Revision Description: This report has been revised to update the VOA QC, which was linked to the wrong data file.

FISH AND WILDLIFE RESOURCES IMPACT ANALYSIS PART 1
1 NORTH DEPOT STREET
CITY OF BINGHAMTON, BROOME COUNTY, NEW YORK

1.0 INTRODUCTION

As part of the New York Department of Environmental Conservation's (NYDEC) Brownfield Cleanup Program (BCP), Partridge Venture Engineering, PC, dba PVE Engineering (PVE) is required to perform a Fish and Wildlife Resources Impact Analysis (FWRIA) Part 1 for a parcel located at 1 N Depot Street in Binghamton, New York. The FWRIA identifies potential risks to wildlife from chemicals potentially migrating from the project parcel due to previous site usage. PVE conducted a site visit to evaluate current conditions on May 21, 2024 and March 3, 2025.

The subject parcel is located at 1 N Depot Street (Tax ID #160.25-2-20.2) totaling 0.63 acres which is located along North Depot Street and Prospect Avenue in the village of Binghamton, Broome County, New York. The parcels are currently undergoing a New York State Department of Environmental Conservation (NYSDEC) Brownfield Program investigation as part of a redevelopment plan for the parcels. Figures located in Appendix A illustrate the project location.

1.1 Project Area Description

The subject parcel is located in an urban setting which has been impacted by prior site development. The proposed BCP Site is bordered to the north by 95 Prospect Avenue (commercial) and 108 Prospect Avenue (residential), to the east by 10 Eldrege Street (parking lot) and 21 North Depot Street (commercial), to the south by railroad tracks and a storage yard, and to the west by 89 Prospect Avenue (commercial).

The Site is improved with one (1) 51,000 sq. ft. five-story and paved parking lot. The Site is currently zoned by the City of Binghamton as "Service Commercial". The proposed project area is adjacent to commercial and residential properties. The Site is currently vacant with parking being used for adjoining businesses.

As early as 1887, the property operated as wholesale groceries, a cigar factory, Casper and Honah Tin Works, a machine shop and the Bengal Blueing Factory. In 1898, only the wholesale groceries and cigar factory were in operation. In 1918, the property operated as wholesale groceries, coffee roasters wholesale hardware, and Reynolds and Hawley ornamental iron works. In 1950-1952, the property operated as wholesale groceries, prints wholesale hardware and motor freight terminals with a gasoline tank. In 1970, the property operated as LJ Kingsley Wholesale Hardware (including paints), with a buried gasoline tank, wholesale meats. Currently the structure is a 5-story abandoned/vacant former commercial structure in very poor condition. Ecological communities present on the parcel are described in detail in Section 3 of this report. Appendix B includes photographs depicting the parcel and surrounding areas.

2.0 METHODOLOGY

The FWRIA was prepared in accordance with New York State Department of Environmental Conservation Fish and Wildlife Impact Analysis for Inactive Hazardous Waste Sites (NYSDEC 1994).

Vegetative community types were described according to Ecological Communities of New York State, Second Edition (2014).

The United States Department of the Interior, Fish and Wildlife Service (USFWS) and New York State Department of Environmental Conservation (NYSDEC) Natural Heritage Program (NHP) were contacted for information on rare, threatened and endangered species and significant natural communities in proximity to the parcels; this correspondence is included in Appendix C. The response from the Natural Heritage Program is still pending. The NYSDEC Environmental Resources Mapper (ERM) was used to identify the presence of NYS freshwater wetlands, other mapped aquatic resources, and significant ecological communities in the project vicinity. Information from the ERM review was used to develop the Fish and Wildlife Resource Map (Appendix A). Google Maps was used to perform a desktop analysis of the land uses within 0.5 mile of the subject parcels; this information was used to develop the General Cover Types Map (Appendix A).

A site visit was conducted on March 3, 2025, to inventory the resources of the parcels and land uses within 0.5 mile of the parcels. Conditions during the site visit consisted of clear, cool weather, with small patches of remaining snow cover. Observations during the site visit were used to:

- develop the attached Fish and Wildlife Topographic Map and General Cover Types Map (included in Appendix A),
- observe wildlife species, identify significant ecological resources, and observe evidence of stressors on plants and animals, if any, from site-related contaminants.

Wildlife use in the subject parcels and areas within 0.5 mile was characterized based on evaluation of desktop resources and observations during the March 3, 2025 site visit. Evidence of use observed during the site visit included vocalizations, tracks, scat, tree damage, direct observations of animals, and other indications suggesting presence. Food and cover availability were also noted.

3.0 FISH & WILDLIFE RESOURCES

The area comprising the subject parcels and surrounding area is an urban environment with little to no natural vegetation present. Years of urban development pressure have transformed the area into a highly impacted ecosystem, when compared to an undeveloped site. Vegetation in the area consists of isolated pockets with a high degree of invasive, opportunistic species present. The area is characterized by multi-story dwellings and intermixed commercial and older industrial buildings. Two terrestrial ecological communities were identified within the subject parcel. These include paved road/ path and urban structure exterior.

Terrestrial ecological communities identified outside of the subject parcels but within ½ mile include mowed lawn, mowed lawn with trees, paved road/path, railroad, deepwater river, and urban structure exterior. The approximate boundaries of these cover types are illustrated on the General Cover Type Map located in Appendix A.

3.1 Terrestrial Resources

3.1.1 Cover Type 1: Mowed Lawn

The 1 North Depot parcel does not contain any mowed lawn, however many residential and commercial properties within 0.5 mile of the project contain this cover type. This community is typified by its regularly mowed herbaceous stratum that is dominated by grasses (Poa pratensis and Digitaris spp.) and forbs such as common dandelion (Taraxacum officinale), red clover (Trifolium pratense) and chicory (Cichorium intybus).

This community type provides some foraging habitat for common wildlife species that have adapted to the urban environment, but due to its openness it is not suitable for nesting.

3.1.2 Cover Type 2: Mowed Lawn with Trees

This is the dominant ecological community within the 0.5 mile radius of the site and is primarily associated with the residential and commercial properties that dominate the area. The largest parcels with this cover type includes a recreational park approximately 0.4 mile northwest of the project parcel and a minor league ballpark 0.25 mile southeast of the project parcel. This community is typified by its regularly mowed herbaceous stratum that is dominated by grasses and forbs. Scattered shrubs and trees occur as ornamentals. Common shrubs include border privet (Ligustrum obtusifolium), yew (Taxus spp.) and winged euonymus (Euonymus alatus). Tree species generally include Norway spruce (Picea abies), red maple (Acer rubrum), and Norway maple (Acer platanoides).

This community type provides foraging, roosting, nesting, and other habitat for common wildlife species that are adapted to urban environments, such as eastern grey squirrel (Sciurus carolinensis), eastern cottontail (Sylvilagus floridanus), woodchuck (Marmota monax) and American robin (Turdus migratorius).

3.1.3 Cover Type 3: Paved Road/Path

This community type occurs throughout the review area and primarily consists of paved roads for vehicle use. The 1 North Depot parcel is in the middle of a large contiguous network of paved road paths.

This community provides no wildlife habitat, but it is typically bordered by remnant vegetation that may consist of exotic and/or invasive species. Common urban species are usually found in this habitat type. Wildlife use of the parcels is also limited by surrounding roadways, which discourage or, in the case of road kills, prevent access.

3.1.4 Cover Type 4: Urban Structure Exterior

Exterior surfaces of the residential and commercial buildings and other developed infrastructure throughout the review area can provide some habitat for wildlife species. Some surfaces may be partially vegetated by mosses, lichens, vines and/or other vegetation. The northern portion of the parcel shares a border with a impervious parking lot.

These structures provide potential nesting and roosting habitat for wildlife that has adapted to the urban environment. Species likely include house sparrow (Passer domesticus) and house finch (Haemorhous mexicanus). Other species may include rock pigeons (Columba livia) and in some cases bats.

3.1.5 Cover Type 5: Railroad

The northern side of the parcel shares a border with an active railroad. This community is described as a permanent road having a line of steel rails fixed to wood ties and laid on a gravel roadbed that provides a track for cars or equipment drawn by locomotives. The railroad right of way may be maintained by mowing or herbicide spraying. Characteristic plants include invasive weeds.

This habitat could provide a corridor for white tailed deer and edge habitat for birds. The tendency for railroad habitat to characteristically support invasive species makes it not desirable for species diversity.

3.2 Aquatic Resources

3.2.1 Cover Type 6: Unconfined River

The Chenango River is located 0.2 mile west of the parcel and is categorized as an unconfined river. These rivers are typically dominated by runs with interspersed pool sections and a few or no distinct riffles, clearly defined meanders and well-developed natural levees. The Chenango River flows through Madison, Chenango and Broome counties. It begins in Morrisville (Madison County) and flows for around 90 miles until it empties into the Susquehanna River (Broome County) in Binghamton. The Tioughnioga River is a major tributary which combines with the Chenango River at Chenango Forks. The river is a Class B river that is suitable for recreational uses such as fishing, swimming and boating.

This diverse ecosystem is critically important for numerous fish and wildlife species. It is likely that bald eagles have or will spend time foraging along this stretch of river. Review of the USFWS Information for Planning and Consultation (IPaC) system reported that the Chenango supports the threatened (NYS & federal) green floater (Lasmigona subviridis) The subject parcels will have no impact on the river, or green floater mussel.

3.3 Freshwater Wetlands

Based on desktop review and site visit observations, wetlands are not present on or adjacent to the subject parcel. There is no impact to offsite wetlands from this site.

3.4 Fish and Wildlife Resources

Review of the Environmental Resource Mapper (ERM) identified that the subject parcel is inside of rare species and significant natural community polygons. However, the parcel is not known to support rare, threatened, or endangered species or significant natural communities as the species listed are waterborne species associated with the Chenango River. The USFWS IPaC Trust Resource List (included in Appendix C) identified that the subject parcels are in the vicinity of the northern long eared bat (Myotis septentrionalis, NYS and federal endangered) and Tricolored Bat (Myotis septentrionalis, NYS and federal proposed endangered) and that there are no critical habitats for these species at this location. The list also identified two species that warrant special attention within 0.5 mile of the project location. These include:

- Green floater mussel – NYS threatened, federal proposed threatened
- Monarch butterfly (Danaus plexippus) - federal proposed endangered

Based on available habitat observed during the site visit, none of these species are expected to utilize the site.

The subject parcels provide limited wildlife value due to the previously developed nature of the parcels and the minimal existing vegetation. In addition, the presence of concrete slabs and asphalt further inhibit plant growth which could provide habitat. Wildlife species likely to be present are those that adapt well to an urban setting. The subject parcels do not support northern long eared bat, Tricolor Bat or green floater mussels due to a lack of suitable habitat. The parcel could not support common milkweed (Asclepias syriaca), the host plant for the monarch butterfly. Milkweed or other pollinator friendly species were not observed during the site visit. The impervious nature of the site restricts the growth of any suitable nectar species that could be food sources for monarchs.

The surrounding 0.5-mile radius consists of residential and commercial properties in an urban setting. Naturally occurring ecological communities are not likely due to the highly urbanized surrounding areas. The ecological communities are not consistent or well connected and therefore do not support diverse wildlife populations. Any species present are primarily those that have adapted to the urban environment. The rail corridor could be used a limited wildlife travel corridor for urbanized species. The Chenango River provides the best wildlife habitat within 0.5 mile of the subject parcels but is far enough from the subject parcel that it would not be affected by any contaminants from the subject parcel.

3.5 Observations Of Stress

During the March 3, 2025 site visit, PVE searched for evidence of chemical and physical stressors on flora and fauna inhabiting the subject parcels. This included searching for stressors such as, but not limited to, wildlife mortality, seeps, exposed waste, absence of plants and animals, dead or dying vegetation, discolored soils, and unusual odors.

The subject parcel and surrounding lands have been heavily developed/altered for commercial and residential uses. This has significantly reduced the viability of these areas to support diverse ecological communities and associated fish and wildlife populations. Indications of stress on flora or fauna were not

detected during the site visit. Much of the site was previously developed for industrial/commercial use and remnants of industrial use, asphalt and concrete, remain. This limits uses for wildlife.

3.6 Recorded Fish Kills or other Instances of Wildlife Mortality Associated with Subject Parcels

Records of fish kills or other instances of wildlife mortality were not found for the area

3.7 Fish or Wildlife Consumption Advisories

Fish and wildlife consumption opportunities are not associated with the project parcel as there are no streams or waterbodies on the site, therefore hunting and fishing opportunities do not exist within the subject parcel. As a result, no NYS Department of Health (NYSDOH) fish consumption advisories are relevant.

3.8 Value of Habitat to Associated Fauna

As previously discussed, the developed/urban nature of the subject parcel and surrounding lands greatly limits any wildlife uses and constrains plant life to invasive species that are well adapted to the urban environment. Likely wildlife associations are provided in Sections 3.1, 3.2 and 3.3 above.

Vegetative growth is significantly limited by previous disturbances and the extent of existing pavement and concrete. Broken asphalt and concrete can provide cover for small invertebrates such as worms, snails and millipedes. These cover objects may also be utilized by small amphibians and small snakes. As typically found on abandoned urban sites, common invasive species of plants such as Golden Feather Moss (Campyliadelphus chrysophyllus), Crabgrass (Digitaria sanguinalis) and Virginia Creeper (Parthenocissus quinquefolia) were identified on the property. The habitat value associated with the parcel are minimal and do not offer quality habitat for common species or those that are able to adapt to degraded ecological communities and disturbed habitat.

3.9 Value of Resources to Humans

Except for commercial use, the subject parcels currently provide minimal value to humans in terms of fish and wildlife resources as the parcel is not used for recreational purposes. The urban setting prevents hunting, and the degraded ecological habitats are not significant for wildlife viewing. Fishing in the Chenango River is the nearest environmental outdoor recreational resources within a 0.5-mile radius of the parcel.

Recreation opportunities are not available at the subject parcel nor will they be available in the future, as the project is planned for residential development with no recreational amenities planned.

4.0 EXPOSURE PATHWAYS & ANALYSIS

Based on a review of the existing site conditions, topography, soil boring logs, sampling information, and analytical data, exposure pathways appear limited to direct contact of onsite wildlife species with the limited broken pavement/concrete areas. The presence of blacktop and concrete essentially act as a barrier to burrowing and potential ingestion of contaminated grit. The lack of any aquatic resources on site also limits the potential exposure pathways to any aquatic species.

Contaminants in shallow soil at the project parcels have a very limited exposure to wildlife and a low potential for offsite migration to aquatic resources. Shallow soils were only evaluated since most biological activities occur within approximately three feet of the surface.

Based on previous investigations, groundwater beneath the site was not encountered by any of the ten (10) soil borings. Due to the distance to surface water bodies, the flat topography of the area and the lack of groundwater encountered in the borings, exposure to groundwater contaminants is not anticipated.

4.1 Chemicals of Potential Ecological Concern

Table 375-6.8(b) in Title 6 New York Code of Rules and Regulations (NYCRR) Part 375 lists Restricted Use Soil Cleanup Objectives (SCOs) for Protection of Ecological Resources. Table 375-6.8(a) lists Unrestricted Use SCOs. Soil concentrations at the subject parcels were compared to Restricted Use SCOs for Protection of Ecological Resources to determine what chemicals were those of potential ecological concern. Where an SCO for the Protection of Ecological Resources was not specified for a particular compound, the Unrestricted Use SCO was used as a guidance value.

Based on the soil analytical results reported for the subject parcels, chemicals of potential ecological concern in soil include:

- Benzo(a)anthracene,
- Benzo(a)pyrene,
- Benzo(b)fluoranthene,
- Benzo(k)fluoranthene,
- Dibenz0(a,h)anthracene,
- Indeno(1,2,3-c,d)pyrene,
- Lead, and
- Mercury.

As discussed above, contaminants of concern were evaluated only in shallow (0-3.5 feet depth) soil.

Groundwater was not encountered in any of the ten (10) borings performed.

4.2 Exposure Pathways

Complete exposure pathways include:

- Surface soil contamination that may be ingested by invertebrates and other wildlife, especially burrowing animals,
- Sediment transport of contaminated soil during precipitation, snowmelt and other events that transport surface sediment, and
- Dermal exposure of invertebrates and other wildlife to surface soil contamination especially during burrowing.

Invertebrates such as earthworms and insects likely ingest contaminants through ingestion of contaminated soils and vegetation present onsite. Burrowing mammals, such as chipmunks (Tamias striatus) or woodchuck (Marmota monax), could also have direct contact with surficial soil contamination. The contaminants are then transported through the food chain when larger wildlife (e.g., birds) feed on the invertebrates or small mammals. Due to the nature of the existing impervious cover, burrowing is not anticipated on this site.

5.0 IDENTIFICATION OF APPLICATION FISH & WILDLIFE REGULATORY CRITERIA

Contaminant-specific criteria applicable to the remediation of fish and wildlife resources at the project parcels likely include:

- NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1
- Division of Fish and Wildlife Screening and Assessment of Contaminated Sediment
- NYSDEC DER-10: Technical Guidance for Site Investigation and Remediation

Site-specific criteria such as the NYS Freshwater Wetlands Act (FWA), the Tidal Wetland Act (TWA) and 401 Water Quality Certification (WQC) are not applicable to the project parcels because aquatic resources are not present within the parcel.

6.0 CONCLUSIONS

The site's use as habitat for wildlife is substantially restricted due to the impervious nature and past uses of the site. These past uses have resulted in the discharge of contaminants into the soil, however the impervious cover will protect against direct contact to wildlife. Burrowing, direct soil contact and sediment transport are not anticipated with the site's current land cover. No aquatic resources are located on site and the nearest surface water is 0.2 miles to the west. Redevelopment of the property may be able to provide some future wildlife habitat by utilizing softscape areas with plant selections that will provide food, habitat and shelter.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

https://www.fws.gov/sites/default/files/documents/endangered-species-consultation-handbook.pdf

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see https://www.fws.gov/program/migratory-bird-permit/what-we-do.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see https://www.fws.gov/library/collections/threats-birds.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/partner/council-conservation-migratory-birds.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. **Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.**

Attachment(s):

- Official Species List

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

New York Ecological Services Field Office

PROJECT SUMMARY

Project Code: 2025-0063938
Project Name: 1 N Depot
Project Type: Residential Construction
Project Description: Project includes an existing structure and surrounding impervious areas. The existing structure will be razed and a new building constructed.

Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@42.104678250000006,-75.90924629318809,14z

Counties: Broome County, New York

ENDANGERED SPECIES ACT SPECIES

There is a total of 4 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

MAMMALS

NAME	STATUS
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Endangered
Tricolored Bat *Perimyotis subflavus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10515	Proposed Endangered

CLAMS

NAME	STATUS
Green Floater *Lasmigona subviridis* There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/7541	Proposed Threatened

INSECTS

NAME	STATUS
Monarch Butterfly *Danaus plexippus* There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/9743	Proposed Threatened

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.

APPENDIX D

QUALIFICATIONS

MATTHEW T. CARROLL, CPESC

Permitting Specialist
Civil + Land Development

mcarroll@pve-llc.com
724-444-1100

ABOUT

Matt's background consists of permitting and aquatic resource identification and delineation for large and small land development, utility, municipal and transportation projects. He has considerable experience in the application and acquisition of Local, State and Federal permits for stream and wetlands encroachments, wetland mitigation, riparian buffer offsetting, stormwater discharges from construction activities, erosion and sediment control, and developing permits through coordination with various agencies, including the Ohio Environmental Protection Agency, multiple County Conservation Districts, the Pennsylvania Department of Environmental Protection and the US Army Corps of Engineers (Pittsburgh, Buffalo and Huntingdon Districts).

PROFESSIONAL PRACTICE AREAS

- Eastern Mountain And Piedmont Regional Supplement Training
- Ohio Rapid Assessment Methodology (ORAM) Training
- PADEP Chapter 105 General Permits including GP-3, GP-4. GP-5, GP-7, and GP-8
- PADEP Sam Safety Permitting
- PADEP Sewage Facilities Planning Modules
- Stream Restoration and Stream Habitat Enhancement Plans
- US Army Corps of Engineers Nationwide Permitting
- Wetland Delineation and Management Training

EDUCATION

Youngstown State University
Bachelor of Science, Civil Engineering

Additional Training
NPDES Permits
Preparation of Erosion and Sedimentation Control Plans
Stormwater Management
Wetland Delineation and Mitigation

LICENSES & CERTIFICATIONS

Certified Professional in Erosion and Sedimentation Control (CPESC)

AFFILIATIONS

Nation Council of Examiners for Engineering and Surveying

TENURE

PVE: Since 2013

KEN ATKINS

Environmental Technician

katkins@pve-llc.com
845-454-2544 ext. 313

ABOUT

Ken is an experienced Environmental Technician with broad-based knowledge of inspections and environmental compliance on various types of projects. He is responsible for field sampling, coordination and oversight of subcontractors, correspondence with regulatory agencies, data management, and reporting. Ken also has experience working on a hazardous materials response team and has responded to spills and completed clean up and restoration of affected areas.

PROFESSIONAL PRACTICE AREAS

- Community Air Monitoring
- Drilling Rig Operation & Maintenance
- Field Investigations
- Flora & Fauna Identification
- Groundwater Sampling
- Major Oil Storage Facility Inspections and Compliance
- Monitoring Well Development
- Petroleum Bulk Storage Tank Removal
- Phase I & II Environmental Site Assessments
- Site Inspections
- Soil Vapor Intrusion Investigations
- Unified Soil Classification System

EDUCATION

Mount Saint Mary College:
Bachelor of Arts, Biology

LICENSES & CERTIFICATIONS

OSHA 40-HR training on Hazardous Waste Operations and Emergency Response

OSHA 10-HR construction training

TENURE

PVE: Since 2025

Prior Experience: 6 Years

Appendix E Keystone Associates Phase I ESA, dated October 5, 2015
Appendix F PVE Engineering Phase II ESA, dated November 12, 2024
Appendix G PVEDI Preliminary Remedial Investigation Report, dated August 11, 2025

1.0 INTRODUCTION

The 1 North Depot Street Brownfield Cleanup Program site (the "BCP Site") encompasses one (1) tax parcels totaling 0.64 acres located at 1 North Depot (Tax Parcel ID #160.25-2-20.2) in the City of Binghamton, Broome County, New York. The BCP Site is currently a vacant structure, and an asphalt parking lot zoned as "Service Commercial" (Figures 1 & 2).

The applicant will renovate the 5-story former industrial and commercial structure into a residential use structure with parking. All fifty (50) proposed residential units will be 100% affordable housing.

The property was accepted into the NYSDEC BCP (Site #C704064) and a Brownfield Cleanup Agreement (BCA) was fully executed on July 9, 2025.

The purpose of this Remedial Investigation Work Plan (RIWP) is to further characterize and delineate contaminates originating from the past uses of the BCP Site. An evaluation of Remedial Alternatives will be based upon data generated during earlier investigation data submitted to the NYSDEC in the BCP application and the Remedial Investigation (RI).

2.0 SITE HISTORY AND DESCRIPTION

2.1 Site Description and Surrounding Land Use

The BCP Site is located at 1 North Depot Street, City of Binghamton, Broome County, New York. The site is situated approximately 0.18 miles east of the Chenango River. The proposed BCP Site is bordered to the north by 95 Prospect Avenue (commercial) and 108 Prospect Avenue (residential), to the east by 10 Eldrege Street (parking lot) and 21 North Depot Street (commercial), to the south by railroad tracks and a storage yard, and to the west by 89 Prospect Avenue (commercial).

The Site is currently zoned by the City of Binghamton as “Service Commercial”. The proposed project area is adjacent to commercial and residential properties. The Site is improved with one (1) 51,000 sq. ft. five-story structure and paved parking lot. The Site is currently vacant with parking being used by adjoining businesses. The on-site structure is in very poor condition; portions of the roof and underlying floors have collapsed to basement elevation. There is local support for the cleanup of the property and the redevelopment proposed by the Volunteer.

2.2 Topography, Geology, and Hydrogeology

According to the Mineral Resources Online Spatial Data: Geologic maps (usgs.gov), bedrock underlying the Subject Property consists of Rye Point Shale; Rock Stream Siltstone; Pulteney, Sawmill Creek, Johns Creek, and Montour Shales.

Soil borings completed by Partridge Venture Engineering, PC, dba PVE Engineering (PVE) as part of a Phase II Environmental Site Assessment (ESA) (See Appendices F) did not encounter groundwater at time of drilling (ATD). Shallow refusal on rock (presumed cobbles/river rock) was encountered in three (3) soil borings at depths ranging from 13.6-13.8-feet below ground surface (bgs). Direction of groundwater flow is presumed to be to the west southwest towards Chenango River.

2.3 Site History

As early as 1887, the property operated as wholesale groceries, a cigar factory, Casper and Honah Tin Works, a machine shop and the Bengal Blueing Factory. In 1898, only the wholesale groceries and cigar factory were in operation. In 1918, the property operated as wholesale groceries, coffee roasters wholesale hardware, and Reynolds and Hawley ornamental iron works. In 1950-1952, the property operated as wholesale groceries, prints wholesale hardware and motor freight terminals with a gasoline tank. In 1970, the property operated as LJ Kingsley Wholesale Hardware (including paints), with a buried gasoline tank, wholesale meats; (it should be noted “Phelps Ave” bisected the property east to west to the former Post Office Terminal east of the property through all Sanborn Maps except 1887). Currently a 5-story abandoned/vacant former commercial structure in very poor condition.

Possible sources of contamination are from chemicals used in operations from the cigar factory, tin works, the machine shop, blueing factory, iron works, buried gasoline storage tank and fill from the Avenue that formerly bisected the property.

2.4 Previous Investigations

Relevant reports are summarized below in chronological order. These reports are attached in Appendix E-G.

2.4.1 Phase I Environmental Site Assessment, *Keystone Associates, October 5, 2015*

Keystone Associates completed a Phase I ESA of the Site summarized in their report dated October 5, 2015 which identified no Recognized Environmental Conditions (RECs). PVEDI did not agree with these findings, or lack thereof, and recommended additional investigation into potential impacts to the subsurface quality resulting from past uses described in Section 2.3, above.

2.4.2 Phase II Environmental Site Assessment*, PVE Engineering, July 12, 2024*

PVE performed a Phase II ESA of the Site summarized in their report dated July 12, 2024. The Phase II ESA was completed in accordance with our approved scope of work, dated May 21, 2024.

Scope

On June 4, 2024, a total of ten (10) soil borings soil borings were installed via direct push drilling method using a track-mounted Geoprobe™ 54DT drill rig equipped with 4-foot long, 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners. Soil borings were advanced to a maximum depth of 24.0-feet bgs. Groundwater was not encountered ATD. One (1) soil sample was collected from each of the soil borings for a total of ten (10) soil samples. Soil samples were submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory for analysis of some or all of the following:

- Target Compound List (TCL) Volatile Organic Compounds (VOCs) via United States Environmental Protection Agency (USEPA) Method 8260;
- Commissioner Policy-51 (CP-51) Semi-Volatile Organic Compounds (SVOCs) via USEPA Method 8270;
- Resource Conservation and Recovery Act (RCRA) Metals via USEPA Methods 6010/7473; &
- Polychlorinated Biphenyls (PCBs) via USEPA Method 8082.

On June 4, 2024, a total of four (4) soil vapor samples were collected from exterior locations surrounding the on-site structure. On June 5, 2024, a total of two (2) sub-slab soil vapor samples were collected in the basement of the on-site structure. Exterior vapor probes were installed via a track-mounted Geoprobe™ unit to a depth of 5-feet bgs. Exterior probes were constructed of a stainless-steel mesh vapor probe installed at the bottom of the borehole and connected to polyethylene tubing extending to the ground surface; annular space surrounding the mesh interval was backfilled with clean filter sand while the remaining annular space was backfilled with hydrated bentonite to ground surface to create a seal. PVE installed interior temporary vapor probes using a hammer drill with 5/8-inch drill bit. Interior probes were sealed with non-VOC emitting clay. All vapor probes were purged of one to three volumes at a rate not to exceed 0.2L/min. A helium tracer test was conducted at each location to verify integrity, and demonstrate ambient air was not being drawn into the samples being collected.

Each sample was collected in a certified clean Summa canister with a regulator set to collect a sample over a 2-hour sampling period. Samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of VOCs via USEPA Method TO-15 following standard chain-of-custody procedures.

Effective December 31, 2025, Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York (6 NYCRR) Part 375 has been updated, including new soil cleanup objectives (Fs). The analytical results below have been updated to compare investigative results to the new SCOs.

Analytical Results

Soil Quality: One (1) VOC was detected in one (1) of the seven (7) soil samples collected and analyzed. No VOCs were detected at concentrations exceeding UUSCOs or RRSCOs as defined in 6NYCRR Part 375.

SVOCs were detected in all seven (7) soil samples collected and analyzed. SVOCs were detected in two (2) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs. Exceedances are defined below:

- SB-2 (0.5-2-feet)
  - **Benzo(A)Anthracene (1.4 mg/kg)**
  - **Benzo(A)Pyrene (1.1 mg/kg)**
  - **Benzo(B)Fluoranthene (1.1 mg/kg)**
  - Benzo(K)Fluoranthene (1.1 mg/kg)
  - Chrysene (1.5 mg/kg)
  - Indeno(1,2,3-C,D)Pyrene (0.7 mg/kg)

- SB-4 (2-3.5-feet)
  - **Dibenzo(A,H)Anthracene (0.42 mg/kg)**

Bold font indicates RRSCO exceedance.

Metals were detected in all seven (7) soil samples collected and analyzed. Metals were detected in five (5) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs. Exceedances are defined below:

- SB-4 (2-3.5-feet)
  - **Lead (986 mg/kg)**
  - **Mercury (0.874 mg/kg)**

- SB-5 (2-3-feet)
  - Lead (344 mg/kg)
  - **Mercury (0.831 mg/kg)**

- SB-6 (0.5-3-feet)
  - Lead (202 mg/kg)
  - **Mercury (1.27 mg/kg)**

- SB-8 (2.5-3.5-feet)
  - Lead (63.5 mg/kg)
  - Mercury (0.259 mg/kg)

- SB-9 (2-2.5-feet)
  - Mercury (0.223 mg/kg)

Bold font indicates RRSCO exceedance.

PCBs were not detected in either of the two (2) soil samples collected for analysis of PCBs.

Vapor Quality: A total of six (6) soil vapor samples, four (4) soil vapor samples from exterior locations and two (2) sub-slab soil vapor samples in the basement of the on-site structure were collected from the subject property. The following compounds were detected in the vapor samples collected:

- SV-1
  - 1,2,4-Trimethylbenzene (24 µg/m^3)
  - 1,3,5-Trimethylbenzene (5.6 µg/m^3)
  - 2,2,4-Trimethylpentane (2.26 µg/m^3)
  - 4-Ethyltoluene (24 µg/m^3)
  - Acetone (320 µg/m^3)
  - Benzene (3.9 µg/m^3)
  - Carbon Disulfide (2.8 µg/m^3)
  - Cyclohexane (4.4 µg/m^3)
  - Dichlorodifluoromethane (3.0 µg/m^3)

  - Ethylbenzene (41 µg/m^3)
  - Methyl Ethyl Ketone (5.2 µg/m^3)
  - m,p-Xylene (45 µg/m^3)
  - N-Heptane (6.4 µg/m^3)
  - N-Hexane (10 µg/m^3)
  - O-Xylene (1,2-Dimethylbenzene) (18 µg/m^3)
  - PCE (27 µg/m^3)
  - Toluene (32 µg/m^3)
  - Trichlorofluoromethane (6.8 µg/m^3)

- SV-2
  - 1,2,4-Trimethylbenzene (35 µg/m^3)
  - 1,3,5-Trimethylbenzene (7.8 µg/m^3)
  - 1,3-Butadiene (3.4 µg/m^3)
  - 2,2,4-Trimethylpentane (3.71 µg/m^3)
  - 2-Hexanone (3.4 µg/m^3)
  - 4-Ethyltoluene (36 µg/m^3)
  - Acetone (280 µg/m^3)
  - Benzene (8.1 µg/m^3)
  - Benzyl Chloride (2.5 µg/m^3)
  - Carbon Disulfide (3.0 µg/m^3)
  - Carbon Tetrachloride (7.4 µg/m^3)
  - Cyclohexane (15 µg/m^3)
  - Dichlorodifluoromethane (3.5 µg/m^3)
  - Ethylbenzene (54 µg/m^3)
  - Methyl Ethyl Ketone (6.7 µg/m^3)
  - m,p-Xylene (62 µg/m^3)
  - N-Heptane (28 µg/m^3)
  - N-Hexane (46 µg/m^3)
  - O-Xylene (25 µg/m^3)
  - PCE (17 µg/m^3)
  - Styrene (1.8 µg/m^3)
  - Toluene (47 µg/m^3)
  - TCE (0.51 µg/m^3)
  - Trichlorofluoromethane (2.9 µg/m^3)
  - Vinyl Chloride (0.49 µg/m^3)

- SV-3
  - 1,2,4-Trimethylbenzene (36 µg/m^3)
  - 1,3,5-Trimethylbenzene (8.7 µg/m^3)
  - 2,2,4-Trimethylpentane (4.52 µg/m^3)
  - 4-Ethyltoluene (35 µg/m^3)

  - PCE (890 µg/m^3)
  - Propylene (5.7 µg/m^3)
  - Toluene (10 µg/m^3)
  - TCE (33 µg/m^3)
  - Trichlorofluoromethane (24 µg/m^3)

Co-located ambient indoor air samples would be required to confirm the NYSDOH recommended action at each location. However, given the deteriorated condition of the structure and potential for influence/dilution from outdoor ambient air, no indoor ambient air samples were collected.

Recommendations

1. SVOCs and metals were detected in soil samples at concentrations indicative of impacts to soils from past site operations (use as a trucking terminal, tin works/machine shop/a blueing factory and ironworks). Historic fill is present throughout the subject property.
   a. Four (4) of the seven (7) samples analyzed at the laboratory contained contaminants at concentrations exceeding the intended use criteria (RRSCOs). These concentrations are consistent with historical fill. The presence of this fill and contaminants exceeding the intended use criteria elsewhere on site is likely.

b. If soil is excavated from the site, collection and analysis of additional soil samples would be necessary to characterize soil for purposes of waste characterization, proper handling and selecting an appropriate disposal facility.
c. Unconsolidated materials (below surface cover) throughout the subject property contained urban fill (wood and brick fragments). Should the client elect not to proceed with BCP, and if requested, PVE can prepare a Soil and Materials Management Plan (SMMP) adhering to 6 NYCRR Part 360 which will outline processes for the excavation and handling of this urban fill during any future site earthwork activities.

2. Based on the concentrations of VOCs compounds detected in soil vapor, a vapor encroachment condition (VEC) may exist at the site. The presence of sub-slab vapors indicate that localized VOC sources are present, perhaps in soil and/or groundwater beneath the structure where soil borings were not possible due to limited access. Redevelopment of the site should include the design and installation of a sub-slab depressurization system (SSDS) within the enclosed portions of structures to prevent exposure to building occupants.
3. This investigation is limited in scope, impacts to soil, groundwater and soil vapor from past site operations in other locations of the property cannot be ruled out.

2.4.3 Preliminary Remedial Investigation Report*, PVEDI, August 11, 2025*

PVEDI Engineering, Architecture and Geology, D.P.C. (PVEDI) performed a Preliminary Remedial Investigation of the Site summarized in our report dated August 11, 2025. Preliminary Remedial Investigation was completed in accordance with our approved scope of work, dated May 3, 2025.

Scope
On June 18 and 19, 2025, a total of thirteen (13) soil borings soil borings were installed via direct push drilling methods using a track-mounted GeoprobeTM 6712DT drill rig equipped with 5-foot long, 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners and hand tools for interior locations. Soil borings were advanced to a maximum depth of 40.0-feet bgs. Groundwater was not encountered ATD in the northern-most soil borings (SBs 11, 12, & 13) due to shallow refusal ranging from 20.0 feet to 26.5 feet. Groundwater was encountered in four (4) soil borings (SBs 14, 21, 22, & 23) at a depth of 33.90 feet to 34.64 feet bgs. One (1) soil sample was collected from nine (9) of the thirteen (13) of the soil borings for a total of nine (9) soil samples. Soil samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of the following:

- TCL VOCs via USEPA Method 8260;
- TCL SVOCs via USEPA Method 8270;
- Target Analyte List (TAL) Metals via USEPA Methods 6010/7473; &
- Per- & Polyfluoroalkyl Substances (PFAS) via USEPA Method 1633 (2 samples).

On July 25, 2025, four (4) monitoring wells were sampled for a total of four (4) groundwater samples. Groundwater samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of the following:

- TCL VOCs via USEPA Method 8260; &
- TAL Metals via USEPA Methods 6010/7473.

Analytical Results

Soil Quality: One (1) or more VOCs were detected in nine (9) soil samples collected and analyzed for VOCs. Of note, PCE was detected at low concentrations in each of the nine (9) samples collected. However, VOCs were not detected at concentrations exceeding SCOs.

One (1) or more SVOCs were detected in two (2) of the nine (9) soil samples collected and analyzed for SVOCs. SVOCs were not detected at concentrations exceeding SCOs.

Metals were detected in all nine (9) soil samples collected and analyzed for metals. One (1) or more metals were detected at concentrations exceeding UUSCOs, RRSCOs and/or Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) in seven (7) of the nine (9) soil samples. Exceedances are listed below:

- SB-15 (0.5-1.5-feet)
  - Copper (53.4 mg/kg)
- SB-16 (0.5-1.0-feet)
  - Copper (82.2 mg/kg)
- SB-17 (0.5-1.5-feet)
  - Zinc (122 mg/kg)
- SB-18 (0.5-1.0-feet)
  - Copper (71.4 mg/kg)
  - Lead (215 mg/kg)
  - Zinc (433 mg/kg)
  - Mercury (0.723 mg/kg)
- SB-20 (0.5-1.0-feet)
  - Copper (60.6 mg/kg)
  - Lead (276 mg/kg)
  - Zinc (764 mg/kg)
  - ***Mercury (1.91 mg/kg)***
- SB-21 (35-37-feet)
  - Nickel (35.3 mg/kg)
- SB-22 (35-37-feet)
  - Nickel (31.5 mg/kg)

Bold indicates RRSCO exceedance.

Italic indicated PGWSCO exceedance.

Multiple PFAS compounds were detected in both soil samples collected and analyzed for PFAS. Neither Perfluorooctanesulfonic acid (PFOS) nor Perfluorooctanoic acid (PFOA) were detected in either soil sample. As SCOs are only defined for PFOS and PFOA, no PFAS were detected at concentrations exceeding SCOs.

Groundwater Quality: VOCs were detected in all four (4) of the groundwater samples collected and analyzed for VOCs. One (1) VOC was detected at concentrations exceeding Class GA Groundwater Quality Standards (GQS) as defined in 6NYCRR Part 700-705. Exceedances are listed below.

- MW-1
  - PCE (66.6 ug/L)
- MW-2
  - PCE (79.9 ug/L)
- MW-3
  - PCE (31.2 ug/L)
- MW-4
  - PCE (136 ug/L)

Metals were detected in the four (4) groundwater samples collected and analyzed for metals. Multiple Metals were detected at concentrations exceeding Class GA GQS. Exceedances are listed below.

- MW-1
  - Iron (58.1 mg/L)
  - Lead (0.0897 mg/L)
  - Magnesium (42.6 mg/L)
  - Manganese (2.88 mg/L)
  - Sodium (157 mg/L)
- MW-2
  - Iron (14.1 mg/L)
  - Manganese (0.620 mg/L)
  - Sodium (31.1 mg/L)
- MW-3
  - Barium (2.01 mg/L)
  - Total Chromium (0.0678 mg/L)
  - Copper (0.216 mg/L)
  - Iron (150 mg/L)
  - Lead (0.157 mg/L)
  - Magnesium (67.4 mg/L)
  - Manganese (8.89 mg/L)
  - Nickel (0.145 mg/L)

  - Sodium (55.1 mg/L)
- MW-4
  - Iron (51.7 mg/L)
  - Lead (0.0842 mg/L)
  - Manganese (4.12 mg/L)
  - Sodium (198 mg/L)
  - Thallium (0.00192 mg/L)

Recommendations

1. VOCs and metals were detected in soil and groundwater samples at concentrations indicating past site operations have adversely impacted the subject property.
2. PCE was detected in groundwater at concentrations increasing from east to west under the on-site structure. The upgradient concentrations of PCE range from 31.2 ug/L to 79.9 ug/L while the downgradient concentrations at the properties edge range from 66.6 ug/L to 136 ug/L. Based on surveyed well elevations and estimated direction of groundwater flow, these data suggest a source of groundwater contamination underlying the structure/subject property. Further, PCE was detected at low concentrations in all nine (9) soil samples collected.
3. Multiple metals were detected in groundwater at concentrations exceeding Class GA GQS. Lead was detected in soil samples (data provided in our Phase II ESA) at concentrations exceeding PGWSCOs and groundwater at concentrations exceeding Class GA indicating an on-site source of lead to be contaminating groundwater.
4. We feel that this supplemental data clearly defines source contamination on-site thus deeming the site eligible for Tangible Property Tax Credits (TPTCs).

2.5 Areas of Concern (AOC)

AOC – 1 Historic Fill
AOC – 2 Soil Vapor
AOC – 3 Groundwater
AOC – 4 Buried Gasoline Tank
AOC – 5 Hazardous Building Materials

The following is a brief description of the findings in each area identified above.

AOC – 1 Historic Fill

As indicated in the previous investigations, historic fill was observed in soil boring throughout the subject property, likely a resulting from infill of former on-site structures or subbase for Phelps Avenue that bisected the property historically. This fill was found to contain SVOCs and metals at concentrations exceeding the Site's intended SCOs. AOC – 1 is depicted in Figure 5.

AOC – 2 Soil Vapor

As indicated in the previous investigations, a vapor encroachment condition (VEC) may exist at the site. The presence of chlorinated solvents in soil vapors indicate that localized VOC sources are present, perhaps in soil and/or groundwater beneath the structure where soil borings were not possible due to limited access. VOCs were detected at concentrations requiring further action(s). AOC – 2 is depicted in Figure 5.

AOC – 3 Groundwater

As indicated in the Preliminary Remedial Investigation Report, a total of four (4) conventional 2-inch diameter groundwater monitoring wells were installed throughout the BCP Site. PCE and multiple metals were detected at concentrations exceeding Class GA GQS standards in all four (4) monitoring wells. AOC – 3 is depicted in Figure 5.

According to DECinfo Locator (https://dec.ny.gov/maps/interactive-maps/decinfo-locator), no public potable wells were identified within a 0.25-mile radius of the BCP Site. Residents of the City of Binghamton utilize municipal-supplied water.

AOC – 4 Buried Gasoline Tanks

A gasoline storage tank is depicted in the northern parking lot on Sanborn Maps dated 1950 to 1970. Two (2) soil borings were installed in proximity to (based on georeferenced images) the buried tank; while no impacts were observed in the soil, PVEDI could not extend a soil boring to the depth of groundwater in this area. AOC – 4 is depicted in Figure 5.

AOC – 5 Hazardous Building Materials

The structure is in poor condition with portions of the roof collapsed through underlying floors into the basement. The building materials and debris are co-mingled/homogenized throughout the collapsed pile. ACM may be present throughout the basement in areas prohibiting safe subsurface investigation. AOC – 5 is depicted in Figure 5.

3.0 PURPOSE

A Remedial Investigation is planned to completely characterize the BCP Site, assist in the design of site remediation, and support planned development in accordance with the requirements of the BCP and DER-10. Specific tasks include the following:

- Geophysical survey to identify the location of buried infrastructure, utilities, and estimate the depth-to-bedrock;
- Soil borings for collection and analysis of soil samples;
- Installation of groundwater monitoring wells in overburden for collection and analysis of groundwater samples;
    - Groundwater monitoring wells will surveyed by a New York State-Licensed Surveyor in order to generate a groundwater contour map and determine direction of groundwater flow; &
- Installation of soil vapor probes for collection and analysis of soil vapor samples.

Based on the historical use of the BCP Site and previously summarized results, PVEDI has developed a scope of work to further investigate surface and subsurface conditions. This Work Plan details specific tasks that will facilitate BCP Site characterization and ensure compliance with the NYSDEC BCP requirements. Specifically, when used in concert with results of previous investigations, the findings of the remedial investigation will be used to:

- Describe the amount, concentration, persistence, mobility, form (e.g., solid, liquid), and other significant characteristics of the contamination present (nature of contamination).
- Define hydrogeological factors (e.g., depth to saturated zone, hydrologic gradients [if practical], proximity to a drinking water aquifer).
- Further define the lateral and vertical extent of fill material and characterize the chemical composition of the fill.
- Delineate lateral and vertical extent of site-related contaminants.
- If applicable, define the extent to which the contaminants of concern have potential to migrate, and whether potential future migration may pose a threat to human health or the environment.
- Determine the extent to which contaminant levels pose an unacceptable risk to public health and the environment.
- Provide sufficient information to allow for the identification of potentially feasible remedial alternatives.
- Develop Remedial Action Objectives (RAOs) for the Site based on the contaminant characterization results, exposure pathways, and risk evaluation data. Based on our knowledge of potential Site issues, the RAOs for the Site may require implementation of remedial actions designed to remove or cover impacted soil/fill material.

3.1 Conceptual Site Model

Based on historical information, the Site is in an area dominated by industrial and commercial activities since the 1890s. These activities generated waste which contained VOCs, SVOCs, and heavy metals that resulted in the contamination of soil, groundwater and soil vapor.

A total of four (4) groundwater monitoring wells were installed during the Preliminary Remedial Investigation which encountered groundwater at depths ranging from 33.90 to 34.64 feet. These monitoring wells were surveyed by a NYS Professional Licensed Surveyor (PLS). In conjunction with surveyed well elevations and depth to groundwater measurements to the nearest 0.01-foot, direction of groundwater flow was determined to be to the west southwest towards Chenango River. Depth of bedrock is unknown but regionally believed to be 200 to 1,000 feet bgs and consisting of Rye Point Shale, Rock Stream Siltstone; Pulteney, Sawmill Creek, Johns Creek, and Montour Shales.

4.0 REMEDIAL INVESTIGATION SCOPE OF WORK

Remedial Investigation sampling will focus on delineating the extent of contaminants that have been demonstrated to be present to properly design future remedial alternatives. Sample locations have also been selected to identify contaminants in areas that have not been previously investigated, or where a contaminant source is suspected but previous sampling has been insufficient to conclusively establish the presence or absence of contaminants at concentrations requiring remedial action. In this sense, the Remedial Investigation Scope is presented to provide sufficient detail to develop data to satisfy overall project objectives, but flexibility to adjust for field conditions and observations.

The Sample Summary Table (Table 1) describes the location and depth of each sample, the laboratory analyses and laboratory method number planned for each sample, and the rationale for collecting each sample.

All RI field work will be conducted in accordance with the Quality Assurance Project Plan (QAPP), provided in Appendix A, and the Health and Safety Plan (HASP), provided in Appendix B. Community air monitoring will be conducted in accordance with the Appendix 1A of DER-10.

4.1 Mobilization and Utilities Investigation

Seven (7) days prior to initiating any field activities, PVEDI will notify NYSDEC and NYSDOH personnel of the anticipated field schedule. A draft schedule is presented in Section 11.0.

A geophysical survey will be performed prior to drilling and installation of soil borings and monitoring wells. The geophysical survey will employ ground-penetrating radar (GPR) and magnetic/electromagnetic equipment to locate anomalies that could be representative of buried infrastructure, such as fuel storage tanks, sewer lines, drain pipes, utilities, and conduits that could provide potential pathways for contaminants, or obstructions to be avoided during drilling.

4.2 Soil Borings

Ten (10) soil borings are proposed across the BCP Site to determine site stratigraphy and collect soil samples for laboratory analysis (See Figure 6). Five (5) from beneath the slab of the on-site structure and five (5) from exterior locations. Interior soil boring locations will need to be assessed by a structural engineer provided the integrity of the current on-site structure. If feasible and necessary, shoring will be designed and installed in support of the investigation. Borings will be advanced using various direct push Geoprobe™ equipment equipped with 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners. Interior soil borings will be installed through the slab of on-site structure via Geoprobe™ 420M hand-truck mounted hammer, or equivalent limited access tooling, and be sampled continuously from ground surface to a maximum depth of

35-feet bgs, to depth of groundwater, or to refusal, whichever is encountered first. Exterior soil borings will be installed via Geoprobe™ 6712 track-mounted rig and be sampled continuously from ground surface to a maximum depth of 45-feet bgs, to groundwater, or to refusal, whichever is encountered first.

If shallow refusal is encountered, up to three (3) attempts will be made to complete the soil samples to the target depth. At each location, field personnel will screen soil samples for VOCs using a photoionization detector (PID), and headspace techniques. The project geologist will keep a detailed log of each core: Lithology, grain size, stratigraphic changes, color, and occurrence of groundwater will be recorded. Observations will be made describing the presence of potential contamination in the soil samples based on odor, visual observations, or PID readings.

Four (4) to five (5) discrete/grab soil samples will be collected from each soil boring or surface soil sample. Soil will be collected from surface (0-2-inches), shallow intervals (2-12-inches & 12-24-inches), a fourth interval from the groundwater interface, and a fifth interval collected at the highest PID reading or the most visually contaminated spot, based on field observations (visual or olfactory evidence). If no indications of contamination are present (based upon PID, visual or olfactory evidence) then the sample will not be collected. Lastly, one (1) discrete /grab soil sample will be collected at the soil/groundwater interface in each soil boring to better quantify the vertical extent of soil contamination. Soil samples will be screened for VOCs using a PID. Each discrete/grab soil sample interval will be transferred into laboratory provided container. See Appendix A for more information related to sampling procedure and approved sample containers.

Soil samples will be analyzed for some or all of the following parameters, as specified in Table 1:

- TCL VOCs by USEPA Method 8260 (*All soil samples collected from 2-12", 12-24", most contaminated interval [if applicable] and groundwater interface interval*);
- TCL SVOCs by USEPA Method 8270D (*All soil samples collected from 0-2", 2-12", 12-24", most contaminated interval [if applicable] and groundwater interface interval*);
- TAL Metals by USEPA Method 6010C & 7471 (*All soil samples collected from 0-2", 2-12", 12-24", most contaminated interval [if applicable] and groundwater interface interval*);
    - Including cyanide and hexavalent chromium.
- TCL PCBs by USEPA Method 8082A (*All soil samples collected from 0-2", 2-12", 12-24", most contaminated interval [if applicable] and groundwater interface interval*);
- TCL Pesticides by USEPA Method 8081B (*All soil samples collected from 0-2", 2-12", 12-24", most contaminated interval [if applicable] and groundwater interface interval*);

- TCL Herbicides by USEPA Method 8051A (*All soil samples collected from 0-2", 2-12", 12-24", most contaminated interval [if applicable] and groundwater interface interval*); &
- Emerging Contaminants: 1,4-Dioxane & Per- & PFAS by USEPA Method 8270D SIM & 1633 (*Sampled from two (2) selected intervals from ten [10] soil borings*).

Samples to be analyzed for emerging contaminants will be collected in accordance with NYSDEC Guidelines for Sampling, Analysis, and Assessment of PFAS, dated April 2023.

All samples will be analyzed by a NYSDOH ELAP-certified laboratory providing Analytical Services Protocol (ASP) Category B deliverables. Field duplicates and matrix spike/matrix spike duplicates (MS/MSD) will be collected for quality control/quality assurance (QA/QC) purposes and analyzed for sample parameters described above, in accordance with Table 1. In addition, aqueous equipment field blanks will be collected in the field and laboratory-supplied aqueous trip blanks will accompany the sample shipment (trip blanks analyzed for VOCs only). QA/QC blanks and duplicates will be completed at a frequency of one sample for every 20 field-samples, as required in DER-10. QA/QC blanks and duplicates are included in Table 1.

Upon completion of drilling, each boring will be filled to within 12-inches of ground surface with either the drill cuttings or a cement/bentonite grout mixture (if grossly contaminated media is identified). Boreholes filled with soil cuttings will be completed to ground surface using drilling sand, if necessary. Boreholes filled with grout will be completed with Quickrete to top of groundwater interface and natural soil cuttings/sand, as necessary. All borings will be patched with the appropriate surface materials (e.g., asphalt or concrete patch), depending on the location.

4.3 Soil Vapor

A vapor intrusion investigation will be conducted in accordance with NYSDOH Guidance for Evaluating Vapor Intrusion in the State of New York, dated May 2006 (and subsequent revisions).

A total of three (3) soil vapor samples and five (5) sub-slab soil vapor samples are to be collected from the BCP Site. Sub-slab soil vapor samples will be installed using a hammer-drill and 5/8-inch drill bit. Vapor probes would be installed below the slab elevation and sealed at the surface with a non-VOC emitting clay to prevent sample cross contamination.

A helium-vapor test will be conducted to demonstrate a proper seal around the sampling port and confirm sample integrity. Prior to sample collection, the sample port will be purged of one to three volumes at a rate not to exceed 0.2 L/min. The vapor samples will be collected in laboratory-supplied, batch certified-clean Summa® canisters calibrated for a sampling period of 2-hours and at a flow rate not to exceed 0.2 L/minute. Prior to soil vapor sample collection, one (1) to three (3) volumes of soil vapor will be purged from the

sample port at a flow rate not to exceed 0.2 L/minute. Based on the condition of the on-site building and the direction of the NYSDEC Project Manager, the collection of indoor air samples will not provide usable data to evaluate the potential for exposure at the site, therefore the collection of indoor and outdoor samples is not required at this time.

Vapor sample canisters will be submitted to a NYSDOH ELAP-certified laboratory for analysis for VOCs via USEPA Method TO-15.

4.4 Monitoring Wells

Based on the previous investigation completed at the Site, groundwater was encountered from 33.90 to 34.64 feet. An additional two (2) monitoring wells will be installed, to a maximum depth of 45-feet bgs, in overburden soils through the use of a Geoprobe™ or conventional drilling rig equipped with hollow-stem augers (HSA). Monitoring wells will be constructed of 2-inch Schedule 40 PVC with a 0.020-inch slotted screen and solid riser. The borehole annulus of the wells will be filled with silica sand to a height of 2-feet above the top of the screen to form a filter pack. Bentonite will be placed above the filter pack to form a 2-foot seal. The remainder of the borehole annulus will be filled with a bentonite-cement grout or drill cuttings (if not grossly contaminated). Wells will be finished at the surface with either flush-to-grade curb boxes or appropriately sized steel standpipe with locking cap set in concrete, depending on the location.

Each monitoring well will be developed to remove fine-grained soil from the well and filter pack using a submersible pump. Groundwater samples will be collected using low-flow (minimal-drawdown) sampling techniques, with dedicated tubing. Prior to sample collection, depth to groundwater will be measured to the nearest 0.01-foot and recorded for each well. The wells will be purged until temperature, pH, oxygen reduction potential (ORP), turbidity, dissolved oxygen (DO) and conductivity have stabilized. The top-of-casing elevation will be surveyed to the nearest 0.01 foot by a NYS-PLS. Depth-to-water measurements recorded prior to sample collection will be used to calculate groundwater gradients and develop a groundwater contour map.

Groundwater samples will be analyzed for the following:

- TCL VOCs by USEPA Method 8260C;
- TCL SVOCs by USEPA Method 8270D;
- TAL Metals by USEPA Method 6010C & 7471B;
    - Including cyanide and hexavalent chromium;
    - Field filtered and totals;
- TCL PCBs by USEPA Method 608;
- TCL Pesticides by USEPA Method 608;
- TCL Herbicides by USEPA Method 8051A; &
- Emerging Contaminants: 1,4-Dioxane & PFAS by USEPA Method 8270D SIM & 1633.

All samples will be analyzed by a NYSDOH ELAP-certified laboratory providing Category B deliverables for the analyses listed above. Aqueous equipment field blanks will be collected for QA/QC purposes and analyzed for all sample parameters in accordance with Table 1. Laboratory-supplied aqueous trip blanks will accompany the sample shipment (trip blanks analyzed for VOCs only).

4.5 Hazardous Building Materials

The volunteer will cause surveys of the on-site building materials for the presence of LBP and ACM to determine the presence and amount thereof which may impact the ability to adequately investigation and/or remediate the BCP Site. Any damaged/loose friable ACM identified during surveys presenting immediate risks to on-site personnel will require abatement prior to investigation of interior spaces. Such abatement will be conducted in accordance with NYS DOL Industrial Code Rule 56. Other identified LBP and ACM will be properly abated during RA of the property and will be further discussed in the forthcoming RAWP.

4.6 Investigation-Derived Waste Management

Investigation-derived wastes (IDW) will be minimized by returning excess soil from soil borings to the original borehole unless grossly contaminated, in accordance with DER-10(3.3)(e), which also prescribes the following: If field evidence of gross contamination is identified, soil cuttings, decontamination wastewater and groundwater will be drummed containerized and staged near the point of generation and will be properly disposed of based on laboratory results. If free of visible contamination, disposable personal protective equipment (PPE), sampling supplies and disposables will be placed in heavy-duty plastic bags and disposed of properly as general refuse.

In any instance during the performance of this RI, all IDW will be managed in accordance with procedures and methods outlined in DER-10 section 3.3e.

4.7 Data Review

All samples undergoing laboratory analysis will be subject to a third-party data review process in accordance with the QAPP, to ensure the usability of the data collected. Data usability summary reports (DUSRs) documenting any issues with QA/QC will be prepared and included in the RI Report. Further, Category B Deliverables for the previous data collected during the Phase II ESA and the Preliminary Remedial Investigation Report will be requested from the laboratory. Data usability summary reports (DUSRs) for all data amassed from the site documenting any issues with QA/QC will be prepared and included in the RI Report.

5.0 FISH AND WILDLIFE RESOURCES IMPACT ANALYSIS

The purpose of the FWRIA Part 1 is to identify actual or potential impacts to fish and wildlife resources from site contaminants of ecological concern. PVE prepared the Resource Characterization (Part 1) in accordance with DER-10 Section 3.10.1. If required, based on the Part 1, a FWRIA Part 2 (Ecological Impact Assessment) using the scope of work for gathering the necessary data to perform the evaluations identified in DER-10 subsection 3.10.2.

PVE's FWRIA Part 1 concluded the following; the site's use as habitat for wildlife is substantially restricted due to the impervious nature and past uses of the site. These past uses have resulted in the discharge of contaminants into the soil, however the impervious cover will protect against direct contact to wildlife. Burrowing, direct soil contact and sediment transport are not anticipated with the site's current land cover. No aquatic resources are located on site and the nearest surface water is 0.2 miles to the west. Redevelopment of the property may be able to provide some future wildlife habitat by utilizing softscape areas with plant selections that will provide food, habitat and shelter.

6.0 PREVIOUSLY UNDISCOVERED CONDITIONS

Borings proposed in the RI scope are anticipated to identify and delineate contaminants in areas where data has been insufficient to properly design future remedial alternatives. If previously undiscovered conditions are identified during completion of this RI scope, additional RI tasks will be proposed as an addendum to this Work Plan and carried out in accordance with the standard operating procedures contained herein.

7.0 QUALITIATIVE HUMAN HEALTH EXPOSURE ASSESSMENT

A qualitative human health exposure assessment will be conducted to determine if the presence and concentrations of chemicals in the environmental media at the BCP Site pose potential human health concerns. The assessment will encompass both on-Site and off-Site risks with the results of the exposure analysis used as one of the criteria to determine the most appropriate future actions at the Site. Proposed "actions" may include "no further action", additional data collection, and/or quantitative health risk assessment and the establishment of action levels. The assessment will begin with the construction of a conceptual Site model, a graphic illustration that outlines chemical source areas, possible chemical release mechanisms, environmental media that currently show or may show in the future the presence of chemicals, possible exposure pathways, possible points of exposure for human receptors, possible exposure routes, and possible human receptors. The conceptual model will be based on current Site conditions and surrounding land use as well as the planned future Site and surrounding land uses.

Qualitative evaluations will be made for the four (4) components that typically comprise a health risk assessment: data evaluation; exposure assessment; toxicity assessment; and risk characterization/uncertainty analysis. In the data evaluation, chemical concentrations in the various media will be compared to appropriate NYSDEC standards and criteria (e.g., NYSDEC Soil Cleanup Objective and Cleanup Levels, Water Quality Standards, etc.). Chemicals detected at concentrations greater than these standards and criteria will be identified as contaminants of potential concern. In the exposure assessment, an evaluation will be made of the likelihood and magnitude of exposure to the contaminants of potential concern in environmental media of concern. This will involve outlining possible exposure routes and plausible exposure times, frequencies, and durations. In the toxicity assessment, the toxicity of the contaminants of concern will be outlined. This will include identifying known or suspected carcinogens and/or the target organ/system of concern for noncarcinogenic effects. In the risk characterization, information from the three components will be integrated, to estimate the likelihood and magnitude of possible health risks.

8.0 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

See Appendix A – Quality Assurance Project Plan for additional details.

8.1 Analytical Methods

All samples collected during the BCP RI will be analyzed using EPA-approved analytical methods. See the attached QAPP for further detail (Appendix A).

8.2 Laboratory

The subcontracted laboratory will be certified by the New York State Department of Health to perform Contract Laboratory Program (CLP) analysis on all media to be sampled during this investigation. The laboratory will perform the sample analysis in accordance with the most recent NYSDEC ASP.

8.3 Data Submittal

Analytical data will be submitted in complete ASP Category B data packs. Procedures for chain of custody, laboratory instrumentation calibration, laboratory analyses, reporting of data, internal quality control, and corrective actions shall be followed as per SW-846 and as per the laboratory's Quality Assurance Plan. Where appropriate, trip blanks, field blanks, field duplicates, and matrix spike, matrix spike duplicate shall be performed at a rate of 5% and will be used to assess the quality of the data. The laboratory's in-house QA/QC limits will be utilized whenever they are more stringent than those suggested by the EPA methods.

8.4 Data Usability Summary Report

The data package will be sent to a qualified, independent, data validation specialist for evaluation of the accuracy and precision of the analytical results. A DUSR will be prepared for the RI data sets to describe the compliance of the analyses with the analytical method protocols detailed in the NYSDEC ASP. The DUSR will provide a determination of whether the data meets the project-specific criteria for data quality and data use. The validation effort will be completed in accordance with NYSDEC Division of Environmental Remediation DUSR guidelines.

9.0 HEALTH AND SAFETY

Field tasks will be performed using industry standard health and safety procedures. A site-specific HASP has been prepared for use by the field team during all field activities. This plan details known and potential hazards of the Site and field tasks as well as air monitoring and emergency procedures. The HASP is presented in Appendix B.

Fact sheets documenting the goals and progress of the project will be prepared at key milestones of the project and distributed to those on the project mailing list. The distribution list is included in the Citizens Participation Plan which is provided in Appendix C.

9.1 Community Air Monitoring

Where ground intrusive operations are planned, community air monitoring will be performed to protect the downwind community. This Community Air Monitoring Plan (CAMP) data will be submitted to the NYSDEC and NYSDOH on a weekly basis. A PVEDI representative will continually monitor the breathing zone in the vicinity of the immediate work area using PID instrumentation capable of measuring total volatile organic compounds in air at concentrations as low as 1 part per million (PPM). The air in the work zone also will be continually monitored for dust generation using a pDR 1500 hand-held meter or comparable model. Additionally, one (1) upwind and one (1) downwind station, consisting of one (1) PID and one (1) DustTrak II Aerosol Monitor respectively, will operate continuously during all ground intrusive work with extra care exercised when sampling near adjacent residential properties. Within one (1) business day of any CAMP exceedances detected during monitoring, the NYSDEC and NYSDOH will be notified of actions planned or taken in response to these exceedances. If VOC measurements are detected at 5 ppm above the background for the 15-minute average, or if dust generation is observed at 100 micrograms per cubic meter greater than at background (upwind perimeter) locations, then the intrusive work will be temporarily halted, dust suppression techniques will be implemented and more rigorous monitoring of VOCs and dust will be conducted in accordance with the NYSDOH Generic CAMP. A copy of the CAMP is provided in Appendix D.

10.0 REPORTING

10.1 Remedial Investigation Report

Upon completion of field activities and receipt of laboratory results, PVEDI will prepare a Remedial Investigation Report (RIR) that will summarize the findings and compare the analytical results to appropriate NYSDEC and NYSDOH standards, objectives and guidelines in conformance with DER-10 requirements. The data will be summarized in tables and figures, and sample locations will be depicted on sample location maps with corresponding sample numbers and depths.

The report will include ASP Category B laboratory data packages for all samples (including previous investigations), soil boring logs, well construction diagrams, well development and purge logs, sample location maps, and groundwater contour maps derived from depth to water measurements. Data usability summary reports documenting any issues with QA/QC will be prepared and included in the RIR. Electronic data deliverables will be submitted to the NYSDEC EQuIS database.

The findings and conclusions of the RIR will form the basis for developing a Remedial Action Work Plan (RAWP).

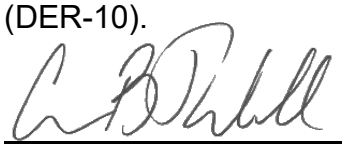
11.0 SCHEDULE

We anticipate implementation of this Remedial Investigation Work Plan to be conducted according to the following approximate schedule (pending Department-approval and satisfaction of required public comment periods):

Remedial Investigation	Estimated Start	Estimated Completion
Mobilization	March 2026	March 2026
Soil Borings	March 2026	March 2026
Soil Vapor Probes	March 2026	March 2026
Monitoring Well Installation	March 2026	March 2026
Monitoring Well Development/Sampling	April 2026	April 2026
Preliminary Data Evaluation	April 2026	April 2026
Final Data Review/Develop DUSR	May 2026	May 2026
Remedial Investigation Report	May 2026	May 2026

12.0 CERTIFICATION

I, Conor Tarbell., certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Remedial Investigation Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10).



1/29/2026

Conor Tarbell, QEP. Date

Soil Vapor/Indoor Air Matrix A
May 2017
Analytes Assigned: Trichloroethene (TCE), *cis*-1,2-Dichloroethene (*c*-1,2-DCE), 1,1-Dichloroethene (1,1-DCE), Carbon Tetrachloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m3)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m3) < 0.2	0.2 to < 1	1 and above
< 6	1. No Further Action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
6 to < 60	4. No Further Action	5. MONITOR	6. MITIGATE
60 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

Soil Vapor/Indoor Air Matrix B
May 2017
Alanytes Assigned: Tetrachloroethene (PCE), 1,1,1-Trichloroethane (1,1,1-TCA), Methylene Chloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m3)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m3) <3	3 to <10	10 and above
<100	1. No Further Action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGAT
100 to <1,000	4. No Further Action	5. MONITOR	6 MITIGATE
1,000 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

Soil Vapor/Indoor Air Matrix C
May 2017
Analytes Assigned: Vinyl Chloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m3)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m3) < 0.2	0.2 and above
< 6	1. No Further Action	3. No Further Action
6 to < 60	4. MONITOR	6. MITIGATE
60 and above	7. MITIGATE	9. MITIGATE

Soil Vapor/Indoor Air Matrix D
February 2024
Analytes Assigned: Benzene, Ethylbenzene, Naphthalene, Cyclohexane, Isooctane (2,2,4-Trimethylpentane), 1,2,4-Trimethylbenzene, 1,2,3-Trimethylbenezene, O-Xylene

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m3)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m3) < 2	2 to < 10	10 and above
< 60	1. No Further Action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
60 to < 600	4. No Further Action	5. MONITOR	6. MITIGATE
600 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

Soil Vapor/Indoor Air Matrix E
February 2024
Analytes Assigned: M-Xylene, P-Xylene, Heptane, Hexane

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m3)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m3) < 6	6 to < 20	20 and above
< 200	1. No Further Action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
200 to < 2,000	4. No Further Action	5. MONITOR	6. MITIGATE
2,000 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

Soil Vapor/Indoor Air Matrix F
February 2024
Analytes Assigned: Toluene

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m3)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m3) < 10	10 to < 50	50 and above
< 300	1. No Further Action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
300 to < 3,000	4. No Further Action	5. MONITOR	6. MITIGATE
3,000 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

NOTE: Matrices are provided for informational purposes only and are not valid without co-located soil vapor and indoor air samples.

													Total Soil Samples (including QA/QC)	**54**	
													Total Groundwater Samples (including QA/QC)	**6**	
													Total Vapor Samples (including QA/QC)	**10**	

QA/QC: Consist of Field Duplicate, Matrix Spike/Matrix Spike Duplicate and Field Blank.
MS/MSD: Matrix Spike/Matrix Spike Duplicate. To be analyzed for full list of analytes as parent sample.
Field Duplicate: To be analyzed for full list of parameters as parent sample.
Field Blank: To be analyzed for full list of parameters as parent sample.
Emerging Contaminants: 1,4-Dioxane and Per- & Polyfluoroalkyl Substances (PFAS).
One trip blank will be analyzed per shipment for Part TCL VOCs only.
Sample depths described above are not final. Final sample collection depths will be based upon findings in the field.
SO: Soil
GW: Groundwater
SV: Soil Vapor
SSV: Sub-slab vapor

ATTACHMENTS

Attachment A - Resumes for Project Team

1.0 INTRODUCTION

This Quality Assurance Project Plan (QAPP) describes the protocols and procedures that will be followed during implementation of Remedial Investigation (RI) at 1 North Depot Street, City of Binghamton, Broome County, New York. The objective of the QAPP is to provide for Quality Assurance (QA) and maintain Quality Control (QC) of environmental investigative, sampling and remedial activities conducted at the Site by PVEDI. Adherence to the QAPP will ensure that defensible data will be obtained during the investigation and remediation.

If any changes are made to the QAPP, these changes will be submitted to the appropriate parties and referenced in all reports.

2.0 PROJECT TEAM

The project team will be drawn from PVEDI professional and technical personnel and PVEDI's subcontractors. All field personnel and subcontractors will have completed a 40-hour training course and updated 8-hour refresher course that meet the Occupational Safety and Health Administration (OSHA) requirements of 29 CFR Part 1910. The following sections describe the key project personnel and their responsibilities.

2.1 PROJECT DIRECTOR

The project director will be responsible for the general oversight of all aspects of the project, including scheduling, budgeting, data management, and decision-making regarding the field program. The project director will communicate regularly with all members of the PVEDI project team and the New York State Department of Environmental Conservation (NYSDEC) to ensure a smooth flow of information between involved parties. Conor Tarbell will serve as the project director for the RA; his resume is included in Attachment A.

2.2 ASSISTANT PROJECT MANAGER

The Assistant Project Manager will be responsible for directing and coordinating all elements of fieldwork. They will prepare reports and participate in meetings with the Site owner and/or the NYSDEC. Samuel Ambrose will serve as the Assistant Project Manager.

2.3 FIELD TEAM LEADER

The field team leader will be responsible for supervising the daily sampling and health and safety activities in the field and will ensure adherence to the HASP. This person(s) will report to the Assistant Project Manager on a regular basis regarding daily progress and any deviations from approved plans. The field team leader will be a qualified, responsible person, able to act professionally and promptly during soil disturbing activities. Other PVEDI staff, as assigned will be field team leaders for fieldwork.

2.4 PROJECT QUALITY ASSURANCE/QUALITY CONTROL OFFICER

The Quality Assurance/Quality Control (QA/QC) Officer will be responsible for adherence to the QAPP. They will review the procedures with all personnel prior to commencing any fieldwork and will assess implementation of the required procedures. John Conrad will serve as the QA/QC officer.

2.5 LABORATORY QUALITY ASSURANCE/QUALITY CONTROL OFFICER

The laboratory QA/QC officer will be responsible for quality control procedures and checks in the laboratory and ensuring adherence to laboratory protocols. He/she will track the movement of samples from the time they are checked in at the laboratory to the time that analytical results are issued. He/she will conduct a final check on the analytical calculations and sign off on the laboratory reports. The laboratory QA/QC officer will be determined upon selection of a contract laboratory(s) for the work.

2.6 QUALITY ASSURANCE OBJECTIVES FOR MEASUREMENT DATA

The overall objectives and criteria for assuring quality for this effort are discussed below. This QAPP addresses how the acquisition and handling of samples and the review and reporting of data will be documented. The objectives of this QAPP are to address the following:

- The procedures to be used to collect, preserve, package, and transport soil, groundwater, and soil vapor samples
- Field data collection
- Record keeping
- Data management
- Chain-of-custody procedures
- Precision, accuracy, completeness, representativeness, decision rules, comparability, and level of quality control effort conformance for sample analysis and data management by the laboratory under EPA analytical met

3.0 STANDARD OPERATING PROCEDURES

The following sections describe the standard operating procedures (SOPs) for the investigative activities. During operations, safety monitoring will be performed as described in the project Health and Safety Plan (HASP) and all field personnel will wear appropriate personal protective equipment (PPE). Remedial Activities will include monitoring well decommissioning, soil excavating, post excavation confirmatory sampling, and soil vapor mitigation installation. PVEDI's proposed scope is summarized below:

- Installation of ten (10) soil borings for the purposes of collection and analysis of soil samples from four (4) discrete soil sample intervals per respective soil boring.
- Installation of two (2) groundwater monitoring wells for the purposes of collection and analysis of groundwater samples.

- Installation of three (3) soil vapor implants, three (3) co-located ambient air samples, and one (1) outdoor ambient air sample for the purposes of collection and analysis of vapor and ambient air samples.

3.1 SOIL SAMPLING

3.1.1 Soil Borings and Surface Soil Sampling

Soil borings and surface soil sampling will be completed to characterize shallow (0 – 2-inches below vegetative cover), and deeper subsurface soils to collect soil samples for laboratory analysis. Figures in the Work Plan depict the proposed soil boring locations.

Surface soil samples will be collected using hand tools, or direct-push drilling rig. Soil borings will be drilled using a truck- or track-mounted direct-push drilling rig. Continuous soil samples will be collected by driving a macrocore sampling tube into the subsurface at five-foot intervals until the target depth. A PVC liner fitted within the macrocore sampler will be removed after each sampling interval and cut lengthwise to access the soil sample for logging, screening, and laboratory sampling.

Logging will consist of: Describing the soil according to the Unified Soil Classification System; describing any evidence of contamination (e.g., non-aqueous phase liquid (NAPL), staining, sheens, odors); and screening for organic vapors using a photoionization detector (PID).

Samples selected for laboratory analysis will be biased towards intervals containing urban fill material or other evidence of contamination (e.g., staining, odors, elevated PID readings).

The soil samples designated for analysis will be collected into laboratory-supplied containers, sealed and labeled, and placed in an ice-filled cooler. Proposed soil samples and analyses are described in the “Sample Summary Table” of the Work Plan. The samples will be analyzed in a laboratory following New York State Department of Health (NYSDOH) Analytical Services Protocol (ASP) Category B deliverables.

3.1.2 Restoration

Upon completion of probing/drilling, each boring will be filled to the near grade surface with either the drill cuttings or a cement/bentonite grout mixture (if gross contamination is identified). Soil borings filled with soil cuttings will be completed to ground surface using drilling sand, if necessary. The borings will be patched with the appropriate materials (e.g., asphalt or concrete patch), depending on the original finish.

3.2 MONITORING WELL INSTALLATION

Monitoring wells boreholes will be installed using one of two (2) methods: Direct-push drilling rig or conventional drilling rig (hollow-stem augers).

Depth of groundwater monitoring wells will be determined based on field conditions. The proposed monitoring well locations are depicted on figures presented in the Work Plan.

Permanent monitoring wells will be constructed of 2-inch I.D. PVC well materials. The slotted well screen will straddle the water table, with the majority of the screen for each well extending below the groundwater interface. Above the well screen, solid PVC tubing will be installed to the surface. A sand filter pack will be installed within the annular space between the PVC and borehole from the bottom of the well to one foot above the top of the slotted screen. The remaining annular space will be filled to the surface with bentonite. Surface casing will be installed to anchor the top of the well and to prevent infiltration of surface water along the outer annulus of the well. Sand filter packs, bentonite seals, and well materials will conform to NYSDEC/USEPA specifications.

Each monitoring well will be developed to remove suspended sediment and establish connectivity between the monitoring well and the surrounding formation. Wells will be developed by surging and purging water in the well column using a small-diameter submersible pump (Whale-brand, or similar). Physical water quality parameters (temperature, pH, and conductivity at a minimum) will be monitored until stabilized, and a minimum of three (3) well-volumes of the standing water column have been removed.

3.3 SOIL VAPOR IMPLANT INSTALLATION

A vapor intrusion investigation will be conducted in accordance with NYSDOH Guidance for Evaluating Vapor Intrusion in the State of New York, October 2006, and subsequent amendments (2017 & 2024). If groundwater is found to be present directly beneath the asphalt or grassy areas, then alternative sample locations will be chosen in the field.

Soil vapor sample points will be installed through the structural slab in accordance with NYSDOH Guidance. Soil vapor implants will be installed using a hammer-drill and 5/8-inch drill bit. Vapor probes would be installed below the slab elevation and sealed at the surface with a non-VOC emitting clay to prevent sample cross contamination.

A tracer gas (helium) test will be conducted to ensure a proper seal around the sampling port and to confirm sample integrity for each sub-slab vapor sample. Sub-slab vapor samples will be collected into laboratory-supplied, batch certified-clean Summa® canisters calibrated for a sampling period of 2-hours and at a flow rate not to exceed 0.2 L/minute. Sub-slab vapor samples will be installed to 2 - 3-inches below the slab and will be calibrated for a sampling period of 2-hours. Prior to sub-slab soil vapor sample collection, one (1) to three (3) volumes of soil vapor will be purged from the sample port at a flow rate not to exceed 0.2 L/minute. No indoor air samples are proposed during this investigation as no inhabitable indoor space currently exists on the site.

Soil vapor samples and analyses are described in the “Sample Summary Table” of the Work Plan. The samples will be analyzed in a laboratory following NYSDOH ASP Category B deliverables.

3.4 DECONTAMINATION OF SAMPLING EQUIPMENT

All non-disposable sampling equipment (Geoprobe rods, macrocore samplers, sampling spoons, etc.) will be either dedicated or decontaminated between sampling locations. Decontamination methods will be conducted in accordance with NYSDEC Guidelines for Sampling and Analysis of PFAS, April 2023.

3.5 MANAGEMENT OF INVESTIGATION DERIVED WASTE

Decontamination fluids will be containerized and staged near the point of generation and will be properly disposed of based on laboratory results. If free of visible contamination, disposable personal protective equipment (PPE) and sampling equipment (scoops, gloves, rope, etc.) will be placed in heavy-duty plastic bags and disposed of properly as general refuse.

4.0 SAMPLING AND LABORATORY PROCEDURES

All sampling, decontamination, laboratory analysis and data review will be conducted in accordance with NYSDEC Guidelines for Sampling and Analysis of PFAS, April 2023.

4.1 SOIL SAMPLING

Soil sampling will be conducted according to the following procedures:

- Characterize the sample according to the modified Unified soil classification system.
- Field screening for evidence of contamination (e.g., odors, staining, elevated PID measurements). Create small holes in the core at one-foot intervals using a sampling spoon (or similar) and place the PID probe in the hole to obtain an organic vapor concentration measurement.
- After selecting which samples will be analyzed in the laboratory, fill the required laboratory-supplied sample jars with the soil from the selected sampling location, eliminating headspace as much as possible. Seal and label the sample jars in accordance with this QAPP and place in an ice-filled cooler.
- Decontaminate any soil sampling equipment between sample locations in accordance with this QAPP.
- Record boring number, sample depth, and sample observations (evidence of contamination, PID readings, soil classification) in field logbook and boring log data sheet, if applicable.

4.2 GROUNDWATER SAMPLING

Unless otherwise noted, groundwater samples will be collected using low-flow (minimal drawdown) purge techniques with dedicated tubing and a peristaltic pump.

Acceptable materials for sampling include: stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials including plumbers tape and sample bottle cap liners with a PTFE layer.

A list of acceptable equipment is provided below, but other equipment may be considered appropriate based on sampling conditions.

- Stainless steel inertia pump with HDPE tubing.
- Peristaltic pump equipped with HDPE tubing and silicone tubing.
- Stainless steel bailer with stainless steel ball.
- Bladder pump (identified as PFAS-free) with HDPE tubing.

The following procedure will be used:

- Open each well, measure the depth to water and gauge the well for any non-aqueous phase liquids (NAPL) using standard tools. NAPL thickness will be recorded in the field notebook.
- Insert dedicated tubing into the monitoring well at the approximate middle of the screened interval.
- Connect tubing to the peristaltic pump and flow-through cell. Insert the Troll 9500 into the flow-through cell. Connect the Troll 9500 to the Rugged Reader (hand-held PC).
- Enter monitoring well construction details of the well to be sampled into the Rugged Reader well development file. The file calculates the interval at which readings will be collected based on well construction.
- Begin pumping the well and collecting data after the flow-through cell fills with water.
- Collect data until physical groundwater parameters (e.g., temperature, pH, conductivity, dissolved oxygen) have stabilized to values with less than 10% change along with turbidity values below 50 NTUs for three consecutive readings.
- Sampling personnel should don new nitrile gloves prior to sample collection due to the potential to contact PFAS containing items (not related to the sampling equipment) during the purging activities.
- Collect groundwater samples from dedicated tubing immediately after the peristaltic pump and as specified in the scope of work.

4.3 SOIL VAPOR SAMPLING

Soil vapor sampling will be conducted according to the following procedures:

- Purge the installed vapor port with a PID or peristaltic pump at a flow rate not to exceed 0.2 L/minute. Purge time determined based on volume of air in tubing (diameter and length.

Follow directions/calculations on PVEDI purge sheet to determine appropriate purge time. Note any elevated PID measurements during purge.

- Following purge, connect laboratory provided summa cannister to sample port tubing. Connection to summa canister may vary based on laboratory but in general will consist of compression fitting and ½-inch nut.
- When sample port tubing is secure in cannister connection, open summa cannister valve to start sample collection and record starting vacuum of can (typically ~30-inches HG).
- Record sample collection start time, starting vacuum, cannister ID and flow valve ID in PVEDI vapor log sheet.
- Periodically check on sample cannister noting vacuum changes.
- When vacuum is between 1-4-inches HG, turn the cannister valve to the closed position, ending the sampling period. Record final vacuum and end sample time in PVEDI vapor log sheet.
- Remove tubing from compression fitting of canister. Plug sample port tubing.

4.4 LABORATORY METHODS

Table 1 summarizes the laboratory methods that will be used to analyze field samples as well as the sample container type, preservation, and applicable holding times. York Analytical Laboratories, Inc., a NYSDOH Environmental Laboratory Approval Program (ELAP) Certified laboratory (Certifications #10854 & 12058), will be used for all chemical analyses in accordance with DER-10 2.1(b) and 2.1(f), including Category B Deliverables.

In addition to the site characterization samples (soil, groundwater, & soil vapor) collected, QAQC samples will be collected at a frequency of one (1) in twenty (20) samples. A total of two (2) matrix spike/matrix spike duplicate (MS/MSD) soil samples, two (2) field blank soil samples, two (2) field duplicate soil samples, one (1) MS/MSD groundwater sample, one (1) field duplicate groundwater sample, one (1) field blank groundwater sample, and one (1) field duplicate soil vapor sample analyzed for the compounds listed below in addition to one (1) trip blank to be analyzed for VOCs per shipment. One (1) duplicate soil vapor sample will be collected.

Table 1 Laboratory Analytical Methods for Analysis Groups

Matrix	Analysis	EPA Method	Bottle Tyle	Preservative	Hold Time
Soils (44 total samples including 4 QAQC)	TCL VOCs	8260C	5035 Encore Samplers	Methanol & Distilled Water - 4 deg. C.	48 hours
	TCL SVOCs	8270D	4 oz. jar	4 deg. C.	14 days
	TAL Metals	6010C	4 oz. jar	4 deg. C.	180 days
	Mercury	7471B	4 oz. jar	4 deg. C.	28 days
	Hexavalent Chromium	7196	2 oz. jar	4 deg. C.	28 days
	Cyanide	4500	2 oz. jar	4 deg. C.	14 days
	TCL Pesticides	8081B	8 oz. jar	4 deg. C.	14 days

	TCL Herbicides	8051A	8 oz. jar	4 deg. C.	14 days
	TCL PCBs	8082A	4 oz. jar	4 deg. C.	14 days
	1,4-Dioxane	8270D SIM	4 oz. jar	4 deg. C.	14 days
	PFAS	1633	250 mL HDPE container	4 deg. C.	28 days
Groundwater (6 total samples including 4 QAQC)	TCL VOCs	8260C (inc. TICS)	3 VOA vials	HCL - 4 deg. C.	14 days
	TCL SVOCs	8270D (inc. TICS)	1-liter amber jar	4 deg. C.	7 days
	TAL Metals	6010C	250 mL plastic container	HNO3 - 4 deg. C.	180 days
	Mercury	7471B	250 mL plastic container	HNO3 - 4 deg. C.	28 days
	Hexavalent Chromium	7196	2 oz. jar	4 deg. C.	28 days
	Cyanide	4500	2 oz. jar	4 deg. C.	14 days
	TCL Pesticides	608	1-liter amber jar	4 deg. C.	7 days to extraction/ 40 days following extraction
	TCL Herbicides	8051A	1-liter amber jar	4 deg. C.	14 days
	TCL PCBs	608	1-liter amber jar	4 deg. C.	14 days
	PFAS	1633	250 mL HDPE container	4 deg. C.	14 days to extraction/ 28 days following extraction
	1,4 Dioxane	8270D SIM	1-liter amber jar	4 deg. C.	7 days to extraction/ 40 days following extraction
Soil Vapor Samples (9 total samples including 1 QAQC)	TO-15 VOCs	TO-15	2-liter Summa Cannister	N/A	28 days

Laboratory reporting limits will be low enough to compare data to the unrestricted-use soil cleanup objective (UUSCO) as defined in 6 NYCRR Part 375.

4.5 QUALITY CONTROL SAMPLING

In addition to the laboratory analysis of the investigative soil samples, additional analyses will be included for quality control measures, as required by the Category B sampling techniques. These samples will include field blanks, trip blanks, matrix spike/matrix spike duplicates (MS/MSD), and duplicate/blind duplicate samples at a frequency of one sample per 20 field samples collected. The "Sample Summary Table" in the Work Plan provides a summary of the field samples and QA/QC samples to be analyzed by the laboratory.

4.6 SAMPLE HANDLING

4.6.1 Sample Labeling and Shipping

All sample containers will be provided with labels containing the following information:

- Project identification
- Sample identification
- Date and time of collection
- Analysis(es) to be performed

Once the samples are collected and labeled, they will be placed on ice in coolers. The samples will be shipped with chain-of-custody (COC) forms. Samples will be shipped overnight (e.g., Federal Express) or transported by a laboratory courier.

4.6.2 Sample Custody

Field personnel will be responsible for maintaining the sample coolers in a secured location until they are picked up and/or sent to the laboratory. The record of possession of samples from the time they are obtained in the field to the time they are delivered to the laboratory or shipped off-site will be documented on COC forms. The COC forms will contain the following information: project name; names of sampling personnel; sample number; date and time of collection and matrix; and signatures of individuals involved in sample transfer, and the dates and times of transfers.

4.7 FIELD INSTRUMENTATION

Field personnel will be trained in the proper operation of all field instruments at the start of the field program. Instruction manuals for the equipment will be on file for referencing proper operation, maintenance and calibration procedures.

4.8 DATA REVIEW

In accordance with DER-10, each of the samples collected as part of the RI will undergo a third-party data review process to ensure the usability of the data collected. Kenneth Applin R. Applin Ph.D. and Michael Perry of Environmental Data Usability (See Resumes in Attachment A) will be contracted for the preparation of Data usability summary reports (DUSR) documenting any issues with QA/QC will be prepared and included in the RI Report.

4.8.1 Data Usability Evaluation

Data usability evaluation procedures shall be performed for both field and laboratory operations as described below.

4.8.2 Procedures Used to Evaluate Field Data Usability

Procedures to validate field data for this project will be facilitated by adherence to the plan outlined in the QAPP. The performance of all field activities, checking for transcription errors and review of field logbooks is the responsibility of the Field Team Leader.

4.8.3 Procedures Used to Evaluate Laboratory Data Usability

Data evaluation will be performed by the third-party data validator using the most current methods and quality control criteria from the USEPA's Contract Laboratory Program (CLP) *National Functional Guidelines for Organic Data Review* (Ref. 8), and Contract Laboratory Program*, National Functional Guidelines for Inorganic Data Review* (Ref. 9). The data review guidance will be used only to the extent that it is applicable to the SW-846 methods; SW-846 methodologies will be followed primarily and given preference over CLP when differences occur. Also, results of blanks, surrogate spikes, MS/MSDs, and laboratory control samples will be reviewed/ evaluated by the data validator. All sample analytical data for each sample matrix shall be evaluated. The third-party data validation expert will also evaluate the overall completeness of the data package. Completeness checks will be administered on all data to determine whether deliverables specified in this QAPP are present. The reviewer will determine whether all required items are present and request copies of missing deliverables.

RESUMES

CHRISTOPHER B. BROWN, PG

Principal / Chief Operating Officer

cbrown@pve-llc.com
860-522-3970

ABOUT

As PVE's COO, Chris manages the firm's operations across all PVE locations. He implements organizational structure and develops strategic initiatives that enhance operational efficiencies throughout all divisions.

Chris is also the Director of Environmental Services, a role he has held since the company's 2011 merger with the former Hudson Valley-based Conrad Geoscience Corp. he co-founded in 1996. He has conducted and supervised the investigation and remediation of state- and federally-listed hazardous waste sites, brownfields, petroleum spills, landfills, and a variety of contaminated residential, commercial, and industrial sites.

Chris oversees the firm's environmental due diligence services for real estate transactions and has participated in hundreds of real estate transactions. He also has worked on geologic characterization projects for Class II, V and VI injection wells. His skills as a consultant on complex and sometimes contentious matters have earned him the trust and respect of clients, regulatory agencies and the PVE team.

PROFESSIONAL PRACTICE AREAS

- Brownfield Site Assessments
- Conceptual Site Modeling / Contaminant Fate and Transport
- Due Diligence Assessments
- Geologic Evaluations
- NYSDEC and NYCOER Regulatory Programs
- Permitting and Regulatory Compliance
- Remedial Actions
- Subsurface Investigations

EDUCATION

Binghamton University
Master of Science, Geology

Colgate University
Bachelor of Arts, Geology

LICENSES & CERTIFICATIONS

Professional Geologist: New York

American Institute of Professional Geologists, CPG

AFFILIATIONS

American Institute of Professional Geologists, Board Member

Habitat for Humanity of Dutchess County: President Emeritus (2023), President (2017-2022)

CONOR TARBELL, QEP

Principal / Regional Director
Environmental Services

ctarbell@pve-llc.com
O: 845-454-2544 Ext. 311 M: 607-226-2764

ABOUT

As a Principal and Regional Director of Environmental Services at the Hudson Valley office, Conor oversees his team and provides comprehensive environmental consulting services, including Phase I and II ESAs, soil vapor intrusion investigations, remediation, affordable housing, hazardous building materials surveys in support of affordable housing projects, communication and correspondence with regulatory agencies and customer relations/business development.

Conor specializes in managing Brownfield redevelopment projects, including the preparation, negotiation and implementation of remedial investigation and remedial action work plans. These work plans can consist of soil and groundwater sampling, vapor/air monitoring, and remedial design, including in-situ groundwater treatment and vapor mitigation/extraction. Conor led the firm's initiative to purchase a direct-push drilling rig and tooling for use on environmental projects.

PROFESSIONAL PRACTICE AREAS

- Affordable Housing Hazardous Building Material Surveys
- Brownfield Redevelopment Project Management
- Phase I and II ESAs
- Remediation
- Remedial Action Work Plans, including Preparation, Negotiation and Implementation
- Remedial Design, including In-Situ Groundwater Treatment
- Remedial Investigations
- Soil and Groundwater Sampling
- Soil Vapor Intrusion Investigations
- Vapor / Air Monitoring
- Vapor Mitigation/Extraction

SAMUEL AMBROSE, PG

Project Manager
Environmental Services

sambrose@pve-llc.com
845-454-2544

ABOUT

Sam is an experienced geologist with a strong background in field investigations, including soil, surface and groundwater sampling, geologic logging, stream assessment, monitoring, and mitigation of mine subsidence-related impacts. As Project Manager, his responsibilities include proposal writing, budgeting, coordination with subcontractors, correspondence with regulatory agencies, data management, reporting, and customer relations. Sam is also responsible for performing site inspections and providing peer reviews of Phase I and II Environmental Site Assessments.

PROFESSIONAL PRACTICE AREAS

- Data Collection and Analysis
- Drilling Oversight
- Environmental Compliance
- Environmental Sampling
- Field Investigations
- Field Planning Prep Work
- Health and Safety Planning
- Indoor Air Sampling
- Phase I & II Environmental Site Assessments
- Project Management
- Site Inspections
- Soil and Groundwater Sampling
- Soil Boring Classification
- Sub-slab Sampling
- Vapor/Air Monitoring
- Water Sampling
- Well Abandonment Oversight
- Well Development

KEN ATKINS

Environmental Technician

katkins@pve-llc.com
845-454-2544 ext. 313

ABOUT

Ken is an experienced Environmental Technician with broad-based knowledge of inspections and environmental compliance on various types of projects. He is responsible for project scoping, coordination and oversight of subcontractors, correspondence with regulatory agencies, data management, reporting and customer relations. Ken also has experience working on a hazardous materials response team and has responded to spills and completed clean up and restoration of affected areas.

PROFESSIONAL PRACTICE AREAS

- Drilling Oversight
- Field Investigations
- Phase I & II Environmental Site Assessments
- Site Inspections
- Water Sampling
- Well Development

EDUCATION

Mount Saint Mary College:
Bachelor of Arts, Biology

LICENSES & CERTIFICATIONS

OSHA 40-HR training on Hazardous Waste Operations and Emergency Response

OSHA 10-HR construction training

TENURE

PVE: Since 2025

Prior Experience: 6 Years

Resume

Kenneth R. Applin, Ph.D.

KR Applin and Associates
8806 Route 256
Dansville, NY 14437
585.335.5998

EDUCATION

Ph.D., Geochemistry and Mineralogy
The Pennsylvania State University
Area of Emphasis: aqueous geochemistry
Related Areas of Study: hydrogeology, chemistry
Degree Granted: 1982

M.S., Geochemistry and Mineralogy
The Pennsylvania State University
Area of Emphasis: aqueous geochemistry
Related Areas of Study: hydrogeology, radionuclide geochemistry, computer programming
Degree Granted: 1978

B.A., Geological Sciences
State University of New York at Geneseo
Area of Emphasis: geological sciences
Related Areas of Study: physics, biology, chemistry, computer science
Degree Granted: 1974

PROFESSIONAL EXPERIENCE

1993 - present
KR Applin & Associates
Professional consultant in geochemistry, hydrogeology, and geology. Experienced in landfill closure investigations, groundwater and surface water monitoring at solid and hazardous waste sites, geochemistry investigations, hydrogeologic investigations, and data validation.

1993 - 1994
Adjunct Lecturer, State University of New York at Geneseo
Served as Adjunct Lecturer with the Dept. of Geological Sciences. Developed and taught Environmental Geology. Supervised undergraduate research in surface water geochemistry and the environmental chemistry of lead.

1989-1993
Chief Hydrogeologist and Geochemist, Larsen Engineers, Rochester, NY
Managed all projects involving environmental and hydrogeologic investigations including landfill siting and closure investigations, hazardous waste site investigations, environmental assessments for property transactions, underground storage tank investigations, and water supply studies.

PROFESSIONAL EXPERIENCE (Continued)

1982-1989
Assistant Professor of Geology, University of Missouri-Columbia, MO
Served as professor and research scientist for the Dept. of Geology. Taught undergraduate and graduate courses in geology, hydrogeology, and geochemistry. Supervised undergraduate and graduate student research in the Depts. of Geology, Civil Engineering, and Chemistry. Conducted research in groundwater geochemistry, mineralogy, and sedimentology.

1975-1982
Graduate Research Assistant, The Pennsylvania State University
Conducted research on uranium geochemistry and global geochemical cycles. Performed field sampling and laboratory analyses of water using wet chemistry methods, atomic absorption spectrophotometry (AAS), ICP emission spectrophotometry, neutron activation analysis, colorimetry, and x-ray fluorescence. Served as instructor with the Penn State Marine Science Program at Wallops Is., VA. Served as advisor to the U.S. Bureau of Mines on uranium solution mining project in Casper, WY. Developed computer software for interpreting natural water geochemistry.

PROFESSIONAL AFFILIATIONS

Association of Groundwater Scientists and Engineers

REPRESENTATIVE PROJECTS

Closure investigation and post-closure environmental monitoring of the Town of Arcadia Landfill, Wayne County, NY (1994 - present)

Closure investigation and post-closure environmental monitoring of the Galen-Lyons Landfill, Wayne County, NY (1994 - present)

Closure investigation and post-closure environmental monitoring of the Town of Wolcott Landfill, Wayne County, NY (1995 - present)

Closure investigation and post-closure environmental monitoring of Town of Ontario Landfill, Wayne County, NY (2004-present)

Remedial Investigation/Feasibility Study (RI/FS) Workplan and Citizen Participation Plan (CPP) for the Brockport Landfill Inactive Hazardous Waste Site, Monroe County, NY (1993)

Post-closure data validation and trend analysis for the Brockport Landfill Inactive Hazardous Waste Site, Monroe County, NY (2001 - present)

Preparation of Site Analytical Plan (SAP) for Seneca Meadows Landfill Expansion, Seneca Falls, NY (1996 and 2006)

Preparation of Site Analytical Plan (SAP) for Lockwood Landfill, Dresden, NY (February 2007)

Preparation of quarterly groundwater and surface water monitoring reports, Seneca Meadows Landfill, Seneca Falls, NY (1995 - present)

Preparation of Chemical Data Acquisition Plan (CDAP) for Interim Corrective Measures, Old Sanitary Landfill, Fort Drum, NY (1994)

Laboratory analytical data validation for various landfill monitoring and brownfield remediation projects (1994 - present)

Currently conducting post-closure groundwater and explosive gas monitoring for four inactive municipal landfills, and groundwater and surface water monitoring at one privately-owned landfill

Michael K. Perry

10028 Deer Park Dr.
Dansville, NY 14437

585.991.9156
michaelkperry55@gmail.com

Profile

- Over 30 years experience in the Environmental Laboratory Industry with career progression from laboratory technician to laboratory director
- Proven accomplishments include business growth, laboratory management, project planning, project management, methods development and problem resolution
- Multiple laboratory certifications

  Strengths include:

  - Analytical Instrumentation
  - Problem solving
  - Customer complaints resolution
  - Cost Control
  - Staff training and Supervision
  - Quality and Productivity Improvement

Employment Background

Environmental Data Usability, (personal business DBA). ~ Dansville, NY 2014 - present

Environmental Data Evaluation

- Production of Data Usability Reports (DUSRs) for NYS Brownfield sites

---

Dansville Auto Mart ~ Dansville, NY 2014 - present

Assistant Maintenance Technician

- Variety of duties including picking up cars for sales, preparing cars for auction, assisting mechanics, and janitorial duties

---

Columbia Analytical Services dba ALS Enviromental ~ Rochester, NY 1996 - 2014

Laboratory Director

- Responsible for overall growth and management of a 50-60 person laboratory
- Set daily production schedules for all departments
- Client services including project planning, problem solving, and business development
- Introduction of new laboratory methods.
- Recommendation and purchase of new analytical instrumentation
- Sales and marketing effort
- Annual Budget development
- Health and safety including Hazardous Waste Management

Michael K. Perry

General Testing Corp. ~ Rochester, NY 1979 - 1996

Laboratory Manager (1986 -1996)

- Promoted due to extensive knowledge of departmental logistics and personnel
- Grew the laboratory from $1,000k to over $5,000k per year in revenue
- Hands-on method development in the laboratory
- Managed all aspects of the laboratory including client services, quality assurance, and analytical scheduling

Lab Analyst / Supervisor (1979 - 1986)

- Instrumentation manager
- Operation and maintenance of all laboratory equipment
- Analysis of water, soil, and air samples

Coca Cola Corp. ~ Atlanta, GA 1975 - 1979

Senior Laboratory Technician

- Analysis of raw materials and finished product using both chemistry and instrumental techniques

Education

ACS Short Course – Effective Management of Chemical Laboratories

BS Chemistry, Georgia State University, Atlanta, GA

AAS Chemical Technology, Alfred State College, Alfred, NY

1.0 Introduction

1.1 HASP Applicability

This site-specific Health and Safety Plan (HASP) has been developed by PVEDI Engineering, Architecture and Geology, D.P.C. (PVEDI) and establishes the health and safety procedures to minimize potential risks to personnel involved with the investigation activities at the 1 North Depot (the BCP Site), City of Binghamton, New York. This HASP applies to all personnel potentially exposed to safety and/or health hazards related to the activities described in Section 3.0 of this document.

THIS HASP APPLIES TO PVEDI PERSONNEL THIS HASP CAN BE UTILITZED BY OTHER ENTITIES FOR THIS PROJECT, AT THEIR SOLE RISK, WHICH IS ACKNOWLEDGED ON THE HASP RECEIPT AND ACCEPTANCE FORM (ATTACHMENT A).

PVEDI IS RESPONSIBLE FOR PROVIDING PERSONAL PROTECTIVE EQUIPMENT, FIT-TESTING OF RESPIRATORS, AND/OR MEDICIAL MONITORING OUTLINED IN THIS DOCUMENT, WHETHER RETAINED BY PVEDI or NOT. IT IS THE SOLE RESPONSIBILITY OF ALL CONTRACTORS TO IMPLEMENT THEIR HEALTH AND SAFETY PROCEDURES IN ACCORDANCE WITH ALL REQUIREMENTS OUTINED HEREIN.

This HASP has been prepared to comply with the applicable requirements of the Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120). Activities covered by this HASP must be conducted in complete compliance with this HASP and with all applicable Federal, State, and local health and safety regulations. Personnel covered by this HASP who cannot or will not comply will be excluded from site activities.

This HASP will be distributed to each person involved with investigative activities at the site. Each person must sign a copy of the attached HASP Receipt and Acceptance Form (see Attachment A).

1.2 Organization/Responsibilities

The implementation of health and safety at this project location will be the shared responsibility of the Project Manager (PM), the Health and Safety Manager (HSM), the Project Site Safety Officer (SSO) and all other personnel who conduct activities at the site.

- Project Manager: Conor Tarbell
- Health and Safety Manager: Anthony Spadavecchia
- Project Site Safety Officer: Samuel Ambrose

1.2.1 Project Manager

The PM has the primary responsibility for ensuring the overall health and safety of this project. As such, the PM is responsible for ensuring that the requirements of this HASP are implemented. Some of the PM's specific responsibilities include:

- Ensuring that all personnel to whom this HASP applies have received a copy of it;
- Providing the SSO with updated information regarding environmental conditions at the site and the scope of site work;
- Providing adequate authority and resources to the on-site SSO to allow for the successful implementation of all necessary safety procedures;
- Supporting the decisions made by the SSO;
- Maintaining regular communications with the SSO; and
- Coordinating the activities of all subcontractors and ensuring that they are aware of the pertinent health and safety requirements for this project.

1.2.2 Health and Safety Manager

The Health and Safety Manager (HSM) is responsible for the preparation, interpretation and modification of this HASP. Modifications to this HASP which may result in less stringent precautions cannot be undertaken by the SSO without the approval of the HSM. Specific duties of the HSM include:

- Writing, approving and amending the HASP for this project;
- Advising the SSO on matters relating to health and safety on this site;
- Recommending appropriate personal protective equipment (PPE) and air monitoring instrumentation to protect personnel from potential site hazards; and
- Maintaining regular contact with the SSO to evaluate site conditions and new information which might require modifications to the HASP.

1.2.3 Site Safety Officer

All field technicians are responsible for implementing the safety requirements specified in this HASP. One (1) technician will be designated to serve as the Site Safety Officer (SSO). The SSO will be appointed by the PM. The SSO will be on-site during all activities covered by this HASP. The SSO is responsible for enforcing the requirements of this HASP once work begins. The SSO has the authority to immediately correct all situations where non-compliance with this HASP is noted and to immediately stop work in cases where an immediate danger is perceived. Some of the SSO's specific responsibilities include:

- Ensuring that all personnel to whom this HASP applies have submitted a completed copy of the HASP Receipt and Acceptance Form (see Attachment A);

- Ensuring that all personnel to whom this HASP applies have attended a pre-entry briefing prior to entering the work zone;
- Maintaining a high level of health and safety consciousness among employees at the work site;
- Procuring and distributing the PPE needed for personnel involved with this project;
- Procuring the air monitoring instrumentation required and performing air monitoring for field activities;
- Verifying that all PPE and health and safety equipment is in good working order;
- Setting up and maintaining the work zones and ensuring proper cleanup of all site personnel;
- Notifying the PM of all non-compliance situations and stopping work in the event that an immediate danger situation is perceived;
- Monitoring and controlling the safety performance of all personnel within established restricted areas to ensure that required safety and health procedures are being followed;
- Conducting accident/incident investigations and preparing accident/incident investigation reports;
- Conducting the pre-entry briefing as required by Section 10.3 of this HASP; and
- Initiating emergency response procedures in accordance with Section 11.0 of this HASP.

1.2.4 Field Personnel and Covered Subcontractor Personnel

All field personnel covered by this HASP are responsible for following the health and safety procedures specified in this HASP and for performing their work in a safe and responsible manner. Some of the specific responsibilities of the field personnel are as follows:

- Reading this HASP in its entirety prior to the start of on-site work;
- Submitting a completed HASP Receipt and Acceptance Form (see Attachment A) and documentation of medical surveillance and training to the PM prior to the start of work;
- Attending the required pre-entry briefing prior to beginning on-site work;
- Bringing forth any questions or concerns regarding the content of this HASP to the PM or the SSO prior to the start of work;
- Reporting all accidents, injuries and illnesses, regardless of their severity, to the SSO; and
- Complying with the requirements of this HASP and the requests of the SSO.

1.2.5 Contractors

In addition to other requirements referenced in this HASP, all contractors are required to:

- Provide appropriate PPE for their employees;
- Ensure, via daily inspections, that their equipment is maintained in good working condition;
- Operate their equipment in a safe manner; and
- Appoint an on-site safety coordinator to interface with the SSO.

1.3 Modification of this HASP

The procedures in this HASP have been developed based on general knowledge of the site, proposed tasks, and anecdotal information from previous investigations at the site. Should additional information become available regarding potential on-site hazards, it may be necessary to modify this HASP. All proposed modifications to this HASP must be reviewed and approved by the HSM before such modifications are implemented.

Any significant modifications must be incorporated into the written document as addenda and the HASP must be re-issued. The PM will ensure that all personnel covered by this HASP receive copies of all issued addenda. Sign-off forms will accompany each addendum and must be signed by all personnel covered by the addendum. Sign-off forms will be submitted to the PM. The HASP addenda will be distributed during the regularly scheduled meetings so that they can be reviewed and discussed. Attendance forms will be collected during the meeting.

2.0 Site Description and History

Site Location and Current Usage

The 1 N Depot Street Brownfield Cleanup Program site (the "BCP Site") encompasses one (1) tax parcels totaling 0.64 acres located at 1 North Depot (Tax Parcel ID #160.25-2-20.2) in the City of Binghamton, Broome County, New York. The BCP Site is currently a vacant structure, and an asphalt parking lot zoned as "Service Commercial" (Figures 1 & 2).

The applicant will renovate the 5-story former industrial and commercial structure into a residential use structure with parking. All fifty (50) proposed residential units will be 100% affordable housing.

The site is mostly flat; slopes downward to the southwest toward Chenango River (Figure 1).

Summary of Proposed Redevelopment Plan

The subject property is proposed for development into a mixed-use residential (multi-family) and community/commercial use structure.

Summary of the Work Performed Previously

Relevant reports are summarized below in chronological order.

Phase I Environmental Site Assessment, *Keystone Associates, October 5, 2015*

Keystone Associates completed a Phase I Environmental Site Assessment (ESA) for the subject property summarized in their report dated October 5, 2015 which identified no Recognized Environmental Conditions (RECs) in their ESA; PVEDI does not agree with this conclusion.

Phase II Environmental Site Assessment, *PVE Engineering, July 12, 2024*

PVE performed a Phase II ESA of the Site summarized in their report dated July 12, 2024. The Phase II ESA was completed in accordance with our approved scope of work, dated May 21, 2024.

Scope

On June 4, 2024, a total of ten (10) soil borings soil borings were installed via direct push drilling method using a track-mounted Geoprobe™ 54DT drill rig equipped with 4-foot long, 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC

liners. Soil borings were advanced to a maximum depth of 24.0-feet bgs. Groundwater was not encountered at time of drilling (ATD). One (1) soil sample was collected from each of the soil borings for a total of ten (10) soil samples. Soil samples were submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory for analysis of some or all of the following:

- Target Compound List (TCL) Volatile Organic Compounds (VOCs) via United States Environmental Protection Agency (USEPA) Method 8260;
- Commissioner Policy-51 (CP-51) Semi-Volatile Organic Compounds (SVOCs) via USEPA Method 8270;
- Resource Conservation and Recovery Act (RCRA) Metals via USEPA Methods 6010/7473; &
- Polychlorinated Biphenyls (PCBs) via USEPA Method 8082.

On June 4, 2024, a total of four (4) soil vapor samples were collected from exterior locations surrounding the on-site structure. On June 5, 2024, a total of two (2) sub-slab soil vapor samples were collected in the basement of the on-site structure. Exterior vapor probes were installed via a track-mounted Geoprobe™ unit to a depth of 5-feet bgs. Exterior probes were constructed of a stainless-steel mesh vapor probe installed at the bottom of the borehole and connected to polyethylene tubing extending to the ground surface; annular space surrounding the mesh interval was backfilled with clean filter sand while the remaining annular space was backfilled with hydrated bentonite to ground surface to create a seal. PVE installed interior temporary vapor probes using a hammer drill with 5/8-inch drill bit. Interior probes were sealed with non-VOC emitting clay. All vapor probes were purged of one to three volumes at a rate not to exceed 0.2L/min. A helium tracer test was conducted at each location to verify integrity, and demonstrate ambient air was not being drawn into the samples being collected.

Each sample was collected in a certified clean Summa canister with a regulator set to collect a sample over a 2-hour sampling period. Samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of VOCs via USEPA Method TO-15 following standard chain-of-custody procedures.

Analytical Results

Soil Quality: One (1) VOC was detected in one (1) of the seven (7) soil samples collected and analyzed. No VOCs were detected at concentrations exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs) or Restricted Residential Soil Cleanup Objectives (RRSCOs) as defined in 6NYCRR Part 375.

SVOCs were detected in all seven (7) soil samples collected and analyzed. SVOCs were detected in two (2) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs. Exceedances are defined below:

- SB-2 (0.5-2-feet)
  - **Benzo(A)Anthracene (1.4 mg/kg)**
  - **Benzo(A)Pyrene (1.1 mg/kg)**
  - **Benzo(B)Fluoranthene (1.1 mg/kg)**
  - Benzo(K)Fluoranthene (1.1 mg/kg)
  - Chrysene (1.5 mg/kg)
  - **Indeno(1,2,3-C,D)Pyrene (0.7 mg/kg)**

- SB-4 (2-3.5-feet)
  - **Dibenzo(A,H)Anthracene (0.42 mg/kg)**

Bold font indicates RRSCO exceedance.

Metals were detected in all seven (7) soil samples collected and analyzed. Metals were detected in five (5) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs. Exceedances are defined below:

- SB-4 (2-3.5-feet)
  - **Lead (986 mg/kg)**
  - **Mercury (0.874 mg/kg)**

- SB-5 (2-3-feet)
  - Lead (344 mg/kg)
  - **Mercury (0.831 mg/kg)**

- SB-6 (0.5-3-feet)
  - Lead (202 mg/kg)
  - **Mercury (1.27 mg/kg)**

- SB-8 (2.5-3.5-feet)
  - Lead (63.5 mg/kg)
  - Mercury (0.259 mg/kg)

- SB-9 (2-2.5-feet)
  - Mercury (0.223 mg/kg)

Bold font indicates RRSCO exceedance.

PCBs were not detected in either of the two (2) soil samples collected for analysis of PCBs.

Vapor Quality: A total of six (6) soil vapor samples, four (4) soil vapor samples from exterior locations and two (2) sub-slab soil vapor samples in the basement of the on-site

structure were collected from the subject property. The following compounds were detected in the vapor samples collected:

- SV-1
  - 1,2,4-Trimethylbenzene (24 µg/m^3)
  - 1,3,5-Trimethylbenzene (5.6 µg/m^3)
  - 2,2,4-Trimethylpentane (2.26 µg/m^3)
  - 4-Ethyltoluene (24 µg/m^3)
  - Acetone (320 µg/m^3)
  - Benzene (3.9 µg/m^3)
  - Carbon Disulfide (2.8 µg/m^3)
  - Cyclohexane (4.4 µg/m^3)
  - Dichlorodifluoromethane (3.0 µg/m^3)
  - Ethylbenzene (41 µg/m^3)
  - Methyl Ethyl Ketone (5.2 µg/m^3)
  - m,p-Xylene (45 µg/m^3)
  - N-Heptane (6.4 µg/m^3)
  - N-Hexane (10 µg/m^3)
  - O-Xylene (1,2-Dimethylbenzene) (18 µg/m^3)
  - PCE (27 µg/m^3)
  - Toluene (32 µg/m^3)
  - Trichlorofluoromethane (6.8 µg/m^3)

- SV-2
  - 1,2,4-Trimethylbenzene (35 µg/m^3)
  - 1,3,5-Trimethylbenzene (7.8 µg/m^3)
  - 1,3-Butadiene (3.4 µg/m^3)
  - 2,2,4-Trimethylpentane (3.71 µg/m^3)
  - 2-Hexanone (3.4 µg/m^3)
  - 4-Ethyltoluene (36 µg/m^3)
  - Acetone (280 µg/m^3)
  - Benzene (8.1 µg/m^3)
  - Benzyl Chloride (2.5 µg/m^3)
  - Carbon Disulfide (3.0 µg/m^3)
  - Carbon Tetrachloride (7.4 µg/m^3)
  - Cyclohexane (15 µg/m^3)
  - Dichlorodifluoromethane (3.5 µg/m^3)
  - Ethylbenzene (54 µg/m^3)
  - Methyl Ethyl Ketone (6.7 µg/m^3)
  - m,p-Xylene (62 µg/m^3)
  - N-Heptane (28 µg/m^3)
  - N-Hexane (46 µg/m^3)
  - O-Xylene (25 µg/m^3)
  - PCE (17 µg/m^3)

  - Styrene (1.8 µg/m^3)
  - Toluene (47 µg/m^3)
  - TCE (0.51 µg/m^3)
  - Trichlorofluoromethane (2.9 µg/m^3)
  - Vinyl Chloride (0.49 µg/m^3)

- SV-3
  - 1,2,4-Trimethylbenzene (36 µg/m^3)
  - 1,3,5-Trimethylbenzene (8.7 µg/m^3)
  - 2,2,4-Trimethylpentane (4.52 µg/m^3)
  - 4-Ethyltoluene (35 µg/m^3)
  - Acetone (530 µg/m^3)
  - Acrylonitrile (5.3 µg/m^3)
  - Benzene (17 µg/m^3)
  - Cis-1,2-Dichloroethylene (4.5 µg/m^3)
  - Cis-1,2-Dichloromethane (4.5 µg/m^3)
  - Cyclohexane (8.9 µg/m^3)
  - Ethylbenzene (66 µg/m^3)
  - Methyl Ethyl Ketone (10 µg/m^3)
  - m,p-Xylene (73 µg/m^3)
  - N-Heptane (28 µg/m^3)
  - N-Hexane (39 µg/m^3)
  - O-Xylene (27 µg/m^3)
  - PCE (4,900 µg/m^3)
  - Toluene (58 µg/m^3)
  - TCE (100 µg/m^3)
  - Trichlorofluoromethane (13 µg/m^3)

- SV-4
  - 1,2,4-Trimethylbenzene (36 µg/m^3)
  - 1,3,5-Trimethylbenzene (8.2 µg/m^3)
  - 2,2,4-Trimethylpentane (4.95 µg/m^3)
  - 4-Ethyltoluene (34 µg/m^3)
  - Acetone (540 µg/m^3)
  - Benzene (390 µg/m^3)
  - Benzyl Chloride (10 µg/m^3)
  - Bromodichloromethane (13 µg/m^3)
  - Chloroform (84 µg/m^3)
  - Cis-1,2-Dichloroethylene (2.4 µg/m^3)
  - Cyclohexane (9.9 µg/m^3)
  - Ethylbenzene (66 µg/m^3)
  - Methyl Ethyl Ketone (14 µg/m^3)
  - m,p-Xylene (72 µg/m^3)
  - N-Heptane (22 µg/m^3)

  - N-Hexane (35 µg/m^3)
  - O-Xylene (28 µg/m^3)
  - PCE (1,800 µg/m^3)
  - Toluene (110 µg/m^3)
  - Trichlorofluoromethane (8.5 µg/m^3)

- SSV-1
  - Acetone (85 µg/m^3)
  - TCA (7.8 µg/m^3)
  - 1,2,4-Trimethylbenzene (7.7 µg/m^3)
  - Chloroform (9.0 µg/m^3)
  - cis-1,2-Dichloroethylene (83 µg/m^3)
  - Dichlorodifluoromethane (7.7 µg/m^3)
  - Ethylbenzene (9.3 µg/m^3)
  - Methyl Ethyl Ketone (5.0 µg/m^3)
  - N-Heptane (7 µg/m^3)
  - N-Hexane (8.5 µg/m^3)
  - PCE (7,400 µg/m^3)
  - Toluene (8 µg/m^3)
  - TCE (220 µg/m^3)
  - Trichlorofluoromethane (22 µg/m^3)

- SSV-2
  - 1,2,4-Trimethylbenzene (9 µg/m^3)
  - 2,2,4-Trimethylpentane (1.38 µg/m^3)
  - 4-Ethyltoluene (7.3 µg/m^3)
  - Acetone (170 µg/m^3)
  - Benzene (3 µg/m^3)
  - Cis-1,2-Dichloroethylene (1.6 µg/m^3)
  - Cyclohexane (2.6 µg/m^3)
  - Dichlorodifluoromethane (8.8 µg/m^3)
  - Ethylbenzene (11 µg/m^3)
  - Methyl Ethyl Ketone (9.9 µg/m^3)
  - m,p-Xylene (14 µg/m^3)
  - N-Heptane (5.8 µg/m^3)
  - N-Hexane (6.7 µg/m^3)
  - O-Xylene (6.2 µg/m^3)
  - PCE (890 µg/m^3)
  - Propylene (5.7 µg/m^3)
  - Toluene (10 µg/m^3)
  - TCE (33 µg/m^3)
  - Trichlorofluoromethane (24 µg/m^3)

Co-located ambient indoor air samples would be required to confirm the NYSDOH recommended action at each location. However, given the deteriorated condition of the structure and potential for influence/dilution from outdoor ambient air, no indoor ambient air samples were collected.

Recommendations

1. SVOCs and metals were detected in soil samples at concentrations indicative of impacts to soils from past site operations (use as a trucking terminal, tin works/machine shop/a blueing factory and ironworks). Historic fill is present throughout the subject property.
    a. Four (4) of the seven (7) samples analyzed at the laboratory contained contaminants at concentrations exceeding the intended use criteria (RRSCOs). These concentrations are consistent with historical fill. The presence of this fill and contaminants exceeding the intended use criteria elsewhere on site is likely.
    b. If soil is excavated from the site, collection and analysis of additional soil samples would be necessary to characterize soil for purposes of waste characterization, proper handling and selecting an appropriate disposal facility.
    c. Unconsolidated materials (below surface cover) throughout the subject property contained urban fill (wood and brick fragments). Should the client elect not to proceed with BCP, and if requested, PVE can prepare a Soil and Materials Management Plan (SMMP) adhering to 6 NYCRR Part 360 which will outline processes for the excavation and handling of this urban fill during any future site earthwork activities.
2. Based on the concentrations of compounds detected in soil vapor, a vapor encroachment condition (VEC) may exist at the site. The presence of sub-slab vapors indicate that localized VOC sources are present, perhaps in soil and/or groundwater beneath the structure where soil borings were not possible due to limited access. Redevelopment of the site should include the design and installation of a sub-slab depressurization system (SSDS) within the enclosed portions of structures to prevent exposure to building occupants.
3. This investigation is limited in scope, impacts to soil, groundwater and soil vapor from past site operations in other locations of the property cannot be ruled out.

Preliminary Remedial Investigation, *PVEDI, August 11, 2025*

PVEDI Engineering, Architecture and Geology, D.P.C. (PVEDI) performed a Preliminary Remedial Investigation of the Site summarized in our report dated August 11, 2025. Preliminary Remedial Investigation was completed in accordance with our approved scope of work, dated May 3, 2025.

Scope

On June 18 and 19, 2025, a total of thirteen (13) soil borings soil borings were installed via direct push drilling methods using a track-mounted GeoprobeTM 6712DT drill rig equipped with 5-foot long, 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners and hand tools for interior locations. Soil borings were advanced to a maximum depth of 40.0-feet bgs. Groundwater was not encountered ATD in the northern-most soil borings (SBs 11, 12, & 13) due to shallow refusal ranging from 20.0 feet to 26.5 feet. Groundwater was encountered in four (4) soil borings (SBs 14, 21, 22, & 23) at a depth of 33.90 feet to 34.64 feet bgs. One (1) soil sample was collected from nine (9) of the thirteen (13) of the soil borings for a total of nine (9) soil samples. Soil samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of the following:

- TCL VOCs via USEPA Method 8260;
- TCL SVOCs via USEPA Method 8270;
- Target Analyte List (TAL) Metals via USEPA Methods 6010/7473; &
- Per- & Polyfluoroalkyl Substances (PFAS) via USEPA Method 1633 (2 samples).

On July 25, 2025, four (4) monitoring wells were sampled for a total of four (4) groundwater samples. Groundwater samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of the following:

- TCL VOCs via USEPA Method 8260; &
- TAL Metals via USEPA Methods 6010/7473.

Analytical Results

Soil Quality: One (1) or more VOCs were detected in nine (9) soil samples collected and analyzed for VOCs. Of note, PCE was detected at low concentrations in each of the nine (9) samples collected. However, VOCs were not detected at concentrations exceeding SCOs.
One (1) or more SVOCs were detected in two (2) of the nine (9) soil samples collected and analyzed for SVOCs. SVOCs were not detected at concentrations exceeding SCOs.

Metals were detected in all nine (9) soil samples collected and analyzed for metals. One (1) or more metals were detected at concentrations exceeding UUSCOs, RRSCOs and/or Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) in seven (7) of the nine (9) soil samples. Exceedances are listed below:

- SB-15 (0.5-1.5-feet)
    - Copper (53.4 mg/kg)
- SB-16 (0.5-1.0-feet)
    - Copper (82.2 mg/kg)
- SB-17 (0.5-1.5-feet)

    - Zinc (122 mg/kg)
- SB-18 (0.5-1.0-feet)
    - Copper (71.4 mg/kg)
    - Lead (215 mg/kg)
    - Zinc (433 mg/kg)
    - Mercury (0.723 mg/kg)
- SB-20 (0.5-1.0-feet)
    - Copper (60.6 mg/kg)
    - Lead (276 mg/kg)
    - Zinc (764 mg/kg)
    - ***Mercury (1.91 mg/kg)***
- SB-21 (35-37-feet)
    - Nickel (35.3 mg/kg)
- SB-22 (35-37-feet)
    - Nickel (31.5 mg/kg)

Bold indicates RRSCO exceedance.
Italic indicated PGWSCO exceedance.

Multiple PFAS compounds were detected in both soil samples collected and analyzed for PFAS. Neither Perfluorooctanesulfonic acid (PFOS) nor Perfluorooctanoic acid (PFOA) were detected in either soil sample. As SCOs are only defined for PFOS and PFOA, no PFAS were detected at concentrations exceeding SCOs.

Groundwater Quality: VOCs were detected in all four (4) of the groundwater samples collected and analyzed for VOCs. One (1) VOC was detected at concentrations exceeding Class GA Groundwater Quality Standards (GQS) as defined in 6NYCRR Part 700-705. Exceedances are listed below.

- MW-1
    - PCE (66.6 ug/L)
- MW-2
    - PCE (79.9 ug/L)
- MW-3
    - PCE (31.2 ug/L)
- MW-4
    - PCE (136 ug/L)

Metals were detected in the four (4) groundwater samples collected and analyzed for metals. Multiple Metals were detected at concentrations exceeding Class GA GQS. Exceedances are listed below.

- MW-1
    - Iron (58.1 mg/L)

    - Lead (0.0897 mg/L)
    - Magnesium (42.6 mg/L)
    - Manganese (2.88 mg/L)
    - Sodium (157 mg/L)
- MW-2
    - Iron (14.1 mg/L)
    - Manganese (0.620 mg/L)
    - Sodium (31.1 mg/L)
- MW-3
    - Barium (2.01 mg/L)
    - Total Chromium (0.0678 mg/L)
    - Copper (0.216 mg/L)
    - Iron (150 mg/L)
    - Lead (0.157 mg/L)
    - Magnesium (67.4 mg/L)
    - Manganese (8.89 mg/L)
    - Nickel (0.145 mg/L)
    - Sodium (55.1 mg/L)
- MW-4
    - Iron (51.7 mg/L)
    - Lead (0.0842 mg/L)
    - Manganese (4.12 mg/L)
    - Sodium (198 mg/L)
    - Thallium (0.00192 mg/L)

Recommendations

1. VOCs and metals were detected in soil and groundwater samples at concentrations indicating past site operations have adversely impacted the subject property.
2. PCE was detected in groundwater at concentrations increasing from east to west under the on-site structure. The upgradient concentrations of PCE range from 31.2 ug/L to 79.9 ug/L while the downgradient concentrations at the properties edge range from 66.6 ug/L to 136 ug/L. Based on surveyed well elevations and estimated direction of groundwater flow, these data suggest a source of groundwater contamination underlying the structure/subject property. Further, PCE was detected at low concentrations in all nine (9) soil samples collected.
3. Multiple metals were detected in groundwater at concentrations exceeding Class GA GQS. Lead was detected in soil samples (data provided in our Phase II ESA) at concentrations exceeding PGWSCOs and groundwater at concentrations exceeding Class GA indicating an on-site source of lead to be contaminating groundwater.
4. We feel that this supplemental data clearly defines source contamination on-site thus deeming the site eligible for Tangible Property Tax Credits (TPTCs).

2.1 Summary of Proposed Redevelopment Plan

The applicant will renovate the 5-story former industrial and commercial structure into a residential use structure with parking. All fifty (50) proposed residential units will be 100% affordable housing.

2.2 Summary of Past Uses of Site and Areas of Concern (AOCs)

The BCP Site is located at 1 North Depot Street, City of Binghamton, Broome County, New York. The site is situated approximately 0.18 miles east of the Chenango River. The proposed BCP Site is bordered to the north by 95 Prospect Avenue (commercial) and 108 Prospect Avenue (residential), to the east by 10 Eldrege Street (parking lot) and 21 North Depot Street (commercial), to the south by railroad tracks and a storage yard, and to the west by 89 Prospect Avenue (commercial).

The Site is currently zoned by the City of Binghamton as “Service Commercial”. The proposed project area is adjacent to commercial and residential properties. The Site is improved with one (1) 51,000 sq. ft. five-story and paved parking lot. The Site is currently vacant with parking being used for adjoining businesses. There is local support for the cleanup of the property and the redevelopment proposed by the Volunteer.

As early as 1887, the property operated as wholesale groceries, a cigar factory, Casper and Honah Tin Works, a machine shop and the Bengal Blueing Factory. In 1898, only the wholesale groceries and cigar factory were in operation. In 1918, the property operated as wholesale groceries, coffee roasters wholesale hardware, and Reynolds and Hawley ornamental iron works. In 1950-1952, the property operated as wholesale groceries, prints wholesale hardware and motor freight terminals with a gasoline tank. In 1970, the property operated as LJ Kingsley Wholesale Hardware (including paints), with a buried gasoline tank, wholesale meats; (it should be noted “Phelps Ave” bisected the property east to west to the former Post Office Terminal east of the property through all Sanborns except 1887). Currently a 5-story abandoned/vacant former commercial structure in very poor condition.

Possible sources of contamination are from chemicals used in operations from the cigar factory, Casper and Honah Tin Works, the machine shop, and Bengal Blueing Factory.

Based on the findings and conclusions of the previous environmental investigations, the following AOCs have been established:

AOC – 1 Historic Fill
AOC – 2 Soil Vapor
AOC – 3 Groundwater
AOC – 4 Buried Gasoline Tank

AOC – 5 Hazardous Building Materials

The following is a brief description of the findings in each area identified above.

AOC – 1 Historic Fill

As indicated in the previous investigations, historic fill was observed in soil boring throughout the subject property, likely a resulting from infill of former on-site structures or subbase for Phelps Avenue that bisected the property historically. This fill was found to contain SVOCs and metals at concentrations exceeding the Site's intended SCOs.

AOC – 2 Soil Vapor

As indicated in the previous investigations, a vapor encroachment condition (VEC) may exist at the site. The presence of chlorinated solvents in soil vapors indicate that localized VOC sources are present, perhaps in soil and/or groundwater beneath the structure where soil borings were not possible due to limited access.

AOC – 3 Groundwater

As indicated in the Preliminary Remedial Investigation Report, a total of four (4) conventional 2-inch diameter groundwater monitoring wells were installed throughout the BCP Site. PCE and multiple metals were detected at concentrations exceeding Class GA GQS standards in all four (4) monitoring wells.

AOC – 4 Buried Gasoline Tanks

A gasoline storage tank is depicted in the northern parking lot on Sanborn Maps dated 1950 to 1970. Two (2) soil borings were installed in proximity to (based on georeferenced images) the buried tank; while no impacts were observed in the soil, PVEDI could not extend a soil boring to the depth of groundwater in this area.

AOC – 5 Hazardous Building Materials

The structure is in poor condition with portions of the roof collapsed through underlying floors into the basement. The building materials and debris are co-mingled/homogenized throughout the collapsed pile. Asbestos Containing Materials (ACM) may be present throughout the basement in areas prohibiting safe subsurface investigation.

3.0 Remedial Investigation

Remedial Investigation sampling will focus on delineating the extent of contaminants that have been demonstrated to be present to properly design future remedial alternatives. Sample locations have also been selected to identify contaminants in areas that have not been previously investigated, or where a contaminant source is suspected but previous sampling has been insufficient to conclusively establish the presence or absence of contaminants at concentrations requiring remedial action. In this sense, the Remedial Investigation Scope is presented to provide sufficient detail to develop data to satisfy overall project objectives, but flexibility to adjust for field conditions and observations.

The Sample Summary Table (Table 1) describes the location and depth of each sample, the laboratory analyses and laboratory method number planned for each sample, and the rationale for collecting each sample. Table 1 is provided in the RIWP.

All RI field work will be conducted in accordance with the Quality Assurance Project Plan (QAPP), provided in Appendix A, and the Health and Safety Plan (HASP), provided in Appendix B. Community air monitoring will be conducted in accordance with the Appendix 1A of DER-10.

3.1 Mobilization and Utilities Investigation

Seven (7) days prior to initiating any field activities, PVEDI will notify NYSDEC and NYSDOH personnel of the anticipated field schedule. A draft schedule is presented in Section 11.0 of the RIWP.

A geophysical survey will be performed prior to drilling and installation of soil borings and monitoring wells. The geophysical survey will employ ground-penetrating radar (GPR) and magnetic/electromagnetic equipment to locate anomalies that could be representative of buried infrastructure, such as fuel storage tanks, sewer lines, drain pipes, utilities, and conduits that could provide potential pathways for contaminants, or obstructions to be avoided during drilling.

3.2 Soil Borings

Ten (10) soil borings are proposed across the BCP Site to determine site stratigraphy and collect soil samples for laboratory analysis (See Figure 6). Five (5) from beneath the slab of the on-site structure and five (5) from exterior locations. Interior soil boring locations will need to be assessed by a structural engineer provided the integrity of the current on-site structure. If feasible and necessary, shoring will be designed and installed in support of the investigation. Borings will be advanced using various direct push Geoprobe™ equipment equipped with 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners. Interior soil borings will be installed through

the slab of on-site structure via Geoprobe™ 420M hand-truck mounted hammer, or equivalent limited access tooling, and be sampled continuously from ground surface to a maximum depth of 35-feet bgs, to depth of groundwater, or to refusal, whichever is encountered first. Exterior soil borings will be installed via Geoprobe™ 6712 track-mounted rig and be sampled continuously from ground surface to a maximum depth of 45-feet bgs, to groundwater, or to refusal, whichever is encountered first.

If shallow refusal is encountered, up to three (3) attempts will be made to complete the soil samples to the target depth. At each location, field personnel will screen soil samples for VOCs using a photoionization detector (PID), and headspace techniques. The project geologist will keep a detailed log of each core: Lithology, grain size, stratigraphic changes, color, and occurrence of groundwater will be recorded. Observations will be made describing the presence of potential contamination in the soil samples based on odor, visual observations, or PID readings.

Three (3) to four (4) discrete/grab soil samples will be collected from each soil boring or surface soil sample. Soil will be collected from surface (0-2-inches), shallow intervals (2-12-inches & 12-24-inches), and a fourth interval selected for laboratory analysis will be determined based on information generated during previous investigations, field observations including visual and olfactory indications of contamination as well as direct instrument readings and the soil/groundwater interface zone. Soil samples will be screened for VOCs using a PID. Each discrete/grab soil sample interval will be transferred into laboratory provided container. See Appendix A for more information related to sampling procedure and approved sample containers.

Soil samples will be analyzed for some or all of the following parameters, as specified below:

- TCL VOCs by USEPA Method 8260C;
- TCL SVOCs by USEPA Method 8270D;
- TAL Metals by USEPA Method 6010C & 7471;
    - Including cyanide and hexavalent chromium.
- TCL PCBs by USEPA Method 8082A;
- TCL Pesticides by USEPA Method 8081B;
- TCL Herbicides by USEPA Method 8051A; &
- 1,4-Dioxane & PFAS by USEPA Method 8270D SIM & 1633.

Samples to be analyzed for emerging contaminants will be collected in accordance with NYSDEC Guidelines for Sampling, Analysis, and Assessment of PFAS, dated April 2023.

All samples will be analyzed by a NYSDOH ELAP-certified laboratory providing Analytical Services Protocol (ASP) Category B deliverables. Field duplicates and matrix spike/matrix spike duplicates (MS/MSD) will be collected for quality

control/quality assurance (QA/QC) purposes and analyzed for sample parameters described above, in accordance with Table 1. In addition, aqueous equipment field blanks will be collected in the field and laboratory-supplied aqueous trip blanks will accompany the sample shipment (trip blanks analyzed for VOCs only). QA/QC blanks and duplicates will be completed at a frequency of one sample for every 20 field-samples, as required in DER-10. QA/QC blanks and duplicates are included in Table 1.

Upon completion of drilling, each boring will be filled to within 12-inches of ground surface with either the drill cuttings or a cement/bentonite grout mixture (if grossly contaminated media is identified). Boreholes filled with soil cuttings will be completed to ground surface using drilling sand, if necessary. Boreholes filled with grout will be completed with Quickrete to top of groundwater interface and natural soil cuttings/sand, as necessary. All borings will be patched with the appropriate surface materials (e.g., asphalt or concrete patch), depending on the location.

3.3 Soil Vapor

A vapor intrusion investigation will be conducted in accordance with NYSDOH Guidance for Evaluating Vapor Intrusion in the State of New York, dated May 2006 (and subsequent revisions).

A total of three (3) soil vapor samples, three (3) ambient indoor air samples and one (1) ambient outdoor air sample are to be collected from the BCP Site. Sub-slab soil vapor samples will be installed using a hammer-drill and 5/8-inch drill bit. Vapor probes would be installed below the slab elevation and sealed at the surface with a non-VOC emitting clay to prevent sample cross contamination.

A helium-vapor test will be conducted to demonstrate a proper seal around the sampling port and confirm sample integrity. Prior to sample collection, the sample port will be purged of one to three volumes at a rate not to exceed 0.2 L/min. The vapor samples will be collected in laboratory-supplied, batch certified-clean Summa® canisters calibrated for a sampling period of 2-hours and at a flow rate not to exceed 0.2 L/minute. Prior to soil vapor sample collection, one (1) to three (3) volumes of soil vapor will be purged from the sample port at a flow rate not to exceed 0.2 L/minute. One (1) ambient indoor air sample will be collected proximate to each sub-slab vapor implant. The ambient outdoor air sample will be collected from a location (within the Site boundary) determined to be the upwind of the remaining portions of the Site.

Vapor sample canisters will be submitted to a NYSDOH ELAP-certified laboratory for analysis for VOCs via USEPA Method TO-15.

3.4 Monitoring Wells

Based on the previous investigation completed at the Site, groundwater was encountered from 33.90 to 34.64 feet. An additional two (2) monitoring wells will be installed, to a maximum depth of 45-feet bgs, in overburden soils through the use of a Geoprobe™ or conventional drilling rig equipped with hollow-stem augers (HSA). Monitoring wells will be constructed of 2-inch Schedule 40 PVC with a 0.020-inch slotted screen and solid riser. The borehole annulus of the wells will be filled with silica sand to a height of 2-feet above the top of the screen to form a filter pack. Bentonite will be placed above the filter pack to form a 2-foot seal. The remainder of the borehole annulus will be filled with a bentonite-cement grout or drill cuttings (if not grossly contaminated). Wells will be finished at the surface with either flush-to-grade curb boxes or appropriately sized steel standpipe with locking cap set in concrete, depending on the location.

Each monitoring well will be developed to remove fine-grained soil from the well and filter pack using a submersible pump. Groundwater samples will be collected using low-flow (minimal-drawdown) sampling techniques, with dedicated tubing. Prior to sample collection, depth to groundwater will be measured to the nearest 0.01-foot and recorded for each well. The wells will be purged until temperature, pH, oxygen reduction potential (ORP), turbidity, dissolved oxygen (DO) and conductivity have stabilized. The top-of-casing elevation will be surveyed to the nearest 0.01 foot by a NYS-PLS. Depth-to-water measurements recorded prior to sample collection will be used to calculate groundwater gradients and develop a groundwater contour map.

Groundwater samples will be analyzed for the following:

- TCL VOCs by USEPA Method 8260C;
- TCL SVOCs by USEPA Method 8270D;
- TAL Metals by USEPA Method 6010C & 7471B;
    - Including cyanide and hexavalent chromium;
    - Field filtered and totals;
- TCL PCBs by USEPA Method 608;
- TCL Pesticides by USEPA Method 608;
- TCL Herbicides by USEPA Method 8051A; &
- Emerging Contaminants: 1,4-Dioxane & PFAS by USEPA Method 8270D SIM & 1633.

All samples will be analyzed by a NYSDOH ELAP-certified laboratory providing Category B deliverables for the analyses listed above. Aqueous equipment field blanks will be collected for QA/QC purposes and analyzed for all sample parameters in accordance with Table 1. Laboratory-supplied aqueous trip blanks will accompany the sample shipment (trip blanks analyzed for VOCs only).

3.5 Hazardous Building Materials

The volunteer will cause surveys of the on-site building materials for the presence of LBP and ACM to determine the presence and amount thereof which may impact the ability to adequately investigation and/or remediate the BCP Site. Any damaged/loose friable ACM identified during surveys presenting immediate risks to on-site personnel will require abatement prior to investigation of interior spaces. Such abatement will be conducted in accordance with NYS DOL Industrial Code Rule 56. Other identified LBP and ACM will be properly abated during RA of the property and will be further discussed in the forthcoming RAWP.

3.6 Investigation-Derived Waste Management

Investigation-derived wastes (IDW) will be minimized by returning excess soil from soil borings to the original borehole unless grossly contaminated, in accordance with DER-10(3.3)(e), which also prescribes the following: If field evidence of gross contamination is identified, soil cuttings, decontamination wastewater and groundwater will be drummed containerized and staged near the point of generation and will be properly disposed of based on laboratory results. If free of visible contamination, disposable PPE, sampling supplies and disposables will be placed in heavy-duty plastic bags and disposed of properly as general refuse.

In any instance during the performance of this RI, all IDW will be managed in accordance with procedures and methods outlined in DER-10 section 3.3e.

3.7 Data Review

All samples undergoing laboratory analysis will be subject to a third-party data review process in accordance with the QAPP, to ensure the usability of the data collected. Data usability summary reports (DUSRs) documenting any issues with QA/QC will be prepared and included in the RI Report. Further, Category B Deliverables for the previous data collected during the Phase II ESA and the Preliminary Remedial Investigation Report will be requested from the laboratory. DUSRs for all data amassed from the site documenting any issues with QA/QC will be prepared and included in the RI Report.

4.0 Remedial Investigation Health and Safety

Field activities include site meetings, mobilization, implementing the health and safety plan, soil boring/soil vapor and monitoring well installation, analytical testing, equipment decontamination and handling of investigation wastes. Subcontractors will be used for marking private and public utilities, installation of soil borings, monitoring wells and laboratory analysis of soil samples collected.

Site Meeting

A Site "kick-off" meeting will be held with the earth work subcontractor(s) prior to initiating field activities. The purpose of the meeting will be to orient field team members and subcontractors with the Site, project personnel, Site background, scope of work, potential dangers, health and safety requirements, site-specific security and safety protocols, emergency contingencies and other field procedures. NYSDEC will be notified of this meeting and is invited to attend.

Mobilization

Following approval of the RI Work Plan by NYSDEC, Dig Safely NY will be contacted to identify the locations of publicly owned buried utilities which lead to the subject property. Utility clearance will require three working days. PVEDI personnel will interface with appropriate parties to obtain sidewalk and street permits in advance of any field activities, if necessary. No Sidewalk permits are anticipated to be required.

Health and Safety

We anticipate all site work to be performed in Level D PPE. Health and safety monitoring will be conducted during field activities in accordance with the Site-Specific Health and Safety Plan (Appendix B of the RI Work Plan). If air monitoring data suggests an upgrade to Level C PPE is required, work will cease, and Site conditions will be re-evaluated prior to further activities.

5.0 Air Surveillance and Monitoring

Air monitoring will be conducted during any excavation activities in accordance with the HASP and CAMP. See Section 8 of this HASP below and/or Appendix D of the RIWP for further information.

6.0 Chemical Hazard Assessment and Controls

6.1 Chemical Hazards

The predominant contaminants potentially encountered during the subsurface investigation in soil, groundwater, and soil vapor include: Volatile and semi-volatile organic compounds (VOCs and SVOCs); and inorganic metals including barium, chromium, copper, lead, nickel, zinc, iron, manganese, magnesium, sodium, thallium, and mercury. Chemical Hazard and MSDS Sheets are provided in Attachment D.

6.1.1 Table: Occupational Exposure Limits and Ionization Potentials of Detected VOCs and SVOCs

VOCS

Name	Skin Absorption	PEL (1) (PPM)	REL(2) (PPM)	STEL (PPM)	IDLH (PPM)	TLV (3) (PPM)	IP (eV)	Carcinogen
Methyl-tert butyl ether	Yes	NA	NA	NA	NA	50	NA	Suspected
1,2,4-Trimethylbenzene	Yes	NA	25	NA	NA	25	8.27	
1,3,5- Trimethylbenzene	Yes	25	NA	NA	NA	25	NA	
Benzene	Yes	1	0.1	1 (2)	500	0.5	9.24	X

1 -OSHA (Occupational Safety and Health Administration)
PEL - Permissible Exposure Limit (OSHA Standard)
STEL -Short Term Exposure Limit
2 - NIOSH (National Institute for Occupational Safety and Health)
REL - Recommended Exposure Limit
IDLH – Immediately Dangerous to Life and Health
STEL -Short Term Exposure Limit
3 - ACGIH (formerly American Conference of Governmental Industrial Hygienists)
TLV - Threshold Limit Value
STEL -Short Term Exposure Limit
L – Exposure by all routes should be as carefully controlled to levels as low as possible
4 - PELs are listed for these items under Coal Tar Pitch Volatiles
5 - Benzene Soluble fraction
6 – Cyclohexane-extractable fraction
7 - Benzene Soluble Aerosol
NA – not applicable
PPM – parts of airborne contaminant per million parts of air (by volume)
mg/m^3 – milligrams of airborne contaminant per cubic meter of air
IP – ionization potential
eV – electron volt

OSHA PELs, ACGIH TLVs, and NIOSH RELs provide time-weighted averages (TWAs), which are defined as concentrations for a normal 8-hour workday (NIOSH RELS are based on 10 hours) and 40-hour work week to which almost all workers can be exposed repeatedly without suffering adverse health effects.

Per ACGIH, a STEL is defined as the concentration to which “workers can be exposed for short time periods without irritation, chronic or irreversible tissue damage, dose-rate-dependent toxic effects, or narcosis sufficient to be likely to increase the likelihood of accidental injury, impaired self-rescue or materially reduced work efficiency.” The STEL is a 15-minute TWA. STELs are used by OSHA, ACGIH, and NIOSH.

IP refers to ionization potential which is the amount of energy required to remove an electron from an atom or molecule. Air sampling devices known as photo ionization detectors (PIDs) use ultraviolet (UV) light to ionize gas molecules in order to measure the presence of volatile organic compounds (VOCs). The most common light source used in PIDs is a 10.6 eV (electron volt) lamp.

6.1.2 Chemical Hazards of Metals of Concern

The metals detected in on-site soils and associated potential health effects are presented below. If dust control measures implemented during excavation cannot maintain dust levels at an acceptable level, the SSO will notify site workers of the condition. PPE summarized in Section 9.0 will be utilized.

Lead:

Exposure Routes: Inhalation, ingestion, skin and/or eye contact.
Symptoms: Lassitude (weakness, exhaustion), insomnia; facial pallor; anorexia, weight loss, malnutrition; constipation, abdominal pain, colic; anemia; gingival lead line; tremor; paralysis wrist, ankles; encephalopathy; kidney disease; irritation eyes; hypotension.
Target Organs: Eyes, gastrointestinal tract, central nervous system, kidneys, blood, and gingival tissue.
OSHA PEL: 0.05 mg/M^3 as an 8-hour TWA.
ACGIH TLV: 0.05 mg/M^3 as an 8-hour TWA.

Mercury:

Exposure Routes: inhalation, skin absorption, ingestion, skin and/or eye contact.
Symptoms: Irritation of eyes and skin; cough, chest pain, dyspnea (breathing difficulty), bronchitis, pneumonitis; tremor, insomnia, irritability, indecision, headache, lassitude (weakness, exhaustion); stomatitis, salivation; gastrointestinal disturbance, anorexia, weight loss; proteinuria.
Target Organs: Eyes, skin, respiratory system, central nervous system, kidneys.
OSHA PEL: 0.1 mg/m^3 as an 8-hour as a Ceiling.
ACGIH TLV: 0.025 mg/m^3 as an 8-hour TWA.

Barium:

Exposure Routes: Inhalation, skin and/or eye contact.
Symptoms: Irritation of eyes, skin, upper respiratory system; skin burns; gastroenteritis; muscle spasm; slow pulse; extrasystoles; hypokalemia.
Target Organs: Eyes, skin, respiratory system, heart, and central nervous system.
OSHA PEL: 0.5 mg/m^3 as an 8-hour TWA.
ACGIH TLV: 0.5 mg/m^3 as an 8-hour TWA.

Chromium:

Exposure Routes: Inhalation, skin and/or eye contact.
Symptoms: Irritation eyes, skin; lung fibrosis.
Target Organs: Eyes, skin, and respiratory system.
OSHA PEL: 1 mg/m^3 as an 8-hour TWA.
ACGIH TLV: 0.5 mg/m^3 as an 8-hour TWA.

Copper:

Exposure Routes: Inhalation skin and/or eye contact.
Symptoms: Contact can irritate and burn the eyes and skin. Inhalation can irritate

the nose and throat causing coughing and wheezing.
Target Organs: Eye, skin and respiratory system.
OSHA PEL: 1 mg/m^3 as an 8-hour TWA
ACGIH TLV: 1 mg/m^3 as an 8-hour TWA

Magnesium:

Exposure Routes: Inhalation, skin and/or eye contact.
Symptoms: Inhaling this substance can irritate the nose, throat and lungs causing tightness in the chest and difficulty in breathing.
Target Organs: Nose, throat and lungs.
OSHA PEL: 15 mg/m^3 as an 8-hour TWA.
ACGIH TLV: 10 mg/m^3 as an 8-hour TWA.

Manganese:

Exposure Routes: Inhalation.
Symptoms: The aerosol is irritating to the respiratory tract. The substance may have effects on the lungs and central nervous system, resulting in increased susceptibility to bronchitis, pneumonitis and neurologic, neuropsychiatric disorders
Target Organs: Respiratory tract and central nervous system.
OSHA PEL: 5 mg/M3 as a Ceiling.
ACGIH TLV: 0.1 mg/m3 for inhalable particulate matter as an 8-hour TWA.

Nickel:

Exposure Routes: inhalation, skin absorption, ingestion, skin and/or eye contact.
Symptoms: Irritation and burning of eyes and skin; skin allergy; irritation of nose, throat and lungs; headache, dizziness and vomiting; probable lung carcinogen; asthma-like allergy; chronic bronchitis and scarring of the lungs.
Target Organs: Eyes, skin, respiratory system, kidneys and liver.
OSHA PEL: 1.0 mg/m^3 as an 8-hour TWA
ACGIH TLV: 1.5 mg/m^3 as an 8-hour TWA.

Iron:

Exposure Routes: inhalation, skin absorption, ingestion.
Symptoms: nausea, vomiting, abdominal pain, diarrhea, fatigue, lethargy, liver failure, kidney failure, respiratory failure.
Target Organs: Liver, heart, pancreas, endocrine system.
OSHA PEL: 10.0 mg/m3 as an 8-hour TWA
ACGIH TLV: 5.0 mg/m3 as an 8-hour TWA.

Sodium:

Exposure Routes: inhalation, skin absorption, ingestion, eye contact.
Symptoms: Fatigue, dry mouth, restlessness.
Target Organs: Kidney, heart, brain, bones.
OSHA PEL: 2 mg/m3 as an 8-hour TWA
ACGIH TLV: 2 mg/m3 as an 8-hour TWA.

Thallium:

Exposure Routes: inhalation, skin absorption, ingestion, eye contact.
Symptoms: neurological, gastrointestinal, hair loss, skin changes, muscle weakness, confusion, hallucinations, potential death.
Target Organs: nervous system, gastrointestinal tract, skin, central and peripheral nerves.
OSHA PEL: 0.1 mg/m3 as an 8-hour TWA
ACGIH TLV: 0.02 mg/m3 as an 8-hour TWA.

Zinc:

Exposure Routes: Inhalation, skin and/or eye contact.
Symptoms: The aerosol can irritate the nose and throat resulting in wheezing.
Target Organs: Eyes, skin, nose and throat.
OSHA PEL: 15 mg/M^3 as a Ceiling.
ACGIH TLV: 2 mg/m^3 as an 8-hour TWA.

6.2 Chemical Exposure and Control

6.2.1 Activities with Chemical Exposure Potential

The primary route of exposure during site activities in areas contaminated with VOCs, SVOCs and inorganic metals is direct dermal contact, accidental or incidental ingestion, and inhalation of contaminant laden dust. The following work areas and site related activities are areas where chemical exposure is possible:

- Areas where drilling activities will be conducted.
- Contact with soil boring cores and samples.
- Contact with purge water from monitoring wells and samples.

6.2.2 Potential Chemical Exposures and Exposure Action Levels

6.2.2.1 Metals

Exposure potential exists during excavation of soils. Airborne dust can be an issue during soil excavation operations and skin contact can be anticipated during handling. Potential worker exposures exist, through accidental ingestion and direct skin contact, during the soil boring task, as airborne dusts can be generated. SVOCs typically adhere to the airborne soil particles while metals are liberated as well. Of the metals identified in the soil samples, Mercury, with a Threshold Limit Value TLV at 0.1 mg/m^3 (100 ug/m^3) was present in multiple soil samples. The highest level of Mercury detected in the soil samples was 1.91 mg/kg.

The highest level of Lead detected in the soil samples was 986 mg/kg. Assuming a uniform distribution and applying a safety factor, worker exposure can be controlled by establishing **an action level of 0.5 mg/m^3** total airborne dust, through engineering

controls such as dust control. A direct reading dust monitor (e.g. TSI DustTrak) will be used as a surrogate to obtain real time data to aid in monitoring the effectiveness of dust controls. The dust monitor will be set to sample aerosols at PM_{10} (10 micron size particles). Exposures above the action level on 2.5 mg/m^3, will require the use of a NIOSH approved half-face respirator with an N or P, 100 filter.

6.2.2.3 VOCs

PPE will be upgraded to include NIOSH approved half-face respirators with organic vapor cartridges, if airborne concentrations of VOCs, as measured with a direct reading Photo Ionization Detector (PID) exceed 10 ppm or are above background level during on-site activities.

If PID readings in the areas above and surrounding the work area exceed 250 ppm, all on-site activities will be suspended. Future PPE selected will depend on the identity and concentrations of the contaminants encountered. PPE will be discussed in Section 9.

First aid equipment will be available based on MSDS requirements.

To summarize, dust generated during excavation activities will be monitored continuously using a particulate air monitoring instrument. VOC levels during excavation activities will be continuously monitored using a PID. In the western parking area, the above monitoring activities will be supplemented by usage of a mercury vapor analyzer. Exposure monitoring will be further discussed in Section 9.

6.2.3 Exposure Control

A combination of PPE and engineering controls will be utilized to control skin contact and airborne exposures. Engineering controls will consist of demarcating areas to be bored and allow required personnel only in the work areas. Dust suppression will be used whenever possible to keep dust from becoming airborne. PPE will be discussed in Section 9.

The following chemical exposure control measures will be implemented during the proposed site investigations:

- The SSO will perform air monitoring (see Section 5.0) in the worker's breathing zone to determine exposure to VOCs during field activities. If exposures exceed the action levels, respiratory protection, as discussed in Section 8.1, will be donned.
- To avoid direct dermal contact with potentially contaminated media, chemical protective clothing, as described in Section 9.1, will be required when collecting samples and decontaminating sampling equipment.

- Although highly unlikely, exposure to all of the contaminants of concern may occur via ingestion (hand-to-mouth transfer). The decontamination procedures described in Section 11.0 address personal hygiene issues that will limit the potential for contaminant ingestion.

7.0 Physical Hazards and Controls

7.1 Utility Hazards

7.1.1 Underground Utilities

New York law requires that, at least 48 hours prior to initiation of any subsurface work, a utility clearance be performed at the site. The driller will contact New York One Call (811) to request a mark-out of underground utilities in the proposed sampling areas. Work will not begin until the required utility clearances have been performed. Public utility clearance organizations typically do not mark-out underground utility lines that are located on private property. As such, the driller must exercise due diligence and try to identify the location of any private utilities on the properties being investigated. This requirement can be fulfilled in several ways, including:

- obtaining as-built drawings for the areas being investigated from the property owner;
- visually reviewing each proposed excavation location with the property owner or knowledgeable site representative;
- identifying a no-drilling/digging zone; or
- hand digging in the proposed drilling/excavation locations if insufficient data is available to accurately determine the location of the utility lines.

The exact location of these utilities is not known at this time. A public and private mark-out of utilities leading to the subject property will be performed.

7.1.2 Overhead Utilities

Be particularly aware of overhead power lines in the work area. Any vehicle or mechanical equipment capable of having parts of its structure elevated (drill rig, crane, etc.) near energized overhead lines shall be operated so that a clearance of at least ten (10) feet is maintained. If the voltage is higher than 50kV, the clearance shall be increased four (4) inches for every 10kV over that voltage.

7.2 Traffic Concerns

If work is to be performed at exterior locations where traffic may be a concern, the following precautions should be followed. All are designed to draw attention to the work and to warn other people of the activities.

- Notify the property owner of your work location, dates of work and the anticipated work times. Suggest the possibility of a detour around the work area.
- Wear a neon green safety vest. If work is being performed at dawn, dusk or evening, the vests must have reflective tape.

- Set up traffic cones 50 feet in front of the work area. “Work Zone” signs should also be placed in a conspicuous area to warn others of your presence.

7.3 Excavation Hazards

Use of an excavator will require all personnel in the vicinity of the operating rig to wear steel-toed boots, hardhats, hearing protection and safety eyewear. Personnel shall not remain in the vicinity of operating equipment unless it is required for their work responsibilities. Additionally, the following safety requirements must be adhered to:

- All machinery with exposed moving parts must be equipped with an operational emergency stop device. Operators and geologists must be aware of the location of this device. This device must be tested prior to job initiation and periodically thereafter.
- The operator must never leave the controls while the tools are operating unless all personnel are kept clear of operating equipment.
- Operators, helpers and geologists must secure all loose clothing when in the vicinity of drilling operations.
- Only equipment that has been approved by the manufacturer may be used in conjunction with site equipment.

7.4 Noise Exposure

The use of the drilling rig will generate noise levels that will require the use of hearing protection in the immediate vicinity. Appropriate earmuffs or earplugs (i.e., with an NRR greater than 25 dB) should be worn to prevent overexposure. The general rule of thumb is that if you have to raise your voice to be understood by someone who is standing 3 to 5 feet away from you, the noise levels are likely to be above 85 dB and therefore require the use of hearing protection.

7.5 Back Safety

Using the proper techniques to lift and move heavy pieces of equipment, such as drums of investigation-derived wastes, are important to reduce the potential for back injury. The following precautions should be implemented when lifting or moving heavy objects.

- Use mechanical devices to move objects, such as drums of investigation derived wastes, that are too heavy to be moved manually.
- If mechanical devices are not available, ask another person to assist you.
- Bend at the knees, not the waist. Let your legs do the lifting.
- Do not twist while lifting.
- Bring the load as close to you as possible before lifting.
- Be sure the path you are taking while carrying a heavy object is free of obstructions and slip, trip and fall hazards.

7.6 Electrical Safety

If using portable tools that are electrically powered, follow the safety precautions listed below:

- Check to see that electrical outlets used to supply power during field operations is of the three (3) wire grounding type.
- Extension cords used for field operations should be of the three (3) wire grounding type and designed for hard or extra-hard usage. This type of cord uses insulated wires within an inner insulated sleeve and will be marked S, ST, STO, SJ, SJO or SJTO.
- NEVER remove the ground plug blade to accommodate ungrounded outlets.
- Do not use extension cords as a substitute for fixed or permanent wiring. Do not run extension cords through openings in walls, ceilings or floors.
- Protect the cord from becoming damaged if the cord is run through doorways, windows or across pinch points.
- Examine extension and equipment cords and plugs prior to each use. Damaged cords with frayed insulation or exposed wiring and damaged plugs with missing ground blades must be removed from service immediately.
- All portable or temporary wiring which is used outdoors or in other potentially wet or damp locations must be connected to a circuit that is protected by a ground fault circuit interrupter (GFCI). GFCI's are available as permanently installed outlets, as plug-in adapters and as extension cord outlet boxes. Do not continue to use a piece of equipment or extension cord that causes a GFCI to trip.
- When working in flammable atmospheres, be sure that the electrical equipment being used is approved for use in Class I, Division I atmospheres.
- Do not touch a victim who is still in contact with current. Separate the victim from the source using a dry, non-metallic item such as a broom stick or cardboard box. Be sure your hands are dry and you are standing on a dry surface. Turn off the main electrical power switch and then begin rescue efforts.

7.7 Thermal Stress

The hazards of both heat and cold stress are addressed in this HASP.

7.7.1 Heat Stress

Types of Heat Stress

Heat related problems include heat rash, fainting, heat cramps, heat exhaustion and heat stroke. Heat rash can occur when sweat isn't allowed to evaporate, leaving the skin wet most of the time and making it subject to irritation. Fainting may occur when blood pools to lower parts of the body and as a result, does not return to the heart to be pumped to the brain. Heat related fainting often occurs during activities that require

standing erect and immobile in the heat for long periods of time. Heat cramps are painful spasms of the muscles due to excessive salt loss associated with profuse sweating. Heat exhaustion results from the loss of large amounts of fluid and excessive loss of salt from profuse sweating. The skin will be clammy and moist and the affected individual may exhibit giddiness, nausea and headache.

Heat stroke occurs when the body's temperature regulatory system has failed. The skin is hot, dry, red and spotted. The affected person may be mentally confused and delirious. Convulsions could occur. Early recognition and treatment of heat stroke are the only means of preventing brain damage or death. A person exhibiting signs of heat stroke should be removed from the work area to a shaded area. The person should be soaked with water to promote evaporation. Fan the person's body to increase cooling. Immediate medical assistance is needed in case of heat stroke. Dial 911 to request an ambulance.

Increased body temperature and physical discomfort also promote irritability and a decreased attention to the performance of hazardous tasks.

Early Symptoms of Heat-Related Health Problems:

- decline in task performance
- incoordination
- decline in alertness
- unsteady walk
- excessive fatigue
- reduced vigilance
- muscle cramps
- dizziness

Susceptibility to Heat Stress Increases due to:

- lack of physical fitness
- lack of acclimation
- increased age
- dehydration
- obesity
- drug or alcohol use
- sunburn
- infection

People unaccustomed to heat are particularly susceptible to heat fatigue. First timers in PPE need to gradually adjust to the heat.

The Effect of Personal Protective Equipment

Sweating normally cools the body as moisture is removed from the skin by evaporation. However, the wearing of certain PPE, particularly chemical protective coveralls (e.g., Tyvek), reduces the body's ability to evaporate sweat and thereby regulate heat buildup. The body's efforts to maintain an acceptable temperature can therefore become significantly impaired by the wearing of PPE.

Measures to Avoid Heat Stress:

The following guidelines should be adhered to when working in hot environments:

- Establish work-rest cycles (short and frequent are more beneficial than long and seldom).
- Identify a shaded, cool rest area.
- Rotate personnel, alternate job functions.
- Water intake should be equal to the sweat produced. Most workers exposed to hot conditions drink less fluids than needed because of an insufficient thirst. Do not depend on thirst to signal when and how much to drink. For an 8-hour work day, 50 ounces of fluids should be consumed.
- Eat lightly salted foods or drink salted drinks such as Gatorade to replace lost salt.
- Save most strenuous tasks for non-peak heat hours such as the early morning or at night.
- Avoid alcohol during prolonged periods of heat. Alcohol will cause additional dehydration.
- Avoid double shifts and/or overtime.

The implementation and enforcement of the above-mentioned measures will be the joint responsibility of the PM and SSO. Potable water and fruit juices should be made available each day for the field team.

Heat Stress Monitoring Techniques

Site personnel should regularly monitor their heart rate as an indicator of heat strain by the following method:

Check radial pulse rates by using fore- and middle fingers and applying light pressure to the pulse in the wrist for one (1) minute at the beginning of each rest cycle. If the pulse rate exceeds 110 beats/minute, shorten the next work cycle by one-third and keep the rest period the same. If, after the next rest period, the pulse rate still exceeds 110 beats/minute, shorten the work cycle again by one-third.

7.7.2 Cold Stress

Types of Cold Stress

Cold injury is classified as either localized, as in frostbite, frostnip or chilblain; or generalized, as in hypothermia. The main factors contributing to cold injury are exposure to humidity and high winds, contact with wetness and inadequate clothing.

The likelihood of developing frostbite occurs when the face or extremities are exposed to a cold wind in addition to cold temperatures. The freezing point of the skin is about 30ºF. The fluids around the cells of the body tissue freeze, causing the skin to turn white. This freezing is due to exposure to extremely low temperatures. As wind velocity increases, heat loss is greater and frostbite will occur more rapidly.

Symptoms of Cold Stress

The first symptom of frostbite is usually an uncomfortable sensation of coldness, followed by numbness. There may be a tingling, stinging or aching feeling in the affected area. The most vulnerable parts of the body are the nose, cheeks, ears, fingers and toes.

Symptoms of hypothermia, a condition of abnormally low body temperature, include uncontrollable shivering and sensations of cold. The heartbeat slows and may become irregular, the pulse weakens and the blood pressure changes. Pain in the extremities and severe shivering can be the first warning of dangerous exposure to cold.

Maximum severe shivering develops when the body temperature has fallen to 95ºF. This must be taken as a sign of danger and exposure to cold must be immediately terminated. Productive physical and mental work is limited when severe shivering occurs.

Methods to Prevent Cold Stress

When the ambient temperature, or a wind chill equivalent, falls to below 40ºF, site personnel who must remain outdoors should wear insulated coveralls, insulated boot liners, hard hat helmet liners and insulated hand protection. Wool mittens are more efficient insulators than gloves. Keeping the head covered is very important, since 40% of body heat can be lost when the head is exposed. If it is not necessary to wear a hard hat, a wool knit cap provides the best head protection. A face mask may also be worn.

Persons should dress in several layers rather than one single heavy outer garment. The outer piece of clothing should ideally be wind and waterproof. Clothing made of thin cotton fabric or synthetic fabrics such as polypropylene is ideal since it helps to evaporate sweat. Polypropylene is best at wicking away moisture while still retaining its insulating properties. Loosely fitting clothing also aids in sweat evaporation. Denim is not a good protective fabric. It is loosely woven which allows moisture to penetrate. Socks with a high wool content are best. If two pairs of socks are worn, the inner sock should be smaller and made of cotton, polypropylene or a similar type of synthetic material that wicks away moisture. If clothing becomes wet, it should be taken off immediately and a dry set of clothing put on.

If wind conditions become severe, it may become necessary to shield the work area temporarily. The SSO and the PM will determine if this type of action is necessary. Heated break trailers or a designated area that is heated should be available if work is performed continuously in the cold at temperatures, or equivalent wind chill temperatures of 20^{o}F.

Dehydration occurs in the cold environment and may increase the susceptibility of the worker to cold injury due to significant change in blood flow to the extremities. Drink plenty of fluids, but limit the intake of caffeine.

8.0 Air Monitoring

8.1 Monitoring Parameters and Action Levels

Based on the existing Site data, it is not expected that significant levels of organic vapors will be encountered during the Site work. However, air monitoring will be conducted for VOCs. Air monitoring of the breathing zone at the source of ground intrusive work in addition to upwind and downwind of ground intrusive work will be conducted continuously during all ground intrusive activities to assure proper health and safety protection for the team, workers, passersby and adjoining community.

VOCs will be monitored with a PID in accordance with the NYSDOH Generic CAMP. If sustained VOC measurements 5 ppm above the background for the 15-minute average, then the intrusive work will be temporarily halted, dust suppression techniques will be implemented and more rigorous monitoring of VOCs and dust will be conducted. Level C respiratory protection may be donned in accordance with the HASP, if the action level is exceeded.

Fugitive dust generation that could affect Site workers, Site occupants, or the public is not expected because the majority of work will be conducted in moist soil. Soil that is not moist will be wetted as appropriate to minimize visible dust emissions. Particulate monitoring will be conducted at the perimeter of the Site (upwind and downwind stations). If dust levels are observed at 100 mirograms per cubic meter greater than the background concentrations for a duration exceeding 15 or more minutes, work activities will be suspended until dust levels are diminished to an acceptable level.

All monitoring instruments must be calibrated and maintained periodically. Calibration and on-site maintenance records will be kept in the field logbook. The operator must understand the limitations and possible sources of errors for each instrument. It is important that the operator checks that the instrument responds properly to the substances it was designed to monitor. Portable air quality monitoring equipment that measures total volatile organic compounds present such as the Rae Systems MiniRae 2000 (or equivalent) photo ionization detector (PID) must be calibrated at least once per week. Dust monitors must be calibrated at least once a week. The specific instructions for calibration and maintenance provided for each instrument should be followed.

See Appendix D (CAMP) of the RIWP for further detail.

Site air monitoring data will be reviewed weekly by a Certified Industrial Hygienist (CIH). Electronic copies of all air monitoring data will be maintained by the CIH. Air monitoring results will be recorded in the field book during site activities and made available for NYSDEC and NYSDOH review.

The following table summarizes **air monitoring action levels** established for the site:

Contaminants	Action level	Actions
Organic Vapor		Measure and record the upwind background concentration.
	Reading **less than 10 ppm** above background for a sustained period of 15 minutes in WBZ.	Continue work in Level D protection.
	Reading **greater than 10 ppm** above background for a sustained period of 15 minutes in the WBZ	Discontinue work, allow work area to ventilate, collect additional PID readings. If concentrations remain greater than 10 ppm, work can resume in Level C protection with respiratory protection equipped with organic vapor cartridges.
	Readings **greater than 100 ppm** above background for a sustained period of 15 minutes in the WBZ.	Discontinue work, allow work area to ventilate, collect additional PID readings until concentrations are below 100 ppm before work can resume.
Dusts		Measure and record the upwind background concentration.
	Reading **less than 0.5 mg/m3** or above background for a sustained period of 15 minutes in the WBZ.	Continue work in level D protection.
	Reading **greater than 5.0 mg/m3** or above background for a sustained period of 15 minutes in the WBZ	Discontinue work. Employ dust suppression using a water spray, collect additional airborne dust measurements. If concentrations remain greater than 0.5 mg/m^3, work can resume in Level C protection with respiratory protection equipped with P-100 cartridges.

8.2 Direct Reading Instruments

A PID such as the RAE MiniRAE 2000, equipped with a 10.6 eV lamp, shall be used to monitor total VOCs during soil excavation activities. The PID is an appropriate direct-read monitoring instrument given the suspected presence of VOC contamination in on-site soil.

If warranted, based on visual observations, dust levels will be monitored using a particulate air monitoring instrument (PM10).

8.3 Personal Air Sampling

Due to the potential exposure to lead dust, OSHA standard 1926.62 requires the collection of initial personal air samples during the proposed activities. Attachment E provides a summary of the lead dust exposure monitoring requirements.

8.4 Recordkeeping

Air monitoring results will be recorded in the field book during construction activities and made available for review upon request.

Site air monitoring data will be reviewed weekly by the HSM. Electronic copies of all air monitoring data will be maintained by the HSM.

All personal exposure monitoring data pursuant to measuring exposure to lead dust must be maintained for the employee's duration of employment plus 30 years in accordance with OSHA standard 1910.1020, Access to Employee Exposure and Medical Records.

9.0 Personal Protective Equipment

PPE will be worn during site activities to prevent on-site personnel from being injured by the safety hazards posed by the site and/or the activities being performed. In addition, chemical protective clothing will be worn to prevent direct dermal contact with the site's chemical contaminants.

In general, field activities will be conducted in Level D PPE, as described in the table below. PPE will be upgraded to Level C if air monitoring demonstrates VOCs, or dust concentrations in the breathing zone exceeding the action levels outlined in Section 9.1.

If the concentration of volatile organics which can be detected with a PID equals or exceeds the specified action level (100 ppm) all field personnel associated with the project will immediately retreat to a location up-wind of the source of contamination. At this point the SSO must consult with the HSM, who will review the condition with PVEDI home office staff to discuss appropriate actions.

If employees' exposure to lead dust exceed the PEL, the employees will be required to wear half-mask, air-purifying respirator equipped with organic vapor/PM100 cartridges.

9.1 Chemical Protective Clothing

The following tables describe the Level D and Level C PPE and chemical protective clothing to be worn for general site activities and for certain specific tasks.

Level D PPE

PPE Item	Utility Mark Out	Soil Borings	Groundwater Sampling	Soil Vapor Sampling
Hard Hat	✓	✓	✓	N/A
Steel Toed Safety Shoes	✓	✓	✓	N/A
Safety Glasses with Side shields		✓	✓	N/A
Traffic Vests	*	*	*	N/A
Inner PVC/Outer Nitrile Gloves		✓	✓	N/A
Hearing Protection		✓		N/A

Level C PPE

PPE Item	Utility Mark Out	Soil Borings	Groundwater Sampling	Soil Vapor Sampling
Hard Hat	✓	✓	✓	N/A
Steel Toed Safety Shoes	✓	✓	✓	N/A
Safety Glasses with Side shields	✓	✓	✓	N/A
Traffic Vests	*	*	*	N/A
Inner PVC/Outer Nitrile Gloves	✓	✓	✓	✓
Hearing Protection		✓		✓
Half-Face Respirator	✓	✓	✓	✓
Tyvek Protective Suit	✓	✓	✓	✓

* - when working in or near street

9.2 Respiratory Protection

Level D PPE: No respiratory protection required. Air monitoring devices will be used to determine when PPE will be upgraded to include respiratory protection (Section 6.2.2 and 8.0).

Level C PPE: Half-mask, air-purifying respirator equipped with organic vapor/PM100 cartridges.

Respiratory protection will also be worn if odors become objectionable at any time, if respiratory tract irritation is noticed, or if VOCs are detected in the breathing zone as discussed in Section 6.2.2. All on-site personnel who are expected to wear respiratory protection must have successfully passed a qualitative or quantitative fit-test within the past year for the brand, model and size respirator they plan to wear during the proposed activities.

9.3 Other Safety Equipment

The field team will bring the following additional safety items to the site for use as necessary:

- Portable, hand-held eyewash bottles
- First aid kit
- Portable communications equipment
- Fire Extinguisher

10.0 Site Control

10.1 Work Zones

To prevent both exposure of unprotected personnel and migration of contamination due to tracking by personnel or equipment, work areas along with personal protective equipment requirements will be clearly identified. Work areas or zones will be designated as suggested in the "Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities," NIOSH/OSHA/USCG/EPA, November, 1985. They recommend the areas surrounding each of the work areas to be divided into three zones:

- Exclusion or "hot" Zone
- Contamination Reduction Zone (CRZ)
- Support Zone

10.1.1 Exclusion Zone

An exclusion zone (work zone) will be established around each boring location. This zone will move as work progresses to each boring location. This zone should be large enough (i.e. 20-foot radius) to protect unprotected personnel from contact with vapors or dust that may arise from these operations as well as the physical hazards associated with the operation of heavy equipment. Traffic cones or tape will be used to demarcate the active exclusion zone.

All personnel entering the exclusion zone must be trained in accordance with the requirements defined in Section 12.2 of this HASP and must wear the prescribed level of personal protective equipment.

10.1.2 Contamination Reduction Zone

The decontamination zone will be established adjacent to the exclusion zone. Personnel will remove contaminated gloves and other disposable items in this area and place them in a plastic bag until they can be properly disposed of. Reusable equipment, if any, will be decontaminated with tap water, deionized water, methanol, nitric acid and a liquid detergent solution. A complete description of decontamination procedures is presented in Appendix E – Standard Operating Procedure to the Remedial Investigation Work Plan.

10.1.3 Support Zone

At this site, the support zone will include the area outside of the decontamination zone.

10.2 Safety Practices

The following measures are designed to augment the specific health and safety guidelines provided in this plan.

- Eating, drinking, chewing gum or tobacco, smoking or any practice that increases the probability of hand-to-mouth transfer and ingestion of materials is prohibited in the immediate work area and the decontamination zone.
- Smoking is prohibited in all work areas. Matches and lighters are not allowed in these areas.
- Hands and face must be thoroughly washed upon leaving the work area and before eating, drinking or any other activities.
- Beards or other facial hair that interfere with respirator fit are prohibited.
- The use of alcohol or illicit drugs is prohibited during the conduct of field operations.
- All equipment must be decontaminated or properly discarded before leaving the site in accordance with the project work plan.

11.0 Decontamination

Decontamination of equipment and personnel potentially exposed to lead must be in accordance with lead standard 29 CFR 1926.62. See Attachment E for further details.

11.1 Personal Decontamination

Proper decontamination is required of all personnel before leaving the site. Decontamination will occur within the contamination reduction zone. Disposable PPE will be removed in the decontamination zone and placed in lined garbage bags.

If worn, respirators will be cleaned after each use with respirator wipe pads and will be stored in plastic bags after cleaning.

Regardless of the type of decontamination system required, a container of potable water and liquid soap will be made available so employees can wash their hands before leaving the site for lunch or for the day.

11.2 Equipment Decontamination

Reusable equipment, if any, will be decontaminated with tap water, deionized water, methanol, nitric acid and a liquid detergent solution. A complete description of decontamination procedures is presented in Appendix E – Standard Operating Procedure to the Work Plan.

12.0 Medical Monitoring and Training Requirements

12.1 Medical Monitoring

Due to the potential exposure to lead dust, OSHA standard 1926.62 requires baseline medical surveillance for personnel working at the site. Medical monitoring requirements are summarized in Attachment E.

12.2 Health and Safety Training

Although not a requirement for the activities at this site, personnel performing activities covered by this HASP are recommended to have completed the appropriate training requirements specified in 29 CFR 1910.120(e). Each individual should have completed an annual 8-hour refresher-training course and/or initial 40-hour training course within the last year prior to performing any work on the sites covered by this HASP.

Furthermore, if employee exposure monitoring results determine lead exposure to be present, employees should be trained in accordance with 1926.62. See Attachment E for details.

12.3 Pre-Entry Briefing

The SSO will conduct a pre-entry briefing before site activities begin. HASP receipt and acceptance sheets will be collected at this meeting. Short safety refresher meetings will be conducted, as needed, throughout the duration of the project. Attendance of the pre-entry meeting is mandatory and will be documented by the SSO. An attendance form is presented in Attachment B.

13.0 Emergency Response

OSHA defines emergency response as any "response effort by employees from outside the immediate release area or by other designated responders (i.e., mutual-aid groups, local fire departments, etc.) to an occurrence which results, or is likely to result in an uncontrolled release of a hazardous substance." On-site personnel shall not participate in any emergency response where there are potential safety or health hazards (i.e., fire, explosion, or chemical exposure). Response actions will be limited to evacuation and medical/first aid as described within this section below. As such this section is written to comply with the requirements of 29 CFR 1910.38 (a).

The basic elements of an emergency evacuation plan include:

- employee training,
- alarm systems,
- escape routes,
- escape procedures,
- critical operations or equipment,
- rescue and medical duty assignments,
- designation of responsible parties,
- emergency reporting procedures and
- methods to account for all employees after evacuation.

13.1 Employee Training

Employees must be instructed in the site-specific aspects of emergency evacuation. On-site refresher or update training is required anytime escape routes or procedures are modified or personnel assignments are changed. The SSO must verify the specific evacuation procedures that the facility prefers contractors follow in the event of a facility-related emergency. This information will be communicated to the field team during the pre-entry briefing.

13.2 Alarm Systems/Emergency Signals

An emergency communication system must be in effect at all sites. The most simple and effective emergency communication system in many situations will be direct verbal communication. Each site must be assessed at the time of initial site activity and periodically as the work progresses. Verbal communication must be supplemented anytime voices cannot be clearly perceived above ambient noise levels (i.e., noise from drilling probe) and anytime a clear line-of-sight cannot be easily maintained among all personnel because of distance, terrain or other obstructions.

Verbal communication will be adequate to warn on-site personnel of hazards associated with the immediate work area. However, the two-person sampling team may be split up

during the day to expedite sampling. Each team member will be equipped with a cellular phone to ensure immediate communication can occur between each other. These phones can also be used to contact local emergency responders.

13.3 Escape Routes and Procedures

The SSO will verify the escape routes from each work area with a facility representative. Assembly areas must also be identified. The escape routes and assembly areas will be reviewed during the pre-entry briefing. All personnel on site are responsible for knowing the escape route from the site and where to assemble after evacuation.

13.4 Rescue and Medical Duty Assignments

The phone numbers of the police and fire departments, ambulance service, local hospital, and project representatives are provided in the emergency reference sheet and on the cover of this HASP. This sheet will be posted in the site vehicle.

In the event an injury or illness requires more than first aid treatment, the SSO will accompany the injured person to the medical facility and will remain with the person until release or admittance is determined. The SSO will relay all appropriate medical information to the on-site project manager and the HSM.

If the injured employee can be moved from the accident area, he or she will be brought to the contamination reduction zone where their PPE will be removed. If the person is suffering from a back or neck injury the person will not be moved and the requirements for decontamination do not apply. The SSO must familiarize the responding emergency personnel about the nature of the site and the injury. If the responder feels that the PPE can be cut away from the injured person's body, this will be done on-site. If this not feasible, decontamination will be performed after the injured person has been stabilized.

13.5 Designation of Responsible Parties

The SSO is responsible for initiating emergency response. In the event the SSO cannot fulfill this duty, the PM or HSO will take charge.

13.6 Employee Accounting Method

The SSO is responsible for identifying all personnel on-site at all times. On small, short duration jobs this can be done informally as long as accurate accounting is possible.

13.7 Accident Reporting and Investigation

Any incident (other than minor first aid treatment) resulting in injury, illness or property damage requires an accident investigation and report. The investigation should be conducted as soon as emergency conditions are under control. The purpose of the

investigation is not to attribute blame but to determine the pertinent facts so that repeat or similar occurrences can be avoided. An accident investigation form is presented in Attachment C of this HASP. The Supervisor of the injured personnel and the HSM should be notified immediately of the injury.

If a subcontractor personnel is injured, they are required to notify the SSO. Once the incident is under control, the subcontractor will submit a copy of their company's accident investigation report to the SSO.

Chemical Hazard and MSDS Sheets

ATTACHMENT E

Summary of OSHA Lead in Construction Standard (29CFR1926.62)

(a) Scope
This standard covers all construction work where an employee may be exposed to lead, including metallic lead, inorganic lead compounds, and organic lead soaps, but not organic lead compounds.

(b) Definitions
An airborne lead level of 30 µg/m3 is called the Action Level (AL). Having airborne lead concentrations at or above the AL triggers certain health and safety measures described in this standard.

(c) Permissible Exposure Limit (PEL)
The 8-hour Permissible Exposure Limit (PEL) is 50 µg/m3 of airborne lead. If the work day is longer than 8 hours, the PEL is 400/number of hours worked per day. The employer must ensure that no employee is exposed to lead at concentrations over the PEL.

(d) Exposure Assessment
Exposure assessment must be performed in all workplaces where employees may be exposed to lead.

(d)(1) Protection of Employees During Assessment of Exposure

Three sets of specified tasks (often referred to as “trigger tasks”) trigger basic protective measures where lead is present, until the employer performs an employee exposure assessment. (Exposure assessment is an initial determination via air monitoring, or previous monitoring of a very similar job within the last 12 months.) For all three sets of tasks, employers are required to provide the following basic protective measures until air monitoring indicates exposure levels are at or below the PEL:

- Appropriate respiratory protection (type of respirator is specified according to assumed airborne lead level)
- Appropriate personal protective equipment
- clean work clothes such as coveralls at least weekly (daily if greater than 200 µg/m3 lead in air); gloves, hats, shoes or disposable shoe coverlets, face shields, vented goggles or other appropriate equipment.
- Change areas with separate storage facilities for work and street clothes - the employer shall assure that employees do not leave the workplace with work clothes or equipment.
- Hand washing facilities - the employer shall assure that employees wash their hands and face at the end of each work shift.
- Biological monitoring - consisting of initial or baseline blood sampling for lead and zinc protoporphyrin (ZPP).
- Training - includes Hazard Communication, respirator and lead training.

(d)(2) Exposure Assessment (Air monitoring)

When air monitoring is conducted, the employer shall collect full-shift personal samples representative of an employee's regular, daily exposure to lead. Monitoring should include at least one sample for each job classification in each work area either for each shift or for the shift with the highest exposure level.

(d)(3) Basis of Initial Determination

The basis of initial determination, or initial assessment of employee exposure, will be employee exposure monitoring results and relevant considerations (e.g., observations, complaints) with the following two exceptions:

- Where the employer has previously monitored for lead exposures, and the data were obtained within the past 12 months during closely similar workplace operations and conditions, the employer may rely on the earlier results; or
- Where the employer has objective data, demonstrating that a particular product or material containing lead or specific process, operation or activity involving lead cannot result in an employee exposure to lead at or above the AL during processing, use or handling, the employer may rely upon such data instead of implementing initial monitoring.

(d)(6) Frequency of Exposure Assessment

If the initial determination shows exposures less than the AL, no further assessment is needed until there has been a change of equipment, process, control, personnel or a new task has been initiated.

If the initial determination is at or above the AL but at or below the PEL, then monitoring shall be done at least every six months.

If the initial determination is above the PEL, then monitoring shall be done quarterly.

(e) Methods of Compliance

Exposures over the PEL shall be reduced through engineering, work practice and administrative controls, to the extent feasible. Respirators may be used to supplement other controls.

Prior to the commencement of any job where exposures may reach the PEL, the employer shall establish and implement a written compliance program, describing the lead-emitting activities and the means by which exposures will be controlled.
The compliance program shall provide for frequent, regular jobsite inspections by a person who is capable of identifying lead hazards and has authorization to take prompt corrective measures.
Where mechanical ventilation is used, the employer shall evaluate the performance as

necessary to maintain effectiveness.

(f) Respiratory Protection

Where respirators are used, they shall be selected on the basis of air monitoring results, with the minimum level of respirator as indicated in Table 1 below. Until monitoring results are available, the appropriate respirator is determined according to the assumed exposure associated with the task being performed, as per subsection (d) (2).

Where respirators are used, the employer shall institute a complete, written respiratory protection program in accordance with OSHA's Respiratory Protection Standard, 1910.134. The program shall outline procedures for selection, medical evaluations, use, training, cleaning and sanitizing, storage, inspection and maintenance of respirators. The program shall be evaluated by regular inspections.

(g) Protective Work Clothing and Equipment

When an employee is exposed to lead above the PEL (without regard to whether a respirator is worn), or to lead compounds which may cause irritation, the employer shall provide and assure the employee uses appropriate protective work clothing, such as coveralls or other full-body work clothing, gloves, hats, shoes or shoe coverings, and face shields, goggles or other protective equipment as needed.

Work clothing shall be provided at least weekly for employees exposed over the PEL, except daily for those exposed at levels higher than 200 µg/m3.

The employer shall provide for the cleaning or disposal of protective clothing and equipment. Clothing to be laundered must be placed in a closed container, labeled to indicate it contains lead, and the launderer must be notified of the potentially harmful effects of lead exposure.

Cleaning of protective clothing or equipment by blowing, shaking or any other means that disperses lead into the air is prohibited.

(h) Housekeeping

All surfaces shall be maintained as free as practicable of accumulations of lead. Vacuums equipped with toxic dust-removing HEPA filters are the preferred method of cleaning surfaces where lead accumulates. Other types of vacuums may not be used.

Shoveling, dry or wet sweeping, and brushing may be used only where HEPA vacuuming has been tried and found to be ineffective.

Use of compressed air for cleaning is prohibited, unless there is a ventilation system to capture the dust created by the compressed air.

(i) Hygiene Facilities, Practices and Regulated Areas

The employer shall assure that all employees exposed to lead above the PEL wash their hands and face prior to eating, drinking, smoking or applying cosmetics.
The employer shall provide, for ALL employees exposed to lead, adequate hand washing facilities, and assures (in the absence of shower facilities) that employees wash their hands and face at the end of the work shift.

In areas where employees are exposed to lead above the PEL, the employer shall assure that food or beverages are not present or consumed, tobacco products are not present or used and cosmetics are not applied.

Employees exposed to lead above the PEL shall be provided with clean change areas with separate storage facilities for work and street clothing, to prevent cross-contamination.

The employer shall assure that employees do not leave the workplace wearing any protective clothing or equipment that was worn during the work shift.

Shower facilities, soap and towels shall be provided, where feasible, for employees exposed to lead above the PEL, and the employer shall assure that these employees shower at the end of the work shift.

Employees exposed to lead above the PEL shall be provided with a clean lunchroom or eating area. The employer shall assure that the lunch area is kept free from lead accumulation and that employees do not enter the lunch area with protective work clothing or equipment that has not been cleaned by vacuuming or other method that limits dispersion of lead dust.

(j) Medical Surveillance

The employer shall assure that the lead medical program (including all medical examinations and procedures performed) is under the supervision of a licensed physician. The employee has the right to seek a second medical opinion regarding the lead medical evaluation, at the expense of the employer, and if necessary, a third physician may be requested to resolve any disagreements between the first two.

Prophylactic chelation, the routine use of chelating drugs to lower blood lead levels in persons occupationally exposed to lead is prohibited.

(j)(2) Biological Monitoring

Initial blood sampling and analysis for blood lead levels (BLL) and zinc protoporphyrin (ZPP) are required for employees performing any of the specified trigger tasks, or for any employee exposed to an air lead level at or above the AL for at least 1 day.

Employees who are or may be exposed at or above the AL for more than 30 days in any consecutive 12 months, must be enrolled in a medical surveillance program, including BLL and ZPP at least every 2 months for the first 6 months, and every 6 months thereafter.

Any employee with a BLL at or above 40 µg/dl shall have a BLL and ZPP every two months until two consecutive samples are less than 40 µg/dl.

Any employee with a BLL above 50 µg/dl shall receive a follow-up BLL within 2 weeks after the employer receives the results of the first test.

For those employees temporarily removed from their jobs involving lead exposure (see subsection (k), Medical Removal Protection), a BLL and ZPP must be provided every month during the removal period.

(j)(3) Medical Examinations and Consultations

A medical exam shall be provided annually for all employees who had a BLL at or above40 µg/dl during the preceding 12 months.

A medical exam shall be provided to any employee who reports signs or symptoms related to lead poisoning, desires medical advice regarding the effects of lead exposure on the employee's ability to produce a healthy child, is pregnant, or has difficulty breathing while wearing a respirator.

A medical exam shall be provided as medically appropriate to any employee removed from his/her usual job involving exposure to lead.

(k) Medical Removal Protection (MRP)

(k)(1) Temporary Medical Removal and Return

The employer shall remove an employee from work involving exposure to lead at or above the AL on each occasion that a BLL and follow-up test is at or above 50 µg/dl.

An employee who has been removed due to an elevated BLL can return to his/her former job after having two consecutive BLLs at or below 40 µg/dl.

(l) Employee Information and Training

The employer shall provide information about lead hazards, according to the Hazard Communication Standard 1910.1200, to all employees exposed to lead.

For all employees exposed to lead at or above the AL on any day, exposed to lead compounds that cause eye or skin irritation, or who perform any of the specified trigger tasks, the employer shall provide initial (pre-placement) training that includes: the content of this standard and appendices; the operations that may cause lead exposure at or above the

AL; the purpose, proper selection, fitting, use and limitations of respirators; the purpose and description of the medical surveillance program, including the adverse health effects of lead exposure (especially on reproduction); the engineering controls and work practices relevant to the employee's job assignment; the contents of any compliance plan in effect; the location of regulated areas; the prohibition against routine use of chelation agents; the employee's right of access to records.

For all employees exposed to lead at or above the AL on any day, the above training must be provided annually.

(m) Signs

In regulated areas (work areas where employee exposure is above the PEL and/or trigger tasks are performed), the employer shall post a warning sign with the words:

WARNING: LEAD WORK AREA
POISON - NO SMOKING OR
EATING

(n) Record Keeping

The employer is required to maintain detailed records on exposure assessment, including any objective data used for exemption from air monitoring requirements, medical surveillance and medical removals.

(o) Observation of Monitoring

The employer shall provide affected employees or their designated representatives an opportunity to observe any monitoring of employee lead exposure. Observers shall be provided with and use protective equipment if required in the area, receive an explanation of the measurement procedures, observe all steps related to monitoring, and receive copies of the results.

Note: The information presented in this Citizen Participation Plan was current as of the date of its approval by the New York State Department of Environmental Conservation. Portions of this Citizen Participation Plan may be revised during the Site's investigation and cleanup process.

Applicant: **Residences at North Depot LLC**
Site Name**: 1 North Depot**
Site Address: **1 North Depot Street, Binghamton, NY 13901**
Site County: **Broome**
Site Number: **C704064**

1. What is New York's Brownfield Cleanup Program?

New York's Brownfield Cleanup Program (BCP) works with private developers to encourage the voluntary cleanup of contaminated properties known as brownfields so that they can be reused and developed. These uses include recreation, housing, and business.

A *brownfield* is any real property that is difficult to reuse or redevelop because of the presence or potential presence of contamination. A brownfield typically is a former industrial or commercial property where operations may have resulted in environmental contamination. A brownfield can pose environmental, legal, and financial burdens on a community. If a brownfield is not addressed, it can reduce property values in the area and affect economic development of nearby properties.

The New York State Department of Environmental Conservation (NYSDEC) administers the BCP and oversees applicants who conduct brownfield site investigation and cleanup activities. An applicant is a person who has requested to participate in the BCP and has been accepted by NYSDEC. The BCP includes investigation and cleanup requirements that ensure cleanups protect public health and the environment. When NYSDEC certifies that these requirements have been met, the property can be reused or redeveloped for the intended use.

For more information about the BCP, visit: http://www.dec.ny.gov/chemical/8450.html .

2. Citizen Participation Activities

Why NYSDEC Involves the Public and Why It Is Important

NYSDEC involves the public to improve the process of investigating and cleaning up contaminated sites, and to enable citizens to participate more fully in decisions that affect their health, environment, and social well-being. NYSDEC provides opportunities for citizen involvement and encourages early two-way communication with citizens before decision makers form or adopt final positions.

Involving citizens affected and interested in site investigation and cleanup programs is important for many reasons. These include:

- Promoting the development of timely, effective site investigation and cleanup programs that protect public health and the environment

- Improving public access to, and understanding of, issues and information related to a particular site and that site's investigation and cleanup process

- Providing citizens with early and continuing opportunities to participate in NYSDEC's site investigation and cleanup process

- Ensuring that NYSDEC makes site investigation and cleanup decisions that benefit from input that reflects the interests and perspectives found within the affected community

- Encouraging dialogue to promote the exchange of information among the affected/interested public, State agencies, and other interested parties that strengthens trust among the parties, increases understanding of site and community issues and concerns, and improves decision making.

This Citizen Participation (CP) Plan provides information about how NYSDEC will inform and involve the public during the investigation and cleanup of the site identified above. The public information and involvement program will be carried out with assistance, as appropriate, from the applicant.

Project Contacts

Appendix A identifies NYSDEC project contacts to whom the public should address questions or request information about the site's investigation and cleanup program. The public's suggestions about this CP Plan and the CP program for the site are always welcome. Interested people are encouraged to share their ideas and suggestions with the project contacts at any time.

Locations of Reports and Information

The locations of the reports and information related to the Site's investigation and cleanup program also are identified in Appendix A. These locations provide convenient access to important project documents for public review and comment. Some documents may be placed on the NYSDEC website. If this occurs, NYSDEC will inform the public in fact sheets distributed about the site and by other means, as appropriate.

Site Contact List

Appendix B contains the site contact list. This list has been developed to keep the community informed about, and involved in, the site's investigation and cleanup process. The site contact list will be used periodically to distribute fact sheets that provide updates about the status of the project. These will include notifications of upcoming activities at the site (such as fieldwork), as well as availability of project documents and announcements about public comment periods.

The site contact list includes, at a minimum:

- chief executive officer and planning board chairperson of each county, city, town and village in which the site is located;
- residents, owners, and occupants of the site and properties adjacent to the site;
- the public water supplier which services the area in which the site is located;
- any person who has requested to be placed on the site contact list;
- the administrator of any school or day care facility located on or near the site for purposes of posting and/or dissemination of information at the facility;
- location(s) of reports and information.

The site contact list will be reviewed periodically and updated as appropriate. Individuals and organizations will be added to the site contact list upon request. Such requests should be submitted to the NYSDEC project contact(s) identified in Appendix A. Other additions to the site contact list may be made at the discretion of the NYSDEC project manager, in consultation with other NYSDEC staff as appropriate.

Note: The first site fact sheet (usually related to the draft Remedial Investigation Work Plan) is distributed both by paper mailing through the postal service and through DEC Delivers, the agency's email listserv service. The fact sheet includes instructions for signing up with the appropriate county listserv to receive future notifications about the Site. See http://www.dec.ny.gov/chemical/61092.html .

Subsequent fact sheets about the site will be distributed exclusively through the listserv, except for households without internet access that have indicated the need to continue to receive Site information in paper form. Please advise the NYSDEC site project manager identified in Appendix A if that is the case. Paper mailings may continue during the investigation and cleanup process for some sites, based on public interest and need.

CP Activities

The table at the end of this section identifies the CP activities, at a minimum, that have been and will be conducted during the site's investigation and cleanup program. The flowchart in Appendix D shows how these CP activities integrate with the site investigation and cleanup process. The public is informed about these CP activities through fact sheets and notices distributed at significant points during the program. Elements of the investigation and cleanup process that match up with the CP activities are explained briefly in Section 5.

- **Notices and fact sheets** help the interested and affected public to understand contamination issues related to a site, and the nature and progress of efforts to investigate and clean up a site.

- **Public forums, comment periods and contact with project managers** provide opportunities for the public to contribute information, opinions and perspectives that have potential to influence decisions about a site's investigation and cleanup.

The public is encouraged to contact project staff at any time during the site's investigation and cleanup process with questions, comments, or requests for information.

This CP Plan may be revised due to changes in major issues of public concern identified in Section 3 or in the nature and scope of investigation and cleanup activities. Modifications may include additions to the Site contact list and changes in planned citizen participation activities.

Technical Assistance Grant

NYSDEC must determine if the site poses a significant threat to public health or the environment. This determination generally is made using information developed during the investigation of the site, as described in Section 5.

If the site is determined to be a significant threat, a qualifying community group may apply for a Technical Assistance Grant (TAG). The purpose of a TAG is to provide funds to the qualifying group to obtain independent technical assistance. This assistance helps the TAG recipient to interpret and understand existing environmental information about the nature and extent of contamination related to the site and the development/implementation of a remedy.

An eligible community group must certify that its membership represents the interests of the community affected by the site, and that its members' health, economic well-being

or enjoyment of the environment may be affected by a release or threatened release of contamination at the site.

As of the date the declaration (page 2) was signed by the NYSDEC project manager, the significant threat determination for the site had not yet been made.
To verify the significant threat status of the site, the interested public may contact the NYSDEC project manager identified in Appendix A.

For more information about TAGs, visit http://www.dec.ny.gov/regulations/2590.html

Note: The table identifying the citizen participation activities related to the site's investigation and cleanup program follows on the next page:

Citizen Participation Activities	Timing of CP Activity(ies)
Application Process:	
• Prepare Site contact list • Establish document repository	At time of preparation of application to participate in the BCP.
• Publish notice in Environmental Notice Bulletin (ENB) announcing receipt of application and 30-day public comment period • Publish above ENB content in local newspaper • Mail above ENB content to Site contact list • Conduct 30-day public comment period	When NYSDEC determines that BCP application is complete. The 30-day public comment period begins on date of publication of notice in ENB. End date of public comment period is as stated in ENB notice. Therefore, ENB notice, newspaper notice, and notice to the Site contact list should be provided to the public at the same time.
After Execution of Brownfield Site Cleanup Agreement (BCA):	
• Prepare Citizen Participation (CP) Plan	Before start of Remedial Investigation **Note:** Applicant must submit CP Plan to NYSDEC for review and approval within 20 days of the effective date of the BCA.
Before NYSDEC Approves Remedial Investigation (RI) Work Plan:	
• Distribute fact sheet to Site contact list about proposed RI activities and announcing 30-day public comment period about draft RI Work Plan • Conduct 30-day public comment period	Before NYSDEC approves RI Work Plan. If RI Work Plan is submitted with application, public comment periods will be combined and public notice will include fact sheet. Thirty-day public comment period begins/ends as per dates identified in fact sheet.
After Applicant Completes Remedial Investigation:	
• Distribute fact sheet to Site contact list that describes RI results	Before NYSDEC approves RI Report
Before NYSDEC Approves Remedial Work Plan (RWP):	
• Distribute fact sheet to Site contact list about draft RWP and announcing 45-day public comment period • Public meeting by NYSDEC about proposed RWP (if requested by affected community or at discretion of NYSDEC project manager) • Conduct 45-day public comment period	Before NYSDEC approves RWP. Forty-five day public comment period begins/ends as per dates identified in fact sheet. Public meeting would be held within the 45-day public comment period.
Before Applicant Starts Cleanup Action:	
• Distribute fact sheet to Site contact list that describes upcoming cleanup action	Before the start of cleanup action.
After Applicant Completes Cleanup Action:	
• Distribute fact sheet to Site contact list that announces that cleanup action has been completed and that NYSDEC is reviewing the Final Engineering Report • Distribute fact sheet to Site contact list announcing NYSDEC approval of Final Engineering Report and issuance of Certificate of Completion (COC)	At the time the cleanup action has been completed. **Note:** The two fact sheets are combined when possible if there is not a delay in issuing the COC.

3. Major Issues of Public Concern

This section of the Citizen Participation Plan identifies major issues of public concern related to the site. Additional major issues of public concern may be identified during the course of the site's investigation and cleanup process. DEC will continue to communicate next steps to the public.

The subject property includes a warehouse and an asphalt parking lot. A previous Phase II Environmental Site Assessment (ESA) investigation conducted by PVE Engineering in 2024 identified contamination in local soil and soil vapor consisting of volatile organic compounds (VOCs), chlorinated VOCs (cVOCs), semi-volatile organic compounds (SVOCs), and metals. Soil, soil vapor, and sub-slab soil vapor samples at the site will be further investigated to fully identify soil and soil vapor contamination from former site operations. The site was admitted into the NYSDEC BCP in 2025.

There may be impacts related to noise, truck and railroad traffic during investigation, remediation, and redevelopment.

Additional detailed information is available through project contacts described in Appendix A and/or contained within the submitted NYSDEC BCP Application located on DECinfo Locator.

4. Site Information

Appendix C contains a map identifying the location of the Site.

Site Description

The site is comprised of one tax parcel located in the City of Binghamton, Broome County, New York, in a residential and commercial area. See site location map below in Appendix C.

The site is bordered to the north by a commercial area at 95 Prospect Avenue and a residential area at 108 Prospect Avenue, to the east by a parking lot at 10 Eldrege Street and a commercial area at 21 North Depot Street, to the south by railroad tracks and a storage yard, and to the west by a commercial area at 89 Prospect Avenue.

History of Site Use, Investigation, and Cleanup

The earliest available record, an 1887 Sanborn Map, depicted the subject property as a single building occupied by wholesale groceries, a cigar factory, and a machine shop. The subject property has been used as wholesale groceries, a cigar factory, warehouse and wholesale meats as depicted in Sanborn Maps dated 1898. The building was

utilized for wholesale groceries, wholesale hardware and wholesale meats as indicated in Sanborn Maps dated 1918-1952. The subject property remained utilized for wholesale groceries, wholesale hardware, and wholesale meats, and warehouse space as depicted in Sanborn Maps dated 1970. According to the Environmental Data Resources (EDR) city directory search, between 1930-1964 the property was identified as Kingsley Company, a wholesale hardware company, Mc Tighe Grocery Company, and Darling Meats and Provisions Company. In 1974 the Lander's Company also used portions of the property for warehouse space. Other years and occupants were not listed by the research source. Currently this subject property and structure are vacant.

According to the Phase I ESA provided by Keystone Associates, surrounding properties are not anticipated to present a significant environmental concern to the subject property.

Based on historical information, the site is in an area dominated by industrial and commercial activities since the 1890s.

Previous environmental assessments:

- **Phase I Environmental Site Assessment**, *Keystone Associates, October 5, 2015*
- **Phase II Environmental Site Assessment***,* *PVE Engineering, July 12, 2024*
- **Preliminary Remedial Investigation Report***,* *PVEDI, August 11, 2025*

In general, these previous environmental assessments identified contaminants in soils, groundwater and soil vapor exceeding the applicable regulatory limits. Known contaminants consist of VOCs, cVOCs, SVOCs, and heavy metals.

5. Investigation and Cleanup Process

Application

The applicant applied for and has been accepted into New York's Brownfield Cleanup Program as a volunteer. This means that the applicant was not responsible for the disposal or discharge of the contaminants or the ownership or operation of the site took place after the discharge or disposal of contaminants. The volunteer must fully characterize the nature and extent of contamination on-site, and must conduct a qualitative exposure assessment, a process that characterizes the actual or potential exposures of people, fish and wildlife to contaminants on the site and to contamination that has migrated from the site.

The applicant in its application proposes that the site will be used for restricted purposes.

To achieve this goal, the applicant will conduct investigation activities at the site with oversight provided by NYSDEC. NYSDEC and the applicant will execute the Brownfield Cleanup Agreement by setting forth the responsibilities of each party in conducting these activities at the site.

Investigation

The applicant will conduct an investigation of the site officially called a remedial investigation. This investigation will be performed with NYSDEC oversight. The applicant must develop a remedial investigation workplan, which is subject to public comment.

The site investigation has several goals:

1) define the nature and extent of contamination in soil, groundwater and any other parts of the environment that may be affected;
2) identify the source(s) of the contamination;
3) assess the impact of the contamination on public health and the environment; and
4) provide information to support the development of a proposed remedy to address the contamination or the determination that cleanup is not necessary.

The applicant submits a draft “Remedial Investigation Work Plan” to NYSDEC for review and approval. NYSDEC makes the draft plan available to the public review during a 30-day public comment period.

When the investigation is complete, the applicant will prepare and submit a report that summarizes the results. This report also will recommend whether cleanup action is needed to address site-related contamination. The investigation report is subject to review and approval by NYSDEC.

NYSDEC will use the information in the investigation report to determine if the site poses a significant threat to public health or the environment. If the site is identified as significant threat, it must be cleaned up using a remedy selected by NYSDEC from an analysis of alternatives prepared by the applicant and approved by NYSDEC. If the site does not pose a significant threat, the applicant may select the remedy from the approved analysis of alternatives.

Interim Remedial Measures

An Interim Remedial Measure (IRM) is an action that can be undertaken at a site when

a source of contamination or exposure pathway can be effectively addressed before the site investigation and analysis of alternatives are completed. If an IRM is likely to represent all or a significant part of the final remedy, NYSDEC will require a 30-day public comment period.

Remedy Selection

When the investigation of the site has been determined to be complete, the project likely would proceed in one of two directions:

1. The applicant may recommend in its investigation report that no action is necessary at the site. In this case, NYSDEC would make the investigation report available for public comment for 45 days. NYSDEC then would complete its review, make any necessary revisions, and, if appropriate, approve the investigation report. NYSDEC would then issue a "Certificate of Completion" (described below) to the applicant.

or

2. The applicant may recommend in its investigation report that action needs to be taken to address site contamination. After NYSDEC approves the investigation report, the applicant may then develop a cleanup plan, officially called a "Remedial Work Plan." This plan describes the applicant's proposed remedy for addressing contamination related to the site.

When the applicant submits a draft Remedial Work Plan for approval, NYSDEC would announce the availability of the draft plan for public review during a 45-day public comment period.

Cleanup Action

NYSDEC will consider public comments, and revise the draft cleanup plan if necessary, before approving the proposed remedy. The New York State Department of Health (NYSDOH) must concur with the proposed remedy. After approval, the proposed remedy becomes the selected remedy. The selected remedy is formalized in the site decision document.

The applicant may then design and perform the cleanup action to address the site contamination. NYSDEC and NYSDOH oversee the activities. When the applicant completes cleanup activities, it will prepare a final engineering report that certifies that cleanup requirements have been achieved or will be achieved within a specific time frame. NYSDEC will review the report to be certain that the cleanup is protective of public health and the environment for the intended use of the site.

Certificate of Completion

When NYSDEC is satisfied that cleanup requirements have been achieved or will be achieved for the site, it will approve the final engineering report. NYSDEC then will issue a Certificate of Completion (COC) to the applicant. The COC states that cleanup goals have been achieved and relieves the applicant from future liability for site-related contamination, subject to certain conditions. The applicant would be eligible to redevelop the site after it receives a COC.

Site Management

The purpose of site management is to ensure the safe reuse of the property if contamination will remain in place. Site management is the last phase of the cleanup program. This phase begins when the COC is issued. Site management incorporates any institutional and engineering controls required to ensure that the remedy implemented for the site remains protective of public health and the environment. All significant activities are detailed in a Site Management Plan.

An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction that would prevent or restrict certain uses of the property. An institutional control may be used when the cleanup action leaves some contamination that makes the site suitable for some, but not all uses.

An *engineering control* is a physical barrier or method to manage contamination. Examples include caps, covers, barriers, fences, and treatment of water supplies.

Site management also may include the operation and maintenance of a component of the remedy, such as a system that pumps and treats groundwater. Site management continues until NYSDEC determines that it is no longer needed.

Appendix A -
Project Contacts and Locations of Reports and Information

Project Contacts

For information about the Site's investigation and cleanup program, the public may contact any of the following project staff:

New York State Department of Environmental Conservation (NYSDEC):

Michael Belveg
Project Manager
NYSDEC

Remedial Programs
Scoping Sheet for Major Issues of Public Concern

Instructions

This Scoping Sheet assesses major issues of public concern; impacts of the site and its remedial program on the community; community interest in the site; information the public needs; and information needed from the public.

The information generated helps to plan and conduct required citizen participation (CP) activities, and to choose and conduct additional CP activities, if appropriate. The scoping sheet can be revisited and updated as appropriate during the site's remedial process to more effectively implement the site's CP program.

Note: Use the information as an aid to prepare and update the Major Issues of Public Concern section of the site CP Plan.

General Instructions

- When to prepare: During preparation of the CP Plan for the site. It can be revisited and updated anytime during the site remedial process.
- Fill in site name and other information as appropriate.
- The Scoping Sheet may be prepared by DEC or a remedial party, but must be reviewed and approved by the DER site project manager or his/her designee.

Instructions for Numbered Parts

Consider the bulleted issues and questions below and any others that may be unique or appropriate to the site and the community to help complete the five Parts of this Scoping Sheet. Identify the issue stakeholders in Parts 1 through 3 and adjust the site's contact list accordingly.

Part 1. List Major Issues of Public Concern and Information the Community Wants.

- Is our health being impacted? (e.g. Are there problems with our drinking water or air? Are you going to test our water, yards, sumps, basements? Have health studies been done?)
- There are odors in the neighborhood. Do they come from the site and are they hazardous?
- Are there restrictions on what we may do (e.g. Can our children play outside? Can we garden? Must we avoid certain areas? Can we recreate (fish, hunt, hike, etc. on/around the site?)
- How and when were the site's contamination problems created?
- What contaminants are of concern and why? How will you look for contamination and find out where it is going? What is the schedule for doing that?
- The site is affecting our property values!
- How can we get more information (e.g. who are the project contacts?)
- How will we be kept informed and involved during the site remedial process?
- Who has been contacted in the community about site remedial activities?
- What has been done to this point? What happens next and when?
- The site is going to be cleaned up for restricted use. What does that mean? We don't want redevelopment on a "dirty" site.

Part 2. List Important Information Needed <u>From</u> the Community, if Applicable.

- Can the community supplement knowledge about past/current uses of the site?
- Does the community have knowledge that the site may be significantly impacting nearby people, properties, natural resources, etc.?
- Are activities currently taking place at the site or at nearby properties that may need to be restricted?
- Who may be interested or affected by the site that has not yet been identified?
- Are there unique community characteristics that could affect how information is exchanged?
- Does the community and/or individuals have any concerns they want monitored?
- Does the community have information about other sources in the area for the contamination?

Part 3. List Major Issues and Information That Need to be Communicated <u>to</u> the Community.

- Specific site investigation or remediation activities currently underway, or that will begin in the near future.
- The process and general schedule to investigate, remediate and, if applicable, redevelop the site.
- Current understanding about the site contamination and effects, if any, on public health and the environment.
- Site impacts on the community and any restrictions on the public's use of the site and/or nearby properties.
- Planned CP activities, their schedule, and how they relate to the site's remedial process.
- Ways for the community to obtain/provide information (document repositories, contacts, etc.).

Part 4. Community Characteristics

a. - e. Obtain information from local officials, property owners and residents, site reports, site visits, "windshield surveys," other staff, etc.

f. Has the affected community experienced other **significant** present or past environmental problems unrelated to this site? Such experiences could significantly affect public concerns and perspectives about the site; how the community will relate to project staff; the image and credibility of project staff within the community; and the ways in which project staff communicate with the community.

g. In its remedial programs, DER seeks to integrate, and be consistent with, environmental justice principles set forth in *DEC Commissioner Policy 29 on Environmental Justice* and *DER 23 – Citizen Participation Handbook for Remedial Programs*. Is the site and/or affected community wholly or partly in an Environmental Justice (EJ) Area? Use the Search feature on DEC's public web site for "environmental justice". DEC's EJ pages define an EJ area, and link to county maps to help determine if the site and/or community are in an EJ area.

h. Consider factors such as:

- Is English the primary language of the affected community? If not, provisions should be considered regarding public outreach activities such as fact sheets, meetings, door-to-door visits and other activities to ensure their effectiveness.
- The age demographics of the community. For example, is there a significant number of senior citizens in the community? It may be difficult for some to attend public meetings and use document repositories. This may suggest adopting more direct interaction with the community with activities such as door-to-door visits, additional fact sheets, visits to community and church centers, nursing homes, etc.
- How do people travel about the community? Would most people drive to a public meeting or document repository? Is there adequate public transportation?

Part 5. Affected/Interested Public.

Individuals and organizations who need or want information and input can change during the site's remedial process. This need is influenced by real, potential, or perceived impacts of the site or the remedial process. Some people may want information and input throughout the remedial process. Others may participate only during specific remedial stages or may only be interested in particular issues.

It is important to revisit this question when reviewing this scoping sheet. Knowing who is interested in the site – and the issues that are important to them – will help to select and conduct appropriate outreach activities, and to identify their timing and the information to be exchanged.

Check all affected/interested parties that apply to the site. **Note: Adjust the site's contact list appropriately.** The following are some ways to identify affected/interested parties:

- Tax maps of adjacent property owners
- Attendees at public meetings
- Telephone discussions
- Letters and e-mails to DER, the remedial party, and other agencies
- Political jurisdictions and boundaries
- Media coverage
- Current/proposed uses of site and/or nearby properties (recreational, commercial, industrial)
- Discussions with community organizations: grass roots organizations, local environmental groups, environmental justice groups, churches, and neighborhood advisory groups

Division of Environmental Remediation

Remedial Programs
Scoping Sheet for Major Issues of Public Concern (see instructions)

Site Name: 1 North Depot

Site Number: C704064

Site Address and County: 1 North Depot Street, City of Binghamton, Broome County, New York

Remedial Party(ies): Residences at North Depot LLC

Note: For Parts 1. – 3. the individuals, groups, organizations, businesses and units of government identified should be added to the site contact list as appropriate.

Part 1. List major issues of public concern and information the community wants. Identify individuals, groups, organizations, businesses and/or units of government related to the issue(s) and information needs. **Use this information as an aid to prepare or update the Major Issues of Public Concern section of the site Citizen Participation Plan.**

Based on the nature of site contaminants, direct contact with contaminated soil and/or inhalation of airborne dust originating from contamination areas of the site, and any users of local groundwater pose the primary exposure risks to the local public. However, known soil contaminants are currently covered by hardscapes; therefore, the only likely direct exposure risk to the local public would be via dust generation during any ground-invasive work. When remediation commences, excavation activities may create dust, noise, and/or truck traffic at the site during typical business hours. The remedial program will eliminate or reduce the potential for exposure. No groundwater use is anticipated at the site nor have any potable groundwater wells been observed on adjoining properties nearby.

How were these issues and/or information needs identified?
Previous investigations identified contaminated soil, groundwater, and soil vapor at the site.

Part 2. List important information needed **from** the community, if applicable. Identify individuals, groups, organizations, businesses and/or units of government related to the information needed.
No information is needed from the community, at this time.

How were these information needs identified?
N/A

Part 3. List major issues and information that need to be communicated **to** the community. Identify individuals, groups, organizations, businesses and/or units of government related to the issue(s) and/or information.

Information will be communicated to the public as outlined in the Citizen Participation Plan. NYSDEC and NYSDOH contacts will be provided. A repository will exist for the public to review documentation.

How were these issues and/or information needs identified?
Issue identification is the same as Part 1 response. Information communication was established by NYSDEC and NYSDOH as part of the NYS Brownfield Cleanup Program

Part 4. Identify the following characteristics of the affected/interested community. This knowledge will help to identify and understand issues and information important to the community, and ways to effectively develop and implement the site citizen participation plan (mark all that apply):

a. Land use/zoning at and around site:
☒ **Residential** ☐ **Agricultural** ☐ **Recreational** ☒ **Commercial** ☒ **Industrial**

b. Residential type around site:
☒ **Urban** ☐ **Suburban** ☐ **Rural**

c. Population density around site:
☐ **High** ☒ **Medium** ☐ **Low**

d. Water supply of nearby residences:
☒ **Public** ☐ **Private Wells** ☐ **Mixed**

e. Is part or all of the water supply of the affected/interested community currently impacted by the site?
☐ **Yes** ☒ **No**

Provide details if appropriate:
Click here to enter text.

f. Other environmental issues significantly impacted/impacting the affected community?
☐ **Yes** ☒ **No**

Provide details if appropriate:
Click here to enter text.

g. Is the site and/or the affected/interested community wholly or partly in an Environmental Justice Area?
☐ **Yes** ☒ **No**

h. Special considerations:
☐ **Language** ☐ **Age** ☐ **Transportation** ☐ **Other**

Explain any marked categories in **h:**
Click here to enter text.

Part 5. The site contact list must include, at a minimum, the individuals, groups, and organizations identified in Part 2. of the Citizen Participation Plan under 'Site Contact List'. Are *other* individuals, groups, organizations, and units of government affected by, or interested in, the site, or its remedial program? (Mark and identify all that apply, then adjust the site contact list as appropriate.)

APPENDIX D
CAMP

Appendix 1A
New York State Department of Health
Generic Community Air Monitoring Plan

Overview

A Community Air Monitoring Plan (CAMP) requires real-time monitoring for volatile organic compounds (VOCs) and particulates (i.e., dust) at the downwind perimeter of each designated work area when certain activities are in progress at contaminated sites. The CAMP is not intended for use in establishing action levels for worker respiratory protection. Rather, its intent is to provide a measure of protection for the downwind community (i.e., off-site receptors including residences and businesses and on-site workers not directly involved with the subject work activities) from potential airborne contaminant releases as a direct result of investigative and remedial work activities. The action levels specified herein require increased monitoring, corrective actions to abate emissions, and/or work shutdown. Additionally, the CAMP helps to confirm that work activities did not spread contamination off-site through the air.

The generic CAMP presented below will be sufficient to cover many, if not most, sites. Specific requirements should be reviewed for each situation in consultation with NYSDOH to ensure proper applicability. In some cases, a separate site-specific CAMP or supplement may be required. Depending upon the nature of contamination, chemical- specific monitoring with appropriately-sensitive methods may be required. Depending upon the proximity of potentially exposed individuals, more stringent monitoring or response levels than those presented below may be required. Special requirements will be necessary for work within 20 feet of potentially exposed individuals or structures and for indoor work with co-located residences or facilities. These requirements should be determined in consultation with NYSDOH.

Reliance on the CAMP should not preclude simple, common-sense measures to keep VOCs, dust, and odors at a minimum around the work areas.

Community Air Monitoring Plan

Depending upon the nature of known or potential contaminants at each site, real-time air monitoring for VOCs and/or particulate levels at the perimeter of the exclusion zone or work area will be necessary. Most sites will involve VOC and particulate monitoring; sites known to be contaminated with heavy metals alone may only require particulate monitoring. If radiological contamination is a concern, additional monitoring requirements may be necessary per consultation with appropriate DEC/NYSDOH staff.

Continuous monitoring will be required for all ground intrusive activities and during the demolition of contaminated or potentially contaminated structures. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings or monitoring wells.

Periodic monitoring for VOCs will be required during non-intrusive activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. “Periodic” monitoring during sample collection might reasonably consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or

overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. In some instances, depending upon the proximity of potentially exposed individuals, continuous monitoring may be required during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence.

VOC Monitoring, Response Levels, and Actions

Volatile organic compounds (VOCs) must be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis or as otherwise specified. Upwind concentrations should be measured at the start of each workday and periodically thereafter to establish background conditions, particularly if wind direction changes. The monitoring work should be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment should be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment should be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

1. If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities must be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities can resume with continued monitoring.

2. If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities must be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities can resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.

3. If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown.

4. All 15-minute readings must be recorded and be available for State (DEC and NYSDOH) personnel to review. Instantaneous readings, if any, used for decision purposes should also be recorded.

Particulate Monitoring, Response Levels, and Actions

Particulate concentrations should be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations. The particulate monitoring should be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment must be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

1. If the downwind PM-10 particulate level is 100 micrograms per cubic meter (mcg/m^3) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques must be employed. Work may continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed 150 mcg/m^3 above the upwind level and provided that no visible dust is migrating from the work area.

2. If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m^3 above the upwind level, work must be stopped and a re-evaluation of activities initiated. Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within 150 mcg/m^3 of the upwind level and in preventing visible dust migration.

3. All readings must be recorded and be available for State (DEC and NYSDOH) and County Health personnel to review.

December 2009

1.0 EXECUTIVE SUMMARY

Keystone Associates Architects, Engineers and Surveyors, LLC (Keystone Associates) has performed this Phase I Environmental Site Assessment (ESA) in substantial conformance with 40 CFR Part 312 – *Standards and Practices for all Appropriate Inquires* and Standard Practice E-1527-13 of the ASTM, updated November 2013. The purpose of this practice is to define good commercial and customary practice for conducting an Environmental Site Assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the *innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability* (commonly referred to as "landowner liability protections"). The scope of this Phase I ESA for the Property was limited to include assessments, evaluations, conclusions and recommendations related to the Property's recognized environmental conditions based on a visual site inspection, personnel interview(s) and available records review. ASTM standards, when followed, constitute "all appropriate inquiry into the previous ownership and uses of the Property consistent with good commercial or customary practice," as defined by Federal regulations (42 USC 9601 (35)(B) CERCLA).

The goal of this Phase I ESA was to assess the extent to which *recognized environmental conditions* (RECs) exist that could result in significant risk and liability to the owner or occupants of the 1 North Depot Street property, City of Binghamton, New York (the Property), which is identified as Broome County Tax Parcel ID No. 160.25-2-20.2.

The assessment includes identifying environmental hazards, and evaluating risk. The term *recognized environmental conditions* (REC's) is defined by ASTM as the presence or likely presence of any hazardous substance or petroleum products in, on, or at a Property; (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term "Property" is the subject of the environmental site assessment described in this practice. The Property includes buildings and other fixtures and improvements located on the Property and affixed to the land. The term *recognized environmental conditions* is not intended to include *de minimis* conditions that generally would not be subject to an enforcement action if brought to the attention of the appropriate regulatory agency.

As detailed in Section 9.0 of this report, recognized environmental conditions (RECs) have not been identified at this time. However, other potential environmental concerns were identified and evaluated with respect to "business environmental risk".

2.0 INTRODUCTION

Keystone Associates has conducted a Phase I ESA of the property located at 1 North Depot Street in the City of Binghamton, Broome County, New York (the Property). In Appendix A, See Figure 1 - Site Location Map, Figure 2 - USGS Map, and Figure 3 - Site Schematic. The goal of a Phase I ESA is to assess the extent to which recognized environmental conditions, including hazardous substances, petroleum products, wastes, or other environmental hazards exist that could result in significant risk and liability to the owner or occupants of the Property.

2.1 Definition of Work Scope

The scope of this Phase I ESA for the Property was limited to include assessments, evaluations, conclusions and recommendations related to the Property's recognized environmental conditions based on a visual site inspection and available records review in substantial conformance with 40 CFR Part 312 – *Standards and Practices for all Appropriate Inquires* and Standard Practice E-1527-13 of the ASTM, updated November 2013. ASTM standards, when followed, constitute "all appropriate inquiry into the previous ownership and uses of the Property consistent with good commercial or customary practice," as defined by Federal regulations (42 USC 9601 (35)(B) CERCLA).

The assessment was based on the following work program:

- Site Inspection: A walk-through site inspection was conducted to evaluate the current environmental condition of the Property with respect to items such as underground storage tanks (USTs), hazardous or regulated materials, or other visual indications of environmental conditions that could affect the Property. Available site characterization maps and other sources of site characteristics were also reviewed, including National Wetlands Inventory Maps, FEMA Flood Insurance Rate maps, soil/geology resources, and recent aerial photographs.

- Owner/Occupant Interview: A site visit and interview was conducted with Mr. Josh Bishop, recent property owner. Since the building has been vacant for many years, Mr. Bishop was identified as the "most knowledgeable person" available and was interviewed to obtain information pertaining to known or recognized environmental conditions associated with the Property. Based on the site history provided by Mr. Bishop as well as a review of historical documentation, further owner/occupant interviews were not deemed warranted.

- Review of Site History: This review was conducted to identify past land uses or features that might be indicative of environmental concern. Sources of information reviewed included historical aerial photographs, historic Sanborn Fire Insurance Maps, as well as information provided by key personnel as part of the interviews described above.

- Review of Adjoining Land Uses: Adjoining land uses were preliminarily reviewed to assess the potential for environmental impacts on the Property. This review was based on visual observations of adjacent properties during the site inspection, an aerial photograph review, Sanborn Fire Insurance Map review, and a review of a computerized regulatory database report described below.

- Computerized Regulatory Database Search and Agency File Reviews: A computerized environmental regulatory program database report for facilities located within the ASTM specified radius of the Property was obtained from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. The databases provide information on sites located within an ASTM-standard specified distance pertaining to the Federal Comprehensive Environmental Response, Compensation and Liability Act/National Priority List (CERCLA/NPL) and Resource Conservation and Recovery Act (RCRA) programs, Emergency Response Notification System (ERNS), and State Underground Storage Tank/Aboveground Storage Tank (UST/ AST), hazardous waste and solid waste facility program records. In addition, the Broome County Municipal offices and online databases were contacted for relevant information pertaining to the Property and nearby properties.

2.2 Limitations

No limitations were encountered during performance of this Phase I ESA.

2.3 Exceptions and Deletions

No exceptions or deletions to ASTM E-1527-13 were performed in connection with the preparation of this Phase I ESA.

3.0 PROPERTY DESCRIPTION

The Property is located along Prospect Avenue between North Depot and Eldredge Street in the downtown business district of the City of Binghamton. The Property consists of Broome County Tax Parcel Identification No. 160.25-2-20.2, totals 0.63-acres, and is currently owned by the Client, Mr. Josh Bishop of One North Depot, LLC. The Property is improved with an approximate 51,000 square foot masonry structure. The structure is a partial five (5) story building composed of brick masonry with concrete foundation. The remainder of the Property consists of asphalt paved surfaces. In Appendix A, Figure 3 – Site Schematic shows the building configuration.

According to the Sanborn Fire Insurance Map described below in Section 5.6, the Property has historically been utilized for wholesale grocery and meats, wholesale hardware distribution as well as cold storage warehouse space. The building was also utilized by Norfolk Southern Railway office space. The entire building currently remains vacant with all furnishings removed.

3.1 Geology and Hydrogeology

According to the 1968 USGS 7.5-Minute Quadrangle map for the Binghamton West, New York vicinity, the Property lies at approximately 865-feet above mean sea level and is generally flat. Surface water drainage on the Property is in multiple directions, being controlled by the site building, parking lot, and associated stormwater drainage systems located along Depot Street, Prospect Avenue and Eldredge Street. Based on local topography, the suspect groundwater flow direction is from northeast to southwest towards the Chenango River, which is located approximately 940' west of the Property at a mean elevation of 826-feet above mean sea level. In Appendix A, see Figure 2 – USGS Map. It should be noted that a physical investigation would be required to verify the specific groundwater flow direction at the Property.

According to the Broome County, New York Soil Survey dated 1971 as well as the USDA Natural Resource Conservation Service – Web Soil Survey, the Property's overburden is composed of Cut and Fill lands, gravelly materials (Cv). This land type consists of fill that came mostly from areas of Chenango and Howard soils or from leveled areas of these soils. Fill from these materials generally is excellent for highways and for building sites. Areas of this fill near Binghamton commonly consist of 5 to 10 feet of Chenango soil material over alluvial Tioga soil material. Additional soil data is provided in Appendix E.

3.2 Wetlands/Flood Hazard Areas Review

Keystone Associates reviewed the Broome County GIS website and the United States Fish & Wildlife Service National Wetlands Inventory (NWI) online database covering the Property. According to these sources, mapped wetlands are not present on-site or in the immediate vicinity of the Property. Figure 4 – Broome County GIS Map with Flood Zone and NWI wetlands is included in Appendix A.

The Broome County GIS website and Federal Emergency Management Agency (FEMA) online map service center was also reviewed for Flood Insurance Rate Maps covering the area of the Property. Based on this source, the Property is not located within a mapped flood zone. Figure 4 – Broome County GIS Map with Flood Zone and NWI wetlands is included in Appendix A. Flood data is based on FEMA Flood Insurance Rate Map, Binghamton, New York, Community Panel Number 36007C0356F dated February 5, 2010.

3.3 Radon Gas Potential

No radon sampling or testing was completed as part of this Phase I ESA. To evaluate the potential for the presence of radon gas on the Property, the United States Environmental Protection Agency website was reviewed (Appendix E). According to their map of radon zones for New York, Broome County and its surrounding counties are identified as Zone 1. These counties have a predicted average indoor radon screening level greater than 4 pCi/L (picocuries per liter). The current United Stated Environmental Protection Agency (USEPA) guidelines indicate that action should be considered when radon levels reach an annual average of 4 pCi/L (action guideline) or more for any habitable area location. Although the potential presence of radon gas is not considered a specific Recognized Environmental Condition, based on this information, consideration should be given to testing and/or mitigation of radon at the Property.

4.0 SITE RECONNAISSANCE

Date of Inspection:	October 1, 2015
Arrival Time:	8:00 am
Keystone Personnel:	Mr. Timothy M. O'Connor, Sr. Environmental Scientist
Site Representatives:	Mr. Josh Bishop, Owner

The Property was traversed by Keystone Associates where possible. Mr. Bishop accompanied Keystone Associates during the site reconnaissance. Complete access to interior portions of the buildings was provided. Each of the adjacent/abutting properties was inspected along their perimeters to evaluate the potential for containing any areas of potential environmental concern that may impact the Property. During the site visit, the weather was cloudy with temperatures in the 50's. A site inspection checklist is included as Appendix B. Photographs of the Property are presented as Appendix C.

The following is a list of specific areas of potential environmental concern that were investigated by Keystone Associates personnel during the site inspection.

4.1 Property Features and Current Use

As previously stated in Section 3.0, the Property is currently improved with a partial five (5) story building composed of brick masonry with concrete foundation. The remainder of the Property consists of asphalt paved surfaces. The building was constructed prior to 1887. The entire building currently remains vacant with all furnishings removed.

4.2 Utilities, Floor Drains, Vent Pipes, Wells, Cisterns and Septic Systems

Public water and sewer services utilized at the Property are currently provided by the City of Binghamton Water Department. Natural gas and electric services utilized at the Property are provided by New York State Electric and Gas (NYSEG). No physical evidence of water wells, septic systems, or on-site wastewater treatment was observed during the site visit. Several floor drains are located within the building's first floor and appear to be connected to the municipal sewer system. A new natural gas fired furnace unit is located in the building's basement and is used to heat the westernmost portion of the building (former Norfolk Southern office space). A suspect coal shoot was observed along the basement's southernmost interior wall. Sources of prior heating systems were not identified.

4.3 Aboveground/Underground Storage Tanks (AST/USTs)

The presence of aboveground/underground storage tanks was not identified at the Property.

4.4 Pipelines

The presence of pipelines was not identified at the Property.

4.5 Transformers and PCB Equipment

The presence of facility owned electrical transformer and/or PCB containing equipment was not identified at the Property. Several pole mounted, New York State Electric and Gas (NYSEG) owned electrical transformers were observed on or immediately adjacent to the Property along Prospect Avenue. Evidence of fluid release was not identified in the vicinity of the Property during the site reconnaissance. In the event that releases occur, NYSEG would typically be responsible for associated cleanup activities and costs.

4.6 On-site Hazardous Substances and Petroleum Products

The presence of on-site hazardous substances, unidentified containers and/or petroleum products was not identified at the Property.

4.7 Evidence of Landfill, Dumping, Disturbed Soil or Direct Burial Activity

Evidence of landfill, illegal dumping, disturbed soil or direct burial activity was not identified at the Property.

4.8 Evidence of Solid Waste and/or Waste Water Discharges

Evidence of solid waste or waste water discharges was not identified at the Property.

4.9 Evidence of any Industrial or Production/Storage Activities

Evidence of industrial production or storage activities was not identified at the Property.

4.10 Evidence of any Monitoring Wells or Remedial Activities

Evidence of monitoring wells was not identified at the Property.

4.11 Evidence of any Chemical Spills and/or Releases

A visual inspection for evidence of spills of gasoline, oils, chemicals or other contaminants was completed (i.e., staining, stressed vegetation, and similar observations). Evidence of chemical spills or releases was not observed at the Property.

4.12 Asbestos Inspection

An asbestos survey, inspection or investigation is beyond the scope of this Phase I ESA and was not conducted.

According to Subpart 56-5.1 of the applicable New York State Department of Labor Industrial Code Rule 56; if a building or structure, or portion(s) thereof are to be demolished, renovated, remodeled, or have repair work done then an asbestos survey must completed by a licensed asbestos contractor using inspectors certified in compliance with Code Rule Section 56-3.2(d), to determine whether or not the impacted areas contain asbestos containing material (ACM), presumed ACM (PACM), or asbestos material. State and federal regulations also require that

proper handling and disposal of Asbestos Containing Materials (ACMs) be conducted by certified contractors. This excludes "owners" of one and two-family dwellings who do not contract for and solely conduct the demolition, renovation, remodeling or repair work themselves.

4.13 Lead Based Paint Inspection

Lead based paint inspection or investigation is beyond the scope of this Phase I ESA and was not conducted. However, based on the date of construction being prior to 1978, the potential for lead based paint materials exists throughout the building(s). If surfaces/components are intended to be scoured in the course of repair, renovation, alteration and/or demolition activities, then exposure to workers must be addressed in accordance with OSHA Lead-In-Construction Standards 29CFR Part 1926 Subpart D #1926.62A, or Part 1925 for State/Federal projects. This is a potential health risk should the Client decide to renovate, occupy or demolish the site building(s).

4.14 Soil Vapor Migration Evaluation

An evaluation of risk associated with potential soil vapor migration was performed as part of this investigation (as required in the newly revised ASTM standard). Based upon information obtained during the site reconnaissance and regulatory database review, the presence of contamination presenting a concern for soil vapor migration was not identified on-site or immediately upgradient of the Property. Therefore, indoor air quality sampling to determine the presence/absence of soil vapor intrusion at the Property does not appear warranted at this time.

5.0 SITE HISTORY

To evaluate the Property's history, facility personnel were interviewed and historical aerial photographs and Sanborn Fire Insurance Maps were examined (where available). A limited chain of title review was also conducted for the Property. The findings of these reviews and interviews are summarized in the following sections.

5.1 Aerial Photograph Review

Keystone Associates reviewed aerial photographs covering the Property from 1994 to 2014, made available from the Broome County GIS website as well as purchased from Environmental Data Resources, Inc. The results of the review are summarized in the table below. Aerial photographs are included in Appendix D of this report.

TABLE 5-1: AERIAL PHOTOGRAPH REVIEW

Date	Description
1994	The property remains as currently developed with a commercial warehouse building and associated parking lot. The Property is surrounded by mixed use properties. Evidence of environmental concern was not identified on-site.
1999	Significant changes in Property characteristics from the 1994 aerial photograph were not observed.
2002	Significant changes in Property characteristics from the 1999 aerial photograph were not observed.
2006	Significant changes in Property characteristics from the 2002 aerial photograph were not observed.
2012	Significant changes in Property characteristics from the 2006 aerial photograph were not observed.
2014	Significant changes in Property characteristics from the 2012 aerial photograph were not observed. The Property and surrounding properties appear as currently developed. Specific visual evidence of environmental concern was not identified.

Issues of potential environmental concern were not identified through the review of the available historic aerial photographs.

5.2 Interviews

A site walk and interview was conducted on October 1, 2015, with Mr. Josh Bishop, who recently purchased the Property from the County of Broome. Mr. Bishop stated that the building was constructed in the late 1800's and has historically been used for wholesale distribution of groceries, meats and hardware as well as cold storage warehouse space. Additional uses include Norfolk Southern Railway offices. Mr. Bishop stated that those offices were heated via a natural gas fired furnace unit located in the basement. He was unaware of any former heat sources on-site however indicated the presence of a potential coal shoot extending from the southern exterior wall into the building's basement. Mr. Bishop was unaware of any former tenants or site conditions that would pose a significant business environmental risk to the Property.

5.3 Chain of Title Review

To obtain documentation of the ownership history of the Property, Keystone Associates conducted a Chain of Title review at the Broome County, Recorder of Deeds Office. A copy of the most recent deed and tabular summary of deed ownership history is included as Appendix D of this report. Keystone Associates does not guarantee this abstract as a complete chain of title to the Property.

Based on information obtained during the Chain of Title review, indications of current or former high risk owners/occupants were not identified.

5.4 Historical Topographic Maps

The Property is located within the business district of the City of Binghamton where specific site details are not provided, therefore historical topographic maps were not reviewed as part of this Phase I ESA.

5.5 Previous Environmental Reports

Keystone Associates inquired about any previous investigations conducted at the Property. According to the interviewed personnel identified in Section 5.2, previous environmental reports are not known to exist for the Property.

5.6 Sanborn Maps Review

As part of the Phase I ESA, Sanborn Fire Insurance Maps were requested from Environmental Data Resources, Inc. According to EDR's Certified Sanborn Map Report dated September 30, 2015, a complete holding of the Sanborn Library, LLC collection was searched. Sanborn Fire Insurance Maps for the years of 1887, 1898, 1918, 1950, 1952, and 1970 were reviewed. Sanborn Fire Insurance Maps were provided by Environmental Data Resources, Inc. and are included in Appendix D of this report.

- 1887 – The existing site building was present at this time. Occupants included wholesale groceries, a cigar factory and machine shop activities. The existing railway remained present immediately south of the Property.

- 1898 – The building was utilized for wholesale groceries, cigar factory, warehouse and wholesale meats.

- 1918 – The building was utilized for wholesale groceries, wholesale hardware and wholesale meats.

- 1950 – The building remained utilized for wholesale groceries, wholesale hardware and wholesale meats.

- 1952 - Changes in Property characteristics from the 1950 Sanborn map were not observed however it should be noted that image quality was poor.

- 1970 – The building remained utilized for wholesale groceries, wholesale hardware and wholesale meats as well as warehouse space.

5.7 City Directory Review

A City Directory abstract was provided by Environmental Data Resources (EDR) and dated October 2, 2015. City Directories are a review of a particular address and neighboring addresses in business directories including city, cross reference, and telephone directories. For the purpose of this City Directory, the site address 1 North Depot Street, Binghamton, New York 13901 was researched. According to the EDR City Directory Search, in 1930-1964 the Property was identified as Kingsley Company (wholesale hardware), Mc Tighe Grocery Company and Darling Meats and Provisions Company. In addition, in 1974 the Lander's Company also used portions of the Property for warehouse space. Other years/occupants were not listed by the research source.

Keystone Associates does not warrant the accuracy or completeness of the computerized regulatory database report. The report contents are subject to the disclaimer provided within the EDR city directory search report provided in Appendix D.

6.0 ADJOINING LAND USE

Adjoining land uses were reviewed to preliminarily assess the potential for environmental impacts to the Property. The assessment of adjacent properties was based on visual observations and land use as depicted by the aerial photographs. Adjacent land use is summarized on the table below.

TABLE 6-1: ADJOINING LAND USE SUMMARY

Direction	Description
North	Eldredge Street defines the northern property boundary followed by mixed use commercial and residential properties.
South	North Depot Street defines the southern property boundary followed by the Norfolk Southern railway.
East	Commercial building are located immediately east of the Property.
West	Prospect Avenue defines the western property boundary followed by commercial/industrial properties.

Based on the observed conditions outlined in Table 6-1, surrounding properties are not anticipated to present a significant environmental concern to the Property.

7.0 REVIEW OF REGULATORY AGENCY RECORDS

7.1 Local Officials Records Review

Mr. Fred Greisel, City of Binghamton Code Enforcement officer since 1982 was contacted in regards to any potential environmental concerns at the Property and surrounding properties. Mr. Greisel he stated that there were no electronic files recorded for the 1 North Depot Street site and was unaware of any known environmental associated with the Property.

7.2 NYSDEC/USEPA File Review

Based on the lack of potential environmental concerns identified at the Property, an official NYSDEC and/or USEPA FOIA request file review was not conducted as part of this work scope. However, Keystone Associates conducted a NYSDEC Spill Incidents Database Search online and no records were found at the 1 North Depot Street address from 1979 to present. Although several spill events have been recorded in the vicinity of Prospect Avenue and Eldredge Street, each of the identified spill cased have been reported "closed" by the NYSDEC and therefore are not considered to pose significant business environmental risks to the owners or occupants of the Property. Note that this search does not represent a formal FOIA request and that the lack of identified spill cases does not represent certainty that such cases have not been identified by the NYSDEC.

8.0 REGULATORY DATABASE REVIEW

In addition to the historical review, environmental regulatory agency records were searched through the use of state and federal databases accessed and summarized by Environmental Data Resources, Inc (EDR). The EDR report is a screening tool that identifies sites located within a set of ASTM-recommended search radii, to identify the occurrence of spills and/or facilities involving solid waste, hazardous waste, and petroleum products on the Property or nearby properties.

Federal and State regulatory program searches within the ASTM standard search radius for select databases are listed in Table 8-1, followed by a brief summary discussion of the identified sites. A detailed description of each database and facility listing is provided within the full EDR report, which is attached as Appendix E. Keystone Associates does not warrant the accuracy or completeness of the computerized regulatory database report. The report contents are subject to the disclaimer provided within the EDR report.

TABLE 8-1: REGULATORY DATABASE REPORT SUMMARY

Federal Data Services Searched	Min. Search Distance (miles)	Identified Sites	Sites of Concern	Target Property Identified
NPL (National Priorities List)	1.0	0	0	No
Delisted NPL	0.5	0	0	No
CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System)	0.5	0	0	No
NFRAP (No Further Remedial Action Planned Sites)	0.5	1	0	No
RCRIS CORRACTS (Resource Conservation and Recovery Information System – Corrective Action sites)	1.0	0	0	No
RCRIS TSD (Treatment, Storage & Disposal sites)	0.5	0	0	No
RCRIS Generators (RCRIS – Generator List)	Property & Adjoining	6	0	No
Institutional/Engineering Control Registries	Property & Adjoining	0	0	No
ERNS Incidents (Emergency Response Notification System)	Property & Adjoining	0	0	No
State Data Services Searched		Identified Sites	Sites of Concern	
SHWS (New York Priority List of Hazardous Waste Sites)	Property	3	0	No
SWF/LF (New York Solid Waste Disposal and Landfill List)	0.5	1	0	No
LTANK (New York List of Storage Tank Confirmed Releases)	0.5	27	0	No
UST (New York Registered Underground Storage Tank List)	Property & Adjoining	11	0	No
State Institutional/Engineering Control Registries	Property & Adjoining	1	0	No
Voluntary Cleanup Sites	0.5	0	0	No
Brownfield Cleanup Sites	0.5	1	0	No
NY Spill Sites	-	20	0	No

8.1 Federal CERCLIS Sites

The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database is a comprehensive listing of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have either been investigated, or are currently under investigation by the USEPA for the release, or threatened release of hazardous substances. CERCLIS No Further Remedial Action Planned (NFRAP) sites are former hazardous waste sites that have been delisted by the USEPA. While the USEPA de-lists sites after the most significant environmental threats have been removed from a facility, delisting does not necessarily indicate that all soil and groundwater contamination has been addressed.

Number Reported: (1) The CERCLIS NFRAP listed U.S. Postal Service property located at 111 Henry Street is located downgradient of the Property. Based on this information as well as the use of public water supplies on-site, this listing is not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.2 Federal RCRIS Sites

The USEPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The Resource Conservation and Recovery Information System (RCRIS) is a compilation of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. Generators are presented as either Small Quantity Generators (SQGs) which generate less than 1,000 kg/month of non-acutely hazardous waste or Large Quantity Generators (LQGs) which generate greater than 1,000 kg/month of non-acutely hazardous waste, or 1kg/month of acutely hazardous waste. Treatment, storage, and disposal facilities are identified as RCRIS TSD properties. RCRIS TSDCs or CORRACTs sites are treatment, storage and/or disposal facilities that are subject to corrective action under RCRA.

Number Reported: (6) Each of the listed RCRIS sites are located downgradient of the Property. Based on this information as well as the use of public water supplies on-site, these listings are not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.3 State Hazardous Waste Disposal Sites

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial program is the cleanup program for inactive hazardous waste and hazardous substance sites (State equivalent to CERCLIS).

Number Reported: (3) Each of the listed State Hazardous Waste Disposal sites are located downgradient of the Property. Based on this information as well as the use of public water supplies on-site, these listings are not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.4 State Solid Waste Disposal/Landfill Sites

The SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may also include active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Number Reported: (1) The Solid Waste Disposal site is located downgradient of the Property. Based on this information as well as the use of public water supplies on-site, this listing is not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.5 State LTANK Sites

These records contain an inventory of reported leaking storage tank incidents reported from April 1986 through the most recent update. They can be either leaking underground or aboveground storage tanks. The causes of the incidents are tank test failures, tank failures, or tank overfills.

Number Reported: (27) Each of the 27 Leaking Tank spill listings have been determined "closed" by the NYSDEC. Based on this information as well as the use of public water supplies on-site, these listings are not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.6 State UST Sites

The Bulk Petroleum Database contains information on petroleum bulk storage tanks (petroleum capacities in excess of 1,100 gallons and less than 400,000 gallons), hazardous substance/chemical bulk storage (CBS) tanks, and major petroleum storage facilities within the Property's zip code.

Number Reported: (11) None of the UST listings were identified immediately upgradient of the Property. Based on this information as well as the use of public water supplies on-site, these listings are not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.7 State Institutional/Engineering Control Registries

The New York State registry of Institutional/Engineering controls identifies environmental remediation sites which have engineering and/or institutional controls in place.

Number Reported: (1) The listed Binghamton Plaza site is not located upgradient of the Property. Based on this information as well as the use of public water supplies on-site, this listing is not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.8 State Brownfield Cleanup Sites

In an effort to spur the cleanup and redevelopment of brownfields, the state's Environmental Restoration Program provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remedial activities. Once remediated, these sites may then be reused for commercial, industrial, residential, or public use.

Number Reported: (1) This Binghamton Plaza property was previously discussed in Section 8.7 and is not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.9 State Spill Sites

The New York Spills Information Database collects data on spills reported to the NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regulations), or 6 NYCRR Section 595.2 (from CBS regulations). It includes spills active as of April 1986, through the most recent update.

Number Reported: (20) Each of the NY Spill listings has been determined "closed" by the NYSDC. Based on this information as well as the use of public water supplies on-site, these listing are not anticipated to present a significant "business environmental risk" to the owners or occupants of the Property.

8.10 Unplottable Sites

In addition to the plottable listings provided by the database report, eleven (11) additional unplottable listings were identified. Each of these sites was reviewed by name and address and was not identified at, or immediately adjacent to the Property. Based on the Property's use of public water and public sewer utilities, the listed orphan properties are not anticipated to present a significant "business environmental risk" to the owner's or occupants of the Property.

9.0 SUMMARY AND CONCLUSIONS

Keystone Associates has conducted a Phase I Environmental Site Assessment (Phase I ESA) for the site at 1 North Depot Street, City of Binghamton, Broome County, New York (the Property). The Property consists of Broome County Tax Parcel Identification No. 160.25-2-20.2, totals 0.63-acres, and is currently owned by the Client, Mr. Josh Bishop of One North Depot, LLC. The Property is improved with a partial five-story masonry building constructed in the late 1800's. This assessment was conducted in substantial conformance with 40 CFR Part 312 – *Standards and Practices for all Appropriate Inquires* and Standard Practice E-1527-13 of the ASTM, updated November 2013.

Based on the scope of this Phase I ESA outlined in Section 2.1 of this report, recognized environmental conditions (RECs) have not been identified at this time. However, the following environmental concerns were identified and evaluated with respect to "business environmental risk".

1.0 No radon sampling or testing was completed as part of this Phase I ESA. To evaluate the potential for the presence of radon gas on the Property, the United States Environmental Protection Agency website was reviewed (Appendix E). According to their map of radon zones for New York, Broome County and its surrounding counties are identified as Zone 1. These counties have a predicted average indoor radon screening level greater than 4 pCi/L (picocuries per liter). The current United Stated Environmental Protection Agency (USEPA) guidelines indicate that action should be considered when radon levels reach an annual average of 4 pCi/L (action guideline) or more for any habitable area location. Although the potential presence of radon gas is not considered a specific Recognized Environmental Condition, based on this information, consideration should be given to testing and/or mitigation of radon at the Property.

2.0 Asbestos inspection or investigation is beyond the scope of this Phase I ESA and was not conducted. It should be noted that if significant renovations or demolition are anticipated, state and federal regulations require an asbestos survey and proper handling and disposal of Asbestos Containing Materials (ACMs).

3.0 Lead based paint inspection or investigation is beyond the scope of this Phase I ESA and was not conducted. If demolition, renovations and/or remodeling of this Property are to take place, exposure to workers must be addressed in accordance with OSHA Lead-In-Construction Standards 29CFR Part 1926 Subpart D #1926.62A, or Part 1925 for State/Federal projects.

With the exceptions of the issues as described above, other environmental concerns have not been identified at this time. Please note that the conclusions reached in this report do not represent scientific certainties, but rather are probabilities based on our professional judgment. The conclusions made in this report are based solely on the scope of services described herein and the information obtained during the course of work.

10.0 CERTIFICATION

The reported analyses, opinions and conclusions are personal, unbiased, professional and limited only by the assumptions and qualifications stated herein. Compensation is not contingent upon an action or an event resulting from the analyses, opinions or conclusions in, or the use of this report.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Timothy M. O'Connor, C.E.P.
Senior Environmental Scientist

Richard J. Tarnowski, C.E.P., C.E.I.
Director of Environmental Services

11.0 QUALIFICATIONS

Keystone Associates is a full service architectural, engineering and surveying firm offering services from initial planning, environmental and feasibility studies through detailed design, procurement and construction phase services. The firm was originally established in 1993 as Keystone Trozzle, LLC and was renamed in July of 2000 as Keystone Associates Architects, Engineers and Surveyors, LLC.

Timothy M. O'Connor, Senior Environmental Scientist performed this Phase I ESA. Professional review was provided by Richard J. Tarnowski, Director of Environmental Services. The scope of this investigation was limited to visual observation of surface conditions at the Property, interviews with the Property realtor and owner, listed public agency personnel, and a review of readily available reports and literature.

The investigation addresses the likelihood of hazardous substance or petroleum product contamination resulting from past and current known uses of the Property. As a result, certain conditions may not be revealed. These conditions include, but are not limited to, the following:

1. Naturally occurring toxins in the subsurface soils, rocks, water, or on-site flora;
2. Toxicity of substances common in current habitable environments, such as stored household products, building materials, and consumables;
3. Presence of lead or copper in drinking water or in paint, which could exceed regulatory standards;
4. Contaminant plumes or contaminated soils below the ground surface;
5. Contaminants or contaminant concentrations that do not violate present regulatory standards but may violate future such standards;
6. Asbestos containing materials;
7. Radon gas;
8. Wetlands;
9. Sinkholes or subsurface conditions affecting structural stability;
10. Operations conducted on days other than those during our observation;
11. Unknown site contamination, such as "midnight" dumping and/or accidental spillage which may occur before or following the site visit.

Additional investigation, including sampling and laboratory analysis, may be appropriate to confirm the presence or absence of the above items.

The computer database contained in this report has been provided by Environmental Data Resources and was obtained from publicly available sources and other secondary sources of information produced by others. Keystone Associates disclaims any and all liability for any errors, omission, or inaccuracies in such information and data, whether attributable to inadvertence or otherwise, and for any consequences arising therefrom. The report is valid only for the geographical parameters specified on the cover page of that report, and any alteration or deviation from that description will require a new report.

Information provided to Keystone Associates by interviewees forms the basis for certain opinions and findings for this report. Keystone Associates cannot warrant the accuracy or completeness of information provided by these sources, but has used professional judgment, available site information, and visual observations in incorporating information provided by the interviewee into this report.

Services for this project are performed in accordance with the Agreement between the Client and Keystone Associates. No warranty or guarantee of site conditions is intended. This report is solely for the use of the Client and any reliance on this report by third parties shall be at such party's sole risk.

This report is intended to be used in its entirety, including all attachments and/or addenda to the report. Reliance on portions of the report, without considering it in its entirety, could potentially lead to misinterpretation by the reader.

Deed-Quit Claim

This Indenture,

Made the 30 Day of **December two thousand and fourteen**

Between THE COUNTY OF BROOME, a municipal corporation organized under the laws of the State of New York, having its principal place of business in the Edwin L. Crawford County Office Building, Government Plaza, Binghamton, NY 13902. *Grantor(s)* Party(ies) of the first part, and

One North Depot LLC residing or doing business at, **PO Box 1554, Binghamton, New York 13901**

Grantee(s) Parties of the second part,

Witnesseth that the party of the first part, in consideration of

Twenty thousand dollar(s) Dollars (**$20,000.00**)

Lawful money of the United States, and other good and valuable consideration

Paid by the parties of the second part, does hereby remise, release and quitclaim unto the parties of the second part, their heirs and assigns forever,

All that tract or parcel of land situated in the **City of Binghamton**, County of Broome, and State of New York, bounded and described as follows:

Said parcel is designated on the Broome County Tax Map as Tax Map No: **P/O 160.25-2-20,** also known as **P/O 1 North Depot Street.**

The aforementioned premise was conveyed to the County of Broome by Kevin Keough, Director of Real Property Tax Services for the County of Broome by deed dated and recorded in the Broome County Clerk's Office on **December 11, 2012** in Liber **2391** of deeds at page **59,**

Excepting and reserving to the grantor County of Broome the northeast section of the subject's land measuring 58± front feet along Eldredge street by 166± along the easterly line, by 50± feet along the southerly line and 165± along the westerly line to the point of the beginning, and The area south of the existing commercial area of the condominiums along the rear of the building for parking and area measuring 108± along the rear of the building and 18± feet in depth. See Attached Survey

This conveyance is given pursuant to Resolution No: **2014-475** adopted by the Broome County Legislature on **November 20, 2014.**

Together with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

To have and to hold the premises herein granted unto the parties of the second part, their heirs and assigns forever.

In Presence of

In witness Whereof, the party of the first part has caused its corporate seal to be hereunto affixed, and these presents to be signed by it's duly authorized officer this 30th day of **December Two Thousand and fourteen.**

ONE NORTH DEPOT STREET, CITY OF BINGHAMTON, BROOME COUNTY, NEW YORK STATE

ALL THAT TRACT OR PARCEL OF LAND situate in the City of Binghamton, County of Broome, State of New York, being a portion of the property now or formerly of the County of Broome described in Liber 2391 Page 59 as recorded in the Broome County Clerk's Office on December 11, 2012 (portion of TM# 160.25-2-20), bounded and described as follows: BEGINNING at a point on the southeasterly boundary of Prospect Avenue at its intersection with the division line between the property now or formerly of the D & H Railroad on the south and the property now or formerly of the County of Broome per L. 2391 P. 59 (TM# 160.25-2-20) on the north;

RUNNING THENCE along said Prospect Avenue the following four (4) courses and distances:

1) N39°23'37"E, a distance of 136.49 feet to a point;

2) N58°34'32"E, a distance of 71.52 feet to a point;

3) N39°05'01"E, a distance of 118.27 feet to a point;

4) N51°46'01"E, a distance of 26.20 feet to a point at its intersection with the southerly boundary of Eldredge Street; thence N85°04'01"E along said Eldredge Street, a distance of 7.80 feet to a point; thence S04°26'43"E through said County of Broome, a distance of 132.60 feet to a point at its intersection with the division line between the property now or formerly of Arise Development, LLC per L. 2059 P. 525 (TM# 160.25-2-16) on the south and said County of Broome on the north; thence along the division lines between said Arise Development and said County of Broome the following two (2) courses and distances:

1) S85°28'41"W, a distance of 57.33 feet to a point;

2) S00°26'09"E, a distance of 80.48 feet to a point, the last mentioned course also being along a party wall; thence continuing S00°26'09"E through said County of Broome, a distance of 30.00 feet to a point at its intersection with said D & H Railroad on the south and said County of Broome on the north; thence S88°48'21"W along the last mentioned division line, a distance of 204.58 feet to the POINT OF BEGINNING.

The above described parcel contains 27,989 square feet or 0.643 acre, more or less.

The above described parcel is subject to the following by Deed Recorded in the Broome County Clerk's Office:

1) Perpetual Easement Granted to the State of New York in L. 443 P. 502;

2) Easement Granted to New York State Electric & Gas Corp. in L. 2083 P. 169 on September 20, 2004.

3) Easement Granted to New York State Electric & Gas Corp. in L. 2083 P. 206 on September 20, 2004.

4) Easement Granted to New York State Electric & Gas Corp. in L. 2083 P. 209 on September 20, 2004.

5) Easement Granted to New York State Electric & Gas Corp. in L. 2094 P. 675 on December 30, 2004.

6) Access Easement A as shown on below described map.

7) Access Easement B as shown on below described map.

The above described parcel is subject to any and all easements of record and/or as found in the field.

Bearings are referred to True North at the 76°35' Meridian of West Longitude.

The above described parcel is shown on the map entitled "Boundary Survey for One North Depot LLC, One North Depot Street, City of Binghamton, Broome County, New York State" as Parcel 2 to be Conveyed, prepared by Keystone Associates Architects, Engineers and Surveyors, LLC as project number 2406.26914, sheet B-1 dated February 13, 2015.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Keystone Associates, Architect were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Broome County, New York

October 2, 2015

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (http://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means

for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil scientists classified and named the soils in the survey area, they compared the

individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Broome County, New York
Survey Area Data: Version 12, Sep 13, 2014

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 10, 2011—Oct 8, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Broome County, New York

Cv—Cut and fill lands, gravelly materials

Map Unit Setting

National map unit symbol: 9pxd
Mean annual precipitation: 36 to 45 inches
Mean annual air temperature: 43 to 48 degrees F
Frost-free period: 110 to 180 days
Farmland classification: Not prime farmland

Map Unit Composition

Udorthents, gravelly, and similar soils: 80 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Udorthents, Gravelly

Typical profile

H1 - 0 to 4 inches: very gravelly silt loam
H2 - 4 to 70 inches: very gravelly sandy loam

Properties and qualities

Slope: 0 to 8 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to very high (0.20 to 19.98 in/hr)
Depth to water table: About 36 to 72 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 15 percent
Available water storage in profile: Low (about 4.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7s
Hydrologic Soil Group: A

Minor Components

Howard

Percent of map unit: 5 percent

Udifluvents

Percent of map unit: 5 percent

Udorthents, loamy

Percent of map unit: 5 percent

Chenango

Percent of map unit: 5 percent

Re: **Phase II Environmental Site Assessment**; 1 North Depot Street, City of Binghamton, Broome County, New York 13901
Tax ID #160.25-2-20.2 (Approx. 0.63 acres with 51,000 sq. ft. structure)
PVE File #20240228

Dear Mr. Regan:

Partridge Venture Engineering, PC, dba PVE Engineering (PVE) has completed the Phase II Environmental Site Assessment (ESA) in accordance with our approved scope of work, dated May 21, 2024, for the above referenced property (Figures 1 & 2). Below is a summary of field activities, analytical data, and conclusions/recommendations.

1.0 INTRODUCTION

PVE reviewed a Phase I ESA prepared by Keystone Associates (KA) for the subject property dated October 5, 2015. KA identified no Recognized Environmental Conditions (RECs) in their ESA; PVE does not agree with this conclusion. Historic Sanborn Fire Insurance Maps identified the following items/uses on-site: A buried gasoline tank associated with a trucking terminal, tin works/machine shop, a bluing (steel works) factory and ironworks. The review also identified the following historic uses on adjoining and nearby properties: railroad and turn table, Troy Chemical Company, and a cigar factory.

PVE understands the client is interested in pursuing the New York State Department of Environmental Conservation (NYSEC) Brownfield Cleanup Program (BCP) for the remediation and redevelopment of this property. As such, PVE proposed a Phase II ESA to assess impacts to the subject property, if any. Below is a summary of field activities, analytical data, and recommendations.

2.0 FIELD ACTIVITIES

2.1 Geophysical Survey and Private Utility Mark Out

A geophysical services contractor was retained to screen the proposed soil boring locations for private utilities and/or anomalies that could obstruct drilling/sampling activities. Geophysical field activities were completed on June 4, 2024; sample locations were adjusted accordingly. No anomalies indicative of buried tanks were observed during this screening.

2.2 Soil Borings and Sample Collection

On June 4 and June 5, 2024, PVE completed a total of ten (10) soil borings throughout the subject property (Figure 3). The soil borings were installed via direct push drilling method using a track-mounted Geoprobe™ 54DT drill rig equipped with 4-foot long, 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners. Soil borings were advanced to a maximum depth of 24.0-feet below ground surface (bgs).

The project scientist kept a detailed log of each core including lithology, grain size, stratigraphic changes, color, moisture content and the occurrence of refusal. Soil samples were screened in the field for the presence of Volatile Organic Compounds (VOCs) using a calibrated photoionization detector (PID) and headspace techniques. PVE personnel collected one (1) soil sample from each of the soil borings for a total of ten (10) soil samples; soil samples collected from soil boring locations SB-1, SB-3 and SB-7 were placed on hold. Soil samples were submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory for analysis of the following:

- Target Compound List (TCL) VOCs via United States Environmental Protection Agency (USEPA) Method 8260;
- Commissioner Policy-51 (CP-51) Semi-Volatile Organic Compounds (SVOCs) via USEPA Method 8270;
- RCRA Metals via USEPA Method 6010/7473; &
- Polychlorinated Biphenyls (PCBs) via USEPA Method 8082 (2 samples).

Soil borings are summarized below:

Boring SB-1 was advanced to 16.3 feet bgs; where refusal was encountered. Soil consisted of brown/dark brown fine, medium sand, some silt, some gravel, some cobble. Groundwater was not encountered at the time of drilling (ATD). No elevated PID readings were observed. One (1) soil sample was collected from 14.0-16.0 feet bgs for laboratory analysis.

Boring SB-2 was advanced to 13.8 feet bgs; where refusal was encountered. Soil consisted of brown/dark brown fine, medium sand, some silt, with gravel, some cobble. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-2.0 feet bgs for laboratory analysis.

Boring SB-3 was advanced to 19.8 feet bgs; where refusal was encountered. Soil consisted of brown/light brown fine, medium sand, some silt, some gravel, little cobble. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 6.0-8.0 feet bgs for laboratory analysis.

Boring SB-4 was advanced via to 18.2 feet bgs; where refusal was encountered. Soil consisted of dark brown and light gray fine, medium and coarse sand, some silt, some gravel, and fill. Fill material consisted of slag. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 2.0-3.5 feet bgs for laboratory analysis.

Boring SB-5 was advanced to 13.6 feet bgs; where refusal was encountered. Soil consisted of dark brown and light gray fine, medium and coarse sand, some silt, some gravel, and fill. Fill material consisted of ash, slag and little brick fragments. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 2.0-3.0 feet bgs for laboratory analysis.

Boring SB-6 was advanced to 16.8 feet bgs; where refusal was encountered. Soil consisted of dark brown and light gray fine, medium and coarse sand, some silt, some gravel, and fill. Fill material consisted of glass, tile and coal fragments. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-3.0 feet bgs for laboratory analysis.

Boring SB-7 was advanced to 20.0 feet bgs; where refusal was encountered. Soil consisted of brown fine and medium sand, some silt, some gravel, with cobble. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 7.0-9.0 feet bgs for laboratory analysis.

Boring SB-8 was advanced to 24.0 feet bgs. Soil consisted of dark brown/black fine sand, with silt, and fill. Fill material consisted of little brick fragments and crushed coal. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 2.5-3.5 feet bgs for laboratory analysis.

Boring SB-9 was advanced to 17.2 feet bgs; where refusal was encountered. Soil consisted of dark brown/black fine sand, with silt, and fill. Fill material consisted of little brick fragments and crushed coal. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 2.0-2.5 feet bgs for laboratory analysis.

Boring SB-10 was advanced to 13.8 feet bgs; where refusal was encountered. Soil consisted of brown/dark brown fine and medium sand, some silt, with gravel and cobble, and fill. Fill material consisted of little brick fragments. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-3.0 feet bgs for laboratory analysis.

Shallow refusal was encountered in three (3) soil borings from depths ranging from 13.6-13.8 feet. Groundwater was not encountered in any of the ten (10) soil borings. Fill was observed in five (5) soil borings at depths ranging from 0.5 to 3.5 feet bgs.

Soil borings were backfilled with native cuttings and clean sand (as necessary). Borings through asphalt were repaired with cold patch.

2.3 Vapor Sampling

On June 4, 2024, a total of four (4) soil vapor samples were collected from exterior locations surrounding the on-site structure. On June 5, 2024, a total of two (2) sub-slab soil vapor samples were collected in the basement of the on-site structure. Exterior vapor probes were installed via a track-mounted Geoprobe unit to a depth of 5-feet below grade surface. Probed were constructed of a stainless-steel mesh vapor probe installed at the bottom of the borehole and connected to polyethylene tubing extending to the ground surface; annular space surrounding the mesh interval was backfilled with clean filter sand while the remaining annular space was backfilled with hydrated bentonite to ground surface to create a seal. PVE installed interior temporary vapor probes using a hammer drill with 5/8-inch drill bit. Interior probes were sealed with non-VOC emitting clay. All vapor probes were purged of one to three volumes at a rate not to exceed 0.2L/min. A helium tracer test was conducted at each location to verify integrity, and demonstrate ambient air was not being drawn into the samples being collected.

Each sample was collected in a certified clean Summa canister with a regulator set to collect a sample over a 2-hour sampling period. Samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of VOCs via USEPA Method TO-15 following standard chain-of-custody procedures.

3.0 RESULTS

Soil and soil vapor sample results are summarized in Tables 1-4, and 5, respectively. Analytical reports are attached.

3.1 Soil Samples

Analytical results from soil samples are summarized in Table 1-4 and compared to Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs) as defined in 6NYCRR Part 375. Analytical reports are attached. See Figure 3 for soil sample locations.

3.1.1 VOCs

One (1) VOC was detected in one (1) of the seven (7) soil samples collected and analyzed. No VOCs were detected at concentrations exceeding UUSCOs or RRSCOS.

3.1.2 SVOCs

SVOCs were detected in all seven (7) soil samples collected and analyzed. SVOCs were detected in two (2) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs. Exceedances are defined below:

- SB-2 (0.5-2-feet)
  - **Benzo(A)Anthracene (1.4 mg/kg)**
  - **Benzo(A)Pyrene (1.1 mg/kg)**
  - **Benzo(B)Fluoranthene (1.1 mg/kg)**
  - Benzo(K)Fluoranthene (1.1 mg/kg)
  - Chrysene (1.5 mg/kg)
  - **Indeno(1,2,3-C,D)Pyrene (0.7 mg/kg)**

- SB-4 (2-3.5-feet)
  - **Dibenzo(A,H)Anthracene (0.42 mg/kg)**

Bold font indicates RRSCO exceedance.

3.1.3 Metals

Metals were detected in all seven (7) soil samples collected and analyzed. Metals were detected in five (5) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs. Exceedances are defined below:

- SB-4 (2-3.5-feet)
  - **Lead (986 mg/kg)**
  - **Mercury (0.874 mg/kg)**

- SB-5 (2-3-feet)
  - Lead (344 mg/kg)
  - **Mercury (0.831 mg/kg)**

- SB-6 (0.5-3-feet)
  - Lead (202 mg/kg)
  - **Mercury (1.27 mg/kg)**

- SB-8 (2.5-3.5-feet)
  - Lead (63.5 mg/kg)
  - Mercury (0.259 mg/kg)

- SB-9 (2-2.5-feet)
  - Mercury (0.223 mg/kg)

Bold font indicates RRSCO exceedance.

3.1.4 PCBs

PCBs were not detected in any of the two (2) soil samples collected and analyzed.

3.2 Vapor Samples

Analytical results from soil vapor samples are summarized in Table 5 and compared to NYSDOH Decision Matrices as defined in *Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006 and subsequent amendments)*. Analytical reports are attached. See Figure 3 for soil vapor sampling locations.

According to the NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006)* and subsequent amendments, twenty-one (21) compounds are regulated by NYSDOH: 1,1-Dichloroethene (1,1-DCE); Cis-1,2-Dichloroethene (Cis-1,2-DCE); Vinyl Chloride (VC); 1,1,1 – Trichloroethane (1,1,1-TCA); Carbon Tetrachloride, Methylene Chloride; Tetrachloroethylene (PCE); Trichloroethylene (TCE); Benzene; Ethylbenzene; Naphthalene; Cyclohexane; Isooctane (2,2,4-Trimethylpentane); 1,2,4-Trimethlybenzene; 1,3,5-Trimethylbenzene; o-Xylene; m-Xylene; p-Xylene; Heptane; Hexane; and Toluene. The following NYSDOH-regulated compounds were detected in the vapor samples collected:

- SV-1
  - 1,2,4-Trimethylbenzene (24 µg/m^3)
  - 1,3,5-Trimethylbenzene (5.6 µg/m^3)
  - 2,2,4-Trimethylpentane (2.26 µg/m^3)
  - Benzene (3.9 µg/m^3)
  - Cyclohexane (4.4 µg/m^3)
  - Ethylbenzene (41 µg/m^3)
  - m,p-Xylene (45 µg/m^3)
  - N-Heptane (6.4 µg/m^3)
  - N-Hexane (10 µg/m^3)
  - O-Xylene (1,2-Dimethylbenzene) (18 µg/m^3)
  - PCE (27 µg/m^3)
  - Toluene (32 µg/m^3)

- SV-2
  - 1,2,4-Trimethylbenzene (35 µg/m^3)
  - 1,3,5-Trimethylbenzene (7.8 µg/m^3)
  - 2,2,4-Trimethylpentane (3.71 µg/m^3)
  - Benzene (8.1 µg/m^3)
  - Carbon Tetrachloride (7.4 µg/m^3)
  - Cyclohexane (15 µg/m^3)
  - Ethylbenzene (54 µg/m^3)
  - m,p-Xylene (62 µg/m^3)
  - N-Heptane (28 µg/m^3)
  - N-Hexane (46 µg/m^3)
  - O-Xylene (25 µg/m^3)
  - PCE (17 µg/m^3)
  - Toluene (47 µg/m^3)

  - TCE (0.51 µg/m^3)
  - Vinyl Chloride (0.49 µg/m^3)

- SV-3
  - 1,2,4-Trimethylbenzene (36 µg/m^3)
  - 1,3,5-Trimethylbenzene (8.7 µg/m^3)
  - 2,2,4-Trimethylpentane (4.52 µg/m^3)
  - Benzene (17 µg/m^3)
  - Cis-1,2-Dichloroethylene (4.5 µg/m^3)
  - Cyclohexane (8.9 µg/m^3)
  - Ethylbenzene (66 µg/m^3)
  - m,p-Xylene (73 µg/m^3)
  - N-Heptane (28 µg/m^3)
  - N-Hexane (39 µg/m^3)
  - O-Xylene (27 µg/m^3)
  - PCE (4,900 µg/m^3)
  - Toluene (58 µg/m^3)
  - TCE (100 µg/m^3)

- SV-4
  - 1,2,4-Trimethylbenzene (36 µg/m^3)
  - 1,3,5-Trimethylbenzene (8.2 µg/m^3)
  - 2,2,4-Trimethylpentane (4.95 µg/m^3)
  - Benzene (390 µg/m^3)
  - Cis-1,2-Dichloroethylene (2.4 µg/m^3)
  - Cyclohexane (9.9 µg/m^3)
  - Ethylbenzene (66 µg/m^3)
  - m,p-Xylene (72 µg/m^3)
  - N-Heptane (22 µg/m^3)
  - N-Hexane (35 µg/m^3)
  - O-Xylene (28 µg/m^3)
  - PCE (1,800 µg/m^3)
  - Toluene (110 µg/m^3)

- SSV-1
  - TCA (7.8 µg/m^3)
  - 1,2,4-Trimethylbenzene (7.7 µg/m^3)
  - cis-1,2-Dichloroethylene (83 µg/m^3)
  - Ethylbenzene (9.3 µg/m^3)
  - N-Heptane (7 µg/m^3)
  - N-Hexane (8.5 µg/m^3)
  - PCE (7,400 µg/m^3)
  - Toluene (8 µg/m^3)
  - TCE (220 µg/m^3)

- SSV-2
  - 1,2,4-Trimethylbenzene (9 µg/m^3)

- 2,2,4-Trimethylpentane (1.38 µg/m^3)
- Benzene (3 µg/m^3)
- Cis-1,2-Dichloroethylene (1.6 µg/m^3)
- Cyclohexane (2.6 µg/m^3)
- Ethylbenzene (11 µg/m^3)
- m,p-Xylene (14 µg/m^3)
- N-Heptane (5.8 µg/m^3)
- N-Hexane (6.7 µg/m^3)
- O-Xylene (6.2 µg/m^3)
- PCE (890 µg/m^3)
- Toluene (10 µg/m^3)
- TCE (33 µg/m^3)

Chlorinated VOCs and petroleum related VOCs were detected in soil vapor samples at concentrations potentially warranting mitigation. Based on the concentration of the NYSDOH regulated compound detected in the soil vapor, the following actions may be required:

- SV-1
  - **No further action**

- SV-2
  - **Monitor**

- SV-3
  - **Mitigate**

- SV-4
  - **Mitigate**

- SSV-1
  - **Mitigate**

- SSV-2
  - **Monitor**

A co-located ambient indoor air sample would be required to confirm the NYSDOH recommended action at each location. However, given the deteriorated condition of the structure and potential for influence/dilution from outdoor ambient air, no indoor ambient air samples were collected.

4.0 DISCUSSION and CONCLUSIONS

4.1 Soil

1. Ten (10) soil borings were installed throughout the subject property. One (1) soil sample was collected from each of the ten (10) soil borings for laboratory analysis; soil boring locations SB-1, SB-3 and SB-7 were placed on hold pending client authorization.
2. VOCs were detected in one (1) of the seven (7) soil samples at concentrations below UUSCOs.

3. SVOCs were detected in two (2) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs.
4. Metals were detected in five (5) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs.
5. PCBs were not detected in any of the two (2) soil samples collected and analyzed.

4.2 Vapor

1. A total of four (4) soil vapor samples were collected throughout the exterior of the subject property; a total of two (2) sub-slab soil vapor samples were collected in the basement of the structure on the subject property.
2. Chlorinated VOCs and petroleum related VOCs were detected in soil vapor and sub-slab vapor samples at concentrations warranting additional actions according to NYSDOH Guidance.

5.0 RECOMMENDATIONS

1. SVOCs and metals were detected in soil samples at concentrations indicative of impacts to soils from past site operations (use as a trucking terminal, tin works/machine shop/a blueing factory and ironworks). Historic fill is present throughout the subject property.
    a. Four (4) of the seven (7) samples analyzed at the laboratory contained contaminants at concentrations exceeding the intended use criteria (RRSCOs). These concentrations are consistent with historical fill. The presence of this fill and contaminants exceeding the intended use criteria elsewhere on site is likely.
    b. If soil is excavated from the site, collection and analysis of additional soil samples would be necessary to characterize soil for purposes of waste characterization, proper handling and selecting an appropriate disposal facility.
    c. Unconsolidated materials (below surface cover) throughout the subject property contained urban fill (wood and brick fragments). Should the client elect not to proceed with BCP, and if requested, PVE can prepare a Soil and Materials Management Plan (SMMP) adhering to 6 NYCRR Part 360 which will outline processes for the excavation and handling of this urban fill during any future site earthwork activities.
2. Based on the concentrations of NYSDOH regulated compounds detected in soil vapor, a vapor encroachment condition (VEC) may exist at the site. The presence of sub-slab vapors indicate that localized VOC sources are present, perhaps in soil and/or groundwater beneath the structure where soil borings were not possible due to limited access. Redevelopment of the site should include the design and installation of a sub-slab depressurization system (SSDS) within the enclosed portions of structures to prevent exposure to building occupants.
3. This investigation is limited in scope, impacts to soil, groundwater and soil vapor from past site operations in other locations of the property cannot be ruled out.

If you have any questions, please do not hesitate to contact us.

Sincerely,

PVE Engineering

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs);
Yellow Shading designates those compounds detected at concentrations exceeding UUSCOs
Orange shading designates those compounds detected at concentration exceeding RRSCOs
J = Detected below the Reporting Limit but greater than or equal to the Method Detection Limit
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Notes:
Standards are for respective NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York - 2017 & 2024 Revised Decision Matrices A, B, C, D, E, & F;
Green shading indicates "No Further Action";
Yellow shading indicates "Identify Source(s), Resample or Mitigate/or Monitor";
Orange shading indicates "Mitigate";
NE = No standard established; &
ND and U = Not detected at Method Detection Limit for sample.

SOIL BORING LOGS

PVE Engineering
48 Springside Avenue
Poughkeepsie, NY 12603
Telephone: 845.454.2544

BORING NUMBER SB-1

CLIENT Regan Development Corporation
PROJECT NAME 1 North Depot Street, Binghamton, NY
PROJECT NUMBER 20240228
PROJECT LOCATION 1 North Depot Street, Binghamton, NY
DATE STARTED 6/4/24 **COMPLETED** 6/4/24
GROUND ELEVATION _____ **HOLE SIZE** 2 1/4 inches
DRILLING CONTRACTOR PVE Engineering
GROUND WATER LEVELS:
DRILLING METHOD Direct Push via GeoProbe 54DT
AT TIME OF DRILLING ---
LOGGED BY Anthony Spadavecchia **CHECKED BY** SMA
AT END OF DRILLING ---
NOTES
AFTER DRILLING ---

DEPTH (ft)	SAMPLE TYPE NUMBER	U.S.C.S.	GRAPHIC LOG	MATERIAL DESCRIPTION	ENVIRONMENTAL DATA

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 06, 2024 and listed below. The project was identified as your project: **20240228**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24F0413

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 07, 2024 and listed below. The project was identified as your project: **20240228**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24F0432

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
QR-01	Analyses are not controlled on RPD values from sample concentrations less than 10 times the reporting limit. QC batch accepted based on LCS and/or LCSD QC results.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Re: **Preliminary Remedial Investigation Report**; 1 North Depot Street, City of Binghamton, Broome County, New York 13901
Tax IDs #160.25-2-20.2 (Approx. 0.63 acres with 51,000 sq. ft. structure)
PVEDI File #20240228

Dear Mr. Regan:

PVEDI Engineering, Architecture and Geology, D.P.C. ("PVEDI"), has completed the Preliminary Remedial Investigation in accordance with the approved scope of work, dated May 3, 2025, for the above referenced property (Figures 1 & 2). Below is a summary of field activities, analytical data and recommendations.

1.0 INTRODUCTION

In May 2024, PVEDI completed a Phase II Environmental Site Assessment (ESA) in accordance with our approved scope of work, for the above referenced property. Based on results from this investigation, a Brownfield Cleanup Program (BCP) application was submitted to the NYSDEC, and the site may be accepted into the Program. However, NYSDEC has indicated that the site may not be eligible for Tangible Property Tax Credits (TPTCs), unless the site is demonstrated to be a source of contamination, a required component of obtaining TPTCs.

Below is a summary of our activities during the Preliminary Remedial Investigation, designed to evaluate the subject property as a source of contaminants.

2.0 FIELD ACTIVITIES

2.1 Geophysical Survey and Private Utility Mark Out

A geophysical services contractor was retained to conduct a mark-out to screen the proposed boring locations for utilities or anomalies which may obstruct drilling activities. Field activities were completed on June 18, 2025. Sample locations were adjusted accordingly.

2.2 Soil Borings and Sample Collection

On June 18, and 19, 2025, PVEDI completed a total of thirteen (13) soil borings throughout the subject property (Figure 3). Borings were installed via direct push methods using a track-mounted Geoprobe™ 6712DT rig equipped with 5-foot long, 2 ¼-inch diameter stainless steel core barrels for exterior sample locations and via hand tools for interior locations. Geoprobe™ core barrels were fitted with PVC liners. Borings were advanced to a maximum depth of 40-feet below ground surface (bgs). Groundwater was not encountered in the northern-most borings (SBs 11, 12, & 13) due to shallow refusal ranging from 20.0 feet to 26.5 feet.

The project geologist kept a detailed log of each core including lithology, grain size, stratigraphic changes, color, moisture content and the occurrence of refusal. Soil samples were screened in the field for the presence of volatile organic compounds (VOCs) using a photoionization detector (PID) and headspace techniques. PVEDI personnel collected one (1) soil sample from nine (9) of the thirteen (13) soil borings for a total of nine (9) soil samples. Soil samples were submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory for analysis of the following:

- Target Compound List (TCL) VOCs via United States Environmental Protection Agency (USEPA) Method 8260;
- TCL Semi-Volatile Organic Compounds (SVOCs) via USEPA Method 8270;
- Target Analyte List (TAL) Metals via USEPA Method 6010 & 7473; &
- Polyfluoroalkyl Substances (PFAS) by USEPA Method 1633 (2 samples).

Soil borings are summarized below:

Boring SB-11 was advanced to 26.5 feet bgs via Geoprobe™ 6712DT, where refusal was encountered. Soil consisted of brown fine/medium sand, silt, gravel, and cobble. Groundwater was not encountered at time of drilling (ATD). No elevated PID readings were observed. No samples were collected for laboratory analysis.

Boring SB-12 was advanced to 20.0 feet bgs via Geoprobe™ 6712DT, where refusal was encountered. Soil consisted of brown fine/medium sand, silt, gravel, cobble, and fill. Fill material consisted of coal and brick fragments. Groundwater was not encountered ATD. No elevated PID readings were observed. No samples were collected for laboratory analysis.

Boring SB-13 only hollow stem auger at this location, no lithology was documented.

Boring SB-14 was advanced to 40.0 feet bgs via Geoprobe™ 6712DT, where refusal was encountered. Soil consisted of dark brown fine/medium sand, silt, gravel, fill, and cobble. Fill material consisted of coal fragments. Groundwater was encountered at 40.0 feet ATD. An elevated PID reading of 10.1 parts per million (ppm) was observed at the 38.0-40.0 feet interval. One (1) sample was collected from 38.0-40.0 feet for laboratory analysis. This boring was converted into MW-1.

Boring SB-15 was advanced to 1.5 feet bgs via hand tools, where refusal was encountered. Soil consisted of brown fine/medium sand, silt, gravel, and cobbles. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-1.5 feet bgs for laboratory analysis.

Boring SB-16 was advanced to 1.0 feet bgs via hand tools, where refusal was encountered. Soil consisted of brown fine/medium sand, silt, gravel, and cobbles. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-1.0 feet bgs for laboratory analysis.

Boring SB-17 was advanced to 1.5 feet bgs via hand tools, where refusal was encountered. Soil consisted of dark brown fine/medium sand, silt, gravel, cobbles, and fill. Fill material consisted of white ash. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-1.5 feet bgs for laboratory analysis.

Boring SB-18 was advanced to 1.0 feet bgs via hand tools, where refusal was encountered. Soil consisted of dark brown fine/medium sand, silt, gravel, cobbles, and fill. Fill material consisted of brick fragments.

Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-1.0 feet bgs for laboratory analysis.

Boring SB-19 was advanced to 1.5 feet bgs via hand tools, where refusal was encountered. Soil consisted of dark brown fine/medium sand, silt, gravel, cobbles, and fill. Fill material consisted of brick fragments. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-1.5 feet bgs for laboratory analysis.

Boring SB-20 was advanced to 1.1 feet bgs via hand tools, where refusal was encountered. Soil consisted of dark brown fine/medium sand, silt, gravel, cobbles, and fill. Fill material consisted of brick fragments. Groundwater was not encountered ATD. No elevated PID readings were observed. One (1) soil sample was collected from 0.5-1.0 feet bgs for laboratory analysis.

Boring SB-21 was advanced to 40.0 feet bgs via Geoprobe™ 6712DT, where refusal was encountered. Soil consisted of brown/dark brown fine/medium sand, silt, gravel, cobble, and fill. Fill material consisted of brick fragments. Groundwater was encountered at 35.0 feet ATD. An elevated PID reading of 0.1 ppm was observed at the 35.0-37.0 feet interval. One (1) sample was collected from 35.0-37.0 feet for laboratory analysis. This boring was converted into MW-2.

Boring SB-22 was advanced to 40.0 feet bgs via Geoprobe™ 6712DT, where refusal was encountered. Soil consisted of brown/dark brown fine/medium sand, silt, gravel, cobble, and fill. Fill material consisted of brick fragments. Groundwater was encountered at 35.0 feet ATD. No elevated PID readings were observed. One (1) sample was collected from 35.0-37.0 feet for laboratory analysis. This boring was converted into MW-3.

Boring SB-23 was advanced to 24.0 feet bgs via Geoprobe™ 6712DT, where refusal was encountered. Soil consisted of brown fine/medium sand, silt, clay, gravel, and cobble. Groundwater was encountered at 24.0 feet ATD. No elevated PID readings were observed. No samples were collected for laboratory analysis. This boring was converted into MW-4.

2.3 Monitoring Well Installation and Sampling

Monitoring wells were constructed of 2-inch diameter Schedule 40 PVC slotted (20-slot) with a flush-to-grade curb box. Annular space surrounding the screened interval of the well was backfilled with adequate filter sand and bentonite. Monitoring well locations, boring depths, and groundwater depths are summarized in the table below; locations are depicted in Figure 3. The monitoring wells were surveyed by Keystone, a New York State Professional Licensed Surveyor (PLS) on July 1, 2025. A groundwater contour map is provided as Figure 4; groundwater has been determined to be flowing to the west southwest. Monitoring well construction diagrams and purge logs are attached.

ID/Location	Date of Drilling	Bottom of Boring (below grade)	Occurrence of Groundwater (below grade)
MW-1 / SB-14	06/19/2025	45-feet	Static at 34.25-feet
MW-2 / SB-21	06/23/2025	45-feet	Static at 34.11-feet
MW-3 / SB-22	06/23/2025	45-feet	Static at 33.90-feet
MW-4 / SB-23	06/24/2025	45-feet	Static at 34.64-feet

On July 25, 2025, groundwater samples were collected from the four (4) monitoring wells using a bladder pump. Groundwater was encountered at depth ranging from 24.0-40.0 feet bgs. Groundwater samples were dispensed into laboratory provided containers and delivered to a NYSDOH ELAP certified laboratory for analysis of:

- TCL VOCs via USEPA Method 8270; &
- TAL Metals via USEPA Method 6010 & 7473.

3.0 RESULTS

Soil sample results are summarized in Tables 1-4. Analytical reports are attached.

Groundwater sample results are summarized in Table 5-6. Analytical reports are attached.

3.1 Soil Samples

Analytical results from soil samples are summarized in Table 1-4 and compared to Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) as defined in 6NYCRR Part 375. See Figure 3 for soil boring sampling locations.

3.1.1 VOCs

One (1) or more VOCs were detected in nine (9) soil samples collected and analyzed for VOCs. Of note, tetrachloroethylene (PCE) was detected at low concentrations in each of the nine (9) samples collected. However, VOCs were not detected at concentrations exceeding SCOs.

3.1.2 SVOCs

One (1) or more SVOCs were detected in two (2) of the nine (9) soil samples collected and analyzed for SVOCs. SVOCs were not detected at concentrations exceeding SCOs.

3.1.3 Metals

Metals were detected in all nine (9) soil samples collected and analyzed for metals. One (1) or more metals were detected at concentrations exceeding UUSCOs, RRSCOs and/or PGWSCOs in seven (7) of the nine (9) soil samples. Exceedances are listed below.

- SB-15 (0.5-1.5-feet)
  - Copper (53.4 mg/kg)
- SB-16 (0.5-1.0-feet)
  - Copper (82.2 mg/kg)
- SB-17 (0.5-1.5-feet)
  - Zinc (122 mg/kg)
- SB-18 (0.5-1.0-feet)
  - Copper (71.4 mg/kg)
  - Lead (215 mg/kg)
  - Zinc (433 mg/kg)
  - Mercury (0.723 mg/kg)

- SB-20 (0.5-1.0-feet)
  - Copper (60.6 mg/kg)

  - Lead (276 mg/kg)
  - Zinc (764 mg/kg)
  - ***Mercury (1.91 mg/kg)***
- SB-21 (35-37-feet)
  - Nickel (35.3 mg/kg)
- SB-22 (35-37-feet)
  - Nickel (31.5 mg/kg)

Bold indicates RRSCO exceedance.
Italic indicated PGWSCO exceedance.

3.1.4 PFAS

Multiple PFAS compounds were detected in both soil samples collected and analyzed for PFAS. Neither Perfluorooctanesulfonic acid (PFOS) nor Perfluorooctanoic acid (PFOA) were detected in either soil sample. As SCOs are only defined for PFOS and PFOA, no PFAS were detected at concentrations exceeding SCOs.

3.2 Groundwater Samples

Groundwater sample results are summarized in Table 5-6 and compared to Class GA Groundwater Quality Standards (GQS) as defined in 6NYCRR Part 700-705. See Figure 3 for groundwater sampling locations.

3.2.1 VOCs

VOCs were detected in all four (4) of the groundwater samples collected and analyzed for VOCs. One (1) VOC was detected at concentrations exceeding Class GA GQS. Exceedances are listed below.

- MW-1
  - PCE (66.6 ug/L)
- MW-2
  - PCE (79.9 ug/L)
- MW-3
  - PCE (31.2 ug/L)
- MW-4
  - PCE (136 ug/L)

3.2.2 Metals

Metals were detected in the four (4) groundwater samples collected and analyzed for metals. Multiple Metals were detected at concentrations exceeding Class GA GQS. Exceedances are listed below.

- MW-1
  - Iron (58.1 mg/L)
  - Lead (0.0897 mg/L)
  - Magnesium (42.6 mg/L)
  - Manganese (2.88 mg/L)
  - Sodium (157 mg/L)
- MW-2
  - Iron (14.1 mg/L)

  - Manganese (0.620 mg/L)
  - Sodium (31.1 mg/L)
- MW-3
  - Barium (2.01 mg/L)
  - Total Chromium (0.0678 mg/L)
  - Copper (0.216 mg/L)
  - Iron (150 mg/L)
  - Lead (0.157 mg/L)
  - Magnesium (67.4 mg/L)
  - Manganese (8.89 mg/L)
  - Nickel (0.145 mg/L)
  - Sodium (55.1 mg/L)
- MW-4
  - Iron (51.7 mg/L)
  - Lead (0.0842 mg/L)
  - Manganese (4.12 mg/L)
  - Sodium (198 mg/L)
  - Thallium (0.00192 mg/L)

4.0 DISCUSSION and CONCLUSIONS

4.1 Soil

1. Thirteen (13) soil borings were completed throughout the subject property. One (1) soil sample was collected from nine (9) of the thirteen (13) soil borings for laboratory analysis.
2. Low concentrations of VOCs, SVOCs, and PFAS were detected in soil samples at concentrations below SCOs.
3. Metals were detected in seven (7) soil samples at concentrations exceeding UUSCOs, RRSCOs and/or PGWSCOs.

4.2 Groundwater

1. Four (4) monitoring wells were installed on the subject property. One (1) groundwater sample was collected from each of the four (4) monitoring wells for laboratory analysis.
2. One (1) VOC (PCE) was detected in all four (4) groundwater samples at concentrations exceeding Class GA GQS as defined in 6NYCRR Part 700-705.
3. Multiple metals were detected in all four (4) groundwater samples at concentrations exceeding Class GA GQS as defined in 6NYCRR Part 700-705.

5.0 RECOMMENDATIONS

1. VOCs and metals were detected in soil and groundwater samples at concentrations indicating past site operations have adversely impacted the subject property.
2. PCE was detected in groundwater at concentrations increasing from east to west under the on-site structure. The upgradient concentrations of PCE range from 31.2 ug/L to 79.9 ug/L while the downgradient concentrations at the properties edge range from 66.6 ug/L to 136 ug/L. Based on surveyed well elevations and estimated direction of groundwater flow, these data suggest a source of groundwater contamination underlying the structure/subject property. Further, PCE was detected at low concentrations in all nine (9) soil samples collected.

3. Multiple metals were detected in groundwater at concentrations exceeding Class GA GQS. Lead was detected in soil samples (data provided in our Phase II ESA) at concentrations exceeding PGWSCOs and groundwater at concentrations exceeding Class GA indicating an on-site source of lead to be contaminating groundwater.
4. We feel that this supplemental data clearly defines source contamination on-site thus deeming the site eligible for TPTCs

If you have any questions, please do not hesitate to contact us.

Sincerely,

PVEDI

Conor B. Tarbell, QEP
Regional Director of Environmental Services

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs);
Yellow Shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentration exceeding RRSCOs;
Blue Shading designates those compounds detected at concentration exceeding PGWSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method Detection Limit;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Table 2 - SVOCs in Soil Samples
Compared to UUSCOs, RRSCOs, and PGW per 6 NYCRR Part 375

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs);
Yellow Shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentration exceeding RRSCOs;
Blue Shading designates those compounds detected at concentration exceeding PGWSCOs;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs);
Yellow Shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentration exceeding RRSCOs;
Blue Shading designates those compounds detected at concentration exceeding PGWSCOs;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Notes:
Standards are for Class GA groundwater according to 6NYCRR Part 700-705;
Red Shading designates those compounds detected at concentrations exceeding Class GA
J = Detected below the Reporting Limit but greater than or equal to the Method Detection Limit
B = Analyte is found in the associated analysis batch blank;
NE = No standard established; &
ND and U = Not detected at MDL for sample.

Groundwater Monitoring - MW-2 Purge Log
1 North Depot Street, Binghamton, Broome County, NY
PVEDI #20240228-0006

Project Information:

Operator Name	Anthony Spadavecchia
Company Name	PVEDI
Project Name	1 North Depot Street
Site Name	N/A
Date	6/25/2025

Pump Information:

Pump Model/Type	Bladder Pump
Tubing Type	Polyethylene
Tubing Diameter	0.19 [in]
Tubing Length	55 [ft]
Pump placement from TOC	45 [ft]

Well Information:

Well ID	MW-2
Well diameter	2 [in]
Well total depth	45 [ft]
Depth to top of screen	35 [ft]
Screen length	10 [ft]
Depth to Water	34.11 [ft]

Low-Flow Sampling Stabilization Summary

	Time	Temp [C]	pH [pH]	Sp.Cond [mS/cm]	Turb [NTU]	DO [mg/L]	ORP [mV]
Stabilization Settings							
Last 5 Readings	11:00:33	15.2	7.08	2.404	37.91	8.06	178.6
	11:03:33	15.2	7.07	2.402	43.01	8.07	180.4
	11:06:33	15.3	7.06	2.394	31.9	8.07	182.5

Poughkeepsie NY, 12603
Attention: Anthony Spadavecchia

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 20, 2025 and listed below. The project was identified as your project: **20240228-0006**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25F1350

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 20, 2025 and listed below. The project was identified as your project: **20240228-0006**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25F1357

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 28, 2025 and listed below. The project was identified as your project: **20240228-0006**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25G1770

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Re: 1 North Depot, Site ID No. C704064
City of Binghamton, Broome County
Remedial Investigation Work Plan

Dear Gabe Regan:

The New York State Department of Environmental Conservation (DEC) and the New York State Department of Health (DOH) have reviewed the revised Remedial Investigation Work Plan (the work plan) for the 1 North Depot site, dated January 29, 2026, which was prepared by PVEDI Engineering, Architecture and Geology, D.P.C. (PVEDI) on behalf of Residences at North Depot LLC (Volunteer). The work plan is hereby approved.

The DEC requires notification at least seven days in advance of field work.

As a reminder, PVEDI must be able to develop and submit a report which complies with Part 375, DER-10, and the approved work plan. PVEDI must conduct/complete the necessary inspections and other work to ensure the investigation is implemented correctly and completely; and generate or obtain and maintain the necessary documentation throughout investigation to support the development of the report.

Please send the approved work plan, along with the modification letters, to the document repository, and instruct the repository to replace the draft work plan with the approved plan.

The Volunteer is responsible for obtaining any other permits and approvals that may be required, and must comply with all applicable federal and state laws, rules, and regulations, as well as local ordinances, including but not limited to, zoning ordinances, building codes, fire codes, etc.

Please ensure the work progresses according to the schedule included in the work plan.

If you have any questions, please do not hesitate to contact me at 315-426-7446 or michael.belveg@dec.ny.gov or Joshua Cook at 315-426-7524 or joshua.cook@dec.ny.gov.

Sincerely,

Michael Belveg
