RECEIVED, subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated above which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of, said property over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the bill of lading terms and conditions in the governing classification on the date of shipment.
Shipper hereby certifies that he is familiar with all the lading terms and conditions in the governing classification and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

Rate (...) Where the rate is dependent on value, shippers are required to state specifically in writing the agreed or declared value of the property as follows: "The agreed or declared value of the property is hereby specifically stated by the shipper to be not exceeding _____ per _____."

If no amount is inserted and the shipper does not otherwise state the carrier's liability shall be limited to the extent provided by such provisions. (See NMFTA Item 168)

Bulk Commodities requiring special or additional care or attention in handling or stowing must be so marked and packaged as to ensure safe transportation. See Section 7(a) of Item 360, Bills of Lading, Freight Bills and Statements of Charges and Section 1(a) of Item 370, Contract Terms and Conditions for a list of such articles.

Hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name and are classified, packaged, marked and labeled/placarded, and are in all respects in proper condition for transport according to applicable international and national governmental regulations.

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2210519
Project Number:	2001642	**Report Date:**	03/17/22

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2210519
Project Number:	2001642	**Report Date:**	03/17/22

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2210519-23: A sample identified as "TRIP BLANK" was received, but not listed on the Chain of Custody. At the client's request, this sample was analyzed for Volatile Organics.

L2210519-24: A sample identified as "FIELD BLANK" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

The analyses performed were specified by the client.

Semivolatile Organics by SIM

The WG1611455-1 Method Blank, associated with L2210519-04, -09 and -20, has concentrations above the reporting limits for Naphthalene, Fluorene, Phenanthrene, 1-Methylnaphthalene and 2-Methylnaphthalene. The sample was re-extracted with the method required holding time exceeded and both the sample and method blank were non-detect for this target compound. The results of both extractions are reported, along with the re-extract QC. The original sample result is reported with a "B" qualifier.

The WG1611455-1 Method Blank, associated with L2210519-08, -11, and -13, has a concentration above the reporting limit for Naphthalene, Fluorene, Phenanthrene, 1-Methylnaphthalene and 2-Methylnaphthalene. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

Perfluorinated Alkyl Acids by Isotope Dilution

L2210519-01, -02, -04, -08, -09, -11, -20 and WG1612353-3/-4: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2210519
Project Number:	2001642	**Report Date:**	03/17/22

Case Narrative (continued)

L2210519-09: The sample was re-extracted on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-extraction was performed only for the compound(s) that exceeded the calibration range.
The WG1613765-1 Method Blank, associated with L2210519-09RE, has a concentration above the reporting limit for 6:2FTS and 8:2FTS. These compounds do not apply to the abbreviated list of analytes reported for the associated sample.
The WG1612353-3 MS recoveries, performed on L2210519-01, are outside the acceptance criteria for perfluoropentanoic acid (pfpea) (25%), perfluorohexanoic acid (pfhxa) (66%), perfluorooctanoic acid (pfoa) (50%) and perfluorooctanesulfonic acid (pfos) (16%).
The WG1612353-4 MSD recoveries, performed on L2210519-01, are outside the acceptance criteria for perfluoropentanoic acid (pfpea) (27%), perfluorooctanoic acid (pfoa) (51%) and perfluorooctanesulfonic acid (pfos) (7%).
WG1613765: A Matrix Spike was prepared with the sample batch, however, the native sample was not available for reporting; therefore, the results could not be reported.

Pesticides
L2210519-04: The internal standard (IS) response for 1-bromo-2-nitrobenzene (201%) was above the acceptance criteria on column B; however, the sample was not re-analyzed due to obvious interferences. The surrogate recoveries are outside the method acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (27%) and decachlorobiphenyl (22%) due to interference with the Internal Standard.
L2210519-08: The surrogate recoveries were outside the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (6%) and decachlorobiphenyl (5%); however, the criteria were achieved upon re-extraction outside of holding time. The results of both extractions are reported.
L2210519-08RE: The sample was extracted with the method required holding time exceeded.

Total Metals

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2210519
Project Number:	2001642	**Report Date:**	03/17/22

Case Narrative (continued)

The WG1610363-3/-4 MS/MSD recoveries for calcium (0%/30%) and sodium (0%/0%), performed on L2210519-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)		
Perfluorooctadecanoic Acid	PFODA	16517-11-6
Perfluorohexadecanoic Acid	PFHxDA	67905-19-5
Perfluorotetradecanoic Acid	PFTA	376-06-7
Perfluorotridecanoic Acid	PFTrDA	72629-94-8
Perfluorododecanoic Acid	PFDoA	307-55-1
Perfluoroundecanoic Acid	PFUnA	2058-94-8
Perfluorodecanoic Acid	PFDA	335-76-2
Perfluorononanoic Acid	PFNA	375-95-1
Perfluorooctanoic Acid	PFOA	335-67-1
Perfluoroheptanoic Acid	PFHpA	375-85-9
Perfluorohexanoic Acid	PFHxA	307-24-4
Perfluoropentanoic Acid	PFPeA	2706-90-3
Perfluorobutanoic Acid	PFBA	375-22-4
PERFLUOROALKYL SULFONIC ACIDS (PFSAs)		
Perfluorododecanesulfonic Acid	PFDoDS	79780-39-5
Perfluorodecanesulfonic Acid	PFDS	335-77-3
Perfluorononanesulfonic Acid	PFNS	68259-12-1
Perfluorooctanesulfonic Acid	PFOS	1763-23-1
Perfluoroheptanesulfonic Acid	PFHpS	375-92-8
Perfluorohexanesulfonic Acid	PFHxS	355-46-4
Perfluoropentanesulfonic Acid	PFPeS	2706-91-4
Perfluorobutanesulfonic Acid	PFBS	375-73-5
FLUOROTELOMERS		
1H,1H,2H,2H-Perfluorododecanesulfonic Acid	10:2FTS	120226-60-0
1H,1H,2H,2H-Perfluorodecanesulfonic Acid	8:2FTS	39108-34-4
1H,1H,2H,2H-Perfluorooctanesulfonic Acid	6:2FTS	27619-97-2
1H,1H,2H,2H-Perfluorohexanesulfonic Acid	4:2FTS	757124-72-4
PERFLUOROALKANE SULFONAMIDES (FASAs)		
Perfluorooctanesulfonamide	FOSA	754-91-6
N-Ethyl Perfluorooctane Sulfonamide	NEtFOSA	4151-50-2
N-Methyl Perfluorooctane Sulfonamide	NMeFOSA	31506-32-8
PERFLUOROALKANE SULFONYL SUBSTANCES		
N-Ethyl Perfluorooctanesulfonamido Ethanol	NEtFOSE	1691-99-2
N-Methyl Perfluorooctanesulfonamido Ethanol	NMeFOSE	24448-09-7
N-Ethyl Perfluorooctanesulfonamidoacetic Acid	NEtFOSAA	2991-50-6
N-Methyl Perfluorooctanesulfonamidoacetic Acid	NMeFOSAA	2355-31-9
PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS		
2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid	HFPO-DA	13252-13-6
4,8-Dioxa-3h-Perfluorononanoic Acid	ADONA	919005-14-4
CHLORO-PERFLUOROALKYL SULFONIC ACIDS		
11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid	11Cl-PF3OUdS	763051-92-9
9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid	9Cl-PF3ONS	756426-58-1
PERFLUOROETHER SULFONIC ACIDS (PFESAs)		
Perfluoro(2-Ethoxyethane)Sulfonic Acid	PFEESA	113507-82-7
PERFLUOROETHER/POLYETHER CARBOXYLIC ACIDS (PFPCAs)		
Perfluoro-3-Methoxypropanoic Acid	PFMPA	377-73-1
Perfluoro-4-Methoxybutanoic Acid	PFMBA	863090-89-5
Nonafluoro-3,6-Dioxaheptanoic Acid	NFDHA	151772-58-6

Project Number:	2001642	**Report Date:**	03/17/22

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2210519
Project Number:	2001642	**Report Date:**	03/17/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2210519
Project Number:	2001642	**Report Date:**	03/17/22

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

Project Number:	2001642	**Report Date:**	03/10/23

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2307270
Project Number:	2001642	**Report Date:**	03/10/23

Case Narrative (continued)

Report Submission

March 10, 2023: This final report includes the results of all requested analyses.

February 23, 2023: This is a preliminary report.

February 23, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2307270-01 through -07: The element list for metals analysis was specified by the client.

L2307270-02, -03, -04, and -07: The sample was received above the appropriate pH for the Total Metals analysis. The laboratory added additional HNO3 to a pH <2.

L2307270-06: The sample was received above the appropriate pH for the Total Metals analysis. The laboratory added additional HNO3; however, the pH would not adjust into the proper range.

L2307270-09: The water-preserved VOA vials for Volatile Organics Low-Level analysis were received at the laboratory beyond the 48 hour holding time required for freezing. The client was notified and the results of the analysis are reported.

Volatile Organics

L2307270-01, -02D, and -03D: The sample was received in the proper acid-preserved containers; however, upon analysis, the pH was determined to be greater than 2, and thus the method required holding time was exceeded.

L2307270-04D, -05D, -06D, -07D: The pH was greater than two; however, the sample was analyzed within the method required holding time.

L2307270-09 and -11: The acetone result should be considered estimated due to co-elution with a non-target compound.

Project Name: UNIFIRST - LIVERPOOL **Lab Number:** L2307270
Project Number: 2001642 **Report Date:** 03/10/23

Case Narrative (continued)

Dissolved Gases

L2307270-02, -04, -05, and -06: The samples were collected in pre-preserved vials; however, the pH of the sample was determined to be greater than two.

Perfluorinated Alkyl Acids by 1633

The WG1751676-4/-5 MS/MSD RPD, performed on L2307270-15, is outside the acceptance criteria for perfluorododecane sulfonic acid (pfdods) (38%).

Total Metals

L2307270-04, -06, and -07: The sample has an elevated detection limit for iron due to the prep dilution required by the sample matrix.

L2307270-09, -11, and -15: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1743568-3/-4 MS/MSD recoveries for iron (350%/900%), performed on L2307270-04, do not apply because the sample concentration is greater than four times the spike amount added.

The WG1743954-3/-4 MSD recoveries for aluminum (203%/164%), calcium (288%/604%), and iron (MSD 0%), performed on L2307270-15, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1743954-3/-4 MS/MSD recoveries, performed on L2307270-15, are outside the acceptance criteria for copper (217%/136%). A post digestion spike was performed and was within acceptance criteria.

The WG1743954-3/-4 MS/MD recoveries, performed on L2307270-15, are outside the acceptance criteria for sodium (127%/127%). A post digestion spike was performed and yielded an unacceptable recovery for sodium (126%). The serial dilution recovery was not applicable; therefore, this element fails the matrix test and the result reported in the native sample should be considered estimated.

The WG1743954-3/-4 MS/MSD RPD for copper (36%), performed on L2307270-15, is above the acceptance criteria.

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2307270
Project Number:	2001642	**Report Date:**	03/10/23

Case Narrative (continued)

Cyanide, Total

The WG1745087-2 LCS recovery for cyanide, total (64%), associated with L2307270-11 and -15, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1745087-2/-3 LCS/LCSD RPD, associated with L2307270-11 and -15, is above the acceptance criteria for cyanide, total (45%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)		
Perfluorooctadecanoic Acid	PFODA	16517-11-6
Perfluorohexadecanoic Acid	PFHxDA	67905-19-5
Perfluorotetradecanoic Acid	PFTA/PFTeDA	376-06-7
Perfluorotridecanoic Acid	PFTrDA	72629-94-8
Perfluorododecanoic Acid	PFDoA	307-55-1
Perfluoroundecanoic Acid	PFUnA	2058-94-8
Perfluorodecanoic Acid	PFDA	335-76-2
Perfluorononanoic Acid	PFNA	375-95-1
Perfluorooctanoic Acid	PFOA	335-67-1
Perfluoroheptanoic Acid	PFHpA	375-85-9
Perfluorohexanoic Acid	PFHxA	307-24-4
Perfluoropentanoic Acid	PFPeA	2706-90-3
Perfluorobutanoic Acid	PFBA	375-22-4
PERFLUOROALKYL SULFONIC ACIDS (PFSAs)		
Perfluorododecanesulfonic Acid	PFDoDS/PFDoS	79780-39-5
Perfluorodecanesulfonic Acid	PFDS	335-77-3
Perfluorononanesulfonic Acid	PFNS	68259-12-1
Perfluorooctanesulfonic Acid	PFOS	1763-23-1
Perfluoroheptanesulfonic Acid	PFHpS	375-92-8
Perfluorohexanesulfonic Acid	PFHxS	355-46-4
Perfluoropentanesulfonic Acid	PFPeS	2706-91-4
Perfluorobutanesulfonic Acid	PFBS	375-73-5
Perfluoropropanesulfonic Acid	PFPrS	423-41-6
FLUOROTELOMERS		
1H,1H,2H,2H-Perfluorododecanesulfonic Acid	10:2FTS	120226-60-0
1H,1H,2H,2H-Perfluorodecanesulfonic Acid	8:2FTS	39108-34-4
1H,1H,2H,2H-Perfluorooctanesulfonic Acid	6:2FTS	27619-97-2
1H,1H,2H,2H-Perfluorohexanesulfonic Acid	4:2FTS	757124-72-4
PERFLUOROALKANE SULFONAMIDES (FASAs)		
Perfluorooctanesulfonamide	FOSA/PFOSA	754-91-6
N-Ethyl Perfluorooctane Sulfonamide	NEtFOSA	4151-50-2
N-Methyl Perfluorooctane Sulfonamide	NMeFOSA	31506-32-8
PERFLUOROALKANE SULFONYL SUBSTANCES		
N-Ethyl Perfluorooctanesulfonamido Ethanol	NEtFOSE	1691-99-2
N-Methyl Perfluorooctanesulfonamido Ethanol	NMeFOSE	24448-09-7
N-Ethyl Perfluorooctanesulfonamidoacetic Acid	NEtFOSAA	2991-50-6
N-Methyl Perfluorooctanesulfonamidoacetic Acid	NMeFOSAA	2355-31-9
PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS		
2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid	HFPO-DA	13252-13-6
4,8-Dioxa-3h-Perfluorononanoic Acid	ADONA	919005-14-4
CHLORO-PERFLUOROALKYL SULFONIC ACIDS		
11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid	11Cl-PF3OUdS	763051-92-9
9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid	9Cl-PF3ONS	756426-58-1
PERFLUOROETHER SULFONIC ACIDS (PFESAs)		
Perfluoro(2-Ethoxyethane)Sulfonic Acid	PFEESA	113507-82-7
PERFLUOROETHER/POLYETHER CARBOXYLIC ACIDS (PFPCAs)		
Perfluoro-3-Methoxypropanoic Acid	PFMPA	377-73-1
Perfluoro-4-Methoxybutanoic Acid	PFMBA	863090-89-5
Nonafluoro-3,6-Dioxaheptanoic Acid	NFDHA	151772-58-6

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2307270
Project Number:	2001642	**Report Date:**	03/10/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2307270
Project Number:	2001642	**Report Date:**	03/10/23

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST LIVERPOOL	**Lab Number:**	L2309361
Project Number:	2001642	**Report Date:**	02/27/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST LIVERPOOL	**Lab Number:**	L2309361
Project Number:	2001642	**Report Date:**	02/27/23

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2338669
Project Number:	2001642	**Report Date:**	07/26/23

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2338669-07R/D: The analysis was performed utilizing a compromised vial.

Dissolved Gases

L2338669-01, -03, and -05: The samples were collected in pre-preserved vials; however, the pH of the samples were determined to be greater than two. The samples were analyzed within the method required holding time.

Dissolved Metals

The WG1801934-4 Laboratory Duplicate RPD for iron (56%), performed on L2338669-01, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Cristin Walker

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2338669
Project Number:	2001642	**Report Date:**	07/26/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2338669
Project Number:	2001642	**Report Date:**	07/26/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Project Number:	2001642	**Report Date:**	12/19/23

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number:	2001642	**Report Date:**	12/19/23

Case Narrative (continued)

Report Submission

December 19, 2023: This final report includes the results of all requested analyses.

December 12, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2371128-02: The sample was received above the appropriate pH for the Total Metals analysis. The laboratory added additional HNO3 to a pH <2.

L2371128-22: The Trip Blank was only analyzed for Volatile Organics. No containers were received for any other requested analysis.

L2371128-23: A sample identified as "FB" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

Volatile Organics

L2371128-05D2: The surrogate recovery for 4-bromofluorobenzene (144%) is outside the acceptance criteria; however, since the sample was non-detect for all target analytes associated with this surrogate, re-analysis was not required.

Dissolved Gases

L2371128-03 and -05: The samples were collected in pre-preserved vials; however, the pH of the samples was determined to be greater than two.

Semivolatile Organics by SIM

The WG1859056-1 Method Blank, associated with L2371128-07, -08, and -11 through -15, has a concentration above the reporting limit for naphthalene. Since the sample concentrations for L2371128-07 and

Project Name: UNIFIRST - LIVERPOOL **Lab Number:** L2371128
Project Number: 2001642 **Report Date:** 12/19/23

Case Narrative (continued)

-11 through -15 are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B". L2371128-08 was re-extracted with the method required holding time exceeded and both the sample and WG1862199-1 Method Blank were non-detect to the RL for this target compound. The results of both extractions are reported and the original sample result is reported with a "B" qualifier.

Perfluorinated Alkyl Acids by Isotope Dilution
L2371128-01, -02, -03, -06, -07, -09 through -12, -14, -15, -18, -21, WG1862713-1, WG1862713-4, and WG1863357-2: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.
L2371128-03, -05, and -11: The sample was centrifuged and decanted prior to extraction due to sample matrix.
The WG1862713-3/-4 MS/MSD recoveries, performed on L2371128-08, are outside the acceptance criteria for 1h,1h,2h,2h-perfluorooctanesulfonic acid (6:2fts) (9%/32%).

PCBs
L2371128-03D: The sample has elevated detection limits due to the dilution required by the sample matrix.

Pesticides
L2371128-03: The internal standard (IS) response for 1-bromo-2-nitrobenzene (600%) was above the acceptance criteria on column B; however, the sample was not re-analyzed due to obvious interferences. The surrogate recoveries are outside the method acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (10%) and decachlorobiphenyl (7%) due to interference with the Internal Standard.

Herbicides
L2371128-03: The internal standard (IS) response for 4,4'-DBOB (380%) was above the acceptance criteria on column A; however, the sample was not re-analyzed due to obvious interferences. The surrogate recovery

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2371128
Project Number:	2001642	**Report Date:**	12/19/23

Case Narrative (continued)

is outside the method acceptance criteria for dcaa (4%) due to interference with the Internal Standard.

Total Metals

L2371128-21: The initial analysis yielded a high Relative Standard Deviation (>30%) for calcium. Re-analysis confirmed the original result.

The WG1859957-3/-4 MS/MSD recoveries for calcium (130%/160%), iron (MSD 126%), magnesium (25%/60%), and sodium (0%/140%), performed on L2371128-08, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1860083-3 MS recoveries for calcium (30%) and sodium (40%), performed on L2371128-19, do not apply because the sample concentrations are greater than four times the spike amounts added.

Cyanide, Total

The WG1861003-4 MS recovery, performed on L2371128-08, is outside the acceptance criteria for cyanide, total (175%); however, the associated LCS recovery is within criteria. No further action was taken. The MS/MSD RPD is above the acceptance criteria for cyanide, total (59%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2371128
Project Number:	2001642	**Report Date:**	12/19/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2371128
Project Number:	2001642	**Report Date:**	12/19/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 524.2: THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300: Chloride, Sulfate, Nitrate.**
EPA 624.1: Volatile Halocarbons & Aromatics,
EPA 608.3: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625.1: SVOC (Acid/Base/Neutral Extractables).
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9221E, EPA 1600, EPA 1603, SM9222D.**

Mansfield Facility:

Drinking Water
EPA 200.7: Al, Ba, Cd, Cr, Cu, Fe, Mn, Ni, Na, Ag, Ca, Zn. **EPA 200.8:** Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. **EPA 245.1** Hg.
EPA 522, EPA 537.1.

Non-Potable Water
EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.
EPA 200.8: Al, Sb**,** As, Be, Cd, Cr, Cu, Fe, Pb, Mn, Ni, K, Se, Ag, Na, TL, Zn.
EPA 245.1 Hg.
SM2340B

RE: Project: Unifirst Liverpool
Pace Project No.: 20299224

Dear Jordan DesRosiers:

Enclosed are the analytical results for sample(s) received by the laboratory on December 05, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Baton Rouge

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh

Date: December 19, 2023

General Information:
6 samples were analyzed for Pace ENV-SOP-BTRO-0042 by Pace Analytical Services Baton Rouge. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

Analyte Comments:

QC Batch: 311731

D3: Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

QUALIFIERS

Project: Unifirst Liverpool
Pace Project No.: 20299224

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The Nelac Institute

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
D4	Sample was diluted due to the presence of high levels of target analytes.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.

Report Date 02/22/2023

Report # 223021116

Project Unifirst - 2001642

Samples Collected 2/7/23 - 2/8/23

Deliver To	***Additional Recipients***
Jeff Holden GEI Consultants 1301 Trumansburg Rd Suite N Ithaca, NY 14850 607-216-8956	Wendy Moore, GEI Consultants

A2LA ACCREDITED
CERT # 6429.01

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with Pace Gulf Coast's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*****	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics **-** The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at Pace Gulf Coast is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of Pace Gulf Coast. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: GEI Consultants - Ithaca **Report:** 223021116

Pace Analytical Gulf Coast received and analyzed the sample(s) listed
on the Report Sample Summary page of this report. Receipt of the sample(s) is documented
by the attached chain of custody. This applies only to the sample(s) listed in this report.
No sample integrity or quality control exceptions were identified unless noted below.

No anomalies were found for the analyzed sample(s).

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

RE: Project: 23G0821 M Hernandez
Pace Project No.: 20284197

Dear Theresa Ferrentino:

Enclosed are the analytical results for sample(s) received by the laboratory on August 01, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Baton Rouge

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Devin McDougal

PROJECT NARRATIVE

Project: 23G0821 M Hernandez
Pace Project No.: 20284197

Method: **Pace ENV-SOP-BTRO-0042**
Description: BRAM23G Low Level VFA
Client: PACE NEW ENGLAND
Date: August 18, 2023

General Information:
6 samples were analyzed for Pace ENV-SOP-BTRO-0042 by Pace Analytical Services Baton Rouge. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

H3: Sample was received or analysis requested beyond the recognized method holding time.
- 23G0821-01 MW1 (Lab ID: 20284197001)
- 23G0821-02 MW2 (Lab ID: 20284197002)
- 23G0821-03 MW 3S (Lab ID: 20284197003)
- 23G0821-04 MW 3I (Lab ID: 20284197004)
- 23G0821-05 MW 4S (Lab ID: 20284197005)
- 23G0821-06 MW 4I (Lab ID: 20284197006)

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 292965

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- LCS (Lab ID: 1404197)
  - Hexanoic Acid

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

QUALIFIERS

Project: 23G0821 M Hernandez
Pace Project No.: 20284197

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The Nelac Institute

ANALYTE QUALIFIERS

H3	Sample was received or analysis requested beyond the recognized method holding time.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.

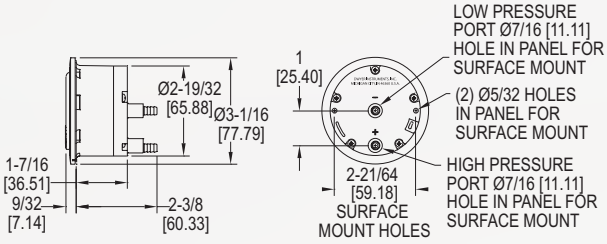
SERIES 2-5000 | MINIHELIC® II DIFFERENTIAL PRESSURE GAGE

FEATURES/BENEFITS

- **Removable lens and rear-housing provides easy, cost-effective servicing**
- **Accuracy and value provides an excellent solution for OEM and user applications**
- **Durable housing materials make it well-suited for rough environments and total high pressure**

APPLICATIONS

- Room positive pressure sensing
- Cabinet air-purging
- Medical respiratory equipment
- Air samplers
- Electronic air cooling systems
- Laminar flow hoods
- Local indication on filter status
- Face velocity on fume hood
- Duct pressures



DESCRIPTION

Combining clean design, small size and low cost with enough accuracy for all but the most demanding applications our **Series 2-5000 Minihelic® II Gage** offers the latest in design features for a dial type differential pressure gage. It is our most compact gage but is easy to read and can safely operate at total pressures up to 30 psig.

SPECIFICATIONS

Service	Air and compatible gases.
Wetted Materials	Consult factory.
Housing	Glass filled nylon; polycarbonate lens.
Accuracy	±5% of FS at 70°F (21.1°C).
Pressure Limits	30 psig (2.067 bar) continuous to either pressure connection.
Temperature Limits	20 to 120°F (-6.67 to 48.9°C).
Mounting Orientation	Diaphragm in vertical position. Consult factory for other position orientations.
Process Connections	Barbed, for 3/16″ ID tubing (standard); 1/8″ male NPT (optional).
Weight	6 oz (170.1g).
Agency Approvals	Meets the technical requirements of EU Directive 2011/65/EU (RoHS II)
Caution: FOR USE ONLY WITH AIR OR COMPATIBLE NON-CORROSIVE GASES	

DIMENSIONS

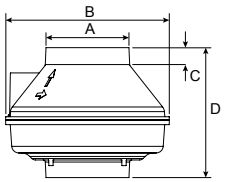
Rn4EC
High Suction EC Radon Fan

When to use it

Our new Rn4EC radon fan is specifically designed for mitigation systems requiring high suction air performance, with the built-in flexibility to provide greater air flow rates at lower suction pressures as well.

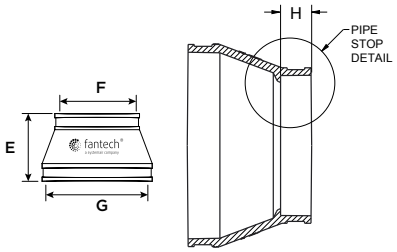
What makes it different



As the most powerful model in Fantech's family of Radon Mitigation fans, the Rn4EC can create 4.3" of suction while moving 20 cfm, as well as, move 490 cfm when operating at only 0.5" of suction.

The Rn4EC features an electronically commutated (EC) motor. Inherently efficient and operationally stable at full and reduced speeds, the EC motor arms the radon professional with installation methods not previously practical. Located in the wiring box, an integral speed control potentiometer can be used to "dial in" the fan speed necessary to achieve either the required sub-slab depressurization or required system air flow rate.

LDVI Couplings Included



Included with every Rn4EC is a pair of Fantech's new LDVI (Low Durometer Vibration Isolating) couplings - available in 6x3 or 6x4. Designed specifically for radon mitigation applications, LDVI couplings are molded with a more flexible, more easily installed, low durometer material as compared to standard plumbing couplings.

Appendix N Post-Startup Sampling Results Summary

April 9, 2026

Summary of Post-Startup Vapor Intrusion Conditions
UniFirst Corporation
Liverpool, New York
NYSDEC BCP Site No. 734152
May 2024; Revised July 2025; Revised April 2026

1. Introduction

Between July 2020 and October 2023, UniFirst undertook facility renovations at its laundry facility located at 113 7th North Street in Liverpool, Town of Salina, New York. Initial site investigations performed in anticipation of the renovations indicated the presence of chlorinated volatile organic compounds (CVOCs) in subsurface soil and/or groundwater within a portion of the property (primarily below portions of the pre-existing facility building). As a result, UniFirst entered into a Brownfields Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in October 2021 to investigate and remediate this property, which is identified as Site Number C734152.

The facility renovation proceeded in two phases. Between summer 2020 and spring 2022, Phase 1 included construction of a new approximately 31,000 square foot structure adjacent to Luther Avenue. While Phase 1 was under construction, UniFirst continued operating in the pre-existing facility in the east/northeast side of the Property. Once the Phase 1 building was completed, facility operations moved to the new Phase 1 building in spring 2022, the former facility building was demolished, and the Phase 2 building was constructed largely atop the footprint of the former facility building. Upon completion of Phase 2 in October 2023, the new facility was joined as a single building housing UniFirst's laundry facility and administrative operations.

Due to the presence of CVOCs in the subsurface resulting from former dry-cleaning operations in the former facility building, Interim Remedial Measures (IRMs) were undertaken in conjunction with both facility renovation phases. The final IRM Work Plan for Phase 1 was submitted to NYSDEC on October 31, 2022, and approved on November 23, 2022. The final IRM Work Plan for Phase 2 was submitted to NYSDEC on September 2, 2022, and approved on September 9, 2022. The scope of both IRMs included construction of vapor mitigation systems (VMS) comprised of vapor barrier and a sub-slab depressurization system (SSDS) incorporated into the design of their respective new building phases.[1] Although constructed in two phases, the resulting facility renovation represented one contiguous building such that a single VMS design addressed both building components, which came on-line in October 2023. Both Work Plans also called for indoor air (IA) sampling to be performed during the winter heating season following construction of the buildings, which occurred in January 2024. Permanent soil vapor sampling

[1] The Phase 2 IRM also included subsurface injections to provide in-situ treatment of CVOCs because the apparent CVOC source area was largely beneath the Phase 2 building footprint.

points were also installed during the construction of both phases of the new facility, and a selection of those points were also pressure-tested and sampled during the January 2024 sampling event.

The sub-slab vapor collection system and the vapor barrier associated with Phase 1 construction were installed in summer 2021. The vapor barrier material was left extending beyond the edge of the Phase 1 building toward the forthcoming Phase 2 so the two sections of the vapor barrier could be sealed to each other upon construction of the Phase 2 floor. The subsequent above-slab portions of the Phase 1 building VMS were completed by spring 2022. During Phase 2 construction in fall 2023, the sub-slab vapor collection system and the Phase 2 segments of the vapor barrier liner were installed and seamed along the junction of the two building phases. The above-slab portions of Phase 2 building SSDS were completed by October 2023, at which time the facility's VMS was complete and operational.

In accordance with the IRM Work Plans and NYSDOH IA sampling guidance[2] post-startup IA sampling was planned for January 2024 after the SSDS had been operating for at least 30 days into the heating season. The IA samples were collected between January 17 and 19, 2024 to evaluate the effectiveness of the VMS. In addition, UniFirst voluntarily elected to collect soil vapor samples from a subset of the permanent sub-slab vapor monitoring ports collocated with the air sampling locations during this January 2024 event. Additionally, several rounds of pressure testing have been performed, including one during the January 2024 IA and sub-slab soil vapor sampling event, as well as in March 2025, June 2025[3], and December 2025[4] to record SSDS vacuum conditions. The sampling locations, procedures, and results are discussed below, followed by data evaluation and a summary of conclusions and recommendations.

2. UniFirst Facility and Operations

The facility is an active commercial laundry operation, which takes in soiled clothes, rags, carpets, etc. from a variety of industrial and commercial facilities. A large portion of the items being brought into the facility are soiled with chemicals that can elevate IA chemical levels, possibly in excess of background levels, which is separate from/unrelated to site-related vapor intrusion (VI).

A chemical inventory was performed within the facility immediately prior to conducting the air sampling event. A variety of chemicals were observed to be stored and in use throughout the facility. The chemical inventory summary is included in Attachment A. These chemicals are generally products used as part of the laundering process, but also include paints, solvents,

[3] Monitoring Point MP6D was not accurately measured on June 16, 2025 (i.e., probe was not properly sealed to the port) so a technician returned on June 26, 2025 to successfully measure the MP6D pressure

[4] Monitoring Point MP6D was not accurately measured on December 10, 2025 (i.e., probe was not properly sealed to the port) so a technician returned on January 8, 2026 to successfully measure the MP6D pressure

lubricants, aerosols, PVC glue, and motor oil stored and used in the maintenance room and shop room near MP1 (Figure 1), as well as paints and other various construction-related chemicals stored beneath the stairs close to MP6 (Figure 1). It was also noted that workers frequently smoke cigarettes in open exterior doorways throughout the building, which is a potential source of many VOCs, including benzene, chloromethane, toluene, ethylbenzene, xylene, 1,3-butadiene, and 2-butanone (MEK) (all of which were detected in one or more indoor and/or ambient air samples).

Additionally, because the building is operated as a commercial laundry cleaning facility, uniforms and rags soiled with various chemicals from customer facilities are continually stored in and processed throughout the facility as noted above, and the chemicals present will differ from day to day depending on the laundry stream. Therefore, in addition to the known chemicals that are used in the laundry cleaning and maintenance operations at the facility, soiled laundry potentially also contribute to the measured IA concentrations of certain chemicals.

Although attempts were made to remove the majority of the soiled materials from the facility during IA sampling, it was not possible to exclude all operational-related sources without shutting down for several days and removing all soiled materials from the premises. Due to the presence of these unavoidable unrelated IA sources, a comparison of the observed IA concentrations to ambient (outdoor background) concentrations cannot provide an accurate representation of impacts resulting from soil VI.

3. Sampling Locations and Procedures

From January 17 to 19, 2024, GEI collected eight IA samples, five sub-slab soil vapor samples (along with pressure testing of the vapor points [Section 5.3]), and one ambient air sample. The sample locations are shown on Figure 1 and summarized in the following table:

Location	Ambient Air	Indoor Air	Soil Vapor
Ambient (Outdoor) Air	AA1	--	--
MP-1	--	IA1	SSV1D
MP-2	--	IA2	--
MP-3	--	IA3	SSV3
MP-4	--	IA4	SSV4
MP-5	--	IA5	SSV5D
MP-6	--	IA6	SSV6
MP-7	--	IA7	--
MP-8	--	IA8	--

Indoor and ambient air sampling was conducted consistent with the approved IRM Work Plans. Sub-slab soil vapor sampling was not a required component of the IRMs but was performed at UniFirst's discretion and consistent with previously established procedures to demonstrate conditions below the new facility.

Indoor and ambient air samples were collected at breathing height (approximately 4 to 6 ½ feet above the floor) using Summa canisters with 8-hour flow controllers. Sub-slab soil vapor samples were collected from permanent vapor monitoring points (installed through the vapor barrier during construction). Sub-slab vapor samples were collected in Summa canisters with 1-hour flow controllers. A helium tracer test was conducted for quality control purposes at each sub-slab sampling point to demonstrate that IA was not affecting the sub-slab samples. Attachment A includes the IA and sub-slab soil vapor sampling logs.

The different sampling durations were used for IA and sub-slab soil vapor samples because the duration used for each is considered to be representative of each media. Collecting sub-slab soil vapor samples over one hour is considered representative because the sub-slab conditions (e.g. temperature, pressure, moisture content and vapor concentrations are relatively stable over time. IA samples were collected over eight hours to assess exposure over a typical workday. This longer time period for IA sampling (as compared to soil vapor sampling) accounts for changing conditions throughout the day inside the UniFirst facility as different machines are operated, doors are opened and closed, the HVAC system turns on and off, etc. None of these fluctuating conditions are present in the subsurface. The longer sample duration for the IA samples accounts for a representative sample of conditions during a typical worker shift.

4. Analytical Results

The January 2024 post-startup air and sub-slab soil vapor samples were shipped to Alpha Analytical Laboratories in Mansfield, MA for analysis of VOCs using Method TO-15. Table 1 summarizes the chemicals detected in the IA and ambient air samples. Table 2 summarizes the results for the sub-slab soil vapor samples. The laboratory data package is included in Attachment C. The analytical results are further discussed below.

4.1 Indoor Air

Concentrations of multiple constituents, including acetone, bromodichloromethane, BTEX (benzene, toluene, ethylbenzene and xylenes), 1,3-butadiene, 2-butanone (MEK), chloroform, dibromochloromethane, ethanol, 4-ethyltoluene, 1,1-dichloroethane, n-heptane, n-hexane, 2-propanol, tetrahydrofuran, tetrachloroethylene (PCE), trans-1,2-dichloroethene (trans-1,2-DCE), trichloroethene (TCE), 1,3,5-trimethylbenzene, and 1,2,4-trimethylbenzene, chloromethane, and 1,2- dichloroethane, were detected in IA above the background concentrations reported in the ambient air sample.[5] NYSDOH has published Indoor Air (IA) Guidelines for two of these constituents, including PCE and TCE. Detected concentrations of both constituents were significantly below these published guidelines. Additionally, USEPA 2001: Building Assessment and Survey Evaluation (BASE) 90th Percentile (P90) values are available for

[5] For the purpose of this evaluation, indoor air results were considered above background if the indoor air concentration was more than 10% greater than the ambient air concentration.

screening additional chemicals against commercial background values[6]. USEPA BASE P90 background values are available for the majority of the detected constituents in IA (all except for tetrahydrofuran and trans-1,2-DCE). Chloroform was the only VOC detected above its USEPA BASE P90 value and is likely related to non-VI sources as further discussed below. The indoor and ambient air sample results are included in Table 1.

With respect to the CVOCs that are of primary concern at the site (i.e., PCE and its daughter products, including TCE, cis- and trans-1,2-dichloroethene [DCE], and vinyl chloride [VC]), the following observations can be made:

- PCE was detected in seven of eight IA samples, with concentrations ranging from 1.25 to 6.7 ug/m^3 (the NYSDOH IA Guideline is 30 ug/m^3 and the USEPA BASE P90 value is 15.9 ug/m^3).
- TCE was detected in one of eight IA samples with a concentration of 0.156 ug/m^3 (the NYSDOH IA Guideline is 2 ug/m^3 and the USEPA BASE P90 value is 4.2 ug/m^3).
- Trans-1,2-DCE was detected in one of eight IA samples with a concentration of 1.21 ug/m^3 (no published NYSDOH guideline or USEPA BASE P90 value).
- Cis-1,2-DCE and VC were not detected in any IA samples (no published NYSDOH guidelines; USEPA Base P90 background values are <1.9 ug/m^3 and <0.25 ug/m^3, respectively).
- CVOCs of primary concern were not detected in the ambient air sample.

4.2 Soil Vapor

Concentrations of acetone, benzene, 2-butanone (MEK), cyclohexane, ethanol, 2-propanol, PCE, tetrahydrofuran, toluene, 1,2,4-trimethylbenzene, and 2,2,4-trimethylpentane were detected in soil vapor above laboratory reporting limits. The soil vapor sample results collected in January 2024 are included in Table 2.

Relative to the detections of compounds in IA above background during this January 2024 event, acetone, benzene, 2-butanone (MEK), ethanol, 2-propanol, PCE, tetrahydrofuran, toluene, and 1,2,4-trimethylbenzene were also detected in soil vapor. Compounds that were detected in IA above background and not detected in soil vapor in January 2024 are bromodichloromethane, 1,3-butadiene, chloroform, chloromethane, dibromochloromethane, 1,1-dichloroethane, 1,2-dichloroethane trans-1,2-dichloroethene, ethylbenzene, 4-ethyltoluene, n-heptane, n-hexane, TCE, 1,3,5-trimethylbenzene, and o-xylene. Compounds that were detected in soil vapor and not detected in IA above background are cyclohexane and 2,2,4-trimethylpentane.

[6] EPA BASE P90 values are provided in Appendix C, Table C2 of the Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH).

With respect to the CVOCs that are of primary concern at the site, the following observations can be made:

- PCE was detected above laboratory reporting limits in one of five soil vapor samples (at location SSV5D) at a concentration of 139 ug/m^3.
- TCE, cis-1,2-DCE, trans-1,2-DCE, and VC were not detected above laboratory reporting limits in any soil vapor samples.
- These January 2024 concentrations are significantly lower than those previously reported between 2020 and 2022, prior to the SSDS installation and building reconstruction.

5. Data Evaluation

IA and/or soil vapor analytical data were evaluated from three perspectives:

- Comparison of IA data to established NYSDOH Air Guidelines7 and USEPA BASE P90 values[8].
- Comparison between concentrations in groundwater, soil vapor (collected both before and after SSDS installation) and IA
- An assessment of facility operations for the compounds detected in IA that do not have published NYSDOH air guidelines.

GEI also measured the vacuum pressure from each riser stack and the sampled soil vapor points during the January 2024 sampling event to confirm the sub-slab depressurization (Section 5.3).

5.1 Indoor Air Evaluation

The IA results indicate that with the VMS operating, the potential VI associated with contaminants of concern (primarily PCE and its daughter compounds) in the groundwater and soil is not occurring at a rate that causes IA concentrations above NYSDOH guidelines, including NYSDOH Ambient Air guidelines and BASE P90 values. The maximum concentration of PCE in the IA samples was 6.7 ug/m^3, which is significantly less than the applicable NYSDOH Ambient Air Guideline value of 30 ug/m^3 and USEPA BASE P90 value of 15.9 ug/m^3, and approximately two orders of magnitude lower than the concentration in the one soil vapor sample in which it was detected (139 ug/m^3) during the same sampling event. The only detection of TCE in the IA samples had a concentration of 0.156 ug/m^3, also less than the applicable NYSDOH Ambient Air Guideline value of 2 ug/m^3 and USEPA BASE P90 value of 4.2 ug/m^3. Trans-1,2-DCE was detected in one IA sample at a concentration of 1.21 ug/m^3, although there is neither an established

[7] Ambient Air guidelines for Trichloroethene and Tetrachloroethene are provided on the NYSDOH "Soil Vapor Intrusion Guidance and Updates" webpage.
[8] USEPA BASE P90 values are provided in Appendix C, Table C2 of the Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH).

NYSDOH Air Guideline nor USEPA BASE P90 value for this compound. The other daughter products of PCE were not detected in IA.

With respect to other VOCs detected in IA, only chloroform was detected above the USEPA BASE P90 value of 1.1 ug/m^3. Chloroform concentrations exceeded the P90 value in seven of the eight samples, ranging from 1.7 to 26.2 ug/m^3. (And while detected in certain pre-SSDS installation soil vapor samples it was not detected in the post-SSDS installation soil vapor samples that were collected at the same time as the air samples.) Chloroform detections in IA are likely attributed to a non-VI source, possibly related to the soiled laundry stream present during sampling because materials soiled with organic compounds laundered with chlorine can produce chloroform.

This evaluation of CVOCs in IA satisfies the scope of work included in the IRM Work Plans and demonstrates the effectiveness of the VMS that was installed through IRM implementation during both Phases of facility construction. However, UniFirst elected to analyze the full list of VOCs for the USEPA Method TO-15 in IA and to collect sub-slab soil vapor samples for analysis of the full TO-15 VOC list. As noted in Sections 3.1 and 3.2, several additional VOCs were detected in IA and sub-slab soil vapor. Considering the additional data for IA and sub-slab soil vapor, additional data evaluations were performed as presented below.

5.2 Additional Evaluation of VI Pathway

The following table depicts maximum concentrations of chemicals detected at least once in IA above background (ambient conditions), along with the associated maximum concentrations among soil vapor and groundwater samples collected to date.

Compound (conc in ug/m^3)	Max. Indoor Air Conc. (& Location [Fig. 1])	Remedial Investigation (pre-VMS install) Max. Soil Vapor Conc. (& Location) NOTE 1	Jan 2024 (post-VMS install) Max. Soil Vapor Conc. (& Location [Fig. 1])[9]	Max. GW Conc. (& Location [Fig 1])	Assessment
Acetone	23.8 (IA7 @ MP7)	406 (SSV3)	12,500 (SSV6 @ MP5)	200 (TW6)	VMS effective
Bromodichloromethane	1.79 (IA1)	ND	ND	5 (TW-14)	Incomplete VI pathway
1,3-Butadiene	0.082 (IA4)	2.91 (SV1; NOTE 2)	ND	NA	Non-VI source/Incomplete VI pathway
Chloroform	26.2 (IA1)	830 (SSV6)	ND	36 (MW2)	VMS effective
Chloromethane	1.62 (IA2)	2.95 (SSV1)	ND	ND	Non-VI source
Dibromochloromethane	0.213 (IA1)	ND	ND	1.4 (TW14)	Incomplete VI pathway
1,1-Dichloroethane	0.158 (IA4)	ND	ND	ND	Non-VI source
1,2-Dichloroethane	0.097 (IA6)	ND	ND	ND	Non-VI source
Trans-1,2-DCE	1.21 (IA8)	89.6 (SSV2)	ND	170 (TW6)	VMS effective
Ethanol	83.1 (IA7)	296 (SSV5)	29,600 (SSV5D @ MP5 location)	NA	VMS effective
4-Ethyltoluene	0.261 (IA1)	12.5 (SV1; NOTE 2)	ND	NA	Non-VI source/Incomplete VI pathway
2-Butanone (MEK)	2.75 (IA1)	109 (SSV4)	41,600 (SSV6 @ MP6 location)	1.9 (MW2R)	VMS effective
2-Propanol	2.9 (IA1)	112 (SSV5)	961 (SSV5D @ MP5 location)	NA	VMS effective
Tetrahydrofuran	8.94 (IA1)	900 (SSV4)	111,000 (SSV6 @ MP6 location)	ND	VMS effective
TCE	0.156 (IA5)	5,540 (SSV2)	ND	30,000 (MW3S)	VMS effective
PCE	6.7 (IA1)	47,700 (SSV2)	139 (SSV5D @ MP5 location)	140,000 (MW4S)	VMS effective
Benzene	0.933 (IA4)	96.8 (SV3)	27.5 (SSV5D @ MP5 location)	72 (MW5S)	VMS effective
Ethylbenzene	0.869 (IA1)	15 (SSV5)	ND	780 (MW5S)	VMS effective
1,2,4-trimethylbenzene	1.17 (IA1)	72.8 (SV1; NOTE 2)	865 (SSV6 @ MP6 location)	NA	VMS effective
1,3,5-trimethylbenzene	0.315 (IA1)	44.3 (SV1; NOTE 2)	ND	NA	Non-VI source/Incomplete VI Pathway
o-xylene	1.14 (IA1)	22.9 (SSV5)	ND	35 (MW1R)	VMS effective
m,p-xylene	3.58 (IA1)	53.9 (SSV5)	ND	42 (MW5S)	VMS effective
Heptane	1.72 (IA1)	221 (SV3)	ND	NA	VMS effective
Hexane	0.863 (IA4)	1,650 (SV3)	ND	NA	VMS effective
Toluene	26.4 (IA3)	39.6 (SSV5)	40.7 (SSV3 @ MP3 location)	530 (MW2)	VMS effective

[9] The laboratory detection limits for certain sub-slab soil vapor samples were elevated due to dilution of the samples. It is possible that these compounds are present in the subsurface at concentrations below

Table Acronyms:
ND indicates the compound was not detected in the associated media.
NA indicates the compound has not been analyzed in the associated media.
Table Notes:
Pre-VMS installation soil vapor data was obtained between 2020 and 2022 prior to demolition or the original facility as part of preliminary investigations and Remedial Investigations and was included in the draft Remedial Investigation Report (December 2024). Therefore, these locations are not coincident with post-VMS startup locations. These pre-VMS startup soil vapor sampling locations are shown in Attachment D.
SV1 was located immediately adjacent to Luther Ave outside both the former and current facility footprint (collected in 2020) and is considered not Site related.

The efficacy of the SSDS operation is evident based on the orders-of-magnitude difference between most IA and soil gas concentrations. Further, the post-VMS installation soil vapor data shows marked reductions in the concentration of Site-related CVOCs, including PCE, TCE, and trans-1,2-DCE, relative to pre-VMS soil vapor maximum concentrations. A more detailed evaluation of relevant data is summarized below.

Due to their absence in the subsurface, it is unlikely that the IA concentrations of 1,1-dichloroethane and 1,2-dichloroethane (which were detected in IA slightly above background but not in soil vapor or groundwater) are related to volatilization from the subsurface and are therefore considered non-VI sources. Similarly, 1,3-butadiene, 4-ethyltoluene, 1,3,5-trimethylbenzene (which were detected in IA above background but not detected in site-related soil vapor and not analyzed in groundwater) are not attributed to VI. However, because they were not analyzed in groundwater, they are categorized in the table above as possibly being an incomplete VI pathway, as well as a potential non-VI source. Regardless, none of the IA concentrations for these compounds exceeded the USEPA BASE P90 commercial background IA values.

With respect to non-VI sources, bromodichloromethane and dibromochloromethane, which were detected in IA and groundwater but not in soil vapor, the VI pathway is likely not complete.

Based on comparison of the analytical results, the following compounds detected in IA above background and also detected in soil vapor but not detected or not analyzed in groundwater: heptane, hexane, chloromethane, ethanol, 2-propanol, tetrahydrofuran, and 1,2,4-trimethylbenzene. These could be the result of a potentially complete VI pathway, but the maximum IA concentration of each of these compounds is orders of magnitude less than the maximum soil vapor concentrations (with the exception of chloromethane[10]), confirming that the VMS is effective in controlling or interrupting the pathway, as further discussed below. Further,

---

the detection limits. Regardless, the indoor air concentrations of these compounds are below USEPA BASE P90 (except chloroform) and only slightly above local background and the VMS is effectively mitigating the vapor intrusion pathway.

[10] Although found at low concentrations in three pre-VMS installation soil vapor samples, it is more likely that its presence in indoor air is attributable to tobacco smoke. Chloromethane is commonly found in tobacco smoke, which was present during indoor air sampling (maximum concentration location was near door to area used by workers for smoking).

the IA concentrations of these compounds also did not exceed the USEPA BASE P90 values, where available (tetrahydrofuran has no value).

The remaining compounds that were detected above background in IA and also detected in soil vapor and groundwater - PCE, TCE, trans-1,2-DCE, benzene, toluene, ethylbenzene and xylenes (BTEX), acetone, 2-butanone (MEK), and chloroform - may be the result of a potentially complete VI pathway but, again, maximum IA concentration of each of these compounds is orders of magnitude less than the maximum soil vapor (with the exception of toluene[11]), confirming that the VMS is effective in controlling or interrupting the pathway. Additionally, with the exception of chloroform (discussed in Sections 4.1 and 4.3.1), the IA concentrations of these compounds also did not exceed the USEPA BASE P90 values, where available (trans-1,2-DCE has no value).

5.2.1 Potential Non-Vapor Intrusion Sources

Discussion of the potential sources of constituents that were detected in IA but are considered to be unrelated to VI from historical releases at the former laundry facility (i.e., Site related sources in the subsurface) is provided below.

The building is operated as a commercial laundry cleaning facility, where uniforms, floor coverings, and rags soiled with various chemicals from customer facilities are continually stored in and processed throughout the facility. The chemicals present within the facility will differ from day to day depending on the laundry stream. This variable laundry stream is a potential confounding source of constituents identified in IA. For example, as noted above, chloroform can be produced when material soiled with organics is laundered using chlorine.

The presence of fuel-related constituents (BTEX, ethanol, heptane, hexane) is likely contributable to offsite sources, such as the petroleum spills at the adjacent Pilot property that are known to be impacting the UniFirst property. Even in the absence of this potential off-site source, the presence of these constituents in IA in an industrial setting is common and closely associated with known sources (e.g., idling vehicles at loading docks) and not necessarily indicative of vi. Similarly, the presence of chloromethane in IA slightly above background at two adjacent locations (i.e., the IA samples collected from locations MP1 and MP2) may be attributable to tobacco smoke moving into the building from open doorways. The maximum concentrations of these chemicals in IA are below the maximum soil vapor concentrations, as well as USEPA Base P90 values, indicating that the VMS is effective in controlling the potential intrusion pathway.

1,2,4-trimethylbenzene is also a component of gasoline (see discussion in paragraph above) and is present in asphalt, which is the primary component of the Nitra-Core sealant that was used during vapor barrier construction. The maximum concentration in IA is well below the maximum

[11] Toluene is commonly found in vehicle exhaust, which was present during indoor air sampling (maximum concentration location was near loading dock doors).

soil vapor concentration, as well as USEPA BASE P90 values, indicating that the VMS is effective in controlling the potential intrusion pathway.

Tetrahydrofuran is a key component of PVC glue, which commonly contains 30-60% tetrahydrofuran.[12,13] Tetrahydrofuran detections in the sub-slab soil vapor are likely attributable to the recent installation of the PVC pipe that makes up the SSDS (including the sub-slab sampling ports) and facility's waste lines. MEK is commonly used as a solvent in certain paints, coatings, and glues,[14] and may be the result of off-gassing from building materials or maintenance products. Although MEK and tetrahydrofuran were detected in all the soil vapor samples, they were only detected in one IA sample (IA1), which was collected in the shop room where several solvents, paints, and glues are stored. The maximum concentrations of both compounds in IA are orders of magnitude below the maximum soil vapor concentrations, indicating that the VMS is effective in controlling the potential intrusion pathway.

With respect to ethanol and 2-propanol (detected in IA above background and in soil vapor, but not analyzed in groundwater), the concentrations of these compounds in sub-slab soil vapor and IA are not considered a health concern based on National Institute for Occupational Safety and Health (NIOSH)-identified recommended exposure limits (REL) that are orders of magnitude higher than the concentrations detected in IA at the site. The REL for ethanol is 1,900,000 $\mu g/m^3$ and the REL for 2-propanol is 980,000 $\mu g/m^3$. Comparatively, the highest concentrations detected in soil vapor and IA were 83.1 $\mu g/m^3$ and 2.9 $\mu g/m^3$, respectively. Further, similar to other compounds detected in the IA samples, ethanol and 2-propanol are both commonly used as disinfectants and degreasers in various industries, including laundry operations. The maximum concentrations of both compounds in IA are orders of magnitude below the maximum soil vapor concentrations, further confirming that the VMS is effective in controlling the potential intrusion pathway.

With respect to acetone, which was detected in IA above background, soil vapor, and groundwater, the concentrations detected in groundwater are low with respect to volatilization potential.[15] Further, both IA and soil vapor concentrations are well below the NIOSH REL (590,000 $\mu g/m^3$). The maximum concentration of acetone in IA is several orders of magnitude

[15] For example, although New York does not publish volatilization criteria for groundwater, criteria are available in neighboring states such as Connecticut, where the groundwater volatilization criterion for acetone is 50,000 ug/L, compared to a maximum observed groundwater concentration of 200 ug/L.

below the maximum soil vapor concentrations, indicating that the VMS is effective in controlling the potential intrusion pathway.

5.2.2 Conclusion

Overall, the concentrations of compounds present in IA are below levels expected to impact human health and are likely to not be the result of complete vi pathway. As discussed in Section 4.1 above, IA sampling alone satisfied the scope of work included in the IRM Work Plans and demonstrates the effectiveness of the VMS. The supplemental evaluations herein provide additional evidence that the VMS is effective. For compounds detected in soil vapor, with few exceptions (i.e., chloromethane and toluene, both likely attributable to secondary sources), the associated IA concentrations were substantially lower, supporting findings that VMS is effective in controlling the potential intrusion pathway. Further, it is more likely that the presence of compounds detected above background in IA are the result of chemicals stored or used in laundry operations, chemicals being brought on site in the soiled textiles for laundering as discussed in Section 2 and/or are off-gassing from the recent construction or offsite sources rather than from volatilization from COCs present below the building.[16]

5.3 Evaluation of Sub-slab Depressurization

GEI technicians used a manometer to measure the vacuum pressure in each SSDS riser stack on 4 occasions, including an annual inspection in December 2024, a follow-up inspection in March 2025, a post-repair inspection in June 2025, and another annual inspection in December 2025. These data are summarized on the following table, in units of inches of water column (inWC).

Stack ID	S1	S2	S3	S4	S5
Negative Pressure (inWC) **December 12, 2024**	2.48	2.61	2.57	2.10	Unstable Readings
Negative Pressure (inWC) **March 20, 2025**	0.185	1.780	1.770	1.300	0.085

[16] Several construction-related glues and paints, as well as a variety of degreasers and disinfectants related to the laundry operation, were observed during the chemical inventory (Attachment C). The highest indoor air concentrations were generally observed at IA1 (in the shop room), where several chemicals are stored and used. Other chemicals are likely the result of off-gassing from materials used during construction (e.g., vapor barrier sealant and PVC glue used during SSDS construction). Chemicals are also present and volatizing from the laundry that is brought into and washed at the facility. Because of the volume and consistent use/processing of these materials as part of laundry operations, these process chemicals nor the soiled laundry could be removed from the building during the indoor air sampling event.

Negative Pressure (inWC) **June 16, 2025**	2.0	2.4	1.9	1.4	1.0
Negative Pressure (inWC) **December 10, 2025**	1.823	1.880	1.806	1.265	0.830

Similar to the riser stacks, GEI technicians used a manometer to measure the vacuum pressure in each sub-slab monitoring point on 5 occasions, including the four identified above, as well as during the post-startup sampling event in January 2024.[17] These data are summarized on the following table.

MP ID	MP1D	MP2D	MP3D	MP4D	MP5D	MP6D[18]	MP7D	MP8D
Negative Pressure (inWC) **Post-Startup January 2024**	0.35	NM	0.93	0.64	0.80	0.03	NM	NM
Negative Pressure (inWC) **Annual Inspection December 2024**	0.575	NM	1.495	1.090	1.420	0.001	NM	NM
Negative Pressure (inWC) **Annual Inspection Follow-up March 2025**	0.149	0.775	0.865	0.562	0.789	0.002	0.170	0.110

[17] Monitoring points MP2D, MP7D, MP8D were not accessible during the January 2024 event. MP2D could not be opened because the metal cover had rusted shut. MP7D could not be accessed because the plastic cap had been installed upside down and cemented in place. MP8D could not be accessed because a carpet had been installed over top and the exact location was not known.

[18] A recurring issue has been encountered at MP6D that makes it especially difficult to get an accurate pressure measurement at this point. On two occasions (June 2025 and December 2025) an adequate seal was not achieved, thus a zero pressure reading was recorded. On both occasions, when technicians returned and measured the pressure directly in the PVC monitoring point instead of through the port in the plastic threaded cap, sufficient pressure was confirmed.

Negative Pressure (inWC) **Post Repair June 2025**	0.564	1.04	1.05	0.854	0.945	0.112	0.626	0.508
Negative Pressure (inWC) **Annual Inspection December 2025/January 2026**	0.399	0.840	0.780	0.624	0.732	0.013	0.457	0.386

The June 2025 and December 2025/January 2026 events were performed after repairs that were identified during the 2024 annual inspection were completed. The negative pressures in each monitoring point that was measured post-startup (January 2024), as well as the eight monitoring points measured during these two post-repair events all surpass the design standard, which was to create a vacuum of at least 0.004 inches water column.

In summary, sub-slab vacuum coverage confirms control of potential intrusion pathways and effectiveness of the VMS when discharge stacks are operating as designed.

6. Conclusions and Recommendations

The post-startup heating season data described herein show that the VMS installed during facility construction (i.e., vapor barrier and active SSDS) is operating as intended. Operation of the SSDS will continue. UniFirst personnel will maintain and inspect system components, including the blowers, gauges and alarms, periodically. GEI began conducting annual inspections of the VMS in 2024. The inspection report for the first annual inspection is included in Attachment E. Note that the repairs identified in the inspection were made in June 2025, and vacuums were verified thereafter. The inspection report for the second annual inspection is included in Attachment F.

Inspections include visual inspection of the complete system (e.g. vent fans, piping, warning devices, labelling on system components), identification and repair of leaks, and inspection of the exhaust points to verify no air intakes have been located nearby. A detailed description of the operation, maintenance and monitoring is described in the Interim Site Management Plan, which was submitted for agency approval as part of the draft Construction Completion Report for Phase 2 Construction and is expected to be submitted as a stand-alone final document in the second half of 2025.

Table 1. January 2024 Indoor Air Results
UniFirst Corporation
Liverpool, NY
BCP Site No. 734152

Notes:
Data for these sampling events have not been validated. Qualifiers are Lab Qualifiers.
Analytes in blue are not detected in any sample

ug/m^3 = micrograms per cubic meter
P90 = 90th percentile
BTEX = Benzene, Toluene, Ethylbenzene, and Xylenes
VOC = Volatile Organic Compound

CAS No. = Chemical Abstracts Service Number

Bolding indicates a detected result concentration
Shading indicates a detected result above the P90 EPA BASE or NYSDOH IA Guideline Value

* indicates an indoor air result that is within 10% of the ambient air result for the same compound, and therefore is considered consistent with background conditions

Laboratory Qualifiers:
U = The result was not detected above the reporting limit.

EPA BASE P90 = US Environmental Protection Agency 2001 building assessment and survey evaluation (BASE) 90th p

- RIGHT-OF-WAY BOUNDARY

NOTES:

1. "SSV" DESIGNATED IDs ARE SUB-SLAB SOIL VAPOR SAMPLES. "IA" DESIGNATED IDs ARE INDOOR AIR SAMPLES. (INDOOR AIR SAMPLES WERE COLLECTED AT BREATHING HEIGHT, CO-LOCATED WITH THE SOIL VAPOR SAMPLES.)
2. RESULTS ARE REPORTED IN µg/m^3.
3. SAMPLES WERE COLLECTED ON JANUARY 17 & 18, 2024.
4. PCE = TETRACHLOROETHENE.
5. TCE = TRICHLOROETHENE.
6. DCE = DICHLOROETHENE.
7. VC = VINYL CHLORIDE.
8. CVOC RESULTS ARE SUMMARIZED ON THIS FIGURE BECAUSE THEY ARE THE PRIMARY SITE CONSTITUENTS OF CONCERN. OTHER VOCS WERE DETECTED IN CERTAIN SAMPLES. REFER TO THE VI DATA TABLES.
9. ACCORDING TO WARREN RAMIE SURVEYING, THE DEED DESCRIPTIONS, ON WHICH THE PROPERTY BOUNDARIES SHOWN HEREON WERE BASED, PREDATE ONONDAGA COUNTY'S RIGHT OF WAY TAKING FOR 7TH NORTH STREET.

Attachment A Field Sampling Logs

AMBIENT AIR SAMPLING CHECKLIST

Sampling Location: AA-1

Sample ID: 2001642-AA-1

Date: 1/17/24

Sampling personnel: MF, JD, AJ

Summa Canister ID: 3441

Flow Regulator ID: 01743

Sample Type / Analysis Method: TO15/Summa

Sampling Start Time: 0850

Sampling Finish Time: 1648_____

During Sampling	
Time	**Vacuum**
1241	**-17.86**
1458	**-10.27**

Did Summa canister go to ambient pressure? Yes / No

Vacuum pressure reported by Laboratory: ---

Pressure gauge reading (Pre-opening): Flow Controller: -29.97 in. Hg

Pressure gauge reading (After sample collected): Flow Controller: -4.41 in. Hg

Environmental Conditions (Outside):	**Before Sampling**	**After Sampling**
Temperature (°F):	12	19
Barometric Pressure (in. Hg):	29.53	29.53
Prevailing Wind Direction:	WSW	SW
General Weather Conditions:	CLEAR	CLEAR

Environmental Conditions (At Sample Location):	**Before Sampling**	**After Sampling**
Temperature (°F):	12	19
Barometric Pressure (in. Hg):	29.53	29.53

PID readings at sample location (ppb): 0

Photographs taken before sampling? Yes / No **If Yes, what time: 0850 Taken by:** _____

Photographs taken after sampling? Yes / No **If Yes, what time:** _____ **Taken by:** _____

Was the building aired out prior to sample collection? Yes / No **If yes, how long?**

Windows open? Yes / No **Ventilation fans?** Yes / No

Was there significant precipitation within 12 hours of (or during) the sampling event? Yes / No

Were any of the ~~residents home~~ during sampling? Yes / No **If yes, provide detail:** Sampling performed during regular working hours, with laundry fully operational

Did any of the occupants NOT follow instruction for residents? Yes / No **If yes, describe below:**

N/A - generally unable to modify work practices/typical laundry operation during sampling

Air intake at 34".

Basement Ceiling Height (to joists): Front _____**; Back**_____.

Provide any information that may be pertinent to the sampling event and may assist in the data interpretation process. Also, note the usage of the basement (storage only, laundry, etc.):

AMBIENT AIR SAMPLING CHECKLIST

Sampling Location: IA1

Sample ID: 2001642-IA1

Date: 1/17/24

Sampling personnel: MD, JD, AJ

Summa Canister ID: 3185

Flow Regulator ID: 01601

Sample Type / Analysis Method: TO15/Summa

Sampling Start Time: 0817

Sampling Finish Time: 1617

During Sampling	
Time	**Vacuum**
858	**-27.37**
1238	**-15.96**
1445	**-9.4**

Did Summa canister go to ambient pressure? Yes / (No)

Vacuum pressure reported by Laboratory: ---

Pressure gauge reading (Pre-opening): Flow Controller:-29.89 in. Hg

Pressure gauge reading (After sample collected): Flow Controller: -5.13 in. Hg

Environmental Conditions (Outside):	**Before Sampling**	**After Sampling**
Temperature (°F):	15	19
Barometric Pressure (in. Hg):	29.9	29.53
Prevailing Wind Direction:	WSW	SW
General Weather Conditions:	CLEAR	CLEAR

Environmental Conditions (At Sample Location):	**Before Sampling**	**After Sampling**
Temperature (°F):	72	72
Barometric Pressure (in. Hg):	29.5	29.5

PID readings at sample location (ppb): 0

Photographs taken before sampling? (Yes) / No **If Yes, what time: 0817 Taken by: JD**

Photographs taken after sampling? Yes / (No) **If Yes, what time: _____ Taken by: _____**

Was the building aired out prior to sample collection? Yes / (No) **If yes, how long?**

Windows open? Yes / (No) **Ventilation fans?** Yes / (No)

Was there significant precipitation within 12 hours of (or during) the sampling event? Yes / (No)

Were any of the ~~residents home~~ during sampling? (Yes) / No **If yes, provide detail: Workers were present in the building for sampling.**

Did any of the occupants NOT follow instruction for residents? Yes / (No) **If yes, describe below:**

N/A - generally unable to modify work practices/typical laundry operation during sampling

Air intake at 50"

Basement Ceiling Height (to joists): Front n/a Back n/a

Provide any information that may be pertinent to the sampling event and may assist in the data interpretation process. Also, note the usage of the basement (storage only, laundry, etc.):

Sampling personnel: MF, JD, AJ

Summa Canister ID: 2734

Flow Regulator ID: 02009

Sample Type / Analysis Method: TO15/Summa

Sampling Start Time: 0827

Sampling Finish Time: 1627

During Sampling	
Time	**Vacuum**
909	**-27.74**
1234	**-16.87**
1451	**-9.97**

Did Summa canister go to ambient pressure? Yes / (No)

Vacuum pressure reported by Laboratory: ---

Pressure gauge reading (Pre-opening): Flow Controller: -29.52 in. Hg

Pressure gauge reading (After sample collected): Flow Controller: -5.4 in. Hg

Environmental Conditions (Outside):	**Before Sampling**	**After Sampling**
Temperature (°F):	15	19
Barometric Pressure (in. Hg):	29.9	29.53
Prevailing Wind Direction:	WSW	SW
General Weather Conditions:	CLEAR	CLEAR

Environmental Conditions (At Sample Location):	**Before Sampling**	**After Sampling**
Temperature (°F):	65	65
Barometric Pressure (in. Hg):	29.5	29.5

PID readings at sample location (ppb): 0

Photographs taken before sampling? (Yes) / No **If Yes, what time: 0827 Taken by: JD**

Photographs taken after sampling? Yes / (No) **If Yes, what time: _____ Taken by: _____**

Was the building aired out prior to sample collection? Yes / (No) **If yes, how long?**

Windows open? Yes / (No) **Ventilation fans?** Yes / (No)

Was there significant precipitation within 12 hours of (or during) the sampling event? Yes / (No)

Were any of the ~~residents home~~ during sampling? (Yes) / No **If yes, provide detail: Workers were present in the building for sampling.**

Did any of the occupants NOT follow instruction for residents? Yes / (No) **If yes, describe below:**

N/A - generally unable to modify work practices/typical laundry operation during sampling

Air intake at 80"

Basement Ceiling Height (to joists): Front _____; Back_____.

Provide any information that may be pertinent to the sampling event and may assist in the data interpretation process. Also, note the usage of the basement (storage only, laundry, etc.):

Sample Type / Analysis Method: SUMMA/TO-15&APH

Sampling Start Time: 1112

Sampling Finish Time: 1212

Did Summa Canister go to ambient pressure? No

Pressure gauge reading (Pre-opening): Flow Controller: -29.32 in.Hg

Pressure gauge reading (After sample collected): Flow Controller: -2.99 in.Hg

During Sampling		
Time	Vacuum	Helium (%)*
1122	-29.81	12.0
1132	-20.56	18.0
1142	-16.00	12.7
1152	-11.64	11.3
1202	-7.07	13.2
~~1212~~	~~-2.99~~	
1212	2.99	10.1

*Percentage of Helium in bowl surrounding point

Environmental Conditions (Outside):

	Before Sampling	After Sampling
Temperature:	23°F	23°F
Barometric Pressure:	30.08 in	30.05 in
Prevailing Wind Direction:	N 6 mph	N 6 mph
General Weather Conditions:	cloudy	cloudy

Photographs taken before sampling? Y **If Yes, what time:** 1112 **Taken by:** JD

Vacuum prior to sampling (in. WC): -0.35

Ambient air concentration (ppb): 0

Soil gas concentration prior to sampling (ppm): 0.1

Vapor point purged for 5 **min with a MiniRAE (500-600 cc/min) prior to sampling.**

Comments:

Before sampling: Bowl 15.1% He, Sample port 0% He.

After sampling: Bowl 10.1% He, Sample port 6800 ppm He.

6800ppm=0.68%.

According to NYDOH protocol, the tracer test is passed if the concentration of the tracer gas in the sample port is less than 10% of the concentration of the tracer gas in the bowl. This test passes because the tracer test limit is 1.0% and the sample port reading is 0.68%.

Attachment B Chemical Inventory Documentation

Chemical Inventory

The following products were identified in the UniFirst Laundry Facility during the chemical inventory conducted by GEI on January 17, 2024 in support of the simultaneous vapor sampling event.

Shop/Garage Room

- Aerosol lubricant
- Formula 777 EC weed killer
- Rotella T1 diesel motor oil
- Muriatic acid
- O'Reilly windshield washer fluid
- MC-10 sanitizer
- Shell Rotella T6 full synthetic motor oil
- PVC primer
- CPVC primer
- Interior paint
- Pipe thread sealant
- Gasket maker
- Silicone lubricant
- Rustoleum PB Blaster
- Chain and cable lubricant
- JB Weld blue silicone
- Pneumatic oil
- Gorilla Glue
- Anti-freeze lubricant
- Unspecified oil
- Sigma M-460 Lubricant

Boiler Room

- Chem Aqua 10270
- Chem Aqua 13140
- Chem Aqua 18102
- Chem Aqua 13140
- Chem Aqua 13096
- Gasoline

Wastewater Room

- Neave
- PVC Primer
- Cleanoform

Wastewater Room (Ctd)

- Spray paint
- Motor oil
- Acrylic paint
- Epoxy
- Battery terminal cleaner
- Silicone spray
- Flocculant mix tank
- Enamel spray
- Slick rail cleaner and wax
- Caulk
- Acetone
- Glass cleaner
- Primer
- Enamel spray paint
- Lubricant
- Interior paint
- Hydraulic cement
- Crimsonchlor chlorinated solution
- Hi-vis pro 3265
- Pinnacle liquid antichlor
- Motion high performance neutral pH laundry detergent
- Perteut UN3109
- Express Alkali

Main Room

- 10 MC 10 Sanitizer
- Disinfectant
- Bathroom cleaner
- Food service degreaser
- Glass & Surface cleaner
- Disinfectant – Virucide
- Bio-Powder
- Gojo scrubbing towels
- Aerosol air freshener
- Assorted interior paint

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on January 10, 2024. The canister certification data is provided as an addendum.

L2403441-01D, -02D, -03D, -04D, and -05D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2403441
Project Number:	2001642	**Report Date:**	01/31/24

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2403441
Project Number:	2001642	**Report Date:**	01/31/24

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 524.2: THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on January 10, 2024. The canister certification data is provided as an addendum.

Sample Receipt

L2403442-08: The canister ID number for the sample is listed on the CoC as 3097 but should be 3099.

L2403442-09: The canister ID number for the sample is listed on the CoC as 2855 but should be 2854.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2403442
Project Number:	2001642	**Report Date:**	01/31/24

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	UNIFIRST - LIVERPOOL	**Lab Number:**	L2403442
Project Number:	2001642	**Report Date:**	01/31/24

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

Attachment E 2024 Inspection Report

April 9, 2025
Project No. 2001642

Ms. Catherine Malagrida
UniFirst Corporation
68 Jonspin Road
Wilmington, MA 01887

Re: 2024 Annual Inspection Report
UniFirst Laundry Facility
113 7th North Street, Liverpool, New York
NYSDEC Site No. C734152

Dear Ms. Malagrida:

GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) has prepared this summary to document the results of the annual site inspection that was performed on December 12, 2024 and follow-up inspection of the sub-slab depressurization system (SSDS) that was performed on March 20, 2025 at the UniFirst Laundry Facility in Liverpool, New York (Figure 1). The inspections were performed in accordance with the Draft Interim Site Management Plan (ISMP) that was submitted to the New York State Department of Environmental Conservation (NYSDEC) on August 28, 2024. The Draft ISMP has not yet been approved by the NYSDEC, but UniFirst has proactively commenced the site inspections and maintenance of the SSDS components pending NYSDEC's approval or comments regarding the Draft ISMP.

Project Background

The NYSDEC-defined Site, as established in the Brownfield Site Cleanup Agreement (BCA, NYSDEC October 2021), includes the UniFirst Laundry Facility building and surrounding parking lots, landscaped areas, and stormwater management areas (Figure 1). The properties in the vicinity of the Site include a mix of commercial and light industrial properties. Investigations conducted at the Site have identified volatile organic compounds in groundwater at concentrations that could cause vapor intrusion (GEI, 2022). Between 2020 and 2023, a new building was constructed at the Site, as described in the Construction Completion Reports for both phases. As a precautionary measure, a vapor mitigation system (VMS) was installed during building construction (GEI, June and August 2024). The VMS is considered an interim remedial measure (IRM) and consists of a vapor barrier and SSDS.

During the Phase 2 building construction, injections of treatment reagents were also conducted near the suspected source area as another IRM (GEI, August 2024). The IRMs had to be completed during building construction, thus were done while the Remedial Investigation was ongoing. The Remedial Investigation was completed in December 2023, as reported in the Remedial Investigation Report

GEI Consultants, Inc. DBA GEI Consultants Engineering,

(GEI, December 2024). A final remedy has not yet been selected, but quarterly groundwater monitoring is currently being undertaken as proposed in the Draft ISMP and verbally approved by the NYSDEC on December 4, 2024. The first two quarterly monitoring events were conducted in December 2024 and March 2025. The Draft ISMP describes the procedures for the managing the environmental conditions at the Site until the final remedy is selected and implemented, and a permanent SMP is established (or as otherwise directed or approved by NYSDEC).

The SSDS includes five riser stacks (referred to as S1 through S5) with roof-mounted blowers that create a negative pressure zone beneath the building slab. There are 12 sub-slab monitoring points throughout the building that are used for measuring the sub-slab vacuum pressure and can be used to collect sub-slab soil vapor (SSSV) samples. SSSV samples were collected during the initial system testing and results were included in the Construction Completion Report for Phase 1 (GEI, 2024). SSSV sampling is not a component of the continuing SSDS operations. Four of the sub-slab monitoring points are "shallow" (MP1S, MP2S, MP5S, and MP8S), meaning they are installed in the area between the vapor barrier and building slab. The remaining eight points are "deep" (MP1D through MP8D) and are installed below the vapor barrier. Only the deep monitoring points are included in the annual SSDS inspections. The discharge stack and monitoring point locations are included in Figure 1.

Based on the current conditions, key aspects of the ISMP include the quarterly groundwater monitoring program and inspections of Site (including the SSDS) annually or in response to significant events that could affect site conditions. The groundwater monitoring program is performed and reported separately from the inspection program. Under the ISMP, the inspections focus on general site conditions and the SSDS. There is not currently an institutional control, and the only current engineering control (EC) is the SSDS that was installed within the new facility building at the time of construction.

2024 Site-Wide Inspection

The ISMP specifies that Site-wide inspections be performed a minimum of once per year and documented on a Site-wide inspection form. The inspection assesses the following:

- Condition and continued effectiveness of ECs.
- General Site conditions at the time of the inspection.
- Whether stormwater management systems, such as basins and outfalls, are working as designed.
- That Site management activities being conducted including, where appropriate, confirmation sampling and a health and safety inspection.
- That Site records are up to date.

The 2024 annual inspection was conducted by GEI on December 12, 2024. Appendix A includes a copy of the completed 2024 Annual Site-Wide Inspection Form.

There was no evidence of unauthorized site use, vulnerabilities from climate change, or change of ownership.

The monitoring wells that are included in the monitoring and sampling plan in the ISMP were also observed to be present and accessible during the December 2024 inspection event.

2024 Sub-Slab Depressurization System Inspection and Maintenance

The SSDS is the only EC included in the ISMP. As described in the Operation, Maintenance, and Monitoring Manual attached to the ISMP, the annual SSDS inspection includes the following:

- Confirmation that fans on each stack are operating as expected.
- Visual inspection of accessible piping and discharge stacks.
- Comprehensive monitoring measurements of vacuum pressure using a digital manometer at each deep monitoring point and riser stack sampling port, and extraction flow using a digital anemometer at each riser stack sampling port.
- The number of days for any system shutdowns.
- A description of breakdowns and/or repairs, and an explanation for any significant downtime.
- A description of the resolution of performance problems.
- Trends in equipment failure.

An initial SSDS inspection was conducted by GEI on December 12, 2024. This inspection included:

- Visual inspection of visible piping and vapor monitoring points within the facility building.
- Use of a drone to photograph the conditions of the roof-mounted blowers and vent piping.
- Measurements of vacuum pressures at accessible sub-slab monitoring points. While vacuum measurements were planned for eight sub-slab monitoring points, GEI was only able to measure vacuums at five points during the December 2024 inspection due to the condition of certain points, as discussed below.
- Measurements of vacuum pressures and discharge velocities in the riser pipes associated with each of the five blower riser pipes.

Annual SSDS inspection field forms for the December 2024 inspection are included in Appendix B. As noted, SSDS equipment observable inside the building was generally in good condition and the blowers were operating. Vacuum pressure readings in four of the five riser pipes were over 2” WC, meeting the goal of minimum vacuum of 0.25” WC in each riser described in the IRM Work Plan for Phase 1 Vapor Mitigation System (GEI, 2022). The fifth (S5) indicated variable and unstable pressures, as further discussed below. For the five monitoring points where sub-slab pressures could be measured, four had vacuum pressures greater than the goal for minimum vacuum pressure for this system (0.004” WC). The fifth (MP6D) appeared to be in satisfactory condition but had a vacuum pressure of only 0.001” WC.

Drone photos[1] (Appendix D) also indicated that the roof-top blowers and vents were intact with no indications of deficient conditions.

Deficient conditions noted by the December 2024 SSDS inspection included:

- One sub-slab sampling port (MP1D) was missing its protective cover.
- One sub-slab sampling port (MP3D) was found to be partially filled with water. The water was cleared from the monitoring point to make it suitable for monitoring. GEI concluded that the water entered from inside the building (e.g., due to floor washing).
- Two sub-slab monitoring ports (MP2D and MP8D) could not be accessed because rust accumulation in the threads of the riser precluded removal of the caps.
- One sub-slab sampling port (MP7D) could not be accessed because its cap had been incorrectly installed at the time of construction, concrete from the slab pour was binding the cap, and an internal fence divider wall passed directly over the sampling port.
- Blower S5 was not maintaining a consistent vacuum and the sub-slab vacuum pressure at nearby location MP6D was below target. Collectively, these observations suggested that blower S5 was not operating properly despite the fact that the blower was operational, and the drone photos did not indicate any apparent cause. Further evaluation could not be performed at the time because of the limited sub-slab points available for troubleshooting due to the issues noted above.

Note that, while attempts were made to measure air discharge velocities in the blower stacks, it was subsequently determined that there was an error with the anemometer during this inspection; discharge velocity measurements are not reported for the December 2024 event.

GEI returned to the Site on March 13, 2025, with additional tools to make repairs and gain access to the ports that were inaccessible during the initial visit. Repairs included:

- Replaced a missing screw to secure the cover of MP1D.
- Installed a gasket beneath the lid of MP3D.
- Installed sampling ports in MP8D and MP7.
- Removed rust from the cover of MP2D so that the point could be accessed.

GEI returned to the Site on March 20, 2025, to re-inspect the SSDS following repairs and further troubleshoot blower S5. Inspection documentation for the March 2025 re-inspection is included in Appendix B. During this inspection, the sub-slab monitoring points were in satisfactory condition and had vacuum pressures greater than the goal vacuum pressure for this system (minimum 0.004" WC), with the exception of MP6D. MP6D visually appeared to be in satisfactory condition but had a positive pressure of up to 0.010" WC. Riser stacks S2 through S4 appeared in satisfactory condition and had discharge

[1] The drone flight was conducted while operating under 14 CFR Part 107. A Part 107 waiver (ID #ALT53P6RQFC0) was acquired prior to the flight due to operating in Class C airspace associated with Syracuse International Airport. A copy of the waiver is included in Appendix C.

velocities between 1160 and 1330 ft/min. Riser stack S1 initially had a discharge velocity of 340 ft/min and S5 had a discharge velocity of 560 ft/min. To further assess the cause of these low readings, UniFirst maintenance staff went on the roof to inspect the blowers. They found that blower S1 had been switched off[2] and the blower on S5 had separated from the stack piping and was laying on the roof. Blower S1 was switched back on and the discharge velocity and vacuum pressure in S1 were re-measured approximately 30 minutes later. The pressure in MP1D, MP6D, MP7D, and MP8D were also re-measured approximately 45 minutes after S1 was turned back on. The discharge velocity in S1 was 1200 ft/min and vacuum pressure was 1.840" WC. The vacuum pressure in MP1D, MP6D, and MP8D were greater when S1 was running than they had been prior. The pressure in MP6D did not change. The final pressure and flow velocity readings are recorded on the inspection documentation in Appendix B.

Even without blower S5 operating, the discharge velocities in riser stacks S1 through S4 ranged from 1,160 ft/min to 1,330 ft/min, resulting in a combined discharge of 974 cubic feet per minute (CFM). The total discharge is above the target total discharge for the system (minimum 330 CFM) as specified in the IRM Work Plan for Phase 1 Vapor Mitigation System (GEI, 2022).

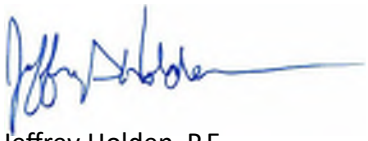
It appears that the rooftop stack for S5 separated from the riser pipe due to improper spacing of the supporting guy wires (see photos in Appendix D). Specifically, the gap in spacing between two of the wires was greater than 180 degrees, therefore providing no resistance to a wind load from the unsupported direction. GEI is currently working with a subcontractor to develop and implement corrective measures for this blower, and to assess whether improper guy wire spacing may be present at any other blowers to prevent similar occurrences. The repairs will be made as soon as possible and will require the use of personal fall protection due to the proximity of the blowers to the edge of the roof.

Once blower S5 is repaired and operational, sub-slab vacuum readings will again be made at location MP6D. It is anticipated that proper operation of blower S5 will provide target vacuum at this location. Measurements will not be needed at other sub-slab points because they achieve target vacuum without S5 being operational, and the vacuum could only be enhanced when the additional blower is online.

In addition to the repairs noted above, GEI also recommends replacing the vacuum gauges that were installed in the riser pipes by the building contractor when the SSDS was installed. While gauges were installed, they were not properly sized to measure the range of vacuum pressures expected to occur. During annual inspections, this is addressed by bringing portable pressure gauges and taking manual readings. If properly sized gauges are installed, they could be read at any time without additional equipment. Periodic inspections by field or facility personnel could then identify insufficient vacuum pressures at any time. This could avoid unintentional and/or potentially extended periods of blowers being offline (as observed for blower S1 during the March 2025 inspection), maximizing the up time and protectiveness of the SSDS.

[2] Because the roof is not routinely accessed (especially in winter) and the blower switch is mounted on the exterior of the blower, it is hypothesized that falling ice or debris from the vent piping hit the switch and turned off blower S1.

Compliance with SMP



Several issues were identified with the SSDS that was established as an EC in the ISMP. During the initial inspection, performance issues with S5, insufficient vacuum pressure at MP6D, and several inaccessible monitoring points were observed. System maintenance resolved the monitoring point access issues prior to the follow-up inspection. However, the blower on stack S1 was found to have been shut off for an unknown amount of time between the two inspection events, insufficient vacuum pressure was observed again in MP6D during the follow-up inspection, and stack S5 had broken off below the blower and fallen onto the roof. During the follow-up inspection, the S1 blower was turned back on and vacuum in nearby monitoring points was sufficient. At UniFirst's direction, GEI is working with a subcontractor to have stack S5 repaired as soon as possible to restore negative pressure beneath the entire slab. The vacuum pressure at monitoring point MP6D will be reassessed once blower S5 is back online to confirm that target pressure is achieved. GEI will notify UniFirst and the NYSDEC once those repairs are complete, and the performance is confirmed.

Site-wide inspections and SSDS monitoring will continue to be performed annually, or in response to significant events, in accordance with the ISMP.

If you have any questions, please feel free to contact Jeff Holden at 607.216.8956.

Sincerely,

Engineering Control Systems

The site engineering control systems is a sub-slab depressurization system. Exposure to remaining contamination in soil/groundwater at the site is prevented by a vapor mitigation system consisting of a sub-slab vapor barrier and sub-slab depressurization system. A separate inspection form, which is included in the O&M Manual for the SSDS, should also be completed each year.

Was access granted by property owner to perform SSDS inspection?

Terms of Operation

Operator authorizes Aloft to collect LAANC Data and disclose this data to the FAA in order to provide LAANC services as described in the Privacy Policy: https://www.aloft.ai/privacy/

Operator is a Certified Part 107 Remote Pilot and will follow all Part 107 rules and guidelines: https://www.faa.gov/news/fact_sheets/news_story.cfm?newsId=22615

Aloft cannot ensure the completion or accuracy of all displayed TFR data. Remote pilots are responsible for checking the airspace they are operating in per Part 107.49 and complying with all restrictions that may be present such as restricted and prohibited airspace, temporary flight restrictions, etc. To obtain the most accurate and up to date information operators should check Federal Aviation Administration - Graphic TFRs https://tfr.faa.gov and ensure their operation(s) do not overlap with any active TFRs or other restricted airspaces prior to launch.

Operator is responsible for operating in compliance with all Notice to Airmen (NOTAMs) : http://notams.aim.faa.gov

Operator is responsible for operating in compliance with all Special Use Airspace (SUAs): http://sua.faa.gov

Altitude limits are absolute values above ground level (AGL) which shall not be added to the height of any structures.

This authorization does not constitute a waiver of any State law or local ordinance.

Each authorization corresponds to a single operator controlling at most one aircraft at a time.

Contacting ATC by phone for LAANC status information may result in the request being rejected by the FAA.

Attachment F 2025 Inspection Report

March 20, 2026
Project No. 2001642

Mr. Michael Belveg
New York State Department of Environmental Conservation
Division of Environmental Remediation
615 Erie Boulevard West
Syracuse, NY 13204-2400

Re: 2025 Annual Inspection Report
113 7th NORTH STREET SITE
113 7th North Street, Liverpool, New York
Site No. C734152

Dear Mr. Belveg:

On behalf of the Applicant (UniFirst Corporation, Inc.), GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) has prepared this summary to document the results of the annual site and sub-slab depressurization system (SSDS) inspections that were performed on December 10, December 18, 2025 and January 8, 2026 at the UniFirst Laundry Facility in Liverpool, New York (Figure 1). The inspections were performed in accordance with the Interim Site Management Plan (ISMP) that was submitted to the New York State Department of Environmental Conservation (NYSDEC) on September 30, 2025.

Project Background

The NYSDEC-defined Site, as established in the Brownfield Site Cleanup Agreement (BCA, NYSDEC October 2021), includes the UniFirst Laundry Facility building, portions of the surrounding parking lots and loading area, landscaped areas, and stormwater swale (Figure 1). The properties in the vicinity of the Site include a mix of commercial and light industrial properties.

Between 2020 and 2023, a new laundry facility building was constructed. Preliminary investigations identified volatile organic compounds in groundwater at concentrations that could cause vapor intrusion (GEI, 2022). Two Interim Remedial Measures (IRMs) were implemented during construction. The IRMs consisted of installing a vapor mitigation system (VMS), which included a vapor barrier and SSDS, as well as injecting treatment reagents near the suspected source area following demolition and prior to new foundation construction (GEI,2025 a&b).

The SSDS includes five riser stacks (referred to as S1 through S5) with roof-mounted blowers that create a negative pressure zone beneath the building slab. There are 12 sub-slab monitoring points throughout the building that are used for measuring the sub-slab vacuum pressure and can be used to collect sub-slab soil

GEI Consultants, Inc. DBA GEI Consultants Engineering,
Geology, Architecture & Landscape Architecture
950 Danby Rd., Ste. 201-F, Ithaca, NY 14850
607.216.8955

vapor (SSSV) samples.[1] Four of the sub-slab monitoring points are "shallow" (MP1S, MP2S, MP5S, and MP8S), meaning they are installed in the area between the vapor barrier and building slab. The remaining eight points are "deep" (MP1D through MP8D) and are installed below the vapor barrier. The discharge stack and monitoring point locations are included in Figure 1.

Due to the construction schedule, it was necessary to implement the IRMs while the Remedial Investigation is still ongoing. Although a final remedy has yet to be selected, quarterly groundwater monitoring and annual inspections are currently being conducted in accordance with the ISMP. The first five quarterly monitoring events took place from December 2024 through December 2025. The ISMP describes the procedures for the managing environmental conditions until the final remedy is selected and implemented, and a final SMP is established (or as otherwise directed or approved by NYSDEC).

The ISMP includes a quarterly groundwater monitoring program and annual inspections (including the SSDS). The groundwater monitoring program is performed and reported separately from the inspection program. Under the ISMP, the inspections focus on general site conditions and the SSDS. The general site conditions component of the inspection generally includes observation of pavement and stormwater management systems conditions, as well as documentation of site use and ownership. The SSDS component of the inspection generally includes observation of the condition of the visible components of the SSDS, as well as pressure and velocity measurements within the SSDS riser stacks and pressure measurements in the deep vapor monitoring points.

2025 Site-Wide Inspection

The ISMP specifies that Site-wide inspections be performed a minimum of once per year, and in response to significant events that could affect site conditions, as necessary. Inspections are documented on a Site-wide inspection form. The inspection assesses the following:

- Condition and continued effectiveness of ECs.
- General Site conditions at the time of the inspection.
- Whether stormwater management systems, such as basins and outfalls, are working as designed.
- That Site management activities being conducted including, where appropriate, confirmation sampling and a health and safety inspection.
- That Site records are up to date.

The 2025 annual inspection was conducted by GEI on December 10, 2025. There was no evidence of damage, dumping, or other unauthorized site use, vulnerabilities from climate change, or change of ownership. Appendix A includes a copy of the completed 2025 Annual Site-Wide Inspection Form.

Most of the monitoring wells included in the monitoring and sampling plan in the ISMP were present and accessible during the December 2025 inspection event, except MW9S, MW9I, and MW10, which were temporarily inaccessible due to a thick layer ice in the rear parking lot during the inspection. These wells have been present and accessible during all prior sampling events.

[1] SSSV samples were collected during the initial system testing and results were included in the Construction Completion Report for Phase 1 (GEI, 2025a) but sub-slab vapor sampling is not a component of the continuing SSDS operations.

2025 Sub-Slab Depressurization System Repairs

Damage to and/or insufficient operation of certain SSDS components were identified during the 2024 Annual SSDS Inspection as reported in the April 9, 2025, inspection report. To address the issues identified during the prior inspection, GEI and Alpine Environmental mobilized on June 11-12, 2025, to replace the discharge stack and fan at S5, which had broken and fallen onto the roof. A metal bracket was also installed to support stack S5 because the location/orientation of the guy wires cannot properly support this stack. Alpine also inspected the other four stacks and indicated that they are operating and the guy wires were installed at sufficient angles for structural support. Alpine installed new pressure gauges and red light/green light pressure alarms on the indoor riser stacks because the prior gauges were not sized properly and would not trigger the alarm if insufficient pressures were present.

GEI returned on June 16 and 26, 2025 to check pressures and repair the sub-slab monitoring points, as needed. Measured pressures were sufficient in all monitoring points except MP6 (0.00 inches water column [WC]). GEI identified that the insufficient pressure reading at MP6 was due to improper installation of the monitoring point cap. The cap was removed and temporary seal was installed, after which the vacuum pressure was measured at 0.111" WC, which meets the minimum acceptable pressure is -0.004" WC. GEI ordered a permanent replacement cap and returned to install it on July 1, 2025.

2025 Sub-Slab Depressurization System Inspection

As described in the Operation, Maintenance, and Monitoring Manual attached to the ISMP, the annual SSDS inspection includes the following:

- Confirmation that fans on each stack are operating as expected.
- Visual inspection of accessible piping and discharge stacks.
- Visual inspection of pressure gauges and low-pressure red/green light alarms on discharge stacks.
- Comprehensive monitoring measurements of vacuum pressure using a digital manometer at each deep monitoring point and riser stack sampling port, and extraction flow using a digital anemometer at each riser stack sampling port.
- The number of days for any system shutdowns.
- A description of breakdowns and/or repairs, and an explanation for any significant downtime.
- A description of the resolution of performance problems.
- Trends in equipment failure.

The 2025 SSDS inspection was conducted by GEI on December 10, December 18, 2025, and January 8, 2026. This inspection included:

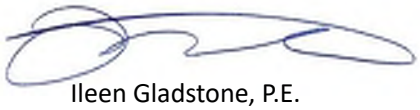
- Visual inspection of visible piping and vapor monitoring points within the facility building (December 10, 2025).
- Use of a drone to observe roof-mounted blowers and vent piping conditions (December 18, 2025).
- Measurements of vacuum pressures at sub-slab monitoring points (December 10, 2025 and January 8, 2026).
- Measurements of vacuum pressures and discharge velocities in the riser pipes associated with each of the five blower riser pipes (December 10, 2025).

Annual SSDS inspection field forms for the 2025 inspection are included in Appendix B.

As noted, SSDS equipment observable inside the building was generally in good condition and the blowers were operating. Vacuum pressure readings in each of the five riser pipes were over 0.8" WC, meeting the goal of minimum vacuum of 0.004" WC in each riser described in the ISMP (GEI, 2025c). The discharge velocity in each of the five riser pipes were over 1150 feet per minute, meeting the goal of a minimum total discharge of 330 cubic feet per minute. Drone photos[2] (Appendix D) also indicated that the roof-top blowers and vents were intact with no indications of deficient conditions and no evidence of air intakes within 30 feet of any stack.

Seven of the eight sub-slab monitoring points had vacuum pressures greater than the goal for minimum vacuum pressure for this system (0.004" WC) when measured on December 10, 2025. The eighth (MP6D) appeared to be in satisfactory condition but had a vacuum pressure of only 0.001" WC. GEI returned on January 8, 2026, to remeasure the vacuum pressure in monitoring point MP6D using a different method. Pressure at MP6D was measured directly from the monitoring point pipe (2-inch PVC pipe) rather than from the port in the cap on top of the monitoring point. The vacuum pressure was 0.013" WC using this alternate method, which meets vacuum pressure goal for this system (minimum 0.004" WC). During future annual inspections, pressure at MP6D will be measured directly from the PVC pipe rather than the through the port in the cap.

Conclusions



The general site and SSDS inspections indicate that controls appear to be operating as designed. Site-wide inspections and SSDS monitoring will continue to be performed annually, or in response to significant events, if necessary, in accordance with the ISMP.

If you have any questions, please feel free to contact Wendy Moore at 607.216.8966.

Sincerely,

Are any monitoring wells opened or damaged: Yes ___ No X Comments:

Engineering Control Systems

The site engineering control systems is a sub-slab depressurization system. Exposure to remaining contamination in soil/groundwater at the site is prevented by a vapor mitigation system consisting of a sub-slab vapor barrier and sub-slab depressurization system. A separate inspection form, which is included in the O&M Manual for the SSDS, should also be completed each year.

Was access granted by property owner to perform SSDS inspection?
Yes X No____ Comments:

Were any SSDS repairs required?

Notifications
60-day advance notice of any proposed changes in site use that are required under the terms of the Orders on Consent, 6NYCRR Part 375, and/or Environmental Conservation Law.
Yes____ No____ Comments: N/A - no changes to site use

7-day advance notice of any proposed ground-intrusive activities pursuant to the Excavation Work Plan.
Yes_X__ No____ Comments: Notice was given directly by Pilot to NYSDEC for well installation in May 2025 (MW1C on UniFirst site)

Notice within 48-hours of any damage or defect to the foundations structures that reduced or has the potential to reduce the effectiveness of the Engineering Control and likewise any action to be taken to mitigate the damage or defect.
Yes____ No____ Comments: N/A - no applicable damage

Verbal notice by noon of the following day of any emergency, such as a fire, flood, or earthquake that reduces or has the potential to reduce the effectiveness of the Engineering Control in place at the site, with written confirmation within 7 days that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.
Yes____ No____ Comments: N/A - no applicable emergencies

Follow-up status reports on actions taken to respond to any emergency event requiring ongoing responsive action shall be submitted to the NYSDEC within 45 days and shall describe and document actions taken to restore the effectiveness of the ECs.
Yes____ No____ Comments: N/A - no applicable emergencies

Any change in the ownership of the site or the responsibility for implementing this ISMP will include the following notifications:

At least 60 days prior to the change, the NYSDEC will be notified in writing of the proposed change. This will include a certification that the prospective purchaser has been provided with a copy of the Orders on Consent, and all approved work plans and reports, including this ISMP.
Yes____ No____ Comments: N/A - no applicable change in ownership

Within 15 days after the transfer of all or part of the site, the new owner's name, contact representative, and contact information will be confirmed in writing.
Yes____ No____ Comments: N/A - no applicable change in ownership
Ask for documentation if yes.

Contingency Plan
In the event of an emergency condition impacting Engineering Controls, UniFirst will follow its existing emergency procedures and evacuation plan for this facility as needed. As appropriate, the fire department and other emergency response group will be notified immediately by telephone of the emergency.

Did an emergency occur in the past year?
Yes____ No_X__ Comments:

Was the fire department or other emergency response group notified immediately?
Yes____ No____ Comments: N/A - no applicable emergencies

Riser Ports						
Location ID	Room	Pressure (in. W.C.)	Discharge Velocity (ft/min)	Condition Satisfactory (check one)		Notes (describe status if not satisfactory: requires maintenance or repair, etc)
				Yes	No	
S1	Main operations	-1.823	1220	X		N/A (Satisfactory)
S2	Main operations	-1.880	1170	X		N/A (Satisfactory)
S3	Main operations	-1.806	1150	X		N/A (Satisfactory)
S4	Main operations	-1.265	1409	X		N/A (Satisfactory)
S5	Main operations	-0.830	1170	X		N/A (Satisfactory)

Note:
1. Measure pressure at extraction riser sample ports with a digital manometer.
2. in. W.C. = inches of water column

Sub-Slab Monitoring Points					
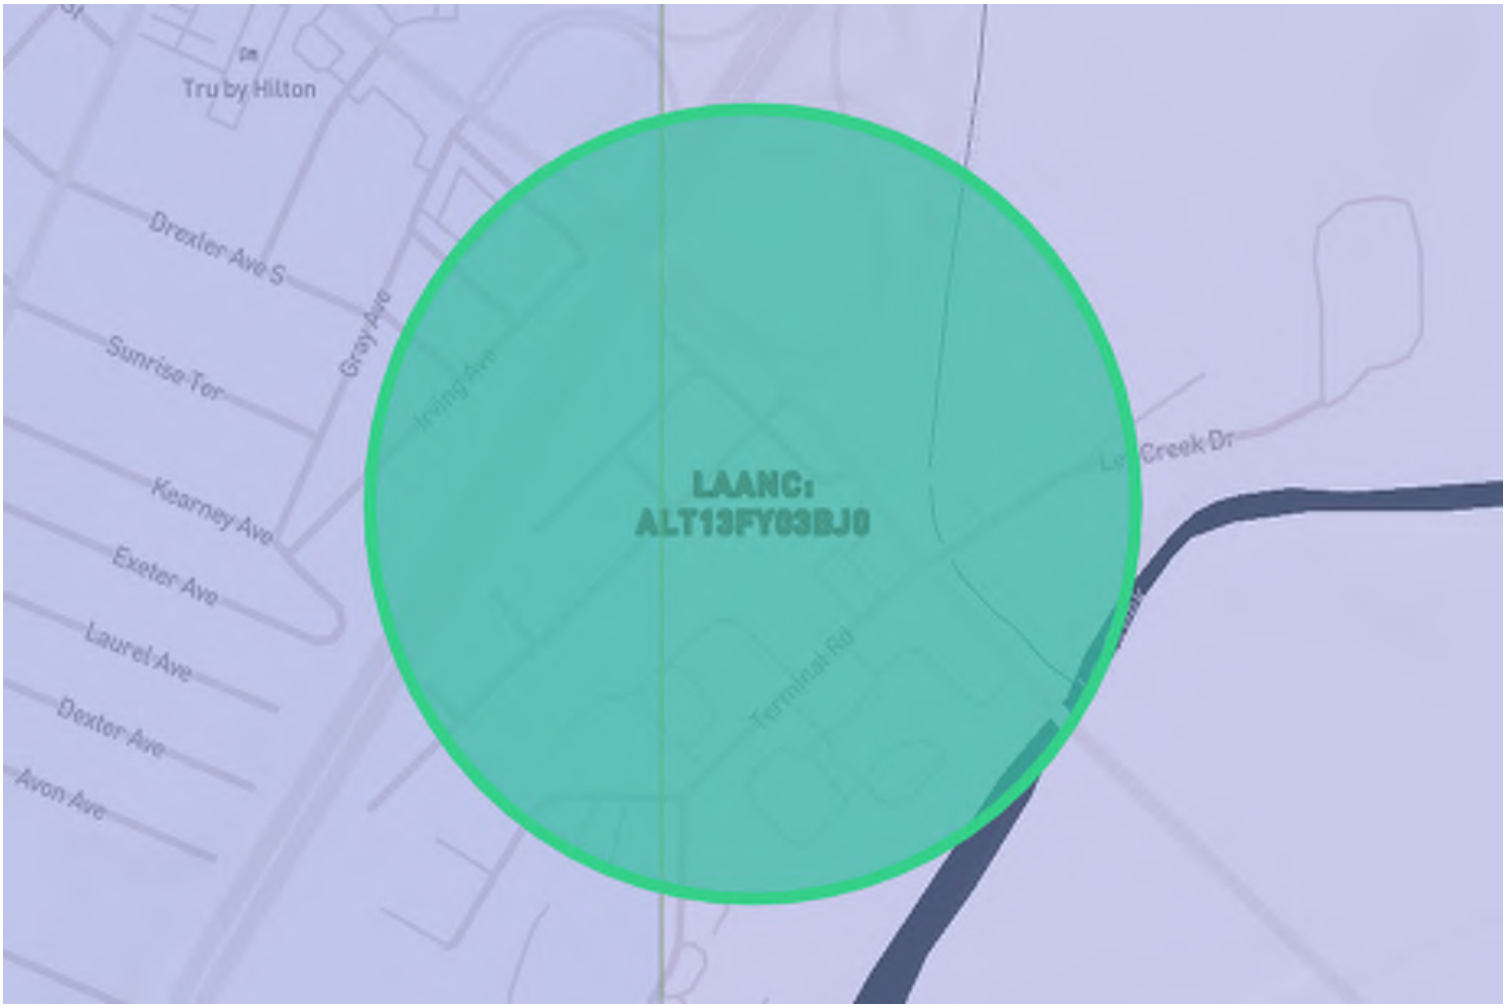
			Condition Satisfactory (check one)		Notes
Location ID	Room	Pressure (in. W.C.)	Yes	No	(describe status if not satisfactory: requires maintenance or repair, etc)
MP1D	Shop/garage	NM	N/A		
MP2D	Main operations	NM	N/A		
MP3D	Main operations	NM	N/A		
MP4D	Main operations, inside fence	NM	N/A		
MP5D	Main operations, beneath loft	NM	N/A		
MP6D	Main operations, beneath stairs	-0.013	X		N/A (Satisfactory)
MP7D	Main Operations	NM	N/A		
MP8D	Office closet	NM	N/A		



Note:
1. Measure pressure at deep sample ports with a digital manometer.
2. in. W.C. = inches of water column
3. NM = not measured

Appendix C Drone Flight Waiver

Aloft AIR CONTROL

Authorized

LAANC Authorization

Request Details

OPERATOR
DesRosiers, Jordan

REFERENCE #
ALTAVG3QXUL0

AIRPORT
SYR (Class C)

DURATION
720 minutes

START
12/18/2025 8:11am EST

HEIGHT
200 ft

END
12/18/2025 8:11pm EST

REQUESTED BY
DesRosiers, Jordan

SAFETY JUSTIFICATION

None

Timeline

Mon, 12/15/2025 8:12am EST

Request Approved

Authorized by FAA

ALTAVG3QXUL0 / SYR 12/18/25 8:11 am EST - 12/18/25 8:11 pm EST 200ft. In accordance with Title 14 CFR Part 107.41, your operation is authorized within the designated airspace and timeframe constraints. Altitude limits are absolute values above ground level which shall not be added to the height of any structures. This Authorization is subject to cancellation at any time upon notice by the FAA Administrator or his/her authorized representative. This Authorization does not constitute a waiver of any State law or local ordinance. Jordan DesRosiers is the person designated as responsible for the overall safety of UAS operations under this Authorization. During UAS operations for on-site communication/recall, Jordan DesRosiers shall be continuously available for direct contact at (716) 572-5024 by Air Traffic. Remote pilots are responsible to check the airspace they are operating in and comply with all restrictions that may be present in accordance with 14 CFR 107.45 and 107.49 (a)(2), such as restricted and Prohibited Airspace, Temporary Flight Restrictions, etc. Remote pilots are also responsible for complying with the operating requirements in 14 CFR 107.29(a) when operating at night. Operations are not authorized in Class E airspace when there is a weather ceiling less than 1,000 feet AGL. If the UAS loses communications or loses its GPS signal, it must return to a predetermined location within the operating area and land. The remote pilot in command must abort the flight in the event of unpredicted obstacles or emergencies. This certificate shall be presented for inspection upon the request of any authorized representative of the Federal Aviation Administration, or of any Federal, State, or municipal official charged with the duty of enforcing local laws or regulations.

Terms of Operation

Operator authorizes Aloft to collect LAANC Data and disclose this data to the FAA in order to provide LAANC services as described in the Privacy Policy: https://www.aloft.ai/privacy/

Operator is a Certified Part 107 Remote Pilot and will follow all Part 107 rules and guidelines: https://www.faa.gov/news/fact_sheets/news_story.cfm?newsId=22615

Aloft cannot ensure the completion or accuracy of all displayed TFR data. Remote pilots are responsible for checking the airspace they are operating in per Part 107.49 and complying with all restrictions that may be present such as restricted and prohibited airspace, temporary flight restrictions, etc. To obtain the most accurate and up to date information operators should check Federal Aviation Administration - Graphic TFRs https://tfr.faa.gov and ensure their operation(s) do not overlap with any active TFRs or other restricted airspaces prior to launch.

Operator is responsible for operating in compliance with all Notice to Airmen (NOTAMs) : http://notams.aim.faa.gov

Operator is responsible for operating in compliance with all Special Use Airspace (SUAs): http://sua.faa.gov

Altitude limits are absolute values above ground level (AGL) which shall not be added to the height of any structures.

This authorization does not constitute a waiver of any State law or local ordinance.

Each authorization corresponds to a single operator controlling at most one aircraft at a time.

Contacting ATC by phone for LAANC status information may result in the request being rejected by the FAA.

Night operations are only available for commercial (Part 107) operators who have completed required FAA training/testing and have equipped anti-collision lighting visible for at least 3 statute miles that has a flash rate sufficient to avoid a collision.
