Appendix J – FWRIA Part 1
Appendix K – Remedial Investigation Work Plan
Appendix L – Remedial Investigation Work Plan Approval Letter

1.0 INTRODUCTION

The 1 North Depot Street Brownfield Cleanup Program site (the "BCP Site") encompasses one (1) 0.64 acre tax parcel located at 1 North Depot (Tax Parcel ID #160.25-2-20.2) in the City of Binghamton, Broome County, New York. The BCP Site contains a 5-story vacant structure, and an asphalt parking lot zoned as "Service Commercial".

The applicant will renovate the vacant 5-story former industrial and commercial structure into a residential use structure with parking. All fifty (50) proposed residential units will be 100% affordable housing.

The property was accepted into the NYSDEC BCP (Site #C704064) and a Brownfield Cleanup Agreement (BCA) was fully executed on July 9, 2025.

PVEDI Engineering, Architecture and Geology, D.P.C. (PVEDI) prepared a Remedial Investigation Work Plan (RIWP) dated December 2025 (Revised January 29, 2026) which was approved by NYSDEC on March 10, 2026.

This Remedial Investigation was planned to characterize the BCP Site, assist in the design of site remediation, and support planned development in accordance with the requirements of the BCP and DER-10

Based on the historical use of the BCP Site and previously summarized results, PVEDI has developed a scope of work to further investigate surface and subsurface conditions. This Work Plan details specific tasks that will facilitate BCP Site characterization and ensure compliance with the NYSDEC BCP requirements. Specifically, when used in concert with results of previous investigations, the findings of the remedial investigation will be used to:

- Describe the amount, concentration, persistence, mobility, form (e.g., solid, liquid), and other significant characteristics of the contamination present (nature of contamination);
- Define hydrogeological factors (e.g., depth to saturated zone, hydrologic gradients [if practical], proximity to a drinking water aquifer);
- Further define the lateral and vertical extent of fill material and characterize the chemical composition of the fill;
- Delineate lateral and vertical extent of site-related contaminants;
- If applicable, define the extent to which the contaminants of concern have potential to migrate, and whether potential future migration may pose a threat to human health or the environment;
- Determine the extent to which contaminant levels pose an unacceptable risk to public health and the environment;
- Provide sufficient information to allow for the identification of potentially feasible remedial alternatives; &

- Develop Remedial Action Objectives (RAOs) for the BCP Site based on the contaminant characterization results, exposure pathways, and risk evaluation data.

Specific tasks included the following:

- Geophysical survey to identify the location of buried infrastructure, utilities, and estimate the depth-to-bedrock;
- Soil borings for collection and analysis of soil samples;
- Installation of groundwater monitoring wells in overburden for collection and analysis of groundwater samples;
- Groundwater monitoring wells will be surveyed by a New York State Professional Licensed Surveyor (PLS) in order to generate a groundwater contour map and determine direction of groundwater flow; &
- Installation of soil vapor probes for collection and analysis of soil vapor samples.

2.0 BCP SITE DESCRIPTION AND HISTORY

The BCP Site is located at 1 North Depot Street, City of Binghamton, Broome County, New York. The site is situated approximately 0.18 miles east of the Chenango River. The proposed BCP Site is bordered to the north by 95 Prospect Avenue (commercial) and 108 Prospect Avenue (residential), to the east by 10 Eldrege Street (parking lot) and 21 North Depot Street (commercial), to the south by railroad tracks and a storage yard, and to the west by 89 Prospect Avenue (commercial).

The Site is currently zoned by the City of Binghamton as "Service Commercial". The proposed project area is adjacent to commercial and residential properties. The Site is improved with one (1) 51,000 sq. ft. 5-story structure and paved parking lot. The Site is currently vacant with parking being used by adjoining businesses. The on-site structure is in very poor condition; portions of the roof and underlying floors have collapsed to basement elevation. There is local support for the cleanup of the property and the redevelopment proposed by the Volunteer.

2.1 HISTORIC USE

As early as 1887, the property operated as wholesale groceries, a cigar factory, Casper and Honah Tin Works, a machine shop and the Bengal Blueing Factory. In 1898, only the wholesale groceries and cigar factory were in operation. In 1918, the property operated as wholesale groceries, coffee roasters wholesale hardware, and Reynolds and Hawley ornamental iron works. In 1950-1952, the property operated as wholesale groceries, prints wholesale hardware and motor freight terminals with a gasoline tank. In 1970, the property operated as LJ Kingsley Wholesale Hardware (including paints), with a buried gasoline tank, wholesale meats; (it should be noted "Phelps Ave" bisected the property east to west to the former Post Office Terminal east of the property through all Sanborn Maps except 1887). Currently a 5-story abandoned/vacant former commercial structure in very poor condition.

Possible sources of contamination are from chemicals used in operations from the cigar factory, tin works, the machine shop, blueing factory, iron works, buried gasoline storage tank and fill from the Avenue that formerly bisected the property.

2.2 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

Relevant reports are summarized below in chronological order. These reports are found in Appendices E-G of the RIWP.

2.2.1 Phase I Environmental Site Assessment, Keystone Associates, October 5, 2015

Keystone Associates completed a Phase I Environmental Site Assessment (ESA) of the Site summarized in their report dated October 5, 2015, which identified no Recognized Environmental Conditions (RECs). PVEDI did not agree with these findings, or lack

thereof, and recommended additional investigation into potential impacts to the subsurface quality resulting from past uses described in Section 2.1, above.

2.2.2 Phase II Environmental Site Assessment, PVE Engineering, July 12, 2024

Partridge Venture Engineering, PC, dba PVE Engineering (PVE) (a predecessor entity to PVEDI) performed a Phase II ESA of the Site summarized in their report dated July 12, 2024. The Phase II ESA was completed in accordance with our approved scope of work, dated May 21, 2024.

Scope

On June 4, 2024, a total of ten (10) soil borings soil borings were installed via direct push drilling method using a track-mounted Geoprobe™ 54DT drill rig equipped with 4-foot long, 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners. Soil borings were advanced to a maximum depth of 24.0-feet below grade surface (bgs). Groundwater was not encountered at time of drilling (ATD). One (1) soil sample was collected from each of the soil borings for a total of ten (10) soil samples. Soil samples were submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory for analysis of some or all of the following:

- Target Compound List (TCL) Volatile Organic Compounds (VOCs) via United States Environmental Protection Agency (USEPA) Method 8260;
- Commissioner Policy-51 (CP-51) Semi-Volatile Organic Compounds (SVOCs) via USEPA Method 8270;
- Resource Conservation and Recovery Act (RCRA) Metals via USEPA Methods 6010/7473; &
- Polychlorinated Biphenyls (PCBs) via USEPA Method 8082.

On June 4, 2024, a total of four (4) soil vapor samples were collected from exterior locations surrounding the on-site structure. On June 5, 2024, a total of two (2) sub-slab soil vapor samples were collected in the basement of the on-site structure. Exterior vapor probes were installed via a track-mounted Geoprobe™ unit to a depth of 5-feet bgs. Exterior probes were constructed of a stainless-steel mesh vapor probe installed at the bottom of the borehole and connected to polyethylene tubing extending to the ground surface; annular space surrounding the mesh interval was backfilled with clean filter sand while the remaining annular space was backfilled with hydrated bentonite to ground surface to create a seal. PVE installed interior temporary vapor probes using a hammer drill with 5/8-inch drill bit. Interior probes were sealed with non-VOC emitting clay. All vapor probes were purged of one to three volumes at a rate not to exceed 0.2L/min. A helium tracer test was conducted at each location to verify integrity, and demonstrate ambient air was not being drawn into the samples being collected.

Each sample was collected in a certified clean Summa canister with a regulator set to collect a sample over a 2-hour sampling period. Samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of VOCs via USEPA Method TO-15 following standard chain-of-custody procedures.

Effective December 31, 2025, Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York (6 NYCRR) Part 375 has been updated, including new soil cleanup objectives (Fs). The analytical results below have been updated to compare investigative results to the new Soil Cleanup Objectives (SCOs).

Analytical Results

Soil Quality: One (1) VOC was detected in one (1) of the seven (7) soil samples collected and analyzed. No VOCs were detected at concentrations exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs) or Restricted Residential Soil Cleanup Objectives (RRSCOs) das defined in 6NYCRR Part 375.

SVOCs were detected in all seven (7) soil samples collected and analyzed. SVOCs were detected in two (2) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs. Exceedances are defined below:

- SB-2 (0.5-2-feet)
  - **Benzo(A)Anthracene (1.4 mg/kg)**
  - **Benzo(A)Pyrene (1.1 mg/kg)**
  - **Benzo(B)Fluoranthene (1.1 mg/kg)**
  - Benzo(K)Fluoranthene (1.1 mg/kg)
  - Chrysene (1.5 mg/kg)
  - Indeno(1,2,3-C,D)Pyrene (0.7 mg/kg)
- SB-4 (2-3.5-feet)
  - **Dibenzo(A,H)Anthracene (0.42 mg/kg)**

Bold font indicates RRSCO exceedance.

Metals were detected in all seven (7) soil samples collected and analyzed. Metals were detected in five (5) of the seven (7) soil samples at concentrations exceeding both UUSCOs and RRSCOs. Exceedances are defined below:

- SB-4 (2-3.5-feet)
  - **Lead (986 mg/kg)**
  - **Mercury (0.874 mg/kg)**
- SB-5 (2-3-feet)
  - Lead (344 mg/kg)
  - **Mercury (0.831 mg/kg)**
- SB-6 (0.5-3-feet)
  - Lead (202 mg/kg)

    - Mercury (1.27 mg/kg)
- SB-8 (2.5-3.5-feet)
    - Lead (63.5 mg/kg)
    - Mercury (0.259 mg/kg)
- SB-9 (2-2.5-feet)
    - Mercury (0.223 mg/kg)

Bold font indicates RRSCO exceedance.

PCBs were not detected in either of the two (2) soil samples collected for analysis of PCBs.

Vapor Quality: A total of six (6) soil vapor samples, four (4) soil vapor samples from exterior locations and two (2) sub-slab soil vapor samples in the basement of the on-site structure were collected from the subject property. The following NYSDOH regulated compounds were detected in the vapor samples collected:

- SV-1
    - 1,2,4-Trimethylbenzene (24 µg/m^3)
    - 1,3,5-Trimethylbenzene (5.6 µg/m^3)
    - 2,2,4-Trimethylpentane (2.26 µg/m^3)
    - 4-Ethyltoluene (24 µg/m^3)
    - Acetone (320 µg/m^3)
    - Benzene (3.9 µg/m^3)
    - Carbon Disulfide (2.8 µg/m^3)
    - Cyclohexane (4.4 µg/m^3)
    - Dichlorodifluoromethane (3.0 µg/m^3)
    - Ethylbenzene (41 µg/m^3)
    - Methyl Ethyl Ketone (5.2 µg/m^3)
    - m,p-Xylene (45 µg/m^3)
    - N-Heptane (6.4 µg/m^3)
    - N-Hexane (10 µg/m^3)
    - O-Xylene (1,2-Dimethylbenzene) (18 µg/m^3)
    - PCE (27 µg/m^3)
    - Toluene (32 µg/m^3)
    - Trichlorofluoromethane (6.8 µg/m^3)
- SV-2
    - 1,2,4-Trimethylbenzene (35 µg/m^3)
    - 1,3,5-Trimethylbenzene (7.8 µg/m^3)
    - 1,3-Butadiene (3.4 µg/m^3)
    - 2,2,4-Trimethylpentane (3.71 µg/m^3)
    - 2-Hexanone (3.4 µg/m^3)
    - 4-Ethyltoluene (36 µg/m^3)
    - Acetone (280 µg/m^3)
    - Benzene (8.1 µg/m^3)

    - Benzyl Chloride (2.5 µg/m^3)
    - Carbon Disulfide (3.0 µg/m^3)
    - Carbon Tetrachloride (7.4 µg/m^3)
    - Cyclohexane (15 µg/m^3)
    - Dichlorodifluoromethane (3.5 µg/m^3)
    - Ethylbenzene (54 µg/m^3)
    - Methyl Ethyl Ketone (6.7 µg/m^3)
    - m,p-Xylene (62 µg/m^3)
    - N-Heptane (28 µg/m^3)
    - N-Hexane (46 µg/m^3)
    - O-Xylene (25 µg/m^3)
    - PCE (17 µg/m^3)
    - Styrene (1.8 µg/m^3)
    - Toluene (47 µg/m^3)
    - TCE (0.51 µg/m^3)
    - Trichlorofluoromethane (2.9 µg/m^3)
    - Vinyl Chloride (0.49 µg/m^3)
- SV-3
    - 1,2,4-Trimethylbenzene (36 µg/m^3)
    - 1,3,5-Trimethylbenzene (8.7 µg/m^3)
    - 2,2,4-Trimethylpentane (4.52 µg/m^3)
    - 4-Ethyltoluene (35 µg/m^3)
    - Acetone (530 µg/m^3)
    - Acrylonitrile (5.3 µg/m^3)
    - Benzene (17 µg/m^3)
    - Cis-1,2-Dichloroethylene (4.5 µg/m^3)
    - Cis-1,2-Dichloromethane (4.5 µg/m^3)
    - Cyclohexane (8.9 µg/m^3)
    - Ethylbenzene (66 µg/m^3)
    - Methyl Ethyl Ketone (10 µg/m^3)
    - m,p-Xylene (73 µg/m^3)
    - N-Heptane (28 µg/m^3)
    - N-Hexane (39 µg/m^3)
    - O-Xylene (27 µg/m^3)
    - PCE (4,900 µg/m^3)
    - Toluene (58 µg/m^3)
    - TCE (100 µg/m^3)
    - Trichlorofluoromethane (13 µg/m^3)
- SV-4
    - 1,2,4-Trimethylbenzene (36 µg/m^3)
    - 1,3,5-Trimethylbenzene (8.2 µg/m^3)
    - 2,2,4-Trimethylpentane (4.95 µg/m^3)
    - 4-Ethyltoluene (34 µg/m^3)
    - Acetone (540 µg/m^3)
    - Benzene (390 µg/m^3)

    - Benzyl Chloride (10 µg/m^3)
    - Bromodichloromethane (13 µg/m^3)
    - Chloroform (84 µg/m^3)
    - Cis-1,2-Dichloroethylene (2.4 µg/m^3)
    - Cyclohexane (9.9 µg/m^3)
    - Ethylbenzene (66 µg/m^3)
    - Methyl Ethyl Ketone (14 µg/m^3)
    - m,p-Xylene (72 µg/m^3)
    - N-Heptane (22 µg/m^3)
    - N-Hexane (35 µg/m^3)
    - O-Xylene (28 µg/m^3)
    - PCE (1,800 µg/m^3)
    - Toluene (110 µg/m^3)
    - Trichlorofluoromethane (8.5 µg/m^3)
- SSV-1
    - Acetone (85 µg/m^3)
    - TCA (7.8 µg/m^3)
    - 1,2,4-Trimethylbenzene (7.7 µg/m^3)
    - Chloroform (9.0 µg/m^3)
    - cis-1,2-Dichloroethylene (83 µg/m^3)
    - Dichlorodifluoromethane (7.7 µg/m^3)
    - Ethylbenzene (9.3 µg/m^3)
    - Methyl Ethyl Ketone (5.0 µg/m^3)
    - N-Heptane (7 µg/m^3)
    - N-Hexane (8.5 µg/m^3)
    - PCE (7,400 µg/m^3)
    - Toluene (8 µg/m^3)
    - TCE (220 µg/m^3)
    - Trichlorofluoromethane (22 µg/m^3)
- SSV-2
    - 1,2,4-Trimethylbenzene (9 µg/m^3)
    - 2,2,4-Trimethylpentane (1.38 µg/m^3)
    - 4-Ethyltoluene (7.3 µg/m^3)
    - Acetone (170 µg/m^3)
    - Benzene (3 µg/m^3)
    - Cis-1,2-Dichloroethylene (1.6 µg/m^3)
    - Cyclohexane (2.6 µg/m^3)
    - Dichlorodifluoromethane (8.8 µg/m^3)
    - Ethylbenzene (11 µg/m^3)
    - Methyl Ethyl Ketone (9.9 µg/m^3)
    - m,p-Xylene (14 µg/m^3)
    - N-Heptane (5.8 µg/m^3)
    - N-Hexane (6.7 µg/m^3)
    - O-Xylene (6.2 µg/m^3)
    - PCE (890 µg/m^3)

- Propylene (5.7 µg/m^3)
- Toluene (10 µg/m^3)
- TCE (33 µg/m^3)
- Trichlorofluoromethane (24 µg/m^3)

Co-located ambient indoor air samples would be required to confirm the NYSDOH recommended action at each location. However, given the deteriorated condition of the structure and potential for influence/dilution from outdoor ambient air, no indoor ambient air samples were collected.

Recommendations

1. SVOCs and metals were detected in soil samples at concentrations indicative of impacts to soils from past site operations (use as a trucking terminal, tin works/machine shop/a blueing factory and ironworks). Historic fill is present throughout the subject property.
    a. Four (4) of the seven (7) samples analyzed at the laboratory contained contaminants at concentrations exceeding the intended use criteria (RRSCOs). These concentrations are consistent with historical fill. The presence of this fill and contaminants exceeding the intended use criteria elsewhere on site is likely.
    b. If soil is excavated from the site, collection and analysis of additional soil samples would be necessary to characterize soil for purposes of waste characterization, proper handling and selecting an appropriate disposal facility.
    c. Unconsolidated materials (below surface cover) throughout the subject property contained urban fill (wood and brick fragments). Should the client elect not to proceed with BCP, and if requested, PVE can prepare a Soil and Materials Management Plan (SMMP) adhering to 6 NYCRR Part 360 which will outline processes for the excavation and handling of this urban fill during any future site earthwork activities.
2. Based on the concentrations of VOCs compounds detected in soil vapor, a vapor encroachment condition (VEC) may exist at the site. The presence of sub-slab vapors indicates that localized VOC sources are present, perhaps in soil and/or groundwater beneath the structure where soil borings were not possible due to limited access. Redevelopment of the site should include the design and installation of a sub-slab depressurization system (SSDS) within the enclosed portions of structures to prevent exposure to building occupants.

2.2.3 Preliminary Remedial Investigation Report, PVEDI, August 11, 2025

PVEDI Engineering, Architecture and Geology, D.P.C. (PVEDI) performed a Preliminary Remedial Investigation of the Site summarized in our report dated August 11, 2025. Preliminary Remedial Investigation was completed in accordance with our approved scope of work, dated May 3, 2025.

Scope

On June 18 and 19, 2025, a total of thirteen (13) soil borings soil borings were installed via direct push drilling methods using a track-mounted Geoprobe™ 6712DT drill rig equipped with 5-foot long, 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners and hand tools for interior locations. Soil borings were advanced to a maximum depth of 40.0-feet bgs. Groundwater was not encountered ATD in the northern-most soil borings (SBs 11, 12, & 13) due to shallow refusal ranging from 20.0 feet to 26.5 feet. Groundwater was encountered in four (4) soil borings (SBs 14, 21, 22, & 23) at a depth of 33.90 feet to 34.64 feet bgs. One (1) soil sample was collected from nine (9) of the thirteen (13) of the soil borings for a total of nine (9) soil samples. Soil samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of the following:

- TCL VOCs via USEPA Method 8260;
- TCL SVOCs via USEPA Method 8270;
- Target Analyte List (TAL) Metals via USEPA Methods 6010/7473; &
- Per- & Polyfluoroalkyl Substances (PFAS) via USEPA Method 1633 (2 samples).

On July 25, 2025, four (4) monitoring wells were sampled for a total of four (4) groundwater samples. Groundwater samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of the following:

- TCL VOCs via USEPA Method 8260; &
- TAL Metals via USEPA Methods 6010/7473.

Analytical Results

Soil Quality: One (1) or more VOCs were detected in nine (9) soil samples collected and analyzed for VOCs. Of note, PCE was detected at low concentrations in each of the nine (9) samples collected. However, VOCs were not detected at concentrations exceeding SCOs.

One (1) or more SVOCs were detected in two (2) of the nine (9) soil samples collected and analyzed for SVOCs. SVOCs were not detected at concentrations exceeding SCOs.

Metals were detected in all nine (9) soil samples collected and analyzed for metals. One (1) or more metals were detected at concentrations exceeding UUSCOs, RRSCOs and/or Protection of Groundwater Soil Cleanup Objectives (PGSCOs) in seven (7) of the nine (9) soil samples. Exceedances are listed below:

- SB-15 (0.5-1.5-feet)
    - Copper (53.4 mg/kg)

- SB-16 (0.5-1.0-feet)
  - Copper (82.2 mg/kg)
- SB-17 (0.5-1.5-feet)
  - Zinc (122 mg/kg)
- SB-18 (0.5-1.0-feet)
  - Copper (71.4 mg/kg)
  - Lead (215 mg/kg)
  - Zinc (433 mg/kg)
  - Mercury (0.723 mg/kg)
- SB-20 (0.5-1.0-feet)
  - Copper (60.6 mg/kg)
  - Lead (276 mg/kg)
  - Zinc (764 mg/kg)
  - *Mercury (1.91 mg/kg)*
- SB-21 (35-37-feet)
  - Nickel (35.3 mg/kg)
- SB-22 (35-37-feet)
  - Nickel (31.5 mg/kg)

Bold indicates RRSCO exceedance.
Italic indicated PGWSCO exceedance.

Multiple PFAS compounds were detected in both soil samples collected and analyzed for PFAS. Neither Perfluorooctanesulfonic acid (PFOS) nor Perfluorooctanoic acid (PFOA) were detected in either soil sample. As SCOs are only defined for PFOS and PFOA, no PFAS were detected at concentrations exceeding SCOs.

Groundwater Quality: VOCs were detected in all four (4) of the groundwater samples collected and analyzed for VOCs. One (1) VOC was detected at concentrations exceeding Class GA Groundwater Quality Standards (GQS) as defined in 6NYCRR Part 700-705. Exceedances are listed below.

- MW-1
  - PCE (66.6 ug/L)
- MW-2
  - PCE (79.9 ug/L)
- MW-3
  - PCE (31.2 ug/L)
- MW-4
  - PCE (136 ug/L)

Metals were detected in the four (4) groundwater samples collected and analyzed for metals. Multiple Metals were detected at concentrations exceeding Class GA GQS. Exceedances are listed below.

- MW-1
  - Iron (58.1 mg/L)
  - Lead (0.0897 mg/L)
  - Magnesium (42.6 mg/L)
  - Manganese (2.88 mg/L)
  - Sodium (157 mg/L)
- MW-2
  - Iron (14.1 mg/L)
  - Manganese (0.620 mg/L)
  - Sodium (31.1 mg/L)
- MW-3
  - Barium (2.01 mg/L)
  - Total Chromium (0.0678 mg/L)
  - Copper (0.216 mg/L)
  - Iron (150 mg/L)
  - Lead (0.157 mg/L)
  - Magnesium (67.4 mg/L)
  - Manganese (8.89 mg/L)
  - Nickel (0.145 mg/L)
  - Sodium (55.1 mg/L)
- MW-4
  - Iron (51.7 mg/L)
  - Lead (0.0842 mg/L)
  - Manganese (4.12 mg/L)
  - Sodium (198 mg/L)
  - Thallium (0.00192 mg/L)

Recommendations

1. VOCs and metals were detected in soil and groundwater samples at concentrations indicating past site operations have adversely impacted the subject property.
2. PCE was detected in groundwater at concentrations increasing from east to west under the on-site structure. The upgradient concentrations of PCE range from 31.2 ug/L to 79.9 ug/L while the downgradient concentrations at the properties edge range from 66.6 ug/L to 136 ug/L. Based on surveyed well elevations and estimated direction of groundwater flow, these data suggest a source of groundwater contamination underlying the structure/subject property. Further, PCE was detected at low concentrations in all nine (9) soil samples collected.
3. Multiple metals were detected in groundwater at concentrations exceeding Class GA GQS. Lead was detected in soil samples (data provided in our Phase II ESA) at concentrations exceeding PGWSCOs and groundwater at concentrations exceeding Class GA indicating an on-site source of lead to be contaminating groundwater.
4. We feel that this supplemental data clearly defines source contamination on-site thus deeming the site eligible for Tangible Property Tax Credits (TPTCs).

2.3 AREAS OF CONCERN

AOC – 1 Historic Fill
AOC – 2 Soil Vapor
AOC – 3 Groundwater
AOC – 4 Buried Gasoline Tank
AOC – 5 Hazardous Building Materials

The following is a brief description of the findings in each area identified above.

AOC – 1 Historic Fill

As indicated in the previous investigations, historic fill was observed in soil boring throughout the subject property, likely a resulting from infill of former on-site structures or subbase for Phelps Avenue that bisected the property historically. This fill was found to contain SVOCs and metals at concentrations exceeding the Site's intended SCOs.

AOC – 2 Soil Vapor

As indicated in the previous investigations, a VEC may exist at the site. The presence of chlorinated solvents in soil vapors indicate that localized VOC sources are present, perhaps in soil and/or groundwater beneath the structure where soil borings were not possible due to limited access. VOCs were detected at concentrations requiring further action(s).

AOC – 3 Groundwater

As indicated in the Preliminary Remedial Investigation Report, a total of four (4) conventional 2-inch diameter groundwater monitoring wells were installed throughout the BCP Site. PCE and multiple metals were detected at concentrations exceeding Class GA GQS standards in all four (4) monitoring wells.

According to DECinfo Locator (https://dec.ny.gov/maps/interactive-maps/decinfo-locator), no public potable wells were identified within a 0.25-mile radius of the BCP Site. Residents of the City of Binghamton utilize municipal-supplied water.

AOC – 4 Buried Gasoline Tanks

A gasoline storage tank is depicted in the northern parking lot on Sanborn Maps dated 1950 to 1970. Two (2) soil borings were installed in proximity to (based on georeferenced images) the buried tank; while no impacts were observed in the soil, PVEDI could not extend a soil boring to the depth of groundwater in this area.

AOC – 5 Hazardous Building Materials

The structure is in poor condition with portions of the roof collapsed through underlying floors into the basement. The building materials and debris are co-mingled/homogenized throughout the collapsed pile. ACM may be present throughout the basement in areas prohibiting safe subsurface investigation.

3.0 REMEDIAL INVESTIGATION ACTIVITIES

The RIWP, initially submitted to NYSDEC in December 2025 (Revised January 29, 2026) which was approved by NYSDEC on March 10, 2026. The RI was developed to characterize the BCP Site, assist in the design of site remediation, and support future development in accordance with the requirements of the BCP and DER-10.

3.1 RI FIELD WORK

The RI scope of work consisted of a geophysical survey and soil, groundwater, soil vapor sampling. Quality assurance/quality control (QA/QC) samples were collected, including trip blanks, field blanks, matrix spike/matrix spike duplicates, and field duplicates in accordance with New York State Analytical Services Protocol (ASP) for Category B deliverables.

Field work was completed in accordance with the approved RIWP. Any deviations to the proposed work plans are described in the "Deviations" section of this report.

All RI field work was conducted in accordance with the Quality Assurance Project Plan (QAPP), Standard Operating Procedures (SOPs), Community Air Monitoring Program (CAMP), and the Health and Safety Plan (HASP) appended to the RIWP.

3.1.1 UTILITY MARKOUT/GEOPHYSICAL SURVEY

Prior to investigation activities, public and private utility mark-outs were conducted by Greenstar Environmental Solutions, LLC (Greenstar) and respective public utility operators within the investigation areas. Greenstar employed ground-penetrating radar (GPR) and magnetic/electromagnetic equipment to locate anomalies that could be representative of buried infrastructure, such as fuel storage tanks, sewer lines, drainpipes, utilities, and other such conduits that could provide potential pathways for contaminant movement, or obstructions to be avoided (including active utilities) when selecting boring locations. No USTs or anomalies indicative of on-site discharge were observed during the utility mark out/geophysical survey and the sampling locations were cleared by the contractor.

3.1.2 SOIL SAMPLING

Soil sampling locations are identified in Figure 3; soil boring logs are attached in Appendix A; geologic cross sections are attached in Appendix B; cross section locations are attached in Figure 9. Ten (10) soil borings were completed using a track-mounted direct-push Geoprobe™ rig equipped with 4 or 5-foot macro-core tubes. Reusable sampling materials were decontaminated in accordance with the approved RIWP preceding each sampling location. Soil borings were advanced to a maximum depth of 45-feet below ground surface (bgs) or to refusal. If refusal was encountered above the proposed final

boring depth, the boring location was adjusted and re-drilled up to three (3) attempts. Shallow refusal occurred at the following locations:

- SB-24
- SB-26
- SB-28
- SB-29
- SB-30

All soil samples outlined in the RIWP were collected for analysis, except for the optional 5th soil samples as no olfactory observations or elevated photoionization detector (PID) readings were encountered during the investigation.

Field personnel documented subsurface conditions at each boring location, including screening soil samples for VOCs using a PID and headspace techniques. The project geologist kept a detailed log of each core, including lithology, grain size, stratigraphic changes, color, and occurrence of groundwater.

Soil samples were collected from intervals defined in the RIWP. When the sample interval was not prescribed, the interval selected for laboratory analysis was based on field observations, including visual and olfactory indications of contamination, as well as direct instrument readings, and on the probable location of contamination. Soil samples were collected on March 30, 2026, March 31, 2026, and April 1, 2026.

Samples were analyzed for some or all of the following parameters varying based on interval and location:

- TCL VOCs by USEPA Method 8260D;
- TCL SVOCs by USEPA Method 8270E;
- TAL Metals by USEPA Method 6010D, 7196A, & 7473;
    - Including cyanide and hexavalent chromium.
- TCL PCBs by USEPA Method 8082A;
- TCL Pesticides by USEPA Method 8081B;
- TCL Herbicides by USEPA Method 8151A; &
- Emerging Contaminants: 1,4-Dioxane & Per- & PFAS by USEPA Method 8270E SIM & 1633A.

All samples were analyzed by a NYSDOH ELAP-certified laboratory providing Category B deliverables.

Upon completion of probing/drilling, each boring was backfilled within 12-inches of ground surface with either the drill cuttings. Boreholes filled with soil cuttings were completed to ground surface using drilling sand, if necessary. All borings were patched

with the appropriate surface materials (e.g., asphalt or concrete patch), depending on the location.

3.1.3 GROUNDWATER SAMPLING

Groundwater sampling locations are identified in Figure 3; monitoring well construction diagrams and monitoring well purge logs are found in Appendix C and Appendix D, respectively.

Groundwater in unconsolidated sediments was encountered in five (5) of the ten (10) soil borings; at two (2) of the ten (10) soil borings, a groundwater monitoring well was installed. Monitoring wells were installed using a track-mounted Geoprobe™ drilling rig equipped with 4.25-inch diameter hallow stem augers (HSA) through to the top of bedrock elevation (presumed). Monitoring wells were constructed with 2-inch ID Schedule 40 PVC slotted (0.02-inch) piping and solid riser from the bottom of each boring to the ground surface. Annular space surrounding the screened interval of the monitoring wells was backfilled with sand; the remaining annular space was back filled with hydrated bentonite to near the surface, and completed with flush mount steel casing grouted in-place and locking cap.

Groundwater monitoring well locations, dates of drilling and depths, including depth to water ATD are displayed below.

Location/ID	Date of Drilling	Termination Depth (bgs)	Date of Sampling	Occurrence of Groundwater ATD (bgs)
MW-5	4/1/2026	45-feet	4/2/2026	35.71-feet
MW-6	4/1/2026	45-feet	4/2/2026	34.92-feet

Following installation, each groundwater monitoring well was developed in order to remove fine-grained sediment from within the well. Each monitoring well was purged and developed prior to sample collection. Water samples were then collected from each monitoring well utilizing low-flow (minimal drawdown) sampling techniques and equipment with dedicated HDPE tubing in accordance with the approved RIWP. Prior to sample collection, depth to groundwater was measured to the nearest 0.01-foot and recorded. Monitoring wells were purged until temperature, pH, turbidity, ORP, dissolved oxygen and conductivity had stabilized (See Appendix D for Monitoring Well Purge Logs).

Samples were analyzed for all of the following parameters:

- TCL VOCs by USEPA Method 8260D;
- TCL SVOCs by USEPA Method 8270E;
- TAL Metals by USEPA Method 6010D, 6020B, 7470, SM3500, & SM4500;
    - Including cyanide and hexavalent chromium;
    - Field filtered and totals;

- TCL PCBs by USEPA Method 8082A;
- TCL Pesticides by USEPA Method 8081B;
- TCL Herbicides by USEPA Method 8151A; &
- Emerging Contaminants: 1,4-Dioxane & PFAS by USEPA Method 8270E SIM & 1633A.

The top-of-casing elevation of each well was surveyed to the nearest 0.01-foot by a NYS-PLS on April 13, 2026 (See the below table). Depth-to-water measurements were collected from all of the monitoring wells to develop a groundwater contour map (Figure 4).

Location/ID	Latitude	Longitude	Groundwater Elevation (Feet)
MW-5	42.1047	-75.9092	866.9
MW-6	42.1045	-75.9093	865.9

3.1.4 VAPOR SAMPLING

Vapor sampling locations are identified in Figure 3. Vapor sampling logs are found in Appendix E.

Sub-slab vapor points were installed in accordance with the NYSDOH Guidance for temporary sub-slab vapor sample probes. Exterior vapor probes were installed using a Geoprobe™ 7822DT equipped with a 1.5-inch direct push (dual-tube) macro-core; tubing was advanced to a maximum of 5-feet below the grade surface. Interior vapor probes were installed through the concrete slab of the foundation using a hammer drill and 5/8-inch drill bit. Non-VOC containing clay (interior locations) and hydrated 3/8-inch bentonite pellets (exterior locations) were used to seal the annular space around the tubing to the surface. A helium tracer test was conducted at each soil vapor probe to ensure sufficient seal at the surface. Immediately prior to sample collection, vapor points were purged of 1 to 3 volumes at a rate that did not exceed 0.2 L/min.

Soil vapor samples were collected on April 1, 2026. Vapor air samples were collected in laboratory-supplied, batch certified-clean Summa canisters calibrated for a sampling period of 2 hours at a flow rate not to exceed 0.2 L/min. Sample canisters were submitted to a NYSDOH ELAP-certified laboratory for analysis of VOCs via USEPA Method TO-15.

3.1.5 DEVIATIONS FROM REMDIAL INVESTIGATION WORK PLAN

Any deviations are explained below:

- One (1) of the proposed interior soil vapor probes (RI-SSV-3) was relocated approximately 20-feet from the proposed location due to obstructions (structure cave-in) identified during site activities.
- The optional 5th soil sample was not collected from any soil borings based on the lack of olfactory observations or elevated PID readings.
- Shallow refusal (mechanical) was encountered in five (5) borings conducted within the footprint of the structure following three (3) attempts dictated in the approved RIWP at each location. Due to restricted site access (existing structure) and the hazardous condition of said structure, only a hand truck mounted Geoprobe^{TM} 420M could be used within the interior. This tooling is limited in its capabilities should adverse drilling conditions be encountered (tight clays, cobbles, fill, etc.).

3.1.6 ADHERENCE TO HASP, QAPP, AND CAMP

The RIWP was implemented in accordance with the procedures specified in PVEDI's HASP, QAPP, SOP and CAMP appended to the RIWP. PVEDI personnel supervised all BCP Site activities. No downwind measurements of dust or VOCs were detected at concentrations exceeding the upwind measurements and warranting additional actions. CAMP data is appended to each respective Daily Field Report in Appendix F.

4.0 REMEDIAL INVESTIGATION RESULTS

Summarized below are the physical observations and analytical results of this RI. Analytical data are presented in the attached tables and are summarized below.

4.1 PHYSICAL CHARACTERISTICS and FIELD OBSERVATIONS

Field observations were documented during the collection of soil samples from soil boring locations. Observations made during drilling of soil borings, not reflected in the analytical results, are described below.

4.1.1 SOIL BORING OBSERVATIONS

The following subsections present a summary of soil boring observations. Stratigraphy and refusal depth are based upon the boring logs in Appendix A.

Subsurface sediments throughout the BCP Site were comprised of silts/sands/clays and gravels. Instances of fill material comprised of brick and asphalt were observed in eight (8) of the ten (10) soil borings installed throughout the BCP Site, most prominently in the upper 2-feet of unconsolidated sediments, but as shallow as 0.5-feet bgs and as deep as 10-feet bgs. No elevated PID readings were observed in the historic fill. No strong olfactory observations were noted.

Groundwater in unconsolidated sediments was encountered in five (5) of the ten (10) soil borings ranging in depth from 33.0-feet to 42.0-feet bgs.

See Appendix A and Appendix B for more information regarding soil boring observations.

4.1.2 DIRECTION OF GROUNDWATER FLOW

Depth-to-water measurements were collected on April 2, 2026 from the two (2) groundwater monitoring wells. The monitoring wells were surveyed by a NYS Licensed Surveyor on April 13, 2026. Surveyed elevations of the top of casing were used to prepare a contour map of the water table elevation (Figure 4). Groundwater located on the subject property appears to flow to the west. Regionally, groundwater is presumed to the west toward the Chenango River.

4.2 NATURE AND EXTENT OF CONTAMINATION – ANALYTICAL RESULTS

4.2.1 Standards, Criteria & Guidance

The analytical results were compared to existing NYS regulatory standards, criteria and guidance (SCGs).

Soil (surface and subsurface) analytical data were compared to UUSCOs, PGSCOs, and RRSCOs contained in Title 6 of the New York State Code of Rules and Regulations (6 NYCRR) Subpart 375-6.8, Remedial Program Soil Cleanup Objectives.

Groundwater analytical data were compared to standards contained in 6 NYCRR Subpart Part 703 Groundwater Standards and Guidance Values [NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1) for the Ambient Water Quality Standards (Class GA) and Guidance Values and Groundwater Effluent Limitations dated June 1998 (Amended April 2000 and June 2004)].

Soil vapor analytical data were compared to the NYSDOH Decision Matrices (A, B, C, D, E, & F) outlined in NYSDOH Decision Matrices as defined in Guidance for Evaluating Soil Vapor Intrusion in the State of New York (February 2024) and subsequent additions.

Soil and groundwater samples were also compared to SCOs and Screening Levels described in NYSDEC's *Sampling, Analysis, and Assessment of Per- and Poly Fluoroalkyl Substances (PFAS) – Under NYSDEC's Part 375 Remedial Programs* dated April 2023.

4.2.2 SOIL RESULTS

Soil sample results were compared to 6 NYCRR § 375-6.8(a) UUSCOs and §375-6.8(b) PGSCOs and RRSCOs. Soil sampling locations are shown on Figure 3. UUSCO exceedances are depicted in Figures 6A. RRSCO exceedances are depicted in Figures 6B. PGSCO exceedances are depicted in Figures 6C. Analytical reports are attached in Appendix H.

Analytical results from the analysis of the soil samples are summarized below. A complete summary of analytical results is presented in Tables 1A through 1F and 2A through 2F. A total of ten (10) soil borings were drilled; four (4) to five (5) soil samples were collected from each location for a total of thirty-three (33) soil samples, including QA/QC soil samples (Field Duplicates & Matrix Spike/Matrix Spike Duplicates). Including QA/QC soil samples; a total of ten (10) soil samples were collected from surface soils (0-2-inches bgs), a total of thirteen (13) soil samples were collected from shallow soils (2-12-inches bgs), a total of ten (10) soil samples were collected from shallow soils (12-24-inches bgs), and a total of ten (10) soil samples were collected from subsurface soils (>24-inches bgs).

Contaminant concentrations exceeding UUSCOs were detected in thirteen (13) of the thirty-three (33) soil samples collected. Five (5) soil samples contained contaminants at concentrations exceeding UUSCOs were collected from the 0-2-inches interval; four (4) soil samples the 2-12-inches interval; one (1) soil sample the 12-24-inches interval; and three (3) soil samples from the greater than 24-inches interval.

Contaminant concentrations exceeding PGSCOs were detected in seven (7) of the thirty-three (33) soil samples collected. No soil samples contained contaminants at concentrations exceeding PGSCOs collected from the 0-2-inches interval; five (5) soil samples the 2-12-inches interval; one (1) soil sample the 12-24-inches interval; and no soil samples from the greater than 24-inches interval.

Contaminant concentrations exceeding RRSCOs were detected in eleven (11) of the thirty-three (33) soil samples collected. Four (4) soil samples contained contaminants at concentrations exceeding RRSCOs were collected from the 0-2-inches interval; three (3) soil samples the 2-12-inches interval; one (1) soil sample the 12-24-inches interval; and three (3) soil samples from the greater than 24-inches interval.

Soil samples and analytes exceeding SCOs are described below.

4.2.2.1 Volatile Organic Compounds

Surface Soils (0-2-inches bgs):
VOCs were detected in eight (8) of the ten (10) surface soil samples. VOCs were not detected in any surface soil samples at a concentration exceeding UUSCOs.

Shallow Soils (2-12-inches bgs):
VOCs were detected in ten (10) of the eleven (11) 2-12-inch interval samples. One (1) VOC was detected in three (3) soil samples at a concentration exceeding its UUSCO and PGSCO; no detected compounds exceeded RRSCOs. It should be noted, Acetone is a common laboratory contaminant, and these exceedances are not believed to be representative of soil quality at the BCP Site. The exceedances are described below:

- RI-SB-24 2-12-inches 20260331
  - *Acetone (0.031 mg/kg)*
- RI-SB-26 2-12-inches 20260330
  - *Acetone (0.035 mg/kg)*
- RI-SB-31 2-12-inches 20260401
  - *Acetone (0.042 mg/kg)*

Italic font indicates those compounds also exceeding PGSCOs.

Shallow Soils (12-24-inches bgs):
VOCs were detected in eight (8) of the ten (10) 12-24-inch interval samples. One (1) VOC was detected in one (1) soil sample at a concentration exceeding its UUSCO and PGSCO; no detected compounds exceeded RRSCOs. The exceedances are described below:

- RI-SB-24 12-24-inches 20260331
  - *Acetone (0.039 mg/kg)*

Italic font indicates those compounds also exceeding PGSCOs.

Subsurface Soils (>2-feet bgs):
VOCs were detected in all ten (10) subsurface soil samples. One (1) VOC was detected in one (1) subsurface soil sample at a concentration exceeding its UUSCO and PGSCO; no detected compounds exceeded RRSCOs. The exceedances are described below:

- RI-SB-30 4-6-feet 20260330
  - *Acetone (0.063 mg/kg)*

Italic font indicates those compounds also exceeding PGSCOs.

Maximum Detections of RRSCO Exceedances : No VOCs were detected in soil samples at concentrations exceeding their respective RRSCOs.

4.2.2.2 Semi-Volatile Organic Compounds

Surface Soils (0-2-inches bgs):
SVOCs were detected in seven (7) of the ten (10) surface soil samples. One (1) SVOC was detected in one (1) surface soil sample at a concentration exceeding its respective UUSCO; no detected compounds exceeded RRSCOs or PGSCOs. The exceedances are described below:

- RI-SB-25 0-2-inches 20260330
  - Phenanthrene (1.18 mg/kg)

Shallow Soils (2-12-inches bgs):
SVOCs were detected in four (4) of the eleven (11) 2-12-inch interval soil samples. Eight (8) SVOCs were detected in one (1) soil sample at concentrations exceeding UUSCOs, RRSCOs, and PGSCOs. The exceedances are described below:

- RI-SB-25 2-12-inches 20260330
  - **Benzo(A)Anthracene (4.84 mg/kg)**
  - **Benzo(A)Pyrene (3.24 mg/kg)**
  - **Benzo(B)Fluoranthene (1.98 mg/kg)**
  - Benzo(G,H,I)Perylene (1.20 mg/kg)
  - *Benzo(K)Fluoranthene (3.08 mg/kg)*
  - *Chrysene (4.70 mg/kg)*
  - Indeno (1,2,3-C,D)Pyrene (1.28 mg/kg)
  - **Phenanthrene (15.7 mg/kg)**

Bold font indicates those compounds also exceeding RRSCOs.
Italic font indicates those compounds also exceeding PGSCOs.

Shallow Soils (12-24-inches bgs):
SVOCs were detected in four (4) of the ten (10) 12-24-inch interval soil samples. No SVOCs were detected at concentrations exceeding UUSCOs.

Subsurface Soils (>2-feet bgs):
SVOCs were detected in three (3) of the ten (10) subsurface soil. No SVOCs were detected in subsurface soil samples at concentrations exceeding UUSCOs.

Maximum Detections of RRSCO Exceedances : Benzo(A)Anthracene was detected at a maximum concentration of 4.84 mg/kg. Benzo(A)Pyrene was detected at a maximum concentration of 3.24 mg/kg. Benzo(B)Fluoranthene was detected at a maximum concentration of 1.98 mg/kg. Phenanthrene was detected at a maximum concentration of 15.7 mg/kg.

4.2.2.3 Metals

Surface Soils (0-2-inches bgs):
Metals were detected in each of the ten (10) surface soil samples. One (1) or more metals were detected in seven (7) surface soil samples at concentrations exceeding UUSCOs or RRSCOs; no detected compounds exceeded PGSCOs. The exceedances are described below:

- RI-SB-25 0-2-inches 20260330
  - Zinc (138 mg/kg)
  - **Hexavalent Chromium (1.97 mg/kg)**
  - **Mercury (0.568 mg/kg)**
- RI-SB-27 0-2-inches 20260331
  - Zinc (114 mg/kg)
- RI-SB-28 0-2-inches 20260331
  - Lead (81.5 mg/kg)
  - Mercury (0.183 mg/kg)
- RI-SB-29 0-2-inches 20260330
  - Cyanide (6.53 mg/kg)
  - Mercury (0.213 mg/kg)
- RI-SB-30 0-2-inches 20260330
  - **Mercury (0.303 mg/kg)**
- RI-SB-31 0-2-inches 20260401
  - **Hexavalent Chromium (1.30 mg/kg)**
- RI-SB-32 0-2-inches 20260331
  - Lead (137 mg/kg)
  - **Mercury (0.720 mg/kg)**

Bold font indicates those compounds also exceeding RRSCOs.

Shallow Soils (2-12-inches bgs):
Metals were detected in each of the eleven (11) 2-12-inch interval soil samples. One (1) or more metals were detected in six (6) shallow soil samples at concentrations exceeding UUSCOs, RRSCOs, and/or PGSCOs. The exceedances are described below:

- RI-SB-25 2-12-inches 20260330
  - Arsenic (13.3 mg/kg)
  - Lead (63.8 mg/kg)
  - Zinc (122 mg/kg)
- RI-SB-29 2-12-inches 20260330
  - **Mercury (0.304 mg/kg)**
- RI-SB-30 2-12-inches 20260330
  - Cyanide (5.79 mg/kg)
  - ***Arsenic (17.1 mg/kg)***
  - Mercury (0.286 mg/kg)
- RI-SB-31 2-12-inches 20260401
  - **Hexavalent Chromium (1.14 mg/kg)**
- RI-SB-32 2-12-inches 20260331
  - Manganese (1,760 mg/kg)
- RI-SB-32 FD 2-12-inches 202603313
  - Arsenic (13.3 mg/kg)

Bold font indicates those compounds also exceeding RRSCOs.
Italic font indicates those compounds also exceeding PGSCOs.

Shallow Soils (12-24-inches bgs):
Metals were detected in each of the ten (10) 12-24-inch interval soil samples. One (1) or more metals were detected in two (2) shallow soil samples at concentrations exceeding UUSCOs or RRSCOs; no detected compounds exceeded PGSCOs. The exceedances are described below:

- RI-SB-29 12-24-inches 20260330
  - Cyanide (3.60 mg/kg)
  - Mercury (0.192 mg/kg)
- RI-SB-30 12-24-inches 20260330
  - **Mercury (0.462 mg/kg)**

Bold font indicates those compounds also exceeding RRSCOs.

Subsurface Soils (>2-feet bgs):
Metals were detected in each of the ten (10) subsurface soil samples. One (1) or more metals were detected in four (4) subsurface soil samples at concentrations exceeding UUSCOs or RRSCOs; no detected compounds exceeded PGSCOs. The exceedances are described below:

- RI-SB-25 41-43-feet 20260330
  - Total Chromium (34.5 mg/kg)
  - **Hexavalent Chromium (1.07 mg/kg)**

- RI-SB-27 32-34-feet 20260330
  - Nickel (31.0 mg/kg)
- RI-SB-29 4-6-feet 20260330
  - **Cyanide (19.8 mg/kg)**
  - Mercury (0.239 mg/kg)
- RI-SB-31 36-38-feet 20260401
  - **Hexavalent Chromium (1.02 mg/kg)**

Bold font indicates those compounds also exceeding RRSCOs.

Maximum Detections of RRSCO Exceedances : Hexavalent Chromium was detected at a maximum concentration of 1.97 mg/kg. Mercury was detected at a maximum concentration of 0.720 mg/kg. Arsenic was detected at a maximum concentration of 17.1 mg/kg. Cyanide was detected at a maximum concentration of 19.8 mg/kg.

4.2.2.4 Polychlorinated Biphenyls

Surface Soils (0-2-inches bgs):
PCBs were detected in one (1) of the ten (10) surface soil samples. No PCBs were detected in surface soil samples at concentrations exceeding UUSCOs.

Shallow Soils (2-12-inches bgs):
No PCBs were detected in any of the eleven (11) 2-12-inch interval soil samples.

Shallow Soils (12-24-inches bgs):
No PCBs were detected in any of the ten (10) 12-24-innch interval soil samples.

Subsurface Soils (>2-feet bgs):
No PCBs were detected in any of the ten (10) subsurface soil samples.

Maximum Detections of RRSCO Exceedances : No PCBs were detected in soil samples.

4.2.2.5 Pesticides & Herbicides

Surface Soils (0-2-inches bgs):
Pesticides were detected in two (2) of the ten (10) surface soil samples. No pesticides were detected in surface soil samples at concentrations exceeding UUSCOs. No herbicides were detected in any of the ten (10) surface soil samples.

Shallow Soils (2-12-inches bgs):
Pesticides were detected in one (1) of the eleven (11) 2-12-inch interval soil samples. No pesticides were detected in shallow soil samples at concentrations exceeding UUSCOs. No herbicides were detected in any of the eleven (11) 2-12-inch interval soil samples.

Shallow Soils (12-24-inches bgs):
No pesticides nor herbicides were detected in any of the ten (10) 12-24-inch interval soil samples.

Subsurface Soils (>2-feet bgs):
No pesticides nor herbicides were detected in any of the ten (10) subsurface soil samples.

Maximum Detections of RRSCO Exceedances : No pesticides or herbicides were detected in soil samples at concentrations exceeding their respective RRSCOs.

4.2.2.6 Emerging Contaminants

Surface Soils (0-2-inches bgs):
1,4-Dioxane was not detected in any of the surface soil samples collected and analyzed for this parameter. PFAS were detected in three (3) of the ten (10) surface soil samples collected and analyzed for PFAS. No PFAS were detected at concentrations exceeding UUSCOs.

Shallow Soils (2-12-inches bgs):
1,4-Dioxane was not detected in any of the 2-12-inch interval soil samples collected and analyzed for this parameter. PFAS were detected in three (3) of the eleven (11) shallow soil samples collected and analyzed for PFAS. No PFAS were detected at concentrations exceeding UUSCOs.

Shallow Soils (12-24-inches bgs):
1,4-Dioxane was not detected in any of the 12-24-inch interval soil samples collected and analyzed for this parameter. No PFAS were detected in any of the ten (10) 12-24-inch interval soil samples collected and analyzed for PFAS.

Subsurface Soils (>2-feet bgs):
1,4-Dioxane was not detected in any of the subsurface soil samples collected and analyzed for this parameter. No PFAS were detected in any of the ten (10) subsurface soil samples collected and analyzed for PFAS.

4.2.3 GROUNDWATER RESULTS

Groundwater sample results were compared to the Class GA Groundwater Quality Standards (GQS) defined in 6 NYCRR Part 700-705 and NYSDEC Division of Water TOGS 1.1.1. A summary of the analytical results of the groundwater investigation is provided below. A complete summary of analytical results is presented in Tables 3A through 3F. A total of six (6) groundwater samples, including one (1) field duplicate, one (1) MS sample, one (1) field blank sample, and one (1) MSD sample were collected from the two (2) monitoring wells. Groundwater sampling locations are depicted in Figure 3. Class GA exceedances are depicted in Figure 7B. Analytical reports are attached in Appendix H.

Contaminants detected at concentrations exceeding Class GA GQS were detected in all three (3) of the groundwater samples collected. Groundwater samples and analytes exceeding Class GA GQS are described below.

4.2.3.1 Volatile Organic Compounds

VOCs were detected in all three (3) groundwater samples collected and analyzed for VOCs. One (1) VOC was detected in two (2) groundwater samples at concentrations exceeding its Class GA GQS. The exceedances are described below:

- MW-6
  - Tetrachloroethylene (26.0 µg/L)
- MW-6 FD
  - Tetrachloroethylene (18.6 µg/L)

Maximum Detections of Class GA GQS Exceedances: Trichloroethylene was detected at a maximum concentration of 26 µg/L.

4.2.3.2 Semi-Volatile Organic Compounds

No SVOCs were detected in any of the three (3) groundwater samples.

Maximum Detections of Class GA GQS Exceedances: No SVOCs were detected in groundwater samples.

4.2.3.3 Metals

Metals were detected in all three (3) of the groundwater samples collected (total and dissolved metals) and analyzed for metals. Multiple metals were detected in each of the three (3) samples at concentrations exceeding Class GA GQS. The exceedances are described below:

- MW-5
  - Total Metals
    - Iron (15.7 mg/L)
    - Magnesium (36.5 mg/L)
    - Manganese (0.621 mg/L)
    - Sodium (247 mg/L)
  - Dissolved Metals (Lab Filtered)
    - Sodium (253 mg/L)
- MW-6
  - Total Metals
    - Iron (20.0 mg/L)
    - Manganese (0.718 mg/L)
    - Sodium (35.5 mg/L)

    - Dissolved Metals (Lab Filtered)
        - Sodium (36.3 mg/L)
- MW-6 FD
    - Total Metals
        - Iron (18.0 mg/L)
        - Manganese (0.617 mg/L)
        - Sodium (39 mg/L)
    - Dissolved Metals (Lab Filtered)
        - Sodium (40.1 mg/L)

Maximum Detections of Class GA GQS Exceedances: Iron was detected at a maximum concentration of 20 mg/L (total); Magnesium was detected at a maximum concentration of 36.5 mg/L (total); Manganese was detected at a maximum concentration of 0.718 mg/L (total); & Sodium was detected at a maximum concentration of 247 mg/L (total) and 253 mg/L (dissolved).

4.2.3.4 Polychlorinated Biphenyls

No PCBs were detected in any of the three (3) groundwater samples.

Maximum Detections of Class GA GQS Exceedances: No PCBs were detected in groundwater samples.

4.2.3.5 Pesticides & Herbicides

No pesticides nor herbicides were detected in any of the three (3) groundwater samples.

Maximum Detections of Class GA GQS Exceedances: No pesticides nor herbicides were detected in groundwater samples.

4.2.3.6 Emerging Contaminants

1,4-Dioxane was not detected in any of the three (3) groundwater samples. PFAS were detected in all three (3) groundwater samples collected and analyzed for PFAS. Perfluorooctanoic acid (PFOA) was detected in all three (3) groundwater samples at concentrations below 6.7 ng/L, as described in NYSDEC's most recent April 2023 Guidance for Sampling and Analysis of PFAS. None of the three (3) groundwater samples contained a cumulative amount of PFAS compounds exceeding the screening value of 500 ng/L, cumulative concentrations ranged from 40.33 ng/L to 159.91 ng/L.

Maximum Detections of Class GA GQS Exceedances: No PFAS were detected in groundwater samples at concentrations exceeding Class GA GQS. PFOA was detected at a maximum concentration of 4.83 ng/L.

4.2.4 VAPOR RESULTS

A summary of the findings of the vapor investigation is provided below. A complete summary of analytical results are presented in Table 4. A total of ten (10) soil vapor samples were collected from eight (8) locations including two (2) field duplicates. The collection of indoor air samples will not provide usable data to evaluate the potential for exposure at the site, therefore the collection of indoor and outdoor samples was not required at this time. Soil vapor sampling results were not compared to criteria outlined in NYSDOH Decision Matrices (A, B, C, D, E, & F) outlined in NYSDOH Decision Matrices as defined in Guidance for Evaluating Soil Vapor Intrusion in the State of New York (February 2024) and subsequent attachments due to no co-located ambient air samples being collected for comparison. Alternatively, below are detections of the twenty-one (21) compounds are regulated by NYSDOH: 1,1-Dichloroethene (1,1-DCE); Cis-1,2-Dichloroethene (Cis-1,2-DCE); Vinyl Chloride (VC); 1,1,1 – Trichloroethane (1,1,1-TCA); Carbon Tetrachloride, Methylene Chloride; Tetrachloroethylene (PCE); Trichloroethylene (TCE); Benzene; Ethylbenzene; Naphthalene; Cyclohexane; Isooctane (2,2,4-Trimethylpentane); 1,2,4-Trimethlybenzene; 1,3,5-Trimethylbenzene; o-Xylene; m-Xylene; p-Xylene; Heptane; Hexane; and Toluene.

Soil vapor sampling locations were selected inside and outside the footprint of the on-site structure and primarily in paved portions of the BCP Site. During the purge of each soil vapor implant, no VOCs were detected above 0.0 PPM by the calibrated 4-gas meter. Vapor sampling locations are depicted in Figure 3. Samples results are depicted in Figure 8B. Analytical reports are attached in Appendix H.

4.2.4.1 Volatile Organic Compounds

VOCs were detected in each of the ten (10) soil vapor samples collected. The following detections of NYSDOH regulated compounds are described below:

- RI-SV-5 20260401
  - 1,2,4-Trimethylbenzene (13 µg/m^3)
  - 1,3,5-Trimethylbenzene (Mesitylene) (3.5 µg/m^3)
  - 2,2,4-Trimethylpentane (3.3 µg/m^3)
  - Benzene (26 µg/m^3)
  - Carbon Tetrachloride (1.1 µg/m^3)
  - Cyclohexane (19 µg/m^3)
  - Ethylbenzene (16 µg/m^3)
  - m,p-Xylene (34 µg/m^3)
  - N-Heptane (62 µg/m^3)
  - N-Hexane (130 µg/m^3)
  - O-Xylene (1,2-Dimethylbenzene) (13 µg/m^3)
  - PCE (4.1 µg/m^3)
  - Toluene (48 µg/m^3)

- RI-SV-6 20260401
  - 1,2,4-Trimethylbenzene (7.3 µg/m^3)
  - 1,3,5-Trimethylbenzene (Mesitylene) (1.7 µg/m^3)
  - 2,2,4-Trimethylpentane (8.9 µg/m^3)
  - Benzene (8.2 µg/m^3)
  - Carbon Tetrachloride (6.9 µg/m^3)
  - Cyclohexane (18 µg/m^3)
  - Ethylbenzene (5.6 µg/m^3)
  - m,p-Xylene (13 µg/m^3)
  - N-Heptane (34 µg/m^3)
  - N-Hexane (62 µg/m^3)
  - O-Xylene (1,2-Dimethylbenzene) (5.4 µg/m^3)
  - PCE (7.1 µg/m^3)
  - Toluene (12 µg/m^3)
- RI-SV-6 DUP 20260401
  - 1,2,4-Trimethylbenzene (9.3 µg/m^3)
  - 1,3,5-Trimethylbenzene (Mesitylene) (2.3 µg/m^3)
  - 2,2,4-Trimethylpentane (9.1 µg/m^3)
  - Benzene (8.5 µg/m^3)
  - Carbon Tetrachloride (7.4 µg/m^3)
  - Cyclohexane (18 µg/m^3)
  - Ethylbenzene (7 µg/m^3)
  - m,p-Xylene (19 µg/m^3)
  - N-Heptane (33 µg/m^3)
  - N-Hexane (66 µg/m^3)
  - O-Xylene (1,2-Dimethylbenzene) (8.3 µg/m^3)
  - PCE (8.6 µg/m^3)
  - Toluene (17 µg/m^3)
- RI-SV-7 20260401
  - 1,2,4-Trimethylbenzene (12 µg/m^3)
  - 1,3,5-Trimethylbenzene (Mesitylene) (3.3 µg/m^3)
  - 2,2,4-Trimethylpentane (3 µg/m^3)
  - Carbon Tetrachloride (10 µg/m^3)
  - Cyclohexane (3.5 µg/m^3)
  - Ethylbenzene (13 µg/m^3)
  - m,p-Xylene (29 µg/m^3)
  - N-Heptane (15 µg/m^3)
  - N-Hexane (66 µg/m^3)
  - O-Xylene (1,2-Dimethylbenzene) (12 µg/m^3)
  - PCE (12 µg/m^3)
  - Toluene (16 µg/m^3)
- RI-SSV-3 20260401
  - 1,2,4-Trimethylbenzene (0.99 µg/m^3)
  - Benzene (16 µg/m^3)
  - Cyclohexane (8.2 µg/m^3)

    - Ethylbenzene (65 µg/m^3)
    - m,p-Xylene (240 µg/m^3)
    - N-Heptane (24 µg/m^3)
    - N-Hexane (33 µg/m^3)
    - O-Xylene (1,2-Dimethylbenzene) (68 µg/m^3)
    - PCE (270 µg/m^3)
    - Toluene (13 µg/m^3)
    - TCE (16 µg/m^3)
- RI-SSV-4 20260401
    - Cis-1,2-DCE (79 µg/m^3)
    - m,p-Xylene (9.2 µg/m^3)
    - N-Hexane (19 µg/m^3)
    - PCE (3,100 µg/m^3)
    - Toluene (7.4 µg/m^3)
    - TCE (89 µg/m^3)
- RI-SSV-5 20260401
    - TCA (2.3 µg/m^3)
    - 1,2,4-Trimethylbenzene (3.7 µg/m^3)
    - 1,3,5-Trimethylbenzene (Mesitylene) (0.84 µg/m^3)
    - 2,2,4-Trimethylpentane (0.80 µg/m^3)
    - Benzene (5.1 µg/m^3)
    - Cyclohexane (5 µg/m^3)
    - Ethylbenzene (4.5 µg/m^3)
    - m,p-Xylene (9.4 µg/m^3)
    - N-Heptane (13 µg/m^3)
    - N-Hexane (28 µg/m^3)
    - O-Xylene (1,2-Dimethylbenzene) (4 µg/m^3)
    - PCE (930 µg/m^3)
    - Toluene (7.8 µg/m^3)
    - TCE (11 µg/m^3)
- RI-SSV-6 20260401
    - 1,2,4-Trimethylbenzene (4.7 µg/m^3)
    - 1,3,5-Trimethylbenzene (Mesitylene) (1.2 µg/m^3)
    - 2,2,4-Trimethylpentane (2.1 µg/m^3)
    - Benzene (2.8 µg/m^3)
    - Cis-1,2-DCE (6.6 µg/m^3)
    - Cyclohexane (1.6 µg/m^3)
    - Ethylbenzene (3.9 µg/m^3)
    - m,p-Xylene (9.5 µg/m^3)
    - N-Hexane (15 µg/m^3)
    - O-Xylene (1,2-Dimethylbenzene) (3.9 µg/m^3)
    - PCE (740 µg/m^3)
    - Toluene (6.5 µg/m^3)
    - TCE (13 µg/m^3)

- RI-SSV-7 20260401
  - Cis-1,2-DCE (59 µg/m^3)
  - m,p-Xylene (9.3 µg/m^3)
  - N-Hexane (11 µg/m^3)
  - PCE (3,100 µg/m^3)
  - TCE (100 µg/m^3)
- RI-SSV-7 DUP 20260401
  - Cis-1,2-DCE (62 µg/m^3)
  - m,p-Xylene (9.5 µg/m^3)
  - N-Hexane (12 µg/m^3)
  - PCE (3,100 µg/m^3)
  - TCE (110 µg/m^3)

4.2.5 DATA VALIDATION

Data Usability Summary Reports (DUSRs) using the NYSDOH ELAP Certified Laboratory provided ASP-B Deliverables (Appendix G). Third party data validation services and DUSRs were prepared by Environmental Data Usability of Dansville, New York. The resume and statement of qualifications (SOQ) for the third-party data validator are attached in Appendix I.

The Data Usability Summary Reports provide a review of eighty-five (85) samples for which 11,886 constituents were quantified by the laboratory. The samples included ten (10) soil vapor samples, fifty-eight (58) soil samples, six (6) groundwater samples, seven (7) field blanks and four (4) trip blanks. Of the 11,886 constituents analyzed, the data validator determined that all except thirty-six (36) results are valid and are considered usable, an overall data usability rate of 99.60%.

All thirty-six (36) constituents flagged by the data validator were Benzoic Acid via USEPA Method 8270D, Caprolactum via USEPA Method 8270D, N-Nitrorosdimethylamine via USEPA Method 8270D, Pentachlorophenol via USEPA Method 8270D, 4-Nitrophenol via USEPA Method 8270D, Hexachlorocyclopentadiene via USEPA Method 8270D, or 2,4-Dinitrophenol via USEPA Method 8270D. No 1,4-Dioxane results by USEPA Method 8270 SIM were rejected by the validator.

4.3 SUMMARY OF REMEDIAL INVESTIGATION RESULTS

The following subsections present a summary of the RI results for the BCP Site. The RI has delineated the extent and nature of contaminants on the BCP Site that require remedial action.

Stratigraphy, Geology and Hydrogeology

Subsurface soils throughout the BCP Site were comprised of silts/sands/clays and gravels. Instances of fill material comprised of brick and asphalt were observed in eight

(8) of the ten (10) RI soil borings installed throughout the BCP Site, most prominently in the upper 6.5-feet of unconsolidated sediments, but as shallow as 0.5-feet bgs and as deep as 10-feet bgs. No elevated PID readings were observed in the historic fill. No strong olfactory observations were noted.

Bedrock was not encountered during the investigation. Shallow refusal was encountered in five (5) of the ten (10) soil borings due to mechanical refusal ranging from 6-feet to 9.5-feet bgs. Groundwater in unconsolidated sediments was encountered in five (5) of the ten (10) soil borings ranging in depth from 33-feet to 42-feet bgs.

Soil Quality

A complete summary of soil sample results is presented in Tables 1A-1F & 2A-2F. UUSCO exceedances are depicted in Figures 6A. RRSCO exceedances are depicted in Figures 6B. PGSCO exceedances are depicted in Figures 6C.

- Surface Soil (0-2-inches): One (1) SVOC (Phenanthrene) and multiple metals (Zinc, Mercury, Lead and Cyanide) were detected at concentrations exceeding UUSCOs. Two (2) metals (Mercury and Hexavalent Chromium) were detected at concentrations exceeding RRSCOs. None of these contaminants exceeded PGSCOs. No VOC, PCBs, Pesticides, Herbicides, or PFAS compounds were detected in surface soils at concentrations exceeding UUSCOs.

- Shallow Soil (2-12-inches): One (1) VOC (Acetone*), multiple SVOCs (Benzo[G,H,I]Perylene, Benzo[K]Fluoranthene, and Indeno[1,2,3-C,D]Pyrene) and multiple metals (Arsenic, Lead, Zinc, Cyanide, Mercury, and Manganese) were detected at concentrations exceeding UUSCOs. Multiple SVOCs (Benzo[A]Anthracene, Benzo[A]Pyrene, Benzo[B]Fluoranthene, and Phenanthrene) and multiple metals (Mercury, Arsenic, and Hexavalent Chromium) were detected at concentrations exceeding RRSCOs. One (1) VOC (Acetone*), two (2) SVOCs (Benzo[K]Fluoranthene and Chrysene) and one (1) metal (Arsenic) were detected at a concentration exceeding PGSCOs. No PCBs, Pesticides, Herbicides, or PFAS compounds were detected in 2-12-inch interval soils at concentrations exceeding UUSCOs.

  Shallow Soil (12-24-inches): Two (2) metals (Cyanide and Mercury) were detected at concentrations exceeding UUSCOs. One (1) metal (Mercury) was detected at a concentration exceeding RRSCOs. One (1) VOC (Acetone*) was detected at a concentration exceeding PGSCOs. No SVOCs, PCBs, Pesticides, Herbicides, or PFAS compounds were detected in 12-24-inch interval soils at concentrations exceeding UUSCOs.

- Subsurface Soil (>2-feet): Three (3) metals (Total Chromium, Nickel, and Mercury) were detected at concentrations exceeding UUSCOs. Two (2) metals (Hexavalent Chromium and Cyanide) were detected at concentrations exceeding RRSCOs.

One (1) VOC (Acetone*) was detected at a concentration exceeding PGSCOs. No SVOCs, PCBs, Pesticides, Herbicides, or PFAS compounds were detected in subsurface soils at concentrations exceeding UUSCOs.

* Acetone is a common laboratory contaminant and PVEDI does not consider this compound to be representative of the BCP Site conditions.

Groundwater Quality

A complete summary of groundwater analytical results for the BCP Site are presented in Table 3A-3F. Sampling locations are depicted in Figure 3; samples and analytes exceeding Class GA GQS are depicted in Figure 7B.

One (1) VOC (Trichloroethylene [TCE]) and multiple metals (Iron, Magnesium, Manganese, Total Sodium and Dissolved Sodium) were detected in groundwater at concentrations exceeding Class GA GQS. No SVOCs, PCBs, Pesticides, Herbicides, or PFAS compounds were detected in groundwater samples at concentrations exceeding Class GA GQS.

Vapor Quality

A complete summary of soil vapor analytical results for the BCP Site are presented in Table 4. Sampling locations are depicted in Figure 3; samples and analytes exceeding Class GA GQS are depicted in Figure 8B.

NYSDOH Regulated VOCs were detected in all ten (10) soil vapor sampling locations. Highest concentrations of cVOCs were detected in samples collected from underneath the structure. Inconsequential concentrations of petroleum related VOCs were detected throughout.

5.0 QUALITATIVE EXPOSURE ASSESSMENTS

DER-10 Section 3.3(c)4 "Qualitative Exposure Assessments" requires that a qualitative exposure assessment for both human health and/or fish and wildlife resources be completed during the Remedial Investigation "to qualitatively determine the route, intensity, frequency and duration of actual or potential exposures to contaminants."

This assessment should:

- Describe the nature and size of the population currently exposed or which may reasonably be expected to be exposed to the contaminants that are present at or migrating from the BCP Site.
- Include a determination of the reasonably anticipated future land use of the BCP Site and affected off-site areas.
- Identify the reasonably anticipated future groundwater use.
- Characterize the exposure setting, identifying current and reasonably foreseeable exposure pathways.
- Evaluate contaminant fate and transport.
- Include a full delineation of the nature and extent of off-site impacts; unless the remedial party is a volunteer in the BCP, in which event off-site field information is only needed sufficient to identify the presence of contamination and support the qualitative off-site exposure assessment of these sites.

5.1 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT

The objective of the qualitative human health exposure assessment (QHHEA) is to identify potential receptors and pathways for human exposure to the contaminants of concern (COC) that are present at the BCP Site. Potential receptors are the populations that may become exposed to COCs by virtue of their presence at the BCP Site. Receptors vary by age, the nature of their use of the BCP Site, and hours of occupancy. A key element of the QHHEA is the identification of exposure pathways. An exposure pathway describes a potential route that the COC may take to travel from the source to the receptor. Generally, multiple potential exposure pathways are identified for a BCP Site. An identified pathway indicates that the potential for exposure through that route exists; it does not signify that the exposure is actually occurring.

A QHHEA was conducted in accordance with Appendix 3B and Section 3.3 (b) 8 of the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation to determine whether the BCP Site poses an existing or future health hazard to the BCP Site's exposed or potentially exposed populations (i.e., the receptors). This assessment included:

- A description of the contaminant source(s), including the location of the contaminant release to the environment (any waste disposal area or point of

discharge), or if the original source is unknown, the contaminated environmental medium (soil, indoor or outdoor air, water, etc.) at the point of exposure;
- An explanation of the contaminant release and transport mechanisms to the exposed population;
- Identification of all potential exposure point(s) where actual or potential human contact with a contaminated medium may occur;
- Description(s) of the route(s) of exposure (i.e., ingestion, inhalation, dermal absorption); and
- A characterization of the receptor populations who may be exposed to contaminants at a point of exposure.

5.1.1 BCP SITE CONDITIONS

The 1 North Depot Street Brownfield Cleanup Program site (the "BCP Site") encompasses one (1) tax parcels totaling 0.64 acres located at 1 North Depot (Tax Parcel ID #160.25-2-20.2) in the City of Binghamton, Broome County, New York. The BCP Site consists of a vacant 4- to 5-story structure, and an asphalt parking lot zoned as "Service Commercial". Both the on-site structure and the asphalt parking lot are in poor condition.

5.1.2 SUMMARY OF ENVIRONMENTAL CONDITONS

SURFACE & SHALLOW SOIL: One (1) VOC, multiple SVOCs, and multiple metals were detected at concentrations exceeding UUSCOs in seven (7) locations (a total of ten [10] soil samples). Multiple SVOCs and metals were detected at concentrations exceeding RRSCOs in five (5) locations (a total of nine [9] soil samples). One (1) VOC and one (1) metal were detected at concentrations exceeding PGSCOs in four (4) locations (a total of five [5] soil samples).

SUBSURFACE SOIL: Multiple metals were detected at concentrations exceeding UUSCOs in three (3) locations (a total of three [3] soil samples). Multiple metals were detected at concentrations exceeding RRSCOs in three (3) locations (a total of three [3] soil samples). One (1) VOC and one (1) metal were detected at concentrations exceeding PGSCOs in one (1) location (a total of one [1] soil sample).

GROUNDWATER: One (1) VOC and multiple metals were detected in groundwater samples at concentrations exceeding Class GA standards. Contaminant concentrations exceeding Class GA standards were detected in all three (3) of the groundwater samples collected.

VAPOR: NYSDOH regulated VOCs were detected in soil vapor samples.

SUMMARY: Contaminants are present in surface, shallow, subsurface soils, soil vapor, and groundwater throughout the BCP Site.

5.1.3 CONCEPTUAL SITE MODEL

A conceptual site model has been developed based on the findings of the RI. The purpose of the model is to develop a simplified framework for understanding the site's geological conditions, distribution and sources of contamination, potential migration pathways and potentially complete exposure pathways. Following is a description of each.

The primary contaminant of concern identified during previous investigations and this RI are: SVOCs and metals in soils; and PCE in groundwater and soil vapor and heavy metals in shallow soils/fill. PCE was not detected in any soil samples at concentrations exceeding SCOs. However, deep soil borings (beyond 9-feet and/or extending to depth of the groundwater interface) could not be installed through the footprint of the on-site structure due to limited tooling abilities. Potential sources of contamination are identified as 1) suspected on-site industrial uses that may have warranted degreasers containing PCE; 2) suspected source of SVOC and metals contamination is due to the presence of asphalt, asphalt subbase, and historic fill in the upper horizon of soils (varying in depth from 0.5 to 10 feet bgs.

Peak concentrations of PCE in groundwater were detected along the west/northwestern corner of the on-site structure/western boundary of the BCP Site boundary. Widespread dissolved concentrations of PCE with increased concentrations observed along that western boundary could represent a dissolved PCE migrating from east to west beneath the subject property. This flow is supported by the groundwater contour map provided as Figure 4.

SVOCs and metals were encountered in previous investigations and this RI primarily in shallow soils, likely due to the presence of asphalt, asphalt subbase and historic fill. However, hexavalent chromium was also detected in subsurface soils in two (2) locations varying in depth from 36-43-feet bgs. Hexavalent chromium was also detected in the upper surface and shallow soil sample intervals from these locations which may suggest drag-down of contaminants from surface/near surface to subsurface. Hexavalent chromium was not detected in any of the groundwater samples collected and analyzed during the RI further supporting the drag-down hypothesis. In general, the presence of hexavalent chromium could be due to atmospheric deposition from welding operations associated with maintenance of train cars/train tracks or the ornamental iron works use that was located straddling the BCP Site in the northern region and the adjoining property to the northeast (1918 & 1950 Sanborn Maps).

5.1.3.1 Receptor Populations

The human receptors for current BCP Site conditions include visitors and trespassers. Trespassers may include children, adolescents and adults, whereas most permitted visitors (engineers, contractors, etc.) would be limited to adults. During construction and remediation activities, receptors will likely include adult workers and visitors.

5.1.3.2 Potential Exposure Pathways

Potential pathways to human receptors include the following:

- Ingestion of fill/soil;
- Inhalation of vapors and particulates; and
- Dermal contact with fill/soil or building materials.

Current Conditions: Currently, the site contains a vacant structure with paved parking areas and there is limited potential for exposure to site-related contaminants. A potential exposure pathway to contaminants in surface soil exists due to accessible nature of the site and the unkept nature of the pavement and cracked slab but is partially mitigated by said paved areas and concrete slab. No potential pathway to contaminants in groundwater exists because groundwater is not used for any purpose at the Site, and because the BCP Site is served by a public water supply. A pathway from contaminants in soil gas to human receptors exists for any trespassers entering the on-site structure.

Construction/Remediation Activities: Once structure rehabilitation (construction) and site remediation activities begin, workers will come into direct contact with soils as a result of excavation activities. On-site workers could potentially ingest, inhale, or have dermal contact with exposed impacted soil & fill. Off-site receptors could be exposed to dust from on-site activities. During construction and remediation, on-site and off-site exposures to contaminated dust will be addressed through dust controls, the implementation of a Community Air Monitoring Program, and a Health and Safety Plan. During remediation and construction, the entire BCP Site will be fenced to prohibit access to the site by anyone other than authorized site workers.

Future (Post-Construction) Conditions: Once remedial actions and redevelopment of the Site have been completed, an approved cover system consisting of clean soil in landscaped areas or hardscapes (including paved parking areas, building foundation/slab, and sidewalks) will be installed over remaining contaminated areas. After remediation, a complete exposure pathway via inhalation of subsurface soil gas should not exist, provided the building's slab is properly sealed and that a sub-slab depressurization system is installed and maintained beneath the structure.

Potential Exposure Pathways Off-Site: Currently, no exposure pathways to on-site contamination for the general public to the site exists because the site is covered with impervious surfaces, and groundwater is not potable. Implementation of a CHASP and CAMP under future remediation/construction conditions will prevent the public from being exposed to soil, dust and vapors generated during construction. The following procedures will be followed:

- Air monitoring will be conducted for particulates (i.e., dust) and VOCs during all intrusive activities as part of a CAMP. Dust and/or vapor suppression techniques will be employed to limit potential for off-site migration of soil and vapors.
- Vehicle tires and undercarriages will be washed as necessary before trucks leave the site to prevent tracking material off-site.
- A soil erosion/sediment control plan will be implemented during construction to control off-site migration of soil.

A potential exposure pathway may exist for adjoining properties through vapor intrusion. The RIWP was initially drafted and reviewed amidst the release of the revised Part 375 regulations, including the new program requirement for off-site investigation of exposure pathways. Any additional sampling to confirm this potential exposure pathway should be considered during future pilot test or remedial design scoping as a function of the Remedial Action Work Plan. If necessary, engineering controls such as soil vapor extraction system(s) shall be implemented during remedial action to prevent these complete exposure pathways.

5.1.4 OVERALL HUMAN HEALTH EXPOSURE ASSESSMENT

According to DER-10 Appendix 3B, the five (5) elements of an exposure pathway include: (1) a contaminant source; (2) contaminant release and transport mechanisms; (3) a point of exposure; (4) a route of exposure; and (5) a receptor population. An exposure pathway is considered complete when all five elements of an exposure pathway are documented. A potential exposure pathway exists when any one or more of the five elements comprising an exposure pathway cannot be documented. An exposure pathway may be eliminated from further evaluation when any one of the five elements comprising an exposure pathway has not existed in the past, does not exist in the present, and cannot reasonably be anticipated to exist in the future.

5.1.4.1 Current Conditions

The conceptual site model identified a contaminant source and a human receptor population. Also, a point of exposure exists/may exist for potential exposure media for COCs in soil for current BCP Site conditions, since COCs are present in limited surface soil areas. However, a contaminant release and transport mechanism does not exist, as contaminants in surface soils are not readily mobilized. A receptor population exists only for trespassers and BCP Site authorized BCP Site worker/visitors. Since there are currently no restrictions on access to the BCP Site, human exposure to contaminated soil through ingestion or direct contact is possible, but limited.

On-site groundwater is contaminated with PCE and metals. Groundwater in this area of Binghamton is not use for potable purposes. Potable water is derived from the Susquehanna River, which is treated at Binghamton Water Filtration approximately 1.3-miles from the BCP Site. Because groundwater is not used and the depth of groundwater

below the ground surface, no complete exposure pathway to contaminated groundwater through ingestion or direct contact exists under current site conditions.

Elevated concentrations of NYSDOH regulated VOCs were detected in soil gas beneath the on-site structure Vapor intrusion is possible through preferential pathways and the degraded concrete slab. Since there are currently no restrictions on access to the BCP Site, human exposure to contaminated soil through inhalation is possible, but limited due to locked doors.

5.1.4.2 Construction/Remediation Activities

Points of exposure during construction/remediation activities include the disturbed and exposed contaminated soil during excavation, contaminated dust arising from the excavation during remedial activities and inhalation of contaminated vapors within the structure interior.

Routes of exposure include ingestion and dermal absorption of contaminated soil and inhalation of dust arising from contaminated soil. The receptor population includes construction and remediation workers. All five (5) elements exist; therefore, a complete exposure pathway is present. However, the temporary risk will be eliminated by applying appropriate health and safety measures, including installation of a complete perimeter fence, monitoring for dust and VOCs during implementation of the CAMP, using dust suppression measures, maintaining site security, and wearing the appropriate personal protective equipment. Training is also required for workers who come into contact with contaminated materials, who are taught how to avoid exposure and protect themselves. The exposure pathway is not complete for off-site populations. The only potential route of exposure would be through migration of dust. This potential exposure will be mitigated through the use of dust suppression and confirmed by implementation of the CAMP.

5.1.4.3 Future (Post-Construction) Conditions

Post-construction conditions may have a contaminant source (Element 1) and a human receptor population (Element 5); however, a point of exposure (Element 3) will not exist for potential exposure to COCs in soil, soil vapor and groundwater. The BCP Site will be subject to Engineering Controls and Institutional Controls to eliminate points of exposure. Following Site redevelopment, potential inhalation of subsurface vapors will be mitigated through a vapor mitigation system. A composite cover system consisting of clean soil and/or hardscapes will be employed to eliminate direct contact with contaminated soils. Finally, a deed restriction on use of groundwater will be placed on the property eliminating future contact with contaminants in groundwater.

5.1.4.4 Potential Ecological Risks

The BCP Site currently contains structure or paved areas with limited intentional vegetative areas (areas of vegetation growing up through degraded paved areas or between sidewalks). The proposed future BCP Site use is residential, including rehabilitation of the existing structures, concrete sidewalks and asphalt. As such, there is limited risk to ecological receptors. The findings of the Fish and Wildlife Impact Analysis Part 1 are summarized in Section 5.6, below.

5.1.5 QHHEA Summary

Based upon the above analysis, there is a potential complete exposure pathway that requires mitigation during implementation of the remedy. There is no complete exposure pathway under future conditions after the Site is redeveloped. This assessment takes into consideration the reasonably anticipated use of the BCP Site, which includes remediation of contamination for residential use. Potential post-construction use of groundwater is not considered during this QHHEA because the area is served by public water; a deed restriction will be placed on the property to ensure no future use includes groundwater usage. An environmental easement will be required to manage the site-wide cover system and soil vapor mitigation measures.

During the remedial action, on-site exposure pathways will be limited or eliminated by restricting access to the BCP Site, implementation of soil management, stormwater pollution prevention, dust controls, employment of a CAMP, and implementation of a Health and Safety Plan. After the remedial action is complete, there will be no remaining exposure pathways to on-Site soil/fill, due to the installation of a sitewide cover system. Potential inhalation of subsurface vapors should not exist as vapor mitigation techniques shall be employed. The exposure route and assessment table included in Appendix 3B of DER-10 is presented below.

Environmental Media & Exposure Route	Human Exposure Assessment
Direct contact with surface soils (and incidental ingestion)	Limited exposure because contaminated surface soils are covered with pavement, structure and the BCP Site will be fenced off from the public. Potential exposure to trespassers on the Site only if they intentionally or inadvertently dig in areas of contaminated soil.

Direct contact with subsurface soils (and incidental ingestion)	Potential exposure for workers completing intrusive remedial actions at the Site but controlled through CAMP and HASP.
Ingestion of groundwater	No exposure because the Site is served by a public water supply / groundwater is not being used for drinking water. There are no known domestic water supply wells in the immediate area.
Direct Contact with Groundwater	Depth of groundwater (>30-feet bgs) and anticipated excavation depths during redevelopment will eliminate direct contact.
Inhalation of air (exposures related to soil vapor intrusion)	A vapor mitigation system shall be installed in on-site buildings at the 1 North Depot parcel to prevent the indoor air quality from being affected by the contamination.

5.2 FISH AND WILDLIFE RESOURCE IMPACT ANALYSIS (FWRIA)

A FWRIA Part 1 was completed by PVE dated March 6, 2025. The Part 1 Assessment is attached as Appendix J. Conclusions from the Part 1 Assessment are summarized below.

PVE's FWRIA Part 1 concluded the following; the site's use as habitat for wildlife is substantially restricted due to the impervious nature and past uses of the site. These past uses have resulted in the discharge of contaminants into the soil, however the impervious cover will protect against direct contact to wildlife. Burrowing, direct soil contact and sediment transport are not anticipated with the site's current land cover. No aquatic resources are located on site and the nearest surface water is 0.2 miles to the west. Redevelopment of the property may be able to provide some future wildlife habitat by utilizing softscape areas with plant selections that will provide food, habitat and shelter.

6.0 SUMMARY & CONCLUSIONS

This section summarizes the results of the RI with respect to the primary goals of the investigation:

- Characterize the lateral and vertical extent of contaminants in the BCP Area to the degree necessary to evaluate the human health and ecological risks and to develop a remedy to reduce these risks;
- Document the sources of contaminants in the BCP Area, including a preliminary evaluation of ongoing sources of contaminants that need to be addressed so that a sustainable remedy can be developed and implemented; and
- Determine the human health and ecological risks from exposure to contaminants.

The nature and extent of contamination at the 1 North Depot BCP Site has been established to the degree necessary to complete the required risk assessments and remedial alternatives analysis. These program-required elements will be presented to the Department in the Remedial Work Action Plan, to be prepared. The horizontal and vertical distribution of contamination was characterized by field observations and the analysis of soil, groundwater and vapor samples, as follows:

6.1 SOIL CONTAMINATION

The RI and previous investigations identified a historic fill later extending from ground surface to as deep as 10-feet bgs. This historic fill contained varying concentrations of SVOCs (Benzo(A)Anthracene, Benzo(A)Pyrene, (B)Fluoranthene, & Phenanthrene) and heavy metals (Hexavalent Chromium, Mercury, Arsenic, & Cyanide) at concentrations exceeding RRSCOs. Presumed native soil beneath the historic fill revealed concentrations of hexavalent chromium exceeding RRSCOs in two (2) soil borings. Based on the encountered depths of hexavalent chromium (36-38-feet and 41-43-feet bgs), hexavalent chromium detected in co-located overlying surface and shallow soil samples at similar concentrations, and the lack of hexavalent chromium at detectable concentrations in groundwater, PVEDI believes these results to be due to drag down from above during the direct-push drilling process.

6.2 GROUNDWATER

The RI and previous investigations identified one (1) VOC (PCE) and multiple metals (iron, manganese, magnesium, total sodium, and dissolved sodium) detected in groundwater samples at concentrations exceeding Class GA GQS. Iron, manganese, magnesium, and sodium are considered to be naturally occurring and representative of background conditions. This is further supported by the absence of those analytes detected in soil samples at concentrations exceeding PGSCOs.

PCE was not detected in any soils during this RI or previous investigations at concentrations exceeding SCOs. Concentrations ranged from 2.73 ug/L (MW-5) on the

hydrologically upgradient portion of the BCP Site to 136 ug/L (MW-4) on the downgradient portion. A heat map depicting PCE concentrations from this investigation and the previous investigation is presented as Figure 10.

6.3 SOIL VAPOR

Multiple regulated VOCs were detected in all eight (8) soil vapor sampling locations. In the absence of indoor air sample results to compare to NYSDOH Decision Matrices, PVEDI offers our professional opinion that TCE and PCE were detected at elevated concentrations primarily along the southern, central and western portion of the BCP Site. Soil vapor samples collected in the northern portion of the BCP Site detected PCE at less significant concentrations.

6.4 CONCLUSIONS

1. Soils encountered during the RI consisted of historic fill from ground surface to varying depths (0.5 to 10-feet bgs), but predominately in the upper 6.5-feet of unconsolidated sediments. Presumed native soils of predominately sands begin at approximately 6.5 to 45-feet bgs. No bedrock was encountered during this investigation. Groundwater was encountered in five (5) soil sample locations at depths ranging from 33 to 42-feet bgs and groundwater flow was determined to be westerly towards the Chenango River. Shallow refusal (mechanical) was encountered in five (5) soil borings conducted within the footprint of the structure.
2. Contaminants (SVOCs and metals) are present in soil at concentrations exceeding RRSCOs predominantly in the historic fill horizon encountered. Two (2) deeper interval soil samples detected a metal analyte at concentrations exceeding RRSCOs. However, it is our professional opinion these detections are due to drilling method drag down and are not representative of site conditions.
3. Contaminants in groundwater exceeding Class GA GQS are limited to one (1) VOC (PCE) and five (5) metals. The metals are considered to be naturally occurring and representative of background conditions. PCE was detected site-wide at varying concentrations. The highest concentrations were encountered along the western boundary.
4. Human exposure to contaminants in soil, soil vapor and groundwater is unlikely prior to remediation considering 1) the site is covered with asphalt and/or building; 2) the structure is vacant and locked; and 3) groundwater is not (and will not be) relied on for consumptive purposes.
5. Sufficient data was amassed during the RI and previous investigations to prepare a comprehensive Remedial Action Work Plan including an evaluation of remedial alternatives (Alternatives Analysis) to address the areas of contamination.

7.0 CERTIFICATION

"I, Conor Tarbell, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and *that this Remedial Investigation Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and that all activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications*."

Analytes Assigned:
Benzene, ethylbenzene, naphthalene, cyclohexane, isooctane (2,2,4-trimethylpentane), 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, *o*-xylene

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m³)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m³)		
	< 2	2 to < 10	10 and above
< 60	1. No further action	2. No Further Action	3. IDENTIFY SOURCE(S) or RESAMPLE or MITIGATE
60 to < 600	4. No further action	5. MONITOR	6. MITIGATE
600 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

mcg/m³ = micrograms per cubic meter

Soil Vapor/Indoor Air Matrix E
February 2024

Analytes Assigned:
m,p-xylene, heptane, hexane

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m³)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m³)		
	< 6	6 to < 20	20 and above
< 200	1. No further action	2. No Further Action	3. IDENTIFY SOURCE(S) or RESAMPLE or MITIGATE
200 to < 2,000	4. No further action	5. MONITOR	6. MITIGATE
2,000 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

mcg/m³ = micrograms per cubic meter

Soil Vapor/Indoor Air Matrix F
February 2024

Analytes Assigned:
Toluene

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m³)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m³)		
	< 10	10 to < 50	50 and above
< 300	1. No Further Action	2. No Further Action	3. IDENTIFY SOURCE(S) or RESAMPLE or MITIGATE
300 to < 3,000	4. No Further Action	5. MONITOR	6. MITIGATE
3,000 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

mcg/m³ = micrograms per cubic meter

NOTE: Matrices are provided for informational purposes only and are not valid without co-located soil vapor and indoor air samples.

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Table 1A - VOCs in Surface/Shallow Soil Samples
Compared to UUSCOs, RRSCOs, and PGW per 6 NYCRR Part 375

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Table 1B - SVOCs in Surface/Shallow Soil Samples
Compared to UUSCOs, RRSCOs, and PGW per 6 NYCRR Part 375

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
J- = The result is an estimated quantity and may be biased low;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use
Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), &
Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NJ = The analyis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use
Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), &
Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NJ = The analyis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Table 1F - Emerging Contaminants in Surface/Shallow Soil Samples
Compared to UUSCOs, RRSCOs, and PGW per 6 NYCRR Part 375

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Table 1F - Emerging Contaminants in Surface/Shallow Soil Samples
Compared to UUSCOs, RRSCOs, and PGW per 6 NYCRR Part 375

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Table 2A - VOCs in Subsurface Soil Samples
Compared to UUSCOs, RRSCOs, and PGW per 6 NYCRR Part 375

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Table 2B - SVOCs in Subsurface Soil Samples
Compared to UUSCOs, RRSCOs, and PGW per 6 NYCRR Part 375

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use
Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), &
Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Notes:
Standards are for respective Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), & Protection of Groundwater Soil Cleanup Objectives (PGSCOs);
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs;
Orange shading designates those compounds detected at concentrations exceeding RRSCOs;
Blue shading designates those compounds detected at concentrations exceeding PGSCOs;
J = Detected below the Reporting Limit but greater than or equal to the Method;
UJ = Reported Quantitation limit is approximate and may be inaccurate;
NS = Analyte not analyzed for;
NE = No standard established; &
ND and U = Not detected at method detection limit for sample.

Table 3A - VOCs in Groundwater Samples
Compared to Class GA Groundwater Quality Standards per 6NYCRR Part 700-705
1 North Depot Street, Binghamton, New York

Notes:
Standards are for Class GA groundwater according to 6NYCRR Part 700-705;
Red Shading designates those compounds detected at concentrations exceeding Class GA;
J = Detected below the Reporting Limit but greater than or equal to the Method Detection Limit;
UJ = The analyte was not detected above the reported sample quantation limit;
NE = No standard established; &
ND and U = Not detected at MDL for sample.

Notes:
Standards are for Class GA groundwater according to 6NYCRR Part 700-705;
Red Shading designates those compounds detected at concentrations exceeding Class GA;
J = Detected below the Reporting Limit but greater than or equal to the Method Detection Limit;
UJ = The analyte was not detected above the reported sample quantation limit;
NE = No standard established; &
ND and U = Not detected at MDL for sample.

Notes:
Standards are for Class GA groundwater according to 6NYCRR Part 700-705;
Red Shading designates those compounds detected at concentrations exceeding guidance values;
J = Detected below the Reporting Limit but greater than or equal to the Method Detection Limit;
UJ = The analyte was not detected above the reported sample quantation limit;
NE = No standard established; &
ND and U = Not detected at MDL for sample.

APPENDIX A - BORING LOGS

BORING NUMBER RI-SB-24

PVEDI
A Stratus Team Company

CLIENT Regan Development Corporation
PROJECT NAME Remedial Investigation Report
PROJECT NUMBER 20240228
PROJECT LOCATION 1 N Depot, Binghampton, NY
DATE STARTED 3/31/26 **COMPLETED** 3/31/26
GROUND ELEVATION 862' **HOLE SIZE** 2.25"
DRILLING CONTRACTOR CoreDown Drilling
GROUND WATER LEVELS:
DRILLING METHOD Direct Push via GeoProbe 420M
AT TIME OF DRILLING ---
LOGGED BY AER **CHECKED BY** CBT
AT END OF DRILLING ---
NOTES 37° and rainy.
AFTER DRILLING

DEPTH (ft)	SAMPLE TYPE NUMBER	ENVIRONMENTAL DATA (ppm)	LITHOLOGY	MATERIAL DESCRIPTION	
0	0-2"	PID = 0		Concrete.	
				0.5	861.5
1	2-12"			FILL: Light brown sand, some gravel, little silt; comingled with brick and asphalt; dry.	
2	12-24"			2.0	860.0
3		PID = 0		(SM) Light brown sand, some gravel, little silt; dry.	
4					
5	4-6'	PID = 0			
6				6.0	856.0

Refusal at 6.0 feet.
Bottom of borehole at 6.0 feet.

APPENDIX F - DAILY FIELD REPORTS

DAILY FIELD REPORT
Prepared By Aaron Rubinstein

WEATHER	Snow		Rain		Overcast	X	Partly Cloudy		Bright Sun	
TEMP.	< 32		32-50		50-70	X	70-85		>85	

BCP Site No.:	C704064	**Date:**	3/30/2026
Project Name	1 North Depot		
Address:	1 North Depot, City of Binghampton, Broome County, New York		
DEC Project Manager:	Michael Belveg	**DOH Project Manager:**	Jacob Tyler

On-Site Consultant: PVEDI	**Consultant Contact(s):** Aaron Rubinstein
On-Site Contractor(s): Coredown	**Contractor Contact(s):** Dan Bellucci

Work Activities Performed (Since Last Report):
PVEDI was retained by the volunteer (Residences at North Depot LLC) to investigate Brownfield Cleanup Program Site #C704064.

Site Activities (3/30/2026):

- PVEDI implemented the CAMP by erecting upwind and downwind monitoring stations in proximity to the drill rig.
- PVEDI provided oversight of the completion of soil borings RI-SB-25, RI-SB-27, RI-SB-29, & RI-SB-30.
- RI-SB-29 & RI-SB-30 was advanced to a maximum depth of 6.5 feet below ground surface (ft bgs) due to shallow refusal.
- RI-SB-27 was advanced to a maximum depth of 34 ft bgs. Groundwater was encountered at 32 ft bgs.
- RI-SB-25 was advanced to a maximum depth of 45 ft bgs. Groundwater was encountered at 42 ft bgs.
- PVEDI monitored VOCs by keeping a personal PID in close proximity to drilling activities.

Waste Disposal:

- No waste disposal occurred.

Working In Area(s):

Worked in the western and northern exterior as well as the interior.

Samples Collected:

- RI-SB-25 0-2", 2"-12", 12"-24", & 41'-43'; RI-SB-27 0-2", 2"-12", 12"-24", & 32'-34'; RI-SB-29 0-2", 2"-12", 12"-24", & 4'-6'; RI-SB-30 0-2", 2"-12", 12"-24", & 4'-6'; and
- PFAS FB (Field Blank)

Air Monitoring:

Air monitoring for total VOCs was conducted continuously on Site. PIDs were relocated in coordination with drilling locations.

No 15-minute running average for total VOC concentrations were detected above the background (upwind) concentrations during air monitoring at the downwind air-monitoring station.

Problems or Delays Encountered:

No problems were encountered.

Planned Activities:

Soil sampling will continue tomorrow (3/31).

Notes:
Standards are for NYSDOH Generic Community Air Monitoring Plan
per Final DER-10, Technical Guidance for Site Investigation and Remediation
Yellow shading designates downwind particulate level concentrations exceed background (upwind perimeter) by at least 0.15 mg/m3; &
Red shading designates 15-minute average downwind particulate level concentrations exceed background (upwind perimeter) by at least 0.15 mg/m3.
NR represents that no data was recorded during this time.

CAMP
VOCs Data Summary

Upwind VOC Data Summary		
Maximum	0.7	ppm
Minimum	0.3	ppm
Average	0.6	ppm
Maximum 15-Minute Average	0.7	ppm

Downwind VOC Data Summary		
Maximum	0.2	ppm
Minimum	0.0	ppm
Average	0.1	ppm
Maximum 15-Minute Average	0.0	ppm

3/30/2026, 10:52:00 AM

Notes:

Yellow shading designates downwind total organic vapor concentrations exceed background (upwind perimeter) by at least 5 parts per million (ppm); &

Red shading designates 15-minute average downwindtotal organic vapor concentrations exceed background (upwind perimeter) by at least 5 ppm.

NR represents that no data was recorded during this time.

DAILY FIELD REPORT
Prepared By Matthew Bellia

WEATHER	Snow		Rain		Overcast	X	Partly Cloudy		Bright Sun	
TEMP.	< 32		32-50		50-70	X	70-85		>85	

BCP Site No.:	C704064	**Date:**	3/31/2026
Project Name	1 North Depot		
Address:	1 North Depot, City of Binghampton, Broome County, New York		
DEC Project Manager:	Michael Belveg	**DOH Project Manager:**	Jacob Tyler

On-Site Consultant: PVEDI	**Consultant Contact(s):** Aaron Rubinstein
On-Site Contractor(s): Coredown	**Contractor Contact(s):** Dan Bellucci

Work Activities Performed (Since Last Report):
PVEDI was retained by the volunteer (Residences at North Depot LLC) to investigate Brownfield Cleanup Program Site #C704064.

Site Activities (3/31/2026):

- PVEDI implemented the CAMP by erecting upwind and downwind monitoring stations in proximity to the drill rig.
- PVEDI provided oversight of the completion of soil borings RI-SB-24, RI-SB-28, RI-SB-32, & RI-SB-33.
- RI-SB-24 & RI-SB-28 were advanced to maximum depths of 5.5 feet below ground surface (ft bgs) and 9.5 ft bgs respectively due to shallow refusal.
- RI-SB-32 was advanced to a maximum depth of 45 ft bgs. Groundwater was encountered at 41 ft bgs.
- RI-SB-33 was advanced to a maximum depth of 45 ft bgs. Groundwater was encountered at 36 ft bgs.
- PVEDI monitored VOCs by keeping a personal PID in close proximity to drilling activities.

Waste Disposal:

- No waste disposal occurred.

Working In Area(s):

Worked in the northern exterior as well as the interior.

Samples Collected:

- RI-SB-24 0-2", 2"-12", 12"-24", & 4'-6'; RI-SB-28 0-2", 2"-12", 12"-24", & 7'-9'; RI-SB-32 0-2", 2"-12", 12"-24", & 40'-42'; RI-SB-33 0-2", 2"-12", 12"-24", & 35'-37'; and
- PFAS FB
- RI-SB-32 MS, MSD, FD, & FB (2-12")

Air Monitoring:

Air monitoring for total VOCs was conducted continuously on Site. PIDs were relocated in coordination with drilling locations.

No 15-minute running average for total VOC concentrations were detected above the background (upwind) concentrations during air monitoring at the downwind air-monitoring station.

Problems or Delays Encountered:

No problems were encountered.

Planned Activities:

Soil sampling will continue tomorrow (4/1). The groundwater wells and soil vapor points are planned to be installed tomorrow (4/1) as well.

Notes:
Standards are for NYSDOH Generic Community Air Monitoring Plan
per Final DER-10, Technical Guidance for Site Investigation and Remediation
Yellow shading designates downwind particulate level concentrations exceed background (upwind perimeter) by at least 0.15 mg/m3; &
Red shading designates 15-minute average downwind particulate level concentrations exceed background (upwind perimeter) by at least 0.15 mg/m3.
NR represents that no data was recorded during this time.

On-Site Consultant: PVEDI	**Consultant Contact(s):** Aaron Rubinstein
On-Site Contractor(s): N/A	**Contractor Contact(s):** N/A

Work Activities Performed (Since Last Report):
PVEDI was retained by the volunteer (Residences at North Depot LLC) to investigate Brownfield Cleanup Program Site #C704064.

Site Activities (4/2/2026):

- PVEDI stabilized water quality parameters and conducted low-flow groundwater sampling at RI-MW-5 and RI-MW-6.

Waste Disposal:

- No waste disposal occurred.

Working In Area(s): Worked in the northern exterior of the site.
Samples Collected: • RI-MW-6, MS, MSD, FD, & FB; RI-MW-5; and • PFAS FB
Air Monitoring: No air monitoring was conducted as no ground intrusive activities occurred on site.
Problems or Delays Encountered: No problems were encountered.
Planned Activities: Remedial investigation sampling concluded on April 2, 2026.

REVIEWER'S NARRATIVE
PVE, LLC SDG 26C1677 - 1 North Depot Street, Binghamton, NY: Project#: 20240228

The data associated with this Sample Delivery Group (SDG) 26C1677, analyzed by York Analytical Laboratories, Stratford, CT have been reviewed in accordance with assessment criteria provided by the New York State Department of Environmental Conservation following the review procedures provided in the USEPA Functional Guidelines for evaluating organic and inorganic data.

All analytical results reported by the laboratory are considered valid and acceptable except results that have been qualified as rejected, "R". Results qualified as estimated "J", or as non-detects, "U", are considered usable for the purpose of evaluating water and/or soil quality. However, these qualifiers indicate that the accuracy and/or precision of the analytical result is questionable. A summary of all data that have been qualified and the reasons for qualification are provided in the following data usability summary report (DUSR).

Two facts should be noted by all data users. First, the "R" qualifier means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the analyte is present or not. Values qualified with an "R" should not appear on the final data tables because they cannot be relied upon, even as the last resort. Second, no analyte concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

LABORATORY:	York Analytical Laboratories Stratford, CT
SDG No.:	26C1677

2.0 INTRODUCTION

This data usability summary report (DUSR) was prepared in accordance with guidance provided by the New York State Department of Environmental Conservation (NYSDEC). The DUSR is based on a review and evaluation of the laboratory analytical data package. Specifically, the NYSDEC guidance recommends review and evaluation of the following elements of the data package:

- Completeness of the data package as defined under the requirements of the NYSDEC Analytical Services Protocols (ASP) Category B or the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) deliverables,
- Compliance with established analyte holding times,
- Adherence to quality control (QC) limits and specifications for blanks, instrument tuning and calibration, surrogate recoveries, spike recoveries, laboratory duplicate analyses, and other QC criteria,
- Adherence to established analytical protocols,
- Conformance of data summary sheets with raw analytical data, and
- Use of correct data qualifiers.

Data deficiencies, analytical protocol deviations, and quality control problems identified using the review criteria above and their effect on the analytical results are discussed in this report.

3.0 SAMPLE AND ANALYSIS SUMMARY

The data package consists of analytical results for 16 soil samples, 1 TB, and 1 FB collected on March 30, 2026. These samples were analyzed for Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), PFASs, 1,4-Dioxane, Pesticides, PCBs, Herbicides, Metals, Total Cyanide (TCN), and Hexavalent Chromium (Cr+6).

All laboratory analyses were submitted to York Analytical Laboratories, Stratford, CT and analyzed as SDG 26C1677. The analytical results were provided in NYSDEC ASP Category B format, which includes all raw analytical data and laboratory QC data.

4.0 GUIDANCE DOCUMENTS AND DATA REVIEW CRITERIA

The guidance documents appropriate for reviewing laboratory quality control (QC) data and assigning data qualifiers (flags) to analytical results were selected from those listed in Table 4-1. The QC limits established in the documents applicable to this data review were used to assess the quality of the analytical results. In some cases, however, QC limits established internally by the laboratory were taken into account to determine data quality.

The QC criteria considered for assessing the usability of the reported analytical results provided for each analyte type (i.e. VOCs, SVOCs, metals, etc.) are listed in Table 4-2. These criteria may vary with the analytical method utilized by the laboratory. These criteria comply with the guidance recommended in Section 2.0 above.

5.0 DATA VALIDATION QUALIFIERS

The letter qualifiers (flags) used to define data usability are described briefly below. These letters are assigned by the data validator to analytical results having questionable accuracy and/or precision as determined by reviewing the laboratory QC data associated with the analytical results.

TABLE 4-1

Guidance Used For Validating Laboratory Analytical Data

Analyte Group	Guidance	Date
Metals (ICP-AES)	USEPA SOP HW-3a, Rev. 1	September 2016
Metals (Hg & CN)	USEPA SOP HW-3c, Rev. 1	September 2016

Instrument Tuning	Required Detection Limit
Initial Calibration and Instrument Performance	Laboratory Control Sample
	Matrix Spikes
Daily Calibration	Method Blank
Blanks	Instrument Calibration
Lab Control Sample	
Field Duplicate	

The laboratory may also use various letters and symbols to flag analytical results generated when QC limits were exceeded. The meanings of these flags may differ from those used by the independent data validator. Those used by the laboratory are provided with the analytical results.

NOTE: The assignment of data qualifiers by the data reviewer (validator) to laboratory analytical results should not necessarily be interpreted by the data user as a measure of laboratory ability or proficiency. Rather, the qualifiers are intended to provide a measure of data accuracy and precision to the data user, which, for example, may provide a level of confidence in determining whether or not standards or cleanup objectives have been met.

U The analyte was analyzed for but was not detected at or above the sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the *approximate* concentration of the analyte in the sample. (The magnitude of any ± value associated with the result is not determined by data validation).

J+ The result is an estimated quantity and may be biased high.

J- The result is an estimated quantity and may be biased low.

UJ The analyte was analyzed for but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

R The sample result is rejected (i.e., is unusable) due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

The validated analytical results are attached to this report. Validation qualifiers (flags) are indicated in red print. Data sheets having qualified data are signed and dated by the data reviewer.

6.0 RESULTS OF THE DATA REVIEW

The results of the analytical data review are summarized in Table1 6-1 through 6-10. These tables list the samples where QC criteria were found to exceed acceptable limits and the actions taken to qualify the associated analytical results.

7.0 TOTAL USABLE DATA

For SDG 26C1677, eighteen samples were analyzed and results were reported for 3775 analytes. Even though some results were flagged with a "J" as estimated, all results (100 %) are considered usable. See the summary table for the analyses that have been rejected and qualified and the associated QC reasons.

Note 1): All organic analyses (except the PFASs) did not have any Initial Calibration Verification (ICV) data included in the report as required by the SW-846 methodology. No data validation determination could be made. Even thought no data validation qualifiers were added, any organic data should be considered as estimated but usable.

1.0) Introduction

This work order Narrative applies to the following samples submitted to our laboratory on: 03/30/2026 6:40 PM

18 sample(s) were received intact in a custody-sealed cooler(s) unless otherwise noted. Upon receipt, cooler temperature(s) was determined using a NIST traceable digital infrared thermometer. The cooler temperature was acceptable (<= 6 °C)
and documented as: **{22.0}°C**

WorkOrder Comments

Cooler temperature upon receipt was 22.0 degrees C, and there was no ice present. Also, added a trip blank that was received with the samples but not listed on the COC.

Appendix C

Validator Qualifications

KENNETH R. APPLIN
Geochemist/Data Validator

Ph.D., Geochemistry and Mineralogy, The Pennsylvania State University

M.S., Geochemistry and Mineralogy, The Pennsylvania State University

B.A., Geological Sciences, SUNY at Geneseo, NY

Dr. Applin has over 35 years of experience working with the geochemistry of natural waters. His prior experience includes working as an Assistant Professor of Geology at the University of Missouri-Columbia and as Chief Hydrogeologist and Geochemist with a leading engineering firm in Rochester, NY. In 1993, he established KR Applin and Associates, a small consulting business that focuses on the geochemistry of natural waters, especially as applied to problems involving the contamination of groundwater and surface water.

Dr. Applin is also an experienced analytical data validator and has provided data validation services since 1994 to a variety of clients performing brownfield cleanup projects, hazardous waste remediation, groundwater monitoring at solid waste facilities, and other projects requiring third-party data validation. Dr. Applin has several years of hands-on experience with the laboratory analysis of natural waters and has successfully completed the USEPA Region II certification courses for performing inorganic and organic analytical data validation.

MICHAEL K. PERRY
Chemist/Data Validator

B.S. Chemistry, Georgia State University, Atlanta, GA

A.A.S., Chemical Technology, Alfred State College, Alfred, NY

Mr. Perry has over 30 years of experience in the analytical laboratory business. During his early career, he spent several years as a laboratory analyst performing the analysis of soil, water, and air samples for inorganic and organic chemical parameters. During his last 20 years in the environmental laboratory business, he managed and directed two major analytical laboratories in Rochester, NY. His management responsibilities included oversight of the daily operations of the lab, staff training and supervision, the selection, purchase, and maintenance of analytical instruments, the introduction of new laboratory methods, analytical quality assurance and quality control, data acquisition and management, and other business-related activities.

Mr. Perry has an extensive working knowledge of the methods and procedures used for sampling and analyzing both inorganic and organic analytes in soil, water, and air. He is an accomplished laboratory chemist and is familiar with the analytical methods and procedures established under the USEPA Contract Laboratory Protocols (CLP), the NYSDEC Analytical Services Protocols (ASP), and the NYSDOH Environmental Laboratory Approval Program (ELAP).

REVIEWER'S NARRATIVE
PVE, LLC SDG 26C1722 - 1 North Depot Street, Binghamton, NY: Project#: 20240228

The data associated with this Sample Delivery Group (SDG) 26C1722, analyzed by York Analytical Laboratories, Stratford, CT have been reviewed in accordance with assessment criteria provided by the New York State Department of Environmental Conservation following the review procedures provided in the USEPA Functional Guidelines for evaluating organic and inorganic data.

All analytical results reported by the laboratory are considered valid and acceptable except results that have been qualified as rejected, "R". Results qualified as estimated "J", or as non-detects, "U", are considered usable for the purpose of evaluating water and/or soil quality. However, these qualifiers indicate that the accuracy and/or precision of the analytical result is questionable. A summary of all data that have been qualified and the reasons for qualification are provided in the following data usability summary report (DUSR).

Two facts should be noted by all data users. First, the "R" qualifier means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the analyte is present or not. Values qualified with an "R" should not appear on the final data tables because they cannot be relied upon, even as the last resort. Second, no analyte concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

1.0 SUMMARY

SITE:	1 North Depot St. Binghamton, NY Project #: 20240228 – RIR Implementation
SAMPLING DATE:	March 31, 2026
SAMPLE TYPE:	28 soil samples, 1 TB, and 2 FB
LABORATORY:	York Analytical Laboratories Stratford, CT
SDG No.:	26C1722

2.0 INTRODUCTION

This data usability summary report (DUSR) was prepared in accordance with guidance provided by the New York State Department of Environmental Conservation (NYSDEC). The DUSR is based on a review and evaluation of the laboratory analytical data package. Specifically, the NYSDEC guidance recommends review and evaluation of the following elements of the data package:

- Completeness of the data package as defined under the requirements of the NYSDEC Analytical Services Protocols (ASP) Category B or the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) deliverables,
- Compliance with established analyte holding times,
- Adherence to quality control (QC) limits and specifications for blanks, instrument tuning and calibration, surrogate recoveries, spike recoveries, laboratory duplicate analyses, and other QC criteria,
- Adherence to established analytical protocols,
- Conformance of data summary sheets with raw analytical data, and
- Use of correct data qualifiers.

Data deficiencies, analytical protocol deviations, and quality control problems identified using the review criteria above and their effect on the analytical results are discussed in this report.

3.0 SAMPLE AND ANALYSIS SUMMARY

The data package consists of analytical results for 28 soil samples, 1 TB, and 2 FB collected on March 31, 2026. These samples were analyzed for Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), PFASs, 1,4-Dioxane, Pesticides, PCBs, Herbicides, Metals, Total Cyanide (TCN), and Hexavalent Chromium (Cr+6).

All laboratory analyses were submitted to York Analytical Laboratories, Stratford, CT and analyzed as SDG 26C1722. The analytical results were provided in NYSDEC ASP Category B format, which includes all raw analytical data and laboratory QC data.

4.0 GUIDANCE DOCUMENTS AND DATA REVIEW CRITERIA

The guidance documents appropriate for reviewing laboratory quality control (QC) data and assigning data qualifiers (flags) to analytical results were selected from those listed in Table 4-1. The QC limits established in the documents applicable to this data review were used to assess the quality of the analytical results. In some cases, however, QC limits established internally by the laboratory were taken into account to determine data quality.

The QC criteria considered for assessing the usability of the reported analytical results provided for each analyte type (i.e. VOCs, SVOCs, metals, etc.) are listed in Table 4-2. These criteria may vary with the analytical method utilized by the laboratory. These criteria comply with the guidance recommended in Section 2.0 above.

5.0 DATA VALIDATION QUALIFIERS

The letter qualifiers (flags) used to define data usability are described briefly below. These letters are assigned by the data validator to analytical results having questionable accuracy and/or precision as determined by reviewing the laboratory QC data associated with the analytical results.

TABLE 4-1

Guidance Used For Validating Laboratory Analytical Data

Analyte Group	Guidance	Date
Metals (ICP-AES)	USEPA SOP HW-3a, Rev. 1	September 2016
Metals (Hg & CN)	USEPA SOP HW-3c, Rev. 1	September 2016
Volatile Organic Compounds (by Methods 8260B & 8260C)	USEPA SOP HW-24, Rev. 4	September 2014
Semi-Volatile Organic Compounds (by Method 8270D)	USEPA SOP HW-22 Rev. 5	December 2010
Pesticides (by Method 8181B)	USEPA SOP HW-44, Rev. 1.1	December 2010
Chlorinated Herbicides (by Method 8151A)	USEPA SOP HW-17, Rev. 3.1	December 2010
Polychlorinated Biphenyls (PCBs)	USEPA SOP HW-37A, Rev. 0	June 2015
Volatile Organic Compounds (Air) (by Method TO-15)	USEPA SOP HW-31, Rev. 6	September 2016
Per- and PolyFluoroAlkyl Substances (PFAS)	* NYSDEC ** US Dept. of Defense	January 2021 November 2022
Radiological Analysis		
Uranium	USEPA Method 908.0	June 1999

System Monitoring Compounds	Surrogate Recoveries	Surrogate Recoveries	Initial/Continuing Calibration	Calibration	Instr Performance Check
Lab Control Sample	Lab Control Sample	Matrix Spikes	CRDL Standards	Lab Control Samples	Initial Calibration
Matrix Spikes	Matrix Spikes	Blanks	Blanks	Blanks	Continuing Calibration
Blanks	Blanks	Instrument Calibration & Verification	Interference Check Sample	Spike Recoveries	Blanks
Instrument Tuning	Instrument Tuning	Comparison of duplicate GC column results	Spike Recoveries	Lab Duplicates	Surrogates
Internal Standards	Internal Standards	Analyte ID	Lab Duplicate		Lab Fortified Blank
Initial Calibration	Initial Calibration	Lab Qualifiers	Lab Control Sample		Matrix Spikes
Continuing Calibration	Continuing Calibration	Field Duplicate	ICP Serial Dilutions		Internal Standards
Lab Qualifiers	Lab Qualifiers		Lab Qualifiers		
Field Duplicate	Field Duplicate		Field Duplicate		

Method TO-15 (Air)	Radiological (U and Ra)
Completeness of Pkg	Completeness of Pkg
Sample Preservation	Sample Preservation
Holding Time	Holding Time
Canister Certification	Sample Specific Yield
Instrument Tuning	Required Detection Limit
Initial Calibration and Instrument Performance	Laboratory Control Sample
	Matrix Spikes
Daily Calibration	Method Blank
Blanks	Instrument Calibration
Lab Control Sample	
Field Duplicate	

The laboratory may also use various letters and symbols to flag analytical results generated when QC limits were exceeded. The meanings of these flags may differ from those used by the independent data validator. Those used by the laboratory are provided with the analytical results.

NOTE: The assignment of data qualifiers by the data reviewer (validator) to laboratory analytical results should not necessarily be interpreted by the data user as a measure of laboratory ability or proficiency. Rather, the qualifiers are intended to provide a measure of data accuracy and precision to the data user, which, for example, may provide a level of confidence in determining whether or not standards or cleanup objectives have been met.

U The analyte was analyzed for but was not detected at or above the sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the *approximate* concentration of the analyte in the sample. (The magnitude of any ± value associated with the result is not determined by data validation).

J+ The result is an estimated quantity and may be biased high.

J- The result is an estimated quantity and may be biased low.

UJ The analyte was analyzed for but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

R The sample result is rejected (i.e., is unusable) due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

The validated analytical results are attached to this report. Validation qualifiers (flags) are indicated in red print. Data sheets having qualified data are signed and dated by the data reviewer.

6.0 RESULTS OF THE DATA REVIEW

The results of the analytical data review are summarized in Table1 6-1 through 6-12. These tables list the samples where QC criteria were found to exceed acceptable limits and the actions taken to qualify the associated analytical results.

7.0 TOTAL USABLE DATA

For SDG 26C1722, thirty-one samples were analyzed and results were reported for 4231 analytes. Fifteen results have been rejected. Even though some results were flagged with a "J" as estimated, all other results (99.6 %) are considered usable. See the summary table for the analyses that have been rejected and qualified and the associated QC reasons.

Note 1): All organic analyses (except the PFASs) did not have any Initial Calibration Verification (ICV) data included in the report as required by the SW-846 methodology. No data validation determination could be made. Even thought no data validation qualifiers were added, any organic data should be considered as estimated but usable.

1.0) Introduction

This work order Narrative applies to the following samples submitted to our laboratory on: 03/31/2026 6:30 PM

31 sample(s) were received intact in a custody-sealed cooler(s) unless otherwise noted. Upon receipt, cooler temperature(s) was determined using a NIST traceable digital infrared thermometer. The cooler temperature was acceptable (<= 6 °C)
and documented as: **{5.7}°C**

WorkOrder Comments

Lab recieved TB vials (-33) with significant headspace. These were lab supplied TB sets, the issue was brought to

bottle preperation departments attention.

Appendix C

Validator Qualifications

KENNETH R. APPLIN
Geochemist/Data Validator

Ph.D., Geochemistry and Mineralogy, The Pennsylvania State University

M.S., Geochemistry and Mineralogy, The Pennsylvania State University

B.A., Geological Sciences, SUNY at Geneseo, NY

Dr. Applin has over 35 years of experience working with the geochemistry of natural waters. His prior experience includes working as an Assistant Professor of Geology at the University of Missouri-Columbia and as Chief Hydrogeologist and Geochemist with a leading engineering firm in Rochester, NY. In 1993, he established KR Applin and Associates, a small consulting business that focuses on the geochemistry of natural waters, especially as applied to problems involving the contamination of groundwater and surface water.

Dr. Applin is also an experienced analytical data validator and has provided data validation services since 1994 to a variety of clients performing brownfield cleanup projects, hazardous waste remediation, groundwater monitoring at solid waste facilities, and other projects requiring third-party data validation. Dr. Applin has several years of hands-on experience with the laboratory analysis of natural waters and has successfully completed the USEPA Region II certification courses for performing inorganic and organic analytical data validation.

MICHAEL K. PERRY
Chemist/Data Validator

B.S. Chemistry, Georgia State University, Atlanta, GA

A.A.S., Chemical Technology, Alfred State College, Alfred, NY

Mr. Perry has over 30 years of experience in the analytical laboratory business. During his early career, he spent several years as a laboratory analyst performing the analysis of soil, water, and air samples for inorganic and organic chemical parameters. During his last 20 years in the environmental laboratory business, he managed and directed two major analytical laboratories in Rochester, NY. His management responsibilities included oversight of the daily operations of the lab, staff training and supervision, the selection, purchase, and maintenance of analytical instruments, the introduction of new laboratory methods, analytical quality assurance and quality control, data acquisition and management, and other business-related activities.

Mr. Perry has an extensive working knowledge of the methods and procedures used for sampling and analyzing both inorganic and organic analytes in soil, water, and air. He is an accomplished laboratory chemist and is familiar with the analytical methods and procedures established under the USEPA Contract Laboratory Protocols (CLP), the NYSDEC Analytical Services Protocols (ASP), and the NYSDOH Environmental Laboratory Approval Program (ELAP).

REVIEWER'S NARRATIVE
PVE, LLC SDG 26D0086 - 1 North Depot Street, Binghamton, NY: Project#: 20240228

The data associated with this Sample Delivery Group (SDG) 26D0086, analyzed by York Analytical Laboratories, Stratford, CT have been reviewed in accordance with assessment criteria provided by the New York State Department of Environmental Conservation following the review procedures provided in the USEPA Functional Guidelines for evaluating organic and inorganic data.

All analytical results reported by the laboratory are considered valid and acceptable except results that have been qualified as rejected, "R". Results qualified as estimated "J", or as non-detects, "U", are considered usable for the purpose of evaluating water and/or soil quality. However, these qualifiers indicate that the accuracy and/or precision of the analytical result is questionable. A summary of all data that have been qualified and the reasons for qualification are provided in the following data usability summary report (DUSR).

Two facts should be noted by all data users. First, the "R" qualifier means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the analyte is present or not. Values qualified with an "R" should not appear on the final data tables because they cannot be relied upon, even as the last resort. Second, no analyte concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

1.0 SUMMARY

SITE:	1 North Depot St. Binghamton, NY Project #: 20240228 – RIR Implementation
SAMPLING DATE:	April 01, 2026
SAMPLE TYPE:	10 air samples
LABORATORY:	York Analytical Laboratories Stratford, CT
SDG No.:	26D0086

2.0 INTRODUCTION

This data usability summary report (DUSR) was prepared in accordance with guidance provided by the New York State Department of Environmental Conservation (NYSDEC). The DUSR is based on a review and evaluation of the laboratory analytical data package. Specifically, the NYSDEC guidance recommends review and evaluation of the following elements of the data package:

- Completeness of the data package as defined under the requirements of the NYSDEC Analytical Services Protocols (ASP) Category B or the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) deliverables,
- Compliance with established analyte holding times,
- Adherence to quality control (QC) limits and specifications for blanks, instrument tuning and calibration, surrogate recoveries, spike recoveries, laboratory duplicate analyses, and other QC criteria,
- Adherence to established analytical protocols,
- Conformance of data summary sheets with raw analytical data, and
- Use of correct data qualifiers.

Data deficiencies, analytical protocol deviations, and quality control problems identified using the review criteria above and their effect on the analytical results are discussed in this report.

3.0 SAMPLE AND ANALYSIS SUMMARY

The data package consists of analytical results for 10 air samples collected on April 01, 2026. These samples were analyzed for TO-15 Volatile Organic Compounds (VOCs).

All laboratory analyses were submitted to York Analytical Laboratories, Stratford, CT and analyzed as SDG 26D0086. The analytical results were provided in NYSDEC ASP Category B format, which includes all raw analytical data and laboratory QC data.

4.0 GUIDANCE DOCUMENTS AND DATA REVIEW CRITERIA

The guidance documents appropriate for reviewing laboratory quality control (QC) data and assigning data qualifiers (flags) to analytical results were selected from those listed in Table 4-1. The QC limits established in the documents applicable to this data review were used to assess the quality of the analytical results. In some cases, however, QC limits established internally by the laboratory were taken into account to determine data quality.

The QC criteria considered for assessing the usability of the reported analytical results provided for each analyte type (i.e. VOCs, SVOCs, metals, etc.) are listed in Table 4-2. These criteria may vary with the analytical method utilized by the laboratory. These criteria comply with the guidance recommended in Section 2.0 above.

5.0 DATA VALIDATION QUALIFIERS

The letter qualifiers (flags) used to define data usability are described briefly below. These letters are assigned by the data validator to analytical results having questionable accuracy and/or precision as determined by reviewing the laboratory QC data associated with the analytical results.

TABLE 4-1

Guidance Used For Validating Laboratory Analytical Data

Analyte Group	Guidance	Date
Metals (ICP-AES)	USEPA SOP HW-3a, Rev. 1	September 2016
Metals (Hg & CN)	USEPA SOP HW-3c, Rev. 1	September 2016
Volatile Organic Compounds (by Methods 8260B & 8260C)	USEPA SOP HW-24, Rev. 4	September 2014
Semi-Volatile Organic Compounds (by Method 8270D)	USEPA SOP HW-22 Rev. 5	December 2010
Pesticides (by Method 8181B)	USEPA SOP HW-44, Rev. 1.1	December 2010
Chlorinated Herbicides (by Method 8151A)	USEPA SOP HW-17, Rev. 3.1	December 2010
Polychlorinated Biphenyls (PCBs)	USEPA SOP HW-37A, Rev. 0	June 2015
Volatile Organic Compounds (Air) (by Method TO-15)	USEPA SOP HW-31, Rev. 6	September 2016
Per- and PolyFluoroAlkyl Substances (PFAS)	* NYSDEC ** US Dept. of Defense	January 2021 November 2022
Radiological Analysis		
Uranium	USEPA Method 908.0	June 1999
Radium-226	USEPA Method 903.1	1980
General Chemistry Parameters	per NYSDEC ASP	July 2005

Canister Certification	Sample Specific Yield
Instrument Tuning	Required Detection Limit
Initial Calibration and Instrument Performance	Laboratory Control Sample
	Matrix Spikes
Daily Calibration	Method Blank
Blanks	Instrument Calibration
Lab Control Sample	
Field Duplicate	

The laboratory may also use various letters and symbols to flag analytical results generated when QC limits were exceeded. The meanings of these flags may differ from those used by the independent data validator. Those used by the laboratory are provided with the analytical results.

NOTE: The assignment of data qualifiers by the data reviewer (validator) to laboratory analytical results should not necessarily be interpreted by the data user as a measure of laboratory ability or proficiency. Rather, the qualifiers are intended to provide a measure of data accuracy and precision to the data user, which, for example, may provide a level of confidence in determining whether or not standards or cleanup objectives have been met.

U The analyte was analyzed for but was not detected at or above the sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the *approximate* concentration of the analyte in the sample. (The magnitude of any ± value associated with the result is not determined by data validation).

J+ The result is an estimated quantity and may be biased high.

J- The result is an estimated quantity and may be biased low.

UJ The analyte was analyzed for but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

R The sample result is rejected (i.e., is unusable) due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

The validated analytical results are attached to this report. Validation qualifiers (flags) are indicated in red print. Data sheets having qualified data are signed and dated by the data reviewer.

6.0 RESULTS OF THE DATA REVIEW

The results of the analytical data review are summarized in Table 6-1. The table lists the samples where QC criteria were found to exceed acceptable limits and the actions taken to qualify the associated analytical results.

7.0 TOTAL USABLE DATA

For SDG 26D0086, ten samples were analyzed and results were reported for 750 analytes. Even though some results were flagged with a "J" as estimated, all results (100 %) are considered usable. See the summary table for the analyses that have been rejected and qualified and the associated QC reasons.
