Appendix F - Institutional and Engineering Controls Certification Form

### SECTION 1.0 INTRODUCTION

C&S Engineers, Inc., on behalf of our client Pioneer Midler Avenue, LLC, submits this third Annual Periodic Review Report for the site known as Midler City Industrial Park - Site No. C734103.

### Historical Background

The site encompasses approximately 22 acres and is located in the eastern portion of the City of Syracuse, as shown on Figure 1. Historically the site was the home to the Prosperity Laundry Equipment Company, a premier manufacturer of commercial laundry and dry cleaning equipment. Currently a Lowe's home center and a branch of State Employees Federal Credit Union (SEFCU) occupy much of the site. However, there are vacant outparcels which remain available for development.

During the Remedial Investigation (RI) and demolition activities that occurred in 2004-2006, areas impacted by petroleum and chlorinated volatile organic compounds were discovered. The main chlorinated volatile organic compounds (CVOCs) found at the site included tetrachloroethene (PCE), trichloroethene (TCE), vinyl chloride (VC), cis-1,2-dichloroethene (cis-1,2-DCE), and trans-1,2-dichloroethene (trans-1,2-DCE).

Excavation and offsite disposal were the means to manage petroleum impacted soil discovered during demolition and site work activities. Additionally, an Interim Remedial Measure (IRM) was conducted from November 2006 through early October 2007 to remove CVOCs from four source areas identified during the RI. The technology adopted to remove CVOCs was in-situ thermal desorption also known as ISTD. ISTD treatment of approximately 16,210 cubic yards, removed over 86,000 pounds of CVOCs which were treated on site via thermal oxidation. Further information regarding remedial efforts is presented in the IRM report prepared by C&S and dated December 2007.

Given the following information about the site, the final remedy selected for the site was Monitored Natural Attenuation (MNA) using a protocol established by the United States Environmental Protection Agency (USEPA):

- The presence of soils with high organic content (10.8% average);
- Nature of CVOCs;
- 40 years of site inactivity;
- Evidence of reductive dechlorination;
- Inorganic characteristics of groundwater including ORP, methane/ethane/ethane concentrations; and,
- The presence of *Dehalococcoides*.

### Effectiveness of the Remedial Program

Data and discussion presented in this report confirm that CVOCs in groundwater continue to decrease. Current concentrations are well below those observed at the commencement of the Remedial Investigation and ensuing in-situ thermal treatment of significant source areas, and, with one exception (MW-10D), have declined significantly since the end of the cool-down period (assumed to be December 2008). The decrease in contaminant levels in most wells, combined with the lines of evidence associated with reductive dechlorination, indicate that MNA continues to be the appropriate remedial technology for site groundwater.

### <u>Compliance</u>

There are no areas of non-compliance regarding the major elements of the Site Management Plan that require corrective measures.

### **Recommendations**

Based on the progress of CVOC attenuation observed thus far in the program, the New York State Department of Environmental Conservation (NYSDEC) Region 7 office, in a letter dated September 14, 2010 has agreed to reduce the frequency of groundwater sampling and analysis to twice per year, with those events occurring in Spring and Fall 2011. That same letter also allowed the deletion of monitoring well MW-2D from the sampling program. A copy of that letter is shown in Appendix A. Implementation of the modified groundwater monitoring program will occur in 2011 with full annual reporting as specified in the December 2007 *Remedial Work Plan, Site Management Plan* and, as required by the Brownfield Cleanup Agreement for the site.

Relative to industrial controls and institutional controls (ICs/ECs) for the site, no changes are recommended.

### SECTION 2.0 SITE OVERVIEW

The Midler City Industrial Park site encompasses approximately 22 acres and is located in the eastern portion of the City of Syracuse, as shown on Figure 1. Further detail concerning the property boundary is shown on Figure ASB-01 in the December 2007 *Final Engineering Report* for the site.

Developed as an industrial facility in the late nineteenth century and utilized as such through the mid-twentieth century, the Midler City Industrial Park is relatively flat and is bounded as follows:

- North by Interstate Route 690.
- East by undeveloped property owned by Sutton Investing Corporation.
- South by property owned by CSX Transportation.

• West by Midler Avenue.

The site was one of the last undeveloped accessible tracts of land adjacent to the highly urbanized Erie Boulevard corridor. Currently, a Lowe's home center and a branch of SEFCU occupy much of the site. Vacant outparcels remain available for development.

During the RI and demolition activities that occurred in 2004-2006, areas impacted by petroleum and chlorinated volatile organic compounds were discovered. The nature of chlorinated volatile organic compounds (CVOCs) found at the site included tetrachloroethene (PCE), trichloroethene (TCE), vinyl chloride (VC), cis-1,2-dichloroethene (cis-1,2-DCE), and trans-1,2-dichloroethene (trans-1,2-DCE). The occurrence of CVOCs was found within the marl and peat and extended to depths of approximately 26 feet below ground surface. The source of the CVOCs is attributed to past manufacturing and or waste management practices of the former Prosperity Laundry Equipment Company. No.6 fuel oil and other petroleum hydrocarbons were discovered during earthwork where several underground storage tanks were once present for the boiler house and beneath certain floor slabs of the manufacturing complex where equipment was once located. Those areas of petroleum impacted media were consistent with TAGM 4046/STARS which was in effect at the time the work was completed.

An IRM was conducted from 2006-2007 to remove CVOCs from four source areas identified during the RI. The technology adopted to remove CVOCs was in-situ thermal desorption also known as ISTD. The smallest of the four source areas ("B-5" Area) was first excavated and the impacted materials were placed within the two largest areas ("B-1" and "B-3" Areas) for CVOC removal via ISTD. The layout of the ISTD system in each of the source areas is shown on the figure prepared by TerraTherm (ISTD provider) which is attached to this report. Based upon the high organic content of subsurface soils (10.8% average), a site specific soil clean-up objective of 31,200  $\mu$ g/kg total CVOCs was established consistent with TAGM 4046 guidance (which was in affect at the time of the IRM) for calculating such objectives. As a result of the ISTD treatment, approximately 86,000 pounds of CVOCs were removed from the subsurface and treated on site via thermal oxidation. Further information regarding remedial efforts is presented in the December 2007 IRM report prepared by C&S.

Given: the significant source removal effort; presence of soils with high organic content (10.8% average); nature of CVOCs; over 40 years of site inactivity; evidence of reductive dechlorination; inorganic characteristics of groundwater including ORP, methane/ethane/ethane concentrations; and, the presence of *Dehalococcoides;* the final remedy selected for the site relative to groundwater was Monitored Natural Attenuation (MNA) using protocol established by the United States Environmental Protection Agency (USEPA). The groundwater MNA program commenced in 2008 and was documented in a series of quarterly data reports since that time. Evaluation of the data has been presented in reports to the NYSDEC entitled *First Annual Site Monitoring Report* (February 2009) and *Second Annual Periodic Review Report* (April 2010) both of which were prepared by C&S. The quarterly groundwater monitoring program continued through the third quarter of 2010 with results transmitted to NYSDEC Region 7 on a regular basis. As noted previously, a letter from NYSDEC Region 7 dated September 14, 2010

allowed a modification to the groundwater monitoring program. No other changes during the year 2010 have occurred.

The collected samples were subjected to a variety of laboratory analyses associated with MNA including inorganic parameters, microbial indicators, and contaminant concentration. The resultant data were examined for evidence indicating overall reduction of contaminant levels and further evaluated relative to the calculation of rate constants using USEPA protocol.

Groundwater quality data (relative to chlorinated compounds) for each of the wells are presented on tables shown in Appendix B-1. Analytical results for the MNA parameters are shown on the table that is Appendix B-2 of this report. Appendix B-3 includes the groundwater contour maps for each sampling event completed in 2010.

# SECTION 3.0 EVALUATION OF REMEDY PERFORMANCE, EFFECTIVENESS, AND PROTECTIVENESS

### Natural Attenuation Parameters

Appendix B-1 and Appendix B-2 contain tables that summarize the data collected from the monitoring wells since February 2008 and in some instances as far back as 2005. Elevated groundwater temperatures recorded during the first year after the shutdown of the ISTD system were determined to be the result of the heating process which had a duration of approximately 11 months. The Remedial Work Plan issued in December 2007 established that the cool-down period would be considered complete when the range of groundwater temperatures recorded at the monitoring wells stabilized to within five degrees Fahrenheit (F) of each other. The 2010 data revealed that monitoring wells MW-2D, 9D, 10D and 15D were consistently within five degrees F of each other. However, MW-13D, MW-14D and MW-16D were typically the warmest wells. The widest spread of temperatures were seen at MW-14D in March 2010, when that well was 9.63 degrees F warmer than MW-15D which had a recorded temperature of 49.55 degrees F. In June 2010, all the wells were approximately 5.22 degrees F of each other except for MW-16D which 6.66 degrees warmer than MW-9D which was the coldest well at 54.32 degrees F. A review of the October 2010 temperature data revealed that MW-13D was 9.45 degree F warmer than the coldest well, MW-15D where a temperature of 60.46 degrees F was recorded. Although the June 2010 data suggest that the cool down period has run its course, there remain fluctuations.

Other parameters of interest during 2010 include:

- ORP The ORP measurements generally remain at levels exceeding -300 mV. The exception is MW-2D where -272 mV was recorded in June 2010 and at MW-16 where a value of -291 mV was recorded in October 2010. Regardless, values larger than -100 mV are indicative of an environment that is conducive to support reductive dechlorination.
- Dissolved Oxygen Other than limited instances, the presence of dissolved oxygen in each of the monitoring wells continues to be essentially non-existent and indicative of a reducing environment.

- Methane Concentrations of 3 mg/l or less were recorded during 2010 in MW-2D, MW-9D, and MW-10D. Concentrations exceeding 9 mg/l are consistent in the remaining four wells.
- Sulfate In MW-2D, MW-9D, MW-10D, and MW-15D concentrations exceeding 320 mg/l were recorded in 2010. Lower concentrations ranging from 12 mg/l to 156 mg/l were found in wells MW-13D, MW-14D, and MW-16D, which is a similar range to that recorded during 2009. According to USEPA MNA guidance, sulfate in excess of 20 mg/l may cause competitive exclusion of dechlorination. However, in many plumes with high concentrations of sulfate, reductive dechlorination still occurs. Based on CVOC data collected at the Midler Avenue site, it would appear the reductive dechlorination is occurring.
- Dehalococcoides (Dhc) Meaningful concentrations (exceeding 1 x10<sup>7</sup> gene copies per liter of this microbe were found during 2010 in MW-10D, MW-13D, and MW-14D and to a lesser extent in MW-16D. The most notable increase in the estimated percentage (%) of Dhc within the overall microbial population for a given sample was at MW-13D where the estimated percent of Dhc increased from the 2-7% range in March 2010 to an estimated range of 22-52% in June and then declined to 9-25% in October 2010. This variation appears to coincide with the observed increase and subsequent decrease in the concentration of cis-1,2-DCE and VC during the same time period.
- Vinyl chloride reductase (vcrA) As the occurrence of Dhc decreases so does vcrA. The variation of vcrA in MW-13D was similar as noted above for Dhc in MW-13D.

### **Evaluation Of Rate Constants**

The February 2009 *First Annual Site Monitoring Report* developed rate constants from cooldown period data which were determined to be of minimal relevance with respect to long-term natural attenuation trends. The USEPA instructs in that, to make a statistically valid projection of the rate of monitored natural attenuation, monitoring periods of at least three years should be considered. With data from ten sampling events since 2008 (which includes data from the cool down period) we offer the following observations and calculations regarding the apparent rate of CVOC reduction at each of the site monitoring wells during the 988 day period extending from February12, 2008 through October 26, 2010.

### **Concentration Versus Time Rate Constants**

The following discussion refers to first order rate constants derived from a comparison of individual CVOC analytical results for each monitoring well from the initial (February 12, 2008) post-treatment monitoring event through most recent sampling event (October 26, 2010). In this evaluation we considered all of the data points since 2008 to see if a "best fit" linear relationship was evident. These data include the "cool down" points, which were previously ignored in the evaluation for the 2009 PRR. By using all the data points, there was much scatter and in some instances the resultant trend line suggested that concentrations of certain CVOCs were increasing. Nevertheless, groundwater quality has generally improved and at certain wells, detected CVOCs do not exceed Class GA Groundwater Standards.

The following is an evaluation of rate constant trend lines; these will become more statistically valid as more data are generated.

**MW-2D** - Since the CVOCs of interest have been reported at estimated concentrations below their respective NYSDEC Class GA Standards and, the September 2010 letter from NYSDEC Region 7 removed this well from future sampling, an evaluation of the data relative to first order rate constants was not performed.

**MW-9D** - Trans-1.2.DCE and cis-DCE have both been reported at estimated concentrations less than the Class GA groundwater standard of 5  $\mu$ g/l since October 2008. Given the data, further evaluation of first order rate constants for these two CVOCs was not performed. For vinyl chloride, the concentration declined from 4  $\mu$ g/l in February 2008 to 3.5  $\mu$ g/l in October 2010. This resulted in a trendline that suggests the Class GA groundwater standard of 2  $\mu$ g/l would be met in approximately six years.

**MW-10D** - The data indicate a positive slope for vinyl chloride over the monitoring period, as the concentration of that compound increased from 96  $\mu$ g/l in February 2008 to 140  $\mu$ g/l in October 2010. However, the October 2010 concentration of vinyl chloride is lower than the reported concentration of 170  $\mu$ g/l in December 2009. Also cis-1,2-DCE data resulted in a positive slope since there was an increase from 200  $\mu$ g/l in February 2008 to 290  $\mu$ g/l in October 2010. For trans-1,2-DCE, a decline from 16  $\mu$ g/l to 14  $\mu$ g/l indicates a theoretical time to achieve the 5  $\mu$ g/l Class GA standard of approximately nine years.

**MW-13D** – Vinyl chloride concentrations declined from 3,100  $\mu$ g/l in February 2008 to 510  $\mu$ g/l in October 2010. However when all the data are plotted, including the spike in the concentration of vinyl chloride seen in the March 2010 event (7400  $\mu$ g/l as compared to to 760  $\mu$ g/l in December 2009), this creates a positive slope.

Cis-1,2-DCE concentrations declined from 430  $\mu$ g/l to 260  $\mu$ g/l during the same February 2008 through October 2010 timeframe. Similar to vinyl chloride, a spike in concentration occurred in March 2010, followed by decreases in the June and October 2010 sampling events. Given that spikes of both cis-1,2-DCE and vinyl chloride were followed by concentration decreases in two consecutive sampling events, it would appear that improvements to groundwater quality should be seen in 2011. This "positive slope" condition appears to be a function of a small data set generated during a short time frame.

Trans-1,2-DCE concentrations declined from 36  $\mu$ g/l to 8.3  $\mu$ g/l during the same time period which resulted in a theoretical "Time to Meet Standard" of approximately five years. With regard to PCE and TCE, both of these compounds were less than their respective Class GA Groundwater Standards for the June and October 2010 sampling events and, as such, no further evaluation of the data relative to prediction of "Time to Meet Standards" was performed.

**MW-14D** - Since March 2010 concentrations of both cis-1,2-DCE and trans-1,2-DCE, as well as PCE and TCE, have declined to less than the Class GA Groundwater Standard (5  $\mu$ g/l) for all of these compounds. VC concentrations have declined from 12,000  $\mu$ g/l to 3..6  $\mu$ g/l during the

period from February 2008 through October 2010, resulting in a theoretical time of approximately two to three years to achieve the  $2 \mu g/l$  Class GA Standard for that compound.

**MW-15 and MW-16D** - No meaningful rate constant needs to be established for these wells since the CVOC concentrations have declined to levels that are less than their respective Class GA groundwater Standards.

The above data illustrates some of the limitations of utilizing small data populations collected during a relatively short term. However, the ability of the analytical laboratory to attain generally lower detection limits during 2010 (compared to 2009 and 2008) has improved the ability to evaluate the data and develop rate constants. In some instances these lower detection limits document that specific CVOCs are not present above their respective Class GA Groundwater Standard which is the case at MW-14D. As the MNA program progresses and CVOC concentrations decline via the attenuation processes, the lab will be asked to provide even lower detection limits starting with the first sampling event in 2011.

### **Conclusions and Recommendations**

Data and discussion presented in the preceding text and accompanying data tables confirm that CVOCs in groundwater continue to decrease. Current concentrations are well below those observed at the commencement of the RI and ensuing in-situ thermal treatment of significant source areas and with one exception (MW-10D), have declined significantly since the end of the cool-down period (assumed to be December 2008). The decrease in contaminant levels (in most wells) combined with the lines of evidence associated with reductive dechlorination, indicate that MNA continues to be the appropriate remedial technology for site groundwater.

Based on the progress of CVOC attenuation observed thus far in the program, implementation of the semiannual groundwater sampling routine, approved by NYSDEC Region 7 and as documented in the Department's letter shown in Appendix A of this PRR will be performed. Full annual reporting for calendar year 2011, as specified in the December 2007 *Remedial Work Plan* and *Site Management Plan*, as well as the conditions of the Brownfield Cleanup Agreement for the site, will be completed during the first quarter of 2012.

### SECTION 4.0 IC/EC PLAN COMPLIANCE REPORT

Residual subsurface contamination remains after completion of the IRM performed under the BCP. Engineering Controls (ECs) have been incorporated into the site remedy to provide proper management of this contamination in the future to ensure protection of public health and the environment. A site-specific Environmental Easement has been recorded with the Onondaga County Clerk that provides an enforceable means to ensure the continued and proper management of residual contamination and protection of public health and the environment. It requires strict adherence to all Engineering Controls and all Institutional Controls placed on this Site by NYSDEC by the grantor of the Environmental Easement and any and all successors and assigns of the grantor.

### Site Specific Engineering Controls

As described in the December 2007 Site Management Plan (SMP), as approved by NYSDEC, the following site specific ECs have been implemented.

*Sub-slab depressurization systems (SSDSs)* - SSDSs have been installed and maintained on both the Lowe's home center and SEFCU branch buildings. A site plan showing the location of the monitoring points for each building is provided in Appendix C of this report. Inspection of the systems is performed on a regular basis by Pioneer Midler Avenue, LLC as documented on the forms shown Appendix C of this PRR. No operational problems occurred with the systems during calendar year 2010.

If in the future additional buildings are constructed on the site, similar type SSDS will be designed, installed, and maintained. The designs and system performance requirements will be in accordance with applicable regulations and/or guidance.

*Public water supply* - The site and surrounding properties receive their domestic water from municipal service connections supplied by the City of Syracuse. The source of the municipal water supply is surface water from Skaneateles Lake, Otisco Lake, and Lake Ontario. The Lowe's home center and SEFCU branch are connected to and obtain potable water from the municipal water supply described above. Currently there are no other buildings or users of water on the site.

*Paved and concrete surfaces* -- To the extent reasonable, surfaces outside of the building footprints were paved or covered with conventional asphalt or concrete. Areas beneath the asphalt and/or concrete pavement have received one foot of clean Type 1 or 2 crushed limestone from an approved quarry (i.e., T. H. Kinsella, Hansen). Areas beyond the footprint of the buildings and limits of paved areas received either a combination of clean crushed limestone fill, and/or clean topsoil to a depth of one foot. The clean crushed limestone fill and/or topsoil has been maintained to avoid direct contact with pre-existing urban fill material and native soils. As required by the Site Management Plan Pioneer Midler Avenue, LLC performs a visual inspection of the site twice each year. Those inspections completed during 2010 are documented on the forms shown in Appendix D of this PRR.

### Site-Specific Institutional Controls

As described in the December 2007 Site Management Plan (SMP), as approved by NYSDEC, the following site specific ICs have been implemented.

*Environmental Easement* - Pioneer has granted the NYSDEC an environmental easement for the Site to ensure that use restrictions or engineering controls remain in place and will be binding to future owners and lessees, or until modified, extinguished, or amended by a written instrument executed by the Commissioner of the NYSDEC. No changes to the Environmental Easement have occurred during 2010.

*Groundwater Use Restriction* - The use or discharge of untreated groundwater for any purpose will not be permitted at the Site. As stated under the Engineering Controls, each building is connected to City of Syracuse municipal water supply.

*Soil Management Plan* - A site specific Soil Management Plan (SoMP) dated December 2007 has been approved by NYSDEC and has been implemented at this Site. The objective of the SoMP is to set guidelines for management of soil material during any future activities which would breach the cover system at the site. There have been no excavation, construction or dewatering activities completed during 2010.

During 2009 NYSDEC Region 7 allowed excess spoils (consisting of urban fill) that were generated during earthwork for a new office building on a site in downtown Syracuse owned by the Pioneer Companies and known as Washington Station, to be transported to and temporarily staged at the Midler City Industrial Park Site. Those excess spoils were assessed relative to suitability for re-use at the Midler City Industrial Park Site. In response to a letter issued by NYSDEC Region 7 dated April 27, 2010, Pioneer Midler Avenue, LLC retained Paragon Environmental Services, Inc. to transport approximately 4,188 tons of staged soil for disposal at the City of Auburn Landfill during May and June 2010. Those materials associated with Soil Pile #1 and Soil Pile #4, were allowed to remain on site by NYSDEC Region 7 to Pioneer Midler Avenue, LLC is shown in Appendix E-1 and copies of the transport and disposal documentation are shown in Appendix E-2 of this PRR.

### **Recommendations**

Relative to the SoMP, no changes to the plan are recommended for 2011.

### SECTION 5.0 MONITORING PLAN COMPLIANCE REPORT

The December 2007 *Monitoring Plan* and the December 2007 *Remedial Work Plan*, both approved by NYSDEC, described the measures for evaluating the performance and effectiveness of Monitored Natural Attenuation (MNA). The elements of these plans, relative to groundwater monitoring consisted of quarterly sampling and laboratory analysis for chlorinated volatile organic compounds via EPA Method 8260. Additionally, each sample was further evaluated for the following parameters:

- ORP
- Temperature
- pH
- Dissolved oxygen
- Ferric iron
- Ferrous iron
- Total Iron

- Sulfate
- Sulfide
- Dissolved Organic Carbon
- Dissolved Inorganic Carbon
- Dissolved methane
- Dissolved ethene
- Dissolved ethane
- Microbial analysis to determine presence and concentration of Dhc populations and gene analysis to determine presence/concentrations of Dhc capable of dechlorinating vinyl chloride to ethene

Groundwater data (quality and water levels) were tabulated and entered into the cumulative summary tables after each quarterly sampling event. That information, accompanied by a Data Usability Summary Report (DUSR) and groundwater contour map, was submitted to NYSDEC Region 7 for the sampling events completed in March, June, and October 2010. As noted earlier in this PRR, NYSDEC Region 7 has approved a modification to the sampling frequency and deleted the need to sample the monitoring wells in December 2010. The September 2010 approval letter is shown in Appendix A. The cumulative groundwater data tables (quality and MNA) are shown in Appendix B-1 and Appendix B-2 respectively of this PRR. Also, groundwater contour maps for each sampling event are shown in Appendix B-3.

Further discussion of the results obtained during 2010 relative to remedial objectives, evidence of reductive dechlorination, and recommended changes to the MNA program are presented in Section 3 of this PRR.

### <u>Conclusion</u>

The semiannual groundwater sampling as approved by NYSDEC Region 7 in the Department's letter (shown in Appendix A) will be implemented in 2011.

### SECTION 6.0 OPERATION & MAINTENANCE PLAN

The December 2007 *Operation and Maintenance Plan* for the site, which was approved by NYSDEC, describes the measures necessary to operate and maintain mechanical components of the SSDS systems installed at each of the buildings. The *Operation & Maintenance Plan* included a description of visual inspections to be conducted to document the condition of the exterior paved surfaces.

### SSDS Operation and Maintenance

During 2010 verification of normal operating status was conducted on an approximately weekly basis. This verification, performed by Pioneer Midler Avenue, LLC, is by visual observation of the magnehelic gauge attached to each discharge stack. These observations are recorded and kept on file. Copies of the inspection forms for 2010 are presented in Appendix C of this PRR.

Routine maintenance is performed every 12 months and includes:

- Visual inspection of above grade components
- Verification that no building intakes have been added within ten feet of the SSDS ventilation stacks
- Verification that floor penetrations are not leaking and if leaks are detected appropriate repairs are to be completed.

As appropriate, preventative maintenance, repairs, and/or adjustments will be made to the system to ensure its continued effectiveness. If significant changes are made to building, the system will be modified and/or expanded to properly ensure the system is functioning properly.

No operational problems have occurred with the systems installed at the SEFCU branch and Lowe's home center during 2010.

### Pavement and Concrete Surfaces

All paved and concreted surfaces are maintained such that extensive perforations or cracks are sealed or repaired on an on-going basis. The Property Manager performs a semiannual inspection of the cover system. Documentation of the visual inspections performed in 2010 is presented in Appendix D of this PRR.

### **Conclusion**

Based on the information gathered during 2010, it is our opinion that no changes in the Operation and Maintenance Plan should be implemented for calendar year 2011.

### SECTION 7.0 OVERALL PRR CONCLUSIONS AND RECOMMENDATIONS

### **Compliance with Site Management Plan**

During calendar year 2010, all the requirements of the *Site Management Plan* prepared in 2007 were satisfied and no changes or modifications are contemplated at this time, except for the frequency of groundwater sampling and analysis, as agreed to by NYSDEC Region 7 in September 2010, as noted in Section 1 of this PRR.

During 2009, NYSDEC Region 7 allowed, excess spoils (consisting of urban fill) that were generated during earthwork for a new office building on a site in downtown Syracuse owned by Pioneer and known as Washington Station, to be transported to and temporarily staged at the Midler City Industrial Park Site. Those excess spoils were assessed relative to suitability for re-use at the Midler City Industrial Park Site. In response to a letter issued by NYSDEC Region 7 dated April 27, 2010, Pioneer Midler Avenue, LLC retained Paragon Environmental Services, Inc. to transport approximately 4,188 tons of staged soil for disposal at the City of Auburn

Landfill during May and June 2010. Those materials associated with Soil Pile #1 and Soil Pile #4 were allowed to remain on site by NYSDEC Region 7 and subsequently placed into the "surcharge pile" situated north of the SEFCU building and west of the Lowe's home center. A copy of the April 27, 2010 letter from NYSDEC Region 7 to Pioneer Midler Avenue, LLC is shown in Appendix E-1 and copies of the transport and disposal documentation is shown in Appendix E-2 of this PRR.

#### Performance and Effectiveness of the Remedy

Data and discussion presented in Section 3 of this PRR confirm that CVOCs in groundwater continue to decrease. Current concentrations are well below those observed at the commencement of the Remedial Investigation and ensuing in-situ thermal treatment of significant source areas, and, with one exception (MW-10D), have declined significantly since the end of the cool-down period (assumed to be December 2008). The decrease in contaminant levels (in most wells) combined with the lines of evidence associated with reductive dechlorination, indicate that MNA continues to be the appropriate remedial technology for site groundwater.

Based on the progress of CVOC attenuation observed thus far in the program, C&S will implement the semiannual groundwater sampling and analysis program agreed to by NYSDEC Region 7 in the Departments letter shown in Appendix A of this PRR. Full annual reporting of calendar year 2010, as specified in the December 2007 *Remedial Work Plan* and *Site Management Plan* as well as the conditions of the Brownfield Cleanup Agreement for the site will be completed during the first quarter of 2012..

### Future PRR Submittals

No change in PRR submittal frequency is recommended for this site. As such the next PRR for calendar year 2011 will be issued during the first quarter of 2012.

## **APPENDIX** A

## SEPTEMBER 14, 2010 LETTER CONCERNING REDUCTION OF GROUNDWATER SAMPLING FREQUENCY

### New York State Department of Environmental Conservation

Division of Environmental Remediation, Region 7

615 Erie Boulevard West, Syracuse, New York 13204-2400 **Phone:** (315) 426-7551 • **Fax:** (315) 426-7499 **Website:** <u>www.dec.ny.gov</u>

September 14, 2010

Mr. Jed Schneider Pioneer Midler Avenue, LLC 250 South Clinton Street, Suite 200 Syracuse, New York 13202-1258

Re: Midler City Industrial Park Site No. C734103 Groundwater Sampling Frequency

Dear Mr. Schneider:

The New York State Department of Environmental Conservation (NYSDEC) has reviewed your August 3, 2010 letter requesting that the groundwater sampling frequency be reduced from quarterly to bi-annually (spring and fall). This request is hereby approved. In addition, based on the analytical data (i.e. non-detect levels of contaminants of concern since 2005), MW-2D can be removed from the list of wells sampled.

Respectfully,

.o0

Karen A. Cahill Project Manager Division of Environmental Remediation

<sup>(1)</sup> = Correction factor applied to correct for non-specific PCR amplification products.

(2) = Dehalococcoides DNA detected but below sample specific quantitation limit. Tha sample specific quantitation limit is 4 x 10<sup>2</sup>/liter. Additional explanation provided in: Interpretation of Quantitative Gene-Trac Dehalococcoides Test Results.

(3) = Dehalococcoides DNA detected but below sample specific quantitation limit. The sample specific quantitation limit is 5 x 10<sup>3</sup>/liter. Additional explanation provided in: Interpretation of Quantitative Gene-Trac Dehalococcoides Test Results.

<sup>(4)</sup> = vcrA DNA detected but below sample specific quantitation limit.

NS = Not Sampled.

NA = Not applicable as Dehalococcoides or vcrA DNA not detected.

ND <sup>(1)</sup> = Not Detected. The quantitation limit is  $7 \times 10^3$ /liter

ND  $^{(2)}$ = Not Detected. The quantitation limit is 4 x 10<sup>3</sup>/liter

ND<sup>(3)</sup>= Sample inhibited testing; this increases the probability that test result is a false negative.

NR = Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

Inconclusive = Inconclusive results may indicate extremely low concentrations of Dehalococcoides DNA or vcrA DNA at or below the sample specific quantitation limit (4 x 10<sup>3</sup>/liter), however, test results were insufficient to assign a conclusive positive result for this sample.

## **APPENDIX E-1**

APRIL 27, 2010 LETTER FROM NYSDEC REGION 7 TO PIONEER COMPANIES CONCERNING WASHINGTON STATION SPOILS STAGED AT MIDLER CITY INDUSTRIAL PARK

### New York State Department of Environmental Conservation

Spill Prevention and Response, Region 7 615 Erie Boulevard West, Syracuse, New York 13204-2400 Phone: (315) 426-7519 • Fax: (315) 426-2653 Website: www.dec.ny.gov

April 27, 2010

Mr/Jed Schneider Pioneer Companies 250 S. Clinton Street Syracuse, NY 13202

#### Re: Midler Site No. C734103 Washington Station Spoils

Dear Mr. Schneider:

This letter is in response to your April 23, 2010 email requesting approval for disposal of soil from the upper 2 feet of the designated parking lot area at Washington Station. Data provided to DEC for this material indicates that it meets the Unrestricted Use Soil Cleanup Objectives (SCOs) per Part 375-6, therefore there are no restrictions on its use and/or ultimate disposal.

In addition, per Mary Jane Peachey's March 26 and April 21, 2010 emails, data provided to DEC for spoils currently staged at the Midler site in Soil Piles #2 and 3 indicate that various contaminants exceed the Part 375-6 Restricted Use Protection of Groundwater SCOs, therefore this material cannot be disposed of at the Camillus Landfill. These spoils must be properly disposed of at a permitted Part 360 facility. Soil Piles #1 and 4 can remain at the Midler site.

Please contact me at 315-426-7432 if you have any questions.

Sincerely,

oren Cahell

Karen A. Cahill Project Manager

cc: M.J. Peachey, DEC T. Annal, DEC

ars of stewardship 1970-2010

Alexander B. Grannis Commissioner

## INSTITUTIONAL AND ENGINEERING CONTROLS CERTIFICATION FORM

8.1

#### Enclosure 1 NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION Site Management Periodic Review Report Notice Institutional and Engineering Controls Certification Form

Si	te No.	Site Details C734103	Box 1	
	-	dler City Industrial Park		
Cit Cc	e Address: 6 ty/Town: Syl punty: Onond te Acreage: 2	laga		
Re	porting Peric	od: March 01, 2010 to March 01, 2011		
			YES	NO
1.	Is the inforr	mation above correct?		
	If NO, inclu	de handwritten above or on a separate sheet.		
2.	Has some o tax map arr	or all of the site property been sold, subdivided, merged, or undergone a nendment during this Reporting Period?		
3.		peen any change of use at the site during this Reporting Period RR 375-1.11(d))?		
4.	Have any fe for or at the	ederal, state, and/or local permits (e.g., building, discharge) been issued e property during this Reporting Period?		
	lf you ansv that docun	wered YES to questions 2 thru 4, include documentation or evidence nentation has been previously submitted with this certification form.		
5.	Is the site c	currently undergoing development?		X
			Box 2	****
			YES	NO
6.		nt site use consistent with the use(s) listed below? al and Industrial		
7.	Are all ICs/	ECs in place and functioning as designed?		
	IF TH	IE ANSWER TO EITHER QUESTION 6 OR 7 IS NO, sign and date below a DO NOT COMPLETE THE REST OF THIS FORM.	nd	
1	Hau	easures Work Plan must be submitted along with this form to address the submitted along with the submitted along with this form to address the submitted along with the submitted a	ese issi	ues.

#### Parcel: 033.1-01-01.3

The Controlled Property may be used for commercial use as long as the following long-term engineering controls are employed:

(i) compliance with the Department-approved Site Management Plan ("SMP") for the implemented remedy until the remedial goals for the Controlled Property are attained or deemed complete by the Department;

(ii) maintenance at a minimum of a one foot cover system or a six inch pavement system or buildings over the Site and any disturbance of or excavation from the Site cover system at depths greater than the one foot shall be done in accordance of the requirements of the SMP;

(iii) the groundwater beneath the Controlled Property cannot be used as a potable water source or for any other use without prior written permission of the Department and the pumping and discharge of groundwater to the waters of the State shall not be allowed without appropriate treatment and approval of the governing State, County or Municipal authority;

(iv) continued groundwater monitoring in accordance with the SMP until the Department determines that such monitoring is unnecessary;

(v) installation and maintenance in accordance with the standards and procedures specified in the SMP of subslab depressurization ("SSD") systems for all buildings and building additions to be constructed on the Site and the continued operation and maintenance in accordance with the SMP of those SSD systems already installed on the Site;

#### Parcel: 033.1-01-01.4

The Controlled Property may be used for commercial use as long as the following long-term engineering controls are employed:

(i) compliance with the Department-approved Site Management Plan ("SMP") for the implemented remedy until the remedial goals for the Controlled Property are attained or deemed complete by the Department;

(ii) maintenance at a minimum of a one foot cover system or a six inch pavement system or buildings over the Site and any disturbance of or excavation from the Site cover system at depths greater than the one foot shall be done in accordance of the requirements of the SMP;

(iii) the groundwater beneath the Controlled Property cannot be used as a potable water source or for any other use without prior written permission of the Department and the pumping and discharge of groundwater to the waters of the State shall not be allowed without appropriate treatment and approval of the governing State, County or Municipal authority;

(iv) continued groundwater monitoring in accordance with the SMP until the Department determines that such monitoring is unnecessary;

#### Control Description for Site No. C734103

#### Parcel: 033.1-01-01.5

The Controlled Property may be used for commercial use as long as the following long-term engineering controls are employed:

(i) compliance with the Department-approved Site Management Plan ("SMP") for the implemented remedy until the remedial goals for the Controlled Property are attained or deemed complete by the Department;

(ii) maintenance at a minimum of a one foot cover system or a six inch pavement system or buildings over the Site and any disturbance of or excavation from the Site cover system at depths greater than the one foot shall be done in accordance of the requirements of the SMP;

(iii) the groundwater beneath the Controlled Property cannot be used as a potable water source or for any other use without prior written permission of the Department and the pumping and discharge of groundwater to the waters of the State shall not be allowed without appropriate treatment and approval of the governing State, County or Municipal authority;

(iv) continued groundwater monitoring in accordance with the SMP until the Department determines that such monitoring is unnecessary;

(v) installation and maintenance in accordance with the standards and procedures specified in the SMP of subslab depressurization ("SSD") systems for all buildings and building additions to be constructed on the Site and the continued operation and maintenance in accordance with the SMP of those SSD systems already installed on the Site;

#### Parcel: 033.1-01-01.6

The Controlled Property may be used for commercial use as long as the following long-term engineering controls are employed:

(i) compliance with the Department-approved Site Management Plan ("SMP") for the implemented remedy until the remedial goals for the Controlled Property are attained or deemed complete by the Department;

(ii) maintenance at a minimum of a one foot cover system or a six inch pavement system or buildings over the Site and any disturbance of or excavation from the Site cover system at depths greater than the one foot shall be done in accordance of the requirements of the SMP;

(iii) the groundwater beneath the Controlled Property cannot be used as a potable water source or for any other use without prior written permission of the Department and the pumping and discharge of groundwater to the waters of the State shall not be allowed without appropriate treatment and approval of the governing State, County or Municipal authority;

(iv) continued groundwater monitoring in accordance with the SMP until the Department determines that such monitoring is unnecessary;

#### Control Description for Site No. C734103

#### Parcel: 033.1-01-01.7

The Controlled Property may be used for commercial use as long as the following long-term engineering controls are employed:

(i) compliance with the Department-approved Site Management Plan ("SMP") for the implemented remedy until the remedial goals for the Controlled Property are attained or deemed complete by the Department;

(ii) maintenance at a minimum of a one foot cover system or a six inch pavement system or buildings over the Site and any disturbance of or excavation from the Site cover system at depths greater than the one foot shall be done in accordance of the requirements of the SMP;

(iii) the groundwater beneath the Controlled Property cannot be used as a potable water source or for any other use without prior written permission of the Department and the pumping and discharge of groundwater to the waters of the State shall not be allowed without appropriate treatment and approval of the governing State, County or Municipal authority;

(iv) continued groundwater monitoring in accordance with the SMP until the Department determines that such monitoring is unnecessary;

#### Parcel: 033.1-01-02.4

The Controlled Property may be used for commercial use as long as the following long-term engineering controls are employed:

(i) compliance with the Department-approved Site Management Plan ("SMP") for the implemented remedy until the remedial goals for the Controlled Property are attained or deemed complete by the Department;

(ii) maintenance at a minimum of a one foot cover system or a six inch pavement system or buildings over the Site and any disturbance of or excavation from the Site cover system at depths greater than the one foot shall be done in accordance of the requirements of the SMP;

(iii) the groundwater beneath the Controlled Property cannot be used as a potable water source or for any other use without prior written permission of the Department and the pumping and discharge of groundwater to the waters of the State shall not be allowed without appropriate treatment and approval of the governing State, County or Municipal authority;

(iv) continued groundwater monitoring in accordance with the SMP until the Department determines that such monitoring is unnecessary;

#### Control Description for Site No. C734103

#### Parcel: 033.1-01-20.0

The Controlled Property may be used for commercial use as long as the following long-term engineering controls are employed:

(i) compliance with the Department-approved Site Management Plan ("SMP") for the implemented remedy until the remedial goals for the Controlled Property are attained or deemed complete by the Department;

(ii) maintenance at a minimum of a one foot cover system or a six inch pavement system or buildings over the Site and any disturbance of or excavation from the Site cover system at depths greater than the one foot shall be done in accordance of the requirements of the SMP;

(iii) the groundwater beneath the Controlled Property cannot be used as a potable water source or for any other use without prior written permission of the Department and the pumping and discharge of groundwater to the waters of the State shall not be allowed without appropriate treatment and approval of the governing State, County or Municipal authority;

(iv) continued groundwater monitoring in accordance with the SMP until the Department determines that such monitoring is unnecessary;

### Periodic Review Report (PRR) Certification Statements I certify by checking "YES" below that: 1. a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the certification; b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete. NO If this site has an IC/EC Plan (or equivalent as required in the Decision Document), for each Institutional 2. or Engineering control listed in Boxes 3 and/or 4, I certify by checking "YES" below that all of the following statements are true: (a) the Institutional Control and/or Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department; (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment; (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control; (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document. YES NO IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. A Corrective Measures Work Plan must be submitted along with this form to address these issues. Signature of Owner, Remedial Party or Designated Representative Date
