To the best of my professional knowledge and belief, the undersigned meets the definition of "environmental professional" as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Site. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Matt Walker
Senior Project Environmental Scientist

EXECUTIVE SUMMARY

At the request of Blueprint 15, Inc., C&S Engineers, Inc. (C&S) has prepared this Phase II Environmental Site Assessment (Phase II or Investigation) Report of the Latimer Terrace Apartments located at 301-311 East Taylor Street, Syracuse, New York in Onondaga County (Site). The scope of services for the Phase II was based on our proposal dated January 10, 2024. The location of the Site is shown on **Figure 1**.

C&S performed this Phase II to address the identified Recognized Environmental Conditions identified as a result of the November 2023 Phase I Environmental Site Assessment, completed by C&S Engineers, Inc. The Phase I indicated concerns with historical onsite and offsite uses as summarized below.

- The Site and surrounding area have been associated with dense urban development since at least 1892. The Site was once occupied by residential houses, small shops, and a church, from at least 1892 through 1910. From 1930 through 1961, the Site began to see increased commercial development, such as a drycleaner and automobile filling station (in the northwest section), auto/motorcycle repair shop and an automobile salvage yard (in the west section). Sometime around the mid 1960s, the Site was cleared of all existing buildings and redeveloped with large apartment buildings. These apartment buildings would remain until around 1989 when they would be demolished and replaced by the current apartment structures.

- The surrounding area was predominantly residential in nature from at least 1892 to 1910. Numerous commercial / industrial properties have been located within close proximity to the Site in the 1900s including the Syracuse Twist Drill Company which included an oil house, forge shop, machine shop, boiler house, and an underground oil tank, (adjacent to north between 1892 and 1961), an automobile filling station, auto repair station, appliance repair and tin shop (adjacent to west between 1951-1961), various scrap yards, warehouses, auto repairs stations and automobile filling stations (in close proximity to the south between 1951-1990). Between 1951 and 1968 many structures in close proximity to the Site were demolished. Demolition to the north, west and east of the Site were then redeveloped for apartment and town house complexes. Around 1989, the northern apartments were demolished and replaced by the current apartment structures.

This Phase II ESA was not intended to be a complete delineation of the Site and its contaminants. Instead, this Phase II ESA was based on the results of the Phase I ESA, as stated above. C&S's investigation was focused on the collection of subsurface soils and groundwater in areas of the Site which may have been impacted by historical releases

from past industrial and/or commercial operations, that could have impacted the Sites soil and groundwater.

C&S' Investigation of the Site was conducted on February 26, 2024 and March 5, 2024. The following summarizes and discusses the results of this investigation.

The soil lithology across the site generally consists of historic fill material (HFM) comprised of top soil with organics from 0 to 1 feet below ground surface (bgs). HFM including coal, brick, and ash was encountered in approximately 75 percent of the borings and was found at various depths from 1 to 5 feet bgs. The soil sample collected and analyzed from SB-06 (1.5' – 2') was the only sample that contained HFM. That sample contained concentrations of a SVOC ((Indeno(1,2,3-cd)pyrene)) and multiple metals that exceeded Residential Use SCOs. Therefore, it is expected that the surface soils from across the Site that contained HFM are expected to be similarly impacted. The topsoil was generally underlain by natural deposits comprised of fine to coarse sand and clay and / or silt. Groundwater was generally encountered at depths of 7.5 to 12 feet bgs. Bedrock was not encountered.

The Phase II was designed to investigate three unique areas and their related concerns:

- The former gasoline station / dry cleaner on the northeast portion of the Site
- The former scrap yard on the west portion of the Site.
- The Site boundary to assess potential contamination migration from offsite uses of concern.

The following paragraphs provide summaries of the results of the investigations for each of these areas.

Former Gasoline Station / Dry Cleaner

An area on the northeastern portion of the Site was investigated to determine if the former operation of a dry cleaner and filling station has impacted Site soil or groundwater. The investigation in this area included the completion of a geophysical survey, advancement of seven soil borings, the installation of one temporary groundwater monitoring well, and the collection and analysis of four soil and one groundwater sample for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), poly-chlorinated biphenyls (PCBs), and metals.

The geophysical survey did not reveal the presence of abandoned underground tanks or other anomalies of concern, so the initial boring (SB-01) was placed at the location most likely to have been impacted from former operations, the former gas tanks. Soil in this boring, starting at 6.5 feet bgs was gray in color, exhibited a strong petroleum odor with photoionization detector (PID) levels in the 600s parts per million (ppm) and a heavy sheen was observed in the saturated zone. Due to the discovery of impacts at this

location, C&S attempted to provide some level of delineation and positioned borings in various cardinal directions. Based on that effort, the soil impacts appear to be primarily contained to an area of 2,150 square feet and a depth of 6 to 15-20 feet. The resulting volume of impacted soil is 700 - 900 cubic yards. The soil sample from SB-01 (the gas tank area) is impacted by VOCs, but only two compounds exceeded Residential Use Soil Cleanup Objectives (SCOs). A temporary groundwater monitoring well (TW-1) was installed in SB-01 to understand the anticipated worst-case groundwater impacts. The groundwater in this area was very turbid. Additionally, signs of impairment were observed as the groundwater had a strong petroleum odor, a rainbow sheen and oily product was observed and the initial PID well head reading was 0.9 ppm. Seven VOCs and three SVOCs were detected in TW-1 at concentrations that exceed their respective Technical and Operational Series 1.1.1 (TOGS 1.1.1) standards or guidance. Several of the exceedances are an order of magnitude or higher than the limit. The lead concentration at this well exceeded the TOGS standard and was an order of magnitude higher than other groundwater samples from the Site, suggesting it could be related to the use of tetraethyl lead. However, due to the temporary nature of the wells, the effluent was very turbid and is also a likely or contributing cause of the elevated lead concentration. Due to the discovery of the petroleum impacts, C&S notified the owner Syracuse Housing Authority of the NYSDEC spill reporting requirements. C&S subsequently reported the spill on their behalf and it was assigned number 24-00040.

Former Automotive Repair / Scrap Yard

An area centrally located along the west portion of the Site was investigated to determine if the former operation of an automotive repair / scrap yard has impacted Site soil or groundwater. The investigation in this area included the completion of a geophysical survey, advancement of three soil borings, the installation of one temporary groundwater monitoring well, and the collection and analysis of three soil and one groundwater sample for VOCs, SVOCs, PCBs, and metals.

The geophysical survey for this area revealed an approximate six-inch-thick buried slab around three feet bgs. The approximate dimensions of the slab are 50 feet by 50 feet. Along the southeast side of the buried slab an anomaly was detected and the geophysical technician suspected it to be an underground storage tank (UST). The anomaly measured ten feet long by four feet wide. Boring SB-13 was advanced near the anomaly. Additionally, at an approximate distance of 50 feet to the east of the buried slab, another anomaly suspected to be a UST was detected. The anomaly measured six feet long by three feet wide. A fire insurance map reviewed as part of the Phase I ESA depicts a gasoline tank in this area. Boring SB-12 was advanced near the anomaly. Boring SB-14 was advanced on the north side of the buried slab. Soils from each of these borings were screened for signs of visual impairment, olfactory evidence and PID field screening analysis. No obvious indications of impairment were identified. However, the soil sample from SB-13 had a concentration of 1,2-dichloroethane that (a chlorinated VOC), that marginally (0.024 ppm vs. 0.02 ppm) exceeded Unrestricted Use SCOs.

A temporary groundwater monitoring well (TW-3) was installed in SB-13. The groundwater in this area was very turbid. Additionally, groundwater was screened for signs of visual impairment, olfactory evidence and an initial PID measurement was recorded at the well head. No obvious indications of impairment were identified. However, 1,2-dichloroethane was also detected in TW-3. The concentration of 13.3 parts per billion (ppb) exceeded its respective Technical and Operational Series 1.1.1 (TOGS 1.1.1) standard of 0.6 ppb. The exceedance is an order of magnitude or higher than the limit.

Offsite Uses of Concern

Several offsite concerns included a former adjacent industrial area (adjacent to the north), former gas stations (close proximity to the south and west), an historical drycleaner spill (close proximity to the southwest), and the Syracuse University Steam Station with several historical spills (close proximity to the southeast). The investigation scope to address these areas included the advancement of seven soil borings, the installation of one temporary groundwater monitoring well along various areas of the Site boundary, and the collection and analysis of three soil and one groundwater sample for VOCs, SVOCs, PCBs, and metals.

Soils in these areas were screened for signs of visual impairment, olfactory evidence and PID field screening analysis. No obvious indications of impairment were identified these areas. The detected contaminants in the soil samples were below Unrestricted Use SCOs. A temporary groundwater monitoring well (TW-2) was installed in SB-10. The groundwater in this area was very turbid. Additionally, groundwater was screened for signs of visual impairment, olfactory evidence and an initial PID measurement was recorded at the well head. No obvious indications of impairment were identified. No VOCs, SVOCs, or PCBs were detected in TW-2.

1. Introduction

At the request of Blueprint 15, Inc., C&S Engineers, Inc. (C&S) has prepared this Phase II Environmental Site Assessment (Phase II or Investigation) Report of the Latimer Terrace Apartments located at 301-311 East Taylor Street, Syracuse, New York in Onondaga County (Site). The scope of services for the Phase II was based on our proposal dated January 10, 2024. The location of the Site is shown on **Figure 1**. The investigation was performed generally consistent with American Society of Testing and Materials (ASTM) E 1903-19 Standard Guide for Environmental Site Assessments: Phase II Environmental Site Assessment Process, unless noted otherwise in this report.

1.1. Purpose of Investigation

As indicated in the Standard, there are a wide variety of reasons to perform a Phase II Investigation:

- Assess whether there has been a release of a hazardous substance applicable to CERCLA for purposes including landowner liability protections (innocent landowner, bonafide prospective purchaser, or contiguous property owner);
- Provide information relevant to identifying, defining, or implementing landowner continuing obligations;
- Evaluate Recognized Environmental Conditions from a Phase I Environmental Site Assessment (ESA);
- Provide information relative to identifying, defining, and evaluating conditions that could lead to environmental or human health hazards;
- Provide information relative to evaluating business environmental risk; and
- Provide information to support disclosure of liabilities for financial statements and reporting.

1.2. Scope of Work

The investigation was performed generally consistent with American Society of Testing and Materials (ASTM) *Standard Practice E 1903-19 - Standard Guide for Environmental Site Assessments: Phase II Environmental Site Assessment Process*, unless noted otherwise in **Section 1.3** of this report. The scope of services for this Investigation included the following tasks:

- Subsurface investigation of the geologic and hydrogeologic conditions of the Site;
- Collection and laboratory analytical testing of soil and groundwater samples;
- Evaluation of the findings of the investigation and analytical testing; and
- Discussion of the potential impact of the observed conditions on the Site and recommendation of further actions.

This Investigation was intended to provide further information on the Site's environmental condition to render a professional opinion on the suspected presence or absence of petroleum or chemical impacts from the historical use and RECs associated with the Site.

1.3. Limitations and Exceptions

C&S has performed this investigation consistent with the contract scope of services, using reasonable efforts to identify areas of potential liability associated with environmental concerns identified at the Site. As detailed in our scope of services, the purpose of this investigation was not to characterize the Site in its entirety. Instead, investigation efforts were focused around areas of identified Recognized Environmental Conditions identified as part of the November 2023 Phase I Environmental Site Assessment, completed by C&S Engineers, Inc.

This investigation was performed in accordance with the generally accepted practices of other consultants undertaking similar studies in the same geographical area. C&S has exercised the same care and skill generally exercised by other consultants in similar circumstances and conditions. Our findings and conclusions must not be considered scientific certainties, but rather as our professional opinion concerning the significance of the limited sampling and data gathered during the course of the Limited Phase II Environmental Site Assessment. No expressed or implied warranty is made. Specifically, C&S cannot represent that the site contains no hazardous material, oil, or other latent condition beyond that investigated/sampled by C&S at the time of subsurface site investigation.

No environmental site investigation can wholly eliminate uncertainty regarding the potential nature and extent of the identified environmental concern(s) in connection with a property. Even when an Investigation is executed competently and consistent with the ASTM Standard, it must be recognized that certain conditions present especially difficult target analyte detection problems. Such conditions may include, but are not limited to, complex geological settings, unusual or generally poorly understood behavior and fate characteristics of certain substances, complex, discontinuous, random, dynamic, or spotty distributions of target analytes, physical impediments to investigation imposed by the location of utilities and other man-made objects, and the inherent limitations of assessment technologies.

Similar to a Phase I ESA, there is a point at which the cost of the information obtained or the time required to gather it outweighs the usefulness of the information and, in the context of private transactions and contractual responsibilities, may become a material detriment to the orderly completion of business. If the presence of target analytes is confirmed on a property, the extent of further assessment is a function of the degree of

confidence required and the degree of uncertainty acceptable, in relation to the objectives of the assessment.

1.4. Special Terms and Conditions

This Limited Phase II ESA report has been prepared on behalf and for the exclusive use of Blueprint 15, Inc. This report and its findings shall not, in whole or in part, be provided to or used by any other party without prior written consent of Blueprint 15, Inc. and C&S.

2. Site Description

The following sections include a description of the location, site characteristics, and land use of the Subject Parcel and the area surrounding the Site.

2.1. Site and Surrounding Characteristics

The Site is 4.3 acres of the southern portion of the 11.1-acre tax parcel, identified as City of Syracuse Tax Map ID No. 095.-08-01.0, and is reportedly owned by Syracuse Housing Authority (SHA). The property is located at 301-311 East Taylor Street, Syracuse, New York in Onondaga County.

The table below describes the properties / features / roads immediately surrounding the Site.

Direction	Features
North	Chavez Terrace Apartment Buildings
South	East Taylor Street, Rail Line / Abandoned Vacant Property
East	South Townsend Street, Pioneer Homes Apartments
West	South State Street, SHA Garage & Grounds

A Site location map is attached as **Figure 1**.

2.2. Current Property Use

The Site contains six apartment buildings that were constructed in 1989. The apartments are arranged as two-story townhouse units. The remaining parcel consists of an asphalt parking lot, and manicured lawns.

2.3. Site History and Contamination Concerns

As indicated above, a Phase I ESA was performed for the Site by C&S Engineers in November 2023. Based on the information gathered from the Phase I, it is known that the Site and surrounding area have been associated with dense urban development since at least 1892. The Site was once occupied by residential houses, small shops, and a church, from at least 1892 through 1910. From 1930 through 1961, the Site began to see increased commercial development, such as a drycleaner and automobile filling station (in the northwest section), auto/motorcycle repair shop and an automobile salvage yard (in the west section). Sometime around the mid 1960s, the Site was cleared of all existing buildings and redeveloped with large apartment buildings. These apartment buildings would remain until around 1989 when they would be demolished and replaced by the current apartment structures.

The surrounding area was predominantly residential in nature from at least 1892 to 1910. Numerous commercial / industrial properties have been located within close proximity to the Site in the 1900s including the Syracuse Twist Drill Company which included an oil house, forge shop, machine shop, boiler house, and an underground oil tank, (adjacent to north between 1892 and 1961), an automobile filling station, auto repair station, appliance repair and tin shop (adjacent to west between 1951-1961), various scrap yards, warehouses, auto repairs stations and automobile filling stations (in close proximity to the south between 1951-1990). Between 1951 and 1968 many structures in close proximity to the Site were demolished. Demolition to the north, west and east of the Site were then redeveloped for apartment and town house complexes. Around 1989, the northern apartments were demolished and replaced by the current apartment structures.

Based on the above, further evaluation of the Recognized Environmental Conditions was recommended. Due to the historical land uses, samples collected as part of this Investigation were analyzed for a combination of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), poly-chlorinated biphenyls (PCBs), and metals. A copy of the Phase I Report is provided as **Appendix E**.

2.4. Site Surface Soil Condition

According to the United States Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS) Web Soil Survey, the soil present beneath the subject property is characterized as lacustrine silt, clay, and "Urban Land". The "Urban Land" classification refers to areas in which soil characteristics have been altered due to urban activity.

2.5. Site Geological Conditions

bedrock geologic information was obtained from the Geologic Map of New York-Finger Lakes Sheet (1970, Lawrence V. Rickard and Donald W. Fisher). The bedrock beneath the site is mapped as the dolostone, shale, and/or gypsum of the Syracuse Formation.

2.6. Surface Water and Groundwater Conditions

Based on the interpretation of the USGS Topographic Map, groundwater in the area is assumed to move generally in a northwest direction towards Onondaga Lake. Groundwater flow specific to the Subject property is unknown and may be different from the regional flow. Potential influences include local drainage features, seasonal groundwater level fluctuations, subsurface geology, surface topography, and / or other local site features.

Groundwater flow direction was not investigated as a part of this Phase II ESA.

3. Phase II Environmental Site Assessment Methodologies

C&S conducted field activities for the Phase II ESA on February 26, 2024 and March 5, 2024.

3.1. Investigation Scope and Objectives

The Phase II ESA subsurface investigation consisted of the following tasks:

- Prior to initiating subsurface investigation activities, C&S' drilling subcontractor, Matrix Environmental Technologies Inc. (hereby, referred to as Matrix) notified UDig New York, to arrange for identification and marking of buried public utilities at the Site. C&S endeavored to maintain a minimum setback of at least three feet from utilities during our investigation.

- Prior to initiating subsurface investigation features, a geophysical survey was conducted by Matrix, as a subcontractor to C&S. The geophysical survey consisted of a sitewide utility locating survey and a Ground Penetrating Radar (GPR) survey of the northeast (former drycleaner and gas filling station) area and the west (former automotive repair and salvage yard) area of the Site. The sitewide utility locating survey was limited, due the water service to the complex being untraceable. This was most likely due to the water service line being comprised of a poly material with no tracer wire attached. Matrix performed a visual inspection to assess for utility structures. Utilizing a SPX RD7000 in conductive, inductive and power/radio modes, they located and marked out utilities. Additional confirmation was performed with the Mala Easy Locator HDR. GPR signal reception varies depending upon soil conditions. Therefore, it is utilized in combination with various other geophysical tools for the most accurate verification of known / unknown utilities and / or structures. Utilities were painted in appropriate color. C&S endeavored to maintain a minimum setback of at least three feet from utilities during our investigation. A report was prepared by Matrix to summarize the results of their efforts. The report is provided as **Appendix A**.

- The advancement of 18 soil borings (identified as SB-01 through SB-18). To characterize subsurface conditions; soil borings were advanced in the vicinity of the former filling station / dry cleaner area (northeast section), auto repair / salvage yard area (west section) and representative locations along the property's boundaries (north, east, west & south). The approximate locations of the soil borings are depicted on **Figure 2.**

- The construction of three temporary groundwater monitoring wells (identified as TW-01 through TW-03). The temporary groundwater monitoring wells were installed in the former filling station / drycleaner area (northeast section), auto

repair / salvage yard (west section) and the boundary nearest the Syracuse University Steam Station (southeast section). The approximate locations of the temporary groundwater monitoring wells are depicted on **Figure 3**.

3.2. Site Investigation Methods

The methodologies used during the completion of the Limited Phase II ESA are outlined below.

3.2.1. Decontamination Methods

The typical decontamination system to remove contaminants and debris from non-disposable field equipment is gross contamination removal followed by a "three-station decon". The gross contamination removal consisted of using tools or gloved hand to removal heavy amounts of soiling. The three-station decon was comprised of three 5-gallon buckets that are brought to the site pre-cleaned. The stations consist of:

Initial Pre-Rinse → Alconox® Soap Cleaning → Final Rinse

Electronic field meters and equipment were wiped down with a damp towel or cloth to remove loose and caked soil or contaminants. In the case of a PID, it was ensured that the inlet was free of debris that could cause false positive readings. Groundwater sampling and monitoring equipment (e.g. water level depth meters, water quality meters, pumps, etc.) were thoroughly decontaminated between each sampling location. Where feasible, monitoring and sampling started at the least contaminated locations and moved on to more contaminated locations.

3.2.2. Soil Sampling Methods

As indicated above, Site utilities were marked out prior to intrusive subsurface activities.

Subsurface soils were obtained by continuous soil sampling each soil boring by direct-push methodologies, using Geoprobe Systems' equipped with DT22 Dual Tube Samplers. The DT22 Dual Tube samplers consisted of steel barrels having an inside diameter of 1.25 inches and five feet in length. Single-use clear acetate liners were inserted into the sampling barrels prior to advancement, and the resultant soil cores were collected in the acetate liners as the samplers were advanced. Non-disposable sampling equipment was decontaminated between sample locations to avoid potential cross contamination of samples.

3.2.2.1.Soil Classification

Soils were field-classified with respect to predominant soil types and texture and relative moisture content, based on manual and visual field observations, and examined for staining and / or obvious indicators of petroleum or historical impact. The observed soil lithologies and pertinent observations are documented on Soil Boring Logs contained in **Appendix B**.

3.2.2.2.Field Screening

Soils were screened using open air and headspace analysis methods, using a portable photo-ionization detector (PID; MiniRae Model 3000) equipped with a 10.6 eV lamp. The PID was calibrated to a 100 part-per-million (ppm) isobutylene/air calibration gas mixture. The headspace screening was performed by placing a representative portion of the collected soil samples into re-sealable plastic bags ("Zip-lock" bags), and subsequently screening the air surrounding the soil within the bags with the portable PID as the containerized soil was agitated. The screening was intended to determine the relative concentration of volatile organic compounds (VOCs) that are released from the respective soil sample into the airspace of the bag. The PID screening results recorded for each boring was noted on the Boring Logs contained in **Appendix B**.

3.2.2.3.Soil Sample Collection

Soil sampling locations, depths, and analysis completed are summarized in the following table:

Sample ID	Depth (ft)	VOCs	SVOCs	PCBs	Metals
SB-01 [1]	7.5-9	X	X	X	X
SB-04 [1]	7-9	X	X	X	X
SB-06 [2]	1.5-2	X	X	X	X
SB-08 [2]	5-7	X	X	X	X
SB-10 [2]	5-8	X	X	X	X
SB-12 [3]	12-15	X	X	X	X
SB-13 [3]	11-15	X	X	X	X
SB-14 [3]	5-8	X	X	X	X
SB-16 [1]	6-7.5	X	X	X	X
SB-17 [1]	7-10	X	X	X	X

[1] Former Gas Station / Drycleaner Area on the northeast portion of the site
[2] Site Boundary
[3] Former Salvage Yard / Machine Shop area on the west portion of the Site
SB – Soil Boring / Subsurface Soil Sample
PID Value – Highest observed field readings
ppm = parts-per-million

Volatile organic compounds (VOCs) via USEPA Method 8260, semi-volatile organic compounds (SVOCs) via USEPA Method 8270, polychlorinated biphenyls (PCBs) via USEPA Method 8082, pesticides via USEPA Method 8081, Herbicides via USEPA Method 8151, Metals include various USEPA methods (6010, 6020, 7470, 9010, 7196 based on the site-specific analysis required)

3.2.3. Groundwater Monitoring Well Installation

C&S observed the drilling and installation of temporary groundwater monitoring wells. A total of three one-inch groundwater monitoring wells were installed (TW-01, TW-02, TW-03). **Figure 3** shows the well locations. Drilling was conducted by advancing an approximate 2.5-inch diameter macrocore with a track-mounted Geoprobe® drilling unit. Non-disposable sampling equipment was decontaminated between runs and between drill locations to avoid potential cross contamination of samples.

3.2.3.1.Well Construction

The wells were installed within an approximate 2.5-inch diameter borehole, resulting from the completion of the boring by the drilling rig. The screened interval consisted of one-inch diameter 0.01 inch slotted PVC, positioned to straddle both the anticipated level of the water table and physical evidence of contamination, if applicable. Due to their temporary nature, the screened interval was not packed with sand and the upper extent of the wells were not sealed with bentonite. Groundwater was present at approximately 4 to 10 feet bgs.

The following table provides the depths of the wells.

Well No.	Depth to Water (ft)	Total Well Depth (ft)
TW-01	5.1	13.78
TW-02	10.28	12.97
TW-03	4.2	10.20

3.2.3.2.Well Development and Sampling

Due to the temporary nature of the wells, well development was not attempted. However, approximately three well volumes were removed prior to sampling in order to promote the infiltration of new groundwater through the well screen. Groundwater was very turbid and silty throughout the removal of three well volumes.

The samples were placed into glassware provided by the laboratory and put on ice in a cooler. A groundwater sample was collected from each of the three wells and submitted for VOC, SVOC, PCB and metals analysis.

4. Investigation Findings

The findings of the Limited Phase II ESA investigation are further discussed in the sections below.

4.1. Site Geology

The soil lithology across the site generally consists of fill material comprised of topsoil with organics from 0 to 1 feet bgs. Fill material was encountered in a few of the borings and was found at various depths from 1 to 5 feet bgs. The fill material was generally comprised of coal and brick. The topsoil was generally underlain by natural deposits comprised of fine to coarse sand and clay and / or silt. Groundwater was generally encountered at depths of 7.5 to 12 feet bgs. Bedrock was not encountered. The soils from borings were classified in the following simplified category:

Description	Approximate Depth (ft)
Topsoil – organics, brown silt	0-1
Brown silt with trace, fine to coarse gravel	1-5 *
Brown silty sand with trace, fine to coarse gravel	5-7
Brown fine to coarse sand	7-9
Brown silty clay	9-15

* HFM including coal, brick, and ash was identified in the upper five feet of soil in numerous borings.

The specific lithology observed at each boring location is documented on the corresponding boring logs included in **Appendix B.**

4.2. Site Hydrology

A groundwater survey was not included in the Phase II ESA scope. The following table provides the groundwater depths observed at the time of groundwater sampling from the temporary wells.

Well ID	Depth to Groundwater (feet bgs)	Depth to Bottom of Well (feet bgs)	Well Head PID Reading (ppm)	Field Observations
TW-01	5.4	14.08	0.9	Petroleum odor, sheen on water, very turbid

TW-02	12.28	14.97	0.0	Very turbid
TW-03	6.20	12.20	0.0	Very turbid

Groundwater elevations were not measured to create a groundwater gradient map. However, based on the site topography and presence of Onondaga Creek to the west which flows into Onondaga Lake to the northwest.

4.3. Geophysical Survey

Matrix marked out public and private utilities including water, electric, natural gas, sanitary sewer, and stormwater. Because there was no tracer wire on the water service, borings in this area were hand cleared to five feet. Buried objects of concern including two possible fuel tanks were identified and their locations are shown on **Figures 1, 2, and 3** The potential USTs are located:

- Along the southeast side of a buried slab on the west portion of the Site (former scrap yard). The anomaly measures 10 feet long by four feet wide. Boring SB-13 was advanced near the anomaly.

- To the east of the above referenced buried slab. The anomaly measures six feet long by three feet wide. A fire insurance map reviewed as part of the Phase I ESA depicts a gasoline tank in this area. Boring SB-12 was advanced near the anomaly.

4.4. Field Screening Results

HFM was observed across the Site (12 of 18 soil borings) to varying depths. HFM observations are documents on the boring logs contained in **Appendix B**. HFM observations are summarized in the table below:

Soil Boring ID	*Boring Depth (feet bgs)*															
	0	*1*	*2*	*3*	*4*	*5*	*6*	*7*	*8*	*9*	*10*	*11*	*12*	*13*	*14*	*15*
SB-02					X	X										
SB-03					X	X										
SB-04					X	X										
SB-06		X	X													
SB-07		X	X													
SB-08		X	X	X	X											
SB-13		X	X													
SB-14		X	X													
SB-15					X	X										

Soil Boring ID	Boring Depth (feet bgs)															
	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
SB-16				X	X	X										
SB-17					X	X										
SB-18					X	X										

Notes:
- HFM generally consisted of coal and brick.
- Red text indicates a soil sample was submitted for laboratory analysis at this interval.

Physical observations of petroleum impacts were observed in some of the borings located in the vicinity of the former gas station / dry cleaner on the northeast portion of the Site. These observations were identified via visual impairment, olfactory evidence and PID field screening analysis at the following locations and depths in the table below:

Soil Boring ID	Boring Depth (feet bgs)															
	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
SB-01	0.0						600					53				
SB-16	0.0						82					83				
SB-17	0.0						80					-				

Notes:
- PID readings were collected utilizing a MiniRae 3000 PID equipped with a 10.6 eV lamp.
- The PID screening is performed as a method of determining general presence or absence of VOCs in soil, and to provide a basis for selecting samples for laboratory analysis. The readings obtained provide only an indication of the relative levels of VOCs in the soil, and are not considered to be a direct quantification of actual soil VOC concentration.
- "-" denotes screening was not completed to above-listed depth or insufficient recovery.
- Readings are reported as parts per million (ppm).
- Red text indicates a soil sample was submitted for laboratory analysis at this interval.

Visual / olfactory observations of petroleum impacts were observed in SB-01 from 6 to 15 feet bgs, in SB-16 from 6 to 15 feet bgs, and in SB-17 from 7 to 10 feet bgs. These intervals exhibited a petroleum odor, visible staining, and PID readings ranging from 53 to 600 parts per million (ppm). Samples were collected from SB-01 (6-7.5 feet bgs), SB-16 (6-7.5 feet bgs) and SB-17 (7 to 10 feet bgs).

Due to the above, Syracuse Housing Authority was advised to report these findings to the NYSDEC Spill Hotline. C&S subsequently reported the spill on their behalf, and it was assigned number 24-00040.

4.5. Laboratory Analytical Data

As discussed above, subsurface soil and groundwater, were collected and analyzed. Summaries of the lab data are provided as **Tables 1 and 2,** and laboratory analytical reports are provided in **Appendix D.**

4.5.1. Soil Analytical Data

New York State has established Soil Cleanup Objectives (SCOs) for various chemicals of interest, including chemical compounds associated with petroleum products, chemicals, pesticides / herbicides, metals, etc. The SCOs are established in Title 6 of the New York Codes, Rules, and Regulations at Part 375 (6 NYCRR Part 375). The SCOs in Part 375 are intended to apply to State Superfund Sites, Brownfield Cleanup Program (BCP) Sites, and Environmental Restoration Program (ERP) Sites. Based on the current and future anticipated Site uses, soil contaminant concentrations have been compared to the Unrestricted Use, Residential Use, and Restricted Residential Use SCOs established by NYSDEC. Descriptions of the SCOs are as follows:

- Contaminant concentrations that are below Unrestricted Use SCOs are considered to be representative of pre-release or background conditions, unless an impact to ecological resources has been identified. Soils with contaminant concentrations below these SCOs can be utilized without restriction and sites are not burdened by easements or land use controls.

- The Residential Use SCOs are intended to apply to single family housing sites. Applicable sites in a DEC program are not permitted to raise livestock or produce animal products for human consumption and are subject to a groundwater use restriction.

- The Restricted Residential Use SCOs apply to land uses such as apartments, condominium, co-operative or other multi-family / common property control residential development. In addition to the restrictions for residential use, this use prohibits vegetable gardens, unless planted in gardens where the soil achieves the residential use soil cleanup objectives; and a prohibition of single-family housing. Restricted Residential use is the appropriate use category for day care or other child care facilities, elementary or secondary schools, or college or boarding school residential buildings. This use allows for active recreational uses, which includes recreational activities with a reasonable potential for soil contact.

Commissioner Policy 51 (CP-51) provides the framework and procedures for the selection of soil cleanup levels (SCLs) appropriate for each of the remedial programs in the NYSDEC. CP-51 is used in conjunction with applicable statutes, regulations and guidance, such as 6 NYCRR Part 375-6. Site-specific soil cleanup levels provided in CP-51 are generally applied after a site, or area of concern, is fully investigated to determine the

nature and extent of contaminant. CP-51 specifically includes SCLs for gasoline and fuel oil / diesel contaminated soils.

A summary table comparing the analytical data to the SCOs and SCLs is provided in **Table 1**. The completed laboratory reports can be found in **Appendix D**.

4.5.2. Subsurface Soil Analytical Data

Comparison of the subsurface soil analytical data indicates:

VOCs:

- The soil sample collected from SB-01 (former gas station / dry cleaner area) had concentrations exceeding the Unrestricted Use SCOs / CP-51 SCLs for n-Butylbenzene, n-Propylbenzene, Ethylbenzene, m,p-Xylene, o-Xylene and total Xylene. Additionally, the 1,2,4-Trimethylbenzene concentration exceeded the respective Restricted Residential Use SCO.

- The soil sample collected from SB-16 (former gas station / dry cleaner area) had a concentration of n-Propylbenzene that exceeded the Unrestricted Use SCO / CP-51 SCL, but was approximately 10 times less than the Residential Use SCO.

- The soil sample collected from SB-13 (former salvage yard area) had a concentration of 1,2-Dichloroethane that slightly exceeded the Unrestricted Use SCO (0.0224 ppm vs. 0.02 ppm SCO).

- Numerous other VOCs such as acetone, benzenes, and xylenes were detected in various soil samples collected throughout the Site. However, the concentrations did not exceed their respective Unrestricted Use SCO or the CP-51 SCL.

SVOCs:

- The soil sample collected from SB-06 had a concentration of Indeno(1,2,3-cd)pyrene that slightly exceeded the Restricted Residential Use SCO. It is worth noting that this sample contained HFM.

- Numerous other SVOCs were detected in various soil samples collected throughout the Site. However, they did not exceed their respective the Unrestricted Use SCO or the NYSDEC CP-51 SCL.

Metals:

- The soil sample collected from SB-06 had concentrations of metals that exceeded various SCOs. Mercury exceeded the Residential Restricted Use SCO. Zinc and

lead exceeded the Unrestricted Use SCO. It is worth noting that this sample contained HFM.

- Numerous other metals were detected in various soil samples collected throughout the Site. However, they did not exceed their respective Unrestricted Use SCO.

PCBs:

- PCBs were not detected at concentrations greater than laboratory detection limits, for any of the soil samples collected.

4.5.3. Groundwater Analytical Data

Technical and Operational Guidance Series 1.1.1 (TOGS 1.1.1) presents NYSDEC Division of Water ambient water quality standards and guidance values and groundwater effluent limitations. The authority for these values is derived from Article 17 of the Environmental Conservation Law and 6 NYCRR Parts 700-706, Water Quality Regulations. The groundwater analytical data generated from this Investigation was compared to TOGS 1.1.1 Part I ambient standards and guidance values. Part II of the document describes and lists groundwater effluent limitations.

Comparison of the groundwater analytical data to the TOGs 1.1.1 Class GA Ambient Water Quality Standards indicates:

VOCs:

- The groundwater sample collected from TW-01 (former gas station / dry cleaner area) had concentrations exceeding standards for: n-Butylbenzene, Ethylbenzene, n-Propylbenzene, 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, o-Xylene and total Xylene. Several exceedances were at least an order of magnitude higher than the standard.

- The groundwater sample collected from TW-03 (former Salvage yard area) had concentrations exceeding standards for 1,2-Dichloroethane (which was also present in soil in this area).

SVOCs:

- The groundwater sample collected from TW-01 had concentrations exceeding standards for naphthalene, benzo(a)pyrene, and chrysene.

Metals:

- The groundwater sample collected from TW-01 had concentrations exceeding standards for chromium, lead, and manganese. The lead concentration at this location is an order of magnitude higher than the other two wells. This may be a result of historical releases of leaded gasoline at this location, or due to turbidity as discussed below.

- The groundwater sample collected from TW-02 (southeast Site boundary) had concentrations exceeding standards for lead, and manganese.

- The groundwater sample collected from TW-03 (former Salvage yard area) had concentrations exceeding standards for barium, lead, manganese, and nickel.

- It was noted in the laboratory report that the lead concentration was elevated due to dilution required for high interfering element. Due to the turbidity of each sample, it is expected that each sample is biased high due to high concentrations of suspended particles.

PCBs:

- PCBs were not detected at concentrations greater than laboratory detection limits, for any of the groundwater samples collected.

The locations of the groundwater wells are shown on **Figure 3.**

5. Conclusions

At the request of Blueprint 15, C&S Engineers, Inc. (C&S) has prepared this Phase II Environmental Site Assessment Report of the Latimer Terrace Apartments located at 301-311 East Taylor Street, Syracuse, New York in Onondaga County (Site). The location of the Site is shown on **Figure 1**.

C&S performed this Phase II to address the identified Recognized Environmental Conditions identified as a result of the November 2023 Phase I Environmental Site Assessment, completed by C&S Engineers, Inc. The Phase I indicated concerns with historical onsite and offsite uses as summarized below.

- The Site and surrounding area have been associated with dense urban development since at least 1892. The Site was once occupied by residential houses, small shops, and a church, from at least 1892 through 1910. From 1930 through 1961, the Site began to see increased commercial development, such as a drycleaner and automobile filling station (in the northwest section), auto/motorcycle repair shop and an automobile salvage yard (in the west section). Sometime around the mid 1960s, the Site was cleared of all existing buildings and redeveloped with large apartment buildings. These apartment buildings would remain until around 1989 when they would be demolished and replaced by the current apartment structures.

- The surrounding area was predominantly residential in nature from at least 1892 to 1910. Numerous commercial / industrial properties have been located within close proximity to the Site in the 1900s including the Syracuse Twist Drill Company which included an oil house, forge shop, machine shop, boiler house, and an underground oil tank, (adjacent to north between 1892 and 1961), an automobile filling station, auto repair station, appliance repair and tin shop (adjacent to west between 1951-1961), various scrap yards, warehouses, auto repairs stations and automobile filling stations (in close proximity to the south between 1951-1990). Between 1951 and 1968 many structures in close proximity to the Site were demolished. Demolition to the north, west and east of the Site were then redeveloped for apartment and town house complexes. Around 1989, the northern apartments were demolished and replaced by the current apartment structures.

This Phase II ESA was not intended to be a complete delineation of the Site and its contaminants. Instead, this Phase II ESA was based on the results of the Phase I ESA, as stated above. C&S's investigation was focused on the collection of subsurface soils and groundwater in areas of the Site which may have been impacted by historical releases from past industrial and/or commercial operations, that could have impacted the Sites soil and groundwater.

5.1. Findings

C&S' Investigation of the Site was conducted on February 26, 2024 and March 5, 2024. The following summarizes and discusses the results of this investigation.

The soil lithology across the site generally consists of historic fill material (HFM) comprised of top soil with organics from 0 to 1 feet below ground surface (bgs). HFM including coal, brick, and ash was encountered in approximately 75 percent of the borings and was found at various depths from 1 to 5 feet bgs. The soil sample collected and analyzed from SB-06 (1.5' – 2') was the only sample that contained HFM. That sample contained concentrations of a SVOC ((Indeno(1,2,3-cd)pyrene)) and multiple metals that exceeded Residential Use SCOs. Therefore, it is expected that the surface soils from across the Site that contained HFM are expected to be similarly impacted. The topsoil was generally underlain by natural deposits comprised of fine to coarse sand and clay and / or silt. Groundwater was generally encountered at depths of 7.5 to 12 feet bgs. Bedrock was not encountered.

The Phase II was designed to investigate three unique areas and their related concerns:

- The former gasoline station / dry cleaner on the northeast portion of the Site
- The former scrap yard on the west portion of the Site.
- The Site boundary to assess potential contamination migration from offsite uses of concern.

The following paragraphs provide summaries of the results of the investigations for each of these areas.

Former Gasoline Station / Dry Cleaner

An area on the northeastern portion of the Site was investigated to determine if the former operation of a dry cleaner and filling station has impacted Site soil or groundwater. The investigation in this area included the completion of a geophysical survey, advancement of seven soil borings, the installation of one temporary groundwater monitoring well, and the collection and analysis of four soil and one groundwater sample for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), poly-chlorinated biphenyls (PCBs), and metals.

The geophysical survey did not reveal the presence of abandoned underground tanks or other anomalies of concern, so the initial boring (SB-01) was placed at the location most likely to have been impacted from former operations, the former gas tanks. Soil in this boring, starting at 6.5 feet bgs was gray in color, exhibited a strong petroleum odor with photoionization detector (PID) levels in the 600s parts per million (ppm) and a heavy sheen was observed in the saturated zone. Due to the discovery of impacts at this location, C&S attempted to provide some level of delineation and positioned borings in various cardinal directions. Based on that effort, the soil impacts appear to be primarily

contained to an area of 2,150 square feet and a depth of 6 to 15-20 feet. The resulting volume of impacted soil is 700 - 900 cubic yards. The soil sample from SB-01 (the gas tank area) is impacted by VOCs, but only two compounds exceeded Residential Use Soil Cleanup Objectives (SCOs). A temporary groundwater monitoring well (TW-1) was installed in SB-01 to understand the anticipated worst-case groundwater impacts. The groundwater in this area was very turbid. Additionally, signs of impairment were observed as the groundwater had a strong petroleum odor, a rainbow sheen and oily product was observed and the initial PID well head reading was 0.9 ppm. Seven VOCs and three SVOCs were detected in TW-1 at concentrations that exceed their respective Technical and Operational Series 1.1.1 (TOGS 1.1.1) standards or guidance. Several of the exceedances are an order of magnitude or higher than the limit. The lead concentration at this well exceeded the TOGS standard and was an order of magnitude higher than other groundwater samples from the Site, suggesting it could be related to the use of tetraethyl lead. However, due to the temporary nature of the wells, the effluent was very turbid and is also a likely or contributing cause of the elevated lead concentration. Due to the discovery of the petroleum impacts, C&S notified the owner Syracuse Housing Authority of the NYSDEC spill reporting requirements. C&S subsequently reported the spill on their behalf and it was assigned number 24-00040.

Former Automotive Repair / Scrap Yard

An area centrally located along the west portion of the Site was investigated to determine if the former operation of an automotive repair / scrap yard has impacted Site soil or groundwater. The investigation in this area included the completion of a geophysical survey, advancement of three soil borings, the installation of one temporary groundwater monitoring well, and the collection and analysis of three soil and one groundwater sample for VOCs, SVOCs, PCBs, and metals.

The geophysical survey for this area revealed an approximate six-inch-thick buried slab around three feet bgs. The approximate dimensions of the slab are 50 feet by 50 feet. Along the southeast side of the buried slab an anomaly was detected and the geophysical technician suspected it to be an underground storage tank (UST). The anomaly measured ten feet long by four feet wide. Boring SB-13 was advanced near the anomaly. Additionally, at an approximate distance of 50 feet to the east of the buried slab, another anomaly suspected to be a UST was detected. The anomaly measured six feet long by three feet wide. A fire insurance map reviewed as part of the Phase I ESA depicts a gasoline tank in this area. Boring SB-12 was advanced near the anomaly. Boring SB-14 was advanced on the north side of the buried slab. Soils from each of these borings were screened for signs of visual impairment, olfactory evidence and PID field screening analysis. No obvious indications of impairment were identified. However, the soil sample from SB-13 had a concentration of 1,2-dichloroethane that (a chlorinated VOC), that marginally (0.024 ppm vs. 0.02 ppm) exceeded Unrestricted Use SCOs.

A temporary groundwater monitoring well (TW-3) was installed in SB-13. The groundwater in this area was very turbid. Additionally, groundwater was screened for signs of visual impairment, olfactory evidence and an initial PID measurement was recorded at the well head. No obvious indications of impairment were identified. However, 1,2-dichloroethane was also detected in TW-3. The concentration of 13.3 parts per billion (ppb) exceeded its respective Technical and Operational Series 1.1.1 (TOGS 1.1.1) standard of 0.6 ppb. The exceedance is an order of magnitude or higher than the limit.

Offsite Uses of Concern

Several offsite concerns included a former adjacent industrial area (adjacent to the north), former gas stations (close proximity to the south and west), an historical drycleaner spill (close proximity to the southwest), and the Syracuse University Steam Station with several historical spills (close proximity to the southeast). The investigation scope to address these areas included the advancement of seven soil borings, the installation of one temporary groundwater monitoring well along various areas of the Site boundary, and the collection and analysis of three soil and one groundwater sample for VOCs, SVOCs, PCBs, and metals.

Soils in these areas were screened for signs of visual impairment, olfactory evidence and PID field screening analysis. No obvious indications of impairment were identified these areas. The detected contaminants in the soil samples were below Unrestricted Use SCOs. A temporary groundwater monitoring well (TW-2) was installed in SB-10. The groundwater in this area was very turbid. Additionally, groundwater was screened for signs of visual impairment, olfactory evidence and an initial PID measurement was recorded at the well head. No obvious indications of impairment were identified. No VOCs, SVOCs, or PCBs were detected in TW-2.

5.2. Recommendations

Due to the current and proposed residential use of the Site, it is recommended that the soil and groundwater impacts in the vicinity of the former dry cleaner / filling station be remediated. If the remediation involves source removal and offsite disposal, the soil and groundwater should be properly profiled, transported, and disposed per applicable state and federal regulation. The potential for soil vapor intrusion should also be investigated and addressed as needed.

It is expected that the surface soils from across the Site that contain HFM are impacted with SVOCs and metals at concentrations above site use criteria. As such, any future on-site construction or intrusive excavation activities that would impact the HFM should ensure that these materials are properly handled and managed. As a measure of caution, it is recommended that all soil be properly screened, sampled, and profiled before it is reused elsewhere on the Site or taken offsite. Any soil taken offsite should be managed

according to NYCRR Part 360 and other applicable laws. Additionally, any future use of the site should take into consideration potential contact / exposure risks to on-site occupants. In the event a future construction project encounters groundwater in the vicinity of the former dry cleaner / filling station or the scrap yard, the water should be properly managed. Soil and groundwater management should be addressed in a site-specific soil and groundwater management plan prior to future construction activities.

Test pits should be excavated to determine the absence / presence of the suspected USTs. If USTs are positively identified, proper tank closure and confirmatory sampling will be required.

Following the report of the spill, a NYSDEC project manager contacted C&S and is expecting to receive a copy of the report. It is recommended that this report be provided to the NYSDEC to determine if they agree or have commentary on our recommendations.

Notes:

Results and soil cleanup objectives (SCO) in mg/kg

Analytical data compared to NYSDEC Part 375-6

Highlighted color indicates the respective use SCO(s) exceeded. Use type SCOs are listed from left to right from most restrictive to least restrictive.

Blank space indicates that a SCO does not exist

"J" indicates estimated concentration

"ND" indicates analyte not detected at concentration greater than laboratory detection limit. Detection limit shown in parantheses.

[a] Associated CCV outside of control limits high, sample was ND.

[b] Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.

[c] Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.

Zinc	ug/l	-	270	107	93.3

Notes:

- Analytical results compared to NYSDEC Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values.

- Highlighted cell indicates the respective groundwater limitation exceeded.

- Blank space indicates that a threshold does not exist.

- "J" indicates the analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

[a] Associated CCV outside of control limits high.

[b] Associated CCV outside of control limits high, sample was ND.

[c] Estimated value, concentration exceeds linear calibration range due to vial difference.

[d] Elevated detection limit due to dilution required for high interfering element.

RE: Ground Penetrating Radar (GPR)/Utility Location Field Report
Latimer Terrace
301 East Taylor Street
Syracuse, NY
METI Project: 24.003

Dear Mr. Walker,

Enclosed is the ground penetrating radar (GPR)/Utility Location Field Report for the above referenced site. The report includes a summary of the services provided on 2/26/24 as well as a site plan summarizing the findings of the investigation.

If you have any questions or require further information, please contact us.

GPR/UTILITY LOCATION FIELD REPORT

Date(s) on site: 2/26/24

METI Technician: Nickolas Ander

Others on site: Rich Reagan

Client: C&S Companies

Nicholas Coulombe

Site Location: 301 East Taylor Street, Syracuse

Site Contact:

Phone:

Scope of Work: Perform a sitewide utility location along with targeted GPR Surveys at the North Eastern corner of the site and the Western portion of the site.

Services Provided: Utility Location / GPR

Equipment Utilized: RD7200

MALA Easy Locator Pro

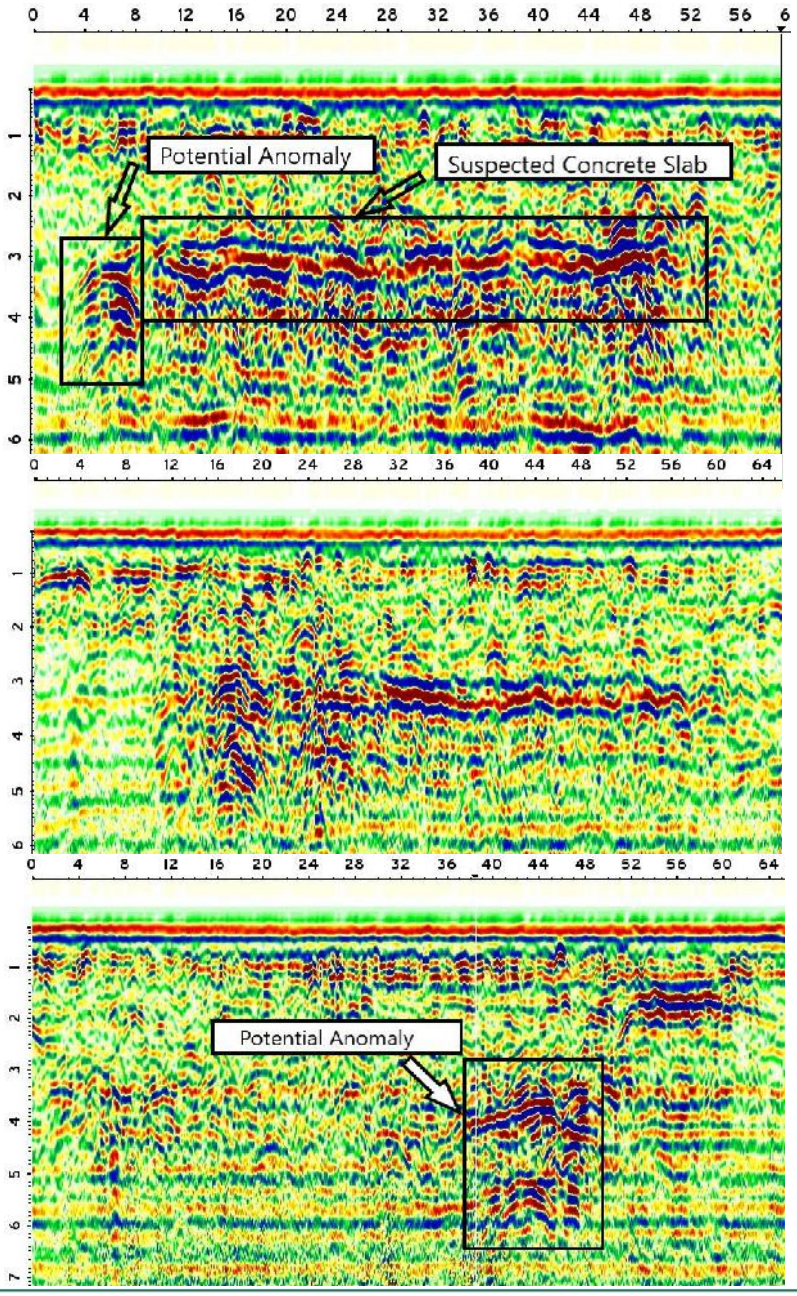
176 ft

Technician Notes:

This report supplements information relayed and marked on-site at time of service. It is for informational purposes only.

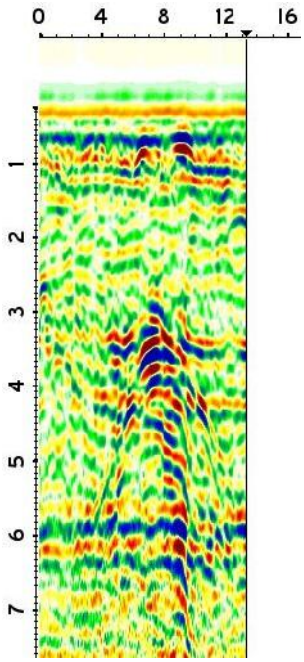
Multiple Utilities were located across the site, refer to the attached site map for their locations. The water service to the complex was unable to be located, this is most likely due to the line being a poly material with no-tracer wire or other means of location being attached. The water line for the on-site fire hydrant was located, refer to attached site map. No anomalies or other structures were observed when performing the GPR survey across the Northeastern corner of the site. When performing the GPR survey on the Western portion of the site, several areas of interest were identified.

Potential Concrete Slab and Anomaly:



These screen grabs were all taken during the GPR survey on the Western portion of the site. The first two images are scans reading East to West (Left to Right on the image), while the third image is a scan North to South. The first two images clearly depict a densely compacted zone approximately 6 inches thick, around 3 feet below ground surface (bgs) which is suspected to be a concrete slab from previous site activities. The approximate dimensions of the slab were noted to be 50ft by 50ft. The anomaly shown off the suspected slab does show some similarities to an underground storage tank (UST). The two features showing it may be a UST are the defined rounded top seen best in the first image, as well as the semi-flat feed back when scanned parallel over the top of the anomaly, shown in image 3. This anomaly was noted to be approximately 10ft long by 4ft wide. Image 2 shows

Second Anomaly



This cross section was taken running perpendicular to the easternmost anomaly that was detected, refer to the site map for the location. The anomaly was located between the electrical and gas services for the nearby apartment building. This anomaly was much smaller in size compared to the previously mentioned anomaly with an approximate area of 3ft by 6ft. The 2D scans does shown possible indicators of a UST such as the smooth top shown here.

Limitations

GPR and subsurface locating uses non-intrusive methods to search for, find, and mark out buried utilities and other subsurface objects including USTs. METI strives to provide the highest quality subsurface location services possible with the technical expertise of our field specialists and state-of-the-art equipment used. Every effort is made to provide our clients with the most accurate information possible without adverse consequences. However, there are innumerable variables involved in locating underground structures, such as topography, size and complexity of the job site, depth and proximity of buried utilities, above ground obstructions, short turnaround schedules, changes in the scope of work, lack of or outdated blueprints, and adverse weather conditions. GPR signal penetration might not be sufficient to detect all utilities or USTs.

Due to unpredictable factors that may affect the results, METI makes no guarantee, expressed or implied, with respect to the completeness or accuracy of the information provided. METI makes no guarantee that all subsurface utilities and structures will be detected. METI is not responsible for detecting subsurface utilities and structures that normally cannot be detected by the methods employed or that cannot be detected because of site conditions. Any use or reliance on the information or opinions provided herein is at the risk of the user and METI shall not be liable for any damage or injury arising out of the use or misuse of the information provided.

Any depths presented in this report are approximate only and are intended to present a general understanding of the depth of an identified subsurface utility or structure. It should be understood by anyone using this report that depths are presented in that manner only and that if knowledge of the vertical location of a subsurface utility or structure is critical, then a Subsurface Utility Engineering (SUE) Quality Level A investigation may be warranted. A SUE Quality Level A investigation requires the use of intrusive, non-destructive methods to expose the subject utilities or structures for precise plan and profile mapping.

Client assumes responsibility of maintaining mark-outs upon completion of service. Mark-outs made in inclement weather and in high traffic areas may not last.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: C&S Companies **Job No:** JD83205

Site: Latimer Terrace Ph II **Report Date** 3/18/2024 11:42:48 A

On 02/27/2024, 7 sample(s), 0 Trip Blank(s), 0 Equip. Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. (SGS) at a temperature of 2.9 °C. The samples were intact and properly preserved, unless noted below. An SGS Job Number of JD83205 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V1N230

- The data for SW846 8260D meets quality control requirements.
- JD83205-6: Sample analyzed with head-space vial. Confirmation run.

Matrix: AQ **Batch ID:** V5A148

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD83238-11MS, JD83238-11MSD were used as the QC samples indicated.
- Sample(s) JD83205-6 have compounds reported with "E" qualifiers indicating estimated value exceeding calibration range. Estimated value, concentration exceeds linear calibration range due to vial difference.
- The matrix spike (MS) recovery(s) of 1,4-Dioxane are outside control limits. Outside control limits due to matrix interference.
- The matrix spike duplicate (MSD) recovery(s) of Vinyl chloride are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- The matrix spike (MS) recovery(s) of cis-1,2-Dichloroethene, Vinyl chloride are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- The RPD(s) for the MS and MSD recoveries of 1,4-Dioxane are outside control limits for sample JD83238-11MSD. Outside control limits due to matrix interference.
- JD83205-7: (pH=6)Sample pH did not satisfy field preservation criteria.
- JD83205-7 for Acetone: Associated CCV outside of control limits high, sample was ND.
- JD83205-6 for Acetone: Associated CCV outside of control limits high.

Matrix: SO **Batch ID:** V2V4154

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD83277-4MS, JD83277-4MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- The matrix spike (MS) recovery(s) of 1,1-Dichloroethane, 1,1-Dichloroethene, 1,2-Dichloroethane, trans-1,2-Dichloroethene are outside control limits. Outside control limits due to matrix interference.
- The matrix spike duplicate (MSD) recovery(s) of 1,4-Dioxane are outside control limits. Outside control limits due to matrix interference.
- The RPD(s) for the MS and MSD recoveries of 1,1,1-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethene, 1,2-Dichloroethane, 1,4-Dioxane, 2-Butanone (MEK), Benzene, Chlorobenzene, cis-1,2-Dichloroethene, Methyl Tert Butyl Ether, Methylene chloride, Toluene, Trichloroethene are outside control limits for sample JD83277-4MSD. Outside control limits due to matrix interference.
- JD83205-1: Dilution required due to high concentration of non-target compound.
- JD83205-1 for Acetone: Associated CCV outside of control limits high, sample was ND.

Matrix: SO **Batch ID:** VI10363

MS Volatiles By Method SW846 8260D

Matrix: SO **Batch ID:** VI10363

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD82804-9RMS, JD83097-1DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- The duplicate RPD(s) for 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, m,p-Xylene, o-Xylene are outside control limits for sample JD83097-1DUP. High RPD due to possible sample nonhomogeneity.
- JD83205-5 for Vinyl chloride: Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
- JD83205-4 for Vinyl chloride: Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
- JD83205-3 for Vinyl chloride: Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
- JD83205-2 for Vinyl chloride: Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.

MS Semi-volatiles By Method SW846 8270E

Matrix: AQ **Batch ID:** OP52821

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Matrix: SO **Batch ID:** OP52854

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) JD82794-13MS, JD82794-13MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- The matrix spike duplicate (MSD) recovery(s) of Anthracene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Chrysene, Indeno(1,2,3-cd)pyrene, Phenanthrene, Pyrene are outside control limits. Outside of in house control limits.
- JD83205-3 for Benzo(g,h,i)perylene: Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
- JD83205-1 for Nitrobenzene-d5: Outside of in house control limits.

GC/LC Semi-volatiles By Method SW846 8082A

Matrix: AQ **Batch ID:** OP52826

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- JD83205-6: Had TBA cleanup.

Matrix: SO **Batch ID:** OP52883

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) JD83414-1MS, JD83414-1MSD, OP52883-MSMSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- The matrix spike duplicate (MSD) recovery(s) of Aroclor 1254 are outside control limits. Outside of in house control limits.
- The RPD(s) for the MS and MSD recoveries of Aroclor 1254 are outside control limits for sample OP52883-MSD. Analytical precision exceeds in-house control limits.
- OP52883-BS1 for Aroclor 1016: Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
- OP52883-BS1 for Aroclor 1260: Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

Metals Analysis By Method SW846 6010D

Matrix: AQ **Batch ID:** MP45136

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD83526-1MS, JD83526-1MSD, JD83526-1SDL were used as the QC samples for the metals analysis.
- The serial dilution RPD(s) for Chromium, Lead, Silver are outside control limits for sample MP45136-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- JD83205-6 for Lead: Elevated detection limit due to dilution required for high interfering element.
- JD83205-7 for Lead: Elevated detection limit due to dilution required for high interfering element.

Matrix: SO **Batch ID:** MP45222

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD83264-1MS, JD83264-1MSD, JD83264-1SDL were used as the QC samples for the metals analysis.
- The matrix spike (MS) recovery(s) of Manganese are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- The serial dilution RPD(s) for Cadmium, Copper are outside control limits for sample MP45222-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MP45222-SD1 for Zinc: Serial dilution indicates possible matrix interference.
- MP45222-SD1 for Manganese: Serial dilution indicates possible matrix interference.
- MP45222-MB1 for Manganese: All reported results <RL or >10x MB value.

Metals Analysis By Method SW846 7470A

Matrix:	AQ	Batch ID:	MP45244

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD83786-1FMS, JD83786-1FMSD were used as the QC samples for the metals analysis.

Metals Analysis By Method SW846 7471B

Matrix:	SO	Batch ID:	MP45236

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD83205-1MS, JD83205-1MSD were used as the QC samples for the metals analysis.

General Chemistry By Method SM2540 G 18TH ED MOD

Matrix:	SO	Batch ID:	GN51820

- Sample(s) JD83205-1DUP were used as the QC samples for the Solids, Percent analysis.

SGS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting SGS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by SGS indicated via signature on the report cover.

(a) Dilution required due to high concentration of non-target compound.
(b) Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
(c) Associated CCV outside of control limits high.
(d) Estimated value, concentration exceeds linear calibration range due to vial difference.
(e) Elevated detection limit due to dilution required for high interfering element.

SGS Sample Receipt Summary

Job Number: jd83205 **Client:** C&S COMPANIES **Project:** LATIMER TERRACE PH II

Date / Time Received: 2/27/2024 9:50:00 AM **Delivery Method:** FEDEX **Airbill #'s:**

Cooler Temps (Raw Measured) °C: Cooler 1: (2.9);

Cooler Temps (Corrected) °C: Cooler 1: ();

Cooler Security	Y	N		Y	N
1. Custody Seals Present:	☑	☐	3. COC Present:	☑	☐
2. Custody Seals Intact:	☑	☐	4. Smpl Dates/Time OK	☑	☐

Cooler Temperature	Y	N
1. Temp criteria achieved:	☑	☐
2. Cooler temp verification:	IR-40 Plastic	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

Quality Control Preservation	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	☐
2. Trip Blank listed on COC:	☐	☑	☐
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition	Y	N
1. Sample recvd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume recvd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☐	☐	☑

Test Strip Lot #s: pH 1-12: 231619 pH 12+: 203117A Other: (Specify)

Comments: 1. -7 only received 1 x 950ML volume for EX Limited Volume. Please confirm.

Responded to by: Angela Lattanzio

Response Date: 2/27/24

Please proceed with limited volume.

Job Change Order: JD83205

Requested Date:	2/28/2024	**Received Date:**	2/27/2024
Account Name:	C&S Companies	**Due Date:**	2/28/2024
Project Description:	Latimer Terrace Ph II	**Deliverable:**	NYASPB

EXECUTIVE SUMMARY

At the request of Blueprint 15, Inc., C&S Engineers, Inc. (C&S) has completed this Phase I Environmental Site Assessment of the Subject Property identified as City of Syracuse Tax Map ID No. 095.-08-01.0, which is located at 301-311 East Taylor Street, Syracuse, New York in Onondaga County. The Subject Property is an approximate 4.3-acre section of an overall 11.1-acre parcel. The Subject Property is located in the southern portion of the parcel and is owned by Syracuse Housing Authority (SHA).

The observations made during C&S' November 10, 2023 Subject Property reconnaissance are included in latter sections of this report. The remainder of this report includes information collected from various local, state and federal agencies, interviews, user-provided information, and reasonably ascertainable historical records such as tax records, aerial photographs, fire-insurance maps, local city directories, and topographic maps.

Based on the results of this Phase I ESA, the following findings and opinions are provided:

Findings and Opinions:

- The Subject Property is identified as City of Syracuse Tax Map ID Nos. 095.-08-01.0, which is located at 301-311 East Taylor Street, Syracuse, New York in Onondaga County. The Subject Property is an approximate 4.3-acre section of an overall 11.1-acre parcel. The Subject Property is located in the southern portion of the parcel and is owned by Syracuse Housing Authority (hereby referred to as SHA).

- The Subject Property and surrounding area have been associated with dense urban development since at least 1892. The Subject Property was occupied by residential houses, small shops, and a church, from at least 1892 through 1910. From 1930 through 1961, the Subject Property began to see increased commercial development, such as a drycleaner, automobile filling station, auto/motorcycle repair shop, and an automobile salvage yard. Sometime around the mid-1960s, the Subject Property was cleared of buildings and replaced by large apartment buildings. These apartment buildings would remain until around the late 1980s when they would be demolished and replaced by the current apartment structures. The historical operation of a drycleaner, automobile filling station, auto/motorcycle repair shop, and an automobile salvage yard on the Subject Property is considered a Recognized Environmental Condition as releases could have impacted the soil and groundwater.

- The surrounding area was predominantly residential in nature from at least 1892 to 1910. Numerous commercial / industrial properties have been located within close proximity to the Subject Property in the 1900s including the Syracuse Twist Drill Company which included an oil house, forge shop, machine shop, boiler house, and an underground oil tank, (adjacent to north between 1892 and 1961), an automobile filling station, auto repair station, appliance repair and tin shop (adjacent to west between 1951-1961), various scrap

yards, warehouses, auto repairs stations and automobile filling stations (in close proximity to the south between 1951-1990). Between 1951 and 1968 many structures in close proximity to the Subject Property were demolished. Demolition to the north, west and east of the Subject Property were then redeveloped for apartment and town house complexes. In the late 1980s, the northern apartments were demolished and replaced by the current apartment structures. The historical operation of a gasoline station at 1000, 1006 and 1005 South State Street (to the west of the SP), and an oil company at 1105 South State Street (to the south of the SP), a drycleaner at 1118-1120 South State Street (to the south of the SP) and a industrial facility known as the Syracuse Twist Drill Company (to the north of the SP) would be considered an a Recognized Environmental Condition in respect to the Subject Property as releases could have impacted the soil and groundwater.

- The information provided in the database report identified a Recognized Environmental Concern in regards to the Salvation Army, located at 1105 South Salina Street has a historic spill that involved contaminated soil found under pump island. The database report indicates the soil would be stockpiled for removal; however there is no record of this occurring. Also a leaking storage tank listing describes a 550-gal tank that leaked an unknown amount of gasoline. The spill is closed as not meeting standards; however, the lack of detail indicates contaminated soil and/or groundwater may exist. The property is considered a Recognized Environmental Condition and a Vapor Encroachment Concern as it is located within 1/10th of a mile and cross-gradient from the Subject Property. Any releases on the property could have migrated to the Subject Property.

- The information provided in the database report identified a Recognized Environmental Concern in regards to the Syracuse University Steam Plant, located at 500 East Taylor Street has a historic spill that involved the discovery of fuel oil on groundwater in 1981. In 1991, fuel oil was still found. In 1992, the surrounding soil was excavated and the NYSDEC closed the spill but not meeting standards. Due to fuel oil in groundwater the potential for the fuel oil to travel to the Subject Property is greatly increased and therefore this would present a concern in respect to the Subject Property. The property is considered a Recognized Environmental Condition and a Vapor Encroachment Concern as it is located within 1/10th of a mile and up-gradient from the Subject Property. Any releases on the property could have migrated to the Subject Property.

- Based on the reconnaissance of the Subject Property, there was no visual evidence of a REC.

- A Phase I ESA was conducted by EA Engineering in May 2023 on the northern section of the same parcel as the Subject Property. Review of historical uses of the Phase One Area and adjacent properties indicate that there were uses which could have negatively impacted the environmental integrity of the Phase One Area, including its use as a junk yard until at least 1961. Additionally, several offsite locations were determined to pose a potential environmental risk to the Phase One Area due to spills, and/or leaking storage tanks. A Phase II ESA was conducted in June 2023 by EA Engineering and the results

indicated that PFAS compounds and carbon tetrachloride were detected in groundwater at concentrations that exceeded AWQS Class GA criteria. PFOS were detected in soil exceeding the protection of groundwater guidance value. Trichloroethylene was detected at soil vapor at concentrations that exceeded EPA Residential Sub-Slab Soil Vapor screening criteria. The results of EA Engineering's Phase II ESA of the northern property may suggest a Recognized Environmental Condition and a Vapor Encroachment Concern to the Subject Property, which is located hydraulically upgradient from the Phase II site.

- Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in a wide variety of products such as water-repellent clothing and furniture, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces, electrical wire insulation, and several other uses.

  In recent years, the NYSDOH, NYSDEC, and USEPA began prioritizing the study of potential health effects of PFAS. There is limited information known to-date regarding PFAS and the regulations associated with them remain fluid. Although there is no precisely-clear definition of what constitutes a PFAS, the EPA lists 6,330 named PFAS substances. In February 2019, NYSDEC mandated the sampling of 21 PFAS substances in groundwater for sites being investigated under certain NYSDEC programs. As of the date of this report, PFAS is not considered hazardous by CERCLA, and therefore a non-scope item.

  According to the EPA, drinking water can be a source of exposure in communities where these chemicals have contaminated water supplies. Such contamination is typically localized and associated with a specific facility. For example, an industrial facility where PFAS were produced or used to manufacture other products, or locations where firefighting foam was used such as oil refineries, airfields or other training facilities for firefighters.

  During the completion of this assessment, an effort has been made to identify known sources of PFAS on or in the vicinity of the Subject Site, based upon common industry knowledge at the time this Assessment was completed. Based on the Phase II report summarized above, PFAS may be an issue at the Subject Property that requires further investigation.

Please refer to Sections 9 and 10 for the complete Findings, Opinions and Conclusions.

1.0 INTRODUCTION

1.1. Purpose

The purpose of this Phase I Environmental Site Assessment (ESA) is to evaluate whether current or historical activities on or adjacent to the property located at 301-311 East Taylor Street, Syracuse, New York, in Onondaga County (the "Subject Property") may have resulted in contamination of the Subject Property by hazardous materials and/or petroleum products. The presence of or potential for contamination is subsequently referred to in this report as a Recognized Environmental Condition (REC). Specific elements of the Phase I ESA include the identification of:

- Possible environmental contaminants
- The proximity of sensitive receptors
- Past and present uses on or adjacent to the Subject Property that may be a REC
- Hazardous material and waste storage or disposal practices

The work conducted in the process of this Phase I ESA was completed consistent with the applicable guidelines developed in the American Society of Testing Materials (ASTM) Standards E1527-21. The performance of this Phase I ESA will help establish the innocent landowner defense through the identification of potential environmental issues which may affect future development of the Subject Property. Specifically, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practice that constitutes "all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C. 9601(35) (B) and 40 C.F.R. Part 312."

It is C&S' understanding that Blueprint 15, Inc. requires a Phase I ESA for the Subject Property for the purpose of environmental due diligence.

ASTM E1527-21 defines three types of RECs as follows:

Recognized Environmental Condition (REC):
"(1) The presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. "

Controlled Recognized Environmental Condition (CREC):
"A recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or

petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations)."

Historical Recognized Environmental Condition (HREC):
"A previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations)."

In addition to defining RECs, ASTM E1527-21 also defines the following terms that may be applicable when assessing a site's environmental risk:

De Minimis Condition:
A de minimis condition is defined as a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. These are not considered to be RECs, but may warrant consideration.

Business Environmental Risk:
A Business Environmental Risk is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Figure X4.1 – Simplified REC Logic, as taken from ASTM 1527-21 is provided on the following page. The flow chart is applied to determine if a condition is a REC, CREC, HREC, de minimis, or not a REC.

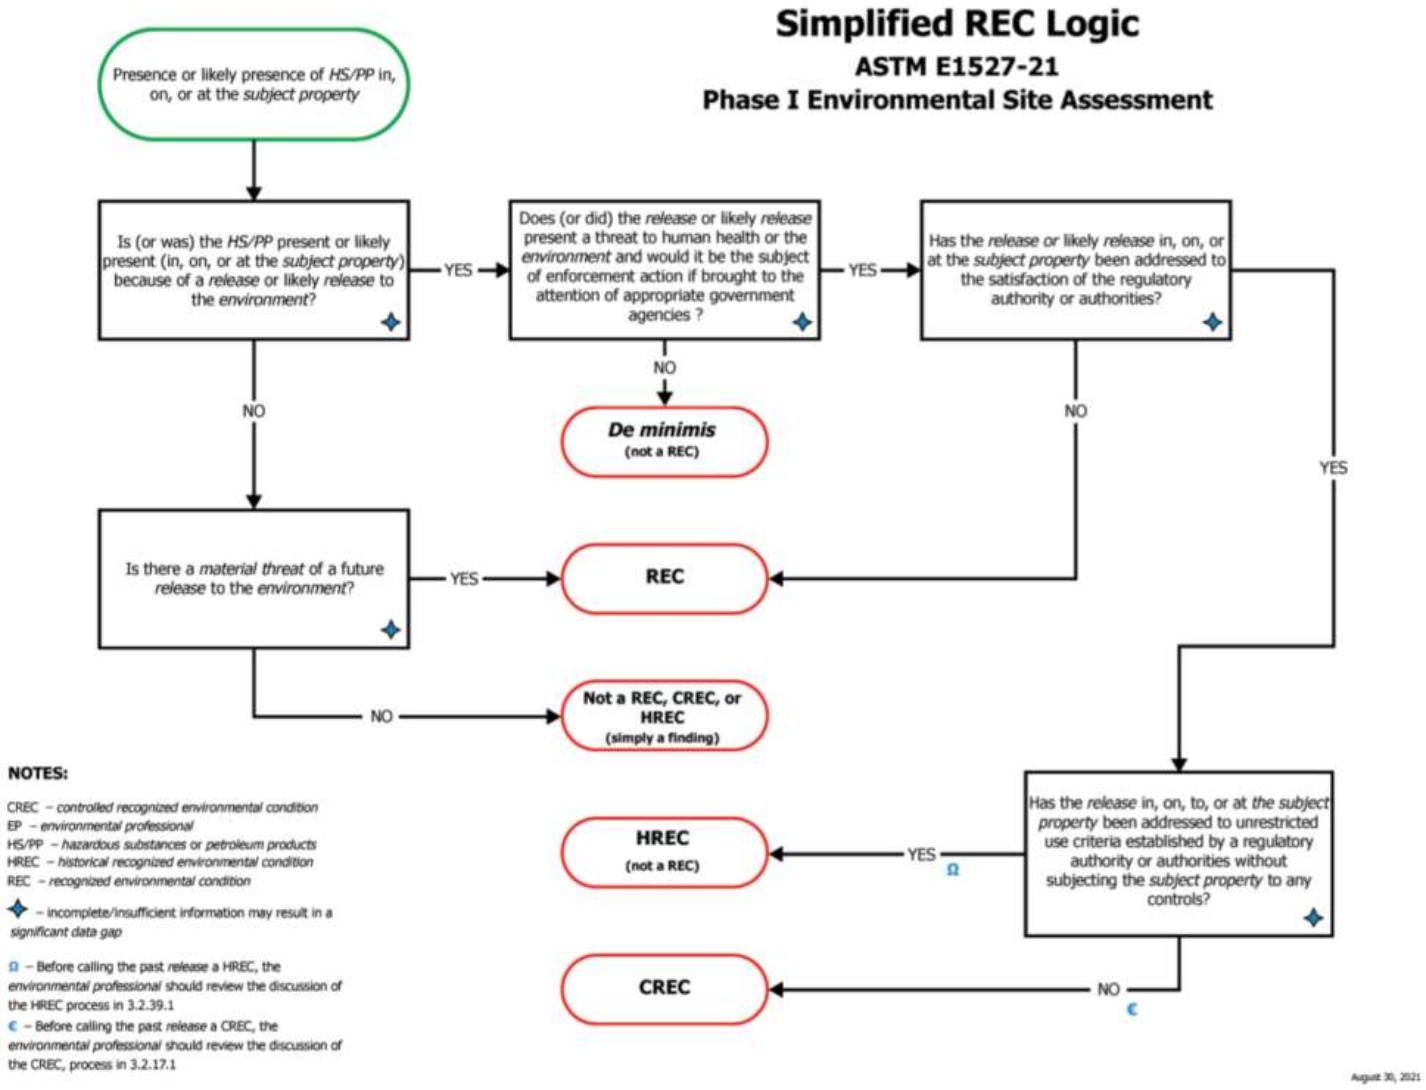

FIG. X4.1 Simplified REC Logic

E1527 – 21

1.2. Scope of Services

The scope of services for this Phase I Environmental Site Assessment included the following tasks:

- Review of the current and past uses of the Subject Property;
- Review of environmental studies/data readily available for the Subject Property;
- Subject Property reconnaissance to evaluate current conditions;
- Review of state and federal databases;
- Evaluation of the potential environmental impact of adjacent properties on the Subject Property; and
- Interview with state / local agencies and Subject Property owner and / or manager, as available.

The scope of services for the Phase I ESA was described in C&S' agreement with Blueprint 15, Inc. signed and dated October 26, 2023.

1.3. User Reliance

This report was prepared by C&S expressly and exclusively for use by Blueprint 15, Inc., the City of Syracuse, Greater Syracuse Property Development Corporation, and its successors and/or assigns. These entities can use and rely upon the information contained in this report, findings, and conclusions. No one else is authorized to rely on this report for any purpose, except to the extent that such reliance is specifically authorized in writing by C&S. Any person who intends to take action, which is in any way related to or affected by the information contained herein, should independently verify all such information.

2.0 SUBJECT PROPERTY DESCRIPTION

2.1. Location, Use, and Description

The Subject Property is identified as City of Syracuse Tax Map ID No. 095.-08-01.0, which is located at 301-311 East Taylor Street, Syracuse, New York in Onondaga County. The Subject Property is an approximate 4.3acre section of an overall 11.1-acre parcel. The Subject Property is located in the southern portion of the parcel and is owned by Syracuse Housing Authority (SHA).

The Subject Property consists of multiple two-story apartment buildings, asphalt parking area, and manicured lawn. Further information concerning existing Subject Property conditions is summarized in Section 8.

The location of the Subject Property is depicted on a 7.5 Minute USGS Topographic Quadrangle as well as on a site plan, which are provided in the **Figures** section of this report.

2.2. Description of Subject Property Improvements and Utilities

The Subject Property contains six apartment buildings that were constructed in 1989. The apartments are arranged as two-story townhouse units. The buildings are wood framed over an insulated concrete block foundation and concrete slab-on-grade. Exterior siding was replaced in 1999 with hardiplank cement-composite siding. The roof was replaced in 2004 with asphalt roofing shingles. The interior finishes are sheetrock walls and ceilings and 12″ tiled floors and/or linoleum sheet flooring. Each apartment is heated by its own natural gas fired boiler and air conditioning is supplied by window mounted units.

The following utilities are available in the vicinity of the Subject Property:

- Electric: National Grid
- Natural Gas: National Grid
- Sanitary Sewer: Onondaga County Department of Water Environment Protection
- Potable Water: Onondaga County Water Authority

2.3. Current Uses of Adjoining Properties

The Subject Property is located in an urban setting and part of a larger SHA housing complex. At the time of the Subject Property reconnaissance, the lands which adjoin the Subject Property were viewed from the property line and roadways. The following table provides a summary of land uses and features observed.

Table 2-4
Adjacent Land Use

Direction	Land Use
North	Apartment Buildings
South	Rail Line / Abandoned Vacant Property
East	SHA Housing (Apartments)
West	SHA Owned Auto Shop

3.0 PHYSICAL SETTING

A Physical Setting Report (PSR) was provided by Environmental Risk Information Services (ERIS) (**Appendix A**). The PSR includes detailed information regarding topographic, hydrologic, and geologic conditions for the Subject Property and surrounding areas, as well as information on soil, groundwater, and radon. Geologic mapping and documentation from C&S' private library were also reviewed. The purpose of reviewing physical setting information is to assess the potential for the migration of contaminants from sites of concern. Observations regarding the physical setting are discussed below.

3.1. Physical Setting Description

3.1.1. General Topographic Setting

Information shown on the representative USGS 7.5 Minute Quadrangle indicates that generally, the topography of the Subject Property is generally flat and is at an approximate elevation of 400-feet above mean sea level.

3.1.2. General Geologic Setting

According to the PSR provided by ERIS, the following soil types and rock formations represent the geologic conditions at the Subject Property:

- Soils consist of lacustrine silt, clay, and "Urban Land". The "Urban Land" classification refers to areas in which soil characteristics have been altered due to urban activity.

- Bedrock consists of dolostone, shale, and/or gypsum of the Syracuse Formation.

3.1.3. General Hydrogeologic Setting

The Subject Property is located approximately 2.4 miles southeast of Onondaga Lake and approximately 0.5 miles east of Onondaga Creek which flows north to Onondaga Lake. Based on the interpretation of the USGS Topographic Map, groundwater in the area is assumed to move generally to the northwest towards Onondaga Lake. Groundwater flow specific to the Subject property is unknown and may be different from the regional flow. Potential influences include local drainage features, seasonal groundwater level fluctuations, subsurface geology, surface topography, and / or other local site features.

4.0 USER PROVIDED INFORMATION

In accordance with ASTM E1527-21, a "User" is defined as the party seeking to complete an environmental site assessment of the Subject Property. If the user is aware of any specialized knowledge or experience that is material to RECs in connection with the Subject Property, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to the environmental professional.

Appendix B includes the Phase I ESA Client / User Questionnaire completed by Ms. Stephanie R. Pasquale, of Blueprint 15, Inc., on November 6, 2023. The Client / User Questionnaire includes questions relative to environmental liens and use limitations, specialized knowledge, valuation reduction for environmental issues, etc. The responses did not identify environmental issues associated with the Subject Property; however, Ms. Pasquale provided C&S with a previously conducted Phase I ESA Report as well as a Phase II ESA Report that describe the environmental condition of the overall area. These reports are summarized in section 5.7.

5.0 HISTORICAL USE ASSESSMENT

5.1. Historical Use Information on Subject Property and Adjoining Properties

Historical information was used to develop a history of the previous uses of the Subject Property and surrounding area. Typical sources utilized to understand historical land use of a property include topographic maps, aerial photographs, fire insurance maps, building department records, property tax files, city directories, and historical reports. These sources are used to help identify the possibility of past land uses contributing to RECs with respect to a property.

These historical sources satisfy the standard for CERCLA's most "reasonably ascertainable" information available. ASTM E1527-21 defines "reasonably ascertainable" as information that is publicly available, obtainable within reasonable time and cost limits, and practically reviewable.

This assessment used the following informational resources to help identify past and present site uses upon and surrounding the Subject Property.

Table 5-1
Historical Information Summary

Section	Historical Source	Source/Comments
5.2	Fire Insurance Maps	Environmental Risk Information Services
5.3	Topographic Maps	Environmental Risk Information Services
5.4	Aerial Photographs	Environmental Risk Information Services
5.5	City Directories	Environmental Risk Information Services
5.6	Recorded Land Title Records	NA
5.7	Historical Environmental Reports	*Phase I Environmental Site Assessment for East Adams Street Redevelopment*, Dated May 2023, by EA Engineering, P.C. and its Affiliate EA Science and Technology *Phase II Environmental Site Assessment for East Adams Street Redevelopment*, Dated June 2023, by EA Engineering, P.C. and its Affiliate EA Science and Technology

These sources were used to help identify the possibility of past land uses contributing to RECs in regard to the current Subject Property.

5.2. Historical Fire Insurance Mapping

A search for fire insurance mapping of the Subject Property and its surrounding area was conducted. The table below summarizes the information shown on these maps and provides interpretations when appropriate (**Appendix A**).

Table 5-2
Fire Insurance Map Review

Year	SP Observations	Adjoining Site Observations
1892	The SP has approximately 50 structures and is divided into 35 separate parcels. The structures are predominantly single family residential; however, a shop, a saloon and a church are depicted.	North – Predominately single family residential buildings are depicted with some commercial development mixed in. The Syracuse Twist Drill Company is situated immediately adjacent and has an oil house, forge shop, machine shop, boiler house, and an underground oil tank. East / West – Predominately single family residential buildings are depicted with some commercial development mixed in. South - Predominately single family residential buildings are depicted with some commercial and industrial development mixed in. The Crabtree's Stone Yard and Jas. Carrier Coal & Wood Yard are depicted around a railroad that traverses in an east/west direction.
1910	Additional parcels have been created and various single family residential buildings are now depicted as fraternities. A gasoline tank is depicted in the center section, at the former address 311 Star Avenue. The tank appears to be a 50-60 gallon tank; however, the map quality in this section is poor and difficult to make precise observations.	North – Various single family residential buildings are now depicted as fraternities. The Syracuse Twist Drill Company has expanded and now has a multiple coal bin storages, an iron storage building, a milling department, additional underground oil storage tanks, and a carpenter shop. East / West – Various single family residential buildings are now depicted as fraternities. Remaining area appears generally unchanged. South – To the south of the railroad is the Syracuse Bridge Company, the location has a 200-gallon gasoline tank depicted. The stone yard is no longer depicted and in its place is the Palmer Lumber and Door Company.

Year	SP Observations	Adjoining Site Observations
1951	A drycleaner and an auto filling station are depicted in the northeast section. These facilities were located on South Townsend Street. An automobile junk yard is located on the west side, at the former address 1009 South State Street. Other various shops are also located in this area; however, the map quality in this section is poor and difficult to make precise observations.	North – Appears generally unchanged. The Syracuse Twist Drill Company has expanded: however, the map quality in this section is poor and difficult to make precise observations. East – A massive demolition project had occurred between East Taylor Street, East Adams Street, South Townsend Street and South McBride Street. This area was completely redeveloped with all previous buildings being demolished. In its place is a housing development known as Pioneer Homes. West – Various residential buildings are now depicted as shops. Two Filling stations and two auto repair facilities are depicted on the Corner of South State Street and Jackson Street. South – Various residential buildings have been demolished and are now industrial in nature. The Syracuse Bridge Company is no longer depicted and in its place is a large cinder block scrap metal bailing building. The Palmer Lumber and Door Company is now the Mann & Hunter Lumber Company, and auto repair / spray painting operations are depicted on this property. A filling station is depicted on the corner on Burt Street and South Townsend Street.
1953	The SP appears generally unchanged.	The surrounding area appears generally unchanged.
1961	The SP appears generally unchanged.	The surrounding area appears generally unchanged.
1968	All parcels have been combined into one and all previous existing buildings have been demolished and replaced with five large apartment buildings.	North / West – A massive demolition project had occurred between East Taylor Street, East Adams Street, South Townsend Street and Montgomery Street. This area was completely redeveloped with all previous buildings being demolished. The Mulberry Square Apartments is depicted to the north, additional apartment housing and an athletic field is depicted to the west. East – Area appears generally unchanged. South – Area appears generally unchanged.
1971	The SP appears generally unchanged.	The surrounding area appears generally unchanged.

Year	SP Observations	Adjoining Site Observations
1990	All previous existing apartment buildings have been demolished. Six new apartment buildings have been constructed around a new cul-de-sac.	North / East / West – Area appears generally unchanged. South – The filling station on the corner of Burt Street and South Townsend Street is no longer depicted. Various residential and commercial buildings have been demolished and the land is now vacant.

SP = Subject Property

5.3. Historical Topographic Mapping

The table below summarizes the information shown on these topographic maps and provides interpretations when appropriate (**Appendix A)**.

Table 5-3
Topographic Map Review

Year	SP Observations	Adjoining Site Observations
1895	The SP is divided by intersecting roads and appears to be developed.	The SP appears to be located in a densely developed area, however the map does not depict individual structures or property use. A railroad is depicted to the south and traverses in an east/west direction.
1898	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.
1939	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.
1947	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.
1958	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.
1973	The intersecting roads are no longer depicted.	The surrounding area appears to be generally unchanged.
1978	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.
2013	A road is depicted entering on the southern boundary.	The surrounding area appears to be generally unchanged.

Year	SP Observations	Adjoining Site Observations
2016	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.
2019	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.

SP = Subject Property
Observations take into account information gleaned from previous historical sources.

5.4. Historical Aerial Photography

The table below summarizes the information shown on these aerial photographs and provides interpretations when appropriate (**Appendix A**). It should be noted that the scale of the photography can make identification and interpretation of fine details difficult. Therefore, the interpretations that follow are primarily relative to observable gross characteristics and features.

Table 5-4
Historical Aerial Photograph Review

Year	SP Observations	Adjoining Site Observations
1938	Several residential buildings are depicted throughout. Jackson Street and Star Ave are depicted traversing through in an east/west direction.	Appears to be predominately single family residential buildings. The Syracuse Twist Drill Company is depicted to the north. A rail road that traverses in an east/west direction is depicted to the south.
1951	The filling station is depicted in the northeast section along South Townsend Street.	A massive demolition project had occurred between East Taylor Street, East Adams Street, South Townsend Street and South McBride Street. This area was completely redeveloped with all previous buildings being demolished. In its place is a housing development known as Pioneer Homes. The remaining adjacent area appears generally unchanged.
1956	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.
1966	All buildings have been demolished, leaving vacant lightly wooded lots. Jackson Street and Star Ave are still depicted.	Large areas to the north, northeast and west have been demolished leaving vacant lightly wooded lots. Interstate 81 is now depicted to the east.

Year	SP Observations	Adjoining Site Observations
1972	Large apartment buildings with parking areas are now depicted.	Areas that were previously demolished and cleared now have apartment buildings, parking lots and a high rise residence hall.
1981	The SP appears generally unchanged.	An athletic field is depicted to the west. The remainder of the surrounding area appears to be generally unchanged.
1985	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.
1995	Former large apartment buildings have been demolished and the current apartment layout is now depicted.	The current apartment building layout is now depicted to the north. Several apartment buildings to the west were demolished and the current SHA building and grounds facility is depicted.
2003-2023	The SP appears generally unchanged.	The surrounding area appears to be generally unchanged.

SP = Subject Property
Observations take into account information gleaned from previous historical sources.

5.5. City Directory Search

City directories (**Appendix A**) are a screening tool to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. A summary of significant entries is provided below.

Table 5-5
City Directory Summary

Year	Property Address	Bearing / Distance / Location	Occupant
1930	959 South State Street	Subject Property	Sheet Metal Worker
1935-1959			Residential
1964-2022			Vacant / Unlisted
1930	1001 South State Street	Subject Property	Laundry
1935-1939			Meat Market
1944			Trucking Company
1949-1959			Restaurant
1964-2022			Vacant / Unlisted
1930	1003 South State Street	Subject Property	Auto Repair Shop
1935			Vacant
1939-2022			Motorcycle Shop

Year	Property Address	Bearing / Distance / Location	Occupant
1964-2022			Vacant / Unlisted
1925-1935	1005 South State Street	Subject Property	Radiator Repair Shop
1944-2022			Vacant / Unlisted
1925-1930	1009 South State Street	Subject Property	Used Car Sales
1935-2022			Vacant / Unlisted
1925-1959	301-325 East Taylor St	Subject Property	Various Residential
1964-2022			Vacant / Unlisted
1925-1949	913 South State Street	510 ft North Down-Gradient	Syracuse Fire Station #4
1959			Storage
1964-2022			Vacant / Unlisted
1925-1930	918 South State Street	420 ft North Down-Gradient	Automobile Paint Shop
1935			Tire Shop
1939			Coal and Wood Sales
1944-1954			Grocery
1959-2022			Vacant / Unlisted
1935	919 South State Street	420 ft North Down-Gradient	Automobile Shop
1939			Storage
1944-2022			Vacant / Unlisted
1935	925 South State Street	300 ft North Down-Gradient	Automobile Shop
1939-1964			Junk Yard
1968-2022			Unlisted
1935-1954	939 South State Street	225 ft North Down-Gradient	Automobile Shop
1959			Allied Decoration Display Co.
1964-2022			Unlisted
1930	952 South State Street	140 ft Northwest Down-Gradient	Automobile Shop
1935-2022			Vacant / Unlisted
1930	1000 South State Street	30 ft West Down-Gradient	Coal Company
1935-1959			Gas Station
1964-2022			Vacant / Unlisted
1930	1006 South State Street	30 ft West Down-Gradient	Oil Company
1935-1954			Gas Station
1964-2022			Vacant / Unlisted
1925-1935	1105 South State Street	160 ft South Down-Gradient	Oil Company
1944-1964			Vacant / Unlisted
1968-1998			Salvation Army
2000-2022			Vacant / Unlisted
1944-1954	1107 South State Street	180 ft South Cross-Gradient	Roth Bros Metal Co.
1959-1978			Unlisted
1935-1944	1117 South State Street	300 ft South Cross-Gradient	Battery Shop
1949-1978			Automobile Shop
1983-2022			Vacant / Unlisted
1968-1983	1118-1120 South State Street	310 ft South Cross-Gradient	Drycleaner
1988-2022			Vacant / Unlisted

Year	Property Address	Bearing / Distance / Location	Occupant
1935-1959	1119 South State Street	320 ft South	Gas Station
1964-2022		Cross-Gradient	Vacant / Unlisted

5.6. Recorded Land Title Records

A chain of title / title abstract was requested. As of the date of this report, a chain of title / title abstract was not provided.

5.7. Other Historical Sources

As part of the historical document review process, C&S reviewed a Phase I ESA Report and a Phase II ESA Report provided by Ms. Stephanie R. Pasquale, of Blueprint 15, Inc. The Phase I & Phase II Reports pertained to the northern section of the same parcel as the Subject Property. Pertinent information obtained from those reports is summarized below.

Phase I Environmental Site Assessment for East Adams Street Redevelopment, Dated May 2023, by EA Engineering, P.C. and its Affiliate EA Science and Technology

The purpose of the Phase I ESA was to identify Recognized Environmental Conditions in connection with the East Adams Redevelopment Phase One Area, which encompassing a portion of the city block bound by South State Street, East Adams Street, East Taylor Street, and South Townsend Street, in Syracuse, New York. The Phase One Area is the northern section of the same parcel as the Subject Property.

The assessment revealed the following RECs in connection with historical uses of the Phase One Area, and offsite properties which could have impacted the soil and groundwater:

- Review of historical uses of the Phase One Area and adjacent properties indicate that there were uses which could have negatively impacted the environmental integrity of the Phase One Area, including its use as a junk yard until at least 1961.

- Several offsite locations were determined to pose a potential environmental risk to the Phase One Area due to spills, and/or leaking storage tanks. The offsite locations listed as an REC in relation to the Phase One Area were; South State Street/New Street Property, 90 Presidential Plaza, Onondaga County Heating/Cooling Plant, Niagara Mohawk, Marks Hotel, and The Salvation Army.

Phase II Environmental Site Assessment for East Adams Street Redevelopment, Dated June 2023, by EA Engineering, P.C. and its Affiliate EA Science and Technology

The purpose of the Phase II ESA was to evaluate Recognized Environmental Conditions that were identified in a previously conducted Phase I ESA by EA Engineering in May of 2023. The Phase II

ESA program consisted of drilling four soil borings, which were converted to one-inch temporary well and three permanent monitoring wells. Four soil vapor monitoring points were also installed around the perimeter of the Phase One Area. Groundwater, soil, and soil vapor samples were collected for analysis of various constituents of potential concern.

Results from of the soil investigation showed no exceedances of Soil Cleanup Objectives (SCO)s in the samples analyzed for Target Compound List Volatile Organic Compounds (TCL VOCs), TCL Target Compound List Semi Volatile Organic Compounds (SVOC)s, Target Analyte List metals (TAL), hexavalent chromium, polychlorinated biphenyls (PCB)s, pesticides, and 1,4-dioxane. However, Perfluorooctane Sulfonic Acid (PFOS) were detected in sample SB-03-0-2 at a concentration of 1.3 µg/kg, which exceeds the protection of groundwater guidance value of 1.0 µg/kg. Asbestos was not detected in soil samples at the Subject Property. The report indicated that overall, the Subject Property does not exhibit subsurface soil impacts from historical uses of the Subject Property or activities on adjacent properties.

Results from the groundwater investigation showed carbon tetrachloride as a Tentatively Identified Compounds (TIC) during analysis for SVOCs. Groundwater in Monitoring Well (MW)-03 exceeded the Ambient Water Quality Standard (AWQS) class GA criteria for carbon tetrachloride. No Resource Conservation and Recovery Act (RCRA) metals were detected above the AWQS Glass GA criteria. Several other metals exceeded the AWQS Class GA criteria; iron (MW-02, MW-03, and TW-04), magnesium (MW-02 and MW-03), manganese (MW-02 and MW-03), sodium (MW-02 and MW-03), and thallium (MW-03). PFAS compounds were detected in groundwater, with PFOS and PFOA exceeding the AWQS Class GA criteria of 2.7 ng/L and 6.7 ng/L respectively. PFOA was detected at a concentration of 15 ng/L at temporary well TW-04. PFOS was detected at MW-01 (7 ng/L), MW-03 (12 ng/L) and TW-04 (12 ng/L). Based on the hydraulic gradient at the property (northwest), Per-and Polyfluoroalkyl Substance (PFAS) compounds were detected at both the upgradient and downgradient well locations. With PFAS detected at the furthermost upgradient well location (MW-01) on the Subject Property's eastern boundary.

Results from the vapor intrusion investigation showed several VOCs in the samples with only two exceeding EPA Residential Sub-Slab Soil Vapor screening criteria. Trichloroethylene was detected at soil vapor location SVP-03 at a concentration of 24 µg/m3 which exceeds the screening criteria of 7.0 µg/m3. Based on analytical results, soil vapors that exceed criteria exist within the subsurface throughout the property.

The results of the Phase II ESA indicated that PFAS compounds and carbon tetrachloride were detected in groundwater at concentrations that exceeded AWQS Class GA criteria. PFOS were detected in soil exceeding the protection of groundwater guidance value. Trichloroethylene was detected at soil vapor at concentrations that exceeded EPA Residential Sub-Slab Soil Vapor screening criteria. The results of EA Engineering's Phase II ESA of the northern adjacent property may pose a REC and VEC in respect to the Subject Property.

Copies of the historical information are provided in **Appendix D.**

5.8. Historical Use Summary

The Subject Property and surrounding area have been associated with dense urban development since at least 1892. The Subject Property was occupied by residential houses, small shops, and a church, from at least 1892 through 1910. From 1930 through 1961, the Subject Property began to see increased commercial development, such as a drycleaner, automobile filling station, auto/motorcycle repair shop, and an automobile salvage yard. Sometime around the mid 1960s, the Subject Property was cleared of buildings and replaced by large apartment buildings. These apartment buildings would remain until around the late 1980s when they would be demolished and replaced by the current apartment structures.

The surrounding area was predominantly residential in nature from at least 1892 to 1910. Numerous commercial / industrial properties have been located within close proximity to the Subject Property in the 1900s including the Syracuse Twist Drill Company which included an oil house, forge shop, machine shop, boiler house, and an underground oil tank, (adjacent to north between 1892 and 1961), an automobile filling station, auto repair station, appliance repair and tin shop (adjacent to west between 1951-1961), various scrap yards, warehouses, auto repairs stations and automobile filling stations (in close proximity to the south between 1951-1990). Between 1951 and 1968 many structures in close proximity to the Subject Property were demolished. Demolition to the north, west and east of the Subject Property were then redeveloped for apartment and town house complexes. In the late 1980s, the northern apartments were demolished and replaced by the current apartment structures.

The information reviewed is indicative of property types and uses that are likely to have resulted in releases, and therefore warrant deeming the sites RECs with respect to the Subject Property.

- Subject Property – The historical operation of a drycleaner, automobile filling station, auto/motorcycle repair shop, and an automobile salvage yard on the Subject Property is considered a Recognized Environmental Condition as releases could have impacted the soil and groundwater.

- 1000 South State Street – Located approximately 160 ft south, similar in elevation and cross-gradient to the Subject Property. This property historically operated as a gasoline station.

- 1006 South State Street – Located approximately 160 ft south, similar in elevation and cross-gradient to the Subject Property. This property historically operated as a gasoline station.

- 1105 South State Street – Located approximately 160 ft south, similar in elevation and cross-gradient to the Subject Property. This property historically operated as an oil company.

- 1118-1120 South State Street – Located approximately 400 ft southwest, 3 feet lower in elevation and cross-gradient to the Subject Property. This property historically operated as a drycleaner.

- Syracuse Twist Drill Company which included an oil house, forge shop, machine shop, boiler house, and an underground oil tank.

- Additionally, the results of the Phase II ESA indicated that PFAS compounds and carbon tetrachloride were detected in groundwater at concentrations that exceeded AWQS Class GA criteria. PFOS were detected in soil exceeding the protection of groundwater guidance value.

Note that under current CERCLA regulations and the ASTM standard, the presence of PFAS is not considered a REC, but is certainly a contaminant of concern. EPA has proposed that PFAS be added as a CERCLA Hazardous Substance, but as of the date of this report it was not listed.

6.0 RECORDS REVIEW

6.1. Standard Environmental Record Sources

C&S reviewed the regulatory status of the Subject Property using a summary report of local, state and federal environmental databases prepared by Environmental Risk Information Services (ERIS). The database report includes up-to-date information from local, state and federal agencies. Records compiled are consistent with standards outlined in ASTM E1527-21 for records that are:

- Within the approximate minimum search distance
- Reasonably ascertainable and are from standard sources
- Provide records under reasonable time and cost constraints

A copy of the database search report is provided in **Appendix A**. The comprehensive list of the reviewed local, state and federal regulatory databases is included in the report.

C&S reviewed the attached database search report to assess which properties or conditions, if any, might result in creating a REC with respect to the Subject Property. Properties that are located within the search distances and were deemed to be significant are described in the subsections below.

All listings from the ERIS Database Report are summarized in the following table.

Table 6-1
Environmental Database Review

Database	Search Distance (miles)	Subject Property Listings	Sites Within Radius
State Environmental Listings			
Registry of Inactive Hazardous Waste Disposal Sites in New York State (SHWS)	1.00	0	5
Hazardous Substance Waste Disposal Sites (HSWDS)	1.00	0	1
Leaking Storage Tanks (LST)	0.50	0	45
Underground Storage Tanks (UST)	0.25	0	12
Aboveground Storage Tanks (AST)	0.25	0	8
Chemical Bulk Storage Tanks (CBS)	0.25	0	1
Desisted Storage Tanks	0.25	0	3
Registry of Engineering Controls in New York State (ENG)	0.5	0	2
Registry of Institutional Controls in New York State (INST)	0.5	0	2
Environmental Restoration Program Listing (ERP)	0.5	0	1

Database	Search Distance (miles)	Subject Property Listings	Sites Within Radius
NY Brownfields	0.5	0	3
Manufactured Gas Plants (MGP)	1	0	1
Spill Incidents Database (NYSPILLS)	0.125	0	24
Per- and Polyfluroroalkyl Substances (PFAS)	0.5	0	2
Delisted Drycleaners	0.25	0	2
Hazardous Waste (NY Manifest)	0.125	0	1
Generators of Hazardous Waste (GEN Manifest)	0.125	0	7
Registered Cooling Towers (COOLING TOWERS)	0.125	0	2
Tier 2	0.125	0	7
Air Permitted Facilities	0.25	0	2
Federal Environmental Listings			
SEMS List 8R Archive Sites (SEMS ARCHIVE)	0.5	0	1
Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)	0.5	0	1
RCRA Generators List (RCRA LQG)	0.25	0	1
RCRA Small Quantity Generators List (RCRA SQG)	0.25	0	5
RCRA Very Small Quantity Generators List (RCRA VSQG)	0.25	0	2
RCRA Non Generators (RCRA NON GEN)	0.25	0	18
Federal Brownfields	0.5	0	14
PFAS Waste Transfers from RCRA (PFAS E-MANIFEST)	0.5	0	1
Per- and Polyfluroroalkyl Industy Sectors (PFAS IND)	0.5	0	3
Federal Drycleaners	0.25	0	1
Polychlorinated Biphenyl (PCB) Notifiers	0.5	0	1

6.1.1. Subject Property Listings

The Subject Property was not identified in any local, state or federal databases.

6.1.2. Adjoining Property Listings

The following adjoining sites are notable with respect to the Subject Property.

Table 6-2
Adjoining Property Listings

Site Name	Data base #	Database(s)	Direction	Description	REC?
South State Street	1	LST	WNW	550-gallon underground tank with contaminated soil was removed	No, remediated by contractor, spill closed by DEC as meeting Standards

Site Name	Data base #	Database(s)	Direction	Description	REC?
NY-1 Pioneer Homes	2	AST / UST	N	Tanks are listed as closed/removed	No, no issues of non-compliance were noted

6.1.3. Proximate Property Listings

The following sites are mapped at distances or elevations that are notable with respect to the Subject Property.

Table 6-3
Proximate Property Listings

Site Name	Data base #	Database(s)	Distance / Gradient Elevation Relative to the SP	REC?
ROTH Bros Metal Co.	5	SEMS Archive CERCLIS	0.04 mi SSW / Same Cross-Gradient	No, site is not listed on the National Priority Listing and no further remedial action is planned.
Former Salvation Army	7	UST	0.05 mi SSW / 1 ft Lower Cross-Gradient	No, three tanks are listed as closed / removed and listed as empty
111 Radison Court	8	NY Spills	0.05 mi E / 2 ft Higher Up-Gradient	No, minor gas tank leak on to pavement. Absorbent was used to clean up spill. NYSDEC closed the spill.
1105 South Salina Street Salvation Army	**9**	**NY Spills, LST, UST**	**0.06 mi SSW / 1 ft Lower Down-Gradient**	**Yes, This site has two spills listed. The first was Spill# 8601904 involved an underground tank with contaminated soil that was discovered during excavation. Tank and contaminated soil were removed. The second was Spill# 9711143 which involved contaminated soil found under pump island. The database report indicates the soil would be stockpiled for removal; however there is no record of this occurring. Also a leaking storage tank listing describes a 550-gal tank that leaked an unknown amount of gasoline. The spill is closed as not meeting standards; however, the lack of detail indicates contaminated soil and/or groundwater may exist.**

Site Name	Data base #	Database(s)	Distance / Gradient Elevation Relative to the SP	REC?
Syracuse Police	11	UST	0.08 mi NNW / 4 ft Higher Down-Gradient	No, two 10,000 gasoline tanks are listed as closed / removed.
908 Montgomery	12	NY Spills, UST	0.09 SW / 4 ft Lower Cross-Gradient	No, three USTs and contaminated soil were removed. A few areas of soil with inaccessible exceedances of CP-51 values were left in place. This spill is located hydraulically down gradient and is lower in elevation than the SP.
Central Village	13	UST	0.09 mi SSE / 1 ft Lower Up-Gradient	No, one 10,000 gallon tank of #2 fuel oil is listed as temporally out of service. No issues of non-compliance noted.
917 Montgomery	15	FED Brownfield	0.1 mi SW / 3 ft Lower Cross-Gradient	No, no specific contaminants listed, site has no cleanup activity, site is located hydraulically down gradient and is lower in elevation than the SP.
500 East Taylor Street Syracuse University Steam Plant	**16, 17 & 20**	**NY Spills, LST, AST, UST, Tier 2, Air Permits, Cooling Towers, Delisted Tanks, Gen Manifest, RCRA Non Gen**	**0.11 mi ESE 8 ft Higher Up-Gradient**	**Yes, spill# 8801654 involved the discovery of fuel oil on groundwater in 1981. In 1991, fuel oil was still found. In 1992, the surrounding soil was excavated and the NYSDEC closed the spill but not meeting standards. Due to fuel oil in groundwater the potential for the fuel oil to travel to the Subject Property is greatly increased and therefore this would present a concern in respect to the Subject Property.**
McKinney Property	18	NY Spills, ENG, ERP, INST	0.11 mi ESE 10 ft Higher Up-Gradient	No. Remediation at the site is complete and groundwater / soil vapor contamination is being managed under a site management plan.
1212 South State Street	19	FED Brownfield	0.11 mi SSW 4 ft Lower Cross-Gradient	No, no specific contaminants listed, site has no cleanup activity, site is located hydraulically down gradient and is lower in elevation than the SP.
1210 South State Street	21	NY Spills FED Brownfield	0.12 mi SSW 4 ft Lower Cross-Gradient	No, spills are closed by the NYSDEC and the site is located cross-gradient and at a distance that isn't expected to impact the Subject Property.

Site Name	Data base #	Database(s)	Distance / Gradient Elevation Relative to the SP	REC?
258 East Adams Street	23	NY Spills, Gen Mainfest, RCRA Non Gem	0.12 mi NW 3 ft Lower Down-Gradient	No, spills are closed by the NYSDEC and the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
1016 South Salina Street	24	SHWS	0.14 mi SW / 5 ft Lower Cross-Gradient	No, site is listed as no further action at this time and the site is located cross-gradient and at a distance that isn't expected to impact the Subject Property.
929 South Salina Street	25	Delisted Drycleaners	0.14 mi WSW 1 ft Lower Down-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
Adams Garage	27	LST	0.15 mi NNW 2 ft Lower Cross-Gradient	No, cleanup completed and closed by the NYSDEC as meeting standards.
1045 South Salina Street	37	FED Brownfield	0.18 mi SE / 8 ft Lower Cross-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
680 South Salina Street	39	LST, UST	0.18 mi W / 3 ft Lower Down-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
South Salina SIDA Property	42	SHWS	0.19 mi SW / 8 ft Lower Cross-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
Harrison Place	43	LST	0.2 mi NW / 5 ft Lower Down-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
1073 South Salina Street	44	FED Brownfield	0.21 mi SW / 8 ft Lower Cross-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
1081 South Salina Street	46	FED Brownfield	0.21 mi SW / 8 ft Lower Cross-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
Renalli Taylor Street	48	PFAS IND	0.22 mi SW / 8 ft Lower Cross-Gradient	No. There is no indication of regulatory non-compliance or a release.
140 Cortland Ave	49	AST, CBS, ENG, LST, INST, LST, RCRA Non Gen, Brownfield, FED Drycleaner	0.22 SW / 8 ft Lower Cross-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.
1101 South Salina Street	52	FED Brownfield	0.24 SW / 8 ft Lower Cross-Gradient	No, the site is located down-gradient and at a distance that isn't expected to impact the Subject Property.

* Sites of Concern are listed in **Semi-Bold** and described in section 6.4 Records Review Summary

C&S reviewed the remainder of the sites listed in the ERIS Database Report, and determined them not to be an environmental concern based on various factors such as the nature of the spill (product spilled, volume, remedial response), distance from the Subject Property, topography, and / or regulatory status. These sites are described in detail within the ERIS Database Report, included in (**Appendix A**).

6.1.4. Unmapped Sites

C&S also reviewed the Orphan List at the rear of the database report. An "Orphan Site" is a record that has insufficient information to be mapped by the GIS system. The review of the Orphan Site List of 27 sites consisted of a comparison of the identified "Orphan" address to roadway mapping of the area surrounding the Subject Property. Based on that evaluation, none of the identified "Orphans" appears to pose a risk to the Subject Property.

6.2. Vapor Encroachment Screening

A vapor encroachment condition (VEC) is defined as "the presence or likely presence of contaminant of concern (COC) vapors in the sub-surface of the target property caused by a release of vapors from contaminated soil or groundwater either on or near the target property". The review for potential VECs was performed in accordance with the practices prescribed in ASTM Practice E2600-15, entitled *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. For the purposes of this assessment, a Tier 1 screening has been performed. The scoped and purpose of a Tier 1 screening is to conduct a screen for vapor encroachment using information collected in the Phase I ESA to determine if a VEC exists at the target property.

ASTM Practice E2600-15 recommends the following search distances around the subject site for use in the Tier 1 Vapor Encroachment Screening process:

ENVIRONMENTAL DATABASE	SEARCH DISTANCE (MILES)	
	Chlorinated COCs	Petroleum Hydrocarbon COCs
Federal NPL Site List	1/3 mile	1/10 mile
Federal CERCLIS / SEMS List	1/3 mile	1/10 mile
Federal CORRACTS Facilities List	1/3 mile	1/10 mile
Federal non-CORRACTS TSD Facilities List	1/3 mile	1/10 mile
Federal RCRA Generators List	Property Only	Property Only
Federal Institutional/Engineering Controls	Property Only	Property Only
Federal ERNS List	Property Only	Property Only
State-Equivalent NPL List	1/3 mile	1/10 mile
State-Equivalent CERCLIS List	1/3 mile	1/10 mile

ENVIRONMENTAL DATABASE	SEARCH DISTANCE (MILES)	
State Solid Waste Landfill or Solid Waste Disposal Sites	1/3 mile	1/10 mile
State Leaking Storage Tanks Sites	1/3 mile	1/10 mile
State Registered Storage Tank Sites	Property Only	Property Only
State Institutional/Engineering Controls	Property Only	Property Only
State Voluntary Cleanup Sites	1/3 mile	1/10 mile
State Brownfield Sites	1/3 mile	1/10 mile

Based on the information provided, the following sites may present a concern with respect to vapor encroachment:

- Subject Property – Historic operation of a drycleaner, automobile filling station, auto/motorcycle repair shop, and an automobile salvage yard.
- 1000 South State Street – Historic operation as a gasoline station.
- 1006 South State Street – Historic operation as a gasoline station.
- 1105 South State Street – Historic operation as an oil company.
- 1118-1120 South State Street – Historic operation as a drycleaner.
- Syracuse Twist Drill Company – Historic operation of an industrial facility.
- Salvation Army, located at 1105 South Salina Street – Historic spill.
- Syracuse University Steam Plant located at 500 East Taylor Street – Historic spill.

6.3. State and Local Regulatory Environmental Records

A Freedom of Information Law (FOIL) request was sent electronically to NYSDEC Region 7 on November 02, 2023. On November 06, 2023, the Department responded indicating that they do not maintain files related to the Subject Property.

A FOIL request was sent electronically to the City of Syracuse on November 02, 2023. On November 13, 2023, the City of Syracuse responded indicating that they maintain files related to the Subject Property. The files consisted of outstanding violation letter for failure to obtain a certification of compliance, and certificates of occupancy. The files do not indicate a REC with respect to the Subject Property.

6.4. Records Review Summary

The information provided in the database report identified a number of records associated with the Subject Property and sites adjoining or in proximity to the Subject Property which may pose a REC with respect to the Subject Property. These include

- Salvation Army, located at 1105 South Salina Street – A historic Spill that involved contaminated soil found under pump island. The database report indicates the soil would be stockpiled for removal; however there is no record of this occurring. Also a leaking

storage tank listing describes a 550-gal tank that leaked an unknown amount of gasoline. The spill is closed as not meeting standards; however, the lack of detail indicates contaminated soil and/or groundwater may exist.

- Syracuse University Steam Plant located at 500 East Taylor Street – A historic spill that involved the discovery of fuel oil on groundwater in 1981. In 1991, fuel oil was still found. In 1992, the surrounding soil was excavated and the NYSDEC closed the spill but not meeting standards. Due to fuel oil in groundwater the potential for the fuel oil to travel to the Subject Property is greatly increased and therefore this would present a concern in respect to the Subject Property.

The information generated from the FOIL process was not indicative of a REC with respect to the Subject Property.

7.0 INTERVIEWS

The objective of conducting interviews is to obtain information indicating RECs in connection with the Subject Property, and other pertinent current and historical information. During the course of the Phase I ESA, C&S conducted interviews with the following persons:

Table 7-1
Interview Log

Name	Affiliation	Date
Stephanie Pasquale Allen Family Foundation, BluePrint 15	Client / User	11/6/2023
Lindy Madill Syracuse Housing Authority	Owner	11/13/2023
FOIL Coordinator	NYSDEC Region 7 FOIL Department	11/06/2023
FOIL Coordinator	City of Syracuse FOIL Department	11/13/2023

Summaries of these interviews are provided below:

7.1.1. Interview with Client / User

Appendix B includes the Phase I ESA Client / User Questionnaire completed by Ms. Stephanie R. Pasquale, of Blueprint 15, Inc., on November 6, 2023. The Client / User Questionnaire includes questions relative to environmental liens and use limitations, specialized knowledge, valuation reduction for environmental issues, etc. The responses did not identify environmental issues associated with the Subject Property; however, Ms. Pasquale provided C&S with a previously conducted Phase I ESA Report as well as a Phase II ESA Report that describe the environmental condition of the overall area. These reports are summarized in section 5.7.

7.1.2. Interview with Owner

On November 13, 2023, C&S contacted Ms. Lindy Madill, Director of Development, Syracuse Housing Authority (SHA) via email. Ms. Madill indicated that SHA has owned the Subject Property since October 1986. According to Ms. Madill, prior to SHA purchasing the property, the Subject Property was called the Mulberry Square Apartments, and was used for housing. Ms. Madill indicated the use of the property prior to the Mulberry Square Apartments is unknown. Ms. Madill is not aware of any environmental lawsuits, citations, violations, or fines related to the Subject Property.

7.1.3. Interviews with State and Local Government Officials

FOIL requests were sent to NYSDEC Region 7 and the City of Syracuse as indicated in Section 6.3. The FOIL process did not reveal any RECs.

7.1.4. Interview Conclusion

Information obtained from the individuals interviewed did not indicate that a REC exists with respect to the Subject Property.

8.0 SUBJECT PROPERTY RECONNAISSANCE

8.1. Methodology and Limiting Conditions

Mr. Nicholas Coulombe, representing C&S, performed a reconnaissance of the Subject Property on November 10, 2023 and recorded his observations. Mr. Coulombe was accompanied by Ms. Lindy Madill of Syracuse Housing Authority during the walkover. C&S personnel performed a combination of an interior and exterior inspection of the buildings and grounds. Photographs of the Subject Property are provided in **Appendix C**.

The objective of the Subject Property walkover was to identify physical and/or visual evidence indicative of an obviously recognizable environmental condition, such as:

- Soil discoloration
- Stained surfaces
- Stressed and / or dead vegetation
- Spills, leaks, leachate, and / or discolored surface waters
- Evidence of previous fire damage
- Evidence of waste disposal
- Barrels, drums, or other containers
- Areas of subsidence or fill

In addition, there are a variety of physical and visual signs that may potentially indicate the presence of an obviously recognizable subsurface condition, such as:

- Vent pipes or fill ports associated with underground storage tanks (UST)
- Aboveground storage tanks (AST)
- Pipelines
- Electrical transformers and abandoned pads
- Rail yards
- Well casings or riser pipes associated with groundwater monitoring wells
- Landfills or dumps
- Surface impoundments or lagoons

8.2. Subject Property Reconnaissance Observations

Consistent with ASTM E1527-21, the items listed in the following table were documented during the course of the reconnaissance. This includes visual verification or evidence of the feature (e.g. fill ports for a UST). Affirmative responses (designated by an "X") are discussed in detail following the table.

Table 8-1
Subject Property Reconnaissance Observations

Category	Item or Feature	Observed?
Hazardous Substance or Petroleum Product Containers	Aboveground Storage Tanks	
	Underground Storage Tanks	
	Bulk Containers (drums / totes)	
	Non-Bulk Containers	
	Hydraulic Equipment	
	Suspect PCB-Containing Equipment	X
	Pipeline	
Olfactory / Visual Evidence of Releases	Odors	
	Pools of Liquid	
	Stains or Corrosion	
	Stained Soil or Pavement	
	Stressed Vegetation	
Water, Wastewater, and Waste Management	Drains or Sumps	
	Pits, Ponds, Lagoons	
	Solid Waste	
	Wastewater Sources	
	Septic Systems or Dry Wells	
	Wells	
Other	Fill Materials	
	Construction / Demolition Debris	

8.3. Subject Property Reconnaissance Summary

The Subject Property consists of six two-story townhouse apartment buildings, an asphalt parking lot, and manicured lawns. The building consists of a two-story office space on the north side and single-story garage space on the south side. The Subject Property is generally flat.

8.3.1. Exterior Observations

The following bullet provides additional detail regarding an significant item noted during the Subject Property reconnaissance:

- Three pad-mounted transformers were observed between the apartment buildings. The transformers were in good condition with no apparent stains or leaks.
- Electrical and natural gas meters are located outside the buildings and secured by a chain link fence with a lockable gate.

8.3.2. Interior Observations

The following bullet provides additional detail regarding a significant item noted during the Subject Property reconnaissance:

- The interior was generally finished with sheetrock walls and tiled floors throughout the first and second floor spaces.

8.3.3. Subject Property Reconnaissance Conclusion

Based on the reconnaissance of the Subject Property, there was no visual evidence of a REC.

9.0 FINDINGS AND OPINIONS

C&S Engineers, Inc. completed this Phase I Environmental Site Assessment consistent with the scope and limitations of ASTM E 1527-21. Based on information gathered during the course of this Phase I Environmental Site Assessment of the Subject Property, including a database search report, the site reconnaissance, and interviews documented in this report, the following has been identified:

- The Subject Property is identified as City of Syracuse Tax Map ID Nos. 095.-08-01.0, which is located at 301-311 East Taylor Street, Syracuse, New York in Onondaga County. The Subject Property is an approximate 4.3-acre section of an overall 11.1-acre parcel. The Subject Property is located in the southern portion of the parcel and is owned by Syracuse Housing Authority (hereby referred to as SHA).

- The Subject Property and surrounding area have been associated with dense urban development since at least 1892. The Subject Property was occupied by residential houses, small shops, and a church, from at least 1892 through 1910. From 1930 through 1961, the Subject Property began to see increased commercial development, such as a drycleaner, automobile filling station, auto/motorcycle repair shop, and an automobile salvage yard. Sometime around the mid-1960s, the Subject Property was cleared of buildings and replaced by large apartment buildings. These apartment buildings would remain until around the late 1980s when they would be demolished and replaced by the current apartment structures. The historical operation of a drycleaner, automobile filling station, auto/motorcycle repair shop, and an automobile salvage yard on the Subject Property is considered a Recognized Environmental Condition as releases could have impacted the soil and groundwater.

- The surrounding area was predominantly residential in nature from at least 1892 to 1910. Numerous commercial / industrial properties have been located within close proximity to the Subject Property in the 1900s including the Syracuse Twist Drill Company which included an oil house, forge shop, machine shop, boiler house, and an underground oil tank, (adjacent to north between 1892 and 1961), an automobile filling station, auto repair station, appliance repair and tin shop (adjacent to west between 1951-1961), various scrap yards, warehouses, auto repairs stations and automobile filling stations (in close proximity to the south between 1951-1990). Between 1951 and 1968 many structures in close proximity to the Subject Property were demolished. Demolition to the north, west and east of the Subject Property were then redeveloped for apartment and town house complexes. In the late 1980s, the northern apartments were demolished and replaced by the current apartment structures. The historical operation of a gasoline station at 1000, 1006 and 1005 South State Street (to the west of the SP), and an oil company at 1105 South State Street (to the south of the SP), a drycleaner at 1118-1120 South State Street (to the south of the SP) and a industrial facility known as the Syracuse Twist Drill Company (to the north of the SP) would be considered an a Recognized Environmental Condition in respect to the Subject Property as releases could have impacted the soil and groundwater.

- The information provided in the database report identified a Recognized Environmental Concern in regards to the Salvation Army, located at 1105 South Salina Street has a historic spill that involved contaminated soil found under pump island. The database report indicates the soil would be stockpiled for removal; however there is no record of this occurring. Also a leaking storage tank listing describes a 550-gal tank that leaked an unknown amount of gasoline. The spill is closed as not meeting standards; however, the lack of detail indicates contaminated soil and/or groundwater may exist. The property is considered a Recognized Environmental Condition and a Vapor Encroachment Concern as it is located within 1/10th of a mile and cross-gradient from the Subject Property. Any releases on the property could have migrated to the Subject Property.

- The information provided in the database report identified a Recognized Environmental Concern in regards to the Syracuse University Steam Plant, located at 500 East Taylor Street has a historic spill that involved the discovery of fuel oil on groundwater in 1981. In 1991, fuel oil was still found. In 1992, the surrounding soil was excavated and the NYSDEC closed the spill but not meeting standards. Due to fuel oil in groundwater the potential for the fuel oil to travel to the Subject Property is greatly increased and therefore this would present a concern in respect to the Subject Property. The property is considered a Recognized Environmental Condition and a Vapor Encroachment Concern as it is located within 1/10th of a mile and up-gradient from the Subject Property. Any releases on the property could have migrated to the Subject Property.

- Based on the reconnaissance of the Subject Property, there was no visual evidence of a REC.

- A Phase I ESA was conducted by EA Engineering in May 2023 on the northern section of the same parcel as the Subject Property. Review of historical uses of the Phase One Area and adjacent properties indicate that there were uses which could have negatively impacted the environmental integrity of the Phase One Area, including its use as a junk yard until at least 1961. Additionally, several offsite locations were determined to pose a potential environmental risk to the Phase One Area due to spills, and/or leaking storage tanks. A Phase II ESA was conducted in June 2023 by EA Engineering and the results indicated that PFAS compounds and carbon tetrachloride were detected in groundwater at concentrations that exceeded AWQS Class GA criteria. PFOS were detected in soil exceeding the protection of groundwater guidance value. Trichloroethylene was detected at soil vapor at concentrations that exceeded EPA Residential Sub-Slab Soil Vapor screening criteria. The results of EA Engineering's Phase II ESA of the northern property may suggest a Recognized Environmental Condition and a Vapor Encroachment Concern to the Subject Property, which is located hydraulically upgradient from the Phase II site.

- Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in a wide variety of

products such as water-repellent clothing and furniture, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces, electrical wire insulation, and several other uses.

In recent years, the NYSDOH, NYSDEC, and USEPA began prioritizing the study of potential health effects of PFAS. There is limited information known to-date regarding PFAS and the regulations associated with them remain fluid. Although there is no precisely-clear definition of what constitutes a PFAS, the EPA lists 6,330 named PFAS substances. In February 2019, NYSDEC mandated the sampling of 21 PFAS substances in groundwater for sites being investigated under certain NYSDEC programs. As of the date of this report, PFAS is not considered hazardous by CERCLA, and therefore a non-scope item.

According to the EPA, drinking water can be a source of exposure in communities where these chemicals have contaminated water supplies. Such contamination is typically localized and associated with a specific facility. For example, an industrial facility where PFAS were produced or used to manufacture other products, or locations where firefighting foam was used such as oil refineries, airfields or other training facilities for firefighters.

During the completion of this assessment, an effort has been made to identify known sources of PFAS on or in the vicinity of the Subject Site, based upon common industry knowledge at the time this Assessment was completed. Based on the Phase II report summarized above, PFAS may be an issue at the Subject Property that requires further investigation.

9.1. Data Failure

ASTM E1527-21 defines a data failure as a failure to achieve the historical research objectives of all appropriate inquiries even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Specifically, the historical research objectives include identifying all obvious uses of the Subject Property from the present, back to the Subject Property's first developed use, or back to 1940, whichever is earlier. A data failure was not encountered during this assessment.

9.2. Data Gap

A data gap is a lack or inability to obtain information required despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required, including but not limited to Subject Property reconnaissance and interviews. During the course of this Phase I Environmental Site Assessment, no significant data gaps that impaired C&S' ability to formulate opinions were encountered.

10.0 CONCLUSIONS

C&S Engineers, Inc. performed this Phase I Environmental Site Assessment consistent with the scope and limitations of ASTM E1527-21 on the Subject Property identified in Section 1.1 and on various figures located at the rear of this report. Any exceptions to or deletions from ASTM E1527-21 are described in Section 12.2. This Phase I ESA has identified the following RECs:

- Subject Property:
    - Former drycleaner, filling station, automotive repair, auto salvage yard

- Offsite:
    - Adjacent northern parcel – PFAS and carbon tetrachloride exceeding AWQS Class GA criteria in groundwater and PFOS exceeding the protection of groundwater guidance value. Trichloroethylene was detected at soil vapor at concentrations that exceeded EPA Residential Sub-Slab Soil Vapor screening criteria.
    - Salvation Army – Lack of closure documentation for leaking storage tanks and spills
    - SU Steam Plant – Fuel found in groundwater wells.
    - Numerous Adjacent and Surrounding Properties – Former gasoline, oil, industrial and dry cleaning operations.

10.1. Opinion on Additional Investigation

Based on the results of this Phase I ESA, further investigation may be warranted at the Subject Property. Appropriate investigation may include a Phase II ESA, including a ground penetrating radar (GPR) survey.

12.0 LIMITATIONS, EXCEPTIONS, ASSUMPTIONS, AND SPECIAL CONDITIONS

12.1. Limitations and Exceptions

C&S has prepared this Phase I ESA consistent with the contract scope of services, using reasonable efforts to identify areas of potential liability associated with RECs at the Subject Property. The conclusions in this report were based solely on a visual review of the Subject Property and on readily available records, interviews, and other secondary sources as cited within this report. C&S has made no independent investigation of the accuracy of these secondary sources and has assumed them to be accurate and complete. C&S does not warrant the accuracy or completeness of the information provided by the secondary sources. C&S does not warrant that contamination that may exist on the Subject Property has been discovered, that the Subject Property is suitable for any particular purpose, or that the Subject Property is clean or free of liability.

No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.

All appropriate inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of the information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information.

ASTM E1527-21 defines limiting conditions as limitations imposed by physical obstructions such as adjacent buildings, bodies of water, asphalt or other paved areas, and other physical constraints (for example, rain, snow, flooding etc.). As noted during the Subject Property reconnaissance, there were no limiting conditions imposed on this assessment.

12.2. Non-Scope Items

Consistent with ASTM E1527-21, the following items are beyond the scope of Phase I Environmental Site Assessments:

- Asbestos Containing Materials
- Industrial Hygiene
- Health and Safety
- Ecological Resources
- Endangered Species
- Indoor Air Quality (unrelated to releases of hazardous substances or petroleum products into the environment)
- Biological Agents
- Mold
- Radon
- Lead-Based Paint
- Lead in Drinking Water
- Wetlands
- Regulatory Compliance
- Cultural and Historical Resources
- Substances not currently defined as hazardous substances (including some substances sometimes generally referred to as emerging contaminants, such as per- and polyfluoroalkyl substances (PFAs)

The Phase I ESA also does not include sampling or chemical analysis of soils, surface water, or groundwater or an intensive examination of facility hazards (compliance audit).

12.3. Significant Assumptions

C&S' conclusions are based on conditions that existed on the Subject Property on November 10, 2023. Past and present conditions that could not be observed were established on the basis of documents. C&S cannot attest to the completeness of accuracy of these materials. The report speaks only as of the date issued. C&S has no responsibility for updating the information herein, and therefore, do not assume that any information contained herein in this Phase I Environmental Site Assessment continues to be accurate subsequent to 180 days from the date of the issuance of this document.

Except where specifically stated to the contrary, the information contained herein was provided to C&S by others and has not been verified independently or otherwise examined to determine accuracy, completeness, or feasibility. In addition, C&S may have had to rely upon the assumptions, especially as to future conditions and events. Accordingly, neither C&S nor any person acting on C&S' behalf (a) makes any warranty or representation, whether expressed or implied, concerning the usefulness of the information contained in this report, or (b) assumes liabilities with respect to the use of or for damages resulting from the use of any information contained in this Environmental Site Assessment report. Further, C&S cannot promise that any assumed conditions will come to pass.

It would be expensive, and perhaps not possible, to conduct an investigation that would ensure the detection of environmental impacts at the Subject Property, which now are, or in the future might be, considered hazardous. This investigation does not guarantee that C&S discovered all

the environmental impacts at the Subject Property. Similarly, a property which, in fact, is unaffected by environmental impacts at the time of the assessment may later, due to natural phenomena or other intervention, become contaminated.

Except where stated to be the contrary, this Environmental Site Assessment has been prepared solely on the basis of readily available visual observation. Except where stated to be the contrary, no demolition or removal by C&S has been accomplished to reveal hidden conditions. No testing such as the testing of materials, equipment, or systems has been performed to verify current conditions or to predict future conditions.

Future regulatory modifications, agency interpretation, or policy changes may affect the compliance status of the property.

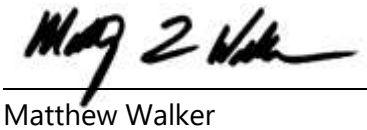
12.4. Special Terms and Conditions

Besides the standard contractual terms between C&S and Blueprint 15, this Phase I Environmental Site Assessment was conducted, in C&S' opinion, with no impeding special terms and conditions that would alter the scope and / or effectiveness of ASTM E1527-21.

13.0 SIGNATURES AND QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the Subject Property. To the best of my knowledge and belief, C&S Engineers Inc. has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Matthew Walker
Senior Project Environmental Scientist

Liability Notice....69

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

FEMA Flood Zone Definitions

Special Flood Hazard Areas – High Risk

Special Flood Hazard Areas represent the area subject to inundation by 1-percent-annual chance flood. Structures located within the SFHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory flood insurance purchase requirements apply in these zones.

ZONE	DESCRIPTION
A	Areas subject to inundation by the 1-percent-annual-chance flood event. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown.
AE, A1-A30	Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. BFEs are shown within these zones. (Zone AE is used on new and revised maps in place of Zones A1–A30.)
AH	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually areas of ponding) where average depths are 1–3 feet. BFEs derived from detailed hydraulic analyses are shown in this zone.
AO	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are 1–3 feet. Average flood depths derived from detailed hydraulic analyses are shown within this zone.
AR	Areas that result from the decertification of a previously accredited flood protection system that is determined to be in the process of being restored to provide base flood protection.
A99	Areas subject to inundation by the 1-percent-annual-chance flood event, but which will ultimately be protected upon completion of an under-construction Federal flood protection system. These are areas of special flood hazard where enough progress has been made on the construction of a protection system, such as dikes, dams, and levees, to consider it complete for insurance rating purposes. Zone A99 may be used only when the flood protection system has reached specified statutory progress toward completion. No BFEs or flood depths are shown.

Coastal High Hazard Areas – High Risk

Coastal High Hazard Areas (CHHA) represent the area subject to inundation by 1-percent-annual chance flood, extending from offshore to the inland limit of a primary front al dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. Structures located within the CHHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory purchase requirements apply in these zones.

ZONE	DESCRIPTION
V	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards associated with storm-induced waves. Because detailed coastal analyses have not been performed, no BFEs or flood depths are shown.
VE, V1-V30	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards due to storm-induced velocity wave action. BFEs derived from detailed hydraulic coastal analyses are shown within these zones. (Zone VE is used on new and revised maps in place of Zones V1–V30.)

Hydrologic Information

Moderate and Minimal Risk Areas

Areas of moderate or minimal hazard are studied based upon the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local stormwater drainage systems are not normally considered in a community's flood insurance study. The failure of a local drainage system can create areas of high flood risk within these zones. Flood insurance is available in participating communities, but is not required by regulation in these zones. Nearly 25-percent of all flood claims filed are for structures located within these zones.

ZONE	DESCRIPTION
B, X (shaded)	Moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee. No BFEs or base flood depths are shown within these zones. (Zone X (shaded) is used on new and revised maps in place of Zone B.)
C, X (unshaded)	Minimal risk areas outside the 1-percent and .2-percent-annual-chance floodplains. No BFEs or base flood depths are shown within these zones. (Zone X (unshaded) is used on new and revised maps in place of Zone C.)

Undetermined Risk Areas

ZONE	DESCRIPTION
D	Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

ERIS

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Sv

Unit Name:	Vernon Shale
Unit Age:	Upper Silurian
Primary Rock Type:	shale
Secondary Rock Type:	black shale
Unit Description:	Vernon Shale

Geologic Unit Ssy

Unit Name:	Syracuse Formation
Unit Age:	Upper Silurian
Primary Rock Type:	dolostone (dolomite)
Secondary Rock Type:	shale
Unit Description:	Syracuse Formation - dolostone, shale, gypsum, salt.

Geologic Unit Dhg

Unit Name:	Helderberg Group
Unit Age:	Lower Devonian
Primary Rock Type:	limestone
Secondary Rock Type:	dolostone (dolomite)
Unit Description:	Helderberg Group - West of Albany: Alsen, Becraft, New Scotland, Kalkberg, Coeymans, and Manlius Limestones; Rondout Dolostone. South of Albany: Port Ewen, Alsen thru Manlius Limestones; Rondout Dolostone.

ERIS

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit AlB (0.24%)

Map Unit Name:	Alton gravelly fine sandy loam, 3 to 8 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Alton(80%)

horizon H1(0cm to 20cm)	Gravelly fine sandy loam
horizon H2(20cm to 91cm)	Gravelly sandy loam
horizon H3(91cm to 117cm)	Very gravelly sandy loam
horizon 2C(117cm to 366cm)	Stratified very gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: AlB - Alton gravelly fine sandy loam, 3 to 8 percent slopes

Component: Alton (80%)
The Alton component makes up 80 percent of the map unit. Slopes are 3 to 8 percent. This component is on proglacial deltas, terraces, outwash plains. The parent material consists of gravelly loamy glaciofluvial deposits over sandy and gravelly glaciofluvial deposits, derived mainly from acidic rocks, with some limestone below 40 inches. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 2s. This soil does not meet hydric criteria.

Component: Arkport (5%)
Generated brief soil descriptions are created for major components. The Arkport soil is a minor component.

Component: Colonie (5%)
Generated brief soil descriptions are created for major components. The Colonie soil is a minor component.

Component: Minoa (5%)
Generated brief soil descriptions are created for major components. The Minoa soil is a minor component.

Component: Phelps (5%)
Generated brief soil descriptions are created for major components. The Phelps soil is a minor component.

Map Unit AlC (0.53%)

Map Unit Name:	Alton gravelly fine sandy loam, rolling
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Alton(80%)

horizon H1(0cm to 20cm)	Gravelly fine sandy loam
horizon H2(20cm to 91cm)	Gravelly sandy loam
horizon H3(91cm to 117cm)	Very gravelly sandy loam
horizon 2C(117cm to 366cm)	Stratified very gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: AlC - Alton gravelly fine sandy loam, rolling

Component: Alton (80%)
The Alton, rolling component makes up 80 percent of the map unit. Slopes are 8 to 15 percent. This component is on outwash plains, proglacial deltas, terraces. The parent material consists of gravelly loamy glaciofluvial deposits over sandy and gravelly glaciofluvial deposits, derived mainly from acidic rocks, with some limestone below 40 inches. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria.

Component: Colonie (5%)
Generated brief soil descriptions are created for major components. The Colonie soil is a minor component.

Component: Phelps (5%)
Generated brief soil descriptions are created for major components. The Phelps soil is a minor component.

Component: Arkport (5%)
Generated brief soil descriptions are created for major components. The Arkport soil is a minor component.

Component: Unnamed soils (5%)
Generated brief soil descriptions are created for major components. The Unnamed soils soil is a minor component.

Map Unit CfB (0.23%)

Map Unit Name:	Cazenovia silt loam, 2 to 8 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	92cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Cazenovia(85%)

horizon H1(0cm to 30cm)	Silt loam
horizon H2(30cm to 91cm)	Silty clay loam
horizon H3(91cm to 152cm)	Gravelly silty clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: CfB - Cazenovia silt loam, 2 to 8 percent slopes

Component: Cazenovia (85%)
The Cazenovia component makes up 85 percent of the map unit. Slopes are 2 to 8 percent. This component is on reworked lake plains, till plains. The parent material consists of loamy till that contains limestone with an admixture of reddish lake-laid clays or reddish clay shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 36 inches during March, April, May. Organic matter content in the surface horizon is about 6 percent. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 1 percent.

Soil Information

Component: Ovid (10%)
Generated brief soil descriptions are created for major components. The Ovid soil is a minor component.

Component Description:

Minor map unit components are excluded from this report.

Map Unit: HTE - Honeoye, Lansing, and Ontario soils, 25 to 35 percent slopes

Component: Honeoye (30%)
The Honeoye component makes up 30 percent of the map unit. Slopes are 25 to 35 percent. This component is on till plains, ridges. The parent material consists of calcareous loamy lodgment till derived from limestone, sandstone, and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent.

Component: Lansing (25%)
The Lansing component makes up 25 percent of the map unit. Slopes are 25 to 35 percent. This component is on till plains, hills. The

parent material consists of calcareous loamy lodgment till derived from limestone, sandstone, and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent.

Component: Ontario (25%)
The Ontario component makes up 25 percent of the map unit. Slopes are 25 to 35 percent. This component is on till plains, ridges. The parent material consists of calcareous loamy lodgment till derived from limestone, sandstone, and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent.

Component: Mohawk (10%)
Generated brief soil descriptions are created for major soil components. The Mohawk soil is a minor component.

Component: Madrid (7%)
Generated brief soil descriptions are created for major soil components. The Madrid soil is a minor component.

Component: Cazenovia (3%)
Generated brief soil descriptions are created for major soil components. The Cazenovia soil is a minor component.

Map Unit PgA (14.53%)

Map Unit Name:	Palmyra gravelly loam, 0 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.
Major components are printed below	
Palmyra(80%)	
horizon H1(0cm to 36cm)	Gravelly loam
horizon H2(36cm to 79cm)	Gravelly loam
horizon H3(79cm to 152cm)	Stratified very gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: PgA - Palmyra gravelly loam, 0 to 3 percent slopes

Component: Palmyra (80%)
The Palmyra component makes up 80 percent of the map unit. Slopes are 0 to 3 percent. This component is on outwash plains, proglacial deltas, terraces. The parent material consists of loamy over sandy and gravelly glaciofluvial deposits, derived mainly from limestone and other sedimentary rocks. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 5 percent. Nonirrigated land capability classification is 1. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 15 percent.

Component: Phelps (8%)
Generated brief soil descriptions are created for major components. The Phelps soil is a minor component.

Component: Arkport (6%)
Generated brief soil descriptions are created for major components. The Arkport soil is a minor component.

Component: Howard (6%)

Soil Information

Generated brief soil descriptions are created for major components. The Howard soil is a minor component.

Map Unit PgB (1.62%)

Map Unit Name:	Palmyra gravelly loam, 3 to 8 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Palmyra(80%)

horizon H1(0cm to 36cm)	Gravelly loam
horizon H2(36cm to 79cm)	Gravelly loam
horizon H3(79cm to 152cm)	Stratified very gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: PgB - Palmyra gravelly loam, 3 to 8 percent slopes

Component: Palmyra (80%)
The Palmyra component makes up 80 percent of the map unit. Slopes are 3 to 8 percent. This component is on terraces, outwash plains, proglacial deltas. The parent material consists of loamy over sandy and gravelly glaciofluvial deposits, derived mainly from limestone and other sedimentary rocks. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 5 percent. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 15 percent.

Component: Phelps (5%)
Generated brief soil descriptions are created for major components. The Phelps soil is a minor component.

Component: Arkport (5%)
Generated brief soil descriptions are created for major components. The Arkport soil is a minor component.

Component: Schoharie (5%)
Generated brief soil descriptions are created for major components. The Schoharie soil is a minor component.

Component: Howard (5%)
Generated brief soil descriptions are created for major components. The Howard soil is a minor component.

Map Unit Ub (79.74%)

Map Unit Name:	Urban land

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Ub - Urban land

Component: Urban land (70%)
Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

Component: Dunkirk (5%)
Generated brief soil descriptions are created for major components. The Dunkirk soil is a minor component.

Soil Information

Component: Appleton (5%)
Generated brief soil descriptions are created for major components. The Appleton soil is a minor component.

Component: Lamson (5%)
Generated brief soil descriptions are created for major components. The Lamson soil is a minor component.

Component: Mardin (5%)
Generated brief soil descriptions are created for major components. The Mardin soil is a minor component.

Component: Howard (5%)
Generated brief soil descriptions are created for major components. The Howard soil is a minor component.

Component: Fredon (5%)
Generated brief soil descriptions are created for major components. The Fredon soil is a minor component.

Map Unit W (0.66%)

Map Unit Name: Water

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: W - Water

Component: Water (100%)
Generated brief soil descriptions are created for major soil components. The Water is a miscellaneous area.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *ONONDAGA* County: **1**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *ONONDAGA* County

No Measures/Homes:	4749
Geometric Mean:	16.2
Arithmetic Mean:	8.5
Median:	3.6
Standard Deviation:	3.7
Maximum:	341.8
% >4 pCi/L:	47
% >20 pCi/L:	10
Notes on Data Table:	Table 1. Screening indoor radon data compiled by the New York State Department of Health. Data represent 1-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The data includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP). The WQP is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

Wells from NWIS — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This select NWIS Wells dataset contains specific Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well, Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern. Applicable NWIS database information is obtained

through the Water Quality Data Portal (WQP). The WQP is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

State Sources

Oil and Gas Wells **OGW**

The Division of Mineral Resources maintains a data management system on wells regulated under the Oil, Gas and Solution Mining Law (OGSML). To assist the Division in the regulation of wells subject to the OGSML, a database of the wells was created in the early 1980's and significantly upgraded in 1998 by the adoption of the Risk Based Data Management System. This system provides information on well ownership, well owners and operators, registered driller, pluggers and companies that provide financial security instruments.

Regulatory Freshwater Wetlands **WETLAND**

The Regulatory Freshwater Wetlands data are a set of ARC/INFO coverages composed of polygonal and linear features. Coverages are based on official New York State Freshwater Wetlands Maps as described in Article 24-0301 of the Environmental Conservation Law. Coverages are not, however, a legal substitute for the official maps. Coverages are available on a county basis for all areas of New York State outside the Adirondack Park. This dataset is provided by New York State Department of Environmental Conservation.

Underground Injection Control Wells **UIC**

A well permit is required from the Division of Mineral Resources for any brine disposal well deeper than 500 feet. This includes any operation to drill, deepen, plug back or convert a well. Regardless of well depth, the NYSDEC Division of Water must be contacted for a determination of whether a SPDES permit is necessary to operate any brine disposal well.

Water Wells Database **WATER WELLS**

The New York State Department of Environmental Conservation (DEC) Bureau of Water Resource Management works to protect, manage, and conserve New York State's groundwater and surface water supply sources, develop management strategies to enhance and protect these waters, and protect both the groundwater and surface water quality in the New York City Watershed and other major watersheds. This dataset does not include information on wells located in Nassau, Suffolk, Kings, and Queens counties.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

RE: CITY DIRECTORY RESEARCH
301-311 East Taylor Street
Syracuse,NY 13202

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
100-600 of E Taylor St
800-1300 of S State St
Search Notes:

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

"RP HIT DEBRIS ON HIGHWAY. HER GAS TANK AND TIRE WERE PUNCTURED. TANK PLUG FAILED, AND GAS LEAKED ONTO PARKING LOT OUTSIDE RP'S SISTER'S APARTMENT ON RADISSON COURT. SYRACUSE FD NOTIFIED AFTER PROGRESSIVE RECOMMENDATION. FD PUT DOWN SPEEDY-DRI AND NOTIFIED HOTLINE. I TOOK 15 MINUTES TO REACH SPILL SITE. FD WAS ALREADY OFF-SITE. PROGRESSIVE HIRED TOW COMPANY, BUT THEY WERE NOT PREPARED TO REMOVE SPEEDY-DRI OR CONTINUE LOCATION DECOMMTAMINATION. I HIRED NRC TO CLEAR PARKING LOT OF GASOLINE SPILL. A MAN CAME OVER TO TALK TO FEMALE DRIVER. I DO NOT KNOW IF THAT WAS THE REGISTERED VEHICLE OWNER. VEHICLE PLATE IS JRP-7723. FEMALE DRIVER NAME IS UNKNOWN. 11/2021 I CALLED SYRACUSE FIRE. THEY WERE UNABLE TO SUPPLY REPORTS WITHOUT A FEE. 06/06/2022 I DECIDED TO CONTACT THE SHERIFF RECORDS, IN CASE THEY HAD A CONTACT WITH CITY FIRE. THE SHERIFF RECORDS CONTACT STATED THAT THE SHERIFF HAS ACCESS TO CITY FIRE REPORTS, BUT, THIS SPILL HAS NO REPORT. IT WAS LISTED AS A HAZARD CALL (E10), AND WITHDRAWN. THE DR NUMBER IS DR 20-41725."

Manifest Information

Waste Code(s):

D009: MERCURY (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

2009: 300 Pounds; 200 Pounds

Manifest Information

Waste Code(s):

F003: (Generic) The following spent nonhalogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above nonhalogenated solvents, and a total of 10 percent or more (by volume) of one or more of those solvents listed in F001, F002, F004 and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

Waste Amounts By Year:

1994: 556 Pounds

Manifest Information

Waste Code(s):

B003: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

Waste Amounts By Year:

2009: 3 Kilograms

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

2009: 1100 Pounds; 1200 Pounds; 1000 Pounds

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)
U213: (109-99-9) Furan, tetrahydro-(I)

Waste Amounts By Year:

2009: 1100 Pounds

Source File: NYSDEC - Environmental Remediation Data Files - Spill Data

Caller Remark:

"FOUND 3 TANKS"

DEC Remark:

"12/2/2020 - Three USTs removed from beneath north garage bay floor by Paragon / Geologic. Tanks are 1k, 2k, 2k. One tank shows gasoline. All samples to be analyzed for 8260 8270 CP-51 compounds. Working with Mary Wilson, 315-684-6669, WilsonMJ@Morrisville.edu, Morrisville Auxiliary of State, POB 901, Morrisville NY 13408 to register tanks. Apparently SUNY purchased property 2/11/2019. KCKemp 01/14/2021 - Closure report and registration received, reviewed, and filed. Spill closed as not meeting standards due to a few inaccessible exceedences of CP-51 guidance values. KCKemp"

Manifest Information

Waste Code(s):

B001: (Wastes containing polychlorinated biphenyls (PCBs)) PCB oil (concentrated) from transformers, capacitors, etc.

Waste Amounts By Year:

1997: 4800 Kilograms
2002: 3 Kilograms

Manifest Information

Waste Code(s):

D006: CADMIUM (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

1996: 55 Gallons

Manifest Information

Waste Code(s):

B006: (Wastes containing polychlorinated biphenyls (PCBs)) PCB transformers. PCB transformers means any transformer that contains 500 ppm PCB or greater.

Waste Amounts By Year:

1997: 800 Kilograms

Manifest Information

Waste Code(s):

B007: (Wastes containing polychlorinated biphenyls (PCBs)) Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Waste Amounts By Year:

1997: 14941 Kilograms

Manifest Information

Waste Code(s):

D008: LEAD (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

1995: 150 Pounds; 375 Pounds

Manifest Information

Waste Code(s):

B002: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers, and cable.

Waste Amounts By Year:

2001: 2455 Kilograms

Manifest Information

Waste Code(s):

B003: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

Waste Amounts By Year:

2001: 1245 Kilograms

Highlights: The Property consists of one parcel totaling 0.21± acres of land in Syracuse, New York. The Property currently contains a brick building, approximately 4,700 square feet (sq ft), in deteriorating condition. At the time of the site visit the Property was vacant, with several areas of solid waste disposal onsite. Access to the Property and interior of the subject building was not granted to Stantec, and our Property reconnaissance was performed from the adjacent roadway rights-of-way. The Property is located in a predominantly commercial/residential neighborhood. The Property was developed in 1892 with a residential dwelling. The current brick building was constructed in the early 1950s and used at that time for bus service and sales.

Highlights: The Property consists of one parcel totaling 0.21± acres of land in Syracuse, New York. The Property currently contains a brick building, approximately 4,700 square feet (sq ft), in deteriorating condition. At the time of the site visit the Property was vacant, with several areas of solid waste disposal onsite. Access to the Property and interior of the subject building was not granted to Stantec, and our Property reconnaissance was performed from the adjacent roadway rights-of-way. The Property is located in a predominantly commercial/residential neighborhood. The Property was developed in 1892 with a residential dwelling. The current brick building was constructed in the early 1950s and used at that time for bus service and sales.

Site Class Desc: Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Assess DOH: People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Contact with contaminated soil remaining at the site is unlikely unless people dig below the soil cover system and demarcation layer that exists across the entire site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site building development and occupancy. Furthermore, environmental data available for an off-site property indicates that soil vapor intrusion is not a concern.

Description:

Location: The McKinney Property site is an approximately 0.60-acre site located at 1226 McBride Street, on the northwest corner of South McBride Street and Burt Street, in an urban area of the City of Syracuse. Site Features: The site is developed as a gravel parking lot with a vegetated strip extending along the northern, eastern and southern site perimeter. There are no buildings on the site. It is generally flat, with a gentle slope from northwest to southeast. There is a concrete retaining wall along the north boundary of the site, which supports an elevated rail line. Current Zoning and Land Use: The majority of the site is a parking lot. It is zoned for commercial use. The surrounding parcels are used for a mix of commercial, industrial, and residential purposes. Several nearby properties are owned by the Syracuse Housing Authority (SHA), including a large residential apartment building. There are also several townhouses located south of the site, across Burt Street from the site. The site is bordered to the north by an elevated railroad line. A portion of the Syracuse University steam plant facility lies beyond the rail line to the north. The site is bordered to the south by Burt Street, with residential buildings beyond. An electrical substation is located further south. To the east, the site is bordered by South McBride Street, with the elevated rail line and the rest of the Syracuse University steam plant lying beyond. To the west, the site is bordered by a commercial property owned by SHA, with vacant lots and Oakwood Avenue beyond. Beyond Oakwood Avenue are vacant lots and two small commercial properties. Past Use of the Site: The site was previously occupied by a metal working company and a scrap metal storage/processing business. The metal working/processing operations have led to contamination of the site by metals and oils. Equipment associated with these operations also contributed to contamination, including underground storage tanks, capacitors containing dielectric fluids, an oil/water separator and hydraulic machinery. Site Geology and Hydrogeology: Unconsolidated deposits in the area have been mapped as lacustrine silt and clay. Soil encountered during the investigation consisted of several feet of fill material, underlain by the lacustrine unit, which consisted of silt and clay with lesser amounts of fine sand. The fill was generally approximately 2 feet thick, but ranged up to 9 feet thick. The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Contact with contaminated soil remaining at the site is unlikely unless people dig below the soil cover system and demarcation layer that exists across the entire site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due

to soil vapor intrusion for any future on-site building development and occupancy. Furthermore, environmental data available for an off-site property indicates that soil vapor intrusion is not a concern.

Description:

Location: The McKinney Property site is an approximately 0.60-acre site located at 1226 McBride Street, on the northwest corner of South McBride Street and Burt Street, in an urban area of the City of Syracuse. Site Features: The site is developed as a gravel parking lot with a vegetated strip extending along the northern, eastern and southern site perimeter. There are no buildings on the site. It is generally flat, with a gentle slope from northwest to southeast. There is a concrete retaining wall along the north boundary of the site, which supports an elevated rail line. Current Zoning and Land Use: The majority of the site is a parking lot. It is zoned for commercial use. The surrounding parcels are used for a mix of commercial, industrial, and residential purposes. Several nearby properties are owned by the Syracuse Housing Authority (SHA), including a large residential apartment building. There are also several townhouses located south of the site, across Burt Street from the site. The site is bordered to the north by an elevated railroad line. A portion of the Syracuse University steam plant facility lies beyond the rail line to the north. The site is bordered to the south by Burt Street, with residential buildings beyond. An electrical substation is located further south. To the east, the site is bordered by South McBride Street, with the elevated rail line and the rest of the Syracuse University steam plant lying beyond. To the west, the site is bordered by a commercial property owned by SHA, with vacant lots and Oakwood Avenue beyond. Beyond Oakwood Avenue are vacant lots and two small commercial properties. Past Use of the Site: The site was previously occupied by a metal working company and a scrap metal storage/processing business. The metal working/processing operations have led to contamination of the site by metals and oils. Equipment associated with these operations also contributed to contamination, including underground storage tanks, capacitors containing dielectric fluids, an oil/water separator and hydraulic machinery. Site Geology and Hydrogeology: Unconsolidated deposits in the area have been mapped as lacustrine silt and clay. Soil encountered during the investigation consisted of several feet of fill material, underlain by the lacustrine unit, which consisted of silt and clay with lesser amounts of fine sand. The fill was generally approximately 2 feet thick, but ranged up to 9 feet thick. The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Caller Remark:

"1 gallon possibly into floor drain - FD on scene now -"

DEC Remark:

"12/20/2012 - Approx 1 gallon of 50% sulfuric acid released onto worker after flexible poly pipe burst, spraying area and worker. Worker immediately placed under water deluge shower, all clothing removed, and eyes rinsed. Approx 1 gallon of sulfuric acid flowed from water deluge area into nearby sanitary sewer. Site is not CBS regulated due to small bulk tank sizes (< 185 gallons), but chemical sulfuraic acid chemical is listed in part 597, so WEP and SU contacted hotline and Fire Department. FD and plant personnel placed sodium bicarb over acid sprayed to floor as well as into sewer in attmept to neutralize acid. Brazell notified for possible municipal notifcation requirement. KCKemp 1/9/2013 - Closure report received and filed. KCKemp"

Waste Amounts By Year:

2000: 150 Pounds

Manifest Information

Waste Code(s):

D007: CHROMIUM (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

1991: 700 Pounds

Manifest Information

Waste Code(s):

D009: MERCURY (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

1994: 20 Pounds
1999: 105 Pounds
2000: 15 Pounds
2001: 1 Gallons; 1 Pounds; 1 Pounds
2002: 1 Pounds; 15 Pounds
2010: 1 Pounds
2011: 17 Pounds
2013: 40 Pounds; 98 Pounds
2016: 19 Pounds

Manifest Information

Waste Code(s):

B001: (Wastes containing polychlorinated biphenyls (PCBs)) PCB oil (concentrated) from transformers, capacitors, etc.

Waste Amounts By Year:

1988: 400 Gallons
1989: 55 Gallons

Manifest Information

Waste Code(s):

B007: (Wastes containing polychlorinated biphenyls (PCBs)) Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Waste Amounts By Year:

1989: 150 Pounds; 900 Pounds
1992: 22 Kilograms; 360 Kilograms

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)
D002: CORROSIVE WASTE (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

2008: 150 Pounds
2014: 3 Pounds

Manifest Information

Waste Code(s):

F001: (Generic) The following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1, 1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004 and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

Waste Amounts By Year:

1988: 275 Gallons
1989: 605 Gallons

Manifest Information

Waste Code(s):

U080: (75-09-2) Methane, dichloro-

Waste Amounts By Year:

2003: 7 Pounds

Manifest Information

Waste Code(s):

F002: (Generic) The following spent halogenated solvents: tetrachloro-ethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2- trifluoroethane, orthodichlorobenzene, trichlorofluoromethane and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004 or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

Waste Amounts By Year:

1989: 440 Gallons
1991: 55 Gallons
1992: 165 Gallons
1994: 55 Gallons
1996: 55 Gallons
2000: 17 Pounds; 250 Pounds

Manifest Information

Waste Code(s):

F003: (Generic) The following spent nonhalogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above nonhalogenated solvents, and a total of 10 percent or more (by volume) of one or more of those solvents listed in F001, F002, F004 and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

Waste Amounts By Year:

1990: 55 Gallons

1994: 20 Gallons
1999: 440 Pounds
2000: 40 Gallons
2003: 33 Pounds
2004: 320 Pounds
2005: 60 Pounds; 300 Pounds
2006: 125 Pounds

Manifest Information

Waste Code(s):

B002: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers, and cable.

Waste Amounts By Year:

1989: 330 Gallons

Manifest Information

Waste Code(s):

B003: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

Waste Amounts By Year:

1988: 100 Pounds

Manifest Information

Waste Code(s):

B004: (Wastes containing polychlorinated biphenyls (PCBs)) PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

Waste Amounts By Year:

1988: 6250 Pounds

Manifest Information

Waste Code(s):

B006: (Wastes containing polychlorinated biphenyls (PCBs)) PCB transformers. PCB transformers means any transformer that contains 500 ppm PCB or greater.

Waste Amounts By Year:

1988: 11000 Pounds
1989: 18200 Pounds

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

1988: 110 Gallons; 385 Gallons
1990: 55 Gallons
1991: 131 Pounds; 131 Pounds; 1732 Pounds; 294 Pounds; 131 Pounds; 55 Gallons
1992: 131 Pounds; 131 Pounds; 86 Pounds; 131 Pounds; 131 Pounds
1993: 24 Gallons; 15 Gallons; 22 Gallons; 18 Gallons
1994: 60 Gallons; 15 Gallons; 21 Gallons; 17 Gallons
1995: 16 Gallons; 12 Gallons; 16 Gallons; 12 Gallons; 17 Gallons; 55 Gallons
1996: 16 Gallons; 15 Gallons; 15 Gallons; 15 Gallons
1997: 15 Gallons; 15 Gallons; 15 Gallons; 16 Gallons; 15 Gallons
1998: 16 Gallons
2000: 800 Pounds
2001: 8 Pounds; 1 Gallons; 200 Pounds; 3 Pounds; 1 Gallons
2002: 25 Pounds; 3 Pounds
2003: 5 Pounds; 60 Pounds; 5 Pounds
2004: 8 Pounds; 10 Pounds; 10 Pounds
2005: 2 Pounds; 20 Pounds; 20 Pounds; 99 Pounds

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)
F003: (Generic) The following spent nonhalogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above nonhalogenated solvents, and a total of 10 percent or more (by volume) of one or more of those solvents listed in F001, F002, F004 and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*
F005: (Generic) The following spent nonhalogenated solvents: toluene, methyl ethyl ketone, carbon disulfide, isobutanol, and pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of 10 percent or more (by volume) of one or more of the above nonhalogenated solvents or those solvents listed in F001, F002 or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

Waste Amounts By Year:

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19870807
Handler Name: SYRACUSE UNIV - STEAM STATION
Source Type: Notification
Federal Waste Generator Code: 2
Generator Code Description: Small Quantity Generator

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Highlights:

The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Highlights: The property is comprised of three parcels with addresses of 1210 S State St (Parcel # 094.-18-10.0), 1212 S State St (Parcel # 094.-18-11.0) and 1214 S State St (094.-18-12.0). Two Victorian homes were constructed on 1212 S State St and 1214 S State St in 1900. In 1954, the homes were connected and a retail storefront was added. A plumbing supply store operated until sometime betweeen 2013 and 2018. Later a large garage on a concrete slab and overhead doors was added to the rear of the 1214 S State St structure and used for storage. Another businesses at the property include an 'oil burner supply' store that sold parts and materials for oil burning heating systems. A Phase I ESA was initiated at the property in 2019 when the City was notified by the prior owners estate attorney of a possible donation to the City. During discussions with the estate attorney, a fire destroyed both structures. The City of Syracuse demolished the site structures with a court order in October of 2019. The property is now vacant. Heating oil above-ground storage tanks (ASTs) were previously located in the basement of the S State St 1212 and 1214 S State St structures. During the 2019 Phase I ESA site visit, evidence of petroleum staining was observed on the earth floor of both buildings proximate to the ASTs. The ASTs were removed by the City's demolition contractor in 2019 however there was no investigation of the observed petroleum hydrocarbon release at either structure.According to the March 2019 Phase I ESA, 'Numerous commercial and industrial properties have been located within close proximity the property in the 1900's through the late 1960's at various timeframes including junk yards, sheet metal fabricators, commercial rug cleaning, printing, tire and battery service, coal sales and automotive repairs.' The historical uses of the adjacent properties are considered an environmental concern for the property. There appears to have been no previous environmental testing performed at the property. Anecdotal evidence made during the March 2019 Phase I ESA would seem to indicate that the property may have been contaminated as a result of incidental spills and drips from the ASTs.

Site Class Desc:	No Further Action at this Time: Sites are given a classification of "N" when: a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Violation/Evaluation Summary

Note:	NO RECORDS: As of Jul 2023, there are no Compliance Monitoring and Enforcement (violation) records associated with this facility (EPA ID).

Handler Summary

Importer Activity:	No
Mixed Waste Generator:	No
Transporter Activity:	No
Transfer Facility:	No
Onsite Burner Exemption:	No
Furnace Exemption:	No
Underground Injection Activity:	No
Commercial TSD:	No
Used Oil Transporter:	No
Used Oil Transfer Facility:	No
Used Oil Processor:	No
Used Oil Refiner:	No
Used Oil Burner:	No
Used Oil Market Burner:	No
Used Oil Spec Marketer:	No

Hazardous Waste Handler Details

Sequence No:	1
Receive Date:	19911118
Handler Name:	PROJECT ORANGE GASLINE PROJECT
Source Type:	Notification
Federal Waste Generator Code:	1
Generator Code Description:	Large Quantity Generator

Waste Code Details

Hazardous Waste Code:	F003
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Site Class Desc (Web):	No Further Action at this Time: Sites are given a classification of "N" when: a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.
Assess DOH:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Description:

This site is undergoing a remedial program under the Brownfield Cleanup Program. See site ID C734140.

Assessment:

See site ID C734140.

Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Site Class Desc (Web):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	People who enter the site may come into contact with site related soil and groundwater contamination if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via the soil vapor intrusion pathway is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Environmental sampling indicates that soil vapor intrusion associated with contamination at the site is not a concern for offsite buildings.

Description:

Location: The site is 1.89 acres and is bordered on the west by South Salina Street, across the street from the former Coyne Textile Services Brownfield Cleanup Program site (ref. Site No. C734144); on the south by a church; to the north by a small glass and mirror shop; and to the east by a community center along Montgomery Street. Site Features: Currently, the site is undeveloped with no structures on the property. The site is a relatively flat lot with broken pavement along with grassed-vegetated areas and some mature trees across the property. Current Zoning and Land Use: The site property is zoned as BA District, which permits the intensive development of land for mixed residential, retail, service and certain industrial uses. Adjacent parcels are zoned for commercial (CA) to the north, west, and southwest, BA to the north and south, and residential (RB) to the east. Other nearby parcels are a mix of industrial, commercial, business, and residential land uses. Past Use of the Site: Previously, the site was used as an above-ground storage tank facility for manufactured gas generated from coal or oil. The approximately 125-foot diameter tank, called a gasometer, stored gas for distribution for city and private lighting, cooking, and heating. The facility operated in the late 1890s until taken out of service sometime before 1951. Thereafter, various uses of the site included a rug cleaner, bottling operation, laundry/dry cleaner, automobile repair, refrigerator repair shop, tailor, plumbing shop, paint shop, and a glass warehouse. The buildings were demolished in the late 1970s and early 1980s and then the site was used as a parking lot. Site Geology and Hydrogeology: The greater portion of the site is underlain with a mix of sand, silt, and clay soils that contain historic fill to a depth of approximately 20 feet. The historic fill contains clay tile, ash, coal and brick. Native soil is located below the fill and consists of peat and marl. The depth to water is approximately 7 to 10 feet below grade with groundwater flow direction to the north-west

Assessment:

A remedial investigation was conducted to assess the nature and extent of contamination at the site. The remedial investigation consisted of the

following elements: the evaluation of buried utilities; collection and analysis of eight surface soil samples; the installation of 33 soil borings which included the collection and analysis of 18 subsurface soil samples; the excavation of six test pits with the analysis of one soil sample; and the installation of five groundwater monitoring wells which included two rounds of groundwater monitoring. Soil and groundwater samples were analyzed for a combination of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, herbicides, PCBs, metals (including mercury, cyanide, and hexavalent chromium), 1,4-dioxane, and PFOS/PFOA. Soils: Contaminants of concern have been identified at concentrations that exceed the Restricted-Residential (RR) Soil Cleanup Objectives (SCOs). The contamination of the soils is generally associated within the historical fill material (HFM) at the site. HFM was observed at varying depths from the surface to approximately 20 feet below grade. SVOCs are present in surface soil samples across the site at concentrations that exceed Restricted-Residential Use SCOs. SVOCs and metals are also present in the sub-surface soils within the HFM at concentrations above Restricted Residential Use SCOs. The types and concentrations of SVOCs and metals that have been identified are consistent with those typically found in historically industrialized urban areas. Native soils sampled from beneath the HFM do not exceed RR SCOs for any analytes. These results suggest that the contaminants of concern are contained within the observed on-site HFM. Surface Soil: Sampling depth: 0 to 2 inches A total of eight surface samples were obtained across the site. Laboratory results indicate several SVOCs are above Restricted Residential (RR) use SCOs including, benzo(a)anthracene with concentrations ranging from 1.7 to 5.5 parts per million (ppm) compared to the RR Use SCO value of 1 ppm; benzo(a)pyrene with concentrations ranging from 1.6 to 4.8 ppm compared to the RR Use SCO value of 1 ppm; benzo(b)fluoranthene with concentrations ranging from 2.3 to 6.6 ppm compared to the RR Use SCO value of 1 ppm; chrysene with concentrations ranging 1.7 to 5.2 ppm compared to the RR Use SCO value of 3.9 ppm; dibenzo(a,h)anthracene with concentrations ranging from 0.37 to 0.7 ppm compared to the RR Use SCO value of 0.33 ppm, and indeno (1,2,3-cd)pyrene with concentrations ranging from 1.1 to 2.8 ppm compared to the RR Use SCO value of 0.5 ppm. Sub-Surface Soils: A total of 18 subsurface samples were collected from across the site. Laboratory results of the soils samples obtained from areas containing HFM indicate SVOCs are present at concentrations above Protection of Groundwater SCOs and Restricted-Residential Use SCOs and, to a lesser degree, metals are present at concentrations above Residential-Restricted Use SCOs Laboratory results indicate several SVOCs are above Restricted Residential Use SCOs including, benzo(a)anthracene with concentrations ranging from 1.6 to 51 parts per million (ppm) compared to the RR Use SCO value of 1 ppm; benzo(a)pyrene with concentrations ranging from 1.2 to 39 ppm compared to the RR Use SCO value of 1 ppm; benzo(b) fluoranthene with concentrations ranging from 1.6 to 49 ppm compared to the RR Use SCO value of 1 ppm; benzo(k)fluoranthene with concentrations ranging from 8.2 to 18 ppm compared to the RR Use SCO value of 3.9 ppm; chrysene with concentrations ranging 3.9 to 40 ppm compared to the RR Use SCO value of 3.9 ppm; dibenzo(a,h)anthracene with concentrations ranging from 0.38 to 5.3 ppm compared to the RR Use SCO value of 0.33 ppm; indeno(1,2,3-cd) pyrene with concentrations ranging from 0.72 to 24 ppm compared to the RR Use SCO value of 0.5 ppm, and phenanthrene with a concentration of 100 ppm compared to the RR Use SCO value of 100 ppm. Laboratory results indicate several metals above Restricted Residential Use SCOs including, total copper with a concentration of 495 ppm compared to the RR Use SCO value of 270 ppm; lead with a concentration of 415 ppm compared to the RR Use SCO value of 400 ppm; and total mercury with concentrations ranging from 0.88 to 1.2 ppm compared to the RR Use SCO value of 0.81 ppm. Five test pits were advanced at areas identified as anomalies during a previous geophysical study. At each location, the subsurface contained construction and demolition (C&D) debris, including wood, concrete, brick, asphalt, as well as HFM. Similar observations of fill were made in borings advanced within a large anomaly that coincided with the footprint of the former gasometer. No tanks, vaults, or other subsurface structures were identified while excavating the test pits. In addition, no visual evidence of contamination (e.g., stains or odors) was observed. Due to the presence of ash at test pit TP-4, a sample was collected. Laboratory results indicate no analytes were above Restricted-Residential Use SCOs. Groundwater: Groundwater samples were collected twice, once in October 2019 and again in January 2020, from five groundwater monitoring wells across the site. The depth to groundwater is approximately seven to ten feet below grade with a groundwater flow direction to the northwest. The results of the laboratory analysis indicate the principal groundwater contaminants are volatile organic compounds (VOCs). A number of VOCs were observed above the NYSDEC Technical and Operational Guidance Series (TOGS) groundwater protection standards. The groundwater contamination is primarily located in the central portion of the site in monitoring wells MW-1 and MW-2. Benzene is present at monitoring wells MW-1 and MW-2 with a concentration range from 58 to 190 ppb, compared to the TOGS standard of 1 ppb. Toluene is present in MW-2 with a concentration range from 11 to 40 ppb, compared to the TOGS standard of 5 ppb. Ethylbenzene is present in MW-2 with a concentration range from ND to 19 ppb, compared to the TOGS standard of 5 ppb. P/M xylene is present in MW-2 with a concentration range from ND to 20 ppb, compared to the TOGS standard of 5 ppb. O-xylene is present in MW-2 with a concentration range from ND to 12 ppb, compared to the TOGS standard of 5 ppb. Styrene is present in MW-2 with a concentration range from ND to 8.8 ppb, compared to the TOGS standard of 5 ppb. No other VOCs exceeded NYSDEC TOGS values at the site. There are several semi-volatile organic compounds (SVOCs) that are slightly above NYSDEC TOGS groundwater protection values, with no single compound concentration greater than 0.12 parts per billion (ppb). Laboratory results identified the following compounds above the NYSDEC TOGS value of 0.002 ppb: benzo(a) anthracene ranging from 0.02 to 0.12 ppb; benzo(a)pyrene ranging from 0.02 to 0.09 ppb; benzo(b)fluoranthene ranging from 0.01 to 0.11 ppb; benzo (k)fluoranthene ranging from 0.01 to 0.05 ppb; chrysene ranging from 0.01 to 0.07 ppb; and indeno (1,2,3-cd) pyrene ranging from 0.02 to 0.07 ppb. Laboratory analysis of the groundwater for pesticides, herbicides and PCBs are non-detect at concentrations greater than the laboratory detection limits. Laboratory analysis of the groundwater for PFOA and PFOS indicate concentrations that are below NYS DEC/DOH threshold values. Laboratory analysis results for 1,4 dioxane are non-detect. Metals commonly associated with hard water (e.g., iron, magnesium, manganese, sodium) are present at concentrations above the TOGs values in each well. These metals are likely naturally occurring and in this setting are unrelated to the site's past activities. However, in monitoring well MW-1 barium slightly exceeds the TOGS value of 1,000 ppb, with a concentration value of 1,002 ppb. In addition, the general region of central New York has been known for elevated saline (sodium) concentrations in the groundwater. Laboratory analysis of the groundwater from this site supports this with dissolved sodium concentrations range from 35,200 up to 181,000 parts per billion in comparison to the TOGS value of 20,000 parts per billion. Off-site impacts in soil and groundwater are expected to be minimal based on the level and pattern of on-site contamination. SVOCs are present in surface soil and sub-surface soil across the site at concentrations that exceed Restricted-Residential Use SCOs and Protection of Groundwater SCOs. However, the types and concentrations of SVOCs and metals that have been identified in the soil are typically found at historically industrialized urban areas as in this instance. There are moderate levels of VOCs in site groundwater that are primarily located within the central portion of the site. Concentrations of SVOCs in site groundwater are slightly above groundwater protection values, but SVOCs do not readily migrate. Given the moderate concentrations of the contaminants of concern in the soil and groundwater it is anticipated the contaminants concentrations will decrease over time due to adsorption and natural attenuation. As a result, it is expected that off-site impacts from on-site contamination to neighboring properties is minimal.

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	Remedial action are complete and measures are in place to prevent people from coming into contact with remaining contamination.

Description:

Location: The site is located at 140 Cortland Avenue in the City of Syracuse and consists of two non-contiguous site areas. South Clinton Street and the 5G manufacturing facility and offices are known as 140 Cortland Avenue and consist of two parcels of land totaling approximately 2.4 acres. The other site area is known as 1002-1022 South Salina Street/Cortland Avenue and 1024-1040 South Salina Street/Tallman Street, and constitute two parcels totaling approximately 0.86 acres. The site limits are generally bounded by commercial buildings to the north, South Salina Street to the east, Tallman Street to the south and vacant commercial/industrial buildings to the west. The site is currently active and zoned for commercial use. Site Features: 140 Cortland Ave. and the South Clinton Street area consists of one building used for the manufacturing of 5G products. These parcels also consist of sidewalks, driveways, parking areas, and limited vegetation. The other area consists of a small park and a parking lot. Current Zoning and Land Use: The site is currently active as a 5G manufacturing facility and is zoned for commercial use. The general area surrounding the site is highly developed and consists of commercial and industrial facilities. Several rows of multifamily houses are located northwest of the site. Past Use of the Site: For more than 100 years, the site was used for industrial purposes, including a machine shop and rug manufacturing before Coyne Textile Services began operation in 1938. As an industrial dry-cleaning facility, the site utilized tetrachloroethene (PCE) and Stoddard solvent (a non-chlorinated solvent) until 2000. Several property owners had structures on what is now the employee parking lot, dating back to 1892 when the location was a brick and mortar building that housed a stone cutting facility. Syracuse Transit Corporation had a bus storage and repair building on the parcel beginning in 1951. From 1989 until acquisition by the current owner, the parcel was used for employee parking and a small greenspace. Coyne Textile Services filed for bankruptcy and ceased operations in late 2015. Ranalli/Taylor St. LLC purchased the property in 2016 and entered a Brownfield Cleanup Agreement (BCA) in September 2017. Site Geology and Hydrogeology: The site has an approximate elevation of 390 feet above mean sea level and is relatively flat. The surrounding areas to the east and west have a relatively steep topographic gradient, which slopes downward to Onondaga Creek. Site soils are tight and consist of Urban Land with the bedrock anticipated to be of Paleozoic era, stratified sequence. The bedrock geology underlying the site is the Syracuse Formation, which consists of dolostone, shale, gypsum, and salts. The exact depth of the bedrock is unknown at the site, but it is known to be at a depth greater than 80 feet bgs. The estimated depth to groundwater is less than 15 feet below ground surface. The groundwater in the area appears to be brackish saline. Groundwater at the site is assumed to flow to the northwest toward Onondaga Creek. However, localized flow directions in the area of the site may vary as a result of underground utilities or other heterogeneous subsurface conditions. Onondaga Creek is located approximately 600 feet west of the site, which flows in a northerly direction towards Onondaga Lake.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and barium in soil, 1,1-dichloroethene, isopropylbenzene (Cumene), tetrachloroethene, trichloroethene, xylene (Total), cis-1,2-dichloroethene, trans-1,2-dichloroethene, benzene, vinyl chloride, bis(2-Ethylhexyl)phthalate, barium, and magnesium in groundwater and tetrachloroethene and trichloroethene in soil vapor.

Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Materials Information

Waste Name: magnesium
Waste Quantity: UNKNOWN
Waste Code:

Waste Name: copper
Waste Quantity: UNKNOWN

Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Site Class Desc (Web):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	Volatile organic compounds in groundwater or soil vapor originating from the Former Coyne Textile site (C734144) may move off-site into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Investigations are needed to determine if soil vapor intrusion is a potential concern for these off-site buildings.

Description:

Location: The on-site portion is located in an urban area at 140 Cortland Avenue in the City of Syracuse and consists of two non-contiguous Site areas. The former main laundry facility and offices are known as 140 Cortland Avenue (Tax Map No. 094.-05-06.0) and consist of one parcel of land totaling approximately 1.75 acres. The park and employee parking area are known as 1002-1022 South Salina Street/Cortland Avenue and 1024-1040 South Salina Street/Tallman Street and consists of two parcels totaling approximately 1.70 acres. The on-site limits are generally bound by commercial buildings to the north, South Salina Street to the east, Tallman Street to the south and South Clinton Street to the west. The off-site portion that currently needs investigation is approximately 8.5 acres located mainly to the west of the on-site portion. Site Features: 140 Cortland Ave. consists of the currently vacant former laundering facility and offices, sidewalks and limited vegetation. The building is a concrete block building with a slab-on-grade foundation. The other area consists of a small park and a fenced in asphalt parking lot. The off-site area is relatively flat and there are several buildings with both industrial and commercial use space. The area also consists of multiple parking lots and some green space. Current Zoning and Land Use: The on-site portion of the site is currently inactive and is zoned for commercial use. The off-site area is zoned for commercial and industrial use. Several rows of multifamily houses are located west of the area. Past Use of the Site: The 140 Cortland Avenue property was owned by various entities of Coyne Textile Services since the mid-1930s and was utilized as an industrial laundry prior to the company filing for bankruptcy and ceasing operations in late 2015. Dry cleaning using PCE and Stoddard solvent (a petroleum mixture made from distilled alkanes, cycloalkanes (naphthenes) and aromatic compounds) was conducted at the property until 2000. These dry cleaning products were stored in aboveground storage tanks (ASTs). Three underground storage tanks (USTs) were historically "closed in place" and were identified as being located beneath the dry cleaning room floor and the boiler room at 140 Cortland Avenue. A gasoline filling station was present in the southern portion of the Site in the 1980s. Prior to the Site being developed by Coyne Textile Services in the 1930s, the Site and surrounding area consisted primarily of single family residences. The former employee

parking lot and park located east of the former laundering facility was owned by Coyne Textile Services from 1989-2015. Since 1989 this area was utilized as a parking lot and park. Historically, a building was utilized by the Syracuse Transit Corporation Bus Lines on the southern portion of the parking lot for bus storage and repairs from at least the 1940s to 1980s. The Syracuse Street Car barn also occupied this area in the early 1900s. The northern portion of the former employee parking lot and park was occupied by small stores in the early 1900s and a gasoline filling station was present on this portion of the parcel from at least the 1950s to 1970s. Coyne Textile Services filed for bankruptcy and ceased operations in late 2015. Ranalli/Taylor St. purchased the property in 2016 and entered a BCA in September 2017. The past use of most of the off-site area is currently unknown. But some of the area was used by Coyne Textile Services to park and maintain their truck fleet. Another portion of the area was used to manufacture garage door parts, faucets, and inked ribbon spools, clips and strips. Site Geology and Hydrogeology: Both the on-site and off-site areas sites have an approximate elevation of 390 feet above mean sea level and are relatively flat. The surrounding areas to the east and west have a relatively steep topographic gradient which slopes downward to Onondaga Creek. Soils consist of Urban Land with the bedrock anticipated to be of Paleozoic era, stratified sequence. The bedrock geology underlying the Site is the Syracuse Formation, which consists of dolostone, shale, gypsum, and salts. The estimated depth to groundwater is less than 20 feet below ground surface. Groundwater at the sites is assumed to flow to the west toward Onondaga Creek. However, localized flow directions in the area of the sites may vary as a result of underground utilities or other heterogeneous subsurface conditions. Onondaga Creek is located approximately 600 feet west of the on-site portion, which flows in a northerly direction towards Onondaga Lake.

Assessment:

Nature and Extent of Contamination: On-site soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also sampled for Emerging Contaminants (ECs). Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern appear to be VOCs and metals with minor detection's of ECs, PCBs, and SVOCs. No off-site samples were taken during the on-site Remedial Investigation. However, there is some off-site groundwater data. See the Groundwater section below. Soil Surface Soils: Only one VOC, acetone, was detected in the surface soil sample collected from Coyne Park at a concentration of 0.427 ppm which exceeds the Part 375 Unrestricted SCO of 0.05 ppm but is less than the Part 375 Commercial SCO of 500 ppm. SVOCs, PCBs, metals, and pesticides contamination were not identified in the surface soil sample. There is currently no off-site surface soil data. Subsurface Soils: Only one VOC, Tetrachloroethene (PCE), was detected at a concentration exceeding the Part 375 Commercial SCO of 150 milligram per kilogram (mg/kg). The PCE concentration is 460mg/kg and this sample was located in the NW corner of the on-site building. There are several other compounds including 1,1- Dichloroethene at a maximum of 1.45mg/kg, 1,2,4 Trimethylbenzene at a maximum of 4.31mg/kg, 2-Butanone (MEK) at a maximum of 0.115mg/kg, trichloroethene at a maximum of 38.3mg/kg, vinyl chloride at a maximum of 12.3mg/kg, cis-1,2-Dichloroethene at a maximum of 424mg/kg, trans-1,2-Dichloroethene at a maximum of 3.46mg/kg, acetone at a maximum of 5.9mg/kg, and Benzene at a maximum of 0.39mg/kg, that were detected above Part 375 Unrestricted SCOs. SVOCs detected at concentrations exceeding their respective Part 375 Unrestricted SCOs, but below Part 375 Commercial SCOs, include benzo(a)anthracene at a maximum of 2.42mg/kg, Benzo(a)pyrene at a maximum of 2.28mg/kg, Benzo(b)fluoranthene at a maximum of 3.06mg/kg, Benzo(k)fluoranthene at a maximum of 1.64mg/kg, Chrysene at a maximum of 2.42mg/kg, and Indeno(1,2,3-cd)pyrene at a maximum of 0.79mg/kg. No SVOCs were detected at concentrations exceeding the Part 375 Commercial SCOs. Pesticides were not detected in any of the subsurface samples. PCBs, including Aroclor 1242 and Aroclor 1260 were detected at concentrations above their respective Part 375 Unrestricted SCO of 0.1 mg/kg, but below the Part 375 Commercial SCO. The maximum Total PCBs concentration was 0.74 mg/kg. Low concentrations of metals were found across the on-site area. Barium was detected at a concentration of 404 mg/kg, which exceeds the Part 375 Commercial SCO of 400 mg/kg. However, this value was qualified, by Pace, with a JH qualifier. This sample was located near the location of the former folding/product storage area. Several other metals were detected above unrestricted SCOs including copper at a maximum of 114mg/kg, lead at a maximum of 776mg/kg, nickel at a maximum of 56.2mg/kg, zinc at a maximum of 315mg/kg, and mercury at a maximum of 1.4mg/kg. No offsite soil samples were taken during the RI however some off-site subsurface soils were sampled in 2015. Off-site subsurface soil data shows four SVOCs above Industrial SCOs in MW-4 at a depth of 8-10 feet. These SVOCs are Benzo(a)anthracene at a maximum of 20 mg/kg, Benzo(a)pyrene at a maximum of 17 mg/kg, Benzo(b)fluoranthene at a maximum of 21 mg/kg, and Dibenzo(a,h)anthracene at a maximum of 2.4 mg/kg. No other contaminants were above industrial SCOs. Groundwater (GW) No PCBs or Pesticides were detected within the groundwater. VOCs detected in groundwater above the GW standard include 1,1-Dichloroethene at a maximum of 18ug/kg, benzene at a maximum of 104ug/kg, isopropylbenzene (Cumene) at a maximum of 121ug/kg, tetrachloroethene at a maximum of 21,400ug/kg, trichloroethene at a maximum of 1,980ug/kg, vinyl chloride at a maximum of 1,560ug/kg, xylene (Total) at a maximum of 6.3ug/kg, cis-1,2-Dichloroethene at a maximum of 4,550ug/kg, and trans-1,2-Dichloroethene at a maximum of 27.5ug/kg. Most of the VOC GW impacts were located in the NW portion of the on-site building but VOC impacts were detected throughout the site. Only one SVOC exceeded GW standards and that was bis(2-Ethylhexyl)phthalate at a maximum of 11ug/kg. This was located in the NW portion of the on-site building. Metals that exceeded the GW standards include barium at a maximum of 2.940ug/kg, beryllium at a maximum of 7ug/kg, chromium at a maximum of 55ug/kg, copper at a maximum of 1,120ug/kg, lead at a maximum of 27ug/kg, magnesium at a maximum of 204,000ug/kg, and thallium at a maximum of 14.5ug/kg. Metals within the GW were detected throughout the whole site. ECs detected in the GW include 6:2FTS at a maximum of 33ng/kg, Perfluorobutanesulfonic acid (PFBS) at a maximum of 14ng/kg, Perfluorobutanoic acid (PFBA) at a maximum of 330ng/kg, Perfluorodecanoic acid (PFDA) at a maximum of 2.1ng/kg, Perfluoroheptanesulfonic Acid (PFHpS) at a maximum of 24ng/kg, Perfluoroheptanoic acid (PFHpA) at a maximum of 160ng/kg, Perfluorohexanesulfonic acid (PFHxS) at a maximum of 25ng/kg, Perfluorohexanoic acid (PFHxA) at a maximum of 350ng/kg, Perfluorononanoic acid (PFNA) at a maximum of 75ng/kg, Perfluorooctanesulfonic acid (PFOS) at a maximum of 2,000ng/kg, Perfluorooctanoic acid (PFOA) at a maximum of 300ng/kg, Perfluoropentanoic acid (PFPeA) at a maximum of 360ng/kg, and 1,4-Dioxane at a maximum of 1.7ng/kg. Most of the ECs were detected in the NW portion of the on-site building. No off-site wells were sampled during the remedial investigation. However, off-sites wells were sampled previously in 2015. There are 4 monitoring wells off-site located to the northwest of the on-site area. Each of these wells have contaminants that exceed NYSDEC TOGS 1.1.1 water quality standards and guidance values. The following contaminants were detected above the GW standards at one or more of the wells: Tetrachloroethene at a maximum of 3100ug/L, benzene at a maximum of 4.4ug/L, vinyl chloride at a maximum of 3200ug/L, trans-1,2-dichloroethene at a maximum of 230ug/L, Trichloroethene at a maximum of 2000ug/L, cis-1,2-dichloroethene at a maximum of 5600ug/kg, and 1,1-Dichloroethene at a maximum of 15ug/L. Soil Vapor Soil vapor detection's that need additional action were detected all throughout the on-site building. Compounds detected needing additional action include: 1,1,1 - Trichloroethane at a maximum of 5.3ug/m3, Tetrachloroethene at a maximum of 1,090ug/m3, Trichloroethene at a maximum of 106ug/m3, and cis-1,2-Dichloroethene at a maximum of 38.4ug/m3. There is currently no off-site soil vapor data.

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	Remedial action are complete and measures are in place to prevent people from coming into contact with remaining contamination.

Description:

Location: The site is located at 140 Cortland Avenue in the City of Syracuse and consists of two non-contiguous site areas. South Clinton Street and the 5G manufacturing facility and offices are known as 140 Cortland Avenue and consist of two parcels of land totaling approximately 2.4 acres. The other site area is known as 1002-1022 South Salina Street/Cortland Avenue and 1024-1040 South Salina Street/Tallman Street, and constitute two parcels totaling approximately 0.86 acres. The site limits are generally bounded by commercial buildings to the north, South Salina Street to the east, Tallman Street to the south and vacant commercial/industrial buildings to the west. The site is currently active and zoned for commercial use. Site Features: 140 Cortland Ave. and the South Clinton Street area consists of one building used for the manufacturing of 5G products. These parcels also consist of sidewalks, driveways, parking areas, and limited vegetation. The other area consists of a small park and a parking lot. Current Zoning and Land Use: The site is currently active as a 5G manufacturing facility and is zoned for commercial use. The general area surrounding the site is highly developed and consists of commercial and industrial facilities. Several rows of multifamily houses are located northwest of the site. Past Use of the Site: For more than 100 years, the site was used for industrial purposes, including a machine shop and rug manufacturing before Coyne Textile Services began operation in 1938. As an industrial dry-cleaning facility, the site utilized tetrachloroethene (PCE) and Stoddard solvent (a non-chlorinated solvent) until 2000. Several property owners had structures on what is now the employee parking lot, dating back to 1892 when the location was a brick and mortar

building that housed a stone cutting facility. Syracuse Transit Corporation had a bus storage and repair building on the parcel beginning in 1951. From 1989 until acquisition by the current owner, the parcel was used for employee parking and a small greenspace. Coyne Textile Services filed for bankruptcy and ceased operations in late 2015. Ranalli/Taylor St. LLC purchased the property in 2016 and entered a Brownfield Cleanup Agreement (BCA) in September 2017. Site Geology and Hydrogeology: The site has an approximate elevation of 390 feet above mean sea level and is relatively flat. The surrounding areas to the east and west have a relatively steep topographic gradient, which slopes downward to Onondaga Creek. Site soils are tight and consist of Urban Land with the bedrock anticipated to be of Paleozoic era, stratified sequence. The bedrock geology underlying the site is the Syracuse Formation, which consists of dolostone, shale, gypsum, and salts. The exact depth of the bedrock is unknown at the site, but it is known to be at a depth greater than 80 feet bgs. The estimated depth to groundwater is less than 15 feet below ground surface. The groundwater in the area appears to be brackish saline. Groundwater at the site is assumed to flow to the northwest toward Onondaga Creek. However, localized flow directions in the area of the site may vary as a result of underground utilities or other heterogeneous subsurface conditions. Onondaga Creek is located approximately 600 feet west of the site, which flows in a northerly direction towards Onondaga Lake.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and barium in soil, 1,1-dichloroethene, isopropylbenzene (Cumene), tetrachloroethene, trichloroethene, xylene (Total), cis-1,2-dichloroethene, trans-1,2-dichloroethene, benzene, vinyl chloride, bis(2-Ethylhexyl)phthalate, barium, and magnesium in groundwater and tetrachloroethene and trichloroethene in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	Remedial action are complete and measures are in place to prevent people from coming into contact with remaining contamination.

Description:

Location: The site is located at 140 Cortland Avenue in the City of Syracuse and consists of two non-contiguous site areas. South Clinton Street and the 5G manufacturing facility and offices are known as 140 Cortland Avenue and consist of two parcels of land totaling approximately 2.4 acres. The other site area is known as 1002-1022 South Salina Street/Cortland Avenue and 1024-1040 South Salina Street/Tallman Street, and constitute two parcels totaling approximately 0.86 acres. The site limits are generally bounded by commercial buildings to the north, South Salina Street to the east, Tallman Street to the south and vacant commercial/industrial buildings to the west. The site is currently active and zoned for commercial use. Site Features: 140 Cortland Ave. and the South Clinton Street area consists of one building used for the manufacturing of 5G products. These parcels also consist of sidewalks, driveways, parking areas, and limited vegetation. The other area consists of a small park and a parking lot. Current Zoning and Land Use: The site is currently active as a 5G manufacturing facility and is zoned for commercial use. The general area surrounding the site is highly developed and consists of commercial and industrial facilities. Several rows of multifamily houses are located northwest of the site. Past Use of the Site: For more than 100 years, the site was used for industrial purposes, including a machine shop and rug manufacturing before Coyne Textile Services began operation in 1938. As an industrial dry-cleaning facility, the site utilized tetrachloroethene (PCE) and Stoddard solvent (a non-chlorinated solvent) until 2000. Several property owners had structures on what is now the employee parking lot, dating back to 1892 when the location was a brick and mortar building that housed a stone cutting facility. Syracuse Transit Corporation had a bus storage and repair building on the parcel beginning in 1951. From 1989 until acquisition by the current owner, the parcel was used for employee parking and a small greenspace. Coyne Textile Services filed for bankruptcy and ceased operations in late 2015. Ranalli/Taylor St. LLC purchased the property in 2016 and entered a Brownfield Cleanup Agreement

(BCA) in September 2017. Site Geology and Hydrogeology: The site has an approximate elevation of 390 feet above mean sea level and is relatively flat. The surrounding areas to the east and west have a relatively steep topographic gradient, which slopes downward to Onondaga Creek. Site soils are tight and consist of Urban Land with the bedrock anticipated to be of Paleozoic era, stratified sequence. The bedrock geology underlying the site is the Syracuse Formation, which consists of dolostone, shale, gypsum, and salts. The exact depth of the bedrock is unknown at the site, but it is known to be at a depth greater than 80 feet bgs. The estimated depth to groundwater is less than 15 feet below ground surface. The groundwater in the area appears to be brackish saline. Groundwater at the site is assumed to flow to the northwest toward Onondaga Creek. However, localized flow directions in the area of the site may vary as a result of underground utilities or other heterogeneous subsurface conditions. Onondaga Creek is located approximately 600 feet west of the site, which flows in a northerly direction towards Onondaga Lake.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and barium in soil, 1,1-dichloroethene, isopropylbenzene (Cumene), tetrachloroethene, trichloroethene, xylene (Total), cis-1,2-dichloroethene, trans-1,2-dichloroethene, benzene, vinyl chloride, bis(2-Ethylhexyl)phthalate, barium, and magnesium in groundwater and tetrachloroethene and trichloroethene in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Highlights:

According to a Phase I ESA Report prepared in January 2020 by Asbestos & Environmental Consulting Corporation (AECC), the Site has a history of use as a residential dwelling beginning in the late 19th century. The Site became mixed residential and commercial in the mid-20th century. The City of Syracuse acquired the Site in 2003 and demolished the remaining one-story commercial building structure that formerly occupied the eastern portion of the Site. Since that time, the Site has remained a vacant lot. The Phase I ESA Report prepared in 2020 identifies the following Recognized Environmental Condition (REC):AECC has identified seven off-Site properties that, when considered together and in relation to the Site, represent enough concern to be considered a REC to the subject Site of this Assessment. Such properties include former and current automotive repair / service stations, former and current gasoline stations, former industrial properties, and former drycleaning facilities. There is documented historical contamination related to some of these properties, while others have no identified history of investigation having occurred that might be able to rule out potential contamination. appears to have been no known previous site investigation performed on the Site but contamination from past operations on adjacent properties are suspected to have impacted the Site. A Phase II ESA is needed to confirm if contamination is present.

Highlights: According to a Phase I ESA Report prepared in January 2020 by Asbestos & Environmental Consulting Corporation (AECC), the Site has a history of use as a residential dwelling beginning in the late 19th century. The Site became mixed residential and commercial in the mid-20th century. The City of Syracuse acquired the Site in 2003 and demolished the remaining one-story commercial building structure that formerly occupied the eastern portion of the Site. Since that time, the Site has remained a vacant lot. The Phase I ESA Report prepared in 2020 identifies the following Recognized Environmental Condition (REC):AECC has identified seven off-Site properties that, when considered together and in relation to the Site, represent enough concern to be considered a REC to the subject Site of this Assessment. Such properties include former and current automotive repair / service stations, former and current gasoline stations, former industrial properties, and former drycleaning facilities. There is documented historical contamination related to some of these properties, while others have no identified history of investigation having occurred that might be able to rule out potential contamination. appears to have been no known previous site investigation performed on the Site but contamination from past operations on adjacent properties are suspected to have impacted the Site. A Phase II ESA is needed to confirm if contamination is present.

Highlights:

According to a Phase I ESA Report prepared in January 2020 by Asbestos & Environmental Consulting Corporation (AECC), the Site has a history of use as a residential dwelling beginning in the late 19th century. The Site became mixed residential and commercial in the mid-20th century. The City of Syracuse acquired the Site in 2003 and demolished the remaining two-story building structure that formerly occupied the Site. Since that time, the Site has remained a vacant lot. The Phase I ESA Report prepared in 2020 identifies the following Recognized Environmental Condition (REC):AECC has identified seven off-Site properties that, when considered together and in relation to the Site, represent enough concern to be considered a REC to the subject Site of this Assessment. Such properties include former and current automotive repair / service stations, former and current gasoline stations, former industrial properties, and former drycleaning facilities. There is documented historical contamination related to some of these properties, while others have no identified history of investigation having

occurred that might be able to rule out potential contamination. There appears to have been no known previous site investigation performed on the Site but contamination from past operations on adjacent properties are suspected to have impacted the Site. A Phase II ESA is needed to confirm if contamination is present.

Highlights: According to a Phase I ESA Report prepared in January 2020 by Asbestos & Environmental Consulting Corporation (AECC), the Site has a history of use as a residential dwelling beginning in the late 19th century. The Site became mixed residential and commercial in the mid-20th century. The City of Syracuse acquired the Site in 2003 and demolished the remaining two-story building structure that formerly occupied the Site. Since that time, the Site has remained a vacant lot. The Phase I ESA Report prepared in 2020 identifies the following Recognized Environmental Condition (REC):AECC has identified seven off-Site properties that, when considered together and in relation to the Site, represent enough concern to be considered a REC to the subject Site of this Assessment.

Such properties include former and current automotive repair / service stations, former and current gasoline stations, former industrial properties, and former drycleaning facilities. There is documented historical contamination related to some of these properties, while others have no identified history of investigation having occurred that might be able to rule out potential contamination. There appears to have been no known previous site investigation performed on the Site but contamination from past operations on adjacent properties are suspected to have impacted the Site. A Phase II ESA is needed to confirm if contamination is present.

Facility ID:	BSF0079	***County:***	Onondaga
Survey Complete:	YES		
Survey:	Class B Fire Suppression Foam Usage Survey - New York State Bulk Storage Facilities		
Q. 6:	NO		
Q. 7:	NO		
Q. 8:	NO		
Q. 9:	NO		
Q. 10:	NO		
Q. 11:	NO		
Q. 12:			
Q. 13:			

Reference:

If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Facility ID: BSF0451
County: Onondaga
Survey Complete: YES
Survey: Class B Fire Suppression Foam Usage Survey - New York State Bulk Storage Facilities
Q. 6: YES
Q. 7: YES
Q. 8: NO
Q. 9: NO
Q. 10: NO
Q. 11: NO
Q. 12:
Q. 13:
Reference: If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Highlights: The Property consists of one parcel totaling 0.53± acres of land in Syracuse, New York. The Property is utilized for automotive repair and storage, with several vehicles located on-site. The Property is improved with one structure, totaling approximately 6,330 square ft. that appears to be used as a garage. Access to the Property and interior of the subject building were not provided, and our Property reconnaissance was performed from the adjacent roadway rights-of-way. The Property is located in a predominantly commercial neighborhood. The Property was developed in 1892 with residential dwellings. Since that time, the Property has been utilized by various business including restaurants and automotive repair, and residential use. The current on-site garage building was constructed in the 1950s and is used for automotive repair.

Highlights: The Property consists of one parcel totaling 0.53± acres of land in Syracuse, New York. The Property is utilized for automotive repair and storage, with several vehicles located on-site. The Property is improved with one structure, totaling approximately 6,330 square ft. that appears to be used as a garage. Access to the Property and interior of the subject building were not provided, and our Property reconnaissance was performed from the adjacent roadway rights-of-way. The Property is located in a predominantly commercial neighborhood. The Property was developed in 1892 with residential dwellings. Since that time, the Property has been utilized by various business including restaurants and automotive repair, and residential use. The current on-site garage building was constructed in the 1950s and is used for automotive repair.

Highlights: The Property consists of one combined parcel totaling 0.65± acres of land in Syracuse, New York. The Property is located on the corner of South Salina Street and Doctor Martin Luther King West Street, formerly West Castle Street. The Property is improved with a small food market and service station, with one single story building totaling approximately 3,260 sq. ft., and a canopy for gasoline pumps, totaling approximately 2,760 sq. ft. At the time of the site visit the Property was utilized by Blue Star as a retail and gasoline service station. The Property is located in a predominantly commercial neighborhood. The Property was developed in 1892 with a large structure containing some residential dwellings and small businesses. The current building was constructed between 1966 and 1978 and is operated as a gasoline service station and market.

Highlights: The Property consists of one combined parcel totaling 0.65± acres of land in Syracuse, New York. The Property is located on the corner of South Salina Street and Doctor Martin Luther King West Street, formerly West Castle Street. The Property is improved with a small food market and service station, with one single story building totaling approximately 3,260 sq. ft., and a canopy for gasoline pumps, totaling approximately 2,760 sq. ft. At the time of the site visit the Property was utilized by Blue Star as a retail and gasoline service station. The Property is located in a predominantly commercial neighborhood. The Property was developed in 1892 with a large structure containing some residential dwellings and small businesses. The current building was constructed between 1966 and 1978 and is operated as a gasoline service station and market.

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program,

Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	The site is in an area which is served by public water. NYSDOH has observed evidence of site trespass during a past site investigation. NYS DEC completed a drum removal in 1991. The City of Syracuse conducted follow-up soil sampling in the Spring of 1992 and no residual contamination was found. The site was delisted in December 1992 and there are no known outstanding health concerns associated with exposure to site contaminants.

Description:

Royal Research Labs was a paint stripping firm and manufacturer of plastic automotive parts. It was located on Shonnard Street. The facility was declared unsafe and the building was condemned by the Syracuse Fire Department in the early 1980's. Approximately 50 drums and containers of chemicals were moved from the Royal Research Lab to the Tip-Top Bakery building, which is also located on Shonnard Street. Some of the chemicals have spilled onto the floor of the building. Analytical results of samples taken, reveal that some of the wastes were ignitable and corrosive. Many of the drums have been removed from the building, but a few still remain scattered through-out. Some were found to contain hazardous waste. In 1991, the DEC initiated a final drum removal. The drum removal was completed by November of 1991. A thorough follow-up investigation with sampling was conducted by the City of Syracuse during the spring of 1992. Sampling analysis revealed no residual contamination from the hazardous waste.

Assessment:

All remaining drums & containers that were stored in this building were removed by November of 1992. The City of Syracuse's follow-up investigation revealed no residual contamination resulting from the drums.

These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Assess DOH: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination.

Description:

Location: The NM-Erie Boulevard MGP Site is an 8.19-acre site located at 300 Erie Boulevard West, in downtown Syracuse. The site is bounded by West Genesee Street to the north, North Franklin Street to the east, Erie Boulevard West to the south and Onondaga Creek to the west. Site Features: The site is relatively flat. There are four adjoining office buildings, and two separate buildings on the site. All buildings are occupied. The remaining site area is covered with paved parking lots and roadways. Current Zoning/Use(s): The site is zoned for commercial use. The immediate surrounding area is zoned for commercial use. Past Use of the Site: The prior uses of the site include three mills (a salt mill, a saw mill, a linseed oil mill) and a tannery. The first manufactured gas plant (MGP) was constructed in 1849 and operated until the 1930s. Site Geology and Hydrogeology: Fill material is present below the asphalt pavement surface cover and ranges in thickness from 3 to 28 feet. The fill unit is underlain by a clay/silt layer. This unit is discontinuous and ranges in thickness from 2 to 22 feet. A sand and gravel unit is encountered beneath the clay/silt layer at depths ranging from 6 to 30 feet below ground surface (bgs). The water table is generally encountered at a depth of approximately 20 feet bgs at the site and flows from south to north. The site is adjacent to Onondaga Creek, which is a losing stream at this location, meaning that water flows from the creek into groundwater. Groundwater is naturally very saline, which renders it unsuitable for potable purposes.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were BTEX and PAHs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Nominated by:
Describe the Site: The site was a limestone quarry from 1882 to 1911. TNT was manufactured at the site during WWI and more recently pesticides, toulene and waste paint were stored on site. Geology on the area is karst. There is documentation of explosions during the time of TNT manufacturing. This site was referred to the Division of Solid Waste on 6/28/91.
Describe the Threat:

Nearby homes have wells as only available water supply. The potential to contaminate groundwater, as well as the potential for runoff to contaminate a pond at the head of Geddes Brook both exist. Lead contamination - apparentiy from shooting practice.

Report Method:	Reported Online

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2023

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2023

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2023

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Sep 19, 2023

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Sep 19, 2023

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jul 10, 2023

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by RCRA.

Government Publication Date: Jul 10, 2023

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jul 10, 2023

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jul 10, 2023

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jul 10, 2023

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jul 10, 2023

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jul 10, 2023

Federal Engineering Controls-ECs: FED ENG

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2021 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Aug 23, 2023

Federal Institutional Controls- ICs: FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2021 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Aug 23, 2023

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: May 25, 2023

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Apr 3, 2023

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: May 2, 2023

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: May 2, 2023

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Sep 20, 2023

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Sep 19, 2023

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Sep 19, 2023

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

Registry of Inactive Hazardous Waste Disposal Sites in New York State: SHWS

State-and tribal- equivalent CERCLIS. State Superfund Program (Inactive Hazardous Waste Disposal Site Remedial Program) (IHWDS) - Oversees the identification, investigation and cleanup of sites where consequential amounts of hazardous waste exist. These sites go through a process of investigation, evaluation, cleanup and monitoring that has several distinct stages. This list is made available by New York State Department of Environmental Conservation's State Superfund Program.

Government Publication Date: Jul 31, 2023

Delisted Registry of Inactive Hazardous Waste Disposal Sites in New York: DELISTED SHWS

This database contains a Registry of Inactive Hazardous Waste Disposal sites which have been removed from New York Department of Environmental Conservation's Environmental Site Remediation database.

Government Publication Date: Jul 31, 2023

Hazardous Substance Waste Disposal Sites: HSWDS

A list of sites included in Hazardous Substance Waste Disposal Site Study reports made available by the New York Department of Environmental Conservation Division of Hazardous Waste Remediation. Provides information regarding the evolving status of hazardous substance waste disposal sites in New York.

Government Publication Date: Oct 24, 2003

Vapor Intrusion Legacy Site List: VAPOR

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion. This list is made available by Department of Environmental Conservation's Vapor Intrusion Legacy Site List. This database is state equivalent CERCLIS.

Government Publication Date: Jun 30, 2023

Solid Waste Facilities and Landfills: SWF/LF

Solid Waste Information Management System (SWIMS) is an inventory containing active and inactive facilities throughout the state. This list is made available by Department of Environmental Conservation's Solid Waste Information Management System (SWIMS).

Government Publication Date: Apr 7, 2022

Inactive Landfill Facilities: LANDFILL INACTIVE

List of inactive landfills in the State of New York. This data is made available by the New York State Department of Environmental Conservation (DEC). DEC notes that these are preliminary data and should not be regarded as a complete inventory of all landfills in the State, and also that site locations and attributes are preliminary and should not be relied upon without independent verification.

Government Publication Date: Sep 21, 2022

Waste Tire Facilities: WASTE TIRE

This list of active Waste Tire Facilities is maintained by the New York State Department of Environmental Conservation. Waste tire storage facilities (WTSF) store waste tires or portions of waste tires. Most of these facilities require Part 360 permits, but under certain conditions a registration maybe available.

Government Publication Date: May 22, 2023

NYC OER Cleanup Sites: OER CLEANUP

Properties remediated under oversight of the New York City (NYC) Mayor's Office of Environmental Remediation (OER), both in the E-Designation program and the NYC Voluntary Cleanup Program. Includes sites completed and in progress.

Government Publication Date: Aug 1, 2023

Recycling Facilities: RECYCLING

The Department of Environmental Conservation (DEC), Division of Materials Management (DMM), Bureau of Permitting and Planning regulates solid waste management facilities in accordance with 6 NYCRR Part 360. Information pertaining to those facilities is maintained with the Division's Solid Waste Information Management System (SWIMS) database. The Facility List is a dataset related to solid waste management facilities operating in the state, and includes such information as facility location, contact names and associated information, waste types managed, and regulatory information.

Government Publication Date: May 22, 2023

Leaking Storage Tanks: LST

This database contains records of chemical and petroleum spill incidents. They include leaking aboveground storage tanks or leaking underground storage tanks, with incidents of tank test failures, tank failures and tank overfill. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Aug 31, 2023

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Storage Tank sites which has been removed from New York Department of Environmental Conservation's Spill Response Program

Government Publication Date: Aug 31, 2023

Underground Storage Tanks- UST-Petroleum Bulk Storage (PBS): UST

Facilities within the Petroleum Bulk Storage (PBS) that have underground storage tanks. Underground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by NewYork Department of Environmental Conservation's Environmental Site Database Search.

Government Publication Date: Aug 21, 2023

The Bulk Storage Program Database - AST: AST

Facilities within the Petroleum Bulk Storage (PBS) that have aboveground storage tanks. Aboveground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by New York State Department of Environmental conservation's Petroleum Bulk Storage (PBS) program.

Government Publication Date: Aug 21, 2023

Petroleum Bulk Storage: TANKS

The Bulk Storage Program Database maintains the registrations of active and inactive bulk storage sites statewide. This database includes Petroleum Bulk Storage (PBS) tanks where no information is available on whether they are ASTs or USTs. This list is made available by Department of Environmental Conservation's Petroleum Bulk Storage (PBS) program.

Government Publication Date: Aug 21, 2023

Major Oil Storage Facilities (MOSF): MOSF

In 1977, the New York State Legislature passed the "Oil Spill Prevention, Control and Compensation Act" (Article 12 of the Navigation Law). This law regulates all oil terminals and transport vessels operating in the waters of the State which have a storage capacity of 400,000 gallons or more. (Terminals and vessels with a capacity of 400,000 gallons or more are commonly referred to as major oil storage facilities or MOSFs). This list is made available by Department of Environmental Conservation's Major Oil Storage Facility (MOSF) Program.

Government Publication Date: Aug 21, 2023

Chemical Bulk Storage (CBS): CBS

Facilities that store regulated hazardous substances in underground tanks . "Hazardous substance" means any substance listed as hazardous or acutely hazardous in 6 NYCRR Part 597 or a mixture thereof. This list is made available by Department of Environmental Conservation's Chemical Bulk Storage (CBS) Program.

Government Publication Date: Aug 21, 2023

Delisted Storage Tanks: DELISTED TANKS

List of Storage Tank sites which has been removed from New York Department of Environmental Conservation's Environmental Site Database.

Government Publication Date: Sep 29, 2023

Delisted County Records: DELISTED COUNTY

Records removed from county databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Jul 3, 2023

Registry of Engineering Controls in New York State: ENG

Registry of Engineering Controls in New York State taken from the Environmental Site Remediation Database.

Government Publication Date: Jul 31, 2023

Registry of Institutional Controls in New York State: INST

Registry of Institutional Controls in New York State taken from the Environmental Site Remediation Database.

Government Publication Date: Jul 31, 2023

Voluntary Cleanup Agreements: VCP

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites. This list is made available by Department of Environmental Conservation's Voluntary Cleanup Program.

Government Publication Date: Jul 31, 2023

Environmental Restoration Program Listing: ERP

Environmental Restoration Program - Provides municipalities with financial assistance for site investigation and remediation at eligible brownfield sites. In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (Bond Act). Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. This list is made available by Department of Environmental Conservation's Environmental Restoration Program.

Government Publication Date: Jul 31, 2023

Brownfields Site List (Subset of Site Remediation): BROWNFIELDS

Brownfield Cleanup Program was developed to enhance private-sector cleanups of brownfields and to reduce development pressure on "Greenfields". A Brownfield site is real property, the redevelopment or reuse of which may be complicated by the presence or potential presence of a contaminant. Contaminants include hazardous waste and/or petroleum. This list is made available by Department of Environmental Conservation's Brownfield Cleanup Program.

Government Publication Date: Jul 31, 2023

Tribal

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 2, which includes New York, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 28, 2016

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 2, which includes New York, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 04, 2016

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 26, 2023

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 26, 2023

County

No County databases were selected to be included in the search.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Mar 2, 2023

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Oct 19, 2022

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Sep 14, 2023

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to September 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Sep 5, 2023

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: Oct 9, 2022

National Response Center PFAS Spills: ERNS PFAS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Sep 23, 2023

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Sep 4, 2023

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Oct 19, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest : PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Oct 11, 2023

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Apr 16, 2023

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Jul 26, 2023

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).
Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA
The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).
Government Publication Date: Aug 23, 2023

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
Government Publication Date: Jan 21, 2023

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Apr 15, 2023

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Apr 15, 2023

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Dec 30, 2022

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: May 1, 2023

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into eAMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Jun 13, 2023

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: May 25, 2023

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Aug 30, 2023

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Apr 19, 2023

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Mar 1, 2023

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Mar 20, 2023

State

Underground Injection Control Wells: UIC

A well permit is required from the Division of Mineral Resources for any brine disposal well deeper than 500 feet. This includes any operation to drill, deepen, plug back or convert a well. Regardless of well depth, the NYSDEC Division of Water must be contacted for a determination of whether a SPDES permit is necessary to operate any brine disposal well.

Government Publication Date: Aug 6, 2018

Manufactured Gas Plants: MGP

A list of former Manufactured Gas Plants (MGP) made available by the New York Department of Environmental Conservation (NYSDEC). From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel. Former MGP structures such as gas holders, tar separators, wells, and tanks were often susceptible to spills and leaks. As a result, these structures were a significant source of contamination from the release of tar and other toxic by-products.

Government Publication Date: Sep 5, 2023

Spill Incidents Database: NY SPILLS

Spill Incidents Database has records dating back to 1978. This database contains records of chemical and petroleum spill incidents. The DEC Spill Response program receives and compiles reports of hazardous material spills occurring anywhere in New York State. These reports are submitted through the Spill Hotline and other mechanisms, and entered by DEC spill response staff into the state's official data base of Spill Incidents Reports. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Aug 31, 2023

PFAS Remedial Sites: PFAS CONTAM

List of sites being addressed under one of the New York Department of Environmental Conservation (DEC) Division of Environmental Remediation (DER)'s remedial programs, where the waste or contaminant of concern is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 31, 2023

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

A list of sites surveyed by the New York Department of Environmental Conservation to determine locations that manufacture, use, store, or release into the environment materials containing Per- and Polyfluoroalkyl Substances (PFAS). Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Some PFAS are difficult to break down and persist in the environment that may cause harm to the public. This list is made available by the Department of Environmental Conservation of New York State.

Government Publication Date: Jan 16, 2019

Landfill Investigations PFAS Sampling Results: PFAS LANDFILL

A list of inactive landfill sites that have been investigated for Per- and Polyfluoroalkyl Substances (PFAS) in the state of New York made available by the New York State Department of Environmental Conservation.

Government Publication Date: Jun 30, 2020

Registed Dry Cleaner Facilities: DRYCLEANERS

The Division of Air Resources of the Department of Environmental Conservation (DEC) tracks all registered dry cleaner facilities.

Government Publication Date: Sep 19, 2023

Delisted Dry Cleaner Facilities: DELISTED DRYCLEANERS

Sites removed from the list of dry cleaner facilities registered with the Department of Environmental Conservation (DEC)'s Division of Air Resources.

Government Publication Date: Sep 19, 2023

Hazardous Waste Manifest - Facilities: NY MANIFEST

List of facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), with which no manifests are associated. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records.

Government Publication Date: Sep 12, 2023

Receivers from Hazardous Waste Manifests: REC MANIFEST

List of receiver facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), which are identified as a receiver in associated manifests. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records. Hazardous Waste Code Descriptions are from NY Part 371.4 (6 CRR-NY 371.4) Identification and Listings of Hazardous Waste, unless otherwise noted.

Government Publication Date: Sep 12, 2023

Generators from Hazardous Waste Manifests: GEN MANIFEST

List of generator facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), which are identified as a generator in associated manifests. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records. Hazardous Waste Code Descriptions are from NY Part 371.4 (6 CRR-NY 371.4) Identification and Listings of Hazardous Waste, unless otherwise noted.

Government Publication Date: Sep 12, 2023

New York City E-Designated Sites: E DESIGNATION

A list of sites with an (E) Designation, described as a New York City (NYC) zoning map designation that indicates the presence of an environmental requirement pertaining to potential hazardous materials contamination, window/wall noise attenuation, or air quality impacts on a particular tax lot. The NYC Office of Environmental Remediation administers the E-Designation Environmental Review Program to avoid significant adverse impacts to human health or the environment through exposure to these hazards. The data is provided by the NYC Department of City Planning (DCP).

Government Publication Date: May 19, 2023

Registered Cooling Towers: COOLING TOWERS

This dataset contains location, legionella sampling results and operational status information for currently operating cooling towers, as well as information on towers that previously operated, in New York State and New York City. The data is self-reported by the cooling tower operator according to Public Health Law, Section 225(5)(a) Subpart 4-1 – Cooling Towers. Data provided by New York State Department of Health.

Government Publication Date: Apr 23, 2023

Tier 2 Report: TIER 2

A list of Tier 2 facilities in the state of New York. This is a list of facilities which have reported hazardous substances provided by Homeland Security and Emergency Services.

Government Publication Date: Sep 28, 2022

NY DEC Projects of Interest: PROJECTS

A list of permits for notable projects - permit applications that have received a lot of public attention - made available by the New York Department of Environmental Conservation (DEC).

Government Publication Date: Nov 26, 2021

Air Permitted Facilities: AIR PERMITS

This list of issued state facility air permits is maintained by the New York State Department of Environmental Conservation (NYDEC). The listing includes Air State Facility Permits (ASF) and Air Title V Facility Permits (ATV). ASF permits may be required by medium-sized commercial or industrial facilities or larger facilities that have agreed to limit emissions. ATV permits may be required at the largest facilities statewide, or at facilities located in those areas where state implementation plans are in place to improve air quality. Please note: An Issued permit is valid for a stated period of time. Modifications may be made to an issued permit for the remainder of the active permit.

Government Publication Date: Dec 30, 2022

Liens Listing: LIEN

New York Environmental Protection and Spill Compensation Fund (Oil Spill Fund) places liens on properties that are sites of oil spills when the owners are responsible parties and fail to pay for cleanup. The Office of the State Comptroller provides this listing of liens information from the Oil Spill Fund.

Government Publication Date: Sep 13, 2023

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Notice: IMPORTANT INFORMATION:

Service: Client has used a service offered by ERIS Information Inc. ("**ERIS**") to generate this report based upon certain search parameters set by Client, or in the case of ERIS's Vapor Encroachment Screening Tool and Checklist, certain search parameters set by ERIS and modified by Client (the "**Service**"). This report contains the results of a search conducted by ERIS of environmental records maintained by third parties. ERIS does not maintain, and has no responsibility for the accuracy or completeness of, such records.

Agreement: Client's use of the Service and any report generated thereby is subject to the Master Services Agreement previously entered into by Client and ERIS, or the terms and conditions accepted by Client in electronically submitting a request for the Service, (the "**Agreement**") and no provision of this Notice shall modify the Agreement. To the extent there is a conflict between any provision of this Notice and any provision of the Agreement, the latter shall control.

Liability Limitation: ERIS's liability for the Service and this report shall be limited to the amount paid by Client for this report and as otherwise set forth in the Agreement. Although in preparing this report ERIS has endeavored to present information that is accurate, ERIS will not have any liability for any errors, omissions or inaccuracies in such information, even if ERIS sets, or Client modifies, the parameters used to conduct the search.

Reliance on Report: This report (1) applies only to the address and the date specified on the cover page of this report and (2) is not a substitute for a Phase I Environmental Site Assessment, a Vapor Encroachment Assessment or any other similar assessment. It is solely intended to be used as a database search of current environmental records maintained by third parties, and Client should not rely on this report for any purpose for which it is not intended. Client may, in Client's discretion, modify search parameters within some of the tools of the Service that may affect the results for which ERIS is not responsible.

License for Use of Report: Client is licensed to use this report solely for its intended purpose as set forth in this Notice and the Agreement. No page of this report may be used by Client without including this report's cover page, this Notice and the project property identifier.

Client Liability: Use of the Service or this report in a manner contrary to this Notice or the Agreement will be a breach of contract and an infringement of ERIS's copyright and other intellectual property rights, for which ERIS will be entitled to damages and other remedies. In addition, upon any such breach or infringement, ERIS may terminate the Agreement, Client's account with ERIS, Client's license to use any reports previously generated for Client pursuant to the Service, and Client's future use of the Service.

Warranty Disclaimer: **EXCEPT AS EXPRESSLY SET FORTH IN THE AGREEMENT, ERIS MAKES NO WARRANTY OR REPRESENTATION REGARDING THE SERVICE, THIS REPORT OR THE RESULTS OF ANY SEARCH CONDUCTED BY CLIENT USING THE SERVICE.**

Ownership: Client may not use any of ERIS's trademarks or attribute any work product to ERIS other than as expressly set forth in this Notice or the Agreement. The Service and this reports are owned by ERIS (or its licensors) and protected by copyright and other intellectual property rights. No portion of this report may be, in whole or in part, modified, reproduced or transferred to a third party by Client, without the prior written consent of ERIS.

Executive Summary

This Report was produced through the ERIS Vapor Screening Tool. The ERIS Vapor Screening Tool and this report output are designed to help those in conducting a Vapor Encroachment Screening on a Property Involved in Real Estate Transactions under the ASTM Standard Designation E2600-22.

The following table lists the data sources searched and any hits in the Area of Concern (AOC) that have been included in the report. The search distances listed are based on search distances used in the Database Report and the search results are grouped based on the minimum default search distances for Chemicals of Concern (COCs) and Petroleum Hydrocarbon Chemicals of Concern (PHCOCs) as outlined in E2600-22. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment.

Caller Remark:

"c/u pending"

DEC Remark:

"RP HIT DEBRIS ON HIGHWAY. HER GAS TANK AND TIRE WERE PUNCTURED. TANK PLUG FAILED, AND GAS LEAKED ONTO PARKING LOT OUTSIDE RP'S SISTER'S APARTMENT ON RADISSON COURT. SYRACUSE FD NOTIFIED AFTER PROGRESSIVE RECOMMENDATION. FD PUT DOWN SPEEDY-DRI AND NOTIFIED HOTLINE. I TOOK 15 MINUTES TO REACH SPILL SITE. FD WAS ALREADY OFF-SITE. PROGRESSIVE HIRED TOW COMPANY, BUT THEY WERE NOT PREPARED TO REMOVE SPEEDY-DRI OR CONTINUE LOCATION DECOMMTAMINATION. I HIRED NRC TO CLEAR PARKING LOT OF GASOLINE SPILL. A MAN CAME OVER TO TALK TO FEMALE DRIVER. I DO NOT KNOW IF THAT WAS THE REGISTERED VEHICLE OWNER. VEHICLE PLATE IS JRP-7723. FEMALE DRIVER NAME IS UNKNOWN. 11/2021 I CALLED SYRACUSE FIRE. THEY WERE UNABLE TO SUPPLY REPORTS WITHOUT A FEE. 06/06/2022 I DECIDED TO CONTACT THE SHERIFF RECORDS, IN CASE THEY HAD A CONTACT WITH CITY FIRE. THE SHERIFF RECORDS CONTACT STATED THAT THE SHERIFF HAS ACCESS TO CITY FIRE REPORTS, BUT, THIS SPILL HAS NO REPORT. IT WAS LISTED AS A HAZARD CALL (E10), AND WITHDRAWN. THE DR NUMBER IS DR 20-41725."

Manifest Information

Waste Code(s):

D009: MERCURY (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

2009: 300 Pounds; 200 Pounds

Manifest Information

Waste Code(s):

F003: (Generic) The following spent nonhalogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above nonhalogenated solvents, and a total of 10 percent or more (by volume) of one or more of those solvents listed in F001, F002, F004 and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

Waste Amounts By Year:

1994: 556 Pounds

Manifest Information

Waste Code(s):

B003: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

Waste Amounts By Year:

2009: 3 Kilograms

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

2009: 1100 Pounds; 1200 Pounds; 1000 Pounds

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)
U213: (109-99-9) Furan, tetrahydro-(I)

Waste Amounts By Year:

2009: 1100 Pounds

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Contact with contaminated soil remaining at the site is unlikely unless people dig below the soil cover system and demarcation layer that exists across the entire site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site building development and occupancy. Furthermore, environmental data available for an off-site property indicates that soil vapor intrusion is not a concern.

Description:

Location: The McKinney Property site is an approximately 0.60-acre site located at 1226 McBride Street, on the northwest corner of South McBride Street and Burt Street, in an urban area of the City of Syracuse. Site Features: The site is developed as a gravel parking lot with a vegetated strip extending along the northern, eastern and southern site perimeter. There are no buildings on the site. It is generally flat, with a gentle slope from northwest to southeast. There is a concrete retaining wall along the north boundary of the site, which supports an elevated rail line. Current Zoning and Land Use: The majority of the site is a parking lot. It is zoned for commercial use. The surrounding parcels are used for a mix of commercial, industrial, and residential purposes. Several nearby properties are owned by the Syracuse Housing Authority (SHA), including a large residential apartment building. There are also several townhouses located south of the site, across Burt Street from the site. The site is bordered to the north by an elevated railroad line. A portion of the Syracuse University steam plant facility lies beyond the rail line to the north. The site is bordered to the south by Burt Street, with residential buildings beyond. An electrical substation is located further south. To the east, the site is bordered by South McBride Street, with the elevated rail line and the rest of the Syracuse University steam plant lying beyond. To the west, the site is bordered by a commercial property owned by SHA, with vacant lots and Oakwood Avenue beyond. Beyond Oakwood Avenue are vacant lots and two small commercial properties. Past Use of the Site: The site was previously occupied by a metal working company and a scrap metal storage/processing business. The metal working/processing operations have led to contamination of the site by metals and oils. Equipment associated with these operations also contributed to contamination, including underground storage tanks, capacitors containing dielectric fluids, an oil/water separator and hydraulic machinery. Site Geology and Hydrogeology: Unconsolidated deposits in the area have been mapped as lacustrine silt and clay. Soil encountered during the investigation consisted of several feet of fill material, underlain by the lacustrine unit, which consisted of silt and clay with lesser amounts of fine sand. The fill was generally approximately 2 feet thick, but ranged up to 9 feet thick. The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been

satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Assess DOH: People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Contact with contaminated soil remaining at the site is unlikely unless people dig below the soil cover system and demarcation layer that exists across the entire site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site building development and occupancy. Furthermore, environmental data available for an off-site property indicates that soil vapor intrusion is not a concern.

Description:

Location: The McKinney Property site is an approximately 0.60-acre site located at 1226 McBride Street, on the northwest corner of South McBride Street and Burt Street, in an urban area of the City of Syracuse. Site Features: The site is developed as a gravel parking lot with a vegetated strip extending along the northern, eastern and southern site perimeter. There are no buildings on the site. It is generally flat, with a gentle slope from northwest to southeast. There is a concrete retaining wall along the north boundary of the site, which supports an elevated rail line. Current Zoning and Land Use: The majority of the site is a parking lot. It is zoned for commercial use. The surrounding parcels are used for a mix of commercial, industrial, and residential purposes. Several nearby properties are owned by the Syracuse Housing Authority (SHA), including a large residential apartment building. There are also several townhouses located south of the site, across Burt Street from the site. The site is bordered to the north by an elevated railroad line. A portion of the Syracuse University steam plant facility lies beyond the rail line to the north. The site is bordered to the south by Burt Street, with residential buildings beyond. An electrical substation is located further south. To the east, the site is bordered by South McBride Street, with the elevated rail line and the rest of the Syracuse University steam plant lying beyond. To the west, the site is bordered by a commercial property owned by SHA, with vacant lots and Oakwood Avenue beyond. Beyond Oakwood Avenue are vacant lots and two small commercial properties. Past Use of the Site: The site was previously occupied by a metal working company and a scrap metal storage/processing business. The metal working/processing operations have led to contamination of the site by metals and oils. Equipment associated with these operations also contributed to contamination, including underground storage tanks, capacitors containing dielectric fluids, an oil/water separator and hydraulic machinery. Site Geology and Hydrogeology: Unconsolidated deposits in the area have been mapped as lacustrine silt and clay. Soil encountered during the investigation consisted of several feet of fill material, underlain by the lacustrine unit, which consisted of silt and clay with lesser amounts of fine sand. The fill was generally approximately 2 feet thick, but ranged up to 9 feet thick. The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer

of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH:	People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Contact with contaminated soil remaining at the site is unlikely unless people dig below the soil cover system and demarcation layer that exists across the entire site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site building development and occupancy. Furthermore, environmental data available for an off-site property indicates that soil vapor intrusion is not a concern.

Description:

Location: The McKinney Property site is an approximately 0.60-acre site located at 1226 McBride Street, on the northwest corner of South McBride Street and Burt Street, in an urban area of the City of Syracuse. Site Features: The site is developed as a gravel parking lot with a vegetated strip extending along the northern, eastern and southern site perimeter. There are no buildings on the site. It is generally flat, with a gentle slope from northwest to southeast. There is a concrete retaining wall along the north boundary of the site, which supports an elevated rail line. Current Zoning and Land Use: The majority of the site is a parking lot. It is zoned for commercial use. The surrounding parcels are used for a mix of commercial, industrial, and residential purposes. Several nearby properties are owned by the Syracuse Housing Authority (SHA), including a large residential apartment building. There are also several townhouses located south of the site, across Burt Street from the site. The site is bordered to the north by an elevated railroad line. A portion of the Syracuse University steam plant facility lies beyond the rail line to the north. The site is bordered to the south by Burt Street, with residential buildings beyond. An electrical substation is located further south. To the east, the site is bordered by South McBride Street, with the elevated rail line and the rest of the Syracuse University steam plant lying beyond. To the west, the site is bordered by a commercial property owned by SHA, with vacant lots and Oakwood Avenue beyond. Beyond Oakwood Avenue are vacant lots and two small commercial properties. Past Use of the

Site: The site was previously occupied by a metal working company and a scrap metal storage/processing business. The metal working/processing operations have led to contamination of the site by metals and oils. Equipment associated with these operations also contributed to contamination, including underground storage tanks, capacitors containing dielectric fluids, an oil/water separator and hydraulic machinery. Site Geology and Hydrogeology: Unconsolidated deposits in the area have been mapped as lacustrine silt and clay. Soil encountered during the investigation consisted of several feet of fill material, underlain by the lacustrine unit, which consisted of silt and clay with lesser amounts of fine sand. The fill was generally approximately 2 feet thick, but ranged up to 9 feet thick. The fill unit consisted of fill or reworked native deposits, mixed with gravel, concrete, metal, wood and other anthropogenic materials. The lacustrine unit showed interlaminations of silt, clay and sand, showing the annual cycle of deposition (varves). It is expected the lacustrine unit is underlain by till; however, neither the till nor bedrock were encountered in any boring advanced at the site. Borings were installed to a maximum depth of 22 feet below grade. Depth to groundwater varied seasonally and ranged from 2.4 feet below grade to 9.6 feet below grade. The predominant direction of groundwater flow at the Site was determined to be south/southwest toward Onondaga Creek.

Assessment:

Certain areas of contamination were excavated and disposed of off-site as interim remedial measures (IRMs). A one-foot clean soil cover system has been installed across the entire site. Contamination at concentrations greater than commercial use soil cleanup objectives (SCOs) remains below the cover system and is being managed under a Site Management Plan. Nature and Extent of Contamination: The primary contaminants of concern at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; polychlorinated biphenyls (PCBs); and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum contamination were excavated and disposed of off-site by the IRMs. Several volatile organic compounds (VOCs) were detected in soil vapor and were also detected above applicable standards, criteria or guidance values (SCGs) in soil and groundwater; however, to a lesser extent than the other contaminants of concern. No site-related contamination was identified off-site. Soil – Contaminants, including metals, PAHs and, to a lesser extent, PCBs remain in soil below the cover system. These contaminants are primarily present in soil immediately below the cover system, at depths ranging from one foot to approximately three feet below grade. Mercury is present across the site at elevated concentrations, primarily in the two feet of soil immediately below the cover system (one foot to three feet below grade). It is present at concentrations up to 438 parts per million (ppm) compared to its soil cleanup objective (SCO) for the protection of public health for commercial use of 2.8 ppm. Similarly, other metals are present at elevated concentrations across the site, primarily in the two feet of soil immediately below the cover system. Arsenic; barium; cadmium; copper; and lead were detected at concentrations up to 218; 6,390; 139; 51,100; and 19,200 ppm, respectively, compared to their respective commercial use SCOs of 16; 400; 9.3; 270; and 1,000 ppm. PAHs are present across the site in the two feet of soil immediately below the cover system, generally at concentrations only slightly exceeding commercial use SCOs, though a couple locations had somewhat higher concentrations. Benzo(a)pyrene, a PAH, exceeded its commercial use SCO more frequently than the other PAHs, and is present at concentrations up to 7.2 ppm, compared to its commercial use SCO of 1 ppm. Concentrations of total PAHs in soils below the cover system range from not detected to 400.8 ppm. PCBs are present across the site in the two feet of soil immediately below the cover system at concentrations exceeding its commercial use SCO. PCBs are present in soils at concentrations up to 29 ppm, compared to its commercial use SCO of 1 ppm. Trichloroethene (TCE) is present in subsurface soil in one area of the site at concentrations up to 6.84 ppm, exceeding its SCO for the protection of groundwater of 0.47 ppm. Groundwater - Groundwater impacts by petroleum were previously noted in a well located at the upgradient edge (northwest corner) of the site. A layer of separate phase petroleum several feet thick was identified in this well. The petroleum contamination in the vicinity of this well was excavated as part of an IRM conducted in 2014. TCE was previously detected in groundwater at concentrations exceeding its groundwater standard of 5 ug/L. The most heavily contaminated soil in this vicinity was excavated and disposed of off-site as part of an IRM conducted in 2014. Groundwater monitoring shows TCE concentrations in groundwater have been reduced. Groundwater results for the rest of the site indicated relatively minor impacts to groundwater quality. The impacts noted were generally only slightly above groundwater standards and/or were not extending off-site. Soil Vapor - Several VOCs were detected in soil vapor including 1,1,1-trichloroethane (which was detected at 5.66 micrograms per cubic meter [ug/m3]); cis-1,2-dichloroethene (which was detected at 0.443 ug/m3); tetrachloroethene (which was detected at 4.96 ug/m3); and trichloroethene (which was detected at 1.37 ug/m3).

Caller Remark:

"1 gallon possibly into floor drain - FD on scene now -"

DEC Remark:

"12/20/2012 - Approx 1 gallon of 50% sulfuric acid released onto worker after flexible poly pipe burst, spraying area and worker. Worker immediately placed under water deluge shower, all clothing removed, and eyes rinsed. Approx 1 gallon of sulfuric acid flowed from water deluge area into nearby sanitary sewer. Site is not CBS regulated due to small bulk tank sizes (< 185 gallons), but chemical sulfuraic acid chemical is listed in part 597, so WEP and SU contacted hotline and Fire Department. FD and plant personnel placed sodium bicarb over acid sprayed to floor as well as into sewer in attmept to neutralize acid. Brazell notified for possible municipal notifcation requirement. KCKemp 1/9/2013 - Closure report received and filed. KCKemp"

2010: 1 Pounds
2011: 17 Pounds
2013: 40 Pounds; 98 Pounds
2016: 19 Pounds

Manifest Information

Waste Code(s):

B001: (Wastes containing polychlorinated biphenyls (PCBs)) PCB oil (concentrated) from transformers, capacitors, etc.

Waste Amounts By Year:

1988: 400 Gallons
1989: 55 Gallons

Manifest Information

Waste Code(s):

B007: (Wastes containing polychlorinated biphenyls (PCBs)) Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Waste Amounts By Year:

1989: 150 Pounds; 900 Pounds
1992: 22 Kilograms; 360 Kilograms

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)
D002: CORROSIVE WASTE (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

2008: 150 Pounds
2014: 3 Pounds

Manifest Information

Waste Code(s):

F001: (Generic) The following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1, 1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004 and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

Waste Amounts By Year:

1988: 275 Gallons
1989: 605 Gallons

Manifest Information

Waste Code(s):

U080: (75-09-2) Methane, dichloro-

Waste Amounts By Year:

2003: 7 Pounds

Manifest Information

Waste Code(s):

F002: (Generic) The following spent halogenated solvents: tetrachloro-ethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2- trifluoroethane, orthodichlorobenzene, trichlorofluoromethane and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004 or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

Waste Amounts By Year:

1989: 440 Gallons
1991: 55 Gallons
1992: 165 Gallons
1994: 55 Gallons
1996: 55 Gallons
2000: 17 Pounds; 250 Pounds

Manifest Information

Waste Code(s):

F003: (Generic) The following spent nonhalogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above nonhalogenated solvents, and a total of 10 percent or more (by volume) of one or more of those solvents listed in F001, F002, F004 and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

Waste Amounts By Year:

1990: 55 Gallons
1994: 20 Gallons
1999: 440 Pounds
2000: 40 Gallons
2003: 33 Pounds
2004: 320 Pounds
2005: 60 Pounds; 300 Pounds
2006: 125 Pounds

Manifest Information

Waste Code(s):

B002: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers, and cable.

Waste Amounts By Year:

1989: 330 Gallons

Manifest Information

Waste Code(s):

B003: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

Waste Amounts By Year:

1988: 100 Pounds

Manifest Information

Waste Code(s):

B004: (Wastes containing polychlorinated biphenyls (PCBs)) PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

Waste Amounts By Year:

1988: 6250 Pounds

Manifest Information

Waste Code(s):

B006: (Wastes containing polychlorinated biphenyls (PCBs)) PCB transformers. PCB transformers means any transformer that contains 500 ppm PCB or greater.

Waste Amounts By Year:

1988: 11000 Pounds

1989: 18200 Pounds

Manifest Information

Waste Code(s):

D001: IGNITABLE WASTE (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

1988: 110 Gallons; 385 Gallons
1990: 55 Gallons
1991: 131 Pounds; 131 Pounds; 1732 Pounds; 294 Pounds; 131 Pounds; 55 Gallons
1992: 131 Pounds; 131 Pounds; 86 Pounds; 131 Pounds; 131 Pounds
1993: 24 Gallons; 15 Gallons; 22 Gallons; 18 Gallons
1994: 60 Gallons; 15 Gallons; 21 Gallons; 17 Gallons

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19870807
Handler Name: SYRACUSE UNIV - STEAM STATION
Source Type: Notification
Federal Waste Generator Code: 2
Generator Code Description: Small Quantity Generator

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002

Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Client / User Questionnaire

CLIENT/USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the Client/User must provide the following information (if available) to C&S Engineers, Inc. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(1) ***Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).*** Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

☐ YES ✠ NO

EXPLAIN: _____

_____

(2) ***Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).*** Are you aware of any AULs, such an engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

☐ **X YES** ☐ NO

EXPLAIN: Property is owned by Syracuse Housing Authority under auspices of US Dept of Housing and Urban Development (HUD) with income and use restrictions.

(3) ***Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).*** As the user of this Phase I Environmental Site Assessment, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ YES ✠ NO

EXPLAIN: _____

_____

(4) ***Relationship of the purchase to the fair market value of the property if it were not contaminated (40 CFR 312.29).*** Does the purchase price being paid for this property reasonably reflect the fair market value of the property? ☐ YES ✠ NO

If you answered "No", and the price is below fair market value, have you considered that the lower price is due to known or presumed contamination at the property?
☐ YES ☐ **X** NO

EXPLAIN: Blueprint 15 is seeking to develop a community center facility to serve the residents of the new 15th Ward neighborhood - the building cannot support debt service and therefore we are seeking, with permission, a below market value to purchase property due to the community purpose being proposed (e.g. that all services offered are affordable to the low-income residents in the community).

CLIENT/USER QUESTIONNAIRE (continued)

(5) ***Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).*** Are you aware of commonly known or reasonably ascertainable information about the property that would help C&S Engineers, Inc. to identify conditions indicative of releases or threatened releases? For example:

(a) Do you know of the past uses of the property? ☐ YES ✠ NO

EXPLAIN: _____

_____

(b) Do you know of specific chemicals that are present or that were once present at the property? ☐ YES ✠ NO

EXPLAIN: _____

_____

(c) Do you know of spills or other chemical releases that have taken place at the property?

☐ YES ✠ NO

EXPLAIN: _____

_____

(d) Do you know of any environmental cleanups that have taken place at the property?

☐ YES ✠ NO

EXPLAIN: _____

_____

(6) ***The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).*** As the user of this Phase I Environmental Site Assessment, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property.

☐ YES ✠ NO

EXPLAIN: Past ESA (2021) was sent to Blueprint 15 without attachments; we have provided to C&S all materials we have in our possession related to this site. Our team does not have the expertise to read and evaluate the reports in our possession which is why we are seeking services from C&S.

EXECUTIVE SUMMARY

EA Engineering, P.C. and its affiliate EA Science and Technology (EA) performed this Phase I Environmental Site Assessment (ESA) of the Phase One Area of the East Adams Street Redevelopment in Syracuse, New York (Subject Property) in conformance with the scope and limitations of ASTM International (ASTM) E1527-21, Standard Practice for ESAs: Phase I ESA Process (ASTM 2021). EA has prepared this Phase I ESA in accordance with EA Proposal No. 0731859, dated 24 February 2023.

The Subject Property has been developed for multiple commercial and residential uses for as long as records are available, dating back to the 1890s. The Subject Property consists of a portion of a single tax parcel that has historically hosted a junk yard, church, Syracuse Fire Department, and residential properties, which is its current use. A multi-family residential apartment complex was constructed on the Subject Property in 1989. The facility is owned and operated by Syracuse Housing Authority.

EA performed this Phase I ESA of the Subject Property in conformance with the scope and limitations of ASTM E1527-21. Any exceptions to, or deletions from, this practice are described in Section 1.4. This assessment has revealed the following recognized environmental conditions (RECs) in connection with historical uses of the Subject Property, and offsite properties which could have impacted the soil and groundwater:

- Review of historical uses of the Subject Property and adjacent properties indicate that there were uses which could have negatively impacted the environmental integrity of the Subject Property, including its use as a junk yard until at least 1961.

- Preliminary results and observations made during an ongoing Phase II ESA of the Subject Property have determined that groundwater and soil vapor have been impacted by contaminants. The indication of contamination in preliminary results is considered a REC. Further information can be found in Section 2.2.4.

- Several offsite locations were determined to pose a potential environmental risk to the Subject Property and are included as a REC. Each site is listed as follows:

    - *South State Street/New Street, Syracuse, New York*, is located 0.07 miles south of the Subject Property.

    - *Presidential Plaza, 90 Presidential Plaza, Syracuse, New York*, is located 0.15 miles northeast from the Subject Property.

    - *Onondaga County Heating/Cooling Plant, Onondaga County Steam Plant, Niagara Mohawk a National Grid Company, 601 South State Street, Syracuse, New York,* is located 0.24 miles north from the Subject Property.

    - *Marks Hotel, Almond and East Genesee Street, Syracuse, New York,* is located 0.37 miles northeast of the Subject Property.

- *The Salvation Army, 1105 South State Street, Syracuse, New York,* is located 0.20 miles south from the Subject Property.

Further details about the sites discussed above can be found in Section 4.1.

Table ES-1 provides the dates the following ASTM E1527-21 Standard Practice for ESAs: Phase I ESA Process components were performed.

1. INTRODUCTION

1.1 PURPOSE

The purpose of the Phase I Environmental Site Assessment (ESA) is to identify, to the extent feasible pursuant to the process prescribed in ASTM International (ASTM) E-1527-21, recognized environmental conditions (RECs) in connection with 301-311 East Taylor Street (the Subject Property). As defined in ASTM E1527-21, a REC is "(1) the presence of hazardous substances or petroleum products in, on, or at Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the Subject Property under conditions that post a material threat of a future release to the environment." The ASTM E1527-21 practice constitutes all appropriate inquiries for the purpose of Landowner Liability Protections, under the Comprehensive Environmental Response, Compensation, and Liability Act. This report reflects the observations, information, and data collected by EA Engineering, P.C. and its affiliate EA Science and Technology (EA) during the period from 24 February to 31 March 2023. Supporting documentation is provided in the appendixes as follows:

- Appendix A – Figures
- Appendix B – Photographic Log
- Appendix C – Historical Research Documentation
- Appendix D – Regulatory Records Documentation
- Appendix E – Supporting Interview Documentation
- Appendix F – Environmental Risk Information Services. (ERIS) Database Report
- Appendix G – Resumes of the Environmental Professionals

1.2 DETAILED SCOPE OF SERVICES

EA has prepared this Phase I ESA in accordance with EA Proposal No. 0731859, dated 24 February 2023, of the East Adams Redevelopment Phase One Area, encompassing a portion of the city block bound by South State Street, East Adams Street, East Taylor Street, and South Townsend Street, Syracuse, New York (Subject Property). Figure 1 (Appendix A) depicts the boundary of the Subject Property.

This Phase I ESA was performed in accordance with ASTM E1527-21 (Standard Practice for ESAs: Phase I ESA Process) (ASTM 2021) and consists of a review of current and historical activities and conditions at the Subject Property and surrounding properties, including a non-intrusive visual inspection of the Subject Property; review of local, state, and federal regulatory database records; review of available historical records; and survey of adjacent land uses. The site reconnaissance does not address non-ASTM considerations such as asbestos, lead-based paint, drinking water quality, or radon, nor does it include sampling or chemical analysis of soils, surface water, or groundwater or an intensive examination of facility hazards (compliance audit).

1.3 SIGNIFICANT ASSUMPTIONS

In expressing the opinions stated in this report, EA exercised the degree of skill and care ordinarily exercised by a reasonable prudent Environmental Professional in the same community and at the same timeframe given the same or similar facts and circumstances. EA assumes that the client, as set forth in the contractual agreement, is also the User as defined by ASTM E1527-21. Documentation and data provided by the User, designated representatives thereof, or other interested third parties, or from the public domain, and referred to in the preparation of this assessment, were used and referenced. Consequently, EA assumes no responsibility or liability for the accuracy of such documentation or data.

The independent conclusions in this report represent EA's professional judgment based on information and data available to EA during this assignment. Factual information regarding operations, conditions, and test data provided by the User or their representative is assumed to be correct and complete. The conclusions presented are based on the data provided, observations, and conditions that existed on the date of the site visit.

1.4 LIMITATIONS AND EXCEPTIONS

EA does not warrant that there are no toxic or hazardous materials, or contamination or indoor air impact; nor does EA accept any liability if such are found at some future time or could have been found if sampling or additional studies were conducted. EA does not assume responsibility for other environmental issues that may be associated with this Subject Property.

In view of the rapidly changing status of environmental laws, regulations, and guidelines, EA cannot be responsible for changes in laws, regulations, or guidelines that occur after the study has been completed and that may affect the Subject Property.

This report was prepared for McCormack Baron Salazar Development, Inc. (MBS) by EA and was based, in part, on third-party information not within the control of MBS or EA. While it is believed that the third-party information contained herein will be reliable under the conditions and subject to the limitations set forth herein, neither MBS nor EA guarantee the accuracy thereof.

1.5 SPECIAL TERMS AND CONDITIONS

No special terms or conditions were associated with this Phase I ESA.

1.6 USER RELIANCE

This report is exclusively for the use and benefit of MBS, its affiliates, and parties providing the potential sale or lease of the Subject Property, Syracuse Housing Authority, and New York State Homes and Community Renewal. This report is not for the use or benefit of, nor may it be relied upon by, any other person or entity without the advance written consent of EA.

This page intentionally left blank

2. SUBJECT PROPERTY DESCRIPTION

2.1 LOCATION AND LEGAL DESCRIPTION

The Subject Property is located at the northern portion of an approximately 11.1-acre parcel in Syracuse, New York, as shown on Figure 1 (Appendix A). The Subject Property is on a parcel which contains multiple apartment complexes (Table 2-1). The Subject Property is in a residential area.

Table 2-1. Parcel Information and Ownership

Onondaga County Parcel ID	Land Area in Acres	Address	Owner
095.-08-01.0	11.1	301-11 East Taylor Street and South State Street	Syracuse Housing Authority

2.2 SUBJECT PROPERTY AND VICINITY GENERAL CHARACTERISTICS

The Subject Property is located in Residential Class B zoning district in Syracuse, New York. The surrounding area contains residential, commercial, and industrial properties.

2.2.1 Topography

The Subject Property is located on the U.S. Geological Survey Syracuse West 7.5-minute quadrangle. The topography of the Subject Property is mostly flat at approximately 398 feet (ft) above sea level. Developed urban land abuts the Subject Property in all directions.

2.2.2 Geology

Review of the U.S. Geological Survey geologic information provided in the ERIS Physical Setting Report indicates that the Subject Property lies within the Syracuse Formation composed of dolostone, shale, gypsum, and salt rock unit and formed during the Upper Silurian and Lower Devonian period. A copy of the geologic information report is provided within the database report in Appendix F.

2.2.3 Soils

Review of the Web Soil Survey from the U.S. Department of Agriculture Natural Resources Conservation Service, indicates that the Subject Property is in a miscellaneous area comprised of urban land that makes up the major soil components of the Subject Property. A copy of the soil information is provided within Appendix C.

2.2.4 Groundwater

There are approximately 118 wells on properties surrounding the Subject Property within a 1-mile radius. Groundwater under the Subject Property is generally regarded as degraded and is not used as a potable water source. A Phase II investigation was initiated at the Subject Property in January 2023.

The results will be included in a Phase II ESA Report. These results will reveal the extent of environmental impacts at the Subject Property from adjacent and surrounding properties.

2.3 CURRENT USE OF THE PROPERTY

The Subject Property is currently owned by Syracuse Housing Authority and is used as an apartment complex.

2.4 DESCRIPTION OF ON-SITE STRUCTURES, ROADS, AND IMPROVEMENTS

The Subject Property contains the following structures (Figure 1, Appendix A):

- ***Main Parking Lot***—Parking spots are located along the edges of Angelou Terrace, and around the cul-de-sac. Angelou Terrace bisects the Subject Property
- ***Apartment Buildings***—Apartment buildings used for housing

There are no other structures present on the Subject Property. All historical buildings have been demolished.

2.5 CURRENT USE OF ADJOINING PROPERTIES

The area immediately abutting the Subject Property contains residential and commercial properties.

3. USER PROVIDED INFORMATION

Copies of the ASTM E1527-21 User Questionnaire were submitted to MBS for the purpose of requesting specialized knowledge of the Subject Property. Mr. Michael Saunders completed the questionnaire on behalf of MBS (Saunders 2023). Information contained in the questionnaires and reports provided during the previous Phase I investigation are summarized below. Copies of the completed questionnaire and User provided reports are included in Appendix E.

3.1 ENVIRONMENTAL LIENS OR ACTIVITY USE LIMITATIONS

Mr. Saunders indicated that he is not aware of any liens or AULs against the Subject Property.

3.2 SPECIALIZED KNOWLEDGE

Mr. Saunders indicated that he has provided the Environmental Professional with all specialized knowledge necessary for this Phase I ESA.

3.3 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Mr. Saunders indicated that to the best of his knowledge, the purchase/lease price of the property reflects fair market value and has not been adjusted to reflect any real or potential contamination that might be found at the Subject Property.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Users of the Subject Property were questioned regarding commonly known or reasonably ascertainable information about the Subject Property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases such as past uses of the Subject Property, specific chemicals that are present or once were present at the Subject Property, spills or other chemical releases that have taken place on the Subject Property, or any environmental cleanups that have taken place at the Subject Property.

Mr. Saunders indicated that all information/documentation concerning past uses of the Subject Property, specific chemicals that are present or once were present, spills or other releases at the property, in his possession, if any, was provided for review. Mr. Saunders further indicated that to the best of his knowledge, the Subject Property has historically been used for housing and has had no past spills or environmental cleanups.

3.5 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

No information was provided on the Owner, manager, or occupant of the Subject Property.

3.6 REASON FOR PERFORMING THE PHASE I ENVIRONMENTAL SITE ASSESSMENT

MBS informed EA that this report had been contracted as part of the prospective redevelopment of the Subject Property.

3.7 OTHER

No other environmental documentation relevant to the ESA for the Subject Property was provided by the User.

4. RECORDS REVIEW

A database report was obtained from ERIS on 6 March 2023 (ERIS 2023) for use as part of this Phase I ESA. The database report was obtained to fulfill the requirements pertaining to standard environmental record sources. The following distances were used to assess potential for vapor migration to impact the Subject Property from adjacent or nearby properties by petroleum hydrocarbon contaminants of concern (COCs) and/or COCs included in Table X6.1 of the Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (E2600-10) (2022). Petroleum hydrocarbon COCs are those volatile petroleum hydrocarbon compounds that are a subset of the COC list and that readily biodegrade to carbon dioxide or water by soil microbes in aerated environments.

- Upgradient Sites—1,760 ft (1/3 mile) for non-petroleum hydrocarbon COC sites, and 528 ft (1/10 mile) for sites with petroleum hydrocarbon COC sites.

- Crossgradient Sites—365 ft for non-petroleum hydrocarbon COC sites, 165 ft for sites with petroleum hydrocarbon COCs where light non-aqueous phase liquid or free product exists, and 95 ft where only dissolved petroleum hydrocarbons are present.

- Downgradient Sites—100 ft for COC contaminated sites and sites where light non-aqueous phase liquid or free product is presumed, and 30 ft when dissolved-phase petroleum hydrocarbons are presumed.

4.1 STANDARD FEDERAL, STATE, AND TRIBAL ENVIRONMENTAL RECORDS

The following standard federal, state, and tribal environmental record sources were reviewed as part of this Phase I ESA:

- Federal National Priorities List (NPL)

- Federal Delisted NPL site list

- Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list

- Federal CERCLIS–No Further Remedial Action Planned site list

- Federal Resource Conservation and Recovery Act (RCRA) Corrective Action Sites (CORRACTS) facilities list

- Federal RCRA non-CORRACTS Treatment, Storage, and Disposal facilities list

- Federal RCRA generators list

- Federal Institutional Control/Engineering Control registries

- Federal Emergency Response Notification System
- State- and Tribal-equivalent CERCLIS
- State and Tribal Landfill and/or Solid Waste Disposal sites lists
- State and Tribal Leaking Storage Tanks (LSTs) list
- State and Tribal Registered Storage Tanks list
- State and Tribal Institutional Control/Engineering Control registries
- State and Tribal Voluntary Cleanup sites
- State and Tribal Brownfield sites
- State- and Tribal-equivalent NPL

Database findings indicate that there are 166 properties listed within the ASTM recommended search distances of the Subject Property associated with the standard environmental records sources. Each of these 166 sites was investigated for its potential to impact the Subject Property based on topographic relation, distance, regulatory status, and volume of spills or releases. The Subject Property itself was not present in any database listings. The following 45 facilities were noted due to their identification as adjacent to the Subject Property, potential to impact the Subject Property in the future, or potential current environmental concern to the Subject Property:

- *Adams Street and State Street Garage, South State Street and East Adams Street, Syracuse, New York*, is located 0.01 miles northwest and at a lower elevation than the Subject Property. The facility is listed in the LST and NY SPILLS databases. This site is listed in the LST database for a tank which leaked 1 liter of gasoline in 1991. The spills is listed as closed. The site is listed in the NY SPILLS database for a 200-gallon (gal) spill of gasoline leaving soil contamination. The site is not expected to adversely impact the Subject Property due to its downgradient location.

- *Syracuse Police Department Gas Depot, 916 South State Street, Syracuse, New York*, is located 0.01 miles southwest and at the same elevation as the Subject Property. The facility is listed in the Underground Storage Tank (UST) database for a closed 10,000-gal gasoline UST. No spills were reported and due to the cross-gradient location, this facility is not expected to have impacted the Subject Property.

- *Niagara Mohawk a National Grid Company, South State Street and East Adams Street MH9-1, Syracuse, New York*, is located 0.01 miles northwest and at a lower elevation than the Subject Property. The facility is listed in the Facility Index System (FINDS), New York Manifest, and RCRA Non-Generators (NONGEN) databases. This site is not

expected to adversely impact the Subject Property due to the lack of spills and releases and the downgradient location.

- *Fire Station #1 and Niagara Mohawk a National Grid Company, 90 South State Street, Syracuse, New York*, is located 0.01 miles west and at a lower elevation than the Subject Property. The facilities are listed in the Aboveground Storage Tank (AST), New York Manifest, RCRA NONGEN, and UST databases. Two closed USTs are present on this site including a 2,000-gal diesel UST and a 2500-gal diesel UST. Additionally, a 2,500-gal active diesel UST is present. This site is not expected to adversely impact the Subject Property due to the lack of spills and releases and the downgradient location.

- *New York-1 Pioneer Homes, East Adams/Renwick/East Taylor/South State Streets, Syracuse, New York*, is located 0.04 miles south and at a higher elevation than the Subject Property. The facility is listed in the AST and UST databases. Two closed USTs are present on this site including a 5,000-gal No. 2 fuel oil UST and a 10,000-gal No. 2 fuel oil UST. Due to the lack of spills and releases this site is not expected to adversely impact the Subject Property.

- *South State Street/New Street, Syracuse, New York*, is located 0.07 miles south and at the same elevation as the Subject Property. An unnamed facility is listed in the State and Tribal LST database. A 550-gal diesel UST was uncovered while excavating for a sewer line and contaminated soil was found. The soil was staged and disposed of by the Syracuse Housing Authority. No further data were present. This site could have impacted the Subject Property.

- *Syracuse Housing Authority, 218 New Street, Syracuse, New York*, is located 0.07 miles southwest and at the same elevation as the Subject Property. The facility is listed in the General Manifest database and RCRA Small Quantity Generator (SQG) due to waste shipped from the property, including approximately 25 gal of corrosive waste. This site is not expected to adversely impact the Subject Property due to the lack of spills reported at this property, and the crossgradient location.

- *Central Tech, 285 East Adams Street, Syracuse, New York*, is located 0.08 miles west and at a lower elevation than the Subject Property. The facility is listed in the UST database for a closed and removed 10,000-gal gasoline UST. Due to the lack of spills and releases and downgradient location, this site is not expected to adversely impact the Subject Property.

- *South State Street and New Street, Syracuse, New York*, is located 0.10 miles north and at a lower elevation than the Subject Property and is listed in the LUST database. Spill No. 9208359 was recorded on 19 October 1992 when an uncovered 550-gal tank was discovered while excavating for a sewer line. Database records indicate that contaminated soil was staged and disposed of by Syracuse Housing Authority, and the spill record was closed on 26 January 1993. This facility is not expected to adversely impact the Subject Property due to the downgradient location.

- *Commercial Property, 249-255 East Adams Street, Syracuse, New York*, is located 0.10 miles west and at a lower elevation than the Subject Property. The facility is listed in the NY SPILLS database for an August 2016 spill of an undisclosed volume of an unknown petroleum product. The spill was listed as closed in September 2016. A Phase II was conducted at the site, and it was determined that no cleanup was necessary, and the use would remain a parking lot. If the use were to change and excavation were to take place then the site may require removal of impacted soil if it is encountered. This site is not expected to adversely impact the Subject Property due to the lack of need for cleanup and the downgradient location.

- *Central Tech School, Institute of Technology, and Syracuse Central School District, 258 East Adams Street, Syracuse, New York*, is located 0.11 miles west and at a lower elevation than the Subject Property. The facilities are listed in the General Manifest, RCRA NONGEN, UST, and NY SPILLS database. A May 2010 spill of hydraulic oil (2 inches [in.]) to a pit was reported and closed in August 2010. A July 2013 spill of an undisclosed volume of polychlorinated biphenyls (PCB) was reported as closed in July 2014. The downgradient location and estimated groundwater flow direction indicates this site is not expected to adversely impact the Subject Property.

- *Niagara Mohawk a National Grid Company Manhole 8-2, Crew Levick Company, Harrison Street and South State Street, Syracuse, New York*, is located 0.12 miles north and at a lower elevation than the Subject Property. The facility is listed in the GEN MANIFEST, Historic Gas stations, NY SPILLS, and RCRA NONGEN databases. The facility is listed in the NY SPILLS database for contamination due to a 1996 Phase II investigation indicating contamination due to an unknown volume release of petroleum products and for an unknown volume release of petroleum products found in 2001. Both incidents are listed as closed. The site was historically a gas station and releases were likely due to its historical uses. The sites down and crossgradient location indicates it is not expected to adversely impact the Subject Property.

- *Parking Lot, 111 Raddison Court, Syracuse, New York*, is located 0.12 miles southeast and at a higher elevation than the Subject Property. The facility is listed in the NY SPILLS database for a September 2020 spill of 10 gal of car gasoline. The spill was reported as closed in May 2022. The small spill volume and distance from the Subject Property indicates this site is not expected to adversely impact the Subject Property.

- *550 Harrison Street, Syracuse, New York*, is located 0.12 miles east and at a higher elevation than the Subject Property. The facility is listed in the NY SPILLS database. A May 1999 spill of 5-gal car gasoline was reported and closed in May 1999. The small spill volume would not be expected to adversely impact the Subject Property.

- *Syracuse Housing Authority – Pioneer Homes, 116 – 118 Radisson Court, Syracuse, New York*, is located 0.12 miles south and at a higher elevation than the Subject Property. The facility is listed in the RCRA SQG and the GEN MANIFEST databases for approximately 30 gal of D002 (corrosive) waste generated and shipped from the facility

in 2008. The quantity of waste generated indicates this facility is not expected to adversely impact the Subject Property.

- *Syracuse Housing Authority, 120-122 Tyler Court, Syracuse, New York*, is located 0.14 miles east and at the same elevation as the Subject Property. The facility is listed in the RCRA SQG database due to corrosive waste storage on the property. There is no indication of a release at the facility and the facility is not expected to impact the Subject Site.

- *Presidential Plaza, 90 Presidential Plaza, Syracuse, New York*, is located 0.15 miles northeast and at a higher elevation than the Subject Property. The facility is listed in the LST database for soil contamination, which was found while removing two 10,000-gal No. 2 fuel oil tanks in 1989. The spill is listed as closed. The volume of the spill is unknown. Additionally, an unknown volume of gasoline was spilled from an overfilled tank in 1994 during a tank removal. Minimal contamination was discovered. The unknown volume of the 1989 spill and the proximity to the Subject Property indicates this site could have negatively impacted the Subject Property.

- *Former Salvation Army Property, 1117 South State Street and 100 Block of Oakwood Avenue, Syracuse, New York*, is located 0.17 miles south and at the same elevation as the Subject Property. The facility is listed in the UST database for four closed/removed 1,000-gal petroleum USTs. NYSDEC provided a UST removal report prepared by Stearns & Wheler Companies detailing the tank removal, residual contamination, and subsequent soil excavation (Stearns & Wheler 2005). Confirmation samples collected from excavation extents reported volatile organic compound (VOC) and semivolatile organic compound (SVOC) exceedances when compared to NYSDEC Technical and Administrative Guidance Memorandum No. 4046 (Replaced by NYSDEC CP-51 2010). NYSDEC responded to this report on 14 March 2005, determining that the cleanup measures were adequate, and that no further remedial action was necessary (NYSDEC 2005, letter included in Appendix D). The site's crossgradient orientation to the Subject Property indicates this facility is not anticipated to adversely impact the Subject Property.

- *Central Garage, 700–712 Townsend Street, Syracuse, New York*, is located 0.17 miles northeast and at a higher elevation than the Subject Property. The facility is listed in the UST database for two closed and removed 8,000-gal gasoline USTs and two 500-gal USTs converted to non-regulated use. The lack of spills and releases and distance from the Subject Property indicates this site is not expected to adversely impact the Subject Property.

- *Benjamin Rush Center, 672 South Salinas Street, Syracuse, New York*, is located 0.17 miles southwest and at a lower elevation than the Subject Property. The facility is listed in the UST database for four closed 1,000-gal No. 2 fuel oil USTs. The lack of spills documented closure of the USTs and the non-regulated status of the current operating tanks indicates this site is not expected to adversely impact the Subject Property.

- *Roth Bros Metal Co., 1107 South State Street, Syracuse, New York,* is located 0.18 miles south and at a higher elevation than the Subject Property. The facility is listed in the CERCLIS and Superfund Enterprise Management System Archive databases due to potential historical secondary lead smelting and/or alloying between 1931 and 1964. Database records suggest that the site was evaluated by U.S. Environmental Protection Agency (EPA) and listed as no further remedial action planned. The no further remedial action planned designation of the site suggests that potential historical lead smelting and/or alloying activities have not adversely impacted the Subject Property.

- *Steam Plant, McBride Street, Syracuse, New York,* is located 0.18 miles southeast and at a higher elevation than the Subject Property. The facility is listed in the LST database for an October 1999 spill of 10-gal of No.2 fuel oil. The volume of the spill and distance from the Subject Property indicates this site is not expected to adversely impact the Subject Property.

- *Executive Clothing SVC, Madison Towers, 60 Presidential Plaza, Syracuse, New York,* is located 0.19 miles northeast and at a higher elevation than the Subject Property. The facility is listed in the UST database for a closed 12,000-gal No. 2 fuel oil UST. The lack of spills and distance from the Subject Property indicates this site is not expected to adversely impact the Subject Property.

- *Desimone's Service Station, Jupp Corporation, Can Am Alliance Corp, 680 South Salina Street, Syracuse, New York,* is located 0.19 miles southwest and at a lower elevation than the Subject Property. The facility is listed in the LST and UST databases. The facility is listed in the LST database for two 2016 spills of unspecified volumes of gasoline. The facility is listed in the UST database for four closed gasoline USTs (two 2,000-gal and two 3,000 gal), three closed gasoline/ethanol USTs (4,000-gal, 6,000-gal, 8,000-gal), and two active gasoline/ethanol USTs (11,000-gal and 4,000-gal). The downgradient location and distance from the Subject Property indicates this site is not expected to adversely impact the Subject Property.

- *SCHC Companies, Inc., 800 South Salina Street, Syracuse, New York,* is located 0.20 miles southwest and at the same elevation as the Subject Property. The facility is listed in the RCRA NONGEN and UST databases. The facility is listed in the UST database for closed USTs including four tanks listed with other material (three 550-gal and one 10,000-gal), one empty 550-gal UST, a 2,000-gal gasoline UST, and two empty USTs (2,000-gal and-550 gal). The lack of spills and releases and distance from the Subject Property indicates this site is not expected to adversely impact the Subject Property.

- *Syracuse University Steam Station, 500 East Taylor Street, Syracuse, New York,* is located 0.20 miles southeast and at a higher elevation than the Subject Property and is listed in the NY SPILLS, LUST, TIER 2, RCRA NONGEN, AST, UST, DELISTED TANKS, GEN MANIFEST, AIR PERMITS, and COOLING TOWERS databases. Further details are listed below.

- Multiple spill incidents at this facility have been recorded, including Spill Nos. 9107234 (20-gal of PCB oil), 0600689 (3-gal of hydraulic oil), 114752 (storm drain overflow), 9204042 (unknown quantity of unknown petroleum), 8801654 (unknown quantity of No. 2 fuel oil; contaminated soil was excavated), 9908800 (10-gal of No. 2 fuel oil), 8910992 (25 gal of No. 2 fuel oil; contaminated soil was excavated), 1213761 (1 gal of 50 percent sulfuric acid), 9008107 (2-gal of gasoline), 0001904 (unknown quantity of No. 2 fuel oil), 0407665 (20-gals of 12% sodium hypochlorite), 9211857 (35-gal of non-PCB transformer oil), 1206833 (unknown quantity of unknown petroleum), 8605131 (unknown quantity of No. 2 fuel oil due to leaky UST), 8605148 (unknown quantity of No. 2 fuel oil due to leaky UST), 1502394 (15-gal of sulfuric acid and 15-gal of phosphoric acid), 1810736 (2-gal of No. 2 fuel oil), and 1902943 (2-gal of hydraulic oil).

- Facility bulk storage tanks include four in service 30,000-gal No. 2 fuel oil USTs and three 1,000-gal chemical storage ASTs (unknown chemicals, transferred to non-regulated use). Historical tanks include one 300-gal kerosene AST (closed 22 October 2009), one 275-gal No. 2 fuel oil AST (closed 25 February 2019), one 15,000-gal No. 2 fuel oil UST (closed prior to March 1991), two 30,000-gal No. 2 fuel oil USTs (closed prior to March 1991), two 200-gal chemical storage ASTs (unknown chemicals, closed 30 October 2009) one 500-gal chemical storage AST (unknown chemicals, closed 1 November 1999), one 1,100-gal chemical storage AST (unknown chemicals, closed 1 November 1999), one 1,500-gal chemical storage AST (unknown chemicals, closed 6 June 2011), and two 7,000-gal chemical storage ASTs (unknown chemicals, closed 17 January 2011).

- The facility is listed in the GEN MANIFEST database for shipment of waste including B001, B002, B003, B004, B006, and B007 PCBs; D001 ignitable waste; D002 corrosive waste; D005 barium; D008 lead; D006 cadmium; D007 chromium; D009 mercury; F001, F002, F003, F005, and F006 non-halogenated solvents; U080 methane; and D040 trichloroethene (TCE).

Database records do not identify environmental impacts or remedial response for most of the recorded spill incidents. Preliminary results of the Phase II ESA underway at the Subject Property suggest that this facility has not adversely impacted the environmental integrity of the Subject Property.

- *The Salvation Army, 1105 South State Street, Syracuse, New York,* is located 0.20 miles south and at a higher elevation than the Subject Property. The facility is listed in the UST, LUST, and NY SPILLS databases. Further details are listed below.

  - A 5,000-gal gasoline UST was installed in 1986 and removed in 1998.

  - NY Spill No. 8601904 was recorded on 19 June 1986, where a 55-gal drum fell off of a commercial vehicle, resulting in a 30-gal release of ethylene glycol to ground surface. Database records suggest that the fire department responded to the spill, and

absorbent media and sand were applied to the spill. The spill record was closed on 2 December 2003. The spill quantity and distance to the Subject Site indicate this incident is not expected to adversely impact the Subject Property.

— NY Spill No. 9711143 was recorded on 5 January 1998, regarding soil contamination discovered under a pump island dispenser. Database records indicate that soil would be stockpiled for removal; however, there is no record of cleanup. The spill record was closed on 6 August 2002. The database report does not identify the nature and extent of contamination, so it is possible that contamination related to this spill remains. Further review of the potential for vapor intrusion at the Subject Property is warranted. A Phase II ESA was initiated at the Subject Property in January 2023. The results are being compiled for inclusion in a Phase II ESA Report.

— A tank failure was reported in the LUST database on 4 August 2004 regarding a gasoline release of unknown quantity from a 550-gal tank. Database records suggest that contaminated soil was excavated and removed from the site, and the LUST record was closed on 4 March 2005. The lack of detail provided by the database report indicates it is possible that contamination related to the LUST identified in this database record could remain. Further review of the potential for vapor intrusion at the Subject Property is warranted. A Phase II ESA was initiated at the Subject Property in January 2023. The results are being compiled for inclusion in a Phase II ESA Report.

- *Harrison Parking Garage, Warren and Harrison Street, Syracuse, New York,* is located 0.21 miles northwest and at a lower elevation than the Subject Property. The facility is listed in the LST database for contaminated soil which was discovered when excavating for the parking garage in 1991. The volume of the gasoline spill was unknown. Due to the distance and downgradient location from the Subject Property, this facility is not expected to adversely impact the Subject Property.

- *Warehouse, 908 Montgomery Street, Syracuse, New York,* is located 0.21 miles northwest and at a lower elevation than the Subject Property. The facility is listed in the UST database for three closed gasoline USTs (two 2,000-gal and one 1,000-gal). The lack of spills or releases and distance and crossgradient location from the Subject Property indicates this facility is not expected to adversely impact the Subject Property.

- *Onondaga County Civic Center, 421 Montgomery Street, Syracuse, New York,* is located 0.21 miles northwest and at a lower elevation than the Subject Property. The facility is listed in the AST database for four diesel ASTs (two 6,000-gal, one 50-gal, and one 75-gal). The distance and downgradient location from the Subject Property indicates this facility is not expected to adversely impact the Subject Property.

- *McKinney Property, 1226 S. McBride Street, Syracuse, New York,* is located 0.22 miles southeast and at a higher elevation than the Subject Property and is identified in the NY SPILLS, Environmental Restoration Program, Institutional Controls (INST), and engineering controls (ENG) databases. From the assessment contained in the database

entries, the primary COCs at the site are metals, including arsenic, barium, cadmium, copper, lead, and mercury; PCBs; and SVOCs, specifically polycyclic aromatic hydrocarbons (PAH). Petroleum was also encountered in certain locations at the site, though the areas with the heaviest known petroleum product were excavated and disposed of off-site. No site-related contamination was identified off-site. Remediation at the site is complete. This facility is not anticipated to have adversely impacted the environmental integrity of the Subject Property.

- *Onondaga County Civic Center, 600 South State Street, Syracuse, New York,* is located 0.22 miles northwest and at a lower elevation than the Subject Property. The facility is listed in the LST database for a spill of 50 gal of No. 2 fuel oil in June 1986. The distance, downgradient location, and volume of release indicates this facility is not expected to adversely impact the Subject Property.

- *917 Montgomery Street, Syracuse, New York,* is located 0.22 miles southwest and at a lower elevation than the Subject Property. The facility is listed in the FED BROWNFIELDS database. The distance and downgradient location from the Subject Property indicates this facility is not expected to adversely impact the Subject Property.

- *917 Montgomery Street and Burt Street, Syracuse, New York,* is located 0.23 miles south and at a lower elevation than the Subject Property. The facility is listed in the FED BROWNFIELDS database under Property ID 244994. The property includes a deteriorating brick building, formerly used for bus service and sales, with visible solid waste disposal on the site. Database records suggest that hazardous waste may be present on the site, and that building materials, groundwater, and soil may be affected. Available documentation does not identify any intrusive environmental investigations or specific COCs. The downgradient location and distance from the Subject Property indicates the site is not anticipated to adversely impact the Subject Property.

- *Syracuse Housing Authority, 409 Burt Street, Syracuse, New York,* is located 0.23 miles southeast and at a higher elevation than the Subject Property. The facility is listed in the RCRA LQG and GEN MANIFEST databases. The facility is listed as a LQG of F003 (non-halogenated solvents) waste, D001 (ignitable) waste, U213 (furan, tetrahydro[I] or tetrahydrofuran) waste, and B003 (PCBs or petroleum oil or other liquid containing 500 parts per million [ppm] or greater PCBs). The facility is listed as a very small quantity generator of D002 (corrosive) waste. Waste shipped from the property includes approximately 500- pounds (lb) of D009 (mercury) waste, 556 lb of F003 (nonhalogenated solvent) waste, 3 kilograms of B003 (PCBs or petroleum oil or other liquid containing 500 ppm or greater PCBs), 3,300 lb of D001 (ignitable waste), and 1,100 lb of D001 (ignitable)/U213 (furan, tetrahydro-[I]) between 1994 and 2009. The crossgradient location and distance from the Subject Property indicates this site is not anticipated to adversely impact the Subject Property.

- *Central Village Housing Project, 302 Burt Street, Syracuse, New York,* is located 0.24 miles south and at a higher elevation than the Subject Property. The facility is listed in the UST database for one temporarily out-of-service 10,000-gal No. 2 fuel oil UST

installed in 1984. Database records show that the most recent inspection was completed on 26 July 2019 and was scheduled for its next inspection on 26 July 2020. Available documentation does not identify why the tank is currently out of service, nor does it identify the quantity of product currently in the tank. The distance and crossgradient orientation from the Subject Property indicates this site is not anticipated to adversely impact the Subject Property.

- *Onondaga County Heating/Cooling Plant, Onondaga County Steam Plant, Niagara Mohawk a National Grid Company, 601 South State Street, Syracuse, New York,* is located 0.24 miles north and at a higher elevation than the Subject Property. The facility is listed in the AST, LST, RCRA-LQG, RCRA NONGEN, and UST databases. The facility is listed in the AST database for a closed 275-gal No.1 fuel oil tank and two 150-gal No. 2 fuel oil tanks. The facility is listed in the LST database for the release of 200-300-gal of No. 6 fuel oil to the groundwater in 1988. The listing is listed as closed and groundwater cleanup was performed. The facility is listed in the UST database for three closed No. 6 fuel oil USTs (two 8,000-gal and one 20,000-gal) and two active 25,000-gal No. 2 fuel oil USTs. The volume of the spill and the proximity to the Subject Property indicates this site could have negatively impacted the Subject Property.

- *Hotel Syracuse 500 South Warren Street, Syracuse New York,* is located 0.24 miles west northwest and at the same elevation as the Subject Property. The facility is listed in the LST database under Spill No. 9810139 recorded on 11 November 1998 regarding a spill of an undisclosed amount of unknown material because of a tank failure. Caller remarks indicate the 9-gal of fuels from the leaking fuel tank was to be deposited in a recovery drum. The spill was closed on 24 April 2000. The distance and crossgradient location of the facility indicates this site is not expected to adversely impact the Subject Property.

- *1210 South State Street, Syracuse, New York,* is located 0.26 miles south and at a lower elevation than the Subject Property. The facility is listed in the FED BROWNFIELDS database. Further details are listed below.

  — The facility is listed in the FED BROWNFIELDS database under Property ID 249193, due to suspected petroleum hydrocarbon releases from two ASTs present in the basements of two buildings located on the site. Structures included two Victorian homes and a storefront. A Phase I ESA was performed in 2019 during a potential estate donation to the City of Syracuse, where staining was observed on the earthen floor around the ASTs. A fire destroyed the buildings in 2019, and the ASTs were subsequently removed by a demolition contractor. Database records identify various historical industrial and commercial activities at adjacent and nearby properties as environmental concerns for this facility as well. As of 2019, there had been no environmental investigation into the extent of petroleum hydrocarbon contamination.

  — NY Spill No. 2200433 was recorded on 6 April 2022, regarding the historic fuel oil ASTs in the basement of the buildings that were destroyed by a fire in 2019. Environmental investigations identified minor exceedances of PAHs, and the spill

incident was closed on 20 April 2022 with a note that environmental media does not meet standards and that cleanup is pending.

— Database records do not identify the extent of contamination at this property but note that remaining contamination is in exceedance of cleanup standards. The designation of remaining contamination is minor; however, and the facility's location being downgradient of the Subject Property suggest that it likely has not adversely impacted the environmental integrity of the Subject Property.

- *Hutchings Psychiatric Center, Building 11, 620 Madison Street, Syracuse, New York*, is located 0.28 miles east northeast and at a higher elevation than the Subject Property. The facility is listed in the LST database under Spill No. 9809684 recorded on 2 November 1998 regarding a spill of an undisclosed amount of unknown material that occurred from the overfilling of a storage tank. Caller notes plans to excavate contaminated soil, investigate, and take samples. The spill is listed as closed as of 31 October 2003. This site is not anticipated to impact the Subject Property.

- *S&F Automotive, 420 Oneida Street, Syracuse, New York*, is located 0.31 miles west southwest and at a lower elevation than the Subject Property. The facility is listed in the LST database under Spill No. 9207347 recorded on 24 September 1992 regarding a 50-gal spill of diesel fuel because of a tank failure. Petroleum product leaked onto the pavement and oil was swept into the storm sewer by personnel. The distance and the downgradient location of the site is not expected to adversely impact the Subject Property.

- *South Salina Street Parcels, 1081 S. Salina Street, Syracuse, New York,* is located 0.35 miles southwest and at a lower elevation than the Subject Property is listed in the BROWNFIELDS database. Information contained in the database report indicates that previously the property was used as an AST tank facility for manufactured gas generated from coal and oil. A remedial investigation (RI) was conducted to assess the nature and extent of contamination at the site. COCs identified at this property are VOCs, SVOCs, and metals. These COCs have been identified at concentrations in soil that exceed the Restricted-Residential Soil Cleanup Objectives. Groundwater concentrations of VOCs and SVOCs were observed at concentrations that exceed the NYSDEC Ambient Water Quality Standards. This facility is not expected to adversely impact the Subject Property due to its distance downgradient of the Subject Site.

- *Coyne Textile Services, 140 Cortland Avenue, Syracuse, New York,* is located 0.34 miles southwest and at a lower elevation than the Subject Property. This facility is listed in the AST, Chemical Bulk Storage, LST, BROWNFIELDS, Delisted Drycleaners, FED Drycleaners, RCRA NONGEN, ENG, and INST databases. This property has an industrial history for over 100 years, operating as a machine shop and rug manufacturer before Coyne Textile Services began operation in 1938 as an industrial dry-cleaning facility. There were several violations associated with compliance and monitoring at the facility (EPA ID NYD013250618) during its operation. Likewise, there were spills

reported during the operation of the dry-cleaning facility associated with storage of oil-soaked rags, and a small diesel fuel spill. Other spills noted were referenced to the ongoing site investigation and cleanup under NYSDEC Brownfields Cleanup Program Site No. C734144 (on-site) and C7341411A (off-site). The results of the RI indicate the primary COCs are VOCs and metals, with minor detections of emerging contaminants, PCBs, and SVOCs. No off-site soil or groundwater was collected during the RI. However, four off-site wells were sampled in 2015 for VOCs and SVOCs. These wells are located to the northwest of the site, downgradient of the Subject Property. Each of the off-site wells had contaminants that exceeded water quality standards and guidance values. Elevated indoor air and sub-slab vapor concentrations were detected on-site during the RI. No off-site indoor or sub-slab vapor samples were collected during the RI. However, the RI concluded that there is potential for impacts to indoor air from site contaminants via soil vapor intrusion in off-site buildings. This facility is not expected to adversely impact the Subject Property due to its distance downgradient.

- *Marks Hotel, Almond and East Genesee Street, Syracuse, New York,* is located 0.37 miles northeast and at a higher elevation than the Subject Property. The facility is listed in the LST database under Spill No. 0202485 recorded on 7 June 2002 regarding a spill of an undisclosed amount of diesel. Inspection noted that there was a hole in the bottom of the tank and soil was noted as being contaminated. The spill is listed as closed as of 9 September 2002. The unknown volume of the spill indicates the site could have potentially impacted the Subject Property.

- *Veterans Association Hospital, 800 Irving Street, Syracuse, New York*, is located 0.4 miles east southeast and at a higher elevation than the Subject Property. The facility is listed in the LST database under Spill No. 0402165 recorded on 27 May 2004 regarding a spill of an undisclosed amount of No. 2 fuel oil because of a tank failure. Inspection noted that the 3000-gal tank was removed and contained holes. The soil was noted as being contaminated. The spill is listed as closed as of 27 May 2004. The distance of the facility and crossgradient orientation indicates the site is not expected to adversely impact the Subject Property.

- *Mondo's Agway, 1127 South Salina Street, Syracuse, New York*, is located 0.42 miles south southwest and at a lower elevation than the Subject Property. The facility is listed in the LST database under Spill No. 8403634 recorded on 25 March 1985 regarding a 250-gal spill of gasoline because of a tank failure of which 190-gal were recovered. Well testing indicated free product in all wells on-site. Mondo's Agway hired a consultant to complete a Phase I hydrogeological study. The spill is listed as closed as of 19 November 1991. The distance and downgradient location of the facility indicates the site is not expected to adversely impact the Subject Property.

- *377 West Onondaga Street, Syracuse, New York,* is located 0.46 miles west and at a lower elevation than the Subject Property. The facility is listed in the LST database under Spill No. 9908209 recorded on 6 October 1999 regarding a spill of an unspecified amount of kerosene because of a tank failure. During a test pit excavation, two 1000-gal USTs were discovered along with approximately 100 tons of contaminated soil. The spill is listed as

closed as of 31 January 2000. The distance and downgradient location of the facility indicates the site is not expected to adversely impact the Subject Property.

- *NM – Syracuse Erie Boulevard MGP, 300 Erie Boulevard West, Syracuse, New York*, is located 0.75 miles and at a higher elevation than the Subject Property. The facility is listed in the solid waste disposal sites database. This property has a history of use as a salt mill, a saw mill, a linseed oil mill and as a tannery. The first manufactured gas plant was constructed in 1849 and operated until the 1930s. The site is currently paved over. Below the asphalt, fill material is present and ranges in thickness from 3 to 28 ft. The fill unit is underlain by a clay/silt layer, which is discontinuous and ranges in thickness from 2 to 22 ft. A sand and gravel unit is present beneath the clay/silt layer at depths ranging from 6 to 30 ft below ground surface (bgs). The water table is generally encountered at a depth of approximately 20 ft bgs at the site and flows from south to north. The site is adjacent to Onondaga Creek, which is a losing stream at this location, meaning that water flows from the creek into groundwater. Groundwater is naturally very saline, which renders it unsuitable for potable purposes Prior to remediation, the primary contaminants of concern were benzene, toluene, ethylbenzene, xylene and PAHs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. This facility is not expected to adversely impact the Subject Property due to its distance and crossgradient orientation from the Subject Property.

The remaining sites listed in the ERIS Database Report, as included on the standard environmental records sources, were evaluated and determined not to be of potential environmental concern based on various factors such as professional judgment, distance from the Subject Property, topographic relations, estimated groundwater flow, and/or regulatory status; a review of regulatory files for the sites is not deemed warranted. These sites are described in detail in the ERIS Database Report (Appendix F).

The ERIS Database Report also referenced one unplottable site, which are “records that could not be mapped due to various reasons, including limited geographic information.” Review of the information provided by ERIS determined the location not to be of potential environmental concern to the Subject Property based on various factors such as professional judgement, distance from the Subject Property, and/or regulatory status. Further review for these records is not warranted. This site is described in the ERIS Database Report (Appendix F).

A Phase II ESA was initiated at the Subject Property in March 2023 and included an Asbestos Containing Materials Inspection. The results are being compiled for inclusion in a Phase II ESA Report. These results will reveal the extent of environmental impacts at the Subject Property from adjacent and surrounding properties.

4.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

4.2.1 State Regulatory Environmental Records

Public environmental records easily available to EA via the NYSDEC online Environmental Site Database Search were reviewed as part of this Phase I ESA. No records were present for the Subject Property.

4.2.2 Fire Department

EA contacted the city of Syracuse on 14 March 2023 requesting any records on file relating to chemical or hazardous waste storage and/or releases, notices of violation or enforcement orders, or emergency responses by the city of Syracuse Fire Department at the Subject Property. To date, no response has been received and this is considered a data gap.

4.2.3 Health Department

EA contacted the New York State Department of Health on 13 March 2023. The Department of Health responded on 10 April 2023 with an extension letter for their response to the records request. On 21 April 2023 the Health Department responded and stated that no records were found for the Subject Property. A copy of their response is available in Appendix D.

4.2.4 Building Permits and Inspections

EA contacted the City of Syracuse on 14 March 2023 requesting any records on file relating to building permits. To date, no response has been received and this is considered a data gap.

4.2.5 Zoning/Land Use Records

EA obtained zoning information from the Onondaga County Planning Agency online map (Syracuse-Onondaga County Planning Agency [SOCPA] 2021). Information obtained from this resource indicated that the Subject Property is in the Residential Class B zone.

4.2.6 Property Tax Files

EA reviewed parcel and tax map information via the SOCPA Geographic Information System online map (SOCPA 2023). Information obtained from this resource is incorporated throughout this report including Parcel/Tax Map Identification, property boundaries, acreage, Owner information, property value assessments, property use, etc.

4.2.7 Recorded Land Title Records

EA was not provided with an environmental lien and AUL search by the User as part of this Phase I ESA. The environmental lien and AUL search will be conducted prior to closing. This is considered a data gap.

4.2.8 Other Records

No other records were reviewed in association with this ESA.

4.3 HISTORICAL USE INFORMATION

EA reviewed historical documentation provided by ERIS including U.S. Geologic Survey (USGS) topographic maps dating between 1895 and 2019, historical aerial imagery dating between 1938 and 2021 (provided by Agricultural Stabilization & Conservation Service, USGS, and U.S. Department of Agriculture), and Sanborn Fire Insurance Maps dating between 1892 and 1990. The Subject Property is in a mixed urban residential/commercial/industrial area. The Subject Property and surrounding properties are depicted as being highly developed, with multiple stages of redevelopment between 1892 and present day, based on available documentation.

Copies of the historical documentation provided by ERIS are included in Appendix C. Each historical topographic map, historical aerial image, and Sanborn Fire Insurance Map are summarized in Tables 4-1, 4-2, and 4-3 respectively.

4.3.1 U.S. Geological Survey Topographic Maps

Topographic maps from 1895, 1898, 1939, 1947, 1958, 1973, 1978, 2013, 2016, and 2019 were reviewed as part of this investigation. Observations made from the reviewed topographic maps are presented in Table 4-1. Copies of the reviewed topographic maps are presented in Appendix C.

Table 4-1. Historical Topographic Map Review Summary

Date	Quadrangle	Subject Property	Adjacent Properties
1895	Syracuse 15-minute	The Subject Property appears developed in the relatively flat south central portion of Syracuse.	Adjacent properties appear developed. Syracuse University Hill is to the southeast, the Onondaga Creek is to the west. and the Erie Canal runs through downtown Syracuse to the north.
1898	Syracuse 15-minute	The Subject Property appeared similar to the previously described map.	The surrounding properties appeared similar to the previously described map.
1939	Syracuse West 7.5-minute	The Subject Property appeared similar to the previously described map.	The Erie Canal no longer runs through Syracuse. There appears to be additional development on Syracuse University Hill. The map now includes major structures, including a school to the west and a hospital to the south of the Subject Property.

Table 4-1. Historical Topographic Map Review Summary

Date	Quadrangle	Subject Property	Adjacent Properties
1947	Syracuse West 7.5-minute	The Subject Property appeared similar to the previously described map.	The surrounding properties appeared similar to the previously described map.
1958	Syracuse West 7.5-minute	The Subject Property appeared similar to the previously described map.	The surrounding properties appeared similar to the previously described map.
1973	Syracuse West 7.5-minute	The Subject Property appeared similar to the previously described map.	Interstate-81 is now present, to the east of the Subject Property.
1978	Syracuse West 7.5-minute	The Subject Property appeared similar to the previously described map.	The surrounding properties appeared similar to the previously described map.
2013	Syracuse West 7.5-minute	The Subject Property appeared similar to the previously described map. The current road improvements can be observed on this map.	The surrounding properties appeared similar to the previously described map.
2016	Syracuse West 7.5-minute	The Subject Property appeared similar to the previously described map.	The surrounding properties appeared similar to the previously described map.
2019	Syracuse West 7.5-minute	The Subject Property appeared similar to the previously described map.	The surrounding properties appeared similar to the previously described map.

4.3.2 Aerial Photographs

Aerial photographs from 1938, 1951, 1956, 1966, 1972, 1981, 1995, 2006, 2008, 2009, 2011, 2013, 2015, 2017, 2019, and 2021 were reviewed as part of this investigation. Observations made from the reviewed aerial photographs are presented in Table 4-2. Copies of the aerial photographs are presented in Appendix C.

Table 4-2. Aerial Photograph Review Summary

Date	Scale	Subject Property	Adjacent Properties
1938	1 in. = 500 ft	The Subject Property appeared developed, with multiple structures present on the property.	Adjacent properties appeared densely developed, mostly by small residential house-sized structures.
1951	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	Multiple blocks to the northeast of the Subject Property were redeveloped (Pioneer Homes).
1956	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	The surrounding areas appeared similar to the previously described photograph.
1966	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	Significant clearing of the blocks to the north and northwest of the Subject Property (north of the railroad) was conducted, leaving vacant/sparsely wooded lots. Interstate-81 is now present to the east of the Subject Property.
1972	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	Many of the blocks to the north and northwest of the Subject Property that were cleared between 1956 and 1966 were redeveloped to include what appear to be large high-occupancy residential buildings.

Table 4-2. Aerial Photograph Review Summary

Date	Scale	Subject Property	Adjacent Properties
1981	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	The surrounding areas appeared similar to the previously described photograph.
1995	1 in. = 500 ft	The Subject Property has been redeveloped and includes a redesigned parking lot and sparser buildings. It appears similar to its modern-day appearance.	The properties directly south of the Subject Property were redeveloped to include the residential buildings that are currently present.
2003	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph. Grass can be seen surrounding the structures of the Subject Property.	The surrounding areas appeared similar to the previously described photograph.
2006	1 in. = 500 ft	The Subject Property appeared similar to the previously described photo.	The surrounding areas appeared similar to the previously described photograph.
2008	1 in. = 500 ft	The Subject Property appeared similar to the previously described photo.	The surrounding areas appeared similar to the previously described photograph.
2009	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	The surrounding areas appeared similar to the previously described photograph.
2011	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	The surrounding areas appeared similar to the previously described photograph.
2013	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	The surrounding areas appeared similar to the previously described photograph.
2015	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	The surrounding areas appeared similar to the previously described photograph.
2017	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	The surrounding areas appeared similar to the previously described photograph.
2019	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	New building appeared on the parcel directly southeast of the Subject Property.
2021	1 in. = 500 ft	The Subject Property appeared similar to the previously described photograph.	The surrounding areas appeared similar to the previously described photograph.

4.3.3 Fire Insurance Maps

Sanborn Fire Insurance Maps from 1892, 1910, 1951, 1953, 1961, 1968, 1971, and 1990 were reviewed as part of this investigation. Observations made from the reviewed Sanborn Fire Insurance Maps are presented in Table 4-3. Copies of the Sanborn Fire Insurance Maps are presented in Appendix C.

Table 4-3. Sanborn Fire Insurance Map Review Summary

Date	Map Sheet	Subject Property	Adjacent Properties
1892	Vol 1: 39, 40, 41, 48, 49, 50, 57, 58	The Subject Property is developed primarily with residential properties. Memorial Presbyterian Baptist Church is present at the southeastern end of the Subject Property.	Adjacent properties include residences and industrial properties. WM Crabtree Stone Works also occupies the northern portion of the block to the west. Industrial properties include a galvanized iron tank manufacturer and a drill manufacturer.

Table 4-3. Sanborn Fire Insurance Map Review Summary

Date	Map Sheet	Subject Property	Adjacent Properties
1910	Vol 1: 10, 17, 18, 25, 6, 7, 8, 9	The Memorial Presbyterian Baptist Church has been expanded to include a chapel. A junk yard is present in the western portion of the Subject Property. Syracuse Fire Department is present in the northwestern corner of the Subject Property.	The parcel to the north of the Subject Property underwent substantial development to include more residential properties and commercial properties. Numerous junk yards are present to the north of the Subject Property.
1951	Vol 1: 10, 17, 18, 6, 7, 8, 89, 9	The church and chapel were converted to a gymnasium and a club, respectively. Much of the parcel was undeveloped. The Syracuse Fire Department remained at the northwestern corner of the Subject Property along with other commercial and residential properties throughout the parcel.	Auto repair shops and hardware shops can be observed. A housing development can be observed east of the Subject Property.
