1953	Vol 1a: 10, 18, 26, 7, 8, 9 26	The Subject Property appeared similar to the previously described map. The quality of the provided Sanborn Map is low, and features are not easily discernable.	The adjacent properties appeared similar to the previously described map. The quality of the provided Sanborn Map is low, and features are not easily discernable.
1961	Vol 1a: 10, 18, 26, 7, 8, 9 26	The Subject Property was further undeveloped. The Syracuse Fire Department can no longer be observed. A Baptist Church is present at the eastern portion of the Subject Property. Junk yards are present throughout the Subject Property.	The adjacent properties appeared similar to the previously described map.
1968	Vol 1a: 17, 18, 26, 7, 8, 9 26	The Subject Property was developed into an apartment complex entitled “Mulberry Square Apartments”.	The parcel to the west of the Subject Property was developed into an athletic field. The parcels directly north of the Subject Property have been developed into large buildings.
1971	Vol 1a: 17, 18, 26, 7, 8, 9 26	The Subject Property appeared similar to the previously described map.	The adjacent properties appeared similar to the previously described map.
1990	Vol 1a: 17, 18, 26, 7, 8, 9 26	The Subject Property appeared as it does in modern day.	The adjacent properties appeared similar to the previously described map.

4.3.4 Local Street Directories

City Directories from ERIS were available for review of South State Street, East Adams Street, and South Townsend Street. The properties listed appear to be residential and commercial properties. Commercial properties included medical services, restaurants, and shops. Several auto parts stores have been present either downgradient or at great distance from the Subject Property. Angelou Terrace, which is the location of the Subject Property, primarily contained residential listings.

4.3.4.1 City Directory Review

The City Directory listings identified that the Subject Property has primarily been surrounded by residential properties and commercial properties. The Subject Property itself has been occupied by residential properties but is not listed in the City Directory Report prior to 1998. Many of the records prior to the 1990s were of poor quality and difficult to read. Environmentally suspect listings were not found on or adjacent to the Subject Property.

4.3.5 Prior Environmental Reports

No prior environmental reports were reviewed in association with this Phase I ESA.

4.3.6 Other Historical Sources

No other historical sources were reviewed in association with this Phase I ESA.

5. SITE RECONNAISSANCE

5.1 METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance was conducted on 27 March 2023 by Mr. Adam Etringer of EA (EA 2023). Mr. Etringer was provided access to all areas of the Subject Property by Syracuse Housing Authority. Ms. Lisa Filicia, of Syracuse Housing Authority, escorted Mr. Etringer during the site reconnaissance. The site reconnaissance did not indicate the visual presence of releases of oil/hazardous materials. No active aboveground storage tanks or underground storage tanks were located at the Subject Property. EA found no evidence that would indicate uncontrolled releases of hazardous materials.

5.2 GENERAL SUBJECT PROPERTY SETTING

The Subject Property represents approximately 4 acres of the 11.1-acre parcel on which it is located. The Subject Property is fenced on the western, northern, and eastern sides. Access to the Subject Property is on Angelou Terrace which enters from the east side of S. State Street. The Subject Property is the site of six two-story residential apartment units containing a total of 24 separate apartments. The apartment units were constructed in 1989. The northern portion of the Subject Property is vegetated with grass and trees.

5.3 INTERIOR OBSERVATIONS

The Subject Property contains 24 residential apartment units that are part of the McKinney Manor development. The Syracuse Housing Authority indicated six of the units are unoccupied. EA entered three unoccupied units, apartments 101, 120, and 124 to perform a visual inspection. Each of the units was identical in layout. The units were in generally poor condition, but no environmentally suspect conditions were observed. General uncleanliness and dirty conditions were observed in the units, but no corrosion, staining, or rot was observed that would indicate an environmentally suspect condition.

The following information and Table 5-1 documents the interior observations:

Table 5-1. Interior Observations

Component	Observed? (Y/N)	Comments
Hazardous substances and petroleum products in connection with identified uses	N	A visual inspection for hazardous substances and petroleum products was completed, and none were observed.
Storage tanks/riser pipes/fill ports	N	No storage tanks/riser pipes or fill ports were observed.
Odors	N	No odors were identified during the inspection.
Pools of Liquid	N	No pools of liquid were observed.
Drums	N	No drums were identified in the interior spaces inspected.

Table 5-1. Interior Observations

Component	Observed? (Y/N)	Comments
Hazardous substances and petroleum products (not necessarily in connection with identified uses)	N	No petroleum products or hazardous substances were observed.
Unidentified substance containers	N	No unidentified substance containers were observed.
PCBs	N	No potential PCB-containing containers were observed.
Heating/cooling	Y	Each of the unoccupied units that were observed had a natural gas water boiler and hot water heater. The systems appeared to be in good condition and were operating at the time of the site reconnaissance.
Boiler room	N	The Angelou Terrace residences do not have a boiler room.
Utility System	N	Natural gas water boiler and hot water heaters are located in each unit.
Stains or corrosion	Y	Each of the unoccupied units were observed to be in generally poor condition; dirty conditions were observed in numerous locations.
Drains and sumps	N	No drains or sumps were observed.
Piping	N	No piping was observed.
Wastes	N	No waste materials were observed.
Other environmentally suspect conditions	N	No other environmentally suspect conditions were observed.

5.4 EXTERIOR OBSERVATIONS

The exterior of the Subject Property was observed on 27 March 2023, at approximately 1130 hours. Weather conditions at the time of the assessment were partly cloudy, with temperatures in the mid-30 degrees Fahrenheit with low wind and low humidity.

The Subject Property is in the City of Syracuse and is bounded by South State Street to the west, East Adams Street to the north, South Townsend Street to the east, and the Chavez Terrace apartment units to the south. The following information and Table 5-1 documents the exterior observations:

- The Subject Property is part of a residential apartment complex. The center portion of the Subject Property is a paved roadway (Angelou Terrace) and parking spaces. A concrete sidewalk surrounds the roadway and provides access to each of the unit entrances. The northern and southern portions of the Subject Property contain grass areas and mature trees.

- The adjacent property to the west contains Syracuse Fire Station 1, and a parking lot that serves the Institute of Technology at Syracuse Central. The adjacent property to the north contains The Oncenter Parking Garage. The adjacent property to the east contains the Pioneer Village housing development. The adjacent property to the south is the site of the

Chavez Terrace portion of the McKinney Manor housing development.

- Stormwater catch basins are present along the center line of Angelou Terrace. Runoff and stormwater also infiltrate the gravel and vegetated surfaces at the Subject Property and may flow to the adjacent street surfaces.
- The Subject Property is served by the City of Syracuse municipal water system.
- The residences at the Subject Property are connected to the City of Syracuse sanitary sewer system.
- No stained gravel, soils, or stressed vegetation were observed at the Subject Property.
- Two household waste dumpsters are located on the north side of Angelou Terrace for use by the residents.
- Three groundwater monitoring wells were located at the Subject Property. The wells were installed by EA in January 2023 as part of the ongoing Phase II ESA.
- Ten 55-gallon drums containing waste generated during the ongoing Phase II ESA are located at the Subject Property. One drum contains personal protective equipment waste; three drums contain soil; and six drums contain water. The analytical characterization of the waste is pending as of the date of this report.
- No totes or intermediate waste containers were identified.

Table 5-2. Exterior Observations

Component	Observed? (Y/N)	Comments
Hazardous substances and petroleum products in connection with identified uses	N	No hazardous substances or petroleum products were observed.
Storage tanks	N	No storage tanks were observed.
Odors	N	No odors were identified.
Pools of liquid	N	No pools of liquid were observed.
Drums	Y	Ten 55-gallon waste drums, as described above, pending characterization.
Hazardous substances and petroleum products (not necessarily in connection with identified uses)	N	No hazardous substances or petroleum products were observed.
Unidentified substance containers	N	No unidentified substance containers were observed.
PCBs	N	No potential PCB-containing containers were observed.
Pits, ponds, or lagoons	N	No pits, ponds, or lagoons were observed.
Stained soil or pavement	N	No stained soil or pavement was observed.
Stressed vegetation	N	No stressed vegetation was observed.
Drains and sumps	N	No rains or sumps were observed.
Solid waste	Y	As noted above.
Wastewater	N	No wastewater piping or infrastructure was observed.

Table 5-2. Exterior Observations

Component	Observed? (Y/N)	Comments
Wells	Y	Three monitoring wells, installed by EA during the Phase II ESA were observed, as described above.
Septic systems	N	No septic systems were observed. The apartment units are connected to the City of Syracuse sanitary sewer system.
Other environmentally suspect conditions	N	No other environmental suspect conditions were observed.

This page intentionally left blank

6. INTERVIEWS

Documentation of the interviews conducted as part of this investigation is contained in Appendix E.

6.1 PRESENT AND PAST OWNER INTERVIEWS

Syracuse Housing Authority is the current owner of the Subject Property. Mr. William J. Simmons, Executive Director for Syracuse Housing Authority was interviewed as a representative of the owner for this Phase I ESA. A copy of Mr. Simmons's questionnaire is available in Appendix E. Mr. Simmons did not identify any environmentally suspect conditions for the Subject Property. Mr. Simmons indicated that lead paint and asbestos testing reports are available for the subject property. EA obtained these reports previously from Syracuse Housing Authority, but they did not contain information about the Subject Property. Mr. Simmons also indicated the following information:

- Mr. Simmons is not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the Subject Property.
- Mr. Simmons is not aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Subject Property.
- Mr. Simmons is not aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.
- Mr. Simmons was not aware of any of the following documents:
    - Environmental compliance audit reports.
    - Environmental permits
    - Registrations for underground storage tanks and aboveground storage tanks.
    - Material safety data sheets.
    - Community right-to-know plan
    - Safety plans; preparedness and prevention plans; or spill prevention, countermeasure, and control plans
    - Reports regarding hydrogeological conditions on the subject property and surrounding area

- Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws with respect to the Subject Property or relating to environmental liens encumbering the property
- Hazardous waste generator notices or reports
- Geotechnical studies
- Risk assessments, and
- Recorded activity and use limitations.

6.2 KEY SITE MANAGER INTERVIEW(S)

Syracuse Housing Authority is the current owner of the Subject Property. Mr. Vincent Hueber, Facility Engineer for Syracuse Housing Authority was interviewed as the Key Site Manager for this Phase I ESA. A copy of Mr. Hueber's questionnaire is available in Appendix E. Mr. Hueber did not identify any environmentally suspect conditions for the Subject Property. Mr. Hueber indicated that lead paint and asbestos testing reports are available, but did not include documentation with submittal of the questionnaire. Upon follow-up with Syracuse Housing Authority, EA obtained two reports, but they did not contain information about the Subject Property. Mr. Hueber also indicated the following information:

- Mr. Hueber is not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the Subject Property.
- Mr. Hueber is not aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Subject Property.
- Mr. Hueber is not aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.
- Mr. Hueber was not aware of any of the following documents:
  - Environmental compliance audit reports.
  - Environmental permits
  - Registrations for underground storage tanks and aboveground storage tanks.
  - Material safety data sheets.
  - Community right-to-know plan

- Safety plans; preparedness and prevention plans; or spill prevention, countermeasure, and control plans
- Reports regarding hydrogeological conditions on the subject property and surrounding area
- Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws with respect to the Subject Property or relating to environmental liens encumbering the property
- Hazardous waste generator notices or reports
- Geotechnical studies
- Risk assessments, and
- Recorded activity and use limitations.

6.3 PRESENT AND PAST OCCUPANT INTERVIEW(S)

No present or past occupants were identified during this Phase I ESA.

6.4 LOCAL GOVERNMENT OFFICIAL INTERVIEW(S)

Municipal, county, and state government correspondence are detailed in Section 4.2.

6.5 INTERVIEWS WITH OTHERS

No additional interviews were conducted.

This page intentionally left blank

7. FINDINGS

The following findings of this Phase I ESA are outlined below:

1. EA did not receive an environmental lien and AUL search provided by the User, this is considered a data gap. However, EA was informed that the User will complete an environmental lien and AUL search prior to closing.

2. Information received from local agencies did not indicate evidence of environmentally suspect conditions at the Subject Property.

3. Historical subject property use indicates that junk yards were present throughout the Subject Property throughout its history. Additionally, a fire station was once present in the northwestern section of the Subject Property. What about adjacent properties?

4. Preliminary Phase II ESA results show that the groundwater at the Subject Property has been impacted by PFAS compounds, and the soil vapor concentrations exceed EPA Residential Sub-Slab Soil Vapor screening criteria for VOCs, indicating that past uses at the Subject Property, offsite properties, or both have impacted the Subject Property.

5. *South State Street/New Street, Syracuse, New York*, is located 0.07 miles south and at the same elevation as the Subject Property. A 550-gal diesel underground storage tank was uncovered while excavating for a sewer line and contaminated soil was found.

6. *Presidential Plaza, 90 Presidential Plaza, Syracuse, New York*, is located 0.15 miles northeast and upgradient from the Subject Property. The facility has soil contamination, which was found while removing two 10,000-gal No. 2 fuel oil tanks in 1989. The volume of the spill is unknown. Additionally, an unknown volume of gasoline was spilled from an overfilled tank in 1994 during a tank removal. Minimal contamination was discovered.

7. *Onondaga County Heating/Cooling Plant, Onondaga County Steam Plant, Niagara Mohawk a National Grid Company, 601 South State Street, Syracuse, New York*, is located 0.24 miles north and upgradient from the Subject Property. The facility is listed in the LST database for the release of 200 to 300 gals of No. 6 fuel oil to the groundwater in 1988.

8. *Marks Hotel, Almond and East Genesee Street, Syracuse, New York,* is located 0.37 miles northeast and upgradient of the Subject Property. The facility is listed in the LST database under Spill No. 0202485 recorded on 7 June 2002 regarding a spill of an undisclosed amount of diesel. Inspection noted that there was a hole in the bottom of the tank and soil was noted as being contaminated.

9. *The Salvation Army, 1105 South State Street, Syracuse, New York,* is located 0.20 miles south and upgradient from the Subject Property. NY Spill No. 9711143 was recorded on 5 January 1998, regarding soil contamination discovered under a pump island dispenser.

Database records indicate that soil would be stockpiled for removal; however, there is no record of cleanup. The spill record was closed on 6 August 2002. The database report does not identify the nature and extent of contamination, so it is possible that contamination related to this spill remains. A tank failure was reported in the LST database on 4 August 2004 regarding a gasoline release of unknown quantity from a 550-gal tank. The lack of detail provided by the database report indicates it is possible that contamination related to the LUST identified in this database record could remain.

10. *Syracuse University Steam Station, East Taylor Street, Syracuse, New York*, is located 0.2 miles southeast and upgradient of the Subject Property. Multiple releases involving petroleum and industrial chemicals have been reported at the facility, in addition to hosting in-service and historical petroleum and industrial chemical bulk storage tanks.

8. OPINION

The rationale for whether a finding is a REC, CREC, historical REC, or *de minimis* condition is presented below:

8.1 *De minimis* Conditions

No *de minimis* conditions were identified as part of this Phase I investigation.

8.2 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

No controlled RECs (CRECs) were identified during this Phase I ESA.

8.3 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

No historical RECs were identified during this Phase I ESA.

8.4 RECOGNIZED ENVIRONMENTAL CONDITIONS

Three RECs were identified during this Phase I ESA:

- Review of historical uses of the Subject Property and adjacent properties indicate that there were uses which could have negatively impacted the environmental integrity of the Subject Property with a likely release of hazardous substances or petroleum products, including its use as a junk yard until at least 1961. This condition constitutes a REC.

- Preliminary results and observations made during the ongoing Phase II ESA has determined that groundwater at the Subject Property have been impacted by a release of hazardous substances. Preliminary laboratory results indicate groundwater concentrations above the NYSDEC Ambient Water Quality Standards for PFAS. Final analytical results, including data validation, are pending at the time of this Phase I ESA. The indication of contamination in preliminary results is considered a REC.

- Several offsite locations were determined to pose a potential environmental risk to the Subject Property due to their elevation in respect to the Subject Property. The following are identified as a REC with additional details presented in section 4.1:

    - *South State Street/New Street, Syracuse, New York*, is located 0.07 miles south and at the same elevation as the Subject Property. A 550-gal diesel underground storage tank was uncovered while excavating for a sewer line and contaminated soil from a release was found.

    - *Presidential Plaza, 90 Presidential Plaza, Syracuse, New York*, is located 0.15 miles northeast and upgradient from the Subject Property. The facility has soil contamination from a release, which was found while removing two 10,000-gal No. 2 fuel oil tanks in 1989. The volume of the spill is unknown. Additionally, an

unknown volume of gasoline was spilled from an overfilled tank in 1994 during a tank removal. Minimal contamination was discovered.

- *Onondaga County Heating/Cooling Plant, Onondaga County Steam Plant, Niagara Mohawk a National Grid Company, 601 South State Street, Syracuse, New York,* is located 0.24 miles north and upgradient from the Subject Property. The facility is listed in the LST database for the release of 200 to 300 gals of No. 6 fuel oil to the groundwater in 1988.

- *Marks Hotel, Almond and East Genesee Street, Syracuse, New York,* is located 0.37 miles northeast and upgradient of the Subject Property. The facility is listed in the LST database under Spill No. 0202485 recorded on 7 June 2002 regarding a release of an undisclosed amount of diesel. Inspection noted that there was a hole in the bottom of the tank and soil was noted as being contaminated.

- *The Salvation Army, 1105 South State Street, Syracuse, New York,* is located 0.20 miles south and upgradient from the Subject Property. NY Spill No. 9711143 was recorded on 5 January 1998, regarding soil contamination discovered under a pump island dispenser from a release. Database records indicate that soil would be stockpiled for removal; however, there is no record of cleanup. The spill record was closed on 6 August 2002. The database report does not identify the nature and extent of contamination, so it is possible that contamination related to this spill remains. A tank failure was reported in the LST database on 4 August 2004 regarding a gasoline release of unknown quantity from a 550-gal tank. The lack of detail provided by the database report indicates it is possible that contamination related to the LUST identified in this database record could remain.

8.5 DATA GAPS

A data gap is defined by ASTM E1527-21 as a lack of or inability to obtain information required by this practice despite good faith efforts by the Environmental Professional to gather such information. Data gaps may result from the incompleteness in any of the activities required by this practice including, but not limited to, the site reconnaissance, interviews, and historical research. Failure to achieve the historical research objectives identified in the standard is termed a data failure and is a type of data gap. The data gaps for the Subject Property are identified as follows:

- EA was not provided an environmental lien and AUL search by the User as part of this Phase I ESA. However, EA was informed that the User will complete an environmental lien and AUL search prior to closing. This is considered a data gap but is not significant due to the preliminary results of the Phase II investigation and the robust database records search.

- EA was unable to receive a response from the Syracuse Fire Department or the Syracuse Building Department as part of the records search for soils and releases and building permits at the Subject Property. This is considered a data gap, but is not significant since

the NYSDEC database was searched and the Subject Property's historical use is well documented. Furthermore, the Subject Property is undergoing a thorough investigation through a Phase II ESA.

This page intentionally left blank

9. CONCLUSIONS

EA has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the East Adams Street Redevelopment Phase One Area located in Syracuse, New York, the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 10 of this report. This assessment has revealed the following RECs, CRECs, and/or significant data gaps in connection with the Subject Property:

9.1 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

No CRECs were identified during this Phase I ESA.

9.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

Three RECs were identified during this Phase I ESA.

- Review of historical uses of the Subject Property and adjacent properties indicate that there were uses which could have negatively impacted the environmental integrity of the Subject Property, including its use as a junk yard until at least 1961.

- Preliminary results and observations made during the ongoing Phase II ESA has determined that groundwater at the Subject Property has been impacted by contaminants. Preliminary laboratory results indicate groundwater concentrations above the NYSDEC Ambient Water Quality Standards for PFAS. Final analytical results, including data validation, are pending at the time of this Phase I ESA.

- Several offsite locations were determined to pose a potential environmental risk to the Subject Property. Further details of the sites associated with this REC are presented in section 4.1. The sites are listed as follows:

    - *South State Street/New Street, Syracuse, New York,* is located 0.07 miles south of the Subject Property.

    - *Presidential Plaza, 90 Presidential Plaza, Syracuse, New York*, is located 0.15 miles northeast from the Subject Property.

    - *Onondaga County Heating/Cooling Plant, Onondaga County Steam Plant, Niagara Mohawk a National Grid Company, 601 South State Street, Syracuse, New York,* is located 0.24 miles north from the Subject Property.

    - *Marks Hotel, Almond and East Genesee Street, Syracuse, New York,* is located 0.37 miles northeast of the Subject Property.

    - *The Salvation Army, 1105 South State Street, Syracuse, New York,* is located 0.20 miles south from the Subject Property.

The RECs will be resolved either through the currently ongoing Phase II ESA investigation at the Subject Property or through institutional or engineering controls as recommended below.

9.3 SIGNIFICANT DATA GAPS

No significant data gaps were identified during this Phase I ESA.

10. NON-SCOPE SERVICES

The following non-scope considerations are included in this Phase I ESA.

10.1 RECOMMENDATIONS

EA recommends the following based on the findings of this Phase I ESA and the preliminary results of the Phase II ESA for the Subject Property:

- Completion of the Phase II ESA, including a report documenting all observations and results. EA also recommends evaluating NYSDEC oversight of the Subject Property.

- Preliminary laboratory results indicate groundwater concentrations above the NYSDEC Ambient Water Quality Standards for PFAS. Final analytical results, including data validation, are pending at the time of this Phase I ESA.

- EA recommends that impacted groundwater be addressed through eliminating any future exposure pathways. This can be achieved through various engineering or institutional controls.

- Based on the results of the planned radon testing, radon mitigation may be required for the planned residential buildings as required by Section 9.6.3.2 of the Multifamily Accelerated Processing Guide. It should be noted that Onondaga County is in Radon Zone 1. A radon/vapor mitigation system may also be required to protect against soil vapor intrusion if soil vapor impacts are confirmed during the Phase II ESA. The mitigation system will be required to be compatible with the chemical concentrations in soil vapor that are reported in the Phase II ESA.

10.2 DEVIATIONS

No deviations from the standard ASTM practice were completed as part of this ESA.

This page intentionally left blank

11. ADDITIONAL SERVICES

No additional services other than those standard to the ASTM practice were provided as part of this Phase I ESA.

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Onondaga County, New York

March 22, 2023

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Onondaga County, New York
Survey Area Data: Version 17, Sep 10, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Aug 3, 2021—Nov 7, 2021

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Onondaga County, New York

Ub—Urban land

Map Unit Setting

National map unit symbol: 9vkw
Mean annual precipitation: 38 to 42 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 110 to 190 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land: 70 percent
Minor components: 30 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Minor Components

RE: CITY DIRECTORY RESEARCH
Angelou Terrace
Syracuse,NY

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
ALL of Angelou Terrace
250-725 of E Adams Street
BEG-1300 of S State Street
ALL of S Townsend Street
Search Notes:

Liability Notice....63

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information

Current USGS Topo (2016)

Quadrangle(s): Syracuse West,NY

Source: USGS 7.5 Minute Topographic Map

Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

Topographic information at project property:

Elevation:	396.79 ft
Slope Direction:	SW

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

ERIS

0 0.3 0.6 Miles

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Sv

Unit Name:	Vernon Shale
Unit Age:	Upper Silurian
Primary Rock Type:	shale
Secondary Rock Type:	black shale
Unit Description:	Vernon Shale

Geologic Unit Ssy

Unit Name:	Syracuse Formation
Unit Age:	Upper Silurian
Primary Rock Type:	dolostone (dolomite)
Secondary Rock Type:	shale
Unit Description:	Syracuse Formation - dolostone, shale, gypsum, salt.

Geologic Unit Dhg

Unit Name:	Helderberg Group
Unit Age:	Lower Devonian
Primary Rock Type:	limestone
Secondary Rock Type:	dolostone (dolomite)
Unit Description:	Helderberg Group - West of Albany: Alsen, Becraft, New Scotland, Kalkberg, Coeymans, and Manlius Limestones; Rondout Dolostone. South of Albany: Port Ewen, Alsen thru Manlius Limestones; Rondout Dolostone.

Soil Information

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

No records found for the project property or surrounding properties.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *ONONDAGA* County: **1**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *ONONDAGA* County

No Measures/Homes:	4749
Geometric Mean:	16.2
Arithmetic Mean:	8.5
Median:	3.6
Standard Deviation:	3.7
Maximum:	341.8
% >4 pCi/L:	47
% >20 pCi/L:	10
Notes on Data Table:	Table 1. Screening indoor radon data compiled by the New York State Department of Health. Data represent 1-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

Wells from NWIS — **FED USGS**

The U.S. Geological Survey's National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIW dataset contains select Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well,

Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern.

State Sources

Oil and Gas Wells **OGW**

The Division of Mineral Resources maintains a data management system on wells regulated under the Oil, Gas and Solution Mining Law (OGSML). To assist the Division in the regulation of wells subject to the OGSML, a database of the wells was created in the early 1980's and significantly upgraded in 1998 by the adoption of the Risk Based Data Management System. This system provides information on well ownership, well owners and operators, registered driller, pluggers and companies that provide financial security instruments.

Regulatory Freshwater Wetlands **WETLAND**

The Regulatory Freshwater Wetlands data are a set of ARC/INFO coverages composed of polygonal and linear features. Coverages are based on official New York State Freshwater Wetlands Maps as described in Article 24-0301 of the Environmental Conservation Law. Coverages are not, however, a legal substitute for the official maps. Coverages are available on a county basis for all areas of New York State outside the Adirondack Park. This dataset is provided by New York State Department of Environmental Conservation.

Underground Injection Control Wells **UIC**

A well permit is required from the Division of Mineral Resources for any brine disposal well deeper than 500 feet. This includes any operation to drill, deepen, plug back or convert a well. Regardless of well depth, the NYSDEC Division of Water must be contacted for a determination of whether a SPDES permit is necessary to operate any brine disposal well.

Water Wells Database **WATER WELLS**

The New York State Department of Environmental Conservation (DEC) Bureau of Water Resource Management works to protect, manage, and conserve New York State's groundwater and surface water supply sources, develop management strategies to enhance and protect these waters, and protect both the groundwater and surface water quality in the New York City Watershed and other major watersheds. This dataset does not include information on wells located in Nassau, Suffolk, Kings, and Queens counties.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Re: 301 Taylor Street, Syracuse, NY

Dear Quincy Milton:

This letter is in regard to your Freedom of Information Law (FOIL) request of March 13, 2023, which is currently being processed.

Please be advised this Office is unable to respond to your request by the date previously given to you because a diligent search for responsive documents is still being conducted.

We estimate that this Office will complete its process by May 8, 2023. The Department will notify you in writing when/if the responsive materials are available for release or if the time needed to complete your request extends beyond the above date.

Should you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

FOIL #: 23-03-159
RE: 301 Taylor Street, Syracuse, NY

Dear Quincy Milton:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on March 13, 2023.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request, and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

Label1

Dear Requester,

Your Freedom of Information Law (FOIL) request dated Tuesday, March 14, 2023 at 12:00 AM (Eastern Standard Time) was received by the City of Syracuse on Tuesday, March 14, 2023 at 12:00 AM (Eastern Standard Time). The request is being reviewed. Access to the records, in whole or part, will be determined in accordance with Article 6 of the New York Public Officers Law.

I anticipate that our review will be completed on or about Monday, May 1, 2023. Due to an unusually high volume of requests received by our office, including a large number of extremely large, complex requests please know that we will make every effort to complete your request in a reasonable time frame, however we appreciate your patience as we diligently work to provide accurate and thorough responses to all of the requests we have received. Do not hesitate to reach out to FOIL@syrgov.net with any questions.

Pursuant to FOIL, a fee of $.25 per page for photocopies not exceeding 9'x14' will be charged upon completion of the request, with the exception of electronic copies provided via e-mail. All other fees will be based on the material requested.

Thank you in advance for your cooperation. If you have any questions, or require further information, please do not hesitate to contact me.

Subject: City of Syracuse FOIL Request FOILReference2023-498 Submitted
Date: Tuesday, March 14, 2023 3:38:59 PM

Dear Requestor,

Thank you for submitting a request for records on Tuesday, March 14, 2023 at 3:38 PM (Eastern Standard Time). Within five business days of the receipt of this written request for a record reasonably described, we will provide an acknowledgment letter with an estimate of when the records you requested will be available, which shall be reasonable under the circumstances of the request. Generally, the approximate completion date is 20 business days from the date of acknowledgement, but the date may vary depending on numerous factors. This date is determined by the number of documents you request, their format, their availability, the time it takes to assemble the documents, the time it takes to review and redact any information that cannot be disclosed pursuant to FOIL, and other factors.

Your request reference number is Request Number: FOILReference2023-498 and your security key is 905355.

Please have both reference numbers available when communicating with our staff regarding your request.

FOIL #: 23-03-159

Dear Quincy Milton:

This letter responds to your Freedom of Information Law (FOIL) request of March 13, 2023, in which you requested environmental records pertaining to "301 Taylor Street in Syracuse."

Please be advised that after conducting a diligent search, no records responsive to your request have been located.

Should you feel that you have been unlawfully denied access to records, you may appeal such denial in writing within 30 days to the Records Access Appeals Officer, Division of Legal Affairs, Empire State Plaza, 2438 Corning Tower, Albany, New York 12237-0026.

If you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Rosemarie Hewig, Esq.

Re: UST Removal Former Salvation Army Property
1105 South State Street
NYSDEC Spill No. 04-04882
S&W No. N3019

Dear Mr. Brazell:

This letter report presents a summary of UST and soil removal activities observed by S&W Redevelopment of North America, LLC (SWRNA) at the former Salvation Army site located at 1105 South State Street in Syracuse, New York (Figure 1). The Syracuse Housing Authority (SHA) retained SWRNA to:

- observe the removal of four (4) underground storage tanks (USTs), and the remedial actions taken to address potential petroleum impacted soil;
- collect end-point soil samples following UST removal and soil excavation; and
- provide a written summary documenting these activities.

SWRNA observed the removal of the four (4) USTs as part of its scope of services. Diversified Contracting, Inc., removed the USTs under the guidance of Nature's Way Inc., (Natures Way) who cleaned and disposed of the tanks. The removal of the State Street (west) side UST (UST-001) began on August 4, 2004. The removal of the three (3) Oakwood Avenue (east) side USTs (UST-002, -003, -004) began on September 1, 2004.

INTRODUCTION

The site is located at 1105 South State Street in Syracuse, New York (Figure 1). The site is owned by the SHA, who purchased the property in 2003 from the Salvation Army as part of a neighborhood improvement plan. Under that plan, SHA retained a demolition contractor to raze an approximately 50,000 square-foot concrete block/brick structure formerly used by Salvation Army. During the course of the demolition, a UST fill port was observed on the South State Street (west) side of the property near a building footer. Fuel supply lines were observed on the Oakwood Avenue (east) side of the site during the course of demolition activities.

Further investigation (using an excavator) confirmed the presence of one (1) 1,000-gallon UST associated with the fill port, and three (3) 1,000-gallon USTs associated with the fuel supply lines (Figure 2). A NYSDEC Petroleum Bulk Storage Application was completed (Appendix A) which identified the tanks as UST-001 (west side UST), UST-002 (northernmost east side UST), UST-003, and UST-004 (southernmost east side UST).

METHODS

A SWRNA field representative was present during the UST removal activities to examine excavated soils for staining or odors, and to screen soils for volatile organic vapors using a photoionization detector (PID). Prior to UST removal, soils overlying the USTs were removed to expose the top of the tanks. The tanks were then breached and liquids were removed from each tank using a 3,000-gallon capacity Pressvac vacuum truck. Nature's Way removed, and transported the liquid contents of each tank to Industrial Oil Tank Service Corporation's Oriskany, NY facility for disposal. After removing the liquids, each tank was removed from the excavation, and cleaned on site by Nature's Way. The cleaned empty tanks were then cut into pieces and disposed of as scrap metal (Appendix D).

Following UST removal, soil from around the tank was excavated and staged on-site. Impacted soil from the South State Street (west) side UST excavation was staged in roll-off storage bins lined with polyethylene sheeting to await off-site transport and disposal. Excavated soil from the Oakwood Avenue (east) side UST excavation was staged on polyethylene sheeting. End-point soil samples were taken from the floor and sidewalls of each of the two excavation areas to document soil conditions following tank/impacted soil removal. The end-point samples were sent to Environmental Laboratory Services, Inc., to be analyzed for STARS List volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs). Following sample collection, the South State Street (west) side UST excavation was backfilled with clean (off-site) fill. Because field observations (i.e. odors) and photoionization detector readings indicated that no petroleum-related impacts were present in soils from the Oakwood Avenue (east) side excavation, all soil removed from the pit was used to backfill the excavation. Both excavation areas were graded to promote positive drainage.

RESULTS

Approximately 1,760-gallons of waste liquids and 83.5-tons of petroleum impacted soil were disposed of as part of the UST removal and soil excavation at the site. End-point soil sample analytical results are summarized on Table 1, and are compared to the NYSDEC Technical and Administrative Guidance Memorandum (TAGM) #4046

Recommended Soil Cleanup Objectives (1994, revised December 2000). The laboratory data report is included in Appendix B.

Representative photographs of the UST excavations are included in Appendix C. Liquid and soil disposal documentation is provided in Appendix D. Excavation area specific results are discussed below.

A. SOUTH STATE STREET (WEST) SIDE UST REMOVAL

A total of 332-gallons of waste liquids were removed from the South State Street (West) Side UST (Appendix D) before the tank was removed and cleaned. Observations made after the UST was removed from the excavation indicated that the bottom portion of the tank was in poor condition, as evidenced by the presence of several holes. The soils around the former UST location appeared stained and exhibited a petroleum-type odor. In addition, non-aqueous phase liquid was observed on perched water directly beneath the former UST location (Appendix C, Photo 3). Based on these observations, which suggested petroleum impacts adjacent to the UST, SWRNA contacted the NYSDEC spills hotline on behalf of the SHA. The NYSDEC assigned spill file number 04-04882 to the site.

Following NYSDEC notification, excavation and disposal of impacted soil was implemented as a remedial action. Soils identified in the field as impacted were excavated based on visual evidence (i.e. staining), odor (i.e. petroleum type odors), and elevated PID readings (greater than 20 ppm). The area of soil excavation was approximately 27-feet by 18-feet, and extended to a dense clay layer at approximately 9-feet below ground surface (bgs). The area of the excavation within the footprint of the former UST was extended into the clay layer to 10-feet bgs. The excavated soil was staged on-site in roll-off storage bins lined with polyethylene sheeting to await off-site transport and disposal. Clean (off-site) fill was used to backfill the excavation, and was graded to promote positive drainage. In total, approximately 83.5 tons of impacted soil was transported to the Auburn Landfill for disposal (Appendix D).

End-point soil samples were taken from each of the four sidewalls (CS-2, -3, -4, -5), and from the floor (CS-1) of the excavation for laboratory analysis. The PID readings for sample CS-1 was 28.2 ppm, for CS-2 was 40.7 ppm, for CS-3 was 3.7 ppm, for CS-4 34.1 ppm, and for CS-5 was 3.7 ppm.

Laboratory data indicate that none of the end-point soil samples taken contained VOC concentrations above TAGM Recommended Soil Cleanup Objectives (RSCOs) except samples CS-1 (floor) and CS-4 (east sidewall). Sample CS-1 contained four (4) compounds (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, toluene, and o-xylene), and CS-4 contained two (2) compounds (m-p xylene and o-xylene) above TAGM #4046 RSCOs.

None of the SVOCs analyzed in end-point samples CS-1 and CS-2 were above TAGM #4046 RSCOs. End-point samples CS-3 (north sidewall), CS-4 (east sidewall), and CS-5 (south sidewall) contained SVOCs at concentrations above TAGM RSCOs.

B. OAKWOOD AVENUE (EAST) SIDE UST REMOVAL

A total of 1,425-gallons of water and sediment material were removed from the three (3) Oakwood Avenue (east) side USTs (Appendix D) before they were excavated and cleaned. No petroleum-type odors, and low PID readings (less than 10 ppm) were noted within the tanks. Observations made of the tanks after they were removed from the pit indicated that each tank was in poor condition as evidenced by holes in the tank walls (Appendix C-Photo 8). No odors or visible petroleum impacts were observed in the soils surrounding or underlying any of the three tanks. PID readings taken from exposed soils in the excavation pit were less than 10 ppm. The area of the UST excavation was approximately 30-feet by 17-feet, and was extended to approximately 7.5-feet bgs.

Prior to backfilling, three grab samples were collected from each side wall and the floor of the excavation from areas that corresponded to the former UST locations. The grab samples were then composited into four (4) end-point soil samples that were submitted for laboratory analysis. Three (3) of the end-point samples were from the east, north/south, and west sidewalls (CS-6, -7, and CS-8, respectively), and one was taken from the floor of the excavation (CS-9). Laboratory results indicate that none of the samples contained VOCs above laboratory detection limits.

The total SVOC concentrations ranged from non-detect (CS-9) to 2.9882 mg/Kg with a majority of the SVOCs below laboratory detection limits. All of the end-point soil samples contained SVOCs below TAGM RSCOs, except sample CS-6 which contained benzo(a)anthracene (0.285 mg/Kg) at a concentration that marginally exceeded the TAGM #4046 RSCO of 0.224 mg/kg.

SUMMARY AND CONCLUSIONS

End-point soil sample laboratory data indicate that the remedial action was successful, and the majority of petroleum-impacted soil associated with the South State Street side UST (UST001) was excavated and disposed of properly. Although some end-point samples contained VOCs and/or SVOCs above TAGM RSCOs (CS-1, -3, -4, and -5), the exceedances are relatively minor and represent isolated areas that contain a minor amount of residual impacted soil. Because residual impacted soil is located in subsurface soil (>8-feet bgs), exposure opportunities are limited. Similarly, exposure to potential groundwater impacts is not likely because local residences and businesses are serviced by a public water supply.

End-point soil sample laboratory results from the Oakwood Avenue (east) side UST excavation did not provide evidence of petroleum related impacts in soils adjacent to the USTs. The laboratory data confirmed field screening and observations.

Based on the end-point soil sample laboratory data, and the content of this summary report, it is respectfully requested that the NYSDEC close spill file number 04-04882 with no further action.

If you have any questions or require additional information, please contact us at your convenience.

Very truly yours,

Appendix A

Petroleum Bulk Storage Application (UST Registration)

New York State Department of Environmental Conservation
Division of Environmental Remediation

Petroleum Bulk Storage Application

Pursuant to the Petroleum Bulk Storage Law,
Article 17, Title 10 of ECL; 6 NYCRR 612-614 and 6 NYCRR, Subpart 360-14

Section A

(See enclosed instructions and please be sure to complete Sections A & B)

Return Completed Form & Fees To:
NYSDEC - PBS Unit

Expiration Date:

Please Type or Print Clearly and Complete All Items

PBS Number: Not Applicable

DEC CBS Number: (If applicable)

DEC SPDES Number: (If applicable)

Transaction Type
(Check all that apply)
NOTE: Transaction Types 1, 2 and 5 may require a fee

- [ ] 1) Initial/ New Facility
- [ ] 2) Change of Ownership
- [X] 3) Substantial Tank Modification
- [ ] 4) Information Correction
- [ ] 5) Renewal

FACILITY

Facility Name: Former Salvation Army Property
Location (Not P.O. Boxes): 117 South State Street and former
Location (cont.): 100 Block of Oakwood Avenue
City: Syracuse
State: NY
Zip Code: 13202
County: Onondaga
Township or City: Syracuse
Name of Operator at Facility: Not Applicable
Facility Telephone Number:
Emergency Contact Name: Not Applicable
Emergency Telephone Number:

OWNER

Owner Name: Syracuse Housing Authority
Address (Street and/or P.O.): 516 Burt Street
City: Syracuse
State: N.Y.
Zip Code: 13202
Federal Tax ID Number:
Owner Telephone Number:

Type of Owner: (check only one)
1 [ ] Private Resident
2 [ ] State Government
3 [X] Local Government
4 [ ] Federal Government
5 [ ] Corporate/Commercial

TYPE OF PETROLEUM FACILITY (Check only one)

- [ ] 01=Storage Terminal/Petroleum Distributor
- [ ] 02=Retail Gasoline Sales
- [ ] 03=Other Retail Sales
- [ ] 04=Manufacturing
- [ ] 05=Utility
- [ ] 06=Trucking/Transportation

Action (1)
1. Initial Listing
2. Add Tank
3. Close/Remove Tank
4. Information Correction
5. Recondition/Repair/ Reline Tank

Tank Location (3)
1. Aboveground-contact w/soil
2. Aboveground-contact w/ impervious barrier
3. Aboveground on saddles, legs, stilts, rack, or cradle
4. Aboveground with 10% or more below ground
5. Underground
6. Underground, vaulted, with access

Status (4)
1. In-service
2. Temporarily out-of-service
3. Closed-Removed
4. Closed- In Place
5. Tank converted to Non-Regulated use

Product Stored (7)
0000. Empty
0001. #2 Fuel Oil
0002. #4 Fuel Oil
0003. #6 Fuel Oil
0011. Jet Fuel
0008. Diesel
0009. Gasoline
0012. Kerosene
0013. Lube Oil
0022. Waste/Used Oil
0259. #5 Fuel Oil
2642. Used Oil (Fuel)
9999. Other -please list :*

Tank Type (8)
01. Steel/Carbon Steel/Iron
02. Galvanized Steel Alloy
03. Stainless Steel Alloy
04. Fiberglass Coated Steel
05. Steel Tank in Concrete
06. Fiberglass Reinforced Plastic (FRP)
07. Plastic
08. Equivalent Technology
09. Concrete
10. Urethane Clad Steel
99. Other-please list:*

Internal Protection (9)
00. None
01. Epoxy Liner
02. Rubber Liner
03. Fiberglass Liner (FRP)
04. Glass Liner
99. Other-please list:*

External Protection (10/18)
00. None
01. Painted/Asphalt Coating
02. Original Sacrificial Anode
03. Original Impressed Current
04. Fiberglass
05. Jacketed
06. Wrapped (Piping)
07. Retrofitted Sacrificial Anode
08. Retrofitted Impressed Current
09. Urethane
99. Other-please list:*

Tank Leak Detection (12)
00 None
01. Interstitial Electronic Monitoring
02. Interstitial Manual Monitoring
03. Vapor Well
04. Groundwater Well
05. In-Tank System (ATG)
06. Impervious Barrier/Concrete Pad (A/G)
99. Other-please list:*

*** If other, please list on a separate sheet including Tank Number**

Piping Type (17)
00. None
01. Steel/Carbon Steel/Iron
02. Galvanized Steel
03. Stainless Steel Alloy
04. Fiberglass Coated Steel
05. Steel Encased in Concrete
06. Fiberglass Reinforced Plastic (FRP)
07. Plastic
08. Equivalent Technology
09. Concrete
10. Copper
11. Flexible Piping
99. Other-please list:*

Overfill Prevention(13)
00. None
01. Float Vent Valve
02. High Level Alarm
03. Automatic Shut-off
04. Product Level Gauge(A/G)
05. Vent Whistle
99. Other-please list:*

Secondary Containment (11/19)
00. None
01. Diking (A/G)
02. Vault (w/access)
03. Vault (w/o access)
04. Double-Walled (U/G)
05. Synthetic Liner
06. Remote Impounding Area
07. Excavation/Trench Liner System
08. Flexible Internal Liner (Bladder)
09. Modified Double-Walled (A/G)
10. Impervious Underlayment
11. Double Bottom (A/G)
99. Other-please list:*

Spill Prevention (14)
00. None
01. Catch Basin
02. Transfer Station Containment
99. Other - Please list*

Piping Location (16)
00. No Piping
01. Aboveground
02. Underground/On-ground
03. Aboveground/Underground Combination

Pipe Leak Detection (20)
00. None
01. Interstitial Electronic Monitoring
02. Interstitial Manual Monitoring
03. Vapor Well
04. Groundwater Well
07. Pressurized Piping Leak Detector
08. Tank Top Sump (Piping)
09. Exempt Suction Piping
99. Other-please list:*

Dispenser (15)
00. None
01. Submersible
02. Suction
03. Gravity

MAJOR TENANT / PROPERTY OWNER/USER QUESTIONNAIRE: PHASE I ENVIRONMENTAL SITE ASSESSMENT

EA has been retained to conduct a Phase I Environmental Site Assessment (ESA) of the following property. The Phase I ESA will involve site observations, interviews, and a review of available documentation. To ensure the success of the assessment and to meet the requirements of EPA All Appropriate Inquiry, and in accordance with the Scope of Work for this assessment, we request that you complete this questionnaire. Please return via email to aetringer@eaest.com.

Date: April 10 2023

Name of person completing questionnaire: Vincent Paul Hubbard **Company:** SHA

Length of association with property: 27 YEARS **Phone Number:** 315 470 4221

Property Name/Address(es): EAST ADAMS 1

Please check appropriate box(es): **Property Owner** ☑ **User** ☐ **Tenant** ☐ FACILITY EXPANSION

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response ("Y" = Yes; "N"= No; "U/NR" = Unknown). Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column.

	QUESTION	RESPONSE			COMMENTS
		Y	N	U/NR	
1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances of petroleum products in, on or from the property?		✓		
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?		✓		
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?		✓		
4	Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?			✓	NEVER SEARCHED
5	Did a search of recorded land title records (or judicial records, where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?			✓	NEVER SEARCHED
6	Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business.		✓		
7	Does the purchase price being paid for this property reasonably reflect fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?			✓

8	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional identify conditions indicative of releases or threatened releases? For example,					
	8A	Do you know the past uses of the property?	✓			RESIDENTIAL
	8B	Do you know of specific chemicals that are present or once were present at the property?		✓		
	8C	Do you know of spills or other chemical releases that have taken place at the property?		✓		
	8D	Do you know of any environmental cleanups that have taken place at the property?		✓		
9	Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?			✓		

In addition to the above, are you aware of any of the following documents? If so, please provide copies:

1 - Environmental site assessment reports (i.e., Phase I, Phase II, tank testing results, radon, lead paint, or asbestos testing, etc.);

2 - Environmental compliance audit reports;

3 - Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits);

4 - Registrations for underground storage tanks (USTs) and aboveground storage tanks (ASTs);

5 - Material safety data sheets;

6 - Community right-to-know plan;

7 - Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc;

8 - Reports regarding hydrogeological conditions on the property and surrounding area;

9 - Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property;

10 - Hazardous waste generator notices or reports;

11 - Geotechnical studies;

12 - Risk assessments; and

13 - Recorded Activity and Use Limitations (AULs).

MAJOR TENANT / PROPERTY OWNER/USER QUESTIONNAIRE: PHASE I ENVIRONMENTAL SITE ASSESSMENT

EA has been retained to conduct a Phase I Environmental Site Assessment (ESA) of the following property. The Phase I ESA will involve site observations, interviews, and a review of available documentation. To ensure the success of the assessment and to meet the requirements of EPA All Appropriate Inquiry, and in accordance with the Scope of Work for this assessment, we request that you complete this questionnaire. Please return via email to aetringer@eaest.com.

Date: 4 27 23

Name of person completing questionnaire: William J. Simmons **Company:** Syracuse Housing Authority

Length of association with property: 16 **Phone Number:** 475-6181

Property Name/Address(es): Angelou Terrace Syracuse NY

Please check appropriate box(es): **Property Owner** ☐ **User** ☐ **Tenant** ☐

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response ("Y" = Yes; "N"= No; "U/NR" = Unknown). Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column.

	QUESTION	RESPONSE			COMMENTS
		Y	N	U/NR	
1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances of petroleum products in, on or from the property?		✓		
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?		✓		
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?		✓		
4	Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?			✓	never searched
5	Did a search of recorded land title records (or judicial records, where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?			✓	never searched
6	Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business.		✓		
7	Does the purchase price being paid for this property reasonably reflect fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?			✓

User Questionnaire
Introduction/Limitations
November 2021

The information in this User Questionnaire is prepared and provided by the *user** to the environmental professional pursuant to 40 CFR 313.22 in order to qualify for one of the *Landowner Liability Protections* (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *"Brownfields Amendments"*). The user must conduct the following inquiries required by 40 C.F.R. §§ 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

*Pursuant to ASTM E 1527-21, the "user" is the party seeking to complete the environmental site assessment of the property. It is also the person seeking to establish one or more of the Landowner Liability Protections (LLPs) under CERCLA. A user may include, without limitation, a potential purchaser or potential leasee or tenant of the property, an owner of the property, a lender or a property manager.

DATE PREPARED: **March 16, 2023**

SUBJECT PROPERTY (address): **Angelou Terrace, Syracuse NY 13202**

USER(S): **Est Adams Phase 1, L.P. c/o McCormack Baron Salazar, Inc.**

NAME OF PERSON COMPLETING QUESTIONNAIRE: **Michael Saunders**

(1) Environmental liens that are filed or recorded against the subject property (40 C.F.R. § 312.25).

Did a search of land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the subject property under federal, tribal, state, or local law?

NOTE 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that *environmental liens* and *AULs* be filed in judicial records rather than in *land title records*. In such cases judicial records shall be searched for *environmental liens* and *AULs*.

Answer: The Environmental Professional is hereby requested to perform the search for environmental cleanup liens and the results will be included in the Phase I Report. Except as provided in the Phase I Report, the user has not identified any environmental cleanup liens.

(2) Activity and use limitations that are in place on the subject property or that have been filed or recorded against the subject property.

Did a search of land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?

Answer: The Environmental Professional is hereby requested to perform the search for AULs and the results will be included in the Phase I Report. Except as provided in the Phase I Report, the user has not identified any AULs for the subject property.

(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 C.F.R. § 312.28).

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Answer: The user is a developer of multifamily and mixed-use properties and has provided to the Environmental Professional all specialized knowledge, if any, that is has in connection with the subject property or nearby properties relevant to environmental matters.

(4) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 C.F.R. § 312.29).

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Answer: In the opinion of the user, the lease price reasonably reflects the fair market value of the subject property, given the non-environmental use restrictions imposed as part of the lease. The user believes the purchase price reflects several factors, including the overall physical and economic conditions at and near the subject property and the seller's desire to encourage and incentivize redevelopment of the subject property for a public good. To the knowledge of the user, the lease price has not been adjusted to reflect any real or potential contamination that might be found at the subject property.

(5) Commonly known or reasonably ascertainable information about the subject property (40 C.F.R. § 312.30).

Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,

(a) Do you know the past uses of the subject property?

Other than housing – No

(b) Do you know of specific chemicals that are present or once were present at the subject property?

No

(c) Do you know of spills or other chemical releases that have taken place at the subject property?

No

(d) Do you know of any environmental cleanups that have taken place at the subject property?

No

(6) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 C.F.R. § 312.31).

Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property?

Answer: To the user's knowledge, the subject property has been used for housing, and the user has not observed obvious indication of contamination at the subject property, other than information/documents that have been provided to the Environmental Professional.

Additional Questions:

(I) Helpful Documents

Do you know whether any of the environmental documents listed in Section 10.8.1 of ASTM E1527-21 exist? If so, can copies be provided to the environmental professional?

Answer: The user has provided to the Environmental Professional all information/documents, if any, in its possession relevant to environmental evaluations conducted at or for the subject property.

(II) Proceedings Involving the Subject Property Questions

Do you know of:
(1) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, at, or from the subject property?

Answer: The user has provided to the Environmental Professional all information/documents, if any, in its possession concerning pending, threatened, or past litigation relevant to hazardous substances and/or petroleum products in, on, at or from the subject property.

(2) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property?

Answer: The user has provided to the Environmental Professional all information/documents, if any, in its possession concerning pending, threatened, or past administrative proceedings relevant to hazardous substances and/or petroleum products in, on, at or from the subject property.

(3) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

Answer: The user has provided to the Environmental Professional all information/documents, if any, in its possession concerning any possible violation of environmental laws or possible liability related to hazardous substances and/or petroleum products with respect to the subject property.

Used Oil Market Burner: No
Used Oil Spec Marketer: No

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 20160407
Handler Name: NIAGARA MOHAWK A NATIONAL GRID CO
Source Type: Implementer
Federal Waste Generator Code: N
Generator Code Description: Not a Generator, Verified

Waste Code Details

Hazardous Waste Code: B002
Waste Code Description: Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

Hazardous Waste Code: B007
Waste Code Description: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Caller Remark:

"c/u pending"

DEC Remark:

"RP HIT DEBRIS ON HIGHWAY. HER GAS TANK AND TIRE WERE PUNCTURED. TANK PLUG FAILED, AND GAS LEAKED ONTO PARKING LOT OUTSIDE RP'S SISTER'S APARTMENT ON RADISSON COURT. SYRACUSE FD NOTIFIED AFTER PROGRESSIVE RECOMMENDATION. FD PUT DOWN SPEEDY-DRI AND NOTIFIED HOTLINE. I TOOK 15 MINUTES TO REACH SPILL SITE. FD WAS ALREADY OFF-SITE. PROGRESSIVE HIRED TOW COMPANY, BUT THEY WERE NOT PREPARED TO REMOVE SPEEDY-DRI OR CONTINUE LOCATION DECOMMTAMINATION. I HIRED NRC TO CLEAR PARKING LOT OF GASOLINE SPILL. A MAN CAME OVER TO TALK TO FEMALE DRIVER. I DO NOT KNOW IF THAT WAS THE REGISTERED VEHICLE OWNER. VEHICLE PLATE IS JRP-7723. FEMALE DRIVER NAME IS UNKNOWN. 11/2021 I CALLED SYRACUSE FIRE. THEY WERE UNABLE TO SUPPLY REPORTS WITHOUT A FEE. 06/06/2022 I DECIDED TO CONTACT THE SHERIFF RECORDS, IN CASE THEY HAD A CONTACT WITH CITY FIRE. THE SHERIFF RECORDS CONTACT STATED THAT THE SHERIFF HAS ACCESS TO CITY FIRE REPORTS, BUT, THIS SPILL HAS NO REPORT. IT WAS LISTED AS A HAZARD CALL (E10), AND WITHDRAWN. THE DR NUMBER IS DR 20-41725."

Source File:	NYSDEC - Environmental Remediation Data Files - Spill Data		

Caller Remark:

"inner wall failed test, tank is OOS. unfurther."

Dec Remark:

"4/19/2016 - Per John Gramz / Primetime Services, 6,000 gallon UST Tank 857A failed tank tightness test when product discovered in interstitial space. This was the sole remaining functional UST at this location. Previously 8,000 gallon UST Tank 859 (master) failed, effectively also removing satellite 4,000 gallon UST Tank 857B from service due to lack of submersible. PBS # is 7-102830. Contacted Facility owner and operator to determine permanent closure plans for these tanks. KCKemp"

Site Class Desc:	
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Contact with contaminated soil remaining at the site is unlikely unless

people dig below the soil cover system and demarcation layer that exists across the entire site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site building development and occupancy. Furthermore, environmental data available for an off-site property indicates that soil vapor intrusion is not a concern.

Description:

Location: The McKinney Property site is an approximately 0.60-acre site located at 1226 McBride Street, on the northwest corner of South McBride Street and Burt Street, in an urban area of the City of Syracuse. Site Features: The site is developed as a gravel parking lot with a vegetated strip extending along the northern, eastern and southern site perimeter. There are no buildings on the site. It is generally flat, with a gentle slope from northwest to southeast. There is a concrete retaining wall along the north boundary of the site, which supports an elevated rail line. Current Zoning and Land Use: The majority of the site is a parking lot. It is zoned for commercial use. The surrounding parcels are used for a mix of commercial, industrial, and residential purposes. Several nearby properties are owned by the Syracuse Housing Authority (SHA), including a large residential apartment building. There are also several townhouses located south of the site, across Burt Street from the site. The site is bordered to the north by an elevated railroad line. A portion of the Syracuse University steam plant facility lies beyond the rail line to the north. The site is bordered to the south by Burt Street, with residential buildings beyond. An electrical substation is located further south. To the east, the site is bordered by South McBride Street, with the elevated rail line and the rest of the Syracuse University steam plant lying beyond. To the west, the site is bordered by a commercial property owned by SHA, with vacant lots and Oakwood Avenue beyond. Beyond Oakwood Avenue are vacant lots and two small commercial properties. Past Use of the Site: The site was previously occupied by a metal working company and a scrap metal storage/processing business. The metal working/processing operations have led to contamination of the site by metals and oils. Equipment associated with these operations also contributed to contamination, including underground storage tanks, capacitors containing dielectric fluids, an oil/water separator and hydraulic machinery. Site Geology and Hydrogeology: Unconsolidated deposits in the area have been mapped as lacustrine silt and clay. Soil encountered during the investigation consisted of several feet of fill material, underlain by the lacustrine unit, which consisted of silt and clay with lesser amounts of fine sand. The fill was generally approximately 2 feet thick, but ranged up to 9 feet thick. The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

Site Class Desc:	
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Contact with contaminated soil remaining at the site is unlikely unless people dig below the soil cover system and demarcation layer that exists across the entire site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site building development and occupancy. Furthermore, environmental data available for an off-site property indicates that soil vapor intrusion is not a concern.

Description:

Location: The McKinney Property site is an approximately 0.60-acre site located at 1226 McBride Street, on the northwest corner of South McBride Street and Burt Street, in an urban area of the City of Syracuse. Site Features: The site is developed as a gravel parking lot with a vegetated strip extending along the northern, eastern and southern site perimeter. There are no buildings on the site. It is generally flat, with a gentle slope from northwest to southeast. There is a concrete retaining wall along the north boundary of the site, which supports an elevated rail line. Current Zoning and Land Use: The majority of the site is a parking lot. It is zoned for commercial use. The surrounding parcels are used for a mix of commercial, industrial, and residential purposes. Several nearby properties are owned by the Syracuse Housing Authority (SHA), including a large residential apartment building. There are also several townhouses located south of the site, across Burt Street from the site. The site is bordered to the north by an elevated railroad line. A portion of the Syracuse University steam plant facility lies beyond the rail line to the north. The site is bordered to the south by Burt

Street, with residential buildings beyond. An electrical substation is located further south. To the east, the site is bordered by South McBride Street, with the elevated rail line and the rest of the Syracuse University steam plant lying beyond. To the west, the site is bordered by a commercial property owned by SHA, with vacant lots and Oakwood Avenue beyond. Beyond Oakwood Avenue are vacant lots and two small commercial properties. Past Use of the Site: The site was previously occupied by a metal working company and a scrap metal storage/processing business. The metal working/processing operations have led to contamination of the site by metals and oils. Equipment associated with these operations also contributed to contamination, including underground storage tanks, capacitors containing dielectric fluids, an oil/water separator and hydraulic machinery. Site Geology and Hydrogeology: Unconsolidated deposits in the area have been mapped as lacustrine silt and clay. Soil encountered during the investigation consisted of several feet of fill material, underlain by the lacustrine unit, which consisted of silt and clay with lesser amounts of fine sand. The fill was generally approximately 2 feet thick, but ranged up to 9 feet thick. The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

Assess DOH:

People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Contact with contaminated soil remaining at the site is unlikely unless people dig below the soil cover system and demarcation layer that exists across the entire site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site building development and occupancy. Furthermore, environmental data available for an off-site property indicates that soil vapor intrusion is not a concern.

Description:

Location: The McKinney Property site is an approximately 0.60-acre site located at 1226 McBride Street, on the northwest corner of South McBride Street and Burt Street, in an urban area of the City of Syracuse. Site Features: The site is developed as a gravel parking lot with a vegetated strip extending along the northern, eastern and southern site perimeter. There are no buildings on the site. It is generally flat, with a gentle slope from northwest to southeast. There is a concrete retaining wall along the north boundary of the site, which supports an elevated rail line. Current Zoning and Land Use: The majority of the site is a parking lot. It is zoned for commercial use. The surrounding parcels are used for a mix of commercial, industrial, and residential purposes. Several nearby properties are owned by the Syracuse Housing Authority (SHA), including a large residential apartment building. There are also several townhouses located south of the site, across Burt Street from the site. The site is bordered to the north by an elevated railroad line. A portion of the Syracuse University steam plant facility lies beyond the rail line to the north. The site is bordered to the south by Burt Street, with residential buildings beyond. An electrical substation is located further south. To the east, the site is bordered by South McBride Street, with the elevated rail line and the rest of the Syracuse University steam plant lying beyond. To the west, the site is bordered by a commercial property owned by SHA, with vacant lots and Oakwood Avenue beyond. Beyond Oakwood Avenue are vacant lots and two small commercial properties. Past Use of the Site: The site was previously occupied by a metal working company and a scrap metal storage/processing business. The metal working/processing operations have led to contamination of the site by metals and oils. Equipment associated with these operations also contributed to contamination, including underground storage tanks, capacitors containing dielectric fluids, an oil/water separator and hydraulic machinery. Site Geology and Hydrogeology: Unconsolidated deposits in the area have been mapped as lacustrine silt and clay. Soil encountered during the investigation consisted of several feet of fill material, underlain by the lacustrine unit, which consisted of silt and clay with lesser amounts of fine sand. The fill was generally approximately 2 feet thick, but ranged up to 9 feet thick. The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

Highlights: The Property consists of one parcel totaling 0.21± acres of land in Syracuse, New York. The Property currently contains a brick building, approximately 4,700 square feet (sq ft), in deteriorating condition. At the time of the site visit the Property was vacant, with several areas of solid waste disposal onsite. Access to the Property and interior of the subject building was not granted to Stantec, and our Property reconnaissance was performed from the adjacent roadway rights-of-way. The Property is located in a predominantly commercial/residential neighborhood. The Property was developed in 1892 with a residential dwelling. The current brick building was constructed in the early 1950s and used at that time for bus service and sales.

Highlights: The Property consists of one parcel totaling 0.21± acres of land in Syracuse, New York. The Property currently contains a brick building, approximately 4,700 square feet (sq ft), in deteriorating condition. At the time of the site visit the Property was vacant, with several areas of solid waste disposal onsite. Access to the Property and interior of the subject building was not granted to Stantec, and our Property reconnaissance was performed from the

adjacent roadway rights-of-way. The Property is located in a predominantly commercial/residential neighborhood. The Property was developed in 1892 with a residential dwelling. The current brick building was constructed in the early 1950s and used at that time for bus service and sales.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have

been contaminated as a result of incidental spills and drips from the ASTs.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State

St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Site Class Desc:
Site Class Desc (Web): No Further Action at this Time: Sites are given a classification of "N" when:

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Site Class Desc:	
Site Class Desc (Web):	No Further Action at this Time: Sites are given a classification of "N" when: a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.
Assess DOH:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Description:

This site is undergoing a remedial program under the Brownfield Cleanup Program. See site ID C734140.

Assessment:

See site ID C734140.

Site Class Desc:	
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful

completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Assess DOH: Remedial action are complete and measures are in place to prevent people from coming into contact with remaining contamination.

Description:

Location: The site is located at 140 Cortland Avenue in the City of Syracuse and consists of two non-contiguous site areas. South Clinton Street and the 5G manufacturing facility and offices are known as 140 Cortland Avenue and consist of two parcels of land totaling approximately 2.4 acres. The other site area is known as 1002-1022 South Salina Street/Cortland Avenue and 1024-1040 South Salina Street/Tallman Street, and constitute two parcels totaling approximately 0.86 acres. The site limits are generally bounded by commercial buildings to the north, South Salina Street to the east, Tallman Street to the south and vacant commercial/industrial buildings to the west. The site is currently active and zoned for commercial use. Site Features: 140 Cortland Ave. and the South Clinton Street area consists of one building used for the manufacturing of 5G products. These parcels also consist of sidewalks, driveways, parking areas, and limited vegetation. The other area consists of a small park and a parking lot. Current Zoning and Land Use: The site is currently active as a 5G manufacturing facility and is zoned for commercial use. The general area surrounding the site is highly developed and consists of commercial and industrial facilities. Several rows of multifamily houses are located northwest of the site. Past Use of the Site: For more than 100 years, the site was used for industrial purposes, including a machine shop and rug manufacturing before Coyne Textile Services began operation in 1938. As an industrial dry-cleaning facility, the site utilized tetrachloroethene (PCE) and Stoddard solvent (a non-chlorinated solvent) until 2000. Several property owners had structures on what is now the employee parking lot, dating back to 1892 when the location was a brick and mortar building that housed a stone cutting facility. Syracuse Transit Corporation had a bus storage and repair building on the parcel beginning in 1951. From 1989 until acquisition by the current owner, the parcel was used for employee parking and a small greenspace. Coyne Textile Services filed for bankruptcy and ceased operations in late 2015. Ranalli/Taylor St. LLC purchased the property in 2016 and entered a Brownfield Cleanup Agreement (BCA) in September 2017. Site Geology and Hydrogeology: The site has an approximate elevation of 390 feet above mean sea level and is relatively flat. The surrounding areas to the east and west have a relatively steep topographic gradient, which slopes downward to Onondaga Creek. Site soils are tight and consist of Urban Land with the bedrock anticipated to be of Paleozoic era, stratified sequence. The bedrock geology underlying the site is the Syracuse Formation, which consists of dolostone, shale, gypsum, and salts. The exact depth of the bedrock is unknown at the site, but it is known to be at a depth greater than 80 feet bgs. The estimated depth to groundwater is less than 15 feet below ground surface. The groundwater in the area appears to be brackish saline. Groundwater at the site is assumed to flow to the northwest toward Onondaga Creek. However, localized flow directions in the area of the site may vary as a result of underground utilities or other heterogeneous subsurface conditions. Onondaga Creek is located approximately 600 feet west of the site, which flows in a northerly direction towards Onondaga Lake.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and barium in soil, 1,1-dichloroethene, isopropylbenzene (Cumene), tetrachloroethene, trichloroethene, xylene (Total), cis-1,2-dichloroethene, trans-1,2-dichloroethene, benzene, vinyl chloride, bis(2-Ethylhexyl)phthalate, barium, and magnesium in groundwater and tetrachloroethene and trichloroethene in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Site Class Desc:	
Site Class Desc (Web):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	Volatile organic compounds in groundwater or soil vapor originating from the Former Coyne Textile site (C734144) may move off-site into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Investigations are needed to determine if soil vapor intrusion is a potential concern for these off-site buildings.

Description:

Location: The on-site portion is located in an urban area at 140 Cortland Avenue in the City of Syracuse and consists of two non-contiguous Site areas. The former main laundry facility and offices are known as 140 Cortland Avenue (Tax Map No. 094.-05-06.0) and consist of one parcel of land totaling approximately 1.75 acres. The park and employee parking area are known as 1002-1022 South Salina Street/Cortland Avenue and 1024-1040 South Salina Street/Tallman Street and consists of two parcels totaling approximately 1.70 acres. The on-site limits are generally bound by commercial buildings to the north, South Salina Street to the east, Tallman Street to the south and South Clinton Street to the west. The off-site portion that currently needs investigation is approximately 8.5 acres located mainly to the west of the on-site portion. Site Features: 140 Cortland Ave. consists of the currently vacant former laundering facility and offices, sidewalks and limited vegetation. The building is a concrete block building with a slab-on-grade foundation. The other area consists of a small park and a fenced in asphalt parking lot. The off-site area is relatively flat and there are several buildings with both industrial and commercial use space. The area also consists of multiple parking lots and some green space. Current Zoning and Land Use: The on-site portion of the site is currently inactive and is zoned for commercial use. The off-site area is zoned for commercial and industrial use. Several rows of multifamily houses are located west of the area. Past Use of the Site: The 140 Cortland Avenue property was owned by various entities of Coyne Textile Services since the mid-1930s and was utilized as an industrial laundry prior to the company filing for bankruptcy and ceasing operations in late 2015. Dry cleaning using PCE and Stoddard solvent (a petroleum mixture made from distilled alkanes, cycloalkanes (naphthenes) and aromatic compounds) was conducted at the property until 2000. These dry cleaning products were stored in aboveground storage tanks (ASTs). Three underground storage tanks (USTs) were historically "closed in place" and were identified as being located beneath the dry cleaning room floor and the boiler room at 140 Cortland Avenue. A gasoline filling station was present in the southern portion of the Site in the 1980s. Prior to the Site being developed by Coyne Textile Services in the 1930s, the Site and surrounding area consisted primarily of single family residences. The former employee parking lot and park located east of the former laundering facility was owned by Coyne Textile Services from 1989-2015. Since 1989 this area was utilized as a parking lot and park. Historically, a building was utilized by the Syracuse Transit Corporation Bus Lines on the southern portion of the parking lot for bus storage and repairs from at least the 1940s to 1980s. The Syracuse Street Car barn also occupied this area in the early 1900s. The northern portion of the former employee parking lot and park was occupied by small stores in the early 1900s and a gasoline filling station was present on this portion of the parcel from at least the 1950s to 1970s. Coyne Textile Services filed for bankruptcy and ceased operations in late 2015. Ranalli/Taylor St. purchased the property in 2016 and entered a BCA in September 2017. The past use of most of the off-site area is currently unknown. But some of the area was used by Coyne Textile Services to park and maintain their truck fleet. Another portion of the area was used to manufacture garage door parts, faucets, and inked ribbon spools, clips and strips. Site Geology and Hydrogeology: Both the on-site and off-site areas sites have an approximate elevation of 390 feet above mean sea level and are relatively flat. The surrounding areas to the east and west have a relatively steep topographic gradient which slopes downward to Onondaga Creek. Soils consist of Urban Land with the bedrock anticipated to be of Paleozoic era,

stratified sequence. The bedrock geology underlying the Site is the Syracuse Formation, which consists of dolostone, shale, gypsum, and salts. The estimated depth to groundwater is less than 20 feet below ground surface. Groundwater at the sites is assumed to flow to the west toward Onondaga Creek. However, localized flow directions in the area of the sites may vary as a result of underground utilities or other heterogeneous subsurface conditions. Onondaga Creek is located approximately 600 feet west of the on-site portion, which flows in a northerly direction towards Onondaga Lake.

Assessment:

Nature and Extent of Contamination: On-site soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also sampled for Emerging Contaminants (ECs). Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern appear to be VOCs and metals with minor detection's of ECs, PCBs, and SVOCs. No off-site samples were taken during the on-site Remedial Investigation. However, there is some off-site groundwater data. See the Groundwater section below. Soil Surface Soils: Only one VOC, acetone, was detected in the surface soil sample collected from Coyne Park at a concentration of 0.427 ppm which exceeds the Part 375 Unrestricted SCO of 0.05 ppm but is less than the Part 375 Commercial SCO of 500 ppm. SVOCs, PCBs, metals, and pesticides contamination were not identified in the surface soil sample. There is currently no off-site surface soil data. Subsurface Soils: Only one VOC, Tetrachloroethene (PCE), was detected at a concentration exceeding the Part 375 Commercial SCO of 150 milligram per kilogram (mg/kg). The PCE concentration is 460mg/kg and this sample was located in the NW corner of the on-site building. There are several other compounds including 1,1- Dichloroethene at a maximum of 1.45mg/kg, 1,2,4 Trimethylbenzene at a maximum of 4.31mg/kg, 2-Butanone (MEK) at a maximum of 0.115mg/kg, trichloroethene at a maximum of 38.3mg/kg, vinyl chloride at a maximum of 12.3mg/kg, cis-1,2-Dichloroethene at a maximum of 424mg/kg, trans-1,2-Dichloroethene at a maximum of 3.46mg/kg, acetone at a maximum of 5.9mg/kg, and Benzene at a maximum of 0.39mg/kg, that were detected above Part 375 Unrestricted SCOs. SVOCs detected at concentrations exceeding their respective Part 375 Unrestricted SCOs, but below Part 375 Commercial SCOs, include benzo(a)anthracene at a maximum of 2.42mg/kg, Benzo(a)pyrene at a maximum of 2.28mg/kg, Benzo(b)fluoranthene at a maximum of 3.06mg/kg, Benzo(k)fluoranthene at a maximum of 1.64mg/kg, Chrysene at a maximum of 2.42mg/kg, and Indeno(1,2,3-cd)pyrene at a maximum of 0.79mg/kg. No SVOCs were detected at concentrations exceeding the Part 375 Commercial SCOs. Pesticides were not detected in any of the subsurface samples. PCBs, including Aroclor 1242 and Aroclor 1260 were detected at concentrations above their respective Part 375 Unrestricted SCO of 0.1 mg/kg, but below the Part 375 Commercial SCO. The maximum Total PCBs concentration was 0.74 mg/kg. Low concentrations of metals were found across the on-site area. Barium was detected at a concentration of 404 mg/kg, which exceeds the Part 375 Commercial SCO of 400 mg/kg. However, this value was qualified, by Pace, with a JH qualifier. This sample was located near the location of the former folding/product storage area. Several other metals were detected above unrestricted SCOs including copper at a maximum of 114mg/kg, lead at a maximum of 776mg/kg, nickel at a maximum of 56.2mg/kg, zinc at a maximum of 315mg/kg, and mercury at a maximum of 1.4mg/kg. No offsite soil samples were taken during the RI however some off-site subsurface soils were sampled in 2015. Off-site subsurface soil data shows four SVOCs above Industrial SCOs in MW-4 at a depth of 8-10 feet. These SVOCs are Benzo(a)anthracene at a maximum of 20 mg/kg, Benzo(a)pyrene at a maximum of 17 mg/kg, Benzo(b)fluoranthene at a maximum of 21 mg/kg, and Dibenzo(a,h)anthracene at a maximum of 2.4 mg/kg. No other contaminants were above industrial SCOs. Groundwater (GW) No PCBs or Pesticides were detected within the groundwater. VOCs detected in groundwater above the GW standard include 1,1-Dichloroethene at a maximum of 18ug/kg, benzene at a maximum of 104ug/kg, isopropylbenzene (Cumene) at a maximum of 121ug/kg, tetrachloroethene at a maximum of 21,400ug/kg, trichloroethene at a maximum of 1,980ug/kg, vinyl chloride at a maximum of 1,560ug/kg, xylene (Total) at a maximum of 6.3ug/kg, cis-1,2-Dichloroethene at a maximum of 4,550ug/kg, and trans-1,2-Dichloroethene at a maximum of 27.5ug/kg. Most of the VOC GW impacts were located in the NW portion of the on-site building but VOC impacts were detected throughout the site. Only one SVOC exceeded GW standards and that was bis(2-Ethylhexyl)phthalate at a maximum of 11ug/kg. This was located in the NW portion of the on-site building. Metals that exceeded the GW standards include barium at a maximum of 2.940ug/kg, beryllium at a maximum of 7ug/kg, chromium at a maximum of 55ug/kg, copper at a maximum of 1,120ug/kg, lead at a maximum of 27ug/kg, magnesium at a maximum of 204,000ug/kg, and thallium at a maximum of 14.5ug/kg. Metals within the GW were detected throughout the whole site. ECs detected in the GW include 6:2FTS at a maximum of 33ng/kg, Perfluorobutanesulfonic acid (PFBS) at a maximum of 14ng/kg, Perfluorobutanoic acid (PFBA) at a maximum of 330ng/kg, Perfluorodecanoic acid (PFDA) at a maximum of 2.1ng/kg, Perfluoroheptanesulfonic Acid (PFHpS) at a maximum of 24ng/kg, Perfluoroheptanoic acid (PFHpA) at a maximum of 160ng/kg, Perfluorohexanesulfonic acid (PFHxS) at a maximum of 25ng/kg, Perfluorohexanoic acid (PFHxA) at a maximum of 350ng/kg, Perfluorononanoic acid (PFNA) at a maximum of 75ng/kg, Perfluorooctanesulfonic acid (PFOS) at a maximum of 2,000ng/kg, Perfluorooctanoic acid (PFOA) at a maximum of 300ng/kg, Perfluoropentanoic acid (PFPeA) at a maximum of 360ng/kg, and 1,4-Dioxane at a maximum of 1.7ng/kg. Most of the ECs were detected in the NW portion of the on-site building. No off-site wells were sampled during the remedial investigation. However, off-sites wells were sampled previously in 2015. There are 4 monitoring wells off-site located to the northwest of the on-site area. Each of these wells have contaminants that exceed NYSDEC TOGS 1.1.1 water quality standards and guidance values. The following contaminants were detected above the GW standards at one or more of the wells: Tetrachloroethene at a maximum of 3100ug/L, benzene at a maximum of 4.4ug/L, vinyl chloride at a maximum of 3200ug/L, trans-1,2-dichloroethene at a maximum of 230ug/L, Trichloroethene at a maximum of 2000ug/L, cis-1,2-dichloroethene at a maximum of 5600ug/kg, and 1,1-Dichloroethene at a maximum of 15ug/L. Soil Vapor Soil vapor detection's that need additional action were detected all throughout the on-site building. Compounds detected needing additional action include: 1,1,1 - Trichloroethane at a maximum of 5.3ug/m3, Tetrachloroethene at a maximum of 1,090ug/m3, Trichloroethene at a maximum of 106ug/m3, and cis-1,2-Dichloroethene at a maximum of 38.4ug/m3. There is currently no off-site soil vapor data.

Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	Remedial action are complete and measures are in place to prevent people from coming into contact with remaining contamination.

Description:

Location: The site is located at 140 Cortland Avenue in the City of Syracuse and consists of two non-contiguous site areas. South Clinton Street and the 5G manufacturing facility and offices are known as 140 Cortland Avenue and consist of two parcels of land totaling approximately 2.4 acres. The other site area is known as 1002-1022 South Salina Street/Cortland Avenue and 1024-1040 South Salina Street/Tallman Street, and constitute two parcels totaling approximately 0.86 acres. The site limits are generally bounded by commercial buildings to the north, South Salina Street to the east, Tallman Street to the south and vacant commercial/industrial buildings to the west. The site is currently active and zoned for commercial use. Site Features: 140 Cortland Ave. and the South Clinton Street area consists of one building used for the manufacturing of 5G products. These parcels also consist of sidewalks, driveways, parking areas, and limited vegetation. The other area consists of a small park and a parking lot. Current Zoning and Land Use: The site is currently active as a 5G manufacturing facility and is zoned for commercial use. The general area surrounding the site is highly developed and consists of commercial and industrial facilities. Several rows of multifamily houses are located northwest of the site. Past Use of the Site: For more than 100 years, the site was used for industrial purposes, including a machine shop and rug manufacturing before Coyne Textile Services began operation in 1938. As an industrial dry-cleaning facility, the site utilized tetrachloroethene (PCE) and Stoddard solvent (a non-chlorinated solvent) until 2000. Several property owners had structures on what is now the employee parking lot, dating back to 1892 when the location was a brick and mortar building that housed a stone cutting facility. Syracuse Transit Corporation had a bus storage and repair building on the parcel beginning in 1951. From 1989 until acquisition by the current owner, the parcel was used for employee parking and a small greenspace. Coyne Textile Services filed for bankruptcy and ceased operations in late 2015. Ranalli/Taylor St. LLC purchased the property in 2016 and entered a Brownfield Cleanup Agreement (BCA) in September 2017. Site Geology and Hydrogeology: The site has an approximate elevation of 390 feet above mean sea level and is relatively flat. The surrounding areas to the east and west have a relatively steep topographic gradient, which slopes downward to Onondaga Creek. Site soils are tight and consist of Urban Land with the bedrock anticipated to be of Paleozoic era, stratified sequence. The bedrock geology underlying the site is the Syracuse Formation, which consists of dolostone, shale, gypsum, and salts. The exact depth of the bedrock is unknown at the site, but it is known to be at a depth greater than 80 feet bgs. The estimated depth to groundwater is less than 15 feet below ground surface. The groundwater in the area appears to be brackish saline. Groundwater at the site is assumed to flow to the northwest toward Onondaga Creek. However, localized flow directions in the area of the site may vary as a result of underground utilities or other heterogeneous subsurface conditions. Onondaga Creek is located approximately 600 feet west of the site, which flows in a northerly direction towards Onondaga Lake.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and barium in soil, 1,1-dichloroethene, isopropylbenzene (Cumene), tetrachloroethene, trichloroethene, xylene (Total), cis-1,2-dichloroethene, trans-1,2-dichloroethene, benzene, vinyl chloride, bis(2-Ethylhexyl)phthalate, barium, and magnesium in groundwater and tetrachloroethene and trichloroethene in soil vapor.

Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Materials Information

Waste Name:	manganese
Waste Quantity:	UNKNOWN
Waste Code:	
Waste Name:	1,1 dichloroethene
Waste Quantity:	UNKNOWN
Waste Code:	
Waste Name:	tetrachloroethene (PCE)
Waste Quantity:	UNKNOWN
Waste Code:	
Waste Name:	benzene
Waste Quantity:	UNKNOWN
Waste Code:	
Waste Name:	copper
Waste Quantity:	UNKNOWN
Waste Code:	
Waste Name:	barium
Waste Quantity:	UNKNOWN
Waste Code:	
Waste Name:	cis-1,2-dichloroethene
Waste Quantity:	UNKNOWN
Waste Code:	
Waste Name:	trans-1,2-dichloroethene
Waste Quantity:	UNKNOWN
Waste Code:	
Waste Name:	trichloroethene (TCE)
Waste Quantity:	UNKNOWN

Waste Code:

Waste Name: vinyl chloride
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: beryllium
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: isopropylbenzene
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: xylene (mixed)
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: iron
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: chromium
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: thallium
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: magnesium
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: sodium
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: bis(2-ethylhexyl)phthalate
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: lead
Waste Quantity: UNKNOWN
Waste Code:

Site Class Desc:	
Site Class Desc (Web):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	People who enter the site may come into contact with site related soil and groundwater contamination if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor

air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via the soil vapor intrusion pathway is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Environmental sampling indicates that soil vapor intrusion associated with contamination at the site is not a concern for offsite buildings.

Description:

Location: The site is 1.89 acres and is bordered on the west by South Salina Street, across the street from the former Coyne Textile Services Brownfield Cleanup Program site (ref. Site No. C734144); on the south by a church; to the north by a small glass and mirror shop; and to the east by a community center along Montgomery Street. Site Features: Currently, the site is undeveloped with no structures on the property. The site is a relatively flat lot with broken pavement along with grassed-vegetated areas and some mature trees across the property. Current Zoning and Land Use: The site property is zoned as BA District, which permits the intensive development of land for mixed residential, retail, service and certain industrial uses. Adjacent parcels are zoned for commercial (CA) to the north, west, and southwest, BA to the north and south, and residential (RB) to the east. Other nearby parcels are a mix of industrial, commercial, business, and residential land uses. Past Use of the Site: Previously, the site was used as an above-ground storage tank facility for manufactured gas generated from coal or oil. The approximately 125-foot diameter tank, called a gasometer, stored gas for distribution for city and private lighting, cooking, and heating. The facility operated in the late 1890s until taken out of service sometime before 1951. Thereafter, various uses of the site included a rug cleaner, bottling operation, laundry/dry cleaner, automobile repair, refrigerator repair shop, tailor, plumbing shop, paint shop, and a glass warehouse. The buildings were demolished in the late 1970s and early 1980s and then the site was used as a parking lot. Site Geology and Hydrogeology: The greater portion of the site is underlain with a mix of sand, silt, and clay soils that contain historic fill to a depth of approximately 20 feet. The historic fill contains clay tile, ash, coal and brick. Native soil is located below the fill and consists of peat and marl. The depth to water is approximately 7 to 10 feet below grade with groundwater flow direction to the north-west

Assessment:

A remedial investigation was conducted to assess the nature and extent of contamination at the site. The remedial investigation consisted of the following elements: the evaluation of buried utilities; collection and analysis of eight surface soil samples; the installation of 33 soil borings which included the collection and analysis of 18 subsurface soil samples; the excavation of six test pits with the analysis of one soil sample; and the installation of five groundwater monitoring wells which included two rounds of groundwater monitoring. Soil and groundwater samples were analyzed for a combination of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, herbicides, PCBs, metals (including mercury, cyanide, and hexavalent chromium), 1,4-dioxane, and PFOS/PFOA. Soils: Contaminants of concern have been identified at concentrations that exceed the Restricted-Residential (RR) Soil Cleanup Objectives (SCOs). The contamination of the soils is generally associated within the historical fill material (HFM) at the site. HFM was observed at varying depths from the surface to approximately 20 feet below grade. SVOCs are present in surface soil samples across the site at concentrations that exceed Restricted-Residential Use SCOs. SVOCs and metals are also present in the sub-surface soils within the HFM at concentrations above Restricted Residential Use SCOs. The types and concentrations of SVOCs and metals that have been identified are consistent with those typically found in historically industrialized urban areas. Native soils sampled from beneath the HFM do not exceed RR SCOs for any analytes. These results suggest that the contaminants of concern are contained within the observed on-site HFM. Surface Soil: Sampling depth: 0 to 2 inches A total of eight surface samples were obtained across the site. Laboratory results indicate several SVOCs are above Restricted Residential (RR) use SCOs including, benzo(a)anthracene with concentrations ranging from 1.7 to 5.5 parts per million (ppm) compared to the RR Use SCO value of 1 ppm; benzo(a)pyrene with concentrations ranging from 1.6 to 4.8 ppm compared to the RR Use SCO value of 1 ppm; benzo(b)fluoranthene with concentrations ranging from 2.3 to 6.6 ppm compared to the RR Use SCO value of 1 ppm; chrysene with concentrations ranging 1.7 to 5.2 ppm compared to the RR Use SCO value of 3.9 ppm; dibenzo(a,h)anthracene with concentrations ranging from 0.37 to 0.7 ppm compared to the RR Use SCO value of 0.33 ppm, and indeno (1,2,3-cd)pyrene with concentrations ranging from 1.1 to 2.8 ppm compared to the RR Use SCO value of 0.5 ppm. Sub-Surface Soils: A total of 18 subsurface samples were collected from across the site. Laboratory results of the soils samples obtained from areas containing HFM indicate SVOCs are present at concentrations above Protection of Groundwater SCOs and Restricted-Residential Use SCOs and, to a lesser degree, metals are present at concentrations above Residential-Restricted Use SCOs Laboratory results indicate several SVOCs are above Restricted Residential Use SCOs including, benzo(a)anthracene with concentrations ranging from 1.6 to 51 parts per million (ppm) compared to the RR Use SCO value of 1 ppm; benzo(a)pyrene with concentrations ranging from 1.2 to 39 ppm compared to the RR Use SCO value of 1 ppm; benzo(b) fluoranthene with concentrations ranging from 1.6 to 49 ppm compared to the RR Use SCO value of 1 ppm; benzo(k)fluoranthene with concentrations ranging from 8.2 to 18 ppm compared to the RR Use SCO value of 3.9 ppm; chrysene with concentrations ranging 3.9 to 40 ppm compared to the RR Use SCO value of 3.9 ppm; dibenzo(a,h)anthracene with concentrations ranging from 0.38 to 5.3 ppm compared to the RR Use SCO value of 0.33 ppm; indeno(1,2,3-cd) pyrene with concentrations ranging from 0.72 to 24 ppm compared to the RR Use SCO value of 0.5 ppm, and phenanthrene with a concentration of 100 ppm compared to the RR Use SCO value of 100 ppm. Laboratory results indicate several metals above Restricted Residential Use SCOs including, total copper with a concentration of 495 ppm compared to the RR Use SCO value of 270 ppm; lead with a concentration of 415 ppm compared to the RR Use SCO value of 400 ppm; and total mercury with concentrations ranging from 0.88 to 1.2 ppm compared to the RR Use SCO value of 0.81 ppm. Five test pits were advanced at areas identified as anomalies during a previous geophysical study. At each location, the subsurface contained construction and demolition (C&D) debris, including wood, concrete, brick, asphalt, as well as HFM. Similar observations of fill were made in borings advanced within a large anomaly that coincided with the footprint of the former gasometer. No tanks, vaults, or other subsurface structures were identified while excavating the test pits. In addition, no visual evidence of contamination (e.g., stains or odors) was observed. Due to the presence of ash at test pit TP-4, a sample was collected. Laboratory results indicate no analytes were above Restricted-Residential Use SCOs. Groundwater: Groundwater samples were collected twice, once in October 2019 and again in January 2020, from five groundwater monitoring wells across the site. The depth to groundwater is approximately seven to ten feet below grade with a groundwater flow direction to the northwest. The results of the laboratory analysis indicate the principal groundwater contaminants are volatile organic compounds (VOCs). A number of VOCs were observed above the NYSDEC Technical and Operational Guidance Series (TOGS) groundwater protection standards. The groundwater contamination is primarily located in the central portion of the site in monitoring wells MW-1 and MW-2. Benzene is present at monitoring wells MW-1 and MW-2 with a concentration range from 58 to 190 ppb, compared to the TOGS standard of 1 ppb. Toluene is present in MW-2 with a concentration range from 11 to 40 ppb, compared to the TOGS standard of 5 ppb. Ethylbenzene is present in MW-2 with a concentration range from ND to 19 ppb, compared to the TOGS standard of 5 ppb. P/M xylene is present in MW-2 with a concentration range from ND to 20 ppb, compared to the TOGS standard of 5 ppb. O-xylene is present in MW-2 with a concentration range from ND to 12 ppb, compared to the TOGS standard of 5 ppb. Styrene is present in MW-2 with a concentration range from ND to 8.8 ppb, compared to the TOGS standard of 5 ppb. No other VOCs exceeded NYSDEC TOGS values at the site. There are several semi-volatile organic compounds (SVOCs) that are slightly above NYSDEC TOGS groundwater protection values, with no single compound concentration greater than 0.12 parts per billion (ppb). Laboratory results identified the following compounds above the NYSDEC TOGS value of 0.002

ppb: benzo(a) anthracene ranging from 0.02 to 0.12 ppb; benzo(a)pyrene ranging from 0.02 to 0.09 ppb; benzo(b)fluoranthene ranging from 0.01 to 0.11 ppb; benzo (k)fluoranthene ranging from 0.01 to 0.05 ppb; chrysene ranging from 0.01 to 0.07 ppb; and indeno (1,2,3-cd) pyrene ranging from 0.02 to 0.07 ppb. Laboratory analysis of the groundwater for pesticides, herbicides and PCBs are non-detect at concentrations greater than the laboratory detection limits. Laboratory analysis of the groundwater for PFOA and PFOS indicate concentrations that are below NYS DEC/DOH threshold values. Laboratory analysis results for 1,4 dioxane are non-detect. Metals commonly associated with hard water (e.g., iron, magnesium, manganese, sodium) are present at concentrations above the TOGs values in each well. These metals are likely naturally occurring and in this setting are unrelated to the site's past activities. However, in monitoring well MW-1 barium slightly exceeds the TOGS value of 1,000 ppb, with a concentration value of 1,002 ppb. In addition, the general region of central New York has been known for elevated saline (sodium) concentrations in the groundwater. Laboratory analysis of the groundwater from this site supports this with dissolved sodium concentrations range from 35,200 up to 181,000 parts per billion in comparison to the TOGS value of 20,000 parts per billion. Off-site impacts in soil and groundwater are expected to be minimal based on the level and pattern of on-site contamination. SVOCs are present in surface soil and sub-surface soil across the site at concentrations that exceed Restricted-Residential Use SCOs and Protection of Groundwater SCOs. However, the types and concentrations of SVOCs and metals that have been identified in the soil are typically found at historically industrialized urban areas as in this instance. There are moderate levels of VOCs in site groundwater that are primarily located within the central portion of the site. Concentrations of SVOCs in site groundwater are slightly above groundwater protection values, but SVOCs do not readily migrate. Given the moderate concentrations of the contaminants of concern in the soil and groundwater it is anticipated the contaminants concentrations will decrease over time due to adsorption and natural attenuation. As a result, it is expected that off-site impacts from on-site contamination to neighboring properties is minimal.

Q. 6: NO
Q. 7: NO
Q. 8: NO
Q. 9: NO
Q. 10: NO
Q. 11: NO
Q. 12:
Q. 13:

County: Onondaga

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Reference: If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Facility ID: BSF0451
County: Onondaga
Survey Complete: YES
Survey: Class B Fire Suppression Foam Usage Survey - New York State Bulk Storage Facilities
Q. 6: YES
Q. 7: YES
Q. 8: NO
Q. 9: NO
Q. 10: NO
Q. 11: NO
Q. 12:
Q. 13:
Reference: If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Highlights: According to a Phase I ESA Report prepared in January 2020 by Asbestos & Environmental Consulting Corporation (AECC), the Site has a history of use as a residential dwelling beginning in the late 19th century. The Site became mixed residential and commercial in the mid-20th century. The City of Syracuse acquired the Site in 2003 and demolished the remaining one-story commercial building structure that formerly occupied the eastern portion of the Site. Since that time, the Site has remained a vacant lot. The Phase I ESA Report prepared in 2020 identifies the following Recognized Environmental Condition (REC):AECC has identified seven off-Site properties that, when considered together and in relation to the Site, represent enough concern to be considered a REC to the subject Site of this Assessment. Such properties include former and current automotive repair / service stations, former and current gasoline stations, former industrial properties, and former drycleaning facilities. There is documented historical contamination related to some of these properties, while others have no identified history of investigation having occurred that might be able to rule out potential contamination. appears to have been no known previous site investigation performed on the Site but contamination from past operations on adjacent properties are suspected to have impacted the Site. A Phase II ESA is needed to confirm if contamination is present.

Since that time, the Site has remained a vacant lot. The Phase I ESA Report prepared in 2020 identifies the following Recognized Environmental Condition (REC):AECC has identified seven off-Site properties that, when considered together and in relation to the Site, represent enough concern to be considered a REC to the subject Site of this Assessment. Such properties include former and current automotive repair / service stations, former and current gasoline stations, former industrial properties, and former drycleaning facilities. There is documented historical contamination related to some of these properties, while others have no identified history of investigation having occurred that might be able to rule out potential contamination. appears to have been no known previous site investigation performed on the Site but contamination from past operations on adjacent properties are suspected to have impacted the Site. A Phase II ESA is needed to confirm if contamination is present.

Highlights:

According to a Phase I ESA Report prepared in January 2020 by Asbestos & Environmental Consulting Corporation (AECC), the Site has a history of use as a residential dwelling beginning in the late 19th century. The Site became mixed residential and commercial in the mid-20th century. The City of Syracuse acquired the Site in 2003 and demolished the remaining two-story building structure that formerly occupied the Site. Since that time, the Site has remained a vacant lot. The Phase I ESA Report prepared in 2020 identifies the following Recognized Environmental Condition (REC):AECC has identified seven off-Site properties that, when considered together and in relation to the Site, represent enough concern to be considered a REC to the subject Site of this Assessment. Such properties include former and current automotive repair / service stations, former and current gasoline stations, former industrial properties, and former drycleaning facilities. There is documented historical contamination related to some of these properties, while others have no identified history of investigation having occurred that might be able to rule out potential contamination. There appears to have been no known previous site investigation performed on the Site but contamination from past operations on adjacent properties are suspected to have impacted the Site. A Phase II ESA is needed to confirm if contamination is present.

Highlights:

According to a Phase I ESA Report prepared in January 2020 by Asbestos & Environmental Consulting Corporation (AECC), the Site has a history of use as a residential dwelling beginning in the late 19th century. The Site became mixed residential and commercial in the mid-20th century. The City of Syracuse acquired the Site in 2003 and demolished the remaining two-story building structure that formerly occupied the Site. Since that time, the Site has remained a vacant lot. The Phase I ESA Report prepared in 2020 identifies the following Recognized Environmental Condition (REC):AECC has identified seven off-Site properties that, when considered together and in relation to the Site, represent enough concern to be considered a REC to the subject Site of this Assessment. Such properties include former and current automotive repair / service stations, former and current gasoline stations, former industrial properties, and former drycleaning facilities. There is documented historical contamination related to some of these properties, while others have no identified history of investigation having occurred that might be able to rule out potential contamination. There appears to have been no known previous site investigation performed on the Site but contamination from past operations on adjacent properties are suspected to have impacted the Site. A Phase II ESA is needed to confirm if contamination is present.

Site Class Desc:	
Site Class Desc (Web):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination.

Description:

Location: The NM-Erie Boulevard MGP Site is an 8.19-acre site located at 300 Erie Boulevard West, in downtown Syracuse. The site is bounded by West Genesee Street to the north, North Franklin Street to the east, Erie Boulevard West to the south and Onondaga Creek to the west. Site Features: The site is relatively flat. There are four adjoining office buildings, and two separate buildings on the site. All buildings are occupied. The remaining site area is covered with paved parking lots and roadways. Current Zoning/Use(s): The site is zoned for commercial use. The immediate surrounding area is zoned for commercial use. Past Use of the Site: The prior uses of the site include three mills (a salt mill, a saw mill, a linseed oil mill) and a tannery. The first manufactured gas plant (MGP) was constructed in 1849 and operated until the 1930s. Site Geology and Hydrogeology: Fill material is present below the asphalt pavement surface cover and ranges in thickness from 3 to 28 feet. The fill unit is underlain by a clay/silt layer. This unit is discontinuous and ranges in thickness from 2 to 22 feet. A sand and gravel unit is encountered beneath the clay/silt layer at depths ranging from 6 to 30 feet below ground surface (bgs). The water table is generally encountered at a depth of approximately 20 feet bgs at the site and flows from south to north. The site is adjacent to Onondaga Creek, which is a losing stream at this location, meaning that water flows from the creek into groundwater. Groundwater is naturally very saline, which renders it unsuitable for potable purposes.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were BTEX and PAHs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Detail(s)

Description:

Location: The NM-Erie Boulevard MGP Site is an 8.19-acre site located at 300 Erie Boulevard West, in downtown Syracuse. The site is bounded by West Genesee Street to the north, North Franklin Street to the east, Erie Boulevard West to the south and Onondaga Creek to the west. Site Features: The site is relatively flat. There are four adjoining office buildings, and two separate buildings on the site. All buildings are occupied. The remaining site area is covered with paved parking lots and roadways. Current Zoning/Use(s): The site is zoned for commercial use. The immediate surrounding area is zoned for commercial use. Past Use of the Site: The prior uses of the site include three mills (a salt mill, a saw mill, a linseed oil mill) and a tannery. The first manufactured gas plant (MGP) was constructed in 1849 and operated until the 1930s. Site Geology and Hydrogeology: Fill material is present below the asphalt pavement surface cover and ranges in thickness from 3 to 28 feet. The fill unit is underlain by a clay/silt layer. This unit is discontinuous and ranges in thickness from 2 to 22 feet. A sand and gravel unit is encountered beneath the clay/silt layer at depths ranging from 6 to 30 feet below ground surface (bgs). The water table is generally encountered at a depth of approximately 20 feet bgs at the site and flows from south to north. The site is adjacent to Onondaga Creek, which is a losing stream at this location, meaning that water flows from the creek into groundwater. Groundwater is naturally very saline, which renders it unsuitable for potable purposes.

Assess ENV:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were BTEX and PAHs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Assess DOH:

Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination.

Site Class Desc:
Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH: The site is in an area which is served by public water. NYSDOH has observed evidence of site trespass during a past site investigation. NYS DEC completed a drum removal in 1991. The City of Syracuse conducted follow-up soil sampling in the Spring of 1992 and no residual contamination was found. The site was delisted in December 1992 and there are no known outstanding health concerns associated with exposure to site contaminants.

Assessment:

All remaining drums & containers that were stored in this building were removed by November of 1992. The City of Syracuse's follow-up investigation revealed no residual contamination resulting from the drums.

Description:

Royal Research Labs was a paint stripping firm and manufacturer of plastic automotive parts. It was located on Shonnard Street. The facility was declared unsafe and the building was condemned by the Syracuse Fire Department in the early 1980's. Approximately 50 drums and containers of chemicals were moved from the Royal Research Lab to the Tip-Top Bakery building, which is also located on Shonnard Street. Some of the chemicals have spilled onto the floor of the building. Analytical results of samples taken, reveal that some of the wastes were ignitable and corrosive. Many of the drums have been removed from the building, but a few still remain scattered through-out. Some were found to contain hazardous waste. In 1991, the DEC initiated a final drum removal. The drum removal was completed by November of 1991. A thorough follow-up investigation with sampling was conducted by the City of Syracuse during the spring of 1992. Sampling analysis revealed no residual contamination from the hazardous waste.

Describe the Site: The site was a limestone quarry from 1882 to 1911. TNT was manufactured at the site during WWI and more recently pesticides, toulene and waste paint were stored on site. Geology on the area is karst. There is documentation of explosions during the time of TNT manufacturing. This site was referred to the Division of Solid

Waste on 6/28/91.

Describe the Threat:

Nearby homes have wells as only available water supply. The potential to contaminate groundwater, as well as the potential for runoff to contaminate a pond at the head of Geddes Brook both exist. Lead contamination - apparentiy from shooting practice.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Nov 3, 2022

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Nov 3, 2022

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Nov 3, 2022

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Jan 25, 2023

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Jan 25, 2023

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 23, 2023

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by RCRA.

Government Publication Date: Jan 23, 2023

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 23, 2023

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 23, 2023

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jan 23, 2023

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 23, 2023

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jan 23, 2023

Federal Engineering Controls-ECs: FED ENG

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Dec 22, 2022

Federal Institutional Controls- ICs: FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Dec 22, 2022

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Nov 3, 2022

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Nov 6, 2022

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Aug 30, 2022

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Jan 25, 2023

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Dec 22, 2022

State

Registry of Inactive Hazardous Waste Disposal Sites in New York State: SHWS

State-and tribal- equivalent CERCLIS. State Superfund Program (Inactive Hazardous Waste Disposal Site Remedial Program) (IHWDS) - Oversees the identification, investigation and cleanup of sites where consequential amounts of hazardous waste exist. These sites go through a process of investigation, evaluation, cleanup and monitoring that has several distinct stages. This list is made available by New York State Department of Environmental Conservation's State Superfund Program.

Government Publication Date: Jan 3, 2023

Delisted Registry of Inactive Hazardous Waste Disposal Sites in New York: DELISTED SHWS

This database contains a Registry of Inactive Hazardous Waste Disposal sites which have been removed from New York Department of Environmental Conservation's Environmental Site Remediation database.

Government Publication Date: Jan 3, 2023

Hazardous Substance Waste Disposal Sites: HSWDS

A list of sites included in Hazardous Substance Waste Disposal Site Study reports made available by the New York Department of Environmental Conservation Division of Hazardous Waste Remediation. Provides information regarding the evolving status of hazardous substance waste disposal sites in New York.

Government Publication Date: Oct 24, 2003

Vapor Intrusion Legacy Site List: VAPOR

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion. This list is made available by Department of Environmental Conservation's Vapor Intrusion Legacy Site List. This database is state equivalent CERCLIS.

Government Publication Date: Dec 29, 2022

Solid Waste Facilities and Landfills: SWF/LF

Solid Waste Information Management System (SWIMS) is an inventory containing active and inactive facilities throughout the state. This list is made available by Department of Environmental Conservation's Solid Waste Information Management System (SWIMS).

Government Publication Date: Dec 22, 2021

Inactive Landfill Facilities: LANDFILL INACTIVE

List of inactive landfills in the State of New York. This data is made available by the New York State Department of Environmental Conservation (DEC). DEC notes that these are preliminary data and should not be regarded as a complete inventory of all landfills in the State, and also that site locations and attributes are preliminary and should not be relied upon without independent verification.

Government Publication Date: Sep 21, 2022

Waste Tire Facilities: WASTE TIRE

This list of active Waste Tire Facilities is maintained by the New York State Department of Environmental Conservation. Waste tire storage facilities (WTSF) store waste tires or portions of waste tires. Most of these facilities require Part 360 permits, but under certain conditions a registration maybe available.

Government Publication Date: Apr 7, 2022

Recycling Facilities: RECYCLING

The Department of Environmental Conservation (DEC), Division of Materials Management (DMM), Bureau of Permitting and Planning regulates solid waste management facilities in accordance with 6 NYCRR Part 360. Information pertaining to those facilities is maintained with the Division's Solid Waste Information Management System (SWIMS) database. The Facility List is a dataset related to solid waste management facilities operating in the state, and includes such information as facility location, contact names and associated information, waste types managed, and regulatory information.

Government Publication Date: Apr 7, 2022

Leaking Storage Tanks: LST

This database contains records of chemical and petroleum spill incidents. They include leaking aboveground storage tanks or leaking underground storage tanks, with incidents of tank test failures, tank failures and tank overfill. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Jan 6, 2023

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Storage Tank sites which has been removed from New York Department of Environmental Conservation's Spill Response Program

Government Publication Date: Jan 6, 2023

Underground Storage Tanks- UST-Petroleum Bulk Storage (PBS): UST

Facilities within the Petroleum Bulk Storage (PBS) that have underground storage tanks. Underground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by NewYork Department of Environmental Conservation's Environmental Site Database Search.

Government Publication Date: Nov 21, 2022

The Bulk Storage Program Database - AST: AST

Facilities within the Petroleum Bulk Storage (PBS) that have aboveground storage tanks. Aboveground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by New York State Department of Environmental conservation's Petroleum Bulk Storage (PBS) program.

Government Publication Date: Nov 21, 2022

Petroleum Bulk Storage: TANKS

The Bulk Storage Program Database maintains the registrations of active and inactive bulk storage sites statewide. This database includes Petroleum Bulk Storage (PBS) tanks where no information is available on whether they are ASTs or USTs. This list is made available by Department of Environmental Conservation's Petroleum Bulk Storage (PBS) program.

Government Publication Date: Nov 21, 2022

Major Oil Storage Facilities (MOSF): MOSF

In 1977, the New York State Legislature passed the "Oil Spill Prevention, Control and Compensation Act" (Article 12 of the Navigation Law). This law regulates all oil terminals and transport vessels operating in the waters of the State which have a storage capacity of 400,000 gallons or more. (Terminals and vessels with a capacity of 400,000 gallons or more are commonly referred to as major oil storage facilities or MOSFs). This list is made available by Department of Environmental Conservation's Major Oil Storage Facility (MOSF) Program.

Government Publication Date: Nov 21, 2022

Chemical Bulk Storage (CBS): CBS

Facilities that store regulated hazardous substances in underground tanks . "Hazardous substance" means any substance listed as hazardous or acutely hazardous in 6 NYCRR Part 597 or a mixture thereof. This list is made available by Department of Environmental Conservation's Chemical Bulk Storage (CBS) Program.

Government Publication Date: Nov 21, 2022

Delisted Storage Tanks: DELISTED TANKS

List of Storage Tank sites which has been removed from New York Department of Environmental Conservation's Environmental Site Database.

Government Publication Date: Nov 21, 2022

Delisted County Records: DELISTED COUNTY

Records removed from county databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Dec 5, 2022

Registry of Engineering Controls in New York State: ENG

Registry of Engineering Controls in New York State taken from the Environmental Site Remediation Database.

Government Publication Date: Jan 3, 2023

Registry of Institutional Controls in New York State: INST

Registry of Institutional Controls in New York State taken from the Environmental Site Remediation Database.

Government Publication Date: Jan 3, 2023

Voluntary Cleanup Agreements: VCP

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites. This list is made available by Department of Environmental Conservation's Voluntary Cleanup Program.

Government Publication Date: Jan 3, 2023

Environmental Restoration Program Listing: ERP

Environmental Restoration Program - Provides municipalities with financial assistance for site investigation and remediation at eligible brownfield sites. In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (Bond Act). Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. This list is made available by Department of Environmental Conservation's Environmental Restoration Program.

Government Publication Date: Jan 3, 2023

Brownfields Site List (Subset of Site Remediation): BROWNFIELDS

Brownfield Cleanup Program was developed to enhance private-sector cleanups of brownfields and to reduce development pressure on "Greenfields". A Brownfield site is real property, the redevelopment or reuse of which may be complicated by the presence or potential presence of a contaminant. Contaminants include hazardous waste and/or petroleum. This list is made available by Department of Environmental Conservation's Brownfield Cleanup Program.
Government Publication Date: Jan 3, 2023

Tribal

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands: INDIAN LUST
This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 2, which includes New York, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Jan 28, 2016

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST
This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 2, which includes New York, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Apr 04, 2016

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST
Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Nov 23, 2022

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST
Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Nov 23, 2022

County

No County databases were selected to be included in the search.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS
The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).
Government Publication Date: Aug 18, 2022

Toxics Release Inventory (TRI) Program: TRIS
The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.
Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI
List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.
Government Publication Date: Aug 24, 2021

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. Sites on this list do not necessarily reflect the source/s of contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Jun 30, 2022

PFOA/PFOS Contaminated Sites: PFAS NPL

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Oct 4, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations https://pfasproject.com/pfas-contamination-site-tr acker/

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills: ERNS PFAS

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Aug 30, 2022

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).
Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA
The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).
Government Publication Date: Nov 23, 2022

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The U.S. Environmental Protection Agency's Enforcement and Compliance History Online system incorporates data from the Integrated Compliance Information System - National Pollutant Discharge Elimination System (ICIS-NPDES). ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. This data includes permit, inspection, violation and enforcement action information for applicable ICIS records.
Government Publication Date: Oct 15, 2022

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jun 25, 2022

Delisted Drycleaner Facilities: DELISTED FED DRY
List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).
Government Publication Date: Jun 25, 2022

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Mar 31, 2021

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 3, 2022

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Aug 18, 2022

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 1, 2022

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG) fuel type locations.

Government Publication Date: Jan 3, 2023

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Jan 11, 2023

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 3, 2022

State

Underground Injection Control Wells: UIC

A well permit is required from the Division of Mineral Resources for any brine disposal well deeper than 500 feet. This includes any operation to drill, deepen, plug back or convert a well. Regardless of well depth, the NYSDEC Division of Water must be contacted for a determination of whether a SPDES permit is necessary to operate any brine disposal well.

Government Publication Date: Aug 6, 2018

Manufactured Gas Plants: MGP

A list of former Manufactured Gas Plants (MGP) made available by the New York Department of Environmental Conservation (NYSDEC). From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel. Former MGP structures such as gas holders, tar separators, wells, and tanks were often susceptible to spills and leaks. As a result, these structures were a significant source of contamination from the release of tar and other toxic by-products.

Government Publication Date: Jan 9, 2023

Spill Incidents Database: NY SPILLS

Spill Incidents Database has records dating back to 1978. This database contains records of chemical and petroleum spill incidents. The DEC Spill Response program receives and compiles reports of hazardous material spills occurring anywhere in New York State. These reports are submitted through the Spill Hotline and other mechanisms, and entered by DEC spill response staff into the state's official data base of Spill Incidents Reports. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Jan 6, 2023

PFAS Remedial Sites: PFAS CONTAM

List of sites being addressed under one of the New York Department of Environmental Conservation (DEC) Division of Environmental Remediation (DER)'s remedial programs, where the waste or contaminant of concern is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jan 3, 2023

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

A list of sites surveyed by the New York Department of Environmental Conservation to determine locations that manufacture, use, store, or release into the environment materials containing Per- and Polyfluoroalkyl Substances (PFAS). Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Some PFAS are difficult to break down and persist in the environment that may cause harm to the public. This list is made available by the Department of Environmental Conservation of New York State.

Government Publication Date: Jan 16, 2019

Landfill Investigations PFAS Sampling Results: PFAS LANDFILL

A list of inactive landfill sites that have been investigated for Per- and Polyfluoroalkyl Substances (PFAS) in the state of New York made available by the New York State Department of Environmental Conservation.

Government Publication Date: Jun 30, 2020

Registed Dry Cleaner Facilities: DRYCLEANERS

The Division of Air Resources of the Department of Environmental Conservation (DEC) tracks all registered dry cleaner facilities.

Government Publication Date: Feb 8, 2023

Delisted Dry Cleaner Facilities: DELISTED DRYCLEANERS

Sites removed from the list of dry cleaner facilities registered with the Department of Environmental Conservation (DEC)'s Division of Air Resources.

Government Publication Date: Feb 8, 2023

Hazardous Waste Manifest - Facilities: NY MANIFEST

List of facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), with which no manifests are associated. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records.

Government Publication Date: Dec 15, 2022

Receivers from Hazardous Waste Manifests: REC MANIFEST

List of receiver facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), which are identified as a receiver in associated manifests. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records. Hazardous Waste Code Descriptions are from NY Part 371.4 (6 CRR-NY 371.4) Identification and Listings of Hazardous Waste, unless otherwise noted.

Government Publication Date: Dec 15, 2022

Generators from Hazardous Waste Manifests: GEN MANIFEST

List of generator facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), which are identified as a generator in associated manifests. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records. Hazardous Waste Code Descriptions are from NY Part 371.4 (6 CRR-NY 371.4) Identification and Listings of Hazardous Waste, unless otherwise noted.

Government Publication Date: Dec 15, 2022

New York City E-Designated Sites: E DESIGNATION

A list of sites with an (E) Designation, described as a New York City (NYC) zoning map designation that indicates the presence of an environmental requirement pertaining to potential hazardous materials contamination, window/wall noise attenuation, or air quality impacts on a particular tax lot. The NYC Office of Environmental Remediation administers the E-Designation Environmental Review Program to avoid significant adverse impacts to human health or the environment through exposure to these hazards. The data is provided by the NYC Department of City Planning (DCP).

Government Publication Date: Nov 28, 2022

Registered Cooling Towers: COOLING TOWERS

Locations of cooling towers registered with New York State, made available by the Center for Environmental Health. In August 2015, the New York State Department of Health released emergency regulations requiring the owners of cooling towers to register them with New York State. These data are self-reported by owners and/or property managers of cooling towers in service in New York State.

Government Publication Date: Aug 2, 2022

Tier 2 Report: TIER 2

A list of Tier 2 facilities in the state of New York. This is a list of facilities which have reported hazardous substances provided by Homeland Security and Emergency Services.

Government Publication Date: Sep 28, 2022

NY DEC Projects of Interest: PROJECTS

A list of permits for notable projects - permit applications that have received a lot of public attention - made available by the New York Department of Environmental Conservation (DEC).

Government Publication Date: Nov 26, 2021

Air Permitted Facilities: AIR PERMITS

This list of issued state facility air permits is maintained by the New York State Department of Environmental Conservation (NYDEC). The listing includes Air State Facility Permits (ASF) and Air Title V Facility Permits (ATV). ASF permits may be required by medium-sized commercial or industrial facilities or larger facilities that have agreed to limit emissions. ATV permits may be required at the largest facilities statewide, or at facilities located in those areas where state implementation plans are in place to improve air quality. Please note: An Issued permit is valid for a stated period of time. Modifications may be made to an issued permit for the remainder of the active permit.

Government Publication Date: Dec 30, 2022

Liens Listing: LIEN

New York Environmental Protection and Spill Compensation Fund (Oil Spill Fund) places liens on properties that are sites of oil spills when the owners are responsible parties and fail to pay for cleanup. The Office of the State Comptroller provides this listing of liens information from the Oil Spill Fund.

Government Publication Date: Oct 5, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Appendix G

Resumes of Environmental Professionals

Jonathan D. Alvarez, CPG
Geologist

Mr. Alvarez is Certified Professional Geologist with 17 years of experience performing comprehensive due diligence for sites across the United States. His experience includes environmental site assessments, portfolio acquisition screening, coastal permitting, urban site remediation, underground storage tank closures, construction oversight, transmission siting assessments, project feasibility, and the design and oversight of freshwater and marine-based investigations.

Mr. Alvarez focuses on coastal and near shore projects for federal, commercial, state, and private clients. He has managed every aspect of Superfund activity and complex due diligence investigations. He has a comprehensive understanding of hydrogeology, watershed processes, bedrock mapping, and erosion and sedimentation controls. His experience includes the delivery of time-critical due diligence assessments for portfolio acquisitions that included solar, natural gas, wind, nuclear, coal, hydropower, and biomass.

Mr. Alvarez has a broad range of technical and safety-related experience to manage projects as an environmental site coordinator. He has hands-on experience with geotechnical technology, various field instrumentation suites, small vessel through ocean-going ship systems, and remote sensing technology, commonly employed as a client's representative on marine surveys. He specializes in interpreting geophysical data, submarine cable routing, constructability and environmental constraint assessments that have led to numerous constructed electrical transmission cable systems across the region.

Education
M.S./Environmental Science & Management/2007 (University of Rhode Island)
B.S./Geology/2004 (University of Rhode Island)

Registrations/Certifications
Certified Professional Geologist (CPG)—No. 11482

Specialized Training
OSHA 40-Hour Hazardous Waste Operations and Emergency Response Training; 2008
OSHA 8-Hour Hazardous Waste Operations and Emergency Response Refresher; 2022
OSHA 8-Hour Hazardous Waste Operations Supervisor Training; 2011
OSHA 10-Hour Construction Safety and Health; 2010

Professional Affiliations/Appointments
International Propeller Club, Port President (2019-2023)

Experience
Years with EA: 3 Total Years: 17

Professional Experience

Program Management—Project Manager and Task Manager for projects where numerous disciplines intersect at or near the shore. Responsible for multiple media sampling activities that include soil, sediment, groundwater and air. Comprehensive experience as an at-sea client representative for marine investigations, feasibility studies and reconnaissance routing exercises. Due diligence environmental project experience includes completion of Phase I/II environmental site assessment reports, Brownfields remediation, and compliance with environmental regulations including state site cleanup programs and Resource Conservation and Recovery Act.

Marine, Estuarine, and Aquatic Site Assessments—Experience with management of numerous geophysical and geotechnical surveys and seafloor characterization efforts in freshwater, estuarine and coastal waters to aid in developing routes for buried undersea cables. Experience includes scoping, performing quality control and on-board representation on bathymetric, geophysical and geotechnical surveys.

Due Diligence—Project Manager for comprehensive environmental site assessments to identify recognized environmental conditions in accordance with the All Appropriate Inquiry standards and in accordance with the American Society for Testing and Materials standards. Provided regulatory guidance to both buyers and sellers as to the implications of recognized environmental conditions and design of the appropriate additional investigative programs validate/refute releases to the environment.

Site Remediation—Senior Project Manager for the design and implementation of remedial systems for the cleanup of petroleum and hazardous materials. The installed remedial systems include in situ chemical oxidation, enhanced reductive dichlorination, enhanced monitoring of natural attenuation, and groundwater pump and treat.

Incremental Sampling Methodology—Senior Project Manager for the design and implementation of Incremental Sampling Methodology in accordance with the Interstate Technology & Regulatory Council 2012 guidance. Provided clients with an effective adaptation for use in contaminated sediment evaluations at very large ecological restoration sites in Massachusetts.

Oakley, B.A., J.D. Alvarez, and J.C. Boothroyd, 2007. Benthic geologic habitats of the Matunuck-Green Hill shoreface, Rhode Island. Presented as a poster at the Geological Society of America,

EA Project Experience

Due Diligence and Compliance; LS Power Equity, LLC; United States—Compiled site data from historical and facility records for a hydroelectric, gas, wind, geothermal, petroleum and coal-fired power plants to assess liabilities associated with environmental and permitting claims for the purchase and sale of the assets. Sources of information included fire insurance mapping, municipal offices, state agencies, and federal databases that were used to develop a comprehensive site model of sensitive receptors, recognized environmental conditions, and contaminants of concern. Reconnoitered site to locate additional areas of concern, conduct interviews with facility personnel, and identify locations. Analyzed the accumulated data, developed recommendations, and documented the findings in accordance with ASTM International (ASTM) standards. Prepared and verified facility compliance plans that included Facility Response Plans, Spill Prevention Control and Countermeasure Plans, and Stormwater Pollution Prevention Plans, Continuous Emission Monitoring System Quality Assurance/Quality Control Plans.
Project Date: 2011 – Present

Environmental Due Diligence; Southcoast Hospitals Group, Inc.; Massachusetts—Compiled site data from historical and facility records for numerous property acquisitions associated with the Client's growth and acquisitions. Sources of information included fire insurance mapping, municipal offices, state agencies, and federal databases that were used to develop a comprehensive site model of sensitive receptors, recognized environmental conditions, and contaminants of concern. Analyzed the accumulated data, developed recommendations, and documented the findings in accordance with ASTM standards.
Project Date: 2021 – Present

Phase I Environmental Site Assessment; North Providence, Rhode Island; Town of North Providence—Managed the All Appropriate Inquiries compliant Phase I Environmental Site Assessment for an unimproved lot planned for recreational redevelopment by the Town.
Project Date: July-August 2020

Donald F. Conan, P.E., P.G.
Senior Engineer

Mr. Conan is a Registered Professional Engineer and Professional Geologist with more than 32 years of extensive experience in environmental and civil engineering. As a Senior Engineer in EA's Syracuse, New York office, Mr. Conan is responsible for managing the engineering staff in the Syracuse office, and the technical oversight of environmental restoration projects under various federal and state programs. He is also the Program Manager for EA's New York State Department of Environmental Conservation (NYSDEC) Contract No. D009806 for Standby Engineering Services. His broad experience includes conducting site assessments related to hazardous waste and petroleum contamination and the remediation activities associated with these projects.

Mr. Conan is currently managing large scale remediation projects under the Comprehensive Environmental Response, Compensation, and Liability Act and the New York State Superfund Program, and providing technical oversight for remedial activities associated with sites within the program. His duties include managing state contractors, developing bidding documents, screening of remedial technologies, operation and maintenance of remediation systems, and preparing corrective measure studies. As Project Manager, he is responsible for managing all aspects of remedial projects: developing work plans, budgets, and schedules; directing field investigations; preparing technical evaluations and documents; preparing design drawings and specifications; and supervising system construction and operation. As Program Manager, he is responsible for managing the portfolio of projects under the Contract, ensuring compliance with contract terms, and overseeing Project Managers and project budgets and schedules. His civil engineering experience includes the study, design, and construction management of land development projects (subdivisions), potable water supply systems, and wastewater facilities.

Experience
Years with EA: 19 Total Years: 31

Professional Experience

Site Remediation—As Project Manager/Senior Engineer, has designed, installed, and operated numerous remedial systems involving groundwater treatment, separate-phase product recovery, and soil remediation. Selects remedial technologies, performs design calculations, and prepares design reports (e.g., remedial action plans, feasibility studies, and corrective measure studies). Obtains regulatory approval of design and proceeds with preparation of plans and specifications for system construction. Experience specifically includes air sparging, soil vapor extraction, groundwater pumping and treatment, multi-phase extraction, in-well stripping, geochemical fixation, and chemical oxidation. Operates remedial systems and performs troubleshooting and system evaluations.

Pilot Studies and Best Remedial Technology Selection—Performs and supervises field activities to determine site-specific conditions that aid in the selection of remedial technologies. Collects and reduces pilot test data (i.e., equipment performance, waste stream concentrations [influent and effluent], and monitoring well vacuum gauge readings) to estimate design parameters for selected technology. Performed pilot tests and treatability studies

utilizing different equipment in groundwater to determine radius of influence, pumping rates, and aquifer characteristics as necessary to properly design groundwater treatment systems. Evaluates pilot test results to screen applicable remedial technologies, develops remedial alternatives, and recommends selected alternative in design reports.

Assessment and Remedial System Design—Develops assessment plans after reviewing site history and available data. Provides oversight of soil boring installation, and monitoring and extraction well installation utilized for delineation of subsurface contamination and pilot study operations. Experience specifically includes subcontractor selection, coordination of field activities, locating soil borings and wells, and field work. Experience includes the design of numerous hydraulic and pneumatic-based remediation systems, groundwater pumping and treatment, chemical oxidation via ozone sparging, and multi-phase extraction systems. Engineering activities consisted of calculating design parameters from pilot tests; well and piping layout; equipment selection; and preparation of design and construction drawings including piping and instrument diagrams, site plans, electrical and control system layouts, site security, and perimeter fencing plans.

Construction Management and Supervision—Served as Construction Manager for numerous soil and groundwater remediation systems. Duties involved pre-qualifying bidders, conducting pre-bid meetings, safety meetings, preparing addenda to bidding documents, evaluating bids, selecting subcontractors, processing change orders, managing budgets and schedules, and handling subcontractor disputes.

Management—Program Manager for EA's NYSDEC Engineering Services Standby Contract D009806 that covers investigation/design and construction work with a total value of $50 million. He currently serves as Certifying Engineer for all remedial action work assignments under NYSDEC Standby Contracts. On each of these assignments, EA provided pre-award services, participated in pre-construction conferences, reviewed contractor submissions, provided full-time inspection, and completed construction records and reports—all under his direction. Deliverables included under the Certifying Engineer responsibilities include Construction Drawings, Design Reports, Site Management Plans, and Periodic Review Reports.

As Vice President of EA Engineering, P.C., is responsible for all technical deliverables associated with work performed in New York State, including certification of engineering deliverables.

Insurance Support Services—Performed numerous projects to advise client regarding remedial technologies and implementation, and associated costs to be included in clean-up cost cap and pollution legal liability insurance policies. These projects involve review of applicant-prepared investigations and designs and evaluation of their applicability to the subject sites. In several cases, devised methods to complete the review of multi-site portfolios within the expedited timeframes required for processing of the application.

Project Management—Manages and provides oversight for environmental restoration projects at sites throughout the Northeast. Coordinates all aspects of the projects from planning and implementing initial site investigations through remedial system installation and operation. Responsibilities include project plan development (work plans, field sampling and analysis plans, corrective action plans, health and safety plans); interaction with client and regulatory officials; arrangement, scheduling, contracting, and supervising various subcontractors (e.g., drillers, analytical laboratories); management of technical personnel including geologists, engineers, and technicians; and senior technical review for data interpretation and report preparation.

Selected Publications and Presentations

Co-authored and presented *A Remedial Action Case Study Utilizing Subsurface Volatilization and Ventilation System (SVVS®) Technology*, at the 1996 Florida Department of Environmental Protection, Annual Storage Tanks/Cleanup Program Meeting. Cocoa Beach, Florida.

Co-authored a paper presented at the 1993 Florida Environmental Expo in Tampa, Florida. The paper covered pilot test design, data collection, and interpretation of results for Subsurface Volatilization and Ventilation System®.

EA Project Experience

Old Upper Mountain Road New York State Superfund Site, Sanitary Sewer Relocation, Lockport, New York; NYSDEC/New York State Department of Health; Engineer-of-Record—Overseeing the design of almost one mile of new sanitary sewer main (30-inch diameter) associated with the superfund site. There is an existing sewer main that currently runs through the superfund site that needs to be relocated prior to remedial action activities. The primary focus of this Work Assignment is to design the construction plans and specifications of the new sewer including; surveying, utility location, geotechnical investigation of proposed path, hydraulic analysis, layout and profile development.
Project Date: June 2019 – Present
Project Value – $600,000; Contract Type – CPFF; EA Project No. – 1602514; EA Project Manager – Matt Smith

Kroll Well Site, Town of New Windsor, New York; NYSDEC; Engineer-of-Record—For the design, installation, startup, and site management of granular activated carbon system to pre-treat potable water supply for the Town of New Windsor, New York. Design included preparation of Basis of Design Report. Municipal system pumps and treats at rate of 300 gallons per minute, with chlorination only. Granular activated carbon treatment systems are being used to remove per- and polyfluoroalkyl substances from the water supply. Oversaw NYSDEC-callout subcontractor during installation/setup of treatment systems, and coordinated with treatment system equipment vendor during design, procurement, and setup of granular activated carbon systems. Oversaw preparation of as-built drawings.
Project Date: ***May 2018 – Present***
Project Value – $910,582; Contract Type – Cost Plus; EA Project Nos. – 14907.40 and 1602502; EA Project Manager – Jim Hayward

Crosby Hill Mobile Home Park, Volney, New York; NYSDEC; Engineer-of-Record—Designed a water distribution system for a mobile home park to remove residents from private well water supply contaminated with per- and polyfluoroalkyl substances. Developed drawings and specifications for directional drilling high density polyethylene water lines through 70-unit park, and performed construction management.
Project Date: ***September 2018 – Present***
Project Value – $174,990; Contract Type – LS; EA Project Nos. – 1490742 and 1602503; EA Project Manager – Megan Miller

Sewall's Island Site, Watertown, New York; NYSDEC; Engineer-of-Record—Designed of a soil cover on behalf of NYSDEC to address impacted soil associated with the historical industrial activities on the property. Pre-design investigation included collection of additional surface soil samples to further delineate the extent of impacts at the site; incorporated results into a pre-design investigation summary report. Prepared remedial design (including drawings and specifications) associated with the soil cover system. Provided construction management services.
Project Date: ***May 2015 – May 2018; March 2019 – April 2020***
Project Value – $109,524 and $309,861; Contract Type – CPFF; EA Project No. – 1490730 and 1490745; EA Project Manager – James Hayward

Global – (Formerly Warex) Certification Report, Newburgh, New York; Global Companies, LLC—Oversaw inspection of secondary containment liner for repair and certification. Sealed certification letter, including volume survey report for containment volume.
Project Date: July–September 2019
Project Value – $14,910; Contract Type – CPM; EA Project No. – 1516901; EA Project Manager – Megan Miller

Deconstruction Design and Supporting Architect-Engineer Services for Demolition of Defense Fuel Support Point, Newington, New Hampshire; Air Force Civil Engineer Center; Senior Engineer—Senior Technical Reviewer for the design and permitting to support the deconstruction of a former Air Force bulk fuel storage facility. The facility includes 6 bulk fuel storage tanks totaling over 15,000,000 gallons of capacity, a fuel offloading pier, a truck fueling rack with six bays, and supporting infrastructure including several structures, fuel pipelines, roads, stormwater infrastructure, and utilities. Reviewed design and permitting effort for completion of design plan set, basis of design report, deconstruction cost estimates, and Air Force programmatic documents. Provided guidance in coordinating efforts between EA, subcontractors, and several government agencies including the Air Force Civil

Engineer Center, Air Force Global Strike Command, Whiteman Air Force Base, Air Force Legal Operations Agency, and Defense Logistics Agency.
Project Date: July 2015 – Present
Project Value – $749,761; Contract Type – LS; EA Project No. – 1456055; EA Project Manager – Mike O'Neill

Deconstruction Design and Supporting Architect-Engineer Services for Demolition of Defense Fuel Support Point, Verona, New York; Air Force Civil Engineer Center; Senior Engineer—Serves as Engineer-of-Record and Senior Technical Reviewer for the full design of the deconstruction of an inactive bulk fuel storage facility located in Verona, New York. Responsible review of design plans, cost estimates, technical specifications, and permit applications. Will seal/stamp final design. Participates in monthly calls with project client and other stakeholders. Project includes deconstruction of three aboveground jet fuel storage tanks and ancillary infrastructure.
Project Date: March 2018 – Present
Project Value – $429,271; Contract Type – LS; EA Project No. – 1535919; EA Project Manager – Mike O'Neill

Dzus Fasteners Site, West Islip, New York; NYSDEC; Engineer-of-Record—For the remedial design for NYSDEC to address a metals-contaminated stream and lake. Oversaw remedial design documents for NYSDEC in accordance with Division of Environmental Remediation-10 guidelines. This included 31 Sheet drawing set and technical specifications. Managed bidding phase, engineer's estimate, bid solicitation and construction management.
Project Date: December 2017 – May 2020
Project Value – $1,960,000; Contract Type – CPFF; EA Project No. – 1490744; EA Project Manager – Frank DeSantis

Petersburgh Landfill New York State Superfund Site, Petersburgh, New York; NYSDEC; Project Manager—Project/Site Manager for a remedial design to address perfluorooctanoic acid detections in the Town of Berlin, New York water supply. The remedy included addition of activated carbon filtration process to the plant's existing treatment train. EA prepared a basis-of-design report and construction drawings; coordinated plant improvement work with the Town of Berlin, New York State Department of Health, and Rensselaer County Department of Health; and provided oversight of the plant improvement site work being performed by NYSDEC Standby Contractor.
Project Date: September 2016 – 2018
Project Value – $500,000; Contract Type – CPFF; EA Project No. – 1490734; EA Project Manager – Donald Conan

Linde Industrial Gas – Richmond, California Plant, Addition of Low Pressure Carbon Dioxide Scrubber; Richmond, California; Project Manager—Supported Linde on permitting of a carbon dioxide scrubber at their Richmond, California facility. The wastewater from the scrubbing process contains/exhibits the following constituents/parameters: acetaldehyde, pH, nitrogen, biochemical oxygen demand, chemical oxygen demand, bisulfite, methanol, and ethanol. Scrubber effluent wastewater is discharged to the City of Richmond's sewer. The City regulates discharge of these constituents and parameters in water discharged to its publicly owned treatment works. EA prepared a permit renewal application and coordinated project activities with the City.
Project Date: 2015–2017
Project Value – $20,000; Contract Type – Cost Plus; EA Project No. – 1524023; EA Project Manager – Donald Conan

Ashland Landfill Leachate Treatment System, for Clean Harbors; West Elizabeth, Pennsylvania; Project Manager—Supported Clean Harbors on a design/build project. Responsible for the preparation of structural, site work, and electrical and mechanical design aspects of the project. The project included two treatment buildings, one oil separation/flow equalization structure, and a water treatment structure.
Project Date: 2014–2017
Project Value – $200,000; Contract Type – Cost Plus; EA Project No. – 15115.01; EA Project Manager – Donald Conan

Owego Heat Treat New York State Superfund Site, Owego, New York; NYSDEC; Project Manager—Project/Site Manager for remedial system optimization. The site was a former heat-treating operation that utilized

chlorinated solvents (tetrachloroethylene) to remove oil from treated metal. The tetrachloroethylene storage vessels leaked and over time impacted both site soils and groundwater. EA commenced the remedial system optimization with the installation of two lines of continuous multi-channel tubing wells. One line of wells is immediately downgradient of the source, and the second line is approximately 300 ft downgradient. Data from sampling the continuous multi-channel tubing wells will be used to calculate mass flux through the lines and this data will be used to screen remedial alternatives.
Project Date: June 2015 – 2017
Project Value – $600,000; Contract Type – CPFF; EA Project No. – 1490731; EA Project Manager – Donald Conan

Puchack Well Field Superfund Site Phase 2; U.S. Army Corps of Engineers–Kansas City District; Project Engineer—Responsible for the technical implementation of remediation efforts associated with the Puchack Well Field Superfund Site, Pennsauken, New Jersey. The project remedy involves the geochemical fixation of hexavalent chromium in a complex series of aquifers via the injection of a sodium lactate solution; the lactate solution reduces Cr^{+6} to Cr^{+3}. The major components of the selected remedy include: establishment of field office for EA and the U.S. Army Corps of Engineers, planning document preparation (Work Plan, Accident Prevention Plan, Contractor Quality Control Plan, and Quality Assurance Project Plan), preconstruction survey of existing conditions, installation and development of monitoring/injection/extraction wells via rotosonic drilling technologies, baseline groundwater sampling and monitoring, selection and procurement of reducing agent, design and construction of mobile injection systems with in-line mixing, injection of reducing agent (i.e., lactate) into the target treatment zones, and process and performance monitoring.
Project Date: June 2019 – Present
Project Value – $13,177,000; Contract Type – Cost Reimbursable; EA Project No. – 6304306; EA Project Manager – Andrew Riggs

Performance-Based Remediation, Air Force Civil Engineer Center; Joint Base Cape Cod, Massachusetts; Project Engineer—Responsible for the implementation of operation and maintenance efforts associated with groundwater treatment systems located on Otis Air National Guard Base at the Massachusetts Military Reservation. EA operates and maintains nine Air Force Civil Engineer Center groundwater treatment plants at the Massachusetts Military Reservation. The plants treat a combined 12 million gallons per day. Treatment generally consists of flow equalization, sand filtration, carbon filtration, and effluent re-injection. Operation and maintenance tasks include system monitoring, filter backwashing, flow adjustments, repair and replacement of damaged components, well rehabilitation, pump maintenance, and reporting. In addition to treatment plant operations and maintenance, EA was responsible for inspections of wind turbines, one Fuhrlander (German manufacturer) since the start of the contract, and two GE turbines as of 20 December 2012.
Project Date: October 2014 – Present
Project Value – $28,000,000; Contract Type – Performance Based; EA Project No. –6290401; EA Project Manager – Jennifer Bouchard

Massachusetts Military Reservation – East Inner Road Requirements and Management Plan; Air Force Civil Engineer Center; Project Manager—Developed a Requirements and Management Plan to provide Otis Air National Guard Base with preliminary design information pertaining to the reconstruction of a portion of Simpkins Road and East Inner Road, minor arterial roads located on Joint Base Cape Cod, formerly known as the Massachusetts Military Reservation in Massachusetts. The study included two areas: (1) approximately 2,100 ft of paved surface extending from the intersection of East Inner Road and South Outer Road to the rotary on East Inner Road, and (2) approximately 750 ft of an abandoned portion of Simpkins Road. The Requirements and Management Plan outlined the conditions of the existing roads, presented geotechnical data on the subsurface and soil conditions beneath the roads, developed a preliminary roadway alignment, made recommendations for stormwater management, and provided guidelines for a basis of design for potential reconstruction of the road.
Project Date: September 2013 – April 2014
Project Value – $40,118; Contract Type – Firm Fixed Price; EA Project No. – 1456041; EA Project Manager – Donald Conan

Old Upper Mountain Road New York State Superfund Site, Lockport, New York; NYSDEC/New York State Department of Health; Engineer-of-Record—Overseeing the remedial design at a former dump site in Lockport, New York. The primary focus of this Work Assignment is to design the construction plans and specifications of the

selected remedial action at the Old Upper Mountain Road site. Prior to design of the remedial action, additional site characterization and investigation is being performed to further evaluate/confirm existing onsite geotechnical conditions, further delineate sediment contamination within Gulf Creek, and to perform bench-scale sediment testing for bulking and leaching characteristics. The following pre-design activities were completed as part of the site investigation portion of the Work Assignment: sediment sampling, sediment bench-scale testing, geotechnical drilling and laboratory analyses, test pit excavations, data validation, and site surveying.
Project Date: June 2014 – Present
Project Value – $678,396; Contract Type – CPFF; EA Project Nos. – 1490726 and 1602514; EA Project Manager – Matt Smith

Bianchi-Weiss New York State Superfund Site, East Patchogue, New York; NYSDEC/New York State Department of Health; Project Manager—Project/Site Manager for remedial action implementation at a former greenhouse facility in East Patchogue, New York. Oversaw a pre-design investigation to refine the limits of chlordane contamination at a 13-acre former greenhouses site. Developed a pre-design investigation report, and contract documents for feasibility study implementation. Responsible for coordination with the NYSDEC and New York State Department of Health, budget review, subcontractor performance and invoice approvals, implementation of quality assurance plan, and allocation of resources and staffing to implement both the quality assurance/quality control program and the site health and safety plan. Fieldwork consisted of environmental sampling (soil, groundwater, surface water, and sediment), and debris stockpile characterization and removal (interim remedial measure).
Project Date: May 2008 – 2017
Project Value – $750,000; Contract Type – CPFF; EA Project No. – 1490718; EA Project Manager – Donald Conan

Empire Electric Company New York State Superfund Site, Brooklyn, New York; NYSDEC; Project Manager—Responsible for developing project work plans, managing subcontractors and budget. The scope of work includes completing the building characterization, developing plans and specifications for building demolition, assisting NYSDEC with bidding phase, managing the selected contractor, and completion of the remedial investigation. The site is listed as a State of New York Superfund site. The building was constructed in 1892 by the Brooklyn City Railroad Company for use as a power plant for the municipally owned trolley system. The building was used for electrical generation until the 1930s when the trolley system was abandoned. Subsequent uses of the building included use as a warehouse and re-conditioning facility for electrical equipment until 1986 when all operations ceased. Historical investigations at the site have documented the presence of widespread polychlorinated biphenyl impacts.
Project Date: 2008–2018
Project Value – $1,400,000; Contract Type – Cost Plus; EA Project No. – 1490706; EA Project Manager – Donald Conan

National Heatset Printing Site, East Farmingdale, New York; NYSDEC; Program Manager—Responsible managing the State's contractor for a $2 million construction project for multiple in-well stripping systems. The site is listed as a State of New York Superfund site. The National Heatset Printing Company operations consisted of lithographic tri-color printing of newspaper and periodical advertisements and the manufacture of lithographic printing plates. National Heatset had been using organic solvents at the site since 1983. National Heatset disposed of its chemical inventory by dumping the materials onto the soils and into a leaching pool located off the rear of the building on the northeast side of the property.
Project Date*: *November 2007 – Present
Project Value – $467,498; Contract Type – Cost Plus; EA Project Nos. – 1447429 and 1602518; EA Project Manager Megan Miller

Former Linde Formerly Used Sites Remedial Action Program Site (now owned by Praxair), for Cabrera Services; Town of Tonawanda, New York; Project Manager—Responsible for the preparation of bid documents associated with utility replacement at the site. There is a network of underground tunnels (precast concrete) that house utilities at the site. A portion of these tunnels are impacted by low levels of radiological contamination and require removal. The utilities contained within the tunnels require relocation/replacement in order to complete the remediation.
Project Date: 2009–2010

Project Value – $25,000; Contract Type – Cost Plus; EA Project No. – 62384.01; EA Project Manager – Donald Conan

P-2069 Oasis Fuel Point, Fort Drum, New York; U.S. Army Corps of Engineers–Baltimore District; Senior Engineer—Responsible for implementation of an ozone sparging pilot test. Tasks involved preparation of a work plan, sparging point and monitoring well design, equipment specifications/procurement, test implementation, data reduction, and reporting. Responsible for the evaluation of using the contaminated sewer infrastructure for effluent disposal. Tasks involved stormwater modeling to simulate pipe conditions during rainfall events while carrying treated effluent. Also reviewed process design for full-scale Surfactant Enhanced Aquifer Remediation at the P-2069 Oasis Fuel Point, Fort Drum, New York. Reviewed work plan/design which included system layout and equipment sizing/specification. Oversaw installation/setup of the full-scale system, performed startup/prove-out, oversaw system operation and data collection, and coordinated with vendors and subcontractors.
Project Date: May 2010 – June 2012
Project Value – $6,467,028; Contract Type – Lump Sum; EA Project No. – 6239301; EA Project Manager – Thomas Porter

Design and Construction of a Dual-Phase Extraction and Air Sparging System, Area 1795, Fort Drum Military Reserve, Watertown, New York; CAPE Environmental under U.S. Army Corps of Engineers Multiple Award Remediation Contract—Project Engineer for design of full-scale multi-phase extraction and aquifer air sparging system at Area 1795, Fort Drum, New York. Calculated design parameters (radius of influence, flow rates, vacuums, pressures) using pilot test data from other Fort Drum sites. Full-scale design included performance of head loss calculations for sizing pipes and system equipment (i.e., vacuum/sparging pumps, off-gas treatment, transfer pumps), selection of specific equipment components by type and vendor, and identification of necessary system controls and electrical power requirements. Developed construction drawings and specifications, as well as procedures and requirements for system operation and maintenance.
Project Date: 2005–2007
Contract Type – FFP and T&M; EA Project No. – Multiple Projects; EA Program Manager – Tom Porter; EA Project Managers – Tom Porter, Vince Williams, Scott Dobson, and Jim Hayward

Witmer Road Landfill, Niagara Falls, New York; The BOC Group; Project Engineer—Responsible for the preparation of a Final Closure Plan of a 24-acre landfill. The site is listed as a State of New York Superfund site. The landfill closure is governed by Parts 360 and 375 of the New York State Codes, Rules, and Regulations for solid waste landfills and hazardous waste sites, respectively. The project is on a fast track for closure completion. Closure pre-design activities commenced in October 1999 with a completion date for construction of October 2000.
Project Date: 2000–2002
Project Value – $30,000; Contract Type – Fixed Price EA Project Manager – Chip McLeod

Storm Sewer System Evaluation, U.S. Postal Service Vehicle Maintenance Facility, Westchester, New York; U.S. Postal Service; Project Engineer—Evaluated the storm sewer collection system associated with a 50-acre vehicle maintenance facility. Project activities include checking design calculations and establishing an operation maintenance schedule associated with storm sewer infrastructure and detention basin.
Project Date: ***September 2000***
Project Value – $25,000; Contract Type – Firm Fixed Price; EA Project Manager – Doug McClure

Installation Restoration Program, Fort Drum Military Installation, Fort Drum, New York; U.S. Army Corps of Engineers–Baltimore District—Project Engineer responsible for engineering aspects of the environmental service program at several of Fort Drum's Installation Restoration Program sites. Environmental services include site characterization, remedial investigations, remedial pilot studies, corrective measure studies, remedial design, remedial construction oversight, long-term monitoring, treatment system operation and maintenance, and site closure. Received regulatory approval of corrective measure studies completed for three petroleum-contaminated sites. At the Army Air Force Exchange Service gasoline station site, provided innovative use of investigation, design/build and operation and maintenance technologies for the implementation of interim remedial measure systems at the site to address subsurface petroleum hydrocarbon contamination saving time and money. The interim remedial measure used multi-phase extraction technology to address separate-phase product and residual soil contamination in the source area, and aquifer air sparging with ozone and tiered monitoring to address the downgradient dissolved-phase hydrocarbon plume.

Project Date: 2000 – June 2008
Project Value – $18.25 million; Contract Type – FFP and T&M; EA Project No. – Multiple Projects; EA Program Manager – Tom Porter; EA Project Managers – Tom Porter, Vince Williams, Scott Dobson, and Jim Hayward

Remedial System Design and Construction Support for Areas 3805/1995, 1595 and 1795, Fort Drum, New York; CAPE Environmental under U.S. Army Corps of Engineers Multiple Award Remediation Contract—Project Engineer for design of full-scale remedial systems at former fueling facilities along Gasoline Alley sites at Fort Drum, New York. Services included performance and oversight during pre-design pilot tests; data collection, evaluation, and calculation of design parameters (radius of influence, flow rates, vacuums, pressures), and completion of basis of design reports; completion of treatment system designs; preparation operation and maintenance manuals; development of a Stormwater Pollution Prevention Plan for construction activities at the site; construction oversight during system installation, engineering erosion and sediment control inspections during construction, and performance of the remedial system startup, proveout, and 6 months of operation and maintenance. Area 3805/1995 site consist of four separate treatment systems (3805 Systems A, B, and C and 1995 System D) and 178 wells (97 multi-phase extraction wells and 81 aquifer air sparging wells) plus process equipment (vacuum pump, high-vacuum liquid separator, oil/water separator, dual-mode oxidizers, air stripper systems, and transfer pumps, etc.); the Area 1595 remedial system consists of 30 multi-phase extraction wells, and 32 aquifer air sparging wells and process equipment; the Area 1795 multi-phase extraction and aquifer air sparging remedial system is comprised of 130 extraction and sparging wells and process equipment.
Project Date: July 2003 – June 2008
Project Value – $1.44 million; Contract Type –T&M and FFP; EA Project No. – 30004.01, .02, .03 and .04; EA Program Manager – Tom Porter; EA Project Manager – James Hayward

Cost Cap Engineering Evaluations/PLL Reviews; AIG Consultants, Inc.; Task Manager—Task Manager for engineering analyses in support of cleanup cost cap and pollution legal liability policy applications for contaminated sites. Performed, managed, and/or served as senior technical reviewer for numerous applications, ranging from former rail yards to manufactured gas sites to dry cleaners. Project activities include assessment of adequacy of site characterization and estimation of potential cleanup costs.
Project Date: 2001–2004
Project Value – $50,000; Contract Type – Time and Materials; EA Project No. – Various –
EA Project Manager – Brian Lesinski

Other Project Experience

Non-Time-Critical Removal Action, Eastern Surplus Site, Meddybemps, Maine; U.S. Environmental Protection Agency, Region 1; May 1999 – February 2000; Project Engineer—Designed a groundwater containment system to minimize the impact of a dissolved solvent plume on an adjacent surface water body. The design included water softening vessels for manganese removal and activated carbon for removal of trichloroethylene and tetrachloroethylene. The total system flow rate was approximately 15 gallons per minute from three extraction wells. Prepared plans and specifications and performed construction management.

Evaluation of Pipeline Cathodic Protection Systems and Underground Storage Tank Leak Detection/Monitoring Systems (Basewide), Naval Submarine Base, New London, Connecticut; Department of the Navy, Northern Division, Naval Facilities Engineering Command; March 1997 – February 1999—Responsible for the evaluation of six underground storage tank monitoring systems and the cathodic protection system associated with the diesel marine fuel pipeline at the base. The project involved the procurement and supervision of two subcontractors, assessment of the underground storage tank and cathodic protection systems, evaluation of subcontractor recommendations, and repair work resulting from assessment. Total contract value over $40,000.

Source Removal Evaluation, Old Firefighting Training Area, Naval Station Newport, Newport, Rhode Island; Department of the Navy, Northern Division, Naval Facilities Engineering Command; March 1997 – June 1998; Project Manager—The site was a former firefighting training area. The project consisted of performing a Source Removal Evaluation, and involved well installation, test pit excavation, and the collection of beach and marine sediments. Field data were used to evaluate whether site-specific conditions were comparable to one or more of the eight conditions, as presented in the National Oil and Hazardous Substances Contingency Plan (Title 40, Code of

Federal Regulations, Section 300.415), which may result in the need for a removal action. Total contract value over $350,000.

Remedial Investigation/Feasibility Study, Eastern Surplus Site, Meddybemps, Maine; U.S. Environmental Protection Agency, Region 1; September 1997 – January 1998; Project Engineer—Prepared and executed a vapor extraction treatability study. Field work included the installation of a vapor extraction well and six observation points. A 24-hour step test was conducted and included collection of vadose zone vacuum levels, flow rate, and influent/effluent analytical samples. Field data were reduced to estimate the site's air permeability and vapor extraction well radius of influence.

Contamination Assessment/Remedial Action, Jim's Marina, Long Key, Florida; Florida Department of Environmental Protection; September 1997 – January 1998; Project Engineer—Responsible for the design, construction, and operation of an Initial Remedial Action at a 2-acre petroleum plume in the Florida Keys. Activities included implementing a vapor extraction system to control petroleum fumes that had forced the evacuation of an adjacent Post Office. The Initial Remedial Action operation was successful and the building was reopened. Supervision of a contamination assessment, design, and construction of a Subsurface Volatilization and Ventilation System® remediation system. Total contract value over $1 million.

Air Sparging/Soil Vapor Extraction Containment System, Pensacola, Florida; Solutia Inc. (formerly Monsanto Chemical Company); September 1996 – February 1998; Project Manager—Provided construction management and oversight of system operation. The project consisted of the design and construction of an air sparging/vapor extraction containment line to control the migration of a chlorinated solvent plume. System included three zones of sparging and vapor extraction wells, a 300-cfm oil-less rotary screw compressor to supply sparging air, and a 600-cfm rotary lobe blower for vapor extraction. Responsibilities included establishing and tracking project budget, preparation of bidding documents, evaluation and selection of subcontractors, negotiating and processing change orders, maintaining client contact, coordinating vendors, contractors, and project schedule. Contract value $600,000+.

Construct Remediation System, Nocatee Cluster Site, Nocatee, Florida; Florida Department of Environmental Protection; July 1995 – March 1997; Project Engineer—Performed the design and prepared plans and specifications for a 40 well air sparging system. The Nocatee Cluster site consists of a Circle K gas station and a Stop-N-Shop gas station separated by a residential lot with a home on it. Recommended combining remediation activities at the two sites to minimize costs associated with remediation. A single equipment building was constructed which housed sparging and vapor extraction blowers and associated equipment for both sites. The equipment shared a single electrical service and telemetry system. Was responsible for the design, construction, and operation activities. Total contract value over $500,000.

General Underground Storage Tank Assessment and Remediation; E-Z Serve Inc., Houston, Texas – 300 Facilities Nationwide; Circle K Corp., Tampa, Florida - 140 Sites in Florida; Florida Department of Environmental Protection – Direct Contract – 55 sites in Florida; American Stores, Salt Lake City, Utah – 10 Sites in Florida; Amerada Hess Inc., Woodbridge, New Jersey – 80 sites in Florida; April 1992 – March 1997—Engineering Technical Lead for remediation projects conducted under the above underground storage tank programs. Responsible for interpreting regulations for over 8 states, understanding and working within the various state programs (funds) set up to finance the underground storage tank cleanups; managing the remediation activities; and designing, constructing, and operating remedial systems within the listed underground storage tank programs. Provided environmental management services related to underground storage tank programs for the above list of clients. The programs ranged from 10 to 300 sites. Remediation at the facilities was funded by a variety of individual state programs and by the clients.

Performance Drive Industrial Park, Syracuse, New York; Hancock Field Development Corporation; January 1989 – April 1990—Project Engineer for the design and construction of an industrial park for the redevelopment of the Hancock Air Base. Project included provision of sewers and water to the site and construction of a new road. Activities included preparation of plans for specifications; organization of construction meetings with contractor, engineer, and owner; and inspection of construction activities.

City Lights Subdivision; Syracuse, New York; Private Developer; August 1988 – March 1989; Project

Engineer—Prepared subdivision plans including the design of sanitary sewer collection systems, water supply systems, and horizontal and vertical alignment of new roadways. Activities also included hydrologic analysis of the proposed subdivision and design of storm water abatement strategies.

Runway Extension – Oneonta Municipal Airport, Oneonta, New York; City of Oneonta; June–November 1989—Project Representative during the construction of an 800-ft extension to the Oneonta Municipal Airport, Oneonta, New York. This project included the relocation of an existing road, clearing of 10 acres to maintain Federal Aviation Administration clear zone, in addition to the extension design and construction.

Big Bay Sewer District, West Monroe, New York; Town of West Monroe; January 1990 – July 1991; Project Engineer—Designed a small diameter pressure sewer collection system including a package treatment plant for the Big Bay Sewer District, Town of West Monroe, New York. Responsible for the preparation of plans and specifications and management of construction, including coordination of contractor's and supplier's activities and responding to questions and problems which occur during construction.

Pressure Sewer Collection System, Cleveland, New York; Village of Cleveland; February–June 1991; Project Engineer—Prepared a report on the feasibility of a small diameter pressure sewer collection system. The report included a preliminary layout of the sewer system, comparison of pressure sewer system to a conventional gravity system, and detailed cost estimate for both.

Employment History

Employer—EA Engineering, P.C. and Its Affiliate EA Science and Technology (Syracuse, New York)
Dates of Employment—February 2000 – Present
Title—Senior Engineer/Vice President (EA Engineering, P.C.)

Employer—Tetra Tech NUS, Inc.
Dates of Employment—1992–2000
Title—Environmental Engineer

Employer—Stearns & Wheler (GHD)
Dates of Employment—1987–1991
Title—Civil Engineer

List of Technical Skills and Specializations

- Construction management/supervision
- Groundwater and soil sampling
- Pilot studies for soil vapor and groundwater extraction remedial system design
- Remedial and subsurface investigations
- Remedial system design
- Remedial system operation and maintenance
- Remedial system startup
- Soil/groundwater remedial system design

Adam Etringer
Senior Scientist

Education
M.S./Water Resources Engineering/2002 (SUNY College of Environmental Science and Forestry, Syracuse, New York)
B.S./Environmental Science/1998 (Plattsburgh State University, Plattsburgh, New York)

Specialized Training
OSHA 40-Hour Hazardous Waste Operations and Emergency Response Training

Experience
Years with EA: 5 Total Years: 21

Mr. Etringer has 21 years of experience in program and project management with a strong assessment and remediation background. He has managed numerous site characterization and remediation projects and is experienced in the development of financial reserve estimates and regulatory reporting.

Professional Experience

Site Characterization and Remediation—Project management responsibilities, including financial controls and staff and subcontractor management. Involved in the development of financial reserve estimates and regulatory reporting to the New York Public Service Commission.

Client Development—Served as client account manager for a large regulated East Coast utility company. Responsible for the financial and technical elements of two separate master services contracts for projects ranging from manufactured gas plant sites and permitting support to other legacy environmental liabilities.

Utility Industry—Involved with Electric Power Research Institute and the Manufactured Gas Plant Consortium. Attended numerous utility industry meeting and seminars and developed a strong network in the industry.

EA Project Experience

Regulatory Oversight of Remedial Investigation and Interim Remedial Measures, Staten Island, New York; New York State Department of Environmental Conservation (NYSDEC) Region 1; Project Manager—Project Manager for the regulatory oversight of a Remedial Investigation and Interim Remedial Measure program being conducted by a Potentially Responsible Party at a 240 acre major oil storage facility. The work includes the deconstruction of over 35 aboveground storage tanks and associated infrastructure, environmental sample collection, data evaluation, implementation of Interim Remedial Measures including excavation and off-site transportation and disposal of impacted material, in-situ treatment of contaminated material via chemical oxidation and construction of an environmental cover. Specific daily tasks include the observation of technical work, to ensure that it is conducted in accordance with approved work plans, the Health and Safety Plan, and applicable NYSDEC and New York State Department of Health regulations. Responsible for documenting detailed records associated with all investigation and Interim Remedial Measure activities and provide office-based support for review and compilation of field data. Responsible for overall implementation of the environmental work activities, identifying and reporting each nonconforming item, providing recommendations for any corrective actions, performing or inspecting, and documenting sampling activities, assisting in monitoring site safety activities, monitoring site activities for overall compliance, ensuring that each analytical test is in accordance with project requirements, and interfacing with the Program Manager and NYSDEC to keep them abreast of overall project quality.

Remedial Investigation and Feasibility Study, West Islip, New York; NYSDEC Region 1; Deputy Project Manager—Deputy Project Manager for the remedial investigation/feasibility study for Operable Unit 4 of the NYSDEC Former Dzus Fastener site, West Islip, New York. Soil and sediment at the site were contaminated with cadmium and chromium from historical metal plating operations. Public interest in this site was high due to its proximity to two schools and residential properties. Identified data gaps and planned an additional remedial investigation and supplemental remedial investigation for Operable Unit 4 of the Former Dzus Fastener Site, comprised of the downstream lake and tidal areas. Prepared Work Plan for the Operable Unit 4 investigation, including the collection of residential soil, sediment, surface water, and biological tissue samples to determine the nature and extent of cadmium and chromium impacts. During the investigation, an additional 64 soil samples were collected from residential properties in the floodplain area, 20 surface water samples from Lake Capri, 24 additional sediment samples from Willetts Creek, 122 sediment samples from Lake Capri, 8 sediment samples for toxicity analysis from Willetts Creek and Lake Capri, and 28 fish tissue samples. Prepared remedial investigation/feasibility

study reports for NYSDEC for each operable unit in accordance with DER-10 guidelines. Identified remedial action objectives and conducted a feasibility study for known environmental impacts associated with former site operations and disposal activities, including an assessment of sediment and soil impacts and delineation based on field investigation. Selected appropriate remedial technologies for regulatory review and comment. Supported the remedial design effort, including development of various permit applications**,** and submittal of a Joint Application form to U.S. Army Corps of Engineers and NYSDEC.

Remedial Investigation, West Islip, New York; NYSDEC Region 1; Project Manager—Project Manager for the remedial investigation for Operable Unit 5 (OU5) of the NYSDEC Former Dzus Fastener site, West Islip, New York. OU5 is the tidal portion of Willetts Creek and the adjacent floodplain soil. Soil and sediment at the site are contaminated with cadmium and chromium from historical metal plating operations. Prepared Work Plan for the OU5 investigation, including the collection of residential soil, sediment, and surface water to determine the nature and extent of cadmium and chromium impacts. Prepared a supplemental Work Plan to include biological tissue samples and an eco-toxicology study to evaluate risk of cadmium and chromium contamination to the ecological community. Prepared a remedial investigation report for NYSDEC in accordance with DER-10 guidelines. The results of the Remedial Investigation indicated that no remedial action is required at the site. Assisting with development of a No Action Proposed Remedial Action Plan and Record of Decision.

Remedial Design, Colonie, New York; NYSDEC Region 5—Supported the remedial design effort, including development of various permit applications**,** and preparation of a Joint Application form to U.S. Army Corps of Engineers and NYSDEC. The remedial activities are proposed to address polychlorinated biphenyl contamination in surface and subsurface overburden soil and sediment at the site.

Remedial Design, Lockport, New York; NYSDEC Region 9—Supported the remedial design effort, including development of various permit applications**,** and preparation of a Joint Application form to U.S. Army Corps of Engineers and NYSDEC. Details of the remediation include removal of contaminated sediment and mitigation of wetland loss at a 1:1 ratio.

Feasibility Study, Tonawanda, New York; NYSDEC Region 9; Project Manager—Responsible for the a feasibility study to address polychlorinated biphenyl contamination contained in site soils, sediment, and groundwater at a 37-acre site where non-permitted dumping and landfilling operations have taken place since the 1960s. Remedial technologies being screened for potential consideration include excavation, capping, and *in situ* stabilization/solidification. Assisting with development of a Proposed Remedial Action Plan and Record of Decision.

Defense Fuel Support Point Verona; Verona, New York; Air Force Civil Engineer Center; Project Scientist and Task Manager—Responsible for the planning effort related to the design of the demolition of Defense Fuel Support Point Verona located in Verona, New York for the Air Force Civil Engineer Center. The project involves demolition of 3 bulk fuel aboveground storage tanks and associated piping and infrastructure at a former jet-fuel storage facility. Planning efforts included site survey, hazardous materials assessment, and a subsurface utility survey. The demolition design is currently ongoing.

Hudson River Polychlorinated Biphenyl Sediments Operable Unit 2 Site, Upper Hudson River, New York; NYSDEC—Performed field quality control audits and oversight of sediment sampling and processing procedures during the execution of a 14-week long sediment sampling effort along a 40-mile stretch of the Upper Hudson River on behalf of NYSDEC. Sampling was performed to evaluate the performance of the U.S. Environmental Protection Agency-led Operable Unit 2 Site dredging and monitoring natural recovery remedy, and to establish baseline post-dredging concentrations of polychlorinated biphenyls to use as comparison points in determining estimated sediment recovery. This high-profile project required strict adherence to the approved Quality Assurance Project Plan and Work Plan to ensure data collected were consistent with previous and future sampling efforts. During quality assurance/quality control visits, alternated between the 3 sampling vessels and on-shore office to observe sampling, processing, documentation, and sample shipping procedures to ensure compliance with the approved Quality Assurance Project Plan and Work Plan, and to ensure consistency between sampling vessels and rotating sampling crews.

Frank B. Postma, P.G., LSP, LEP
Geologist/Senior Project Manager

Education
M.S./Water Resource Management/1989 (University of Rhode Island)
B.S./Geology/1986 (University of Rhode Island)

Registrations/Certifications
Professional Geologist—PA (1995, No. PG-00311113-G)
Licensed Environmental Professional—CT (2000, No. 348)

Specialized Training
CPR and First Aid Training; 2022

Experience
Years with EA: 13 Total Years: 34

Mr. Postma is responsible for the management and technical direction of projects that involve the assessment and remediation of contaminated soil and groundwater. His project experience includes performance and review of tank removals; soil excavation and disposal; real estate transfer assessments; comprehensive hydrogeological site assessments involving petroleum, heavy metals, polychlorinated biphenyls, and chlorinated hydrocarbons; design and implementation of soil and groundwater remediation systems; preparation and certification of Massachusetts Contingency Plan submittals; preparation of Spill Prevention Control and Countermeasure Plans, Environmental Notification Forms, and Environmental Impact Reports; oversight of insurance claims; and design, installation, and operation of on-site remediation systems. Remedial designs have included pump and treat, high vacuum extraction, soil vapor extraction, enhanced bioremediation, bioventing, chemical oxidation, and air sparging technologies to restore impacted soil and groundwater. Mr. Postma is also responsible for the design and implementation of aquifer pumping tests and data interpretation and the preparation of environmental monitoring and sampling plans, Quality Assurance/Quality Control Plans, and Health and Safety Plans. He has designed and implemented stormwater management systems and produced numerous Stormwater Pollution Prevention Plans.

Mr. Postma's other areas of expertise include the delineation of impacted media, contaminant migration through multi-layered geologic systems, contaminant fate and transport, technical report editing, groundwater pumping systems, hydrocarbon recovery systems, and wetland delineation and permitting. He has also provided litigation support and expert witness testimony.

Professional Experience

Due Diligence—Served as Senior Project Manager for comprehensive environmental site assessments to identify recognized environmental conditions in accordance with the All Appropriate Inquiry standards promulgated by U.S. Environmental Protection Agency in November 2005 and in accordance with the American Society for Testing and Materials standards. Provided regulatory guidance to both buyers and sellers as to the implications of recognized environmental conditions and design of the appropriate additional investigative programs validate/refute releases to the environment.

Site Investigation—Served as Senior Project Manager for numerous site investigations, landfill, environmental monitoring, and indoor air projects assessments; and regulatory compliance. Managed and involved with all phases of the site investigation, remedial actions, and coordination with regulatory agencies and the public for releases of hazardous materials and petroleum.

Site Remediation—Served as Senior Project Manager for the design and implementation of remedial systems for the cleanup of petroleum and hazardous materials. The installed remedial systems include biosparging, duel-phase high vacuum extraction, enhanced fluid recover, *in situ* chemical oxidation, enhanced monitoring natural attenuation, soil vapor extraction, and groundwater pump and treat.

Third Party Insurance Review—Provided third party regulatory and technical review of environmental insurance claims. Reviewed site investigations remedial action plans and closure documentation. Provided cost estimates on the assessment and closure activities. Negotiated pricing and settlements with responding consultants. Provided litigation support for subrogation claims.

EA Project Experience

Due Diligence and Compliance; LS Power Equity, LLC; United States—Compiled site data from historical and facility records for a hydroelectric, gas, wind, geothermal, petroleum and coal-fired power plants to assess liabilities associated with environmental and permitting claims for the purchase and sale of the assets. Sources of information included fire insurance mapping, municipal offices, state agencies, and federal databases that were used to develop a comprehensive site model of sensitive receptors, recognized environmental conditions, and contaminants of concern. Reconnoitered site to locate additional areas of concern, conduct interviews with facility personnel, and identify locations. Analyzed the accumulated data, developed recommendations, and documented the findings in accordance with ASTM International standards. Prepared and verified facility compliance plans that included Facility Response Plans, Spill Prevention Control and Countermeasure Plans, and Stormwater Pollution Prevention Plans, Continuous Emission Monitoring System Quality Assurance/Quality Control Plans. Prepared Assets Retirement Obligations for solar and power storage facilities. Prepared Notice of Intents for state and national Multi-Sector General Permits. Prepared Aboveground Storage Tank Permit Application. Prepared process water discharge permit application under the Pennsylvania, Illinois and Kentucky Pollutant Discharge Elimination System programs.
Project Date: 2011 – Present

Due Diligence and Compliance; REV Renewables Holdco, LLC; United States—Compiled site data from historical and facility records for a hydroelectric, wind, and solar power plants to assess liabilities associated with environmental and permitting claims for the purchase and sale of the assets. Sources of information included fire insurance mapping, municipal offices, state agencies, and federal databases that were used to develop a comprehensive site model of sensitive receptors, recognized environmental conditions, and contaminants of concern. Reconnoitered site to locate additional areas of concern, conduct interviews with facility personnel, and identify locations. Analyzed the accumulated data, developed recommendations, and documented the findings in accordance with ASTM International standards.
Project Date: 2021 – Present

Due Diligence and Investigation; Vesper Energy, United States—Compiled site data from historical and facility records for a proposed solar power development project to assess liabilities associated with environmental and permitting claims for the lease of a town landfill and fallow land and a former nuclear power plant. Sources of information included fire insurance mapping, municipal offices, state agencies, and federal databases that were used to develop a comprehensive site model of sensitive receptors, recognized environmental conditions, and contaminants of concern. Reconnoitered site to locate additional areas of concern, conduct interviews with facility personnel, and identify locations. Analyzed the accumulated data, developed recommendations, and documented the findings in accordance with ASTM International standards. Conducted geophysical survey of the property to identify subservice anomalies associated with former septic systems and underground storage tanks. Prepared bid documents and managed demolition of a 7.25-square mile site in preparation for solar development.
Project Date: 2017 – Present

Due Diligence; Noble America, Inc.; United States—Compiled site data from historical society and facility records for bulk petroleum storage facilities to assess liabilities associated with environmental and permitting claims for the purchase and sale of the assets. Sources of information included fire insurance mapping, municipal offices, state agencies, and federal databases that were used to develop a comprehensive site model of sensitive receptors, recognized environmental conditions, and contaminants of concern. Reconnoitered site to locate additional areas of concern, conduct interviews with facility personnel, and identify locations. Analyzed the accumulated data, developed recommendations, and documented the findings in accordance with ASTM International standards.
Project Date: 2014 – Present

Due Diligence; ARGO Brownfields Property; Dorchester, Massachusetts—Teamed with an 8(a) firm to compile site data from historical society and facility records for a Brownfields property, fire insurance mapping, municipal offices, state agencies, and federal databases to develop a comprehensive site model of sensitive receptors, recognized environmental conditions, and contaminants of concern. Reconnoitered site to locate additional areas of concern, conduct interviews with facility personnel, and identify locations. Analyzed the accumulated data, developed recommendations, and documented the findings in accordance with American Society for Testing and Materials standards.

14 Groundwater Monitoring Wells Synoptic Measurements (February 2023)

1. INTRODUCTION

1.1 PROJECT BACKGROUND

McCormack Baron Salazar Development, Inc. (MBSDI) contracted EA Engineering, P.C. and its affiliate EA Science and Technology (EA) to perform a Phase II Environmental Site Assessment (ESA) for the Phase One Area (the subject property) of the East Adams Street Redevelopment in Syracuse, New York. The subject property encompasses the northern portion of the city block bound by S. State St., E. Adams St., E. Taylor St., and S. Townsend St., Syracuse, Onondaga County, New York, as shown on **Figure 1**. The elements of this ESA were performed in accordance with the protocols and procedures of the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation (NYSDEC 2010) and the work plan dated 19 December 2022. The field activities described herein were performed in January and February 2023.

1.2 OBJECTIVES

The purpose of the ESA was to evaluate the Recognized Environmental Conditions (RECs) identified in the Phase I ESA Report (EA 2021a). This included the evaluation of surficial and subsurface conditions at the subject property, to determine if past industrial activities on or near the subject property have resulted in environmental contamination. The Phase II ESA program consisted of drilling four soil borings, which were converted to one temporary well and three permanent monitoring wells. Four soil vapor monitoring points were also installed around the perimeter of the subject property. Groundwater, soil, and soil vapor samples were collected for analysis of various constituents of potential concern. Sampling locations are shown on **Figure 2**. All intrusive field activities were completed with a Community Air Monitoring Plan (CAMP) in-place.

In addition, a New York State Department of Labor (NYSDOL) certified Asbestos Inspector (under subcontract to EA) completed a survey of all structures for the presence of asbestos-containing material (ACM). Several ACM samples were collected for analysis.

This report discusses the field activities and summarizes the soil, groundwater, and soil vapor, and ACM analytical results.

1.3 REPORT ORGANIZATION

The subject property background is described in Section 2. Field activities are described in Section 3. Analytical results are summarized in Section 4. The conclusions and recommendations are discussed in Section 5. The references are presented in Section 6.

The following are provided as appendixes:

- **Appendix A:** Daily Field Reports
- **Appendix B:** Asbestos Survey Report

- **Appendix C:** CAMP Data
- **Appendix D:** Soil Boring Logs
- **Appendix E:** Groundwater Sampling Logs
- **Appendix F:** Field Notes
- **Appendix G:** Soil Vapor Sampling Logs
- **Appendix H:** Waste Manifests
- **Appendix I:** Data Usability Summary Reports
- **Appendix J:** Laboratory Analytical Data

This page left intentionally blank

2. SITE BACKGROUND

2.1 SITE LOCATION AND DESCRIPTION

The subject property encompasses a portion of the city block bound by S. State St., E. Adams St., E. Taylor St., and S. Townsend St., Syracuse, Onondaga County, New York, as shown on **Figure 1**. The subject property (301-11 E. Taylor Street St. and S**.** State St.) is located on approximately 3.28 acres and has been historically used for housing, churches, junk yards, industrial uses such as an iron tank manufacturer, a drill manufacturer, and a tin shop, and a Syracuse fire department station, dating back into the 1890s, the oldest date for which records are available. The subject property is comprised of six two-story multi-unit residential buildings, constructed in 1988, that are owned and operated by the Syracuse Housing Authority. Further description and history of the subject property is documented in the Phase I ESA (EA 2021a).

The topography of the subject property is mostly flat at approximately 398 feet (ft) above sea level. Developed urban land abuts the subject property in all directions. Groundwater under the subject property is not used as a potable water source since public water is available in the area. Soil located at the subject property is comprised of urban land (EA 2021a), while bedrock is comprised of dolostone, shale, gypsum, and a salt rock unit that formed during the Upper Silurian and Lower Devonian period (EA 2021a).

2.2 RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

The following RECs associated with the subject property were documented in the Phase I ESA Report (EA 2023). Each of these RECs were assessed during this Phase II ESA through the collection of soil, groundwater, and soil vapor samples.

- Review of historical uses of the Subject Property and adjacent properties indicate that there were uses which could have negatively impacted the environmental integrity of the Subject Property, including its use as a junk yard until at least 1961.

- Preliminary results and observations made during this Phase II ESA indicate that groundwater and soil vapor at the Subject Property has been impacted by contaminants. Preliminary laboratory results indicate groundwater concentrations above the NYSDEC Ambient Water Quality Standards for PFAS and a soil vapor concentration for Trichloroethene above the EPA Residential Sub-slab Soil Gas Screening Criteria. This Phase II ESA was initiated before the Phase I ESA was completed and this REC is confirmed by the final data. The final data also indicates that soil at the Subject Property has been impacted. Laboratory results indicate a soil concentration above the NYSDEC Protection of Groundwater Guidance Value for PFOS.

- Several offsite locations were determined to pose a potential environmental risk to the Subject Property:

    - *South State Street/New Street, Syracuse, New York*, is located 0.07 miles south of the Subject Property.

- *Presidential Plaza, 90 Presidential Plaza, Syracuse, New York*, is located 0.15 miles northeast from the Subject Property.

- *Onondaga County Heating/Cooling Plant, Onondaga County Steam Plant, Niagara Mohawk a National Grid Company, 601 South State Street, Syracuse, New York,* is located 0.24 miles north from the Subject Property.

- *Marks Hotel, Almond and East Genesee Street, Syracuse, New York,* is located 0.37 miles northeast of the Subject Property.

- *The Salvation Army, 1105 South State Street, Syracuse, New York,* is located 0.20 miles south of the Subject Property.

3. FIELD ACTIVITIES

This section presents the overall approach of the field investigation activities that were performed to meet the stated objectives of the soil, groundwater, and soil vapor sampling. EA's approach to field sampling was designed to evaluate the presence or absence of potential contaminants of concern at the subject property and to quantify the concentrations of potential contaminants of concern through laboratory analysis.

The field investigation program was performed between 09 January 2023 to 22 February 2023 and included the following activities:

- **Community Air Monitoring Program**— All intrusive activities were completed under a CAMP program consisting of continuous air monitoring upwind and downwind of the work area using dust monitors and photoionization detectors (PIDs).

- **Asbestos Survey**— An asbestos survey was completed for all subject property structures by a NYSDOL certified Asbestos Inspector (under subcontract to EA).

- **Soil Boring Sampling**—Advancement of four soil borings; collection and analysis of two soil samples from each soil boring location.

- **Soil Vapor Monitoring Point Sampling—**Installation of four soil vapor monitoring points. However, only collection and analysis of three soil vapor monitoring point samples were completed. One of the soil vapor monitoring points contained water at the time of sampling activities and no sample was able to be collected.

- **Temporary Well Point Installation and Sampling and Abandonment**—Installation of one temporary well point, development of one temporary well point, collection and analysis of one groundwater sample, and abandonment of one temporary well point.

- **Groundwater Monitoring Well Installation and Sampling**—Installation of three monitoring wells, development of three monitoring wells, collection and analysis of three groundwater samples.

- **Site Survey—**EA located all field sampling locations using a laser survey and Global Positioning System equipment. A benchmark was established as a reference point for the monitoring well locations.

Copies of the Daily Field Reports are provided in **Appendix A**. Sampling locations are shown on **Figure 2**.

3.1 ASBESTOS SURVEY

A certified NYSDOL Asbestos Inspector performed a survey of all the structures on the subject property for ACM. The survey was completed in compliance with the June 2016 McCormack Baron Salazar Guidelines for Conducting Asbestos Inspections and in compliance with NYSDOL's Survey Requirements for Building/Structure Demolitions, Renovation, Remodeling, and Repair as specified in Part 56 of Title 12 of the Official Compilation of Codes, Rules, and Regulations of the State of New York. The asbestos survey was managed by an industrial hygienist certified by the American Board of Industrial Hygiene. ACM survey activities were performed by HSE Consulting Services, LLC of Cicero, New York. A copy of the ACM survey report is provided in **Appendix B.**

3.2 COMMUNITY AIR MONITORING PLAN (CAMP)

An EA field geologist was responsible for establishing and operating a community air monitoring program during all drilling activities in accordance with the New York State Department of Health (NYSDOH) Generic Community Air Monitoring Plan. The program included monitoring for volatile organic compounds (VOCs) and particulate concentrations upwind and downwind of the work zone. The monitoring stations were mobile, and were relocated as the work progressed, or if the wind direction changed. Particulate concentrations (PM-10) were monitored continuously at the upwind and downwind stations. If the downwind PM-10 particulate level is 100 micrograms per cubic meter ($\mu g/m^3$) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques were to be employed. VOCs were monitored continuously at the downwind station and periodically at the upwind station by PIDs. If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities must be temporarily halted and monitoring continued. If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities must be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown. Monitoring equipment calculated 15-minute running average concentrations, and all data was downloaded and stored at the conclusion of the project. Data collected during implementation of the community air monitoring is provided in **Appendix C.** Neither particulates nor VOCs were documented above the action levels described above.

3.3 SOIL BORING SAMPLING

EA's drilling subcontractor, Nothnagle Drilling, Inc. (Nothnagle) of Scottsville, New York, contacted Dig Safely New York prior to the start of subsurface work to determine the location of any underground utilities. As part of the utility clearance process, each borehole was hand cleared to the diameter of the drilling equipment to a depth of 5 ft.

Four soil borings (SB-01 through SB-04) were advanced by Nothnagle using a 6712DT Geoprobe rig with hollow-stem augers for installing soil borings using direct push method (**Figure 2**), under the direction of an EA geologist. Down-hole drilling equipment and other non-disposable equipment used for sampling was decontaminated prior to use at the subject property, in between each boring location, and prior to leaving the subject property.

Continuous soil sampling was conducted at each boring location using four-foot acetate macro core samplers. Soil borings were classified and logged by an EA geologist according to the Unified Soil Classification System. Recovered soil was characterized for color, texture, and moisture content. Visible staining, sheens, and odors were also noted if observed. Soil was screened for VOCs using a PID.

At each soil boring location, a soil sample was collected at a representative interval between 0 and 2 ft below ground surface (bgs) to characterize surface soils. If observations of deeper soil indicate presence of visual staining, odor, PID measurements of 10 parts per million or greater and/or gross contamination,[1] a second soil sample was collected at that interval. If observations of deeper soil did not identify any of the parameters listed above, then a second soil sample was collected from above the water table. A field record of all observations was recorded on a soil boring log form (**Attachment D**).

Soil samples collected from borings were analyzed for target compound list (TCL) VOCs via U.S. Environmental Protection Agency (EPA) Method 8260D, TCL semi-volatile organic compounds (SVOCs) via EPA Method 8270E, target analyte list (TAL) metals via EPA Methods 6010C and 7471B, hexavalent chromium via EPA Method 7196A, asbestos via transmission electron microscopy. Tentatively identified compounds (TICs) were included in the laboratory data package for VOCs and SVOCs.

In addition, soil samples collected from SB-04 (**Figure 2**) were analyzed for polychlorinated biphenyls (PCBs) via EPA Method 8082A, soil samples collected from SB-03 were analyzed for per- and polyfluoroalkyl substances via EPA Method 1633, and samples were analyzed for pesticides via EPA Method 8081B at locations SB-01 through SB-04 from 0 to 2 ft bgs.

3.4 GROUNDWATER MONITORING WELL AND TEMPORARY WELL POINT INSTALLATIONS AND SAMPLING

3.4.1 Monitoring Well and Temporary Well Point Installations

Three of the four soil borings installed were converted into permanent 2-inch (in.) polyvinyl chloride monitoring wells (SB-01, SB-02, and SB-03) with the screened interval splitting the

[1] Grossly contaminated media: soil or groundwater which contains sources or substantial quantities of mobile contamination in the form of NAPL that is identifiable either visually, through strong odor, by elevated contaminant vapor levels or is otherwise readily detectable without laboratory analysis.

water table **(Figure 2)**. Each well was constructed of a 10-ft length of 0.010 slot screen and riser. A sand pack consisting of #0 US Silica (or equivalent) was installed from the base of the boring to approximately 2 ft above the top of the screen. A bentonite seal was placed above the sand pack to fill the remaining annular space to approximately 0.5 ft bgs. A flush mount well cover was cemented into place. Each well was secured with a J-plug. Well development was performed by purging a minimum of three well volumes from each well using pump and surge techniques, and each well was allowed to stabilize for one week to ensure that the samples would be representative of the groundwater in the vicinity of the well.

Soil boring (SB-4) was converted to a temporary monitoring point **(Figure 2)**. The temporary monitoring point was constructed of 2-in. diameter polyvinyl chloride, with a 10-ft length of 0.010 slot screen, and a length of riser determined by the total depth of the well. Groundwater samples from the temporary well were collected during mobilization of the drilling work utilizing the same techniques used for the permanent wells, described below. Following collection of the groundwater samples from the temporary well, Nothnagle removed the temporary casing and backfilled the borehole with grout following NYSDEC borehole abandonment protocols.

Following the installation and development of the permanent monitoring wells, an EA field geologist was responsible for collecting groundwater samples from each well using low-flow sampling techniques. Four groundwater samples were collected during Phase II ESA field activities. One sample from one temporary well point (TW-04) and three samples from three monitoring well locations (MW-01 through MW-03). Non-aqueous phase liquids were not observed during sampling. Depth to water (DTW) ranged from 7.29 ft bgs (MW-01) to 10.29 ft bgs (MW-03) and the groundwater flow direction is to the northwest under a hydraulic gradient of 0.0132 feet per foot (ft/ft). Groundwater elevations are provided in **Table 14** and are graphically depicted on **Figure 3**. A portable electric groundwater pump with dedicated tubing for each well was used to collect groundwater for analysis of TCL VOCs via EPA Method 8260D, TCL SVOCs via EPA Method 8270E, TAL metals via EPA Methods 6010C, 6020A and 7471B, total PCBs via EPA Method 8082A, pesticides via EPA Method 8081B, hexavalent chromium via EPA Method 7196A, 1,4-dioxane via EPA Method 8270D-SIM, and per- and polyfluoroalkyl substances via EPA Method 1633. Groundwater sampling logs are provided in **Appendix E**.

All soil and groundwater samples that were collected were shipped to Pace Analytical Laboratories (Pace) in East Longmeadow, Massachusetts for analysis on a standard 10-day turnaround time. Quality Assurance/Quality Control (QA/QC) samples for both soil and groundwater samples include the collection of blind field duplicates and matrix spike/matrix spike duplicate (MS/MSD) pairs at a frequency of 5%. Equipment blanks were also collected per matrix, at a frequency of once per field day. Field and trip blanks were analyzed for VOCs only, for each cooler that was shipped with VOC samples. Pace subcontracted the analysis of asbestos in soil samples to Laboratory Testing Services, Inc. in Long Island City, New York.

Following all sampling activities, the location and elevation of the permanent monitoring wells were field surveyed by EA to facilitate the development of a potentiometric map

3.5 SOIL VAPOR SAMPLING

3.5.1 Soil Vapor Monitoring Point Installation

Four soil vapor points (SVPs) were installed within the vadose zone in four boreholes installed by Nothnagle and overseen by an EA engineer/geologist. Refer to **Figure 2** for locations. SVP-4 was located as close to the Phase One Area boundary as possible due to the proximity of the proposed location to buried utilities. The target depth for installation of SVPs was 5 ft bgs, or above the saturated zone, and locations were cleared by the driller by contacting Dig Safely New York and by hand clearing to a depth of 5 ft bgs to determine the location of any underground utilities. The actual depth of installation was based upon field conditions and observations from field activities associated with Section 3.3. A 6-in. stainless steel sampling screen attached to a dedicated section of 0.25-in. diameter polyethylene tubing was installed in the borehole to collect soil gas samples. A course filter sand (Morie #0N) comparable to the screen slot size was used to backfill the borehole to a minimum of 6-in. above the stainless-steel screen. Granular bentonite pellets were placed above the filter sand to within 1-ft. of grade and hydrated concurrently with placement. The remaining 1-ft of annular space was backfilled with sand and a flush-mount steel curb box and concrete pad was placed at grade. Depths of SVPs are represented in the daily logbook notes which are provided as **Appendix F.**

3.5.2 Soil Vapor Sampling

After the bentonite and grout were allowed to cure for a minimum of 24-hours, sample tubing was purged with 2-3 implant volumes prior to sample collection to ensure representative samples were collected. Three of the four SVPs were sampled with 6-L Summa® canisters for VOCs via EPA Method TO-15. Soil vapor point SVP-04 was filled with water at the time of sampling activities and no sample was able to be collected. Canisters were individually certified and regulated for a 2-hour collection period by Pace. Samples were collected in accordance with EA Standard Operating Procedure (SOP) 020 Active Soil Gas Sampling (February 2019). A shut-in test was performed prior to sample collection to check for leaks. The shut-in test was designed to check for leaks in aboveground fittings and was conducted at all the soil gas monitoring points. To perform the shut-in test, the aboveground sample train was evacuated of air to a measured vacuum of approximately 15 inches (in.) of mercury (Hg) using a Mityvac vacuum hand pump (Model MV8500). If there was an observable loss of vacuum (>1 in. of Hg), the sample train fittings were tightened and adjusted as needed until the vacuum in the sample train did not dissipate for at least one minute. A tracer gas leak test was not performed due to snowy conditions and uneven surface terrain around the sample point. Soil vapor sampling logs are provided in **Appendix G**.

Upon completion of the soil vapor sampling procedures the Summa® canisters were shipped to Pace in East Longmeadow, Massachusetts for analysis of VOCs using EPA Method TO-15. All soil vapor samples were analyzed in accordance with the NYSDEC Analytical Services Protocol.

3.5.3 Investigation Derived Waste (IDW)

Soil cuttings and groundwater purged during well development and sampling activities were containerized in New York State Department of Transportation (NYSDOT) approved 55-gallon drums for off-site disposal. A total of ten drums were generated. A composite sample from the soil drums were submitted for the analysis of Toxicity Characteristic Leaching Procedure (TCLP) VOCs, TCLP SVOCs, TCLP Resource Conservation and Recovery Act (RCRA) metals, TCLP Herbicides, TCLP Pesticides, TCLP PCBs, reactive sulfide, reactive cyanide, total organic halides (TOX), corrosivity, reactivity, paint filter test, and flash point. A composite sample of purge water was submitted for the analysis of TCL VOCs, TCL SVOCs, RCRA metals, PCBs, reactive cyanide, reactive sulfide, TOX, corrosivity, reactivity, and flash point.

The drums were labeled, secured, and stored at the property at a location approved by the Syracuse Housing Authority (SHA). Waste characterization is underway by EA's disposal contractor (Solvents & Petroleum), the pick-up and disposal of the drums is pending at the time of this report. EA will provide oversight for the pickup of the drums and will sign the waste manifest(s) on behalf of the SHA. Copies of all IDW waste manifests will be provided in **Appendix H,** when available, as part of an amended report**.**

3.6 DATA VALIDATION

Data validation is underway by an EA chemist. This validation will include a review of pertinent QA/QC data such as sample extraction and analysis, holding times, calibration, a review of laboratory blanks and QA/QC sample results, and a review of the analytical case narrative. Data Usability Summary Reports will be prepared, and each will include a compliance chart, a list of samples included in each sample delivery group and recalculations of sample results. Nonconforming QA/QC results will be evaluated with respect to their implications for data reliability and usability, and data results will be flagged accordingly on the results sheets (if required). These qualifiers will be added to the summary tables presented in this report and issued as an amended report. Data Usability Summary Reports for the analytical data packages will be provided in **Appendix I** of an amended report.

4. FIELD INVESTIGATION RESULTS

This section presents the findings of the field sampling activities conducted during this Phase II ESA. All soil, groundwater, and soil vapor analyses from the sampling event were performed by Pace located in East Longmeadow, Massachusetts. Pace subcontracted the analysis of asbestos in soil samples to Laboratory Testing Services, Inc. in Long Island City, New York. Asbestos analysis from the ACM survey event were performed by AMA Analytical Services, Inc. (AMA) located in Lanham, Maryland. Pace and AMA are approved by the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program. All laboratory analytical data, except for ACM results, are reported using Category B deliverables and the NYSDEC EQuIS format electronic data deliverable. Data validation is currently underway.

Standards, Criteria, and Guidance (SCGs) are promulgated requirements and non-promulgated guidance, which govern activities that may affect the environment and are widely used at different stages of an investigation and remediation of a site. The SCGs applicable for the data set collected during this Phase II ESA are 6 New York Code of Rules and Regulations Subpart 375-6 Soil Cleanup Objectives (SCOs), NYSDEC Ambient Water Quality Standards (AWQS) for Class GA, and the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH 2006b).

4.1 SOIL

Based on the characterization of soil recovered during soil boring advancement, the subject property is underlain predominantly by fill material (silt, sand, gravel, clay, brick, asphalt, glass, and tile), brown to gray silt and clay, very fine to fine sand, and angular gravel. The sampling was designed with a bias toward the most impacted interval. However, field screening did not indicate any significant impacts at any interval. Per the MBSDI approved work plan, two soil samples were collected from each soil boring (SB-01 through SB-04). One sample was collected between 0 to 2 ft bgs, and the second sample was collected from the highest PID measurement or just above the water table, depending on which condition existed. Three duplicate samples were collected during field activities. One from SB-04 and two from SB-03. Field blanks and equipment blanks were collected per the work plan. Results were compared to restricted residential SCOs since the proposed reuse of the property is for the construction of multi-family residential housing. Soil results were also compared against the protection of groundwater SCO, as required by the Department of Environmental Remediation Technical Guidance for Site Investigation and Remediation (DER-10) (NYSDEC 2010c). Soil samples were analyzed for TCL VOCs, TCL SVOCs, TAL metals, hexavalent chromium, PCBs, pesticides, PFAS, 1,4-dioxane, and asbestos. TICs were also evaluated from the results of the VOC and SVOC analysis.

4.1.1 Volatile Organic Compounds (VOCs)

Soil samples collected and analyzed had detectable concentrations for acetone (0.021J milligrams per kilogram (mg/kg) at SB-02-9.5'-10.5', methyl acetate (0.09 mg/kg at SB-02-0'-2'), and chloromethane (0.0033J mg/kg at SB-02-0'-2'). None of the parameters detected exceeded restricted residential or protection of groundwater SCOs for VOCs. One TIC was identified in soil at the subject property. There are no NYSDEC regulatory guidelines for the TIC identified by the lab. A summary of analytical results for VOCs and TICs is presented on **Table 1**.

4.1.2 Semivolatile Organic Compounds (SVOCs)

Several SVOCs were detected in soil samples collected and analyzed, but no concentrations detected exceeded restricted residential or protection of groundwater SCOs for SVOCs. 1,4-dioxane was not detected in any soil samples. Several TICs were identified at the property. There are no NYSDEC regulatory guidelines for the TICs identified by the lab. A summary of SVOCs and TICs detected in soil boring samples are presented in **Table 2**.

4.1.3 Metals

Various TAL metals were detected in soil borings, but analytes were all below the SCOs used for comparison. A summary of analytical results for metals detected in soil is presented in **Table 3**.

The only soil sample that had detectable concentrations for hexavalent chromium was from soil boring SB-04 (SB-04-0'-2'). Hexavalent chromium was detected at a concentration of 0.14J mg/kg but the concentration is less than the restricted residential SCO or protection of groundwater SCO. A summary of analytical results for hexavalent chromium is presented in **Table 3**.

4.1.4 Polychlorinated Biphenyls (PCBs) and Pesticides

No PCBs were detected in the soil samples submitted for analysis. A summary of the analytical results for PCBs in soil is presented in **Table 4**.

Three pesticides were detected in the soil samples submitted for analysis which included P,P-DDE, P,P-DDD, and P,P-DDT at soil borings SB-01 through SB-04 from 0 to 2 ft bgs. None of the parameters detected exceeded restricted residential or protection of groundwater SCOs. A summary of the analytical results for pesticides in soil is presented in **Table 5**.

4.1.5 Per- and Polyfluoroalkyl Substances (PFAS)

Various PFAS compounds were detected in soil samples submitted for analysis from soil boring SB-03 at depths of 0 to 2 ft bgs and 6 to 8 ft bgs. Perfluorooctane sulfonic acid (PFOS) was detected in sample SB-03-0-2 at a concentration of 1.3 µg/kg which exceeds the protection of

groundwater guidance value of 1.0 µg/kg (presented on **Figure 4**). A summary of analytical results for PFAS detected in soil is presented on **Table 6**.

4.1.6 Asbestos

Asbestos was not detected in soil at the subject property.

4.2 GROUNDWATER

Groundwater analytical results were compared to the NYSDEC AWQS and guidance values. Exceedances are presented on **Figure 5**.

4.2.1 Volatile Organic Compounds (VOCs)

Groundwater samples analyzed for VOCs had detectable concentrations for acetone (MW-03 and TW-04), methyl ethyl ketone (MW-01 and MW-03), and methylene chloride (MW-01) but none of the parameters detected exceeded AWQS Class GA criteria. No TICs were identified at the property. A summary of analytical results for VOCs in groundwater is presented on **Table 7**.

4.2.2 Semivolatile Organic Compounds (SVOCs)

No SVOCs were detected in the groundwater samples analyzed. No groundwater samples analyzed had detectable concentrations for 1,4-dioxane. Two TICs were identified in groundwater at the subject property. One of them was identified as carbon tetrachloride at a concentration of 7.7 µg/L at TW-04 (in exceedance of the 5 µg/L NYSDEC AWQS and guidance value). There is no NYSDEC regulatory guidelines for the other TIC identified by the lab. A summary of analytical results for SVOCs in groundwater are presented on **Table 8**.

4.2.3 Metals

Several metals were detected in the groundwater samples. Five of the parameters detected exceeded AWQS Class GA criteria which were iron (MW-02, MW-03, and TW-04), magnesium (MW-02 and MW-03), manganese (MW-02 and MW-03), sodium (MW-02 and MW-03), and thallium (MW-03). No groundwater samples had detectable concentrations for hexavalent chromium. A summary of analytical results for metals detected in groundwater is presented on **Table 9**.

4.2.4 Polychlorinated Biphenyls (PCBs) and Pesticides

PCBs were not detected in the groundwater samples analyzed. A summary of analytical results for PCBs in groundwater are presented on **Table 10**.

Pesticides were not detected in the groundwater samples analyzed. A summary of analytical results for pesticides in groundwater are presented on **Table 11**.

4.2.5 Per- and Polyfluoroalkyl Substances (PFAS)

Several PFAS compounds were detected in the groundwater at the property. Only PFOS and PFOA have associated NYSDEC AWQS guidance values; 2.7 nanograms per liter (ng/L) for PFOS, and 6.7 ng/L for PFOA. PFOA was detected at a concentration of 15 nanograms per liter (ng/L) at temporary well TW-04. PFOS exceeded the NYSDEC AWQS guidance value at MW-01 (7 ng/L), MW-03 (12 ng/L) and TW-04 (12 ng/L). Perfluorobutanoic Acid was detected at a concentration of 1.2 ng/L in the field blank collected on 23 February 2023. A summary of analytical results for PFAS detected in groundwater is presented in **Table 12**.

4.3 SOIL VAPOR

Several VOCs were detected in the soil vapor samples collected. One of the detected VOCs exhibited compounds that exceeded the EPA Residential Sub-Slab Soil Vapor screening criteria. Trichloroethylene was detected at soil vapor location SVP-03 at a concentration of 24 µg/m^3. The Sub-Slab Soil Vapor screening criteria for trichloroethylene is 7.0 µg/m^3. A summary of analytical results for VOCs detected in soil vapor analytical is presented in **Table 13**. Soil vapor exceedances are presented on **Figure 6**.

4.4 ASBESTOS SURVEY

No asbestos containing materials were identified to be associated with either the interiors or exteriors of the subject property structures (townhouses). However, if additional suspect materials are uncovered during demolition activities that were not identified or assessed as part of this survey, activities which could disturb the suspect material must stop until the materials in question can be assessed (see Code Rule 56 Subpart 56-5.1(j)). A copy of the Asbestos Survey Report is provided in **Appendix B**.

Subpart 56-5.1(g) also requires that one (1) copy of the results of the building/structure asbestos survey shall be immediately transmitted by the building/structure owner as follows:

1. One copy of the completed asbestos survey shall be sent by MBSDI or their agent to the local government entity charged with issuing a permit for such demolition work under applicable State or local laws.

2. The completed asbestos survey for controlled demolition (as per Subpart 56-11.5) or pre-demolition asbestos projects shall also be submitted to the appropriate Asbestos Control Bureau district office as follows.

   SYRACUSE DISTRICT:
   Counties - Broome, Cayuga, Chemung, Chenango, Cortland, Delaware, Franklin, Hamilton, Herkimer, Jefferson, Lewis, Madison, Oneida, Onondaga, Oswego, Otsego, St. Lawrence, Schuyler, Seneca, Steuben, Tioga, Tompkins,
   450 S. Salina Street, Syracuse, NY 13202 (315) 479-3215 (FAX) (315) 479-3333

3. The completed asbestos survey shall be kept on the construction site with the asbestos notification and variance, if required, throughout the duration of any asbestos project and any associated demolition.

5. CONCLUSIONS AND RECOMMENDATIONS

The following sections summarize the conclusions and recommendations developed after evaluating the results of this Phase II ESA. This section is organized by environmental media and a consideration for a path forward for the subject property is included.

5.1 SOIL EVALUATION

No exceedances of SCOs were found in the soil samples analyzed for TCL VOCs, TCL SVOCs, TAL metals, hexavalent chromium, PCBs, pesticides, and 1,4-dioxane. PFOS was detected in sample SB-03-0-2 at a concentration of 1.3 µg/kg which exceeds the protection of groundwater guidance value of 1.0 µg/kg. Asbestos was not detected in soil samples at the subject property. Overall, the subject property does not exhibit subsurface soil impacts from historical uses of the subject property or activities on adjacent properties.

5.2 GROUNDWATER EVALUATION

Groundwater samples were analyzed for TCL VOCs, TCL SVOCs, TAL metals, hexavalent chromium, PCBs, pesticides, 1,4-dioxane, and PFAS. Non-aqueous phase liquids were not observed during sampling. DTW ranged from 7.29 ft bgs (MW-01) to 10.29 ft bgs (MW-03) and groundwater flow direction is to the northwest under an approximate hydraulic gradient of 0.0132 ft/ft. Groundwater elevations are provided in **Table 14** and are graphically depicted on **Figure 3**.

Carbon tetrachloride was identified as a TIC during analysis for SVOCs. Groundwater in MW-03 exceeded the AWQS class GA criteria for carbon tetrachloride. No RCRA metals were detected above the AWQS Glass GA criteria. Several other metals exceeded the AWQS Class GA criteria; iron (MW-02, MW-03, and TW-04), magnesium (MW-02 and MW-03), manganese (MW-02 and MW-03), sodium (MW-02 and MW-03), and thallium (MW-03).

PFAS compounds were detected in groundwater, with PFOS and PFOA exceeding the AWQS Class GA criteria of 2.7 ng/L and 6.7 ng/L respectively. PFOA was detected at a concentration of 15 ng/L at temporary well TW-04. PFOS was detected at MW-01 (7 ng/L), MW-03 (12 ng/L) and TW-04 (12 ng/L). Based on the hydraulic gradient at the property (northwest), PFAS compounds were detected at both the upgradient and downgradient well locations. With PFAS detected at the furthermost upgradient well location (MW-01) on the subject property's eastern boundary, the source of the PFAS detected on the subject site could be from an off-site source.

5.3 VAPOR INTRUSION EVALUATION

Several VOCs were detected in the soil vapor samples with only two exceeding EPA Residential Sub-Slab Soil Vapor screening criteria. Trichloroethylene was detected at soil vapor location SVP-03 at a concentration of 24 µg/m^3 which exceeds the screening criteria of 7.0 µg/m^3. Based

on analytical results, soil vapors that exceed criteria exist within the subsurface throughout the subject property.

5.4 ASBESTOS SURVEY EVALUATION

No asbestos containing materials were identified to be associated with either the interiors or exteriors of the subject property structures (townhouses). A copy of the Asbestos Survey Report is provided in **Appendix B**. Refer to **Section 4.4** for reporting requirements of this asbestos report.

5.5 RECOMMENDATIONS

The results of the Phase II ESA indicate that PFAS compounds and carbon tetrachloride were detected in groundwater at concentrations that exceeded AWQS Class GA criteria. PFOS was detected in soil exceeding the protection of groundwater guidance value. These exceedances may result in the subject property being a candidate for NYSDEC oversight in determining what, if any, remedial action is needed.

To mitigate the VOC compound detected in the soil vapor at the subject property that exceeded EPA Residential Sub-Slab Soil Vapor screening criteria, EA recommends that future structures constructed on the subject property contain ANSI/AARST soil gas mitigation systems which are designed per ANSI/AARST CC-1000 2018 to ensure potential soil vapors do not accumulate within the interior of the structure. Such systems will also serve to protect the structures from Radon, as the subject property is in Radon Zone 1. The soil gas mitigation system must be compatible with the detected concentrations of VOCs in soil gas.

Asbestos containing material was not identified during the investigation. However, if suspect materials are uncovered during renovation or demolition activities that were not identified or assessed as part of survey, activities which could disturb the suspect material must stop until the materials in question can be assessed (see Code Rule 56 Subpart 56-5.1(j)). Demolition waste shall be characterized prior to disposal.

Any soil exported from the property during construction must be characterized, profiled, and properly disposed. Alternatively, soils from the property may be used at another location, if a Beneficial Use Determination (BUD) is made by NYSDEC pursuant to 6 NYCRR Part 360.12, and with consent from the property owner and MBS.

NOTES:
[1] New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation, 6 New York Code of Rules and Regulations Part 375 Environmental Remediation Programs Objectives (2006).
mg/kg = milligrams per kilogram
NA = Not analyzed
U = Analyte not detected
J = Concentration is estimated
NSL = No screening level
TIC = Tentatively identified compound
TND = TIC not detected in sample
This data is unvalidated.

J = Concentration is estimated
NGL = No Guidance Value
NYSDEC Guidance Value = Soil cleanup objectives for PFOA and PFOS have been proposed in an upcoming revision to 6 NYCRR Part 375-6. Until SCOs are in effect, the concentrations shown above for PFOA and PFOS are to be used as guidance values.
This data is unvalidated.

NOTES:

[1] NY CLASS GA GW(AWQS) = New York State Department of Environmental Conservation Groundwater Guidance Values (April 2023)

ng/L = nanogram(s) per liter

NA = Not analyzed

U = Analyte not detected

J = Concentration is estimated

NSL = No screening level

(1) One PFAS compound was detected in the field blank collected on 23 February 2023 . Perfluorobutanoic Acid was detected at a concentration of 1.2 ng/L.

Shaded concentration exceed the screening limit

This data is unvalidated.

Monday, January 9, 2023

Project Name: MBS Phase II ESA E. Adams St. Redevelopment – Phase 1 Area	**Wind Direction**: 13 mph WSW
	Weather (am): 30 F, mostly cloudy
EA Project No. 1617505	**Weather (pm)**: 36 F, partly sunny
Location: Syracuse, New York	**Arrival time**: 0809
EA Staff: Jeremy Fontaine	**Departure time**: 1445

HEALTH AND SAFETY	
Tailgate Safety Topic of the Day:	Situational Awareness
Any changes to the HASP:	No
Are monitoring results at acceptable levels?	Soil: Yes Water: n/a Air: n/a

DESCRIPTION OF OVERSIGHT WORK PERFORMED

National Grid contacted Nothnagle and instructed that they not commence digging activities until the local electrical grid could be verified.

Nothnagle conducted manual hand clearing with drain spade, air knife, and post hole digger at SB-01; met refusal at 4.1'.

Nothnagle made 8 attempts to reach target depth at SVP-1 with 2-in diameter hand auger, and 5 attempts to reach target depth at SVP-4; could not reach depth at either location.

Drilling and Monitoring Well Installation

- None.

Water Sampling

- None.

Soil and Sediment Sampling

- One composite soil sample was collected from the 0-2 ft interval at SB-01:
  - Sample ID: *1617505-SB01-0-2*
- Potential asbestos containing material was isolated and placed in a Ziploc bag:
  - Sample ID: *1617505-SB01-0-2-ACM*

ATTACHMENTS

- Field photos

Start of manual clearing at SB-01.

Manual clearing at SVP-1 with 2-in. hand auger.

Drillers met refusal at 4.1’ at SB-1.

Soil cuttings at 4 ft. include what appears to be weathered carbonate rock.

Nothnagle staged their Geoprobe at the end of Angelou Terrace in the Phase 1 Area.

Daily Field Report
Thursday, January 12, 2023

Project Name: MBS Phase II ESA E. Adams St. Redevelopment – Phase 1 Area	**Wind Direction**: 10 mph SE
	Weather (am): 38 F, overcast, rain
EA Project No. 1617505	**Weather (pm)**: 44 F, overcast
Location: Syracuse, New York	**Arrival time**: 0745
EA Staff: Jeremy Fontaine	**Departure time**: 1600

HEALTH AND SAFETY	
Tailgate Safety Topic of the Day:	Weather
Any changes to the HASP:	No
Are monitoring results at acceptable levels?	Soil: Yes Water: n/a Air: Yes

DESCRIPTION OF OVERSIGHT WORK PERFORMED

Nothnagle installed SVP-01 at previous SB-01 location to approx. 4' (depth of refusal – cleared on 1/9/2023).

Nothnagle conducted manual hand clearing with drain spade, air knife, hand auger and post hole digger at:

- SVP-04 *(Cleared to 5 ft; installed SVP at 4.5' due to water observed at 5')*
- SVP-02 *(met refusal at approx. 4' – same as SVP-01 – installed SVP at 4')*
- SVP-03 *(at marked location, met refusal at approx. 3 feet; offset 5' to the east and tried again – met refusal at approx. 3 feet; no SVP installed)*
- SB-03 *(cleared to 5')*

Drilling and Monitoring Well Installation

- SB-01 was drilled to 15'; MW-01 was installed to 15', screen placed from 5-15', sand to 4', bentonite from 2-4', and partially backfilled pending completion of construction.
- SB-04 was drilled to 15'; TW-04 was installed to 15', screen placed from 5-15'.

Water Sampling

- One rinse/equipment blank (1617505-EQB-1) was collected from the Geoprobe cutting shoe following decontamination procedures at the end of the day.

Soil and Sediment Sampling

- A grab soil sample was collected from the 12-13 ft interval at SB-01:
  - Sample ID: *1617505-SB01-12-13*
- A composite soil sample and MS/MSD samples were collected from the 0-2 ft interval at SB-04:
  - Sample ID: *1617505-SB04-0-2, 1617505-SB04-0-2-MS, 1617505-SB04-0-2-MSD*
- A grab soil sample and a duplicate sample were collected from the 10-12 ft interval at SB-04:
  - Sample ID: *1617505-SB04-10-12, 1617505-DUP-2*

- A composite soil sample, a duplicate sample, and MS/MSD samples were collected from the 0-2 ft interval at SB-03:
  - Sample ID: *1617505-SB03-0-2, 1617505-SB03-0-2-MS, 1617505-SB03-0-2-MSD, 1617505-DUP-1*

ATTACHMENTS

- Field photos

SVP-04 was cleared to 5’.

SB-01, 12-16' *(top)*.

SVP-04 *(top)* and MW-01 *(bottom)*, awaiting completion.

Initial attempt to clear at location of SVP-03 *(left)*, offset 5’ to the east *(right)*.

Nothnagle encountered refusal at SVP-03 at approx. 3’.

SB-04, 10-12’ *(bottom)* and 12-16’ *(top)*.

Decon setup.

Hand clearing at SB-03 *(top)*; possible pipe fragment found in boring at SB-03 *(bottom)*.

SB-03 was cleared to 5’.

1.0 EXECUTIVE SUMMARY

PROJECT INFORMATION
HSE Consulting Services, LLC (HSE) completed an asbestos survey for the Angelou Terrace Townhouses located at 301-311 E. Taylor Street in the City of Syracuse, Onondaga County, NY 13202. The property is further identified as Onondaga County Tax Map Parcel 095.-08-01. Additional townhouse structures associated with the parcel, identified as Chavez Terrace and Latimer Terrace, were not included in the scope of HSE's asbestos survey.
PROPERTY DESCRIPTION
The Angelou Terrace Townhouses consist of six (6) structures encompassing a total of twenty-five (25) dwelling units identified as 100 through 124 Angelou Terrace. The structures were reportedly constructed circa 1989 and are currently owned by the Syracuse Housing Authority. Each of the townhouse units is 2-stories, with the exception of 106 and 118 Angelou Terrace which are 1-story handicap accessible units. The townhouse buildings are constructed on concrete slab foundations and generally contain a kitchen/dining area, living room, laundry room, 1-5 bedrooms, 1-2 bathrooms, closets, and an attached outdoor storage shed.

ASBESTOS SURVEY RESULTS SUMMARY
☑ No asbestos containing materials were identified as a result of the completed asbestos survey. ☐ Asbestos containing materials were identified as a result of the completed asbestos survey. ☐ Materials containing trace asbestos concentrations were identified. Refer to report section 5.0 for a more detailed discussion of findings and to Appendices 2, 4 and 7 for more detailed information regarding building plans, identified homogenous areas and laboratory analysis reports.

2.0 INTRODUCTION

In accordance with a request made by EA Engineering, Science, and Technology, Inc., PBC (EA), HSE Consulting Services, LLC (HSE) has completed an asbestos survey for the Angelou Terrace Townhouses located at 301-311 E. Taylor Street in the City of Syracuse, Onondaga County, NY. The Angelou Terrace Townhouses consist of six (6) structures encompassing a total of twenty-five (25) dwelling units identified as 100 through 124 Angelou Terrace. Each of the units are rented for residential occupancy and none of the buildings or townhouses were being utilized for non-residential purposes. Four (4) of the units, identified as 101, 109, 112 and 120 Angelou Terrace, were vacant at the time of the survey performed by HSE.

The structures were reportedly constructed circa 1989 and are currently owned by the Syracuse Housing Authority. Each of the townhouse units is 2-stories, with the exception of 106 and 118 Angelou Terrace which are 1-story handicap accessible units. The townhouse buildings are constructed on concrete slab foundations and generally contain a kitchen/dining area, living room, laundry room, 1-5 bedrooms, 1-2 bathrooms, closets, and an attached outdoor storage shed.

Interior finishes included gypsum walls and ceilings, vinyl floor tile or sheet linoleum, vinyl cove base, vinyl stair treads, fiberglass and foam pipe insulation, and blown-in cellulose attic insulation. Each unit includes dedicated natural gas-fired hot water boilers and water heaters generally located in a second-floor utility closet, except for the 1-story handicap accessible units. Exterior finishes include hardboard siding, wood trim, and asphalt roofing shingles.

A discussion of the findings resulting from the completed asbestos survey are provided in Section 5.0 of this report. Supporting documentation, including the following, is provided as appendices to this report:

- Appendix 1: Site location map
- Appendix 2: Project diagrams
- Appendix 3: Representative photographs
- Appendix 4: Homogenous area listing
- Appendix 5: Asbestos handling license
- Appendix 6: Asbestos inspector certificates
- Appendix 7: Laboratory analysis reports
- Appendix 8: Laboratory certifications

3.0 ASBESTOS LAWS AND REGULATIONS

Governmental authorities on both the state and federal level have promulgated asbestos laws and regulations. A summary of primary laws and regulations applicable to asbestos training, certifications, inspections, testing, abatement, transportation, and disposal is provided below.

3.1 New York State Laws and Regulations

10 NYCRR Part 73: New York State Department of Health regulations for the training of workers in the asbestos abatement industry and regulations concerning asbestos safety training providers.

12 NYCRR Part 56: New York State Department of Labor regulations relating to the hazards to public safety and health during the removal, encapsulation, enclosure, repair, or the disturbance of friable and non-friable asbestos, or any handling of asbestos material that may result in the release of asbestos fiber.

New York Public Health Law, Section 502: The Environmental Laboratory Approval Program (ELAP) of the Wadsworth Center was established in 1984 and is responsible for the certification of laboratories performing environmental analyses on samples originating from New York State, thus ensuring the accuracy and reliability of these analyses.

6 NYCRR Part 364: New York State Department of Environmental Conservation-Waste Transporter Permits regulations including waste transportation, transport permits, and asbestos transportation tracking.

6 NYCRR Part 360: New York State Department of Environmental Conservation-Solid Waste Management Facilities regulations including definitions of asbestos waste, transfer stations, and land disposal issues.

3.2 Federal laws and Regulations

40 CFR Part 61 (Subpart M): The United States Environmental Protection Agency's National Emission Standard for Asbestos. Air toxics regulations under the Clean Air Act specify work practices for asbestos to be followed during demolitions and renovations of all facilities, including, but not limited to, structures, installations, and buildings (excluding residential buildings that have four or fewer dwelling units). The regulations require a thorough inspection where the demolition or renovation operation will occur.

40 CFR Part 763; Asbestos Containing Materials in Schools Rule: This law required EPA to promulgate regulations requiring local educational agencies to inspect their school buildings for asbestos-containing building material, prepare asbestos management plans and perform asbestos response actions to prevent or reduce asbestos hazards. AHERA also tasked EPA with developing a model plan for states for accrediting persons conducting asbestos inspection and corrective-action activities at schools. The Toxic Substances Control Act defines asbestos as the asbestiform varieties of chrysotile (serpentine); crocidolite; amosite; anthophyllite; tremolite; and actinolite.

1926.1101, 1910.1001 and 1915.1001: The United States Department of Labor Occupational Safety and Health Administration (OSHA) has three standards to protect workers from the hazards of asbestos depending on the type of workplace. The Construction Standard (1926.1101) covers construction, alteration, repair, maintenance, or renovation and demolition of structures containing asbestos. The General Industry Standard (1910.1001) covers work in general industry, such as exposure during brake and clutch repair, maintenance work, and manufacture of asbestos-containing products. The Maritime Standard (1915.1001) covers construction, alteration, repair, maintenance, renovation, and demolition of structures containing asbestos during work in shipyards.

The summary of state and federal laws listed above is provided for reference only.

4.0 METHODOLOGY

4.1 Document Review

HSE reviewed property assessment information for the Angelou Terrace Townhouses on the Onondaga County Department of Real Property Tax Services web site. The assessment information indicated that the townhouses were constructed in 1989. This is generally consistent with construction drawings dated June 27, 1988 prepared by Quinlivan Pierik & Krause Architects and Engineers of Syracuse, NY. The construction drawings were reviewed for indications that ACMs were used in the construction of the townhouses. No previous asbestos assessment reports or documents were available for review.

4.2 Inspection and Sampling

A thorough visual inspection was conducted of the interior and exterior of each structure to identify materials with the potential to contain asbestos. Bulk samples of identified suspect materials were then collected from representative locations in general conformance with Part 56 of Title 12 of the Official Compilation of Codes, Rules, and Regulations of the State of New York (Cited as 12 NYCRR Part 56). Samples were transported with chain-of-custody documentation to AMA Analytical Services, Inc. (AMA) in Lanham, MD for analysis.

The New York State Department of Health's (NYSDOH) has accredited AMA's asbestos laboratory under the Department's Environmental Laboratory Approval Program (ELAP). AMA is also accredited under the United States Department of Commerce National Institute of Standards and Technology (NIST) National Voluntary Laboratory Approval Program (NVLAP). Copies of AMA's certifications are included in Appendix 8.

4.3 Friable Sample Analysis

Friable and non-friable bulk samples were analyzed for asbestos content using Polarized Light Microscopy and Dispersion Staining techniques (PLM/DS) in accordance with New York State Department of Health (NYSDOH) Method 198.1. Laboratory results are reported as percent asbestos including an estimate of the amount of each type of asbestos present (e.g., chrysotile, Amosite, Crocidolite, Actinolite, Anthophylite). The types and percentages of other non-asbestos fibers identified during the analytical procedure are also reported when feasible.

4.3 Non-friable Organically Bound (NOB) Sample Analysis

Non-Friable Organically Bound (NOB) materials were analyzed in accordance with NYSDOH Methods 198.6 and 198.4. Samples were first prepared by Gravimetric Matrix Reduction (GMR) and analyzed using Polarized Light Microscopy (PLM). If the GMR/PLM procedure did not indicate an asbestos concentration of greater than one percent (1%), the corresponding samples were submitted for Transmission Electron Microscopy (TEM) analysis. NYSDOH-ELAP requirements mandate that before NOB materials can be considered or treated as non-asbestos containing, confirmation by the quantitative TEM analytical procedure is required.

5.0 DISCUSSION

A total of four hundred and fifty (450) bulk samples were collected as part of the completed asbestos survey. A total of one hundred twenty-one (121) PLM analyses, three hundred and twenty-nine (329) NOB analyses and three hundred and twenty-nine (329) TEM analyses were performed. Copies of the laboratory analysis reports and chain-of-custody records for samples collected as part of the completed survey are included in Appendix 7 of this report.

Current New York State Department of Labor (NYSDOL) and United States Environmental Protection Agency (USEPA) regulations define materials which contain greater than one percent (> 1 %) asbestos to be regulated ACM. Based on the results of the laboratory analyses performed for samples collected as part of the asbestos survey performed for the Angelou Terrace Townhouses, and as summarized in Tables 1 through 6 below, none of the building materials sampled and analyzed as part of the completed survey were determined to be ACM.

TABLE NOTES

1) Refer to project diagrams in Appendix 2 for area locations, if applicable
2) Dimensions and quantities, if applicable, are estimates only. Abatement contractors are to verify actual material quantities prior to submitting abatement bids.
3) ft^2 = square feet, lf = linear feet, ft^3= cubic feet
4) F= friable, I = Category I non-friable, II = Category II non-friable.
    - Friable ACM means any material that can be reduced to powder by hand pressure when dry.
    - Category I Non-Friable ACM means packing, gaskets, resilient floor coverings and roofing products that contain more than one percent asbestos.
    - Category II Non-Friable ACM means any material, excluding Category I Non-Friable ACM that contains more than one percent asbestos, and is not friable.
    - Regulated ACM (RACM) includes all friable ACM; Category I Non-Friable ACM that will be or has been subject to sanding, grinding, cutting or abrading; Category II Non-Friable ACM that has become friable; and Category II Non-Friable ACM that has a high probability of becoming, or has become crumbled, pulverized, or reduced to a powder by forces expected to act on the material in the course of demolition or renovation operations.

6.0 ASBESTOS ABATEMENT COST ESTIMATE

Due to the fact that no asbestos containing materials were identified as a result of the asbestos survey completed for the Angelou Terrace Townhouses, no asbestos abatement cost is anticipated to be incurred for this project.

7.0 INDUSTRIAL HYGIENE COST ESTIMATE

Due to the fact that no asbestos containing materials were identified as a result of the asbestos survey completed for the Angelou Terrace Townhouses, no industrial hygiene support costs related to the abatement of asbestos containing materials are anticipated to be incurred for this project.

8.0 CONCLUSIONS / RECOMMENDATIONS

Based on the results of the asbestos survey completed for the Angelou Terrace Townhouses at 301-311 E. Taylor Street in Syracuse, NY, no asbestos containing materials were identified to be associated with either the interiors or exteriors of the townhouse structures (see Section 5.0 and Appendices 2, 4 and 7).

If additional suspect materials are uncovered during renovation or demolition activities that were not identified or assessed as part of this survey, activities which could disturb the suspect material must stop until the materials in question can be assessed (see Code Rule 56 Subpart 56-5.1(j)).

Subpart 56-5.1(g) also requires that one (1) copy of the results of the building/structure asbestos survey shall be immediately transmitted by the building/structure owner as follows:

1) One copy of the completed asbestos survey shall be sent by the owner or their agent to the local government entity charged with issuing a permit for such demolition, renovation, remodeling or repair work under applicable State or local laws.

2) The completed asbestos survey for controlled demolition (as per Subpart 56-11.5) or pre-demolition asbestos projects shall also be submitted to the appropriate Asbestos Control Bureau district office as follows.

   SYRACUSE DISTRICT:
   Counties - Broome, Cayuga, Chemung, Chenango, Cortland, Delaware, Franklin, Hamilton, Herkimer, Jefferson, Lewis, Madison, Oneida, Onondaga, Oswego, Otsego, St. Lawrence, Schuyler, Seneca, Steuben, Tioga, Tompkins,

   450 S. Salina Street, Syracuse, NY 13202
   (315) 479-3215 (FAX) (315) 479-3333

3) The completed asbestos survey shall be kept on the construction site with the asbestos notification and variance, if required, throughout the duration of the asbestos project and any associated demolition, renovation, remodeling, or repair project.

HSE has competed an asbestos survey of the Angelou Terrace Townhouses as detailed in this report, and in general conformance with applicable state and federal regulations. To the best of our knowledge and belief, based on the findings of the completed survey, there are no asbestos containing materials associated with the interiors or exteriors of the townhouse structures identified as 100 through 124 Angelou Terrace and located at 301-311 E. Taylor Street in the City of Syracuse, Onondaga County, NY.

9.0 LIMITATIONS

An asbestos survey report is based on a field investigation and the analysis of samples that are assumed to be representative of the various materials associated with a structure. This report does not in any manner represent a warranty or guarantee, either expressed or implied, that other asbestos containing materials do not exist within the building or buildings surveyed, or within building components that were not safely or readily accessible or sampled. The completed asbestos survey shall not be used to define the work scope for asbestos remediation or abatement. This report describes only those conditions present at the time of our survey, and in the areas surveyed. Limited destructive sampling was performed for access into wall cavities, attic spaces or other inaccessible areas, however, exhaustive destructive sampling techniques were not employed. The survey did not include inspection, sampling, or evaluation of subsurface utilities or materials. This report has been prepared on behalf of, and for the exclusive use of the client, and solely for use in an asbestos evaluation of the site.

HSE appreciates the opportunity to provide asbestos survey services in support of this project to EA Engineering, Science, and Technology, Inc., PBC. Please do not hesitate to contact me at your convenience if you have any questions or require additional information regarding this report.

License Number: 50181
License Class: RESTRICTED
Date of Issue: 12/21/2022
Expiration Date: 01/31/2024
Duly Authorized Representative: Brian C King

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

643376-3	DH12623-7	NAD									100.0	JC	White	Homogeneous	SNO	
643376-4	DH12623-8	NAD					TR	10.0			90.0	GB	Multi	Layered	SNO	
643376-5	DH12623-9	NAD						80.0			20.0	Paper	Cream	Homogeneous	SNO	
643376-6	DH12623-10	NAD									100.0	JC	White	Homogeneous	SNO	
643376-7	DH12623-15	NAD					100.0					IN	White	Homogeneous	SNO	
643376-8	DH12623-16	NAD					100.0					IN	White	Homogeneous	SNO	

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Summary of Point Count Results by Polarized Light Microscopy

AMA Sample	Client Sample	Total Asbestos	Chrysotile Percent	Amosite Percent	Crocidolite Percent	Other Asbestos Percent	Glass Fibers Percent	Organic Percent	Synthetic Percent	Other Percent	Particulate Percent	Sample Type	Sample Color	Homogeneity	Point Count Method	Comments
341309-1	DH11823-23	NAD					100.0					IN	White	Homogeneous	SNO	
341309-2	DH11823-24	NAD					100.0					IN	White	Homogeneous	SNO	
341309-3	DH11823-25	NAD					TR	10.0			90.0	GB	Multi	Layered	SNO	
341309-4	DH11823-26	NAD									100.0	JC	White	Homogeneous	SNO	
341309-5	DH11823-27	NAD									100.0	JC	White	Homogeneous	SNO	
341309-6	DH11823-28	NAD						10.0			90.0	GB	Multi	Layered	SNO	
341309-7	DH11823-29	NAD									100.0	JC	White	Homogeneous	SNO	
341309-8	DH11823-30	NAD									100.0	JC	White	Homogeneous	SNO	

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Summary of Asbestos Analysis of Non-Friable Organically Bound (NOB) Bulk Samples

AMA Sample	Client Sample	Sample Type *	% Total Asbestos	% Asbestos by PLM ***	% Asbestos by TEM ***	Type(s) of Asbestos	% Organics	% Acid Soluble	% Other	Material Type	Sample Color	Comments

* Whole = Whole sample submitted and gravimetric reduction performed by AMA Analytical Services, Residue = Gravimetric reduction of sample performed by client and residue only submitted for analysis.

** NAD = "No Asbestos Detected" TR = "Trace equals less than 1% of this component"

*** PLM = Polarized Light Microscopy after gravimetric reduction (NY ELAP Method 198.6) TEM = Transmission Electron Microscopy after gravimetric reduction (NY ELAP Method 198.4)

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Summary of Point Count Results by Polarized Light Microscopy

AMA Sample	Client Sample	Total Asbestos	Chrysotile Percent	Amosite Percent	Crocidolite Percent	Other Asbestos Percent	Glass Fibers Percent	Organic Percent	Synthetic Percent	Other Percent	Particulate Percent	Sample Type	Sample Color	Homogeneity	Point Count Method	Comments
341306-1	DH11823-69	NAD					100.0					IN	White	Homogeneous	SNO	
341306-2	DH11823-70	NAD					100.0					IN	White	Homogeneous	SNO	
341306-3	DH11823-71	NAD						10.0			90.0	GB	Multi	Homogeneous	SNO	
341306-4	DH11823-72	NAD						80.0			20.0	Paper	White	Homogeneous	SNO	
341306-5	DH11823-73	NAD									100.0	JC	White	Homogeneous	SNO	
341306-6	DH11823-74	NAD						10.0			90.0	GB	Multi	Layered	SNO	
341306-7	DH11823-75	NAD						80.0			20.0	Paper	White	Homogeneous	SNO	
341306-8	DH11823-76	NAD									100.0	JC	White	Homogeneous	SNO	

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Summary of Point Count Results by Polarized Light Microscopy

AMA Sample	Client Sample	Total Asbestos	Chrysotile Percent	Amosite Percent	Crocidolite Percent	Other Asbestos Percent	Glass Fibers Percent	Organic Percent	Synthetic Percent	Other Percent	Particulate Percent	Sample Type	Sample Color	Homogeneity	Point Count Method	Comments
643371-1	DH12523-23	NAD					100.0					IN	White	Homogeneous	SNO	
643371-2	DH12523-37	NAD						10.0			90.0	GB	Multi	Layered	SNO	
643371-3	DH12523-38	NAD						70.0			30.0	Paper	Beige	Homogeneous	SNO	

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Summary of Asbestos Analysis of Non-Friable Organically Bound (NOB) Bulk Samples

AMA Sample	Client Sample	Sample Type *	% Total Asbestos	% Asbestos by PLM ***	% Asbestos by TEM ***	Type(s) of Asbestos	% Organics	% Acid Soluble	% Other	Material Type	Sample Color	Comments

* Whole = Whole sample submitted and gravimetric reduction performed by AMA Analytical Services, Residue = Gravimetric reduction of sample performed by client and residue only submitted for analysis.

** NAD = "No Asbestos Detected" TR = "Trace equals less than 1% of this component"

*** PLM = Polarized Light Microscopy after gravimetric reduction (NY ELAP Method 198.6) TEM = Transmission Electron Microscopy after gravimetric reduction (NY ELAP Method 198.4)

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Analyst(s): Ashley Rose, Mario Maldonado IV, Lom Butruk

Technical Director Michael Greenberg

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Summary of Point Count Results by Polarized Light Microscopy

AMA Sample	Client Sample	Total Asbestos	Chrysotile Percent	Amosite Percent	Crocidolite Percent	Other Asbestos Percent	Glass Fibers Percent	Organic Percent	Synthetic Percent	Other Percent	Particulate Percent	Sample Type	Sample Color	Homogeneity	Point Count Method	Comments

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Summary of Point Count Results by Polarized Light Microscopy

AMA Sample	Client Sample	Total Asbestos	Chrysotile Percent	Amosite Percent	Crocidolite Percent	Other Asbestos Percent	Glass Fibers Percent	Organic Percent	Synthetic Percent	Other Percent	Particulate Percent	Sample Type	Sample Color	Homogeneity	Point Count Method	Comments

The following footnotes only apply to those samples that have the total asbestos result flagged (superscripted) with a note number:

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993 and/or NY State ELAP 198.1

EPA - 400 Point Count STA - Stratified Point Count SNO - Scanning Negative Option

All results are to be considered preliminary and subject to change unless signed by the Technical Director or Deputy.

Analyst(s): Surat Watson, Suphin Chinnapad

NYSDOH ELAP Certificate of Approval

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER

Expires 12:01 AM April 01, 2023
Issued April 01, 2022

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MICHAEL GREENBERG
AMA ANALYTICAL SERVICES INC
4475 FORBES BLVD
LANHAM, MD 20706

NY Lab Id No: 10920

is hereby APPROVED as an Environmental Laboratory for the category
ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved subcategories and/or analytes are listed below:

Metals I	
Lead, Total	EPA 7000B
Miscellaneous	
Asbestos in Friable Material	Item 198.1 of Manual
	EPA 600/M4/82/020
Asbestos in Non-Friable Material-PLM	Item 198.6 of Manual (NOB by PLM)
Asbestos in Non-Friable Material-TEM	Item 198.4 of Manual
Lead in Dust Wipes	EPA 7000B
Lead in Paint	EPA 7000B
Sample Preparation Methods	
	ASTM E-1979-17

Serial No.: 64514

Property of the New York State Department of Health. Certificates are valid only at the address shown, must be conspicuously posted, and are printed on secure paper. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify the laboratory's accreditation status.

HSE Consulting Services, LLC

United States Department of Commerce
National Institute of Standards and Technology

NVLAP®

ilac-MRA

Certificate of Accreditation to ISO/IEC 17025:2017

NVLAP LAB CODE: 101143-0

AMA Analytical Services, Inc.
Lanham, MD

is accredited by the National Voluntary Laboratory Accreditation Program for specific services, listed on the Scope of Accreditation, for:

Asbestos Fiber Analysis

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communique dated January 2009).

2022-07-01 through 2023-06-30

ALL-WEATHER
LEVEL
№ 311FX

Project : E. Adams Redevel. Phase I Area.
Project No. 1617505
Start Date : 1/9/2023
End Date :

Syracuse, NY 1/9/2023
Adams Redevel, Phase I 1/2

J. Fontaine, P. Gannon, E. Ashton onsite, set up CAMP equipment.

Downwind dust trak - zero cal
S/n: 023396. Manual mode, 1 min.
PID S/n: ~~572 425 503~~ 45170
Zero cal = 0.0 ppm. Span cal = 106.5 ppm
PID S/n: 16232
Zero cal = 0.0 ppm. Span cal = 100.5 ppm
Upwind dust trak - zero cal
S/n: 038733. Manual mode, 1 min.

Conducted site walk w/ P. Gannon. E. Ashton, P. Gannon offsite - went to visit AOT site.

Nothnagle ~~E~~ arrived onsite. P. Gannon E. Ashton, P. Gannon returned to site. offsite @ 1000
Began hand clearing @ SB-1
* National Grid contacted. Nothnagle and ordered no drilling until electrical grid was verified.
2nd team began hand clearing for SVP-1.
Marked out locations for SVP-3 + SVP-4
Logged surface 0-2 @ ~~SVP~~ SB-1.
~~Collected~~ Found potential evidence of ACM. Consulted w/ E. Ashton.
E Ashton ordered a stop work @ SB-1 using air knife. OK to continue w/ SVPs.

Syracuse, NY 1/9/2023 3
~~E~~ Adams Redevel Phase 1 2/2

1200 Bagged / labeled ACM.
Continued logging 0-2 @ SB-1.
1225 Nothnagle began hand clearing SVP-4.
1230 Collected 161750S-SB01-0-2
1315 Nothnagle continued hand clearing @ SB-1 without the use of air. E Ashton offsite
1411 Broke down CAMP
1428 Drillers hit refusal at SB-1 @ 4.1'. Backfilled hole, placed cone.
5 total (failed) attempts @ reaching depth for SVP-1
5 total (failed) attempts @ reaching depth for SVP 4.
1435 Nothnagle offsite.
~~EA~~ EA offsite (1445).

1/9/23

Rite in the Rain

yracuse, NY 1/10/23
Adams Redevel. Phase I 1/1

J. Fontaine onsite

Ongoing coordination w/ Adam Ettinger, E. Ashton, Nothnagle's Jeff S. Status of field work/plan pending further communication between Adam E. + Steve (Nothnagle). E. Ashton requested I leave site and go check-in w/ M. Bedell at the Phase 2 Area (geophysical survey oversight).

EA offsite

1/10/23

Syracuse, NY 1/12/23
E. Adams Redevel. Phase I 1/3 5

0745 J. Fontaine (JF) onsite. (original SB-01 location now SVP-1)

0806 Drillers arrived onsite. Staged geoprobe at TP-10. (E. Ashton onsite @ 0815).

0839 J. Fontaine began setting up CAMP upwind dust trak Low batt. E. Ashton offsite to retrieve backups.

Hand clearing crew began @ SVP-4.

0902 Nothnagle crew began augering through TP-10.

Hit refusal @ 6.5' at top of concrete slab as described in CME TP log.

Consulted w/ M. Ettinger - advised drillers to try multiple attempts across footprint of TP-10. ~~Nothnagle~~ (JF)

0930 Reached target depth of 10'.

0935 Nothnagle began DPT 10-15'.

* Hand clearing crew completed auger kaffing to 5'. Began installing SVP-4.

0950 E. Ashton onsite. Replaced batteries in upwind Dust Trak.

1050 Nothnagle began installing MW-1.

(1030) Collected 161505-SB01-TP-13 at TP-10.

Hand clearing crew began SVP-2

1105 Re-zeroed upwind MPD.

Rite in the Rain.

Syracuse, NY
E. Adams Redevel. Phase I
1/12/23
2/3

SVP-4 installed ~~4-4.5~~ 4-4.5', instead of 4.5-5' due to water @ 5'.
MW-1 screen 5-15'.
Sand to 4'. Bentonite 1-4'.
Backfill to surface w/ bpx
SVP-2 set @ 4' — Same asphalt surface encountered at SB-1/SVP-1.
SVP-1 installed @ 4.1 as well once MW-1 was set.
Crew moved to SB-4/TW-4/SVP-3 location
Hand clearing crew began at SVP-3
Drillers decomed augers.
Collected 1617505-SB04-0-2 MS, MSD for VOCs/SVOCs/metals/hex/PCBs.
Hand clearing crew hit what appeared to concrete at 3'. Offset SVP-3 5' east. Same depth of refusal.
Drillers began @ SB-4.
Drillers completed installing temp well @ SB-4
Collected 1617505-SB04-10-12. + DUP-2
Drillers decomed augers. / Hand clearing crew decon shovel.
Hand clearing crew moved to SB-3.
Began collecting 1617505-SB03-0-2 + MS/MSD for pest, 1,4, PFAS, ~~[illegible]~~ (JF) + DUP1 (pest, 1,4)
P. Gannon onsite w/ coolers/ice
Drilling crew offsite.

Syracuse, NY
E. Adams Redevel. Phase I
1/12/23
3/3

1537 Collected EQB-1 from cutting shoes. Hand clearing crew cleared to 5' @ SB-03.
P. Gannon + J. Fontaine broke down site packed vehicles.
1600 EA offsite.

1/12/23

Rain in the Rain

Syracuse, NY
T. Adams Redevel Phase 1
1/13/2023
1/2

J. Fontaine onsite 33F Rain+Snow
Began calibrating PIDs.
S/n: 16232 zero = 0.0 span = 100.2
S/n: 45170 zero = 0.0 span = 99.2
potential battery issue.
ppb RAE s/n: 022786 zero = 0 span = 100 ppm (100k ppb)
Nothnagle arrived onsite. Nothnagle support truck got stuck in saturated top soil near decon pad.
Got vehicles unstuck.
J. Fontaine began setting up CAMP stations + Nothnagle set up @ SB-03.
Began drilling @ SB-03.
Collected 1617505-SB03-6-8+ DUP-3 (PFAS) @Asbestos
Drillers completed install of SB-03/MW-03
J. Fontaine moved CAMP to TP-2.
Cleared 0-2 ft w/ spade shovel.
Collected 1617505-SB02-0-2.
Drillers decon'ed equipment.
Mob to TP-2.
Began drilling at TP-2 to 9'
P. Gannon onsite, set up at TW-04.

Syracuse, NY
T. Adams Redevel Phase 1
1/13/2023
2/2

1200 Collected Sample 1617505-SB02-7.5-10 5
Drillers decon'ed equipment/vehicles
Sampled 1307 – P. Gannon purged/sampled TW-04 (1617505-TW04) + DUP-4 (PFAS) + MS/MSD for PFAS
J. Fontaine broke down site/CAMP/setup
1330 J. Fontaine became stuck in wing end of field.
Freed vehicle w/ help of drillers Pat. (Nucs SVCs, Metals)
1402 Collected EQ13-2. (hex, pest.)
1415 P. Gannon offsite w/ samples
1430 TA, Nothnagle offsite.

1/13/2023

Rite in the Rain

0 J. Fontaine arrived — swung by Area 2 to unlock entrance. Returned to Area 1. Awaited drillers.

Drillers arrived. W/ hand clearing crew. W/ Vac truck, set up at SVP-3.

Fritz, Josh. Hand clearing crew began air knifing at SVP-3.

(am) 23°F mostly clear. 5 mph wind

Jeff, Anthony NY Drillers arrived. prepared for well surface completions.

Hand clearers discovered pipe running NW-SE approx 3 ft down. Had the crew backfill w/ contents from vac truck and offset 2 ft. perpendicular to ~~this~~ ex backfilled hole

Jeff set up at SB-01 (MW/01) to begin well development.

J. Fontaine calibrated Horiba.

DTW: 7.2 ft.

1 well vol: 1.27 gal

3 well vol: 3.81 gal

Well went dry after about 2 gal (80% of recharge = 8.76)

- Checked on Anthony — he was preparing SB-03 for completion but ground is frozen, making it difficult to auger

1022 Jeff offsite to purchase narrower tubing in order to develop by pushing more slowly

Hand clearing crew continuing @ SVP-3.

1035 SVP-3 cleared to 5.2'

1050 Jeff returned.

DTW @ SB-01/MW-01 @ 100% (7.2 ft)

1058 2nd attempt at development.

1100 ~~Well went dry about~~ water began pumping intermittently starting + stopping

1105 Well dry after ~ 4 gal.

Fritz, Josh moved to Area 2 waiting on Ed Ashton to meet them and show them where to put the SVPs.

1114 Jeff moved to SVP-3 to install.

Abandoned TW-04 as well, backfilled.

1130 MW-01 DTW ~ 7.25.

↳ 3rd attempt.

1133 Again flow intermittent ~ 2 min in.

1139 Water much clearer, switched buckets (over 5 gals) & total gal.

E. Ashton onsite to grab Area 2 entrance keys

1152 4th attempt at MW-01.

6 total gal.

Anthony completed SVP-4, SVP-1.

Ed, Nathaniel moved to SB-02/MW-02

1215 DTW = 8.50

1220 1st attempt. — 4 gal 1 total.

Rite in the Rain.

Syracuse, NY — 1/16/2023
Adams Redevel Phase 1 — 3/3

Hannah Bedell onsite to swap 2019 SuperCab for 2015 Escape.
DTW: 11? WLM acting up.
(80% recovery = 9.8')
DTW = 9.8 ✓
2nd attempt. 3.5 total gals
dry. Waiting for 2nd recharge.
Anthony completed SVP-1, SVP-4 so far.
Call from Fritz — odor coming from SVP-3
but later decided odor coming from offsite
source. Difficulty getting thru frozen
topsoil at SVP-3 — moving on to SVP-4.
DTW @ SB02/MW-02 ~~9.5~~ approx
Third attempt - 3.5 gal.
DTW @ MW-03 = 10.7
Anthony completed SVP-2, SVP-3, on MW-~~02~~ (JF)
First development attempt. MW-03
~2.5 gal
(80% recharge = 11.08')
Collected 1617505-Solid Waste
Collected 1617505-Aqueous Waste
2nd attempt. 2 gal.
Anthony completed MW-02, MW-01.
Will finish up w/ MW-03 on 1/17.
Final attempt at MW-05. ~2 gals.
EA Nothnagle offsite.

Syracuse, NY — 1/27/2023 — 13
E. Adams Redevel Phase 1 — 1/1

0800 J. Fontaine, M. Gilkey, and E. Cummings onsite to perform SVP sampling.
Set up at ~~SVP~~-2 (installed to 4').
[due to water in point, pulled tubing up ~ 6 in to approx. 3.5 ft bgs]
Set up at SVP-1 (installed to ~4.1')
Collected DUP here (1617505-SVP-DUP)
Moved to SVP-4 (installed to 4.5')
[due to water in point, pulled tubing up ~ 6 in to approx. 4'. Water still in point — pulled tubing up another 6 in to approx. 3.5 bgs]; Water still in point — DID NOT SAMPLE SVP-4.
~~X~~ Set up at SVP-3 (installed to 5 ft).
[Team moved to Phase 2 area to set up @ points, returned to Phase 1]
1206 Started collecting at SVP-2
1209 Started collecting at SVP-1 (w/ DUP)
1211 Started collecting at SVP-3.
~~1340~~ (TF)
1340 Stopped SVP-2
1348 Stopped SVP-3
1353 Stopped SVP-1.
1354 Emily C. offsite. Sealed SVP caps.
1400 J. Fontaine offsite to meet up w/ M. Gilkey at Phase 2 Area.

JFA 1/27/2023.

Rite in the Rain

yracuse, NY 2/21/2023
Adams Redevel Phase 1 1/2

J. Fontaine arrived on site, set up at MW-01.
Calibrated Horiba
X pH - 3.86
✓ mS/cm - 4.47
✓ turb - 0.5
Calibrated Horiba again -
✓ pH - 4.00
✓ mS/cm - 4.48
✓ turb - 0.0
Zeroed PID - 0.0 ppm.
Cleaned flow cell and assembly.
PID at MW-01 = 0.5 ppm
D DTW = 7.29 ft.
0 Began purging at MW-01.
0 Began sampling at MW-01 - collected 1617505-MW01 and MS/MSD for all analytes except for hexavalent chromium (which will be collected after 1200) and PFAS (for which QC samples were collected on 1/13/2023 at TW-04).
9 Moved to MW-02
PID = 0.5 ppm
3 DTW = 8.56
1 Began purging at MW-02
3 Began sampling at MW-02 - collected

Syracuse, NY 2/21/2023
E. Adams Redevel Phase 1 2/2 15

1617505-MW02 and DUP-5 for all analytes except for hex chrome, and PFAS (for which QC samples were collected on 1/13/2023 at TW-04).
1318 Collected hex chrome sample at MW-02.
(1230) Collected 1617505-FB-02212023.
Returned to MW-01 to sample hex chrome.
1333 Collected hex chrome and MS/MSD samples at MW-01.
1340 Moved to MW-03.
Outer/ext. casing flooded w/ meteoric water - drained water w/ pump.
PID at MW-03 = 1.0 ppm.
1357 DTW = 10.29
1404 Began purging MW-03.
1415 Well began to dry.
1417 Heavy rain + severe t-storms began
Tagged DTB at 14.55 ft.
Sealed well (was actually able to bolt cover closed this time - last time bolts didn't appear to fit).
Packed van
Sprinter van got stuck in mud when attempting to depart site. M. Wright, G. Realer and L. Beckman-Lowe came to site to help.
Rite in the Rain
1503 EA offsite.

-racuse, NY
Adams Redevel Phase I

2/22/2023
1/1

J. Fontaine onsite, set up at MW-03.
Sampled MW-03 for PFAS + TSS w/ HDPE bailer
Allowed well to recharge.
Collected additional GW w/ bailer for VOCs and metals.
Filled 1L amber for SVOCs
Filled 1L amber for PCBs
Filled 1L amber for 1,4-Dioxane.
(marked collection times on bottle caps).
Allowed well to recharge.
Collected sample for hexavalent chromium and filled 1L amber for pesticides.
Collected 1617505-FB-02222023.
Sealed MW-03.
J. Fontaine offsite.

2/22/2023

Syracuse, NY
E. Adam Redevel Phase I

03/27/2023

1045 H. Young & P. Gannon onsite to get Horizontal GNSS & Vertical Elevations
1215 EA offsite

3/27/2023

Rite in the Rain
