

A SECOND FORUM FOR SOUTH HILL ELEMENTARY SCHOOL FAMILIES & STAFF

Regarding Environmental Sampling Results

Over the Summer 2007, the South Hill Elementary School property was tested for the presence of volatile organic compounds (VOCs) in soil vapor, sub-slab and crawlspace air. In December 2007, additional testing was performed including classroom indoor air testing and one room was retested in March 2008. The purpose of this forum is to present the results of the December and March tests, explain what they mean, and answer questions from parents and staff. The focus of this meeting will be limited to the South Hill Elementary School.

The presentation will be made by EA Engineering, the testing company retained by the District. Representatives of the New York State Departments of Environmental Conservation and Health have been invited to attend.
