Login Number: 35818 **List Source: TestAmerica Pittsburgh**
List Number: 1
Creator: Butcher, Ryan M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False

Case Narrative

Job ID: 180-35858-1

Laboratory: TestAmerica Pittsburgh

Narrative

Job Narrative
180-35858-1

Receipt
The samples were received on 8/16/2014 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.1º C and 2.2º C.

GC/MS VOA
Method(s) 8260C: The following sample was analyzed via the methanol preserved terracore vial to bring the concentration of target analytes within the calibration range: SSHS-B43-A-SS (180-35858-13). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The recovery of surrogate 1,2-dichloroethane-d4 for the following sample was above the control limit: SSHS-B42-A-7-9 (8) (180-35858-25). As the recovery was high and there were no target compounds detected in the sample, the results were reported.

Method(s) 8260C: The laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for prep batches 115779 and 115874 recovered above the control limits for the following analytes: carbon tetrachloride, trans-1,2-dichloroethene, 1,1,1-trichloroethane, and/or 1,1,2-trichloro-1,2,2-trifluoroethane. As these analytes were biased high in the LCS and were not detected in the associated samples, the results were reported.

Method(s) 8260C: The laboratory control sample duplicate (LCSD) for prep batch 115842 recovered outside of the control limits for the following analytes: bromomethane, chloroethane, and 1,2-dibromoethane. These analytes were not detected in the associated sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8082A: The following sample was diluted due to the abundance of target analytes: SSHS-B100-0.17-2 (1.5) (180-35858-8). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The following sample was diluted to bring the concentration of iron within the linear range of the instrument: SSHS-B100-0.17-2 (1.5) (180-35858-8). Elevated reporting limits (RLs) are provided. Arsenic, nickel, lead, vanadium, and zinc were also reported from dilution due to interelement corrections associated with iron.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery exceeds the control limits

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery exceeds the control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
T	Result is a tentatively identified compound (TIC) and an estimated value.
N	Presumptive evidence of material.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD Recovery exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Laboratory: TestAmerica Pittsburgh

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date
Arkansas DEQ	State Program	6	88-0690	06-27-15
California	State Program	9	2891	03-31-15
Connecticut	State Program	1	PH-0688	09-30-14 *
Florida	NELAP	4	E871008	06-30-15
Illinois	NELAP	5	002602	06-30-15
Kansas	NELAP	7	E-10350	01-31-15
Louisiana	NELAP	6	04041	06-30-15
New Hampshire	NELAP	1	203011	04-04-15
New Jersey	NELAP	2	PA005	06-30-15
New York	NELAP	2	11182	03-31-15
North Carolina (WW/SW)	State Program	4	434	12-31-14
Pennsylvania	NELAP	3	02-00416	04-30-15
South Carolina	State Program	4	89014	04-30-15
Texas	NELAP	6	T104704528	03-31-15
US Fish & Wildlife	Federal		LE94312A-1	11-30-14
USDA	Federal		P330-10-00139	05-23-16
Utah	NELAP	8	STLP	05-31-15
Virginia	NELAP	3	460189	09-14-14 *
West Virginia DEP	State Program	3	142	01-31-15
Wisconsin	State Program	5	998027800	08-31-14 *

* Certification renewal pending - certification considered valid.

Method Summary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North

TestAmerica Job ID: 180-35858-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds (GC/MS)	SW846	TAL PIT
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL PIT
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	TAL PIT
8270D LL	Semivolatile Organic Compounds by GC/MS - Low Level	SW846	TAL PIT
8081B	Organochlorine Pesticides (GC)	SW846	TAL PIT
8081B_LL	Organochlorine Pesticides (GC)	SW846	TAL PIT
8082A	Polychlorinated Biphenyls (PCBs) (GC)	SW846	TAL PIT
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	TAL PIT
6010C	Metals (ICP)	SW846	TAL PIT
7470A	Mercury (CVAA)	SW846	TAL PIT
7471B	Mercury in Solid or Semisolid Waste (Manual Cold Vapor Technique)	SW846	TAL PIT
2540G	SM 2540G	SM22	TAL PIT
9014	Cyanide	SW846	TAL PIT

Client: Geosyntec Consultants, Inc.

Job Number: 180-35858-1

Login Number: 35858

List Source: TestAmerica Pittsburgh

List Number: 1

Creator: Neri, Tom

Question	**Answer**	**Comment**
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Job ID: 180-36053-1

Laboratory: TestAmerica Pittsburgh

Narrative

Job Narrative
180-36053-1

Receipt

The samples were received on 8/23/2014 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.6º C, 4.0º C, 4.3º C and 4.7º C.

GC/MS VOA

Method(s) 8260C: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-8 (180-36053-1) and MW-30 (180-36053-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015D: Surrogate recovery for the following sample was below the control limits: MW-30 (180-36053-4). The sample was re-extracted two days past the seven day holding time and re-analyzed. Both sets of data were reported.

Method 8082A: The following sample was diluted to bring the concentration of target analytes within the calibration range: MW-41 (180-36053-11). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North

TestAmerica Job ID: 180-36053-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery exceeds the control limits

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

List Source: TestAmerica Pittsburgh

List Number: 1

Creator: Watson, Debbie

Question	**Answer**	**Comment**
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
180-36613-1

Receipt
The samples were received on 9/12/2014 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.9º C.

The VOA vials for sample SSHS-LW contained air bubbles greater than 6 mm in diameter.

GC/MS VOA
Method(s) 8260C: The following sample was diluted to bring the concentration of target analytes within the calibration range: SSHS-LW (180-36613-2). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The laboratory control sample (LCS) for analysis batch 119118 recovered slightly below the control limits for 1,2,3-trichlorobenzene.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: Internal standard response of perylene-d12 was above criteria for the following sample: SSHS-SW (180-36613-1). No target compounds were quantitated using this internal standard.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8082A: The following sample was diluted to bring the concentration of target analytes within the calibration range: SSHS-SW (180-36613-1). Elevated reporting limits (RLs) are provided.

Method(s) 8082A: The following sample was diluted to bring the concentration of target analytes within the calibration range: SSHS-LW (180-36613-2). Elevated reporting limits (RLs) are provided. The recovery of surrogate decachlorobiphenyl was below the control limits on one column.

Method(s) 8151A: The following sample was diluted due to the nature of the sample matrix : SSHS-LW (180-36613-2). Elevated reporting limits (RLs) are provided.

Method(s) 8081B_LL: The following sample was diluted due to the nature of the sample matrix: SSHS-LW (180-36613-2). Elevated reporting limits (RLs) are provided.

Method(s) 8081B_LL: The RPD between the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 117967 was above the control limits for the following analytes: b-BHC, endosulfan sulfate, endrin aldehyde, endrin ketone, and g-BHC. The recovery of endrin aldehyde was also above the control limits in the LCSD, but was not detected in sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery exceeds the control limits
X	Surrogate is outside control limits
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
*	LCS or LCSD exceeds the control limits

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)

180-36613 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ Return to Client ☐ Disposal by Lab ☐ Archive for________ Months

Special Instructions/QC Requirements & Comments:
Bubble in 40ml glass voas

Subject: **Stage 4 Data Validation - Level IV Data Deliverable – Volatile Organic Compounds by EPA Methods 8260C and 5035/8260C, Semivolatile Organic Compounds by EPA Methods 3541/8270D, Polychlorinated Biphenyls by EPA Methods 3510C/8082A and 3541/8082A, Metals by EPA Methods 3050B/6010C, Mercury by EPA Method 7471B and Percent Moisture/Solids by Standard Method 2540G– TestAmerica Work Order Numbers 180-35053-1, Revision 1 and 180-35053-2, Revision 1**

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 4 data validation of forty-one solid samples, two matrix spike/matrix spike duplicate (MS/MSD) pairs, four field duplicate samples and one equipment blank, collected on July 21, 2014, as part of the Former Sperry Remington Site-North sampling event. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- EPA Methods 8260C and 5030B/8260C - Volatile Organic Compounds (VOCs) and Tentatively Identified Compounds (TICs)
- EPA Methods 3541/8270D - Semivolatile Organic Compounds (SVOCs) and TICs
- EPA Methods 3510C/8082A and 3541/8082A - Polychlorinated Biphenyls (PCBs)
- EPA Methods 3050B/6010C – Metals
- EPA Method 7471B – Mercury
  Standard Method 2540G - Percent Moisture/Solids

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 4 data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exceptions. Qualified data should be used within the limitations of the qualification.

The average relative response factors (RRFs) in the initial calibrations for 1,4-dioxane, analyzed by EPA method 8260C, were 0.0022 and 0.0024, below the method criteria of 0.0100 and also below the validation criteria of 0.0050. Therefore, the undetected values of 1,4-dioxane in the associated samples were R qualified as rejected

The organic data were reviewed based on the Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP), Former Sperry Remington Site-North Portion, 777 South Main Street, City of Elmira, Chemung County, NY, NYSDEC Project 808022, Geosyntec Project Number MN0832, July 2014, Agency Review Draft, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008 (USEPA-540-R-08-01), as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The inorganic data were reviewed based on the QAPP/FSP, USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, OSWER 9240.1-51, EPA 540-R-10-011, January 2010, as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The following sample was analyzed and validated at a Stage 4 level in the data set:

Laboratory ID	**Client ID**

180-35053-42	SSHS-FB7-C-SUB-1-2
180-35053-43	SSHS-FB7-C-SUB-2-3
180-35053-44	SSHS-FB7-DUP4
180-35053-45	SSHS-FB7-DUP2
180-35053-46	SSHS-FB7-DUP3

The samples were received at the laboratory at 0.6°C, within the QAPP criteria of <6°C. No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the chain of custody (COC). The proper procedure of a single strike-through correction and initials and date of the person making the correction was not followed.

No times of collection were listed on the COC for the field duplicate samples. The laboratory assigned the collection times of 00:00.

It was noted that the sample IDs in the electronic data deliverable (EDD) included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC.

The solids data, used to report the samples on a dry weight bases, were not validated.

TICs were reported with the VOC and SVOC data. As there is no validation guidance for TICs, the TIC data were not validated. In addition, a request was made by the client to reextract/reanalyze sample SSHS-FB7-D-SUB-2-3 to confirm the original sample PCB results. The report with the results of this reextraction/reanalysis was identified as 180-352053-2 Revision 1; the data in this report was not validated.

The laboratory revised the PCB results; the sample and standard chromatographic peaks for the PCBs were re-integrated in a more consistent manner. The revised report was identified as 180-35053-1, Revision 1.

1.0 VOLATILE ORGANIC COMPOUNDS

Fifteen solid samples, one MS/MSD pair, one equipment blank and one field duplicate were analyzed for VOCs per EPA Methods 8260C and 5030B/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times

✓ Laboratory Control Sample
✓ Surrogates
⊗ Equipment Blank
⊗ Field Duplicate
✓ Internal Standards
✓ Target Compound Identifications
✓ Target Compound Quantitations
✓ Sensitivity
⊗ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered to be usable for meeting project objectives, with the following exception. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 98.1%. The average RRFs for 1,4-dioxane were 0.0022 and 0.0024, below the method criteria of 0.0100 and also below the validation criteria of 0.0050. Therefore, the undetected values of 1,4-dioxane in the associated samples were R qualified as rejected.

1.2 Holding Times

The holding times for a solid sample are 48 hours from collection to extraction and 14 days from collection to analysis. The holding time for a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Instrument Performance Check

An instrument performance check sample (tune standard) was analyzed at the beginning of each 12-hour period during sample analysis. The samples were analyzed within the 12-hour period. All ion abundance criteria were met for bromofluorobenzene (BFB).

1.4 Initial Calibration

Appropriate initial calibrations were performed for each analyte. Based on the method of calibration, the laboratory calculated percent relative standard deviation (%RSD) of the RRFs. For the target analytes, the average RRFs and the %RSDs were within the method and validation criteria for the target compounds or the coefficient of determination (r^2) was greater than or equal to 0.990 for the curve fit calibrations. The minimum average RRFs for compounds were above the method and/or the validation criteria, with the following exceptions.

The average RRF for 1,4-dioxane was 0.0022, below the method criteria of 0.0100 and also below the validation criteria of 0.0050 in the initial calibration associated with the soil samples. Therefore, the undetected values of 1,4-dioxane in the associated soil samples were R qualified as rejected.

The average RRF for 1,4-dioxane was 0.0024, below the method criteria of 0.0100 and also below the validation criteria of 0.0050 in the initial calibration associated with the water sample. Therefore, the undetected values of 1,4-dioxane in the associated sample (the equipment blank) was R qualified as rejected.

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	Validation Concentration (µg/kg)	Validation Qualifier*	Reason Code**
SSHS-FB5-A-SS	1,4-Dioxane	320	U	320	R	9
SSHS-FB5-A-SUB-1.5	1,4-Dioxane	320	U	320	R	9
SSHS-FB5-A-SUB-2.5	1,4-Dioxane	230	U	230	R	9
SSHS-FB5-B-SS	1,4-Dioxane	370	U	370	R	9
SSHS-FB5-B-SUB-1.5	1,4-Dioxane	260	U	260	R	9
SSHS-FB5-B-SUB-2.5	1,4-Dioxane	240	U	240	R	9
SSHS-FB5-C-SS	1,4-Dioxane	420	U	420	R	9
SSHS-FB5-C-SUB-1.5	1,4-Dioxane	310	U	310	R	9
SSHS-FB5-C-	1,4-Dioxane	450	U	450	R	9

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	Validation Concentration (µg/kg)	Validation Qualifier*	Reason Code**
SUB-2.5						
SSHS-FB5-D-SS	1,4-Dioxane	330	U	330	R	9
SSHS-FB5-D-SUB-1.5	1,4-Dioxane	200	U	200	R	9
SSHS-FB5-D-SUB-2.5	1,4-Dioxane	340	U	340	R	9
SSHS-FB5-DUP1	1,4-Dioxane	480	U	480	R	9
SSHS-FB5-E-SS	1,4-Dioxane	310	U	310	R	9
SSHS-FB5-E-SUB-1.5	1,4-Dioxane	280	U	280	R	9
SSHS-FB5-E-SUB-2.5	1,4-Dioxane	250	U	250	R	9

µg/kg-microgram per kilogram
U-not detected at the reported method detection limit (MDL)
*Validation qualifiers are defined in Attachment 1 at the end of this report
**EDD reason codes are defined in Attachment 2 at the end of this report

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
EB-20140721	1,4-Dioxane	34	U	34	R	9

µg/L-microgram per liter
U-not detected at the reported MDL

1.5 Continuing Calibration Verification (CCV)

For the target analytes, the CCVs were performed at the required frequency. The percent difference or percent drift (%D) between the RRFs in the initial and continuing calibration standards for the target analytes were within the method acceptance criteria of less than or equal to 20% and/or the validation criteria of 40% for poor performing compounds and 25% for the other compounds, with the following exceptions.

The %Ds for bromomethane (31.1%) and 1,2-Trichloro-1,2,2-trifluoroethane (33.2%) were outside the method and validation criteria in the CCV analyzed with sample SSHS-FB5-E-SUB-2.5, both with high biases. However, since these two compounds were not detected in the associated sample, no qualifications were applied to the data.

1.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 112281, 112413 and 112620). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.7 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). A sample set specific MS/MSD pair, using sample SSHS-FB5-A-SUB-1.5, was reported. The MS/MSD pair had recovery and relative percent difference (RPD) results within the QAPP and laboratory specified acceptance criteria, with the following exceptions.

One or both of the recoveries and/or the RPDs for the following compounds were high and outside the laboratory specified acceptance criteria: carbon disulfide, chlorodibromomethane, o-xylene, PCE, toluene, tetrachloroethene, trans-1,3-dichloropropene and 1,1,2-trichloroethane. Since these compounds were not detected in sample SSHS-FB5-A-SUB-1.5, no qualifications were applied to the data. In addition, the MS recovery of styrene was low and outside the laboratory specified acceptance criteria. Therefore, the undetected value of styrene in sample SSHS-FB5-A-SUB-1.5 was UJ qualified as estimated less than the MDL.

Sample ID	**Compound**	**Laboratory Concentration (µg/kg)**	**Laboratory Flag**	**Validation Concentration (µg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-FB5-A-SUB-1.5	Styrene	0.83	U	0.83	UJ	4

µg/kg-microgram per kilogram
U-not detected at the reported MDL

1.8 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were reported. The results for the LCS were within the QAPP and laboratory specified acceptance criteria for recovery, with the following exception.

The recovery of trans-1,3-dichloropropene was high and outside the laboratory specified acceptance criteria in batch 112620. Since trans-1,3-dichloropropene was not detected in the associated sample, no qualifications were applied to the data.

It was noted that 1,4-dioxane was spiked into the soil LCSs and 1,4-dioxane and methyl acetate were spiked into the water LCS, but the recovery results were not reported. The spike concentrations were sent by the laboratory to the data validator and based on the recoveries calculated by the data validator, the recoveries were within the laboratory specified acceptance criteria.

1.9 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses, with the following exception.

The recovery of toluene-d8 in sample SSHS-FB5-B-SUB-1.5 was high and outside the laboratory specified acceptance criteria. Since the other three surrogate recoveries were acceptable, no qualifications were applied to sample SSHS-FB5-B-SUB-1.5, based on professional and technical judgment.

1.10 Equipment Blank

An equipment blank, EB-20140721, was collected with the sample set. VOCs were not detected in the equipment blank above the MDLs, with the following exceptions.

Acetone and methylene chloride were detected in the equipment blank at estimated concentrations greater than the MDLs and less than the reporting limits (RLs). Therefore, the estimated acetone and methylene chloride concentrations in the associated samples were U qualified as not detected at the RLs.

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	Validation Concentration (µg/kg)	Validation Qualifier	Reason Code
SSHS-FB5-B-SUB-1.5	Acetone	6.6	J	19	U	3
EB-20140721	Methylene Chloride	0.38	J	1.0	U	3
SSHS-FB5-B-SS	Methylene Chloride	3.1	J	6.8	U	3
SSHS-FB5-B-SUB-1.5	Methylene Chloride	0.70	J	4.7	U	3
SSHS-FB5-C-SS	Methylene Chloride	6.0	J	7.5	U	3

µg/kg-microgram per kilogram
U-not detected at the reported MDL

1.11 Field Duplicate

One field duplicate sample, SSHS-FB5-DUP1, was collected with the sample set. Acceptable precision (RPD ≤50%) was demonstrated between the field duplicate and the original sample, SSHS-FB5-E-SUB-2.5, with the following exception.

Carbon disulfide was detected in the original sample at an estimated concentration and not detected in the field duplicate, resulting in a noncalculable RPD between the results. Therefore, the detected concentration was J qualified as estimated and the undetected value was UJ qualified as estimated less than the MDL.

Sample ID	**Compound**	**Laboratory Concentration (µg/kg)**	**Laboratory Flag**	**RPD**	**Validation Concentration (µg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-FB5-DUP1	Carbon disulfide	0.88	U	NC	0.88	UJ	7
SSHS-FB5-E-SUB-2.5	Carbon disulfide	1.6	J		1.6	J	7
SSHS-FB5-DUP1	Trichloroethene	5.2	J	NC	NA	NA	NA
SSHS-FB5-E-SUB-2.5	Trichloroethene	1.5	J		NA	NA	NA
SSHS-FB5-DUP1	The other VOCs	ND	NA	0	NA	NA	NA
SSHS-FB5-E-SUB-2.5	The other VOCs	ND	NA		NA	NA	NA

µg/kg-microgram per kilogram
U-not detected at the reported MDL
J-estimated concentration less than the RL and greater than the MDL
ND-not detected at the MDL
NA-not applicable
NC-not calculable

1.12 Internal Standards

The internal standard areas and retention times were within method limits.

1.13 Target Compound Identifications

The target compound identifications were within the validation criteria.

1.14 Target Compound Quantitation

The compound quantitations were within the validation criteria.

1.15 Sensitivity

The samples were reported to the MDLs. Elevated MDLs and RLs were reported for the samples due to the solids content of the samples; the samples were reported on a dry weight basis.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP. It was noted that total 1,2-dichloroethene and total xylenes were not reported by the laboratory, but the summation of cis- and trans-1,2-dichloroethene and o- and m-&p-xylene were within the QAPP criteria. In addition, 1,4-dioxane and 1,2,3-trichlorobenzene were reported by the laboratory, but not listed in Table C.1 in the QAPP.

1.16 Electronic Data Deliverable (EDD) Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated Level IV report at a minimum of 20%. It was noted that the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the Level IV report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

One solid sample was analyzed for SVOCs per EPA Methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

2.2 Holding Times

The holding times for SVOC analysis of a solid sample are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Instrument Performance Check

An instrument performance check sample (tune standard) was analyzed at the beginning of each 12-hour period during sample analysis. The samples were analyzed within the 12-hour period. All ion abundance criteria were met for decafluorotriphenylphosphine (DFTPP).

Method 8270D describes the analysis of a standard to assess the gas chromatography (GC) column performance and injection port inertness; analyses of the standard resulted in acceptable results.

2.4 Initial Calibration

Appropriate initial calibrations were performed for each analyte. Based on the method of calibration, the laboratory calculated the %RSDs of the RRFs. For the target analytes, the average RRFs were within the method (20% RSD), and/or validation (20% RSD for compounds not considered poor responders, 40% for poor responders) criteria for the compounds or the coefficient of determination (r^2) was greater than or equal to 0.990 for the curve fit calibrations. The minimum average RRFs for the compounds were above the method criteria.

2.5 Continuing Calibration Verification

For the target analytes, the CCV was performed at the required frequency. The CCV RRFs met the method and validation criteria. The %Ds between the RRFs in the initial and continuing calibration standards for the target analytes were within the method acceptance criteria of less than or equal to 20%D and the validation criteria of 40%D for poor performing compounds and 25% D for the compounds.

2.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 112566). SVOCs were not detected in the method blank above the MDLs.

2.7 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

2.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The results for the LCS were within the laboratory and QAPP specified acceptance criteria for recovery.

2.9 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

2.10 Equipment Blank

One equipment blank, EB-20140722, was collected with the samples, but not analyzed for SVOCs.

2.11 Field Duplicate

Field duplicate samples were collected with the sample set but not analyzed for SVOCs.

2.12 Internal Standards

The internal standard areas and retention times were within the method acceptance limits.

2.13 Target Compound Identifications

The target compound identifications were within the validation criteria.

2.14 Compound Quantitation

The compound quantitations were within the validation criteria.

2.15 Sensitivity

The sample was reported to the MDLs. The sample was analyzed at a 1:2 dilution due to the concentrations of the target analytes.

The MDLs and RLs reported were 1/10 of those listed in Table C.1 in the QAPP. In addition, 1,2.4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol were reported by the laboratory, but not listed in Table C.1 in the QAPP.

2.16 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated Level IV report at a minimum of 20%. It was noted that the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the Level IV report and the EDD.

3.0 POLYCHLORINATED BIPHENYLS

Twenty-four solid samples, one MS/MSD pair, three field duplicate samples and one equipment blank were analyzed for PCBs per EPA Methods 3510C/8084 and 3541/8084.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Time

✓ Field Duplicate

⊗ Target Compound Identification
⊗ Compound Quantitation
✓ Sensitivity
⊗ Electronic Data Deliverable Review

3.1 Overall Assessment

The PCB (Aroclor) data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

3.2 Holding Times

The holding times for PCB analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for PCB analysis of waters are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Initial Calibration

Initial calibration of the target compounds was performed as required by the method. The %RSDs were less than or equal to 20% or the coefficient of determination (r^2) was greater than or equal to 0.990 for the curve fit calibrations.

3.4 Continuing Calibration Verification

Continuing calibration was performed at the required frequency. The %Ds between the calibration factors in initial and continuing standard mixtures were within the method 20%D criteria.

3.5 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 112360, 112578 and 112684). PCBs were not detected in the method blanks above the MDLs.

3.6 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). One sample set specific MS/MSD pair, using sample SSHS-FB7-D-SUB-1-2, was reported. The MS/MSD pair had high recovery results, outside the QAPP and laboratory specified acceptance criteria; the RPD results were acceptable. The recoveries of the spiked PCBs, 1016 and 1260, were high due to the concentrations of PCBs 1248 and 1254 in sample SSHS-FB7-D-SUB-1-2; the peaks used to quantitate PCBs 1016 and 1248 are the same, as are the peaks in PCBs 1260 and 1254. Therefore, based on professional and technical judgment, no qualifications were applied to the data.

3.7 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were analyzed. The results for the LCSs were within the QAPP and laboratory specified acceptance criteria for recovery.

3.8 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria, with some exceptions due to the dilution of the samples. No qualifications were applied to the sample data with recoveries outside the laboratory specified acceptance criteria due to the dilutions, based on professional and technical judgment.

3.9 Equipment Blank

One equipment blank, EB-20140721, was collected with the samples. PCBs were not detected in the equipment blank above the MDLs.

3.10 Field Duplicate

Three field duplicate samples, SSHS-FB7-DUP2 and SSHS-FB7-DUP3 and SSHS-FB7-DUP4, were collected with the sample set. Acceptable precision (RPD <50%) was demonstrated between the field duplicates and the original samples, SSHS-FB7-B-SUB-2-3, SSHS-FB7-E-SUB-0.17-1 and SSHS-FB7-C-SUB-0.17-1, respectively.

3.11 Target Compound Identifications

The report narrative stated that the samples appear to contain a mixture of PCBs 1248, 1254, and/or 1262; however, due to weathering or other environmental processes, the PCBs in the samples did not closely match the laboratory's PCB standards used for calibration. The samples were quantified and reported as containing two to three PCBs. Due to the poor match with the PCBs, there is increased qualitative and quantitative uncertainties associated with those results. No qualifications were applied to the data based on the target compound identification (qualitative) uncertainty noted by the laboratory and the data validator. However, the uncertainty noted due to mixtures of PCBs and the differences in the PCB peak ratios observed in the soil samples should be taken into consideration by the data users. Based on the presence of two or three PCBs in the samples, the results were J qualified as estimated, as noted in section 3.12, below.

3.12 Compound Quantitation

As noted above, the report narrative indicated there were both qualitative and quantitative uncertainties associated with the sample results. There are peaks in PCBs 1248 and 1254 that are shared by both PCBs and peaks in 1254 and 1262 that are shared by both PCBs; therefore, there is contribution from the PCBs to each other when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the detected concentrations of PCBs 1248, 1254 and 1262 in the samples were J qualified as estimated, based on professional and technical judgment.

In addition, the concentrations of PCB 1248 in samples SSHS-B32-A-SS, SSHS-FB7-D-SUB-1-2, SSHS-FB7-D-SUB-2-3, SSHS-FB7-A-SUB-1-2, SSHS-FB7-B-SUB-2-3, SSHS-FB7-E-SUB-0.17-1, SSHS-FB7-E-SUB-1-2, SSHS-FB7-E-SUB-2-3, SSHS-FB7-C-SUB-2-3 and SSHS-FB7-DUP2 and PCBs 1248 and 1254 in samples SSHS-FB7-A-SUB-2-3, SSHS-FB7-C-SUB-0.17-1, SSHS-FB7-C-SUB-1-2 and SSHS-FB7-DUP4 were over the instrument calibration range. Since these concentrations were J qualified as estimated due to the combination of PCBs detected in the samples, no additional qualifications were applied to the data.

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	Validation Concentration (µg/kg)	Validation Qualifier	Reason Code
SSHS-B32-A-SS	PCB-1248	550	NA	550	J	13

µg/kg-microgram per kilogram
NA-not applicable

3.13 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported due to the dilutions analyzed.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP. It was noted that total PCBs were listed in Table C.1 in the QAPP, but not reported by the laboratory.

3.14 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated Level IV report at a minimum of 20%. It was noted that the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the Level IV report and the EDD.

4.0 METALS

One solid sample was analyzed for metals per EPA Methods 3050B/6010C (Mercury evaluated separately in Section 5.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

4.1 Overall Assessment

The metals data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

4.2 Holding Times

The holding time for metals analysis of solids is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Initial Calibration

The initial calibration requirements were met for the inductively coupled plasma-atomic emission spectrometer (ICP-AES).

The reporting limit standards were within the method specified acceptance criteria.

The interference check standards (ICSA and ICSAB) met the method specified acceptance criteria.

4.4 Initial and Continuing Calibration Verifications (ICV and CCV)

The percent recoveries in the associated ICVs and CCVs were within the method specified acceptance criteria.

4.5 Initial and Continuing Calibration Blanks (ICB and CCB)

The ICBs and CCBs met the specified acceptance criteria. There were estimated concentrations of magnesium, manganese, potassium, silver and thallium in the bracketing CCBs, greater than the MDLs and less than the RLs. Since the concentrations of these metals in the associated samples were greater than the RLs or not detected, no qualifications were applied to the data.

4.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 112478). Metals were not detected in the method blank above the MDLs, with the following exceptions.

Calcium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs. Since calcium and zinc were detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the data.

4.7 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). A sample set specific MS/MSD pair, using sample SSHS-SS14-A-SS, was reported. The recovery and RPD results were within the QAPP and laboratory specified acceptance criteria, with the following exceptions.

One or both of the recoveries of calcium and antimony were low and outside the QAPP laboratory specified acceptance criteria. In addition, a post digestion spike (PDS) was also analyzed and had recovery results within the laboratory specified acceptance criteria. Therefore, the concentration of calcium was J qualified as estimated and the undetected value of antimony in sample SSHS-SS14-A-SS was UJ qualified as estimated less than the MDL.

It was noted that the recovery criteria for aluminum, iron and manganese were not applicable since the concentrations of these three metals in sample SSHS-SS14-A-SS were greater than four times the spike concentrations. No qualifications were applied to the data.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualification	Reason Code
SSHS-SS14-A-SS	Antimony	0.21	U	0.21	UJ	4
SSHS-SS14-A-SS	Calcium	4500	NA	4500	J	4

mg/kg-milligram per kilogram
U-not detected at the reported MDL
NA-not applicable

4.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was analyzed. The results for the LCS were within the QAPP and laboratory specified acceptance criteria for recovery.

4.9 Serial Dilution

A serial dilution, using sample SSHS-SS14-A-SS, was reported. The percent difference results were within the laboratory specified acceptance criteria.

4.10 Equipment Blank

One equipment blank, EB-20140722, was collected with the samples, but not analyzed for metals.

4.11 Field Duplicate

Field duplicate samples were collected with the sample set but not analyzed for metals.

4.12 Compound Quantitations

The compound quantitations were within the validation criteria.

4.13 Sensitivity

The samples were reported to the MDLs. Elevated MDLs and RLs were reported for the sample due to the solids content of the sample; the sample was reported on a dry weight basis.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP.

4.14 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated Level IV report at a minimum of 20%. It was noted that the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the Level IV report and the EDD.

5.0 MERCURY

One solid sample was analyzed for mercury per EPA Method 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

5.1 Overall Assessment

The mercury data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

5.2 Holding Times

The holding time for mercury analysis of solids is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Initial Calibration

The initial calibration requirements were met. The coefficient of determination (r^2) was greater than or equal to 0.990 for the linear calibration.

The reporting limit standard was within the laboratory specified acceptance criteria.

5.4 Initial and Continuing Calibration Verifications

The percent recoveries in the associated ICVs and CCVs were within the method specified acceptance criteria.

5.5 Initial and Continuing Calibration Blanks

The ICBs and CCBs met the method specified acceptance criteria.

5.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 112471). Mercury was not detected in the method blank above the MDL.

5.7 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

5.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was analyzed. The result for the was within the QAPP and laboratory specified acceptance criteria for recovery.

5.9 Equipment Blank

One equipment blank, EB-20140722, was collected with the samples, but not analyzed for mercury.

5.10 Field Duplicate

Field duplicate samples were collected with the sample set but not analyzed for mercury.

5.11 Compound Quantitations

The compound quantitations were within the validation criteria.

5.12 Sensitivity

The sample was reported to the MDL. Elevated MDL and RL were reported for the sample due to the solids content of the sample; the sample was reported on a dry weight basis.

The MDL and RL were the same as those listed in Table C.1 in the QAPP.

5.13 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated Level IV report at a minimum of 20%. It was noted that the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the Level IV report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Memorandum

Date:	12 September 2014
To:	Aron Krasnopler
From:	Mary Tyler
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level IV Data Deliverable –Semivolatile Organic Compounds by EPA Methods 3520C/8270D and 3541/8270D, Polychlorinated Biphenyls by EPA Methods 3510C/8082A and 3541/8082A and Percent Moisture/Solids by Standard Method 2540G– TestAmerica Work Order Number 180-35079-1, Revision 2**

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of thirty-seven solid samples, three matrix spike/matrix spike duplicate (MS/MSD) pairs, four field duplicate samples and one equipment blank, collected on July 22, 2014, as part of the Former Sperry Remington Site-North sampling event. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- EPA Methods 3520C/8270D and 3541/8270D - Semivolatile Organic Compounds (SVOCs) and Tentatively Identified Compounds (TICs)
- EPA Methods 3510C/8082A and 3541/8082A - Polychlorinated Biphenyls (PCBs)
- Standard Method 2540G - Percent Moisture/Solids

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exceptions.

Due to laboratory control sample/laboratory control sample duplicate (LCS/LCSD) recoveries less than 20% and technical and professional judgment, the undetected values of benzaldehyde in the soil samples were R qualified as rejected.

Qualified data should be used within the limitations of the qualification.

The organic data were reviewed based on the Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP), Former Sperry Remington Site-North Portion, 777 South Main Street, City of Elmira, Chemung County, NY, NYSDEC Project 808022, Geosyntec Project Number MN0832, July 2014, Agency Review Draft, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008 (USEPA-540-R-08-01), as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The following sample was analyzed and validated at a Stage 2A level in the data set:

Laboratory ID	Client ID
180-35079-1	SSHS-FB6-A-SS
180-35079-2	SSHS-SS16-SS
180-35079-3	SSHS-SS12-B-SS

180-35079-38	SSHS-SS15-SS
180-35079-39	SSHS-DUP5
180-35079-40	SSHS-SS12-DUP6
180-35079-41	SSHS-DUP7
180-35079-42	SSHS-B15-DUP8

The samples were received at the laboratory at 1.6°C and 2.1°C, within the QAPP criteria of <6°C. No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the chain of custody (COC). The proper procedure of a single strike-through correction and initials and date of the person making the correction was not followed.

No times of collection were listed on the chain of custody (COC) for the field duplicate samples. The laboratory assigned the collection times of 00:00.

It was noted that the sample IDs in the electronic data deliverable (EDD) included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC.

The solids data, used to report the samples on a dry weight bases, were not validated.

TICs were reported with the SVOC data. As there is no validation guidance for TICs, the TIC data were not validated.

The laboratory revised the sample ID for SSHS-B1S-A-SS; the revised report was identified as 180-35079-1, Revision 1. The laboratory revised the PCB results; the sample and standard chromatographic peaks for the PCBs were re-integrated in a more consistent manner. The revised report was identified as 180-35079-1, Revision 2.

1.0 SEMIVOLATILE ORGANIC COMPOUNDS

Three solid samples, one field duplicate sample and one equipment blank were analyzed for SVOCs per EPA Methods 3520C/8270D and 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment

⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Equipment Blank
✓ Field Duplicate
⊗ Sensitivity

- ✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The SVOC data reported in this package are considered to be usable for meeting project objectives, with the following exceptions. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 98.8%. Due to LCS/LCSD recoveries less than 20% and technical and professional judgment, the undetected values of benzaldehyde in the soil samples were R qualified as rejected.

1.2 Holding Times

The holding times for SVOC analysis of a solid sample are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for SVOC analysis of a water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

1.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported with the data (batches 112566 and 112437). SVOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS and one LCS/LCS duplicate (LCSD) pair were reported. The results for the LCS and LCS/LCSD pair were within the QAPP and laboratory specified acceptance criteria for recovery and relative percent difference (RPD), with the following exception.

The recoveries of benzaldehyde were low (6%/6%, limits 30-150%) and outside the QAPP and laboratory specified acceptance criteria in the LCS/LCSD pair associated with the soil samples.

Therefore, due to LCS/LCSD recoveries less than 20% and technical and professional judgment, the undetected values of benzaldehyde in the soil samples were R qualified as rejected.

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	Validation Concentration (µg/kg)	Validation Qualifier*	Reason Code**
SSHS-DUP5	Benzaldehyde	6.6	U	6.6	R	5
SSHS-FB10-A-SS	Benzaldehyde	6.4	U	6.4	R	5
SSHS-FB6-A-SS	Benzaldehyde	6.4	U	6.4	R	5
SSHS-FB9-A-SS	Benzaldehyde	6.5	U	6.5	R	5

µg/kg-microgram per kilogram
U-not detected at the reported MDL
*Validation qualifiers are defined in Attachment 1 at the end of this report
**EDD reason codes are defined in Attachment 2 at the end of this report

1.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

1.7 Equipment Blank

One equipment blank, EB-20140722, was collected with the samples. SVOCs were not detected in the equipment blank above the method detection limits (MDLs).

1.8 Field Duplicate

Field duplicate samples were collected with the sample set but not analyzed for SVOCs.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated MDLs and reporting limits (RLs) were reported for the samples due to the solids content of the samples; the samples were reported on a dry weight basis.

The MDLs and RLs reported were 1/10 of those listed in Table C.1 in the QAPP. In addition, 1,2.4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol were reported by the laboratory, but not listed in Table C.1 in the QAPP.

1.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated Level IV report at a minimum of 20% as part of the data validation process, It was noted that the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the Level IV report and the EDD.

2.0 POLYCHLORINATED BIPHENYLS

Thirty-seven solid samples, three MS/MSD pairs, four field duplicate samples and one equipment blank were analyzed for PCBs per EPA Methods 3510C/8082A and 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

2.1 Overall Assessment

The PCB data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

The report narrative indicated there were both qualitative and quantitative uncertainties associated with the sample results. There are peaks in PCBs 1248 and 1254 that are shared by both of these PCBs and peaks in 1254 and 1262 that are shared by both of these PCBs; therefore, there is contribution from the PCBs to each other when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the detected concentrations of PCBs 1248, 1254 and 1262 in the samples were J qualified as estimated, based on professional and technical judgment.

2.2 Holding Times

The holding times for PCB analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for PCB analysis of waters are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four method blanks were reported with the data (batches 112444, 112574, 112655 and 112684). PCBs were not detected in the method blanks above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). Three sample set specific MS/MSD pairs, using samples SSHS-FB1-A-SS, SSHS-SS12-C-2-3 and SSHS-FB2-A-SS, were reported. The

MS/MSD pairs had high recovery results, outside the laboratory specified acceptance criteria; the RPD results were acceptable. The recoveries of the spiked PCBs, 1016 and 1260, were high due to the concentrations of PCBs 1248 and 1254 in sample SSHS-FB7-D-SUB-1-2; the peaks used to quantitate PCBs 1016 and 1248 are the same, as are the peaks in PCBs 1260 and 1254. Therefore, based on professional and technical judgment, no qualifications were applied to the data.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs and one LCS/LCSD pair were reported. The results for the LCSs and LCS/LCSD pair were within the QAPP and laboratory specified acceptance criteria for recovery and RPD.

2.6 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria, with some exceptions due to the dilution of the samples. Therefore, no qualifications were applied to the data based on professional and technical judgment.

2.7 Equipment Blank

One equipment blank, EB-20140722, was collected with the samples. PCBs were not detected in the equipment blank above the MDLs.

2.8 Field Duplicate

Four field duplicate samples, SSHS-DUP5, SSHS-SS12-DUP6, SSHS-DUP7 and SSHS-B15-DUP8, were collected with the sample set. Acceptable precision (RPD <50%) was demonstrated between the field duplicates and the original samples, SSHS-FB6-A-SS, SSHS-SS12-A-1-2, SSHS-BS1-A-SS and SSHS-B15-B-2-3, respectively.

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	RPD	Validation Concentration (µg/kg)	Validation Qualifier	Reason Code

2.9 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported due to the dilutions analyzed.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP. It was noted that total PCBs were listed in Table C.1 in the QAPP, but not reported by the laboratory

2.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated Level IV report at a minimum of 20% as part of the data validation process. It was noted that the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the Level IV report and the EDD.

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

Subject: **Stage 2A Data Validation - Level II Data Deliverable – Volatile Organic Compounds by EPA Methods 5030C/8260C and 5035/8260C, Semivolatile Organic Compounds by EPA Methods 3520C/8270D and 3541/8270D, Organochlorine Pesticides by EPA Methods 3510C/8081B and 3541/8081B, Polychlorinated Biphenyls by EPA Methods 3510C/8082A and 3541/8082A, Gasoline Range Organics by EPA Methods 5030C/8015D, Diesel Range Organics by EPA Methods 3520C/8015D, Metals by EPA Methods 3005A/6010C and 3050B/6010C, Mercury by EPA Methods 7470A and 7471B, Cyanide by EPA Methods 9010C/9014 and Percent Moisture/Solids by Standard Method 2540G – TestAmerica Work Order Number 180-35729-1**

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of twenty-five solid samples, five water samples, one matrix spike/matrix spike duplicate (MS/MSD), three field duplicate samples, two equipment blank, one source blank and one trip blank, collected on August 12, 2014, as part of the Former Sperry Remington Site-North sampling event. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- EPA Methods 5030C/8260C and 5035/8260C - Volatile Organic Compounds (VOCs) and Tentatively Identified Compounds (TICs)
- EPA Methods 3520C/8270D and 3541/8270D - Semivolatile Organic Compounds (SVOCs) and TICs
- EPA Methods 3510C/8081B and 3541/8081B - Organochlorine Pesticides
- EPA Methods 3510C/8082A and 3541/8082A - Polychlorinated Biphenyls (PCBs)

- EPA Methods 5030C/8015D - Gasoline Range Organics (GRO)
- EPA Methods 3520C/8015D - Diesel Range Organics (DRO)
- EPA Methods 3005A/6010C and 3050B/6010C – Metals
- EPA Methods 7470A and 7471B – Mercury
- EPA Methods 9010C/9014 - Cyanide
- Standard Method 2540G - Percent Moisture/Solids

EXECUTIVE SUMMARY

The samples were handled, prepared and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The organic data were reviewed based on the Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP), Former Sperry Remington Site-North Portion, 777 South Main Street, City of Elmira, Chemung County, NY, NYSDEC Project 808022, Geosyntec Project Number MN0832, July 2014, Agency Review Draft, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008 (USEPA-540-R-08-01), as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The inorganic data were reviewed based on the QAPP/FSP, USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, OSWER 9240.1-51, EPA 540-R-10-011, January 2010, as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The following samples were analyzed and validated at a Stage 2A level in the data set:

Laboratory ID	Client ID
180-35729-1	SSHS-B95-0.17-2 (1.5)
180-35729-2	SSHS-B95-2-6 (4)
180-35729-3	SSHS-B95-6-10 (8)
180-35729-3 MS	SSHS-B95-6-10 (8)MS
180-35729-3 MSD	SSHS-B95-6-10 (8)MSD
180-35729-4	SSHS-B95-10-15 (11.5)
180-35729-5	SSHS-B92-SS
180-35729-6	SSHS-B92-0.17-2 (1)
180-35729-7	SSHS-B92-2-6 (4)
180-35729-8	SSHS-B92-6-10 (9)

Laboratory ID	Client ID
180-35729-9	SSHS-B92-10-16 (12)
180-35729-10	SSHS-B94-SS
180-35729-11	SSHS-B96-SS
180-35729-12	SSHS-B96-0.17-2 (1.5)
180-35729-13	SSHS-B96-2-6 (4.5)
180-35729-14	SSHS-B96-6-10 (9.5)
180-35729-15	SSHS-B96-10-15.5 (12.5)
180-35729-16	SSHS-B93-SS
180-35729-17	SSHS-B93-0.17-2 (1.5)
180-35729-18	SSHS-B93-2-6 (5)

Laboratory ID	Client ID
180-35729-19	SSHS-B93-6-10 (9.5)
180-35729-20	SSHS-B93-10-16 (15)
180-35729-21	SSHS-B95-SS
180-35729-22	SSHS-B94-0.17-2 (1)
180-35729-23	SSHS-B94-2-6 (6)
180-35729-24	SSHS-B94-6-10 (7)
180-35729-25	SSHS-B94-10-16 (14)
180-35729-26	DUP-1
180-35729-27	DUP-2
180-35729-28	SSHS-B93-GW-18-22
180-35729-29	SSHS-B94-GW-18-22

Laboratory ID	Client ID
180-35729-30	SSHS-B92-GW-18-22
180-35729-31	SSHS-B95-GW-18-22
180-35729-32	SSHS-B96-GW-18-22
180-35729-33	DUP-3-GW
180-35729-34	TRIP BLANK
180-35729-35	20140812-EQUIPMENT BLANK-GW
180-35729-36	20140812-EQUIPMENT BLANK-SOIL
180-35729-37	20140812-SOURCE BLANK

The samples were received at the laboratory within the QAPP criteria of <6°C. No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the chain of custody (COC). The proper procedure of a single strike-through correction and initials and date of the person making the correction was not followed.

No times of collection were listed on the COC for the trip blank or field duplicate samples. The laboratory assigned collection times of 00:00.

It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the electronic data deliverable (EDD). In addition, the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC.

The solids data, used to report the samples on a dry weight bases, were not validated. In addition, TICs were reported with the VOC and SVOC data. As there is no validation guidance for TICs, the TIC data were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

Twenty-five solid samples, five water samples, one MS/MSD pair, two equipment blanks, one source blank, one trip blank and three field duplicate samples were analyzed for VOCs per EPA Methods 5030C/8260C and 5035/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ⊗ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ⊗ Trip Blank
- ✓ Source Blank
- ⊗ Equipment Blank
- ✓ Field Duplicate
- ⊗ Sensitivity
- ⊗ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered to be usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

1.2 Holding Times

The holding times for a solid sample are 48 hours from collection to extraction and 14 days from collection to analysis. The holding time for a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 114641, 114801, 114925, 115104, 115232 and 115242). VOCs were not detected in the method blanks above the method detection limits (MDLs), with the following exceptions.

Methylene chloride was detected at estimated concentrations greater than the MDL and less than the reporting limit (RL) in the method blanks in batches 115104 and 115232. Therefore, the estimated concentration of methylene chloride in the associated sample was U qualified as not detected at the RL.

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier***	**Reason Code****
TRIP BLANK	Methylene Chloride	0.23	J,B	1.0	U	3

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL
B-compound was detected in both the method blank and sample
*Validation qualifiers are defined in Attachment 1 at the end of this report
** Reason codes are defined in Attachment 2 at the end of this report

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

A sample set specific MS/MSD pair, using sample SSHS-B95-6-10 (8), was reported. The MS/MSD pair had recovery and relative percent difference (RPD) results within the QAPP and laboratory (for 1,4-dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria, with the following exception.

The recovery of trans-1,2-dichloroethene in the MSD was high and outside the QAPP specified acceptance criteria. Since trans-1,2-dichloroethene was not detected in sample SSHS-B95-6-10 (8), no qualifications were applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs and three LCS/LCS duplicate (LCSD) pairs were reported. The results for the LCSs and LCS/LCSD pairs were within the QAPP and laboratory (for 1,4-dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria for recovery and RPD, with the following exceptions.

The recoveries of 2-hexanone were high and outside the QAPP specified acceptance criteria in the LCS/LCSD pair in batch 112620. Since 2-hexanone was not detected in the associated samples, no qualifications were applied to the data.

The recovery of 1,3-dichlorobenzene was high and outside the QAPP specified acceptance criteria in the LCSD in batch 115232. Since 1,3-dichlorobenzene was not detected in the associated samples, no qualifications were applied to the data.

The recovery of trans-1,2-dichloroethene was high and outside the QAPP specified acceptance criteria in the LCS in batch 114641. Since trans-1,2-dichloroethene was not detected in the associated samples, no qualifications were applied to the data.

The narrative indicated that the RPD between the LCS and LCSD in batch 115242 was high and outside the QAPP specified limits for 1,2-dibromo-3-chloropropane. Review of the data indicated that the reported RPD was calculated incorrectly; the actual RPD was acceptable. The laboratory was notified and a revised report with the correct RPD is pending.

1.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses, with the following exceptions.

The recoveries of dibromofluoromethane in sample 20140812-SOURCE BLANK and 1,2-dichloroethane-d4 in sample SSHS-B93-0.17-2 (1.5) were high and outside the laboratory specified acceptance criteria. Since the other three surrogate recoveries were acceptable in both samples, no qualifications were applied to samples 20140812-SOURCE BLANK and SSHS-B93-0.17-2 (1.5), based on professional and technical judgment.

1.7 Trip Blank

A trip blank, TRIP BLANK, was submitted with the sample set. VOCs were not detected in the trip blank above the MDLs, with the following exceptions.

Acetone was detected in the trip blank at the RL, 5.0 µg/L, and methylene chloride was detected at an estimated concentration greater than the MDL and less than the RL. Since the methylene chloride concentration in the trip blank was U qualified as not detected at the RL based on the method blank contamination, no additional qualifications were applied to the methylene chloride data. However, the estimated concentrations of acetone in the associated water samples were U qualified as not detected at the RL and the acetone concentrations in the associated water samples that were less than two times the RL were J qualified as estimated, based on professional and technical judgment.

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**
SSHS-B92-GW-18-22	Acetone	3.7	J	5.0	U	3
SSHS-B94-GW-18-22	Acetone	4.4	J	5.0	U	3
20140812-EQUIPMENT BLANK-GW	Acetone	2.6	J	5.0	U	3
SSHS-B93-GW-18-22	Acetone	6.8	NA	6.8	J	3

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**
SSHS-B95-GW-18-22	Acetone	6.7	NA	6.7	J	3

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL
NA-not applicable

1.8 Source Blank

A source blank, 20140812-SOURCE BLANK, was submitted with the sample set. The VOCs were not detected in the source blank above the MDLs.

1.9 Equipment Blank

Two equipment blanks, 20140812-EQUIPMENT BLANK-GW and 20140812-EQUIPMENT BLANK-SOIL, were collected with the sample set. The VOCs were not detected in the equipment blanks above the MDLs, with the following exceptions.

Acetone, carbon disulfide and chloroform were detected in 20140812-EQUIPMENT BLANK-GW and 1,2-dichloroethane was detected in 20140812-EQUIPMENT BLANK-SOIL, at estimated concentrations greater than the MDLs and less than the RLs. Since 1,2-dichloroethane was not detected in the associated soil samples, no qualifications were applied to the soil data. Similarly, since carbon disulfide was not detected in the associated water samples, no qualifications were applied to the carbon disulfide data. The acetone concentration in the equipment blank was U qualified as not detected at the RL based on the trip blank contamination; therefore, no additional qualifications were applied to the acetone data. However, the estimated chloroform concentration in the associated water sample was U qualified as not detected at the RL.

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**
SSHS-B92-GW-18-22	Chloroform	0.21	J	1.0	U	3

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL

1.10 Field Duplicate

Three field duplicate samples, DUP-1, DUP-2 and DUP-3-GW, were collected with the sample set. Acceptable precision (RPD <u>≤</u>50% for solid samples if both results are greater than five times the RL and RPD ≤30% for water samples if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B93-2-6 (5), SSHS-B92-SS and SSHS-B93-GW-18-22, respectively.

Acetone in field duplicate pair SSHS-B93-GW-18-22/ DUP-3-GW had an RPD greater than 30%; no qualifications were applied to the data since one or both sample results were less than five times the RLs.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**RPD**
SSHS-B93-2-6 (5)	Trichloroethene	2.9	J	NC
DUP-1	Trichloroethene	3.1	J	
SSHS-B93-2-6 (5)	The other VOCs	ND	NA	0
DUP-1	The other VOCs	ND	NA	
SSHS-B92-SS	Trichloroethene	1.3	J	NC
DUP-2	Trichloroethene	0.72	U	
SSHS-B92-SS	The other VOCs	ND	NA	0
DUP-2	The other VOCs	ND	NA	

µg/kg-microgram per kilogram
U-not detected at the reported MDL
J-estimated concentration less than the RL and greater than the MDL
NC-not calculable
ND-not detected at the MDL
NA-not applicable

Sample ID	**Compound**	**Laboratory Result (µg/L)**	**Laboratory Flag**	**RPD**
SSHS-B93-GW-18-22	Acetone	6.8	NA	55
DUP-3-GW	Acetone	12	NA	
SSHS-B93-GW-18-22	Tetrachloroethene	0.30	J	NC
DUP-3-GW	Tetrachloroethene	0.27	J	
SSHS-B93-GW-18-22	Trichloroethene	0.37	J	NC
DUP-3-GW	Trichloroethene	0.62	J	
SSHS-B93-GW-18-22	The other VOCs	ND	NA	0
DUP-3-GW	The other VOCs	ND	NA	

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL
NC-not calculable
ND-not detected at the MDL

NA-not applicable

1.11 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for sample SSHS-B96-SS; the sample was analyzed as a "high concentration" sample, per EPA method 5035.

The MDLs and RLs were the same as those listed in Tables C.1 and C.2 in the QAPP. It was noted that total 1,2-dichloroethene and total xylenes were not reported by the laboratory, but cis- and trans- 1,2-dichloroethene and o- and m&p- xylenes were reported. The summation of the MDLs and RLs for cis- and trans-1,2-dichloroethene and o- and m-&p-xylene were within the QAPP criteria for total 1,2-dichloroethene and total xylenes, respectively. In addition, 1,4-dioxane and 1,2,3-trichlorobenzene were reported by the laboratory, but not listed in Tables C.1 and C.2 in the QAPP.

The water MDLs for 1,2-dibromo-3-chloropropane and 1,2-dibromoethane were greater than the screening criteria listed in Table C.2 of the QAPP.

Compound	**Laboratory MDL (µg/L)**	**QAPP Screening Criteria (µg/L)**
1,2-Dibromoethane	0.18	0.00060
1,2-Dibromo-3-Chloropropane	0.14	0.040

µg/L-microgram per liter

1.12 Electronic Data Deliverable (EDD) Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

Twenty-five solid samples, two MS/MSD pair, one equipment blank, one source blank and two field duplicate samples were analyzed for SVOCs per EPA Methods 3520C/8270D and 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
⊗ Source Blank
✓ Equipment Blank
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

2.2 Holding Times

The holding times for the SVOC analysis of a solid sample are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for the SVOC analysis of a water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 114701, 115180 and 115500). SVOCs were not detected in the method blanks above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs, using samples SSHS-B95-6-10 (8) and SSHS-B95-SS, were reported. The MS/MSD pairs had recovery and RPD results within the QAPP and laboratory (for 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol only) specified acceptance criteria, with the following exceptions.

The recoveries of benzaldehyde in the MS/MSD pair using sample SSHS-B95-6-10 (8) were low and outside the QAPP specified acceptance criteria. Therefore, the undetected value of benzaldehyde in sample SSHS-B95-6-10 (8) was UJ qualified as estimated less than the MDL.

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	Validation Concentration (µg/kg)	Validation Qualifier	Reason Code
SSHS-B95-6-10 (8)	Benzaldehyde	53	U	53	UJ	4

µg/kg-microgram per kilogram
U-not detected at or above the MDL

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were reported. The results for the LCSs and LCS/LCSD pair were within the QAPP and laboratory (for 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol only) specified acceptance criteria for recovery and RPD.

2.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

2.7 Source Blank

A source blank, 20140812-SOURCE BLANK, was collected with the sample set. SVOCs were not detected in the source blank above the MDLs, with the following exceptions.

Bis(2-ethylhexyl) phthalate (1.3 µg/L, soil equivalent concentration 22 µg/kg) and butyl benzyl phthalate (0.32 µg/L, soil equivalent concentration 5.3 µg/kg) were detected at estimated concentrations greater than the MDLs and less than the RLs in the source blank. Since the soil equivalent concentrations for these compounds were less than the soil MDLs, no qualifications were applied to the soil samples. However, the estimated concentration of butyl benzyl phthalate in the equipment blank was U qualified as not detected at the RL due to the source blank contamination.

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**
20140812-EQUIPMENT BLANK-SOIL	Butyl benzyl phthalate	0.29	J	1.0	U	3

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL

2.8 Equipment Blank

One equipment blank, EQUIPMENT BLANK-SOIL, was collected with the soil samples. SVOCs were not detected in the equipment blank above the MDLs, with the following exceptions.

Bis(2-ethylhexyl) phthalate (2.4 µg/L, soil equivalent concentration 40 µg/kg) was detected above the RL and butyl benzyl phthalate was detected at an estimated concentration greater than the MDL and less than the RL in the equipment blank. Since the butyl benzyl phthalate concentration in the equipment blank was U qualified as not detected at the RL, based on the source blank contamination no additional qualification was applied to the data.. Additionally, since the soil equivalent concentration of bis (2-ethylhexyl) phthalate was less than the soil MDL, no qualifications were applied to the soil data.

2.9 Field Duplicate

Two field duplicate samples, DUP-1 and DUP-2, were collected with the soil samples. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B93-2-6 (5) and SSHS-B92-SS, respectively.

Compounds/field duplicate pairs with RPDs greater than 50% had one or both sample results less than five times the RLs; therefore, no qualifications were applied to the data for these compounds.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**RPD**
SSHS-B93-2-6 (5)	2-Methylnaphthalene	8.6	J	NC

µg/kg-microgram per kilogram
U-not detected at the reported MDL
J-estimated concentration less than the RL and greater than the MDL
NC-not calculable
ND-not detected at the MDL
NA-not applicable

2.10 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were not reported.

The MDLs and RLs reported were the same as those listed in Table C.1 in the QAPP. In addition, 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol were reported by the laboratory, but not listed in Table C.1 in the QAPP.

2.11 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

3.0 ORGANOCHLORINE PESTICIDES

Twenty-five solid samples, two MS/MSD pairs, one equipment blank, one source blank and two field duplicate samples were analyzed for organochlorine pesticides per EPA methods 3510C/8081B and 3541/8081B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Equipment Blank
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

3.1 Overall Assessment

3.1.1 Completeness

The organochlorine pesticide data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

3.1.2 Analysis Anomalies

The samples were analyzed on two different gas chromatography (GC) columns, per the method protocol. Both PCBs and organochlorine pesticides were reported in the samples. Review of the raw data indicated that PCBs 1248 and 1260 were present in the samples; based on professional and technical judgment, the detections of the multi-peak PCBs resulted in false positives for some of the single peak organochlorine pesticides. Therefore, based on professional and technical judgment, for the organochlorine pesticides with RPD results between the two columns concentrations greater than 25%, the estimated concentrations of the organochlorine pesticides were U qualified as not detected at the RLs and concentrations greater than the RLs were U qualified as not detected at the reported concentrations. The qualifications are summarized in Attachment 3.

In addition, pesticide concentrations above the RL in the source blank were flagged by the laboratory with p, indicating the RPD between the two columns was greater than 40% RPD and the lower concentration was reported; PCBs were not detected in this sample. Therefore, based on professional and technical judgment, the p-flagged concentrations in the source blank were J qualified as estimated. These qualifications are also summarized in Attachment 3.

The report narrative indicated that the continuing calibration verification (CCV) recoveries for 4,4’-DDD and endosulfan II were high and outside the method specified acceptance criteria on one of the GC columns in analysis batch 115680. Since the detected concentrations of 4,4’-DDD and endosulfan II in the associated samples were U qualified as not detected at the RLs due to the RPD results between the two GC columns noted above, no additional qualifications were applied to the data.

3.2 Holding Times

The holding times for the pesticide analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for pesticide analysis of water samples are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 115362, 115626 and 15137). The organochlorine pesticides were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs, using samples SSHS-B95-6-10 (8) and SSHS-B95-SS, were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were reported. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

3.6 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria.

3.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was collected with the samples. The organochlorine pesticides were not detected in the source blank above the MDLs, with the following exceptions.

Aldrin and beta-BHC were detected in the source blank at concentrations greater than the RLs, 0.0023 µg/L and 0.0021 µg/L, respectively; the equivalent soil concentrations are 0.15 µg/kg and 0.14 µg/kg, respectively. No qualifications were applied to the soil samples since the equivalent soil concentrations for both aldrin and beta-BHC were less than the soil MDLs. However, due to the source blank contamination, the concentration of aldrin in the equipment blank was U qualified as not detected at the reported concentration.

It was noted that the concentrations of aldrin and beta-BHC in the source blank were J qualified as estimated at the reported concentrations, due to the RPDs between the two GC columns greater than 25%.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
20140812-EQUIPMENT BLANK-SOIL	Aldrin	0.0014	p	0.0014	U	3

µg/L-microgram per liter
p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported

3.8 Equipment Blank

One equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was collected with the soil samples. The organochlorine pesticides were not detected in the equipment blank above the MDLs, with the following exception.

Aldrin was detected in the equipment blank at a concentration greater than the RL; however, the concentration of aldrin in the equipment blank was U qualified as not detected at the reported concentration, due to the source blank contamination. Therefore, no qualifications were applied to the associated soil samples.

3.9 Field Duplicate

Two field duplicate samples, DUP-1 and DUP-2, were collected with the soil samples. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B93-2-6 (5) and SSHS-B92-SS, respectively.

Sample ID	Compound	Laboratory Result (µg/kg)	Laboratory Flag	RPD
SSHS-B93-2-6 (5)	4,4'-DDT	1.8	J	NC
DUP-1	4,4'-DDT	2.0	NA	
SSHS-B93-2-6 (5)	Endosulfan sulfate	0.19	U	NC

SSHS-B92-SS	Endrin aldehyde	0.80	J,p	NC
DUP-2	Endrin aldehyde	0.44	U	
SSHS-B92-SS	gamma-Chlordane	1.6	J	NC
DUP-2	gamma-Chlordane	0.45	U	
SSHS-B92-SS	Heptachlor epoxide	0.50	J,p	NC
DUP-2	Heptachlor epoxide	0.44	U	
SSHS-B92-SS	The other pesticides	ND	NA	0
DUP-2	The other pesticides	ND	NA	

µg/kg-microgram per kilogram
NA-not applicable
NC-not calculable
U-not detected at the reported MDL
J-estimated concentration greater than the MDL and less than the RL
p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported
ND-not detected at the MDL

3.10 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were not reported.

The MDLs and RLs reported were 1/10 of those listed in Table C.1 in the QAPP.

3.11 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was truncated to 20140814-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

4.0 POLYCHLORINATED BIPHENYLS

Twenty-five solid samples, two MS/MSD pairs, one equipment blank, one source blank and two field duplicate samples were analyzed for PCBs per EPA Methods 3510C/8082A and 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

4.1 Overall Assessment

4.1.1 Completeness

The PCB (Aroclor) data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

4.1.2 Analysis Anomalies

The samples were analyzed on two different GC columns. Three estimated PCB concentrations were flagged by the laboratory with p, indicating the RPD between the two GC columns was greater than 40% RPD and the lower concentration was reported. Therefore, based on professional and technical judgment, the p-flagged concentrations were J qualified as estimated.

Sample ID	**Compound**	**Laboratory Concentration (µg/kg)**	**Laboratory Flag**	**Validation Concentration (µg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-B95-10-15 (11.5)	PCB-1260	4.7	J,p	4.7	J	13
SSHS-B95-SS	PCB-1248	6.8	J,p	6.8	J	13
SSHS-B96-SS	PCB-1248	6.9	J,p	6.9	J	13

µg/kg-microgram per kilogram
p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported
J-estimated concentration less than the RL and greater than the MDL

4.2 Holding Times

The holding times for PCB analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for PCB analysis of water samples are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 115362, 115626 and 15137). PCBs were not detected in the method blanks above the MDLs.

4.4 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs, using samples SSHS-B95-6-10 (8) and SSHS-B95-SS, were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were reported. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

4.6 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria.

4.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was collected with the samples. PCBs were not detected in the source blank above the MDLs.

4.8 Equipment Blank

One equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was collected with the soil samples. PCBs were not detected in the equipment blank above the MDLs.

4.9 Field Duplicate

Two field duplicate samples, DUP-1 and DUP-2, were collected with the soil samples. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B93-2-6 (5) and SSHS-B92-SS, respectively.

NA-not applicable
NC-not calculable
U-not detected at the reported MDL
J-estimated concentration greater than the MDL and less than the RL

ND-not detected at the MDL

4.10 Sensitivity

The samples were reported to the MDLs. No elevated nondetect results were reported.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP. It was noted that total PCBs were listed in Table C.1 in the QAPP, but not reported by the laboratory.

4.11 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

5.0 GASOLINE RANGE ORGANICS

One source blank was analyzed for GRO per EPA Methods 5030C/8015D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

5.1 Overall Assessment

The GRO data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

5.2 Holding Times

The holding time for the GRO analysis of a preserved water sample is 14 days from sample collection to analysis. The holding time was met for the sample analysis.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 143382). GRO was not detected in the method blank above the MDL.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). One sample set specific MS/MSD pair, using samples 20140812-SOURCE BLANK, was reported. The MS/MSD pair had recovery and RPD results within the QAPP specified acceptance criteria.

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The result for the LCS was within the QAPP specified acceptance criterion for recovery.

5.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

5.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was collected with the samples. GRO was not detected in the source blank above the MDL.

5.8 Equipment Blank

Two equipment blanks were collected with the sample set, but not analyzed for GRO.

5.9 Field Duplicate

Three field duplicate samples were collected with the sample set, but not analyzed for GRO.

5.10 Sensitivity

The sample was reported to the MDLs. Elevated nondetect results were not reported.

The MDL and RL reported were the same as those listed in Table C.2 in the QAPP.

5.11 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

6.0 DIESEL RANGE ORGANICS

One source blank was analyzed for DRO per EPA Methods 3520C/8015D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

6.1 Overall Assessment

The DRO data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

6.2 Holding Times

The holding times for the DRO analysis of a water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 143102). DRO was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The results for the LCS were within the QAPP specified acceptance criterion for recovery.

6.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

6.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was collected with the samples. DRO was not detected in the source blank above the MDL.

6.8 Equipment Blank

Two equipment blanks were collected with the sample set, but not analyzed for DRO.

6.9 Field Duplicate

Three field duplicate samples were collected with the sample set, but not analyzed for DRO.

6.10 Sensitivity

The samples were reported to the MDLs. No elevated nondetect results were reported.

The MDL and RL reported were the same as those listed in Table C.2 in the QAPP.

6.11 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

7.0 METALS

Twenty-five solid samples, one MS/MSD pair, one equipment blank, one source blank and two field duplicate samples were analyzed for metals per EPA Methods 3005A/6010C and 3050B/6010C (Mercury evaluated separately in Section 8.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Electronic Data Deliverable Review

7.1 Overall Assessment

The metals data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

7.2 Holding Times

The holding times for metals analyses of water and solid samples are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

7.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 115460, 115461 and 115029). The metals were not detected in the method blanks above the MDLs, with the following exceptions.

Potassium and sodium were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115029. Therefore, the concentrations of potassium and sodium in the associated samples were U qualified as not detected at the RLs.

Barium, cadmium, calcium, nickel, sodium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115460. Since barium, calcium, nickel and zinc were detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the barium, calcium, nickel and zinc data. However, the concentrations of cadmium and sodium in the associated samples were U qualified as not detected at the RLs.

Cadmium, nickel, potassium, sodium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115461. Since nickel, potassium and zinc were detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the nickel, potassium and zinc data. However, the concentrations of cadmium and sodium in the associated samples were U qualified as not detected at the RLs.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
20140812-EQUIPMENT BLANK-SO	Potassium	240	J,B	5000	U	3
20140812-EQUIPMENT BLANK-SO	Sodium	43	J,B	5000	U	3

SSHS-B96-SS	Sodium	42	J,B	610	U	3

mg/kg-milligram per kilogram
J-estimated concentration less than the RL and greater than the MDL
B-compound was detected in both the method blank and sample

7.4 Matrix Spike/Matrix Spike Duplicate

A sample set specific MS/MSD pair, using sample SSHS-B95-6-10 (8), was reported. The recovery and RPD results were within the QAPP specified acceptance criteria, with the following exceptions.

The recoveries of antimony were low and outside the QAPP specified acceptance criteria. A post digestion spike (PDS) was also analyzed, with the antimony recovery within the laboratory specified acceptance criteria. Therefore, the undetected value of antimony in sample SSHS-B95-6-10 (8) was UJ qualified as estimated less than the MDL.

It was noted that the recovery criteria for aluminum, iron and manganese were not applicable since the concentrations of these three metals in sample SSHS-B95-6-10 (8) were greater than four times the spike concentrations. No qualifications were applied to the data.

Sample ID	**Compound**	**Laboratory Concentration (mg/kg)**	**Laboratory Flag**	**Validation Concentration (mg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-B95-6-10 (8)	Antimony	0.21	U	0.21	UJ	4

mg/kg-milligram per kilogram
U-not detected at the reported MDL

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were analyzed. The results for the LCSs were within the QAPP specified acceptance criteria for recovery.

7.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was collected with the samples. Metals were not detected in the source blank above the MDLs, with the following exceptions.

Potassium and sodium were detected at estimated concentrations greater than the MDLs and less the RLs. Since the potassium and sodium concentrations in the source blank were U qualified as not detected at the RLs based on the method blank contamination, no additional qualifications were applied to the potassium and sodium data.

7.7 Equipment Blank

One equipment blank, EQUIPMENT BLANK-SOIL, was collected with the soil samples. The metals were not detected in the equipment blank above the MDLs, with the following exceptions.

Copper, manganese, potassium and sodium were detected at estimated concentrations greater than the MDLs and less than the RLs in the equipment blank. The potassium and sodium concentrations in the equipment blank were U qualified as not detected at the RLs based on the method blank contamination; therefore, no qualifications were applied to the potassium and sodium data. Copper and manganese were detected above the RLs in the associated soil samples; therefore, no additional qualifications were applied to the copper and manganese data.

In addition, iron was detected in the equipment blank at a concentration greater than the RL, 110 µg/L (equivalent soil concentration 5.5 mg/kg). Since iron was detected in the associated soil samples at concentrations greater than ten times the equivalent soil concentration, no qualifications were applied to the iron data.

7.8 Field Duplicate

Two field duplicate samples, DUP-1 and DUP-2, were collected with the soil samples. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B93-2-6 (5) and SSHS-B92-SS, respectively.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD

B-compound was detected in both the sample and method blank
NC-not calculable
ND-not detected at the MDL
NA-not applicable

7.9 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were not reported.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP.

7.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

8.0 MERCURY

Twenty-five solid samples, one MS/MSD pair, one equipment blank, one source blank and two field duplicate samples were analyzed for mercury per EPA Methods 7470A and 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank

✓ Laboratory Control Sample
✓ Source Blank
✓ Equipment Blank
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

8.1 <u>Overall Assessment</u>

The mercury data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

8.2 <u>Holding Times</u>

The holding times for mercury analyses of water and solid samples are 28 days from sample collection to analysis. The holding times were met for the sample analyses.

8.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batch 114731, 115222 and 115584). Mercury was not detected in the method blanks above the MDLs.

8.4 Matrix Spike/Matrix Spike Duplicate

A sample set specific MS/MSD pair, using sample SSHS-B95-6-10 (8) and two MSs using samples SSHS-B92-10-16 (12) and SSHS-B93-6-10 (9.5) were reported. The results of the MS/MSD pair and MSs were within the QAPP specified acceptance criteria.

8.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were analyzed. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

8.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was collected with the samples. Mercury was not detected in the source blank above the MDL.

8.7 Equipment Blank

One equipment blank, EQUIPMENT BLANK-SOIL, was collected with the soil samples. Mercury was not detected in the equipment blank above the MDL.

8.8 Field Duplicate

Two field duplicate samples, DUP-1 and DUP-2, were collected with the soil samples. Acceptable precision (RPD $\leq$50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B93-2-6 (5) and SSHS-B92-SS, respectively.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD
SSHS-B93-2-6 (5)	Mercury	0.023	J	NC
DUP-1	Mercury	0.019	J	
SSHS-B92-SS	Mercury	0.038	J	NC
DUP-2	Mercury	0.038	J	

mg/kg-milligram per kilogram
J-estimated concentration less than the RL and greater than the MDL
NC-not calculable

8.9 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were not reported.

The soil MDL and RL were the same as those listed in Table C.1 in the QAPP.

8.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

9.0 CYANIDE

Twenty-five solid samples, two MS/MSD pairs, one equipment blank, one source blank and two field duplicate samples were analyzed for cyanide per EPA Methods 9010C/9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

9.1 Overall Assessment

The cyanide data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

9.2 Holding Times

The holding times for the cyanide analyses of solid and water samples are 14 days from sample collection to analysis. The holding times were met for the sample analyses.

9.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batch 115113, 115269 and 115561). Cyanide was not detected in the method blanks above the MDL.

9.4 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs, using samples SSHS-B95-6-10 (8) and SSHS-B93-6-10 (9.5), were reported. The recovery and RPD results were within the laboratory specified acceptance criteria; there were no cyanide acceptance criteria in the QAPP.

9.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs, three low LCSs (LLCS) and three high LCSs (HLCS) were reported. The results for the LCSs, LLCSs and HLCSs were within the laboratory specified acceptance criteria for recovery; there were no cyanide acceptance criteria in the QAPP.

9.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was collected with the samples. Cyanide was not detected in the source blank above the MDL.

9.7 Equipment Blank

One equipment blank, EQUIPMENT BLANK-SOIL, was collected with the soil samples. Cyanide was not detected in the equipment blank above the MDL.

9.8 Field Duplicate

Two field duplicate samples, DUP-1 and DUP-2, were collected with the soil samples. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B93-2-6 (5) and SSHS-B92-SS, respectively.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD
SSHS-B93-2-6 (5)	Cyanide, Total	0.47	J	NC
DUP-1	Cyanide, Total	0.59	NA	
SSHS-B92-SS	Cyanide, Total	0.29	J	NC
DUP-2	Cyanide, Total	1.6	NA	

mg/kg-milligram per kilogram
J-estimated concentration less than the RL and greater than the MDL
NA-not applicable
NC-not calculable

9.9 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were not reported.

The MDL and RL were not listed for cyanide in Table C.1 in the QAPP.

9.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES

Subject: **Stage 2A Data Validation - Level II Data Deliverables – Volatile Organic Compounds by EPA Methods 5030C/8260C and 5035/8260C, Semivolatile Organic Compounds by EPA Methods 3520C/8270D and 3541/8270D, Organochlorine Pesticides by EPA Methods 3510C/8081B and 3541/8081B, Polychlorinated Biphenyls by EPA Methods 3510C/8082A and 3541/8082A, Gasoline Range Organics by EPA Methods 5030C/8015D, Diesel Range Organics by EPA Methods 3520C/8015D, Metals by EPA Methods 3005A/6010C and 3050B/6010C, Mercury by EPA Methods 7470A and 7471B, Cyanide by EPA Methods 9010C/9014 and Percent Moisture/Solids by Standard Method 2540G– TestAmerica Work Order Numbers 180-35776-1 and 180-35776-2**

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of sixty-one solid samples, eight solid field duplicate samples, four groundwater samples, four matrix spike/matrix spike duplicate (MS/MSD) pairs, two equipment blanks and one trip blank, collected on August 13, 2014, as part of the Former Sperry Remington Site-North sampling event. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- EPA Methods 5030C/8260C and 5035/8260C - Volatile Organic Compounds (VOCs) and Tentatively Identified Compounds (TICs)
- EPA Methods 3520C/8270D and 3541/8270D - Semivolatile Organic Compounds (SVOCs) and TICs
- EPA Methods 3510C/8081B and 3541/8081B – Organochlorine Pesticides
- EPA Methods 3510C/8082A and 3541/8082A - Polychlorinated Biphenyls (PCBs)

- EPA Methods 5030C/8015D - Gasoline Range Organics (GRO)
- EPA Methods 3520C/8015D - Diesel Range Organics (DRO)
- EPA Methods 3005A/6010C and 3050B/6010C – Metals
- EPA Methods7470A and 7471B – Mercury
- EPA Methods 9010C/9014 - Cyanide
- Standard Method 2540G - Percent Moisture/Solids

EXECUTIVE SUMMARY

The samples were handled, prepared and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exceptions.

Based on low 1,4-dichlorobenzene-d4 internal standard recovery, the undetected values of the compounds associated with this internal standard in sample SSHS-B82-0.17-2 (1.5) were R qualified as rejected.

The undetected value of benzaldehyde in sample SSHS-B97-2-6 (5) was R qualified as rejected based on MS/MSD recoveries less than 20% and professional and technical judgment.

The remaining qualified data should be used within the limitations of the qualification.

The organic data were reviewed based on the Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP), Former Sperry Remington Site-North Portion, 777 South Main Street, City of Elmira, Chemung County, NY, NYSDEC Project 808022, Geosyntec Project Number MN0832, July 2014, Agency Review Draft, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008 (USEPA-540-R-08-01), as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The inorganic data were reviewed based on the QAPP/FSP, USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, OSWER 9240.1-51, EPA 540-R-10-011, January 2010, as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The following samples were analyzed and validated at a Stage 2A level in the data set:

Laboratory ID	Client ID

180-35776-74	20140813-EQUIPMENT BLANK-SO
180-35776-75	TRIP BLANK
180-35776-76	DUP-11

The samples were received at the laboratory at temperatures within the QAPP criteria of <6°C. No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the chain of custody (COC). The proper procedure of a single strike-through correction and initials and date of the person making the correction was not followed.

The following sample receipt issues were noted. These discrepancies did not have an impact on the sample analyses:

- Samples TRIP BLANK and DUP-11 were not listed on the chain of custody (COC). TRIP BLANK was reported for VOCs and DUP-11 was reported for all analyses. Notations were made by the laboratory on the COC to indicate the analyses.
- The second relinquished by signature and date/time by the courier to the laboratory were not documented on the COC.
- No times of collection were listed on the COC for the field duplicate samples. The laboratory assigned the collection times of 00:00.
- The laboratory noted in the report narrative that the time of sample collection for SSHS-B90-0.17-2 (1) on the container label was 11:34; the time of sample collection on the COC was 11:36. The time on the COC was the time used.

It was noted that the sample ID for the equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was truncated to 20140813-EQUIPMENT BLANK-SO in the electronic data deliverable (EDD). In addition, the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC.

The solids data, used to report the samples on a dry weight basis, were not validated. In addition, TICs were reported with the VOC and SVOC data. As there is no validation guidance for TICs, the TIC data were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

Sixty-one solid samples, four groundwater samples, eight solid field duplicate samples, four MS/MSD pairs, two equipment blanks and one trip blank were analyzed for VOCs per EPA Methods 5030C/8260C and 5035/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

1.1.1 Completeness

The VOC data reported in this package are considered to be usable for meeting project objectives, with the following exceptions. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 99.9%. Based on low 1,4-dichlorobenzene-d4 internal standard recovery, the undetected values of the compounds associated with this internal standard in the reanalysis of sample SSHS-B82-0.17-2 (1.5) were R qualified as rejected.

1.1.2 Analysis Anomaly

Sample SSHS-B82-0.17-2 (1.5) was analyzed twice and reported as SSHS-B82-0.17-2 (1.5) and SSHS-B82-0.17-2 (1.5)RA (reanalysis) in the laboratory report and EDD. The internal standard areas for 1,4-dichlorobenzene-d4 were low and outside the method specified acceptance criteria in both analyses. Only SSHS-B82-0.17-2 (1.5)RA was considered for validation, based on acceptable surrogate recoveries. The results for the original analysis of sample SSHS-B82-0.17-2 (1.5) were set to not reportable in the EDD with qualifier file (a column was added to the EDD with qualifier file). Based on the low internal standard recovery in the reanalysis, the undetected values of the compounds associated with internal standard 1,4-dichlorobenzene-d4 in the reanalysis of sample SSHS-B82-0.17-2 (1.5) were R qualified as rejected.

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	Validation Concentration (µg/kg)	Validation Qualifier[1]	Reason Code[2]
SSHS-B82-0.17-2 (1.5)RA	1,2,3-Trichlorobenzene	0.82	U,*	0.82	R	11
SSHS-B82-0.17-2 (1.5)RA	1,2,4-Trichlorobenzene	0.86	U,*	0.86	R	11

U-not detected at or above the method detection limit (MDL)
*-Internal standard response or retention time outside the acceptable limits
[1]-Validation qualifiers are defined in Attachment 1 at the end of this report
[2]-Reason codes are defined in Attachment 2 at the end of this report

1.2 Holding Times

The holding times for a solid sample are 48 hours from collection to extraction and 14 days from collection to analysis. The holding time for a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Eight method blanks were reported with the data (batches 114801, 114925, 114966, 115034, 115232, 115242, 115838 and 115910). VOCs were not detected in the method blanks above the MDLs, with the following exception.

Methylene chloride was detected at an estimated concentration greater than the MDL and less than the reporting limit (RL) in the method blank in batch 115232. Therefore, the estimated concentration of methylene chloride in the associated sample was U qualified as not detected at the RL.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
SSHS-B29-A-GW-18-22	Methylene Chloride	16	J,B	25	U	3

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL
B-compounds was detected in both the method blank and sample

1.4 Matrix Spike/Matrix Spike Duplicate

Four sample set specific MS/MSD pairs, using samples SSHS-B86-6-10 (8), SSHS-B82-2-6 (4), SSHS-B73-2-6 (4) and SSHS-B99-SS were reported. The MS/MSD pairs had recovery and relative percent difference (RPD) results within the QAPP and laboratory (for 1,4-dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria, with the following exceptions.

The RPD for trichlorofluoromethane was high and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B86-6-10 (8). Since trichlorofluoromethane was not detected in sample SSHS-B86-6-10 (8), no qualifications were applied to the data.

The recovery of 1,1,2-trichloro-1,2,2-trifluoroethane was high and outside the QAPP specified acceptance criteria in the MSD using sample SSHS-B82-2-6 (4). Since 1,1,2-trichloro-1,2,2-trifluoroethane was not detected in sample SSHS-B82-2-6 (4), no qualifications were applied to the data.

One or both the recoveries of carbon tetrachloride, chloroethane, chloroform, trans-1,2-dichloroethene, 1,1,1-trichloroethane and 1,1,2-trichloro-1,2,2-trifluoroethane were high and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B99-SS. Since these compounds were not detected in sample SSHS-B99-SS, no qualifications were applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six LCSs and two LCS/LCS duplicate (LCSD) pairs were reported. The results for the LCSs and LCS/LCSD pairs were within the QAPP and laboratory (for 1,4-dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria for recovery and RPD, with the following exception.

The recovery of 1,3-dichlorobenzene was high and outside the QAPP specified acceptance criteria in the LCSD in batch 115232. Since 1,3-dichlorobenzene was not detected in the associated sample, no qualifications were applied to the data.

The recoveries of carbon tetrachloride, chloroethane and 1,1,2-trichloro-1,2,2-trifluoroethane were high and outside the QAPP specified acceptance criteria in the LCS in batch 114996. Since carbon tetrachloride, chloroethane and 1,1,2-trichloro-1,2,2-trifluoroethane were not detected in the associated samples, no qualifications were applied to the data.

1.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses, with the following exceptions.

The recovery of 4-bromofluorobenzene was high and the recovery of toluene-d8 was low in the original analysis of sample SSHS-B82-0.17-2 (1.5), both outside the QAPP specified acceptance criteria. The sample was reanalyzed and the surrogate recoveries in the reanalysis were acceptable. Therefore, only the reanalysis of sample SSHS-B82-0.17-2 (1.5) was considered for validation and no qualifications were applied to the data based on the surrogate recoveries.

1.7 Trip Blank

One trip blank, TRIP BLANK, was submitted with the samples. VOCs were not detected in the trip blank above the MDLs, with the following exceptions.

Acetone was detected above the RL, 26 µg/L and methylene chloride was detected at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated concentrations of acetone and methylene chloride in the associated water samples were U qualified as not detected at the RLs and concentrations of acetone that were less than two times the trip blank concentration were J qualified as estimated in the associated water samples, based on professional and technical judgment.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
20140813-EQUIPMENT BLANK-GW	Acetone	29	NA	29	J	3
20140813-EQUIPMENT BLANK-GW	Methylene Chloride	0.15	J	1.0	U	3
SSHS-99-GW-17-21	Acetone	33	NA	33	J	3
SSHS-B29-A-GW-18-22	Methylene	16	J,B	25	U	3

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
	Chloride					
SSHS-B97-GW-18-22	Acetone	32	NA	32	J	3
SSHS-B98-GW-18-22	Acetone	40	NA	40	J	3

µg/L-microgram per liter
J-estimated concentration greater than the MDL and less than the RL
B-compound was detected in both the method blank and sample
NA-not applicable

1.8 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. VOCs were not detected in the source blank above the MDLs.

1.9 Equipment Blank

Two equipment blanks, 20140813-EQUIPMENT BLANK-GW and 20140813-EQUIPMENT BLANK-SOIL, were collected with the sample set. VOCs were not detected in the equipment blanks above the MDLs, with the following exceptions.

Carbon disulfide and methylene chloride were detected in 20140813-EQUIPMENT BLANK-GW at estimated concentrations greater than the MDLs and less than the RLs and acetone was detected above the RL, 29 µg/L. Since the methylene chloride concentration in the equipment blank was U qualified as not detected at the RL due to the trip blank contamination, no additional qualifications were applied to the methylene chloride data. The acetone concentrations less than two times the trip blank contamination level in the equipment blank and associated samples were J qualified as estimated; therefore, no additional qualifications were applied to the acetone data. However, the estimated concentration of carbon disulfide in the associated sample was U qualified as not detected at the RL.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
SSHS-B97-GW-18-22	Carbon disulfide	0.21	J	1.0	U	3

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL

1.10 Field Duplicate

Eight field duplicate samples, DUP-04, DUP-05, DUP-06, DUP-07, DUP-08, DUP-09, DUP-10 and DUP-11, were collected with the sample set. Acceptable precision (RPD ≤50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B98-6-10 (7.5), SSHS-B99-10-14.5 (12), SSHS-B29-A-2-6 (4.5), SSHS-B73-6-10 (8), SSHS-B90-2-6 (4), SSHS-B89-2-6 (5), SSHS-B85-10-15 (12.5) and SSHS-B83-2-6 (5.5), respectively.

Sample ID	Compound	Laboratory Result (µg/kg)	Laboratory Flag	RPD

DUP-11	Acetone	4.1	U	

Sample ID	Compound	Laboratory Result (µg/kg)	Laboratory Flag	RPD
SSHS-B83-2-6 (5.5)	The other VOCs	ND	NA	0
DUP-11	The other VOCs	ND	NA	

µg/kg-microgram per kilogram
J-estimated concentration less than the RL and greater than the MDL
U-not detected at the reported MDL
NC-not applicable
NA-not applicable
ND-not detected

1.11 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for sample SSHS-B29-A-GW-18-22 due to the sample dilution.

The MDLs and RLs were the same as those listed in Tables C.1 and C.2 in the QAPP. It was noted that total 1,2-dichloroethene and total xylenes were not reported by the laboratory, but cis- and trans- 1,2-dichloroethene and o- and m&p- xylenes were reported. The summation of the MDLs and RLs for cis- and trans-1,2-dichloroethene and o- and m-&p-xylene were within the QAPP criteria for total 1,2-dichloroethene and total xylenes, respectively. In addition, 1,4-dioxane and 1,2,3-trichlorobenzene were reported by the laboratory, but not listed in Tables C.1 and C.2 in the QAPP.

The water sample MDLs for 1,2-dibromo-3-chloropropane and 1,2-dibromoethane were greater than the screening criteria listed in Table C.2 of the QAPP.

Compound	Laboratory MDL (µg/L)	QAPP Screening Criteria (µg/L)
1,2-Dibromoethane	0.18	0.00060
1,2-Dibromo-3-Chloropropane	0.14	0.040

µg/L-microgram per liter

1.12 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was truncated to 20140813-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

Sixty-one solid samples, two groundwater samples, eight solid field duplicate samples, five MS/MSD pairs and one equipment blank were analyzed for SVOCs per EPA Methods 3520C/8270D and 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Sensitivity
⊗ Electronic Data Deliverables Review

2.1 Overall Assessment

2.1.1 Completeness

The SVOC data reported in this package are considered to be usable for meeting project objectives, with the following exception. The undetected value of benzaldehyde in sample SSHS-B97-2-6 (5) was R qualified as rejected based on MS/MSD recoveries less than 20% and technical and professional judgment. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 99.98%.

2.1.2 Analysis Anomaly

Sample SSHS-B90-2-6 (4) was analyzed undiluted and at a 1:20 dilution. The concentration of butyl benzyl phthalate was E flagged by the laboratory in the undiluted analysis, indicating the result exceeded the calibration range. Therefore, the result of butyl benzyl phthalate was the only result considered for validation in the 1:20 dilution. The remaining compounds were validated from the undiluted analysis. The results that were not considered for validation were set to "not reportable" in the EDD with qualifier file (a column was added to the EDD with qualifier file).

The responses of internal standard perylene-d12 in samples SSHS-B29-A-GW-18-22 and SSHS-99-GW-17-21 were above the method specified acceptance criteria. Therefore, the concentrations of the compounds associated with perylene-d12 were J qualified as estimated in samples SSHS-B29-A-GW-18-22 and SSHS-99-GW-17-21.

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**
SSHS-99-GW-17-21	Benzo[a]pyrene	0.87	*	0.87	J	11
SSHS-99-GW-17-21	Benzo[g,h,i]perylene	0.45	*	0.45	J	11
SSHS-99-GW-17-21	Dibenz(a,h)anthracene	0.32	*	0.32	J	11
SSHS-99-GW-17-21	Indeno[1,2,3-cd]pyrene	0.28	*	0.28	J	11

µg/L-microgram per liter
U-not detected at or above the method detection limit (MDL)
*-Internal standard response or retention time outside acceptable limits

2.2 Holding Times

The holding times for the SVOC analysis of a solid sample are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for the SVOC analysis of a water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 114822, 115091, 115664, 115780, 115881 and 115980). SVOCs were not detected in the method blanks above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

Five sample set specific MS/MSD pairs, using samples SSHS-B86-6-10 (8), SSHS-B82-2-6 (4), SSHS-B73-2-6 (4), SSHS-B97-2-6 (5) and SSHS-B99-SS were reported. The MS/MSD pairs had recovery and RPD results within the QAPP and laboratory (for 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol only) specified acceptance criteria, with the following exceptions.

The recoveries of benzaldehyde were low and outside the QAPP specified acceptance criteria in the MS/MSD pairs using samples SSHS-B86-6-10 (8), SSHS-B73-2-6 (4), SSHS-B99-SS and SSHS-B97-2-6 (5); the recoveries of benzaldehyde in the MS/MSD pair using sample SSHS-B97-2-6 (5) were less than 20% (16% and 17%). Therefore, the undetected values of benzaldehyde in samples SSHS-B86-6-10 (8), SSHS-B73-2-6 (4) and SSHS-B99-SS were UJ qualified as estimated less than the MDL and the undetected value in sample SSHS-B97-2-6 (5) was R qualified as rejected, based on professional and technical judgment and recoveries less than 20%.

The MS/MSD recoveries of benzaldehyde were low and the MS recoveries of 2-nitroaniline and di-n-octyl phthalate were high, outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B82-2-6 (4). Since 2-nitroaniline and di-n-octyl phthalate were not detected in sample SSHS-B82-2-6 (4), no qualifications were applied to the data. However, the undetected value of benzaldehyde in sample SSHS-B82-2-6 (4) was UJ qualified as estimated less than the MDL.

Sample ID	**Compound**	**Laboratory Concentration (µg/kg)**	**Laboratory Flag**	**Validation Concentration (µg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-B73-2-6 (4)	Benzaldehyde	57	U	57	UJ	4
SSHS-B82-2-6 (4)	Benzaldehyde	55	U	55	UJ	4
SSHS-B86-6-10 (8)	Benzaldehyde	56	U	56	UJ	4
SSHS-B97-2-6 (5)	Benzaldehyde	55	U	55	R	4
SSHS-B99-SS	Benzaldehyde	65	U	65	UJ	4

µg/kg-microgram per kilogram
U-not detected at the reported MDL

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five LCSs and one LCS/LCSD pair were reported. The results for the LCSs and LCS/LCSD pair were within the QAPP and laboratory (for 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol only) specified acceptance criteria for recovery and RPD.

2.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

2.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. SVOCs were not detected in the source blank above the MDLs, with the following exceptions.

Bis(2-ethylhexyl) phthalate (soil equivalent concentration 23 µg/kg) and butyl benzyl phthalate (soil equivalent concentration 5.5 µg/kg) were detected at estimated concentrations in the source blank greater than the MDL and less than the RL. Since the soil equivalent concentrations for these compounds were less than the MDLs for the associated samples, no qualifications were applied to the soil samples. Since butyl benzyl phthalate was not detected in the associated water samples, no qualifications were applied to the butyl benzyl phthalate data. However, the estimated concentration of bis(2-ethylhexyl) phthalate in the equipment blank was U qualified as not detected at the RL.

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**
20140813-EQUIPMENT BLANK-SOIL	Bis(2-ethylhexyl) phthalate	0.81	J	1.9	U	3

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL

2.8 Equipment Blank

Two equipment blanks were collected, however only 20140813-EQUIPMENT BLANK-SOIL was analyzed for SVOCs. SVOCs were not detected in the equipment blank above the MDLs, with the following exception.

Bis(2-ethylhexyl) phthalate was detected at an estimated concentration in the equipment blank. Since the concentration of bis(2-ethylhexyl) phthalate in the equipment blank was U qualified as not detected at the RL based on the source blank contamination, no qualifications were applied to the data.

2.9 Field Duplicate

Eight field duplicate samples, DUP-04, DUP-05, DUP-06, DUP-07, DUP-08, DUP-09, DUP-10 and DUP-11, were collected with the sample set. Acceptable precision (RPD ≤50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B98-6-10 (7.5), SSHS-B99-10-14.5 (12), SSHS-B29-A-2-6 (4.5), SSHS-B73-6-10 (8), SSHS-B90-2-6 (4), SSHS-B89-2-6 (5), SSHS-B85-10-15 (12.5) and SSHS-B83-2-6 (5.5), respectively.

Compounds/field duplicate pairs with RPDs greater than 50% had one or both sample results less than five times the RLs; therefore, no qualifications were applied to the data for these compounds.

2.10 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for samples SSHS-91-SS, SSHS-B73-10-15 (12.5) and SSHS-B90-0.17-2 (1) due to dilutions analyzed.

The MDLs and RLs reported were the same as those listed in Tables C.1 and C.2 in the QAPP. In addition, 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol were reported by the laboratory, but not listed in Tables C.1 and C.2 in the QAPP.

2.11 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was truncated to 20140813-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

3.0 ORGANOCHLORINE PESTICIDES

Sixty-one solid samples, eight solid field duplicate samples, five MS/MSD pairs and one equipment blank were analyzed for organochlorine pesticides per EPA Methods 3510C/8081B and 3541/8081B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Sensitivity
- ⊗ Electronic Data Deliverables Review

3.1 Overall Assessment

3.1.1 Completeness

The organochlorine pesticide data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

3.1.2 Analysis Anomalies

The samples were analyzed on two different gas chromatography (GC) columns, per the method protocol. Both PCBs and organochlorine pesticides were reported in some of the samples. Review of the raw data indicated that PCBs 1248 and 1260 were present in these samples; based on professional and technical judgment, the detections of the multi-peak PCBs resulted in false positives for some of the single peak organochlorine pesticides. Therefore, based on professional and technical judgment, for organochlorine pesticides with RPD results between the two columns greater than 25%, the estimated concentrations of the organochlorine pesticides were U qualified as not detected at the RL and concentrations greater than the RL were U qualified as not detected at the reported concentrations. The qualifications are summarized in Attachment 3.

In addition, both estimated pesticide concentrations and concentrations above the RL were flagged by the laboratory with p, indicating the RPD between the two columns was greater than 40% RPD and the lower concentration was reported; PCBs were not detected in these samples. Therefore, based on professional and technical judgment, the p-flagged estimated concentrations were J qualified as estimated. These qualifications are also summarized in Attachment 3.

3.2 Holding Times

The holding times for the pesticide analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for pesticide analysis of waters are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3

3.4 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Seven method blanks were reported with the data (batches 115772, 115781, 115782, 115773, 115889, 116007 and 115137). The organochlorine pesticides were not detected in the method blanks above the MDLs.

3.5 Matrix Spike/Matrix Spike Duplicate

Five sample set specific MS/MSD pairs, using samples SSHS-B86-6-10 (8), SSHS-B82-2-6 (4), SSHS-B73-2-6 (4), SSHS-B99-SS and SSHS-B97-6-10 (8), were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria.

3.6 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six LCSs and one LCS/LCSD pair were analyzed. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

3.7 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria, with the following exceptions.

The tetrachloro-m-xylene (TCX) surrogate recoveries were low and outside the laboratory specified acceptance criteria in samples 20140813-EQUIPMENT BLANK-SOIL and DUP-8. Since the other surrogate, decachlorobiphenyl (DCB), had acceptable recoveries in these two samples, no qualifications were applied to the sample data, based on professional and technical judgment.

3.8 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Organochlorine pesticides were not detected in the source blank above the MDLs, with the following exceptions.

Aldrin and beta-BHC were detected in the source blank at concentrations greater than the RLs, 0.0023 µg/L and 0.0021 µg/L, respectively; the equivalent soil concentrations are 0.15 µg/kg and 0.14 µg/kg, respectively. No qualifications were applied to the soil samples since the equivalent soil concentrations for both aldrin and beta-BHC were less than the soil MDLs. However, due to the source blank contamination, the concentration of aldrin in the equipment blank was U qualified as not detected at the reported concentration.

It was noted that the concentrations of aldrin and beta-BHC in the source blank were J qualified as estimated at the reported concentrations, due to the RPDs between the two GC columns greater than 25%.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
20140813-EQUIPMENT BLANK-SO	Aldrin	0.0040	p	0.0040	U	3

µg/L-microgram per liter
p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported

3.9 Equipment Blank

One equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was collected with the samples and analyzed for organochlorine pesticides. Organochlorine pesticides were not detected in the equipment blank above the MDLs, with the following exceptions.

4,4'-DDD was detected in the equipment blank at an estimated concentration greater than the MDL and less than the RL, 0.00069 µg/L (equivalent soil concentration 0.046 µg/kg). No qualifications were applied to the soil samples since the equivalent soil concentrations for 4,4'-DDD was less than the soil MDL.

In addition, 4,4'-DDE, aldrin, endosulfan sulfate, gamma-chlordane and methoxychlor were detected in the equipment blank at concentrations greater than the RLs, 0.014 µg/L, 0.004 µg/L, 0.0015 µg/L, 0.0021 µg/L and 0.0030 µg/L, respectively (equivalent soil concentrations 0.93 µg/kg, 0.26 µg/kg, 0.10 µg/kg, 0.14 µg/kg and 0.20 µg/kg, respectively). Since the concentration of aldrin in the equipment blank was U qualified as not detected at the reported concentration due to the source blank contamination, no additional qualifications were applied to the aldrin soil data. No qualifications were applied to the soil samples for endosulfan sulfate, gamma-chlordane and methoxychlor since the equivalent soil concentrations were less than the soil MDLs. The concentration of 4,4’-DDE in sample SSHS-B97-2-6 (5) was 16 µg/kg; due to the difference between the sample concentration and the equipment blank concentration, no qualifications were applied to the data, based on professional and technical judgment. The estimated concentration of 4,4’-DDE in sample SSHS-B73-2-6 (4) was U qualified as not detected at the RL due to the equipment blank contamination. 4,4’-DDE was either not detected in the other soil samples or U qualified due to the RPD results between the two columns noted above.

It was noted that concentrations of the organochlorine pesticides detected in the equipment blank were J qualified as estimated at the reported concentrations, due to the RPDs between the two GC columns greater than 25%.

Sample ID	**Compound**	**Laboratory Concentration (µg/kg)**	**Laboratory Flag**	**Validation Concentration (µg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-B73-2-6 (4)	4,4'-DDE	0.80	J	1.9	U	3

µg/kg-microgram per kilogram
J-estimated concentration less than the RL and greater than the MDL

3.10 Field Duplicate

Eight field duplicate samples, DUP-04, DUP-05, DUP-06, DUP-07, DUP-08, DUP-09, DUP-10 and DUP-11, were collected with the sample set. Acceptable precision (RPD ≤50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B98-6-10 (7.5), SSHS-B99-10-14.5 (12), SSHS-B29-A-2-6 (4.5), SSHS-B73-6-10 (8), SSHS-B90-2-6 (4), SSHS-B89-2-6 (5), SSHS-B85-10-15 (12.5) and SSHS-B83-2-6 (5.5), respectively, with the following exceptions.

The RPDs for 4,4'-DDT and gamma-chlordane for field duplicate pair SSHS-B29-A-2-6 (4.5)/DUP-06 were >50% and the concentrations were greater than five times the RL. Therefore, the concentrations of 4,4'-DDT and gamma-chlordane were J qualified as estimated in the field duplicate pair. The other compounds/field duplicate pairs with RPDs greater than 50% had one or both sample concentrations less than five times the RL; therefore, no qualifications were applied to the data for these compounds.

4.1 Overall Assessment

4.1.1 Completeness

The PCB (Aroclor) data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

4.1.2 Analysis Anomalies

The samples were analyzed on two different GC columns. One estimated PCB concentration was flagged by the laboratory with p, indicating the RPD between the two columns was greater than 40% RPD and the lower concentration was reported. Therefore, based on professional and technical judgment, the p-flagged concentration was J qualified as estimated.

Sample ID	**Compound**	**Laboratory Concentration (µg/kg)**	**Laboratory Flag**	**Validation Concentration (µg/kg)**	**Validation Qualifier**	**Reason Code**
DUP-08	PCB-1260	17	J,p	17	J	13

µg/kg-microgram per kilogram
p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported
J-estimated concentration less than the RL and greater than the MDL

4.2 Holding Times

The holding times for PCB analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for PCB analysis of waters are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Seven method blanks were reported with the data (batches 115772, 115781, 115782, 115773, 115889, 116007 and 115137). PCBs were not detected in the method blanks above the MDLs.

4.4 Matrix Spike/Matrix Spike Duplicate

Five sample set specific MS/MSD pairs, using samples SSHS-B86-6-10 (8), SSHS-B82-2-6 (4), SSHS-B73-2-6 (4), SSHS-B99-SS and SSHS-B97-6-10 (8), were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six LCSs and one LCS/LCSD pair were analyzed. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

4.6 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria, with the following exceptions.

The tetrachloro-m-xylene (TCX) surrogate recovery was low and outside the laboratory specified acceptance criteria in sample DUP-07. Since the other surrogate, decachlorobiphenyl (DCB), had acceptable recovery in this sample, no qualifications were applied to the sample data, based on professional and technical judgment.

4.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. PCBs were not detected in the source blank above the MDLs.

4.8 Equipment Blank

Two equipment blanks, 20140813-EQUIPMENT BLANK-GW and 20140813-EQUIPMENT BLANK-SOIL, were collected with the samples. PCBs were not detected in the equipment blank above the MDLs.

4.9 Field Duplicate

Eight field duplicate samples, DUP-04, DUP-05, DUP-06, DUP-07, DUP-08, DUP-09, DUP-10 and DUP-11, were collected with the sample set. Acceptable precision (RPD $\leq$50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B98-6-10 (7.5), SSHS-B99-10-14.5 (12), SSHS-B29-

A-2-6 (4.5), SSHS-B73-6-10 (8), SSHS-B90-2-6 (4), SSHS-B89-2-6 (5), SSHS-B85-10-15 (12.5) and SSHS-B83-2-6 (5.5), respectively.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**RPD**
SSHS-B98-6-10 (7.5)	The PCBs	ND	NA	NA
DUP-04	The PCBs	ND	NA

Sample ID	Compound	Laboratory Result (µg/kg)	Laboratory Flag	RPD
DUP-11	The PCBs	ND	NA	

µg/kg-microgram per kilogram
NA-not applicable
U-not detected at the reported MDL
NC-not applicable
ND-not detected at the MDL

4.10 Sensitivity

The samples were reported to the MDLs. No elevated nondetect results were reported.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP. It was noted that total PCBs were listed in Table C.1 in the QAPP, but not reported by the laboratory.

4.11 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was truncated to 20140813-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

5.0 GASOLINE RANGE ORGANICS

Two groundwater samples and one equipment blank were analyzed for GRO per EPA Methods 5030C/8015D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

5.1 Overall Assessment

The GRO data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

5.2 Holding Times

The holding time for the GRO analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported with the data (batches 143382 and 143606). GRO was not detected in the method blanks above the MDL.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs were reported. The results for the LCSs were within the QAPP specified acceptance criterion for recovery.

5.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

5.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. GRO was not detected in the source blank above the MDLs.

5.8 Equipment Blank

One equipment blank, 20140813-EQUIPMENT BLANK-GW, was collected with the groundwater samples. GRO was not detected in the equipment blank above the MDL.

5.9 Field Duplicate

Eight field duplicate samples were collected with the sample set, but were not analyzed for GRO.

5.10 Sensitivity

The samples were reported to the MDL. No elevated nondetect results were reported. The MDL and RL reported were the same as those listed in Table C.2 in the QAPP.

5.11 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

6.0 DIESEL RANGE ORGANICS

Two groundwater samples and one equipment blank were analyzed for DRO per EPA Methods 3520C/8015D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

6.1 Overall Assessment

The DRO data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

6.2 Holding Times

The holding times for the DRO analysis of a water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 143586). DRO was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The results for the LCS were within the QAPP specified acceptance criterion for recovery.

6.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

6.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. GRO was not detected in the source blank above the MDLs.

6.8 Equipment Blank

One equipment blank, 20140813-EQUIPMENT BLANK-GW, was collected with the groundwater samples. DRO was not detected in the equipment blank above the MDL.

6.9 Field Duplicate

Eight field duplicate samples were collected with the sample set, but were not analyzed for DRO.

6.10 Sensitivity

The samples were reported to the MDLs. The MDLs and RLs reported were the same as those listed in Table C.2 in the QAPP.

6.11 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

7.0 METALS

Sixty-one solid samples, eight field duplicate samples, six MS/MSD pairs and one equipment blank were analyzed for metals per EPA Methods 3005A/6010C and 3050B/6010C (Mercury evaluated separately in Section 8.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Electronic Data Deliverables Review

7.1 Overall Assessment

The metals data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

7.2 Holding Times

The holding times for metals analysis of solids and waters are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

7.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five method blanks were reported with the data (batches 115461, 115463, 115029, 115465 and 116034). The metals were not detected in the method blanks above the MDLs, with the following exceptions.

Cadmium, nickel, potassium, sodium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115461. Since nickel and zinc were detected in the associated samples at concentrations greater than the RLs, no qualifications were applied to the data. However, the estimated concentrations of cadmium, potassium and sodium in the associated samples were U qualified as not detected at the RLs.

Barium, calcium, iron, magnesium, potassium, sodium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115463. Since barium, iron, magnesium and zinc were detected in the associated samples at concentrations greater than the RLs, no qualifications were applied to the data for these metals. However, the estimated concentrations of sodium, potassium and calcium in the associated samples were U qualified as not detected at the RLs.

Barium, cadmium, potassium, sodium, vanadium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115465. Since barium, vanadium and zinc were detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the data. However, the estimated concentrations of sodium, cadmium and potassium in the associated samples were U qualified as not detected at the RLs.

Chromium, nickel, silver, sodium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 116034. Since chromium, nickel and zinc were detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the data. However, the estimated concentrations of sodium and silver in the associated samples were U qualified as not detected at the RLs.

Potassium and sodium were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115029. Therefore, the estimated concentrations of sodium and potassium in the associated samples were U qualified as not detected at the RLs.

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL
B-compound detected in both the method blank and sample

7.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). Six sample set specific MS/MSD pairs, using samples SSHS-B86-6-10 (8), SSHS-B82-2-6 (4), SSHS-B73-2-6 (4), SSHS-B97-2-6 (5), SSHS-B99-SS and EQUIPMENT BLANK-SOIL were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria, with the following exceptions.

One or both of the recoveries of antimony, barium and zinc were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B86-6-10 (8). In addition, a post digestion spike (PDS) was also analyzed and had recovery results for antimony and barium within the laboratory specified acceptance criteria; the PDS recovery of zinc was low and outside the laboratory specified acceptance limits. Therefore, the concentration of barium was J qualified as estimated, the undetected value of antimony was UJ qualified as estimated less than the MDL and the concentration of zinc was J- qualified as estimated with a low bias in sample SSHS-B86-6-10 (8).

One or both of the recoveries of antimony and calcium were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B82-2-6 (4). In addition, a PDS was analyzed and had recovery results for antimony and calcium within the laboratory specified acceptance criteria. Therefore, the undetected value of antimony in sample SSHS-B82-2-6 (4) was UJ qualified as estimated less than the MDL and the concentration of calcium was J qualified as estimated.

One or both of the recoveries of antimony, lead and zinc were low, the recoveries of calcium, nickel and magnesium were high and chromium and copper had recoveries that were both low and high, outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B73-2-6 (4). Also, the RPDs for calcium, chromium, copper, magnesium and nickel were high and outside the QAPP specified acceptance criteria. A PDS was analyzed and had recovery results for these metals within the laboratory specified acceptance criteria. Therefore, the undetected value of antimony in sample SSHS-B73-2-6 (4) was UJ qualified as estimated less than the MDL and the concentrations of calcium, chromium, copper, lead, magnesium, nickel and zinc were J qualified as estimated.

The recoveries of antimony were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B99-SS. A PDS was analyzed and had a recovery result for antimony within the laboratory specified acceptance criteria. Therefore, the undetected value of antimony in sample SSHS-B99-SS was UJ qualified as estimated less than the MDL.

The recoveries of antimony and copper were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B97-2-6 (5). Also, the recovery of magnesium in the MS and the RPD for magnesium were high and outside the QAPP specified acceptance criteria. A PDS was analyzed and had recovery results for these metals within the laboratory specified acceptance criteria. Therefore, the undetected value of antimony in sample SSHS-B97-2-6 (5) was UJ qualified as estimated less than the MDL and the concentrations of copper and magnesium were J qualified as estimated.

It was noted that the recovery criteria for aluminum, iron and manganese were not applicable since the concentrations of these three metals in samples SSHS-B86-6-10 (8), SSHS-B82-2-6 (4), SSHS-B73-2-6 (4), SSHS-B97-2-6 (5), SSHS-B99-SS were greater than four times the spike concentrations. Also, the recovery criteria for calcium were not applicable in sample SSHS-B97-2-6 (5) since the calcium concentration was greater than four times the spike concentration. No qualifications were applied to the data.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
SSHS-B97-2-6 (5)	Antimony	0.20	U	0.20	UJ	4
SSHS-B97-2-6 (5)	Copper	23	NA	23	J	4
SSHS-B97-2-6 (5)	Magnesium	3900	NA	3900	J	4
SSHS-B99-SS	Antimony	0.24	U	0.24	UJ	4
SSHS-B73-2-6 (4)	Antimony	0.22	U	0.22	UJ	4
SSHS-B73-2-6 (4)	Calcium	6500	B	6500	J	4

SSHS-B73-2-6 (4)	Magnesium	2700	B	2700	J	4
SSHS-B73-2-6 (4)	Nickel	28	NA	28	J	4
SSHS-B73-2-6 (4)	Zinc	64	B	64	J	4
SSHS-B82-2-6 (4)	Antimony	0.22	U	0.22	UJ	4
SSHS-B82-2-6 (4)	Calcium	8800	B	8800	J	4
SSHS-B86-6-10 (8)	Antimony	0.22	U	0.22	UJ	4
SSHS-B86-6-10 (8)	Barium	100	NA	100	J	4
SSHS-B86-6-10 (8)	Zinc	72	B	72	J-	4

mg/kg-milligram per kilogram
B-metal was detected in both the method blank and the sample
U-not detected at the reported MDL
NA-not applicable

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five LCSs were analyzed. The results for the LCSs were within the QAPP specified acceptance criteria for recovery.

7.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. The metals were not detected in the source blank above the MDLs, with the following exceptions.

Potassium and sodium were detected at estimated concentrations greater than the MDLs and less the RLs. Since the potassium and sodium concentrations in the source blank were U qualified as not detected at the RL based on the method blank contamination, no additional qualifications were applied to the potassium and sodium data.

7.7 Equipment Blank

One equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was collected with the soil samples. Metals were not detected in the equipment blank above the MDLs, with the following exceptions.

Calcium, iron, manganese, potassium and sodium were detected at estimated concentrations greater than the MDLs and less than the RLs. Since the potassium and sodium concentrations in the equipment blank were U qualified as not detected above the RL based on the method blank contamination and the calcium, iron and manganese concentrations in the associated samples were greater than the RLs, no qualifications were applied to the data.

7.8 Field Duplicate

Eight field duplicate samples, DUP-04, DUP-05, DUP-06, DUP-07, DUP-08, DUP-09, DUP-10 and DUP-11, were collected with the sample set. Acceptable precision (RPD $\leq$50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B98-6-10 (7.5), SSHS-B99-10-14.5 (12), SSHS-B29-A-2-6 (4.5), SSHS-B73-6-10 (8), SSHS-B90-2-6 (4), SSHS-B89-2-6 (5), SSHS-B85-10-15 (12.5) and SSHS-B83-2-6 (5.5), respectively, with the following exceptions.

The RPDs for chromium and copper for field duplicate pair SSHS-B98-6-10 (7.5)/DUP-04, calcium and nickel in field duplicate pair SSHS-B29-A-2-6 (4.5)/DUP-06 and lead and manganese in field duplicate pair SSHS-B73-6-10 (8)/DUP-07 were >50% and the concentrations were greater than five times the RL. Therefore, the concentrations of these metals were J qualified as estimated in the field duplicate pairs.

NC-not applicable
ND-not detected at or above the MDL
NA-not applicable

7.9 Sensitivity

The samples were reported to the MDLs. No elevated nondetect results were reported. The MDLs and RLs were the same as those listed in Table C.1 in the QAPP.

7.10 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was truncated to 20140813-EQUIPMENT BLANK-SO and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

8.0 MERCURY

Sixty-one solid samples, eight field duplicate samples, five MS/MSD pairs and one equipment blank were analyzed for mercury per EPA Methods 7470A and 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Electronic Data Deliverables Review

8.1 Overall Assessment

The mercury data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

8.2 Holding Times

The holding times for mercury analyses of water and solid samples are 28 days from sample collection to analysis. The holding times were met for the sample analyses.

8.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 115583, 115584, 115922, 115923, 115423 and 115924). Mercury was not detected in the method blanks above the MDL.

8.4 Matrix Spike/Matrix Spike Duplicate

Five sample set specific MS/MSD pairs, using samples SSHS-B82-2-6 (4), SSHS-B86-6-10 (8), SSHS-B73-2-6 (4), SSHS-B99-SS and SSHS-B29-A-2-6 (4.5) were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria.

8.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five LCSs and one LCS/LCSD pair were analyzed. The result for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

8.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Mercury was not detected in the source blank above the MDL.

8.7 Equipment Blank

One equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was collected with the samples. Mercury was not detected in the equipment blank above the MDL.

8.8 Field Duplicate

Eight field duplicate samples, DUP-04, DUP-05, DUP-06, DUP-07, DUP-08, DUP-09, DUP-10 and DUP-11, were collected with the sample set. Acceptable precision (RPD ≤50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B98-6-10 (7.5), SSHS-B99-10-14.5 (12), SSHS-B29-A-2-6 (4.5), SSHS-B73-6-10 (8), SSHS-B90-2-6 (4), SSHS-B89-2-6 (5), SSHS-B85-10-15 (12.5) and SSHS-B83-2-6 (5.5), respectively.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD

NA-not applicable

8.9 Sensitivity

The samples were reported to the MDL. No elevated nondetect results were reported. The MDL and RL were the same as those listed in Table C.1 in the QAPP.

8.10 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was truncated to 20140813-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDDs.

9.0 CYANIDE

Sixty-one solid samples, eight field duplicate samples, four MS/MSD pairs and one equipment blank were analyzed for cyanide per EPA Methods 9010C/9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Electronic Data Deliverables Review

9.1 Overall Assessment

The cyanide data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

9.2 Holding Times

The holding time for cyanide analysis of a waters and solids is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

9.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 115269, 115397, 115467, 115561, 115605 and 115650). Cyanide was not detected in the method blanks above the MDL.

9.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). Three MSs, using samples SSHS-B85-6-10 (8), SSHS-91-10-15 (12.5) and SSHS-B29-A-10-12 (11.5) and four sample set specific MS/MSD pairs, using samples SSHS-B86-6-10 (8), SSHS-B82-2-6 (4), SSHS-B73-2-6 (4) and SSHS-B99-SS were reported. The MSs and MS/MSD pairs had recovery and RPD results within the laboratory specified acceptance criteria; there were no cyanide acceptance criteria in the QAPP.

9.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six LCSs, six low LCSs (LLCSs) and six high LCSs (HLCSs) were reported. The results for the LCSs, LLCSs and HCLSs were within the laboratory specified acceptance criteria for recovery; there were no cyanide acceptance criteria in the QAPP.

9.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Cyanide was not detected in the source blank above the MDL.

9.7 Equipment Blank

One equipment blank, 20140813-EQUIPMENT BLANK-SOIL, was collected with the soil samples. Cyanide was not detected in the equipment blank above the MDL.

9.8 Field Duplicate

Eight field duplicate samples, DUP-04, DUP-05, DUP-06, DUP-07, DUP-08, DUP-09, DUP-10 and DUP-11, were collected with the sample set. Acceptable precision (RPD ≤50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B98-6-10 (7.5), SSHS-B99-10-14.5 (12), SSHS-B29-A-2-6 (4.5), SSHS-B73-6-10 (8), SSHS-B90-2-6 (4), SSHS-B89-2-6 (5), SSHS-B85-10-15 (12.5) and SSHS-B83-2-6 (5.5), respectively.

Sample ID	**Compound**	**Laboratory Result (mg/kg)**	**Laboratory Flag**	**RPD**

NC-not calculable

9.9 Sensitivity

The samples were reported to the MDLs. No elevated nondetect results were reported. MDLs and RLs were not listed for cyanide in Table C.1 in the QAPP.

9.10 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

ATTACHMENT 3
Organochlorine Pesticide Qualifications Due to RPDs between GC Columns

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of seventy-five solid samples, eight solid field duplicate samples, one groundwater sample, four matrix spike/matrix spike duplicate (MS/MSD) pairs, one equipment blank and one trip blank, collected on August 14, 2014, as part of the Former Sperry Remington Site-North sampling event. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- EPA Methods 5030C/8260C and 5035/8260C - Volatile Organic Compounds (VOCs) and Tentatively Identified Compounds (TICs)
- EPA Methods 3520C/8270D and 3541/8270D - Semivolatile Organic Compounds (SVOCs) and TICs
- EPA Methods 3510C/8081B and 3541/8081B – Organochlorine Pesticides
- EPA Methods 3510C/8082A and 3541/8082A - Polychlorinated Biphenyls (PCBs)

- EPA Methods 5030C/8015D - Gasoline Range Organics (GRO)
- EPA Methods 3520C/8015D - Diesel Range Organics (DRO)
- EPA Methods 3005A/6010C and 3050B/6010C – Metals
- EPA Methods 7470A and 7471B – Mercury
- EPA Methods 9010C/9014 - Cyanide
- Standard Method 2540G - Percent Moisture/Solids

EXECUTIVE SUMMARY

The samples were handled, prepared and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exceptions.

The concentration of hexachlorocyclopentadiene in sample SSHS-B26-A-GW-18-22 was R qualified as rejected based on MS/MSD recoveries less than 20% and technical and professional judgment. In addition, the concentrations of benzaldehyde in samples DUP-18 and DUP-19 were R qualified as rejected based on laboratory control sample (LCS) recovery less than 20% and technical and professional judgment.

All other qualified data should be used within the limitations of the qualification.

The organic data were reviewed based on the Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP), Former Sperry Remington Site-North Portion, 777 South Main Street, City of Elmira, Chemung County, NY, NYSDEC Project 808022, Geosyntec Project Number MN0832, July 2014, Agency Review Draft, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008 (USEPA-540-R-08-01), as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The inorganic data were reviewed based on the QAPP/FSP, USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, OSWER 9240.1-51, EPA 540-R-10-011, January 2010, as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The following samples were analyzed and validated at a Stage 2A level in the data set:

Laboratory ID	Client ID
180-35818-1	SSHS-B65-0.17-2 (1)
180-35818-2	SSHS-B65-4-6 (4)

180-35818-85	20140814-EQUIPMENT BLANK- S
180-35818-86	TRIP BLANK

The samples were received at the laboratory at temperatures within the QAPP criteria of <6°C. No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the chain of custody (COC). The proper procedure of a single strike-through correction and initials and date of the person making the correction was not followed.

No times of collection were listed on the COC for the trip blank and field duplicate samples. The laboratory assigned the collection times of 00:00.

It was noted that the time of laboratory receipt noted on the COC was 13:15; the laboratory reports indicated that the time of laboratory receipt was 9:10. This discrepancy did not have an impact on the sample analyses.

It was noted that the sample ID for the equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was truncated to 20140814-EQUIPMENT BLANK-S in the electronic data deliverable (EDD). In addition, the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC.

The solids data, used to report the samples on a dry weight bases, were not validated. In addition, TICs were reported with the VOC and SVOC data. As there is no validation guidance for TICs, the TIC data were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

Seventy-five solid samples, eight field duplicate samples, one groundwater sample, four MS/MSD pairs, one equipment blank and one trip blank were analyzed for VOCs per EPA Methods 5030C/8260C and 5035/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times

1.1 Overall Assessment

The VOC data reported in this package are considered to be usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

1.2 Holding Times

The holding times for a solid sample are 48 hours from collection to extraction and 14 days from collection to analysis. The holding time for a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Eleven method blanks were reported with the data (batches 115034, 115168, 115346, 115538, 115910, 115669, 115716, 115779, 115838, 115842 and 115874). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate

Four sample set specific MS/MSD pairs, using samples SSHS-B67-2-6 (4.5), SSHS-B26-A-GW-18-22, SSHS-B75-2-6 (3) and SSHS-B79-2-6 (4.5) were reported. The MS/MSD pairs had recovery and relative percent difference (RPD) results within the QAPP and laboratory (for 1,4-

dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria, with the following exceptions.

The recovery of carbon tetrachloride in the MSD and the RPD of 1,1-dichloroethene in the MS/MSD pair using sample SSHS-B67-2-6 (4.5) were high and outside the QAPP specified acceptance criteria. Since carbon tetrachloride and 1,1-dichloroethene were not detected in sample SSHS-B67-2-6 (4.5), no qualifications were applied to the data.

1.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Seven LCSs and four LCS/LCS duplicate (LCSD) pairs were reported. The results for the LCSs and LCS/LCSD pairs were within the QAPP and laboratory (for 1,4-dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria for recovery and RPD, with the following exceptions.

The recovery of cis-1,3-dichloropropene in the LCSD and the RPDs of 1,2-dibromoethane and 4-methyl-2-pentanone in the LCS/LCSD pair were high and outside the QAPP specified acceptance criteria in batch 115716. Since these three compounds were not detected in the associated samples, no qualifications were applied to the data.

One or both recoveries of carbon tetrachloride, trans-1,2-dichloroethene, 1,1,1-trichloroethane and 1,1,2-trichloro-1,2,2-trifluoroethane in the LCS/LCSD pair were high and outside the QAPP specified acceptance criteria in batch 115779. Since these four compounds were not detected in the associated samples, no qualifications were applied to the data.

The recoveries of bromomethane and chloroethane in the LCSD and the RPD of chloroethane in the LCS/LCSD pair were high and outside the QAPP specified acceptance criteria in batch 115842. Also, the recovery of 1,2-dibromoethane in the LCSD was low and outside the QAPP specified acceptance criteria. Since bromomethane and chloroethane were not detected in the associated samples, no qualifications were applied to the bromomethane and chloroethane data. However, the undetected value of 1,2-dibromoethane in the associated sample was UJ qualified as estimated less than the MDL.

One or both recoveries of carbon tetrachloride, trans-1,2-dichloroethene, 1,1,1-trichloroethane and 1,1,2-trichloro-1,2,2-trifluoroethane in the LCS/LCSD pair were high and outside the QAPP specified acceptance criteria in batch 115874. Since carbon tetrachloride, trans-1,2-dichloroethene and 1,1,1-trichloroethane were not detected in the associated samples, no qualifications were applied to the carbon tetrachloride, trans-1,2-dichloroethene and 1,1,1-

trichloroethane data. However, the detected concentration of 1,1,2-trichloro-1,2,2-trifluoroethane in the associated sample was J qualified as estimated.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**Validation Result (µg/kg)**	**Validation Qualifier[1]**	**Reason Code[2]**
SSHS-B26-A-SS	1,2-Dibromoethane	36	U,*	36	UJ	5
DUP-16	1,1,2-Trichloro-1,2,2-trifluoroethane	9.2	*	9.2	J	5

µg/kg-microgram per kilogram
U-not detected at the reported MDL
*-LCS/LCSD recovery or RPD exceeds the control limits
[1]-Validation qualifiers are defined in Attachment 1 at the end of this report
[2]-Reason codes are defined in Attachment 2 at the end of this report

1.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses, with the following exception.

The recovery of dibromofluoromethane in sample DUP-17 was high and outside the laboratory specified acceptance criteria. Since the other three surrogate recoveries were within the laboratory specified acceptance criteria for sample DUP-17, no qualifications were applied to the data, based on technical and professional judgment.

1.7 Trip Blank

One trip blank, TRIP BLANK, accompanied the sample shipment. VOCs were not detected in the trip blank above the MDLs.

1.8 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. VOCs were not detected in the source blank above the MDLs.

1.9 Equipment Blank

An equipment blank, 20140814-EQUIPMENT BLANK- SOIL, was collected with the sample set. VOCs were not detected in the equipment blank above the MDLs.

1.10 Field Duplicate

Eight field duplicate samples, DUP-12, DUP-13, DUP-14, DUP-15, DUP-16, DUP-17, DUP-18 and DUP-19, were collected with the sample set. Acceptable precision [RPD ≤50% if both results are greater than five times the reporting limit (RL)] was demonstrated between the field duplicates and the original samples, SSHS-B81-2-6 (4), SSHS-B84-6-10 (8), SSHS-B78-2-6 (3.5), SSHS-B80-2-6 (5), SSHS-B26-A-13.5-15.5 (15), SSHS-B101-3-6 (4), SSHS-B69-4-6R (5) and SSHS-B77-6-10 (8), respectively.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**RPD**
SSHS-B81-2-6 (4)	The VOCs	ND	NA	0
DUP-12	The VOCs	ND	NA	
SSHS-B84-6-10 (8)	The VOCs	ND	NA	0
DUP-13	The VOCs	ND	NA	
SSHS-B78-2-6 (3.5)	The VOCs	ND	NA	0
DUP-14	The VOCs	ND	NA	
SSHS-B80-2-6 (5)	The VOCs	ND	NA	0
DUP-15	The VOCs	ND	NA	
SSHS-B26-A-13.5-15.5 (15)	1,1,2-Trichloro-1,2,2-trifluoroethane	1.2	J	NC
DUP-16	1,1,2-Trichloro-1,2,2-trifluoroethane	9.2	*	
SSHS-B26-A-13.5-15.5 (15)	Trichloroethene	0.55	U	NC
DUP-16	Trichloroethene	1.1	J	
SSHS-B26-A-13.5-15.5 (15)	The VOCs	ND	NA	0

SSHS-B101-3-6 (4)	Trichloroethene	3.4	J	NC
DUP-17	Trichloroethene	3.3	J	
SSHS-B101-3-6 (4)	The VOCs	ND	NA	0
DUP-17	The VOCs	ND	NA	
SSHS-B69-4-6R (5)	The VOCs	ND	NA	0
DUP-18	The VOCs	ND	NA	
SSHS-B77-6-10 (8)	The VOCs	ND	NA	0
DUP-19	The VOCs	ND	NA	

µg/kg-microgram per kilogram
U-not detected at the reported MDL
J-estimated concentration less than the RL and greater than the MDL
*-LCS/LCSD recovery or RPD exceeds the control limits
NC-not calculable
ND-not detected at the MDL
NA-not applicable

1.11 Sensitivity

The samples were reported to the MDLs. No elevated nondetect results were reported.

The MDLs and RLs were the same as those listed in Tables C.1 and C.2 in the QAPP. It was noted that total 1,2-dichloroethene and total xylenes were not reported by the laboratory, but cis- and trans- 1,2-dichloroethene and o- and m&p- xylenes were reported. The summation of the MDLs and RLs for cis- and trans-1,2-dichloroethene and o- and m-&p-xylene were within the QAPP criteria for total 1,2-dichloroethene and total xylenes, respectively. In addition, 1,4-dioxane and 1,2,3-trichlorobenzene were reported by the laboratory, but not listed in Tables C.1 and C.2 in the QAPP.

The water sample MDLs for 1,2-dibromo-3-chloropropane and 1,2-dibromoethane were greater than the screening criteria listed in Table C.2 of the QAPP.

Compound	**Laboratory MDL (µg/L)**	**QAPP Screening Criteria (µg/L)**
1,2-Dibromoethane	0.18	0.00060
1,2-Dibromo-3-Chloropropane	0.14	0.040

µg/L-microgram per liter

1.12 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was truncated to 20140814-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

Seventy-five solid samples, eight solid field duplicate samples, one groundwater sample and one equipment blank was analyzed for SVOCs per EPA Methods 3520C/8270D and 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverables Review

2.1 Overall Assessment

2.1.1 Completeness

The SVOC data reported in this package are considered to be usable for meeting project objectives, with the following exceptions. The concentration of hexachlorocyclopentadiene in sample SSHS-B26-A-GW-18-22 was rejected based on MS/MSD recoveries less than 20% and technical and professional judgment. The concentrations of benzaldehyde in samples DUP-18 and DUP-19 were rejected based on LCS recovery less than 20% and technical and professional judgment. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 99.96%.

2.1.2 Analysis Anomaly

Sample SSHS-B70-6-10 (7.5) was reported at both an undiluted analysis and 1:4 dilution. The concentration of fluoranthene in the undiluted analysis was E flagged by the laboratory indicating the result exceeded the calibration range. Therefore, the fluoranthene result was the only result validated from the 1:5 dilution. The remaining compounds were validated from the undiluted analysis. The results not considered for validation were set to not reportable in the EDD with qualifier file (a column was added to the EDD with qualifier file).

2.2 Holding Times

The holding times for SVOC analysis of a solid sample are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for SVOC analysis of a water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Seven method blanks were reported with the data (batch 116124, 116125, 116222, 116244, 116269, 115091 and 115557). SVOCs were not detected in the method blanks above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

Six sample set specific MS/MSD pairs, using sample DUP-17, SSHS-B67-2-6 (4.5), SSHS-B26-A-GW-18-22, SSHS-B75-2-6 (3), SSHS-B79-2-6 (4.5) and SSHS-B84-6-10 (8) were reported. The MS/MSD pairs had recovery and RPD results within the QAPP and laboratory (for 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol only) specified acceptance criteria, with the following exceptions.

The recoveries of benzaldehyde in the MS/MSD pairs using samples SSHS-B67-2-6 (4.5), SSHS-B75-2-6 (3), SSHS-B79-2-6 (4.5) and DUP-17 were low and outside the QAPP specified acceptance criteria. Therefore, the undetected values of benzaldehyde in these samples were UJ qualified as estimated less than the MDL and the detected concentration was J qualified as estimated.

One or both recoveries of butyl benzyl phthalate, chrysene, 2,4-dimethylphenol, 2-methylnaphthalene, 2-methylphenol and pyrene in the MS/MSD pair using sample SSHS-B26-A-GW-18-22 were low and outside the QAPP specified acceptance criteria. In addition, the recoveries of hexachlorocyclopentadiene were less than 20% (both 1%) and outside the QAPP specified acceptance criteria. Therefore, the undetected values of butyl benzyl phthalate, chrysene, 2,4-dimethylphenol, 2-methylnaphthalene, 2-methylphenol and pyrene in sample SSHS-B26-A-GW-18-22 were UJ qualified as estimated less than the MDLs and the detected concentrations were J qualified as estimated. The undetected value of hexachlorocyclopentadiene in sample SSHS-B26-A-GW-18-22 was R qualified as rejected, due to professional and technical judgment and recoveries less than 20%.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**Validation Result (µg/kg)**	**Validation Qualifier**	**Reason Code**

NA-not applicable

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six LCSs and one LCS/LCSD pair were reported. The results for the LCSs and LCS/LCSD pair were within the QAPP and laboratory (for 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol only) specified acceptance criteria for recovery and RPD, with the following exceptions.

The recovery of benzaldehyde in the LCS in batch 116125 was low and outside the QAPP specified acceptance criteria. Therefore, the undetected values of benzaldehyde in the associated samples were UJ qualified as estimated less than the MDL and the detected concentration was J qualified as estimated.

The recovery of benzaldehyde in the LCS in batch 116269 was less than 20% (10%) and outside the QAPP specified acceptance criteria. Therefore, the undetected values of benzaldehyde in the associated samples were R qualified as rejected and the detected concentration was J qualified as estimated, due to professional and technical judgment and recoveries less than 20%.

J-estimated concentration greater than the MDL and less than the RL
*- LCS or LCSD exceeds the control limits

2.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

2.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. SVOCs were not detected in the source blank above the MDLs, with the following exceptions.

Bis(2-ethylhexyl) phthalate (soil equivalent concentration 22 µg/kg) and butyl benzyl phthalate (soil equivalent concentration 5.3 µg/kg) were detected at estimated concentrations greater than the MDL and less than the RL in the source blank. Since the soil equivalent concentrations for these compounds were less than the MDLs for the associated samples, no qualifications were applied to the soil samples. However, the estimated concentrations of bis(2-ethylhexyl) phthalate and butyl benzyl phthalate in the equipment blank were U qualified as not detected at the RLs.

Sample ID	**Compound**	**Laboratory Result (µg/L)**	**Laboratory Flag**	**Validation Result (µg/L)**	**Validation Qualifier**	**Reason Code**
20140814-EQUIPMENT BLANK-SOIL	Bis(2-ethylhexyl) phthalate	1.3	J	1.9	U	3
20140814-EQUIPMENT BLANK-SOIL	Butyl benzyl phthalate	0.67	J	0.93	U	3

µg/L-microgram per liter
J-estimated concentration greater than the MDL and less than the RL
NA-not applicable

2.8 Equipment Blank

One equipment blank, 20140814-EQUIPMENT BLANK- SOIL, was collected with the samples. SVOCS were not detected in the equipment blank above the MDLs, with the following exceptions.

Bis(2-ethylhexyl) phthalate, butyl benzyl phthalate and phenol were detected at estimated concentrations greater than the MDLs and less than the RLs in the equipment blank. Since the concentrations of bis(2-ethylhexyl) phthalate and butyl benzyl phthalate in the equipment blank were U qualified as not detected at the RLs and phenol was not detected in the associated samples, no qualifications were applied to the data.

2.9 Field Duplicate

Eight field duplicate samples, DUP-12, DUP-13, DUP-14, DUP-15, DUP-16, DUP-17, DUP-18 and DUP-19, were collected with the sample set. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B81-2-6 (4), SSHS-B84-6-10 (8), SSHS-B78-2-6 (3.5), SSHS-B80-2-6 (5), SSHS-B26-A-13.5-15.5 (15), SSHS-B101-3-6 (4), SSHS-B69-4-6R (5) and SSHS-B77-6-10 (8), respectively, with the following exception.

The RPD for phenanthrene was >50% for field duplicate pair SSHS-B101-3-6 (4)/DUP-17 and the concentrations were greater than five times the RL. Therefore, the concentrations of phenanthrene in the field duplicate pair were J qualified as estimated. The other compounds/field duplicate pairs with RPDs greater than 50% had one or both sample concentrations less than five times the RL; therefore, per the specifications of the QAPP, no qualifications were applied to the data for these compounds.

2.10 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for samples SSHS-B66-6-8R (7), DUP-18 and SSHS-B75-0.17-2 (1.5) due to the dilutions analyzed.

The MDLs and RLs reported were the same as those listed in Table C.1 in the QAPP. In addition, 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol were reported by the laboratory, but not listed in Table C.1 in the QAPP.

2.11 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was truncated to 20140814-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

3.0 ORGANOCHLORINE PESTICIDES

Seventy-five solid samples, eight solid field duplicate samples, five MS/MSD pairs and one equipment blank were analyzed for organochlorine pesticides per EPA Methods 3510C/8081B and 3541/8081B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

3.1 Overall Assessment

3.1.1 Completeness

The organochlorine pesticide data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

3.1.2 Analysis Anomalies

The samples were analyzed on two different gas chromatography (GC) columns, per the method protocol. Both PCBs and organochlorine pesticides were reported in the samples. Review of the raw data indicated that PCBs 1248 and 1260 were present in the samples; based on professional and technical judgment, the detections of the multi-peak PCBs resulted in false positives for some of the single peak organochlorine pesticides. Therefore, based on professional and technical judgment, for organochlorine pesticides with RPD results between the two columns greater than 25%, the estimated concentrations of the organochlorine pesticides were U qualified as not detected at the RL and concentrations greater than the RL were U qualified as not detected at the reported concentration. The qualifications are summarized in Attachment 3.

In addition, both estimated pesticide concentrations and concentrations above the RL were flagged by the laboratory with p, indicating the RPD between the two columns was greater than 40% RPD and the lower concentration was reported; PCBs were reported as not detected in these samples. Therefore, based on professional and technical judgment, the p-flagged concentrations were J qualified as estimated. These qualifications are also summarized in Attachment 3.

3.2 Holding Times

The holding times for the pesticide analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for pesticide analysis of waters are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 116007, 116127, 116128, 116262, 116270 and 115137). Organochlorine pesticides were not detected in the method blanks above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

Five sample set specific MS/MSD pairs, using samples SSHS-B67-2-6 (4.5), SSHS-B83-0.17-2 (1), SSHS-B75-2-6 (3), SSHS-B79-2-6 (4.5) and DUP-14, were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria, with the following exceptions.

Most of the recoveries and RPD results were outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B67-2-6 (4.5). The sample contained PCBs 1248 and 1260, which caused interference with the quantitation of the organochlorine pesticides; the sample was analyzed at a 1:200 dilution to quantitate PCBs 1248 and 1260. Therefore, based on professional and technical judgment, no qualifications were applied to sample SSHS-B67-2-6 (4.5) based the sample concentrations of PCBs.

The RPD was high and outside the QAPP specified acceptance criteria for endrin aldehyde in the MS/MSD pair using sample SSHS-B83-0.17-2 (1). Since endrin aldehyde was not detected in sample SSHS-B83-0.17-2 (1), no qualifications were applied to the data.

One or both of the recoveries of endrin aldehyde and alpha-chlordane were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B79-2-6 (4.5); in addition, the RPD for endrin aldehyde was high and outside the QAPP specified acceptance criteria. Since endrin aldehyde and alpha-chlordane were not detected in sample SSHS-B79-2-6 (4.5), the undetected values of these two compounds were UJ qualified as estimated less than the MDLs in sample SSHS-B79-2-6 (4.5), due to the low recoveries.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**Validation Result (µg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-B79-2-6 (4.5)	alpha-Chlordane	0.36	U	0.36	UJ	4
SSHS-B79-2-6 (4.5)	Endrin aldehyde	0.35	U	0.35	UJ	4

µg/kg-microgram per kilogram
U-not detected at the reported MDL

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five LCSs and one LCS/LCSD pair were analyzed. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

3.6 Surrogate

The surrogate recoveries were within the QAPP specified acceptance criteria, with the following exceptions.

The tetrachloro-m-xylene (TCX) surrogate recoveries were high and outside the QAPP specified acceptance criteria in samples 20140814-EQUIPMENT BLANK-SOIL, SSHS-B69-2-4 (4) and DUP-18. Since the other surrogate, decachlorobiphenyl (DCB), had acceptable recoveries in these three samples, no qualifications were applied to the sample data, based on professional and technical judgment.

3.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Organochlorine pesticides were not detected in the source blank above the MDLs, with the following exceptions.

Aldrin and beta-BHC were detected in the source blank at concentrations greater than the RLs, 0.0023 µg/L and 0.0021 µg/L, respectively; the equivalent soil concentrations are 0.15 µg/kg and 0.14 µg/kg, respectively. No qualifications were applied to the soil samples since the equivalent soil concentrations for both aldrin and beta-BHC were less than the soil MDLs. However, due to the source blank contamination, the concentration of beta-BHC in the equipment blank was U qualified as not detected at the reported concentration.

It was noted that the concentrations of aldrin and beta-BHC in the source blank were J qualified as estimated at the reported concentrations, due to the RPDs between the two GC columns greater than 25%.

Sample ID	**Compound**	**Laboratory Concentration (µg/L)**	**Laboratory Flag**	**Validation Concentration (µg/L)**	**Validation Qualifier**	**Reason Code**
20140814-EQUIPMENT BLANK- S	beta-BHC	0.0019	p	0.0019	U	3

µg/L-microgram per liter
p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported

3.8 Equipment Blank

One equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was collected with the samples. Organochlorine pesticides were not detected in the equipment blank above the MDLs, with the following exception.

beta-BHC was detected in the equipment blank at a concentration greater than the RL, 0.0019 µg/L. Since the beta-BHC concentration in the equipment blank was U qualified as not detected at the reported concentration due to the source blank contamination, no additional qualifications were applied to the data.

3.9 Field Duplicate

Eight field duplicate samples, DUP-12, DUP-13, DUP-14, DUP-15, DUP-16, DUP-17, DUP-18 and DUP-19, were collected with the sample set. Acceptable precision (RPD ≤50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B81-2-6 (4), SSHS-B84-6-10 (8), SSHS-B78-2-6 (3.5), SSHS-B80-2-6 (5), SSHS-B26-A-13.5-15.5 (15), SSHS-B101-3-6 (4), SSHS-B69-4-6R (5) and SSHS-B77-6-10 (8), respectively, with the following exceptions.

The RPDs for aldrin, alpha-chlordane and endrin aldehyde were >50% for field duplicate pair SSHS-B69-4-6R (5)/DUP-18 and the concentrations were greater than five times the RL. Therefore, the concentrations of aldrin, alpha-chlordane and endrin aldehyde in the field duplicate pair were J qualified as estimated.

p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported
NC-not calculable
ND-not detected at the MDL

3.10 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for samples SSHS-B67-0.17-2 (1) and SSHS-B69-2-4 (4) due to the dilutions analyzed.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP.

3.11 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was truncated to 20140814-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

4.0 POLYCHLORINATED BIPHENYLS

Seventy-five solid samples, eight solid field duplicate samples, five MS/MSD pairs and one equipment blank were analyzed for PCBs per EPA Methods 3510C/8082 and 3541/8082.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverables Review

4.1 Overall Assessment

4.1.1 Completeness

The PCB (Aroclor) data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

4.1.2 Analysis Anomalies

The samples were analyzed on two different GC columns. One PCB concentration, in sample SSHS-B66-6-8R (7), was flagged by the laboratory with p, indicating the RPD between the two columns was greater than 40% RPD and the lower concentration was reported. Therefore, based on professional and technical judgment, the p-flagged concentration in this sample was J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (μg/kg)	Laboratory Flag	Validation Concentration (μg/kg)	Validation Qualifier	Reason Code
SSHS-B66-6-8R (7)	PCB-1260	83	p	83	J	13

μg/kg-microgram per kilogram
p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported

4.2 Holding Times

The holding times for PCB analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for PCB analysis of waters are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 116007, 116127, 116128, 116262, 116270 and 115137). PCBs were not detected in the method blanks above the MDLs.

4.4 Matrix Spike/Matrix Spike Duplicate

Five sample set specific MS/MSD pairs, using samples SSHS-B67-2-6 (4.5), SSHS-B83-0.17-2 (1), SSHS-B75-2-6 (3), SSHS-B79-2-6 (4.5) and DUP-14, were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria, with the following exception.

The recoveries of the spiked PCBs, 1016 and 1260, were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B67-2-6 (4.5). Since the original sample was analyzed at a 1:200 dilution to quantitate PCBs 1248 and 1260, based on professional and technical judgment, no qualifications were applied to sample SSHS-B67-2-6 (4.5) based on the MS/MSD recoveries.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six LCSs and one LCS/LCSD pair were analyzed. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

4.6 Surrogate

The surrogate recoveries were within the QAPP specified acceptance criteria, with the following exceptions.

The tetrachloro-m-xylene (TCX) surrogate recovery was high and outside the laboratory specified acceptance criteria in sample SSHS-B67-0.17-2 (1); the decachlorobiphenyl (DCB) recovery was high and outside the laboratory specified acceptance criteria in sample SSHS-B69-2-4 (4). Since the other surrogate had acceptable recoveries in these two samples, no qualifications were applied to the sample data, based on professional and technical judgment.

4.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. PCBs were not detected in the source blank above the MDLs.

4.8 Equipment Blank

One equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was collected with the samples. PCBs were not detected in the equipment blank above the MDLs.

4.9 Field Duplicate

Eight field duplicate samples, DUP-12, DUP-13, DUP-14, DUP-15, DUP-16, DUP-17, DUP-18 and DUP-19, were collected with the sample set. Acceptable precision (RPD $\leq$50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B81-2-6 (4), SSHS-B84-6-10 (8), SSHS-B78-2-6 (3.5), SSHS-B80-2-6 (5), SSHS-B26-A-13.5-15.5 (15), SSHS-B101-3-6 (4), SSHS-B69-4-6R (5) and SSHS-B77-6-10 (8), respectively.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**RPD**

4.10 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for the following samples due to the dilutions analyzed.

SSHS-B65-0.17-2 (1)	SSHS-B67-2-6 (4.5)
SSHS-B65-4-6 (4)	SSHS-B68-0.17-2 (1)
SSHS-B66-0.17-2 (1)	SSHS-B68-2-6 (5.5)
SSHS-B66-2-4 (3)	SSHS-B69-2-4 (4)
SSHS-B67-0.17-2 (1)	SSHS-B69-4-6R (5)

DUP-18
SSHS-B101-0.17-2 (1)

SSHS-B26-A-2-6 (2)
SSHS-B70-6-10 (7.5)

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP. It was noted that total PCBs were listed in Table C.1 in the QAPP, but not reported by the laboratory.

4.11 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was truncated to 20140814-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

5.0 GASOLINE RANGE ORGANICS

One groundwater sample was analyzed for GRO per EPA Methods 5030C/8015D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment

⊗ Electronic Data Deliverables Review

5.1 Overall Assessment

The GRO data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

5.2 Holding Times

The holding time for the GRO analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 143606). GRO was not detected in the method blank above the MDL.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). One sample set specific MS/MSD pair, using sample SSHS-B26-A-GW-18-22, was reported. The recovery of GRO in the MS and the RPD in the MS/MSD pair were high and outside the QAPP specified acceptance criteria. Therefore, the concentration of GRO in sample SSHS-B26-A-GW-18-22 was J qualified as estimated.

Sample ID	Compound	Laboratory Result (µg/L)	Laboratory Flag	Validation Result (µg/L	Validation Qualifier	Reason Code
SSHS-B26-A-GW-18-22	GRO	440	NA	440	J	4

µg/L-micrograms per liter
NA-not applicable

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The result for the LCS was within the QAPP specified acceptance criterion for recovery.

5.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

5.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. GRO was not detected in the source blank above the MDL.

5.8 Equipment Blank

An equipment blank was not collected with the groundwater samples.

5.9 Field Duplicate

Eight field duplicate samples were collected with the sample set, but were not analyzed for GRO.

5.10 Sensitivity

The samples were reported to the MDL. No elevated nondetect results were reported. The MDL and RL reported were the same as those listed in Table C.2 in the QAPP.

5.11 Electronic Data Deliverables Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

6.0 DIESEL RANGE ORGANICS

One groundwater sample was analyzed for DRO per EPA Methods 3520C/8015D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

6.1 Overall Assessment

The DRO data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

6.2 Holding Times

The holding times for the DRO analysis of a water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 143586). DRO was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). One sample set specific MS/MSD pair, using sample SSHS-B26-A-GW-18-22, was reported. The recoveries in the MS/MSD were low and outside the QAPP specified acceptance criteria. However, since the sample was reported at a dilution, no qualifications were applied to the data based on professional judgment.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The result for the LCS was within the QAPP specified acceptance criterion for recovery.

6.6 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

6.7 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. GRO was not detected in the source blank above the MDLs.

6.8 Equipment Blank

An equipment blank was not collected with the groundwater samples.

6.9 Field Duplicate

Eight field duplicate samples were collected with the sample set, but were not analyzed for DRO.

6.10 Sensitivity

The samples were reported to the MDL. The MDL and RL reported were the same as those listed in Table C.2 in the QAPP.

6.11 Electronic Data Deliverables Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDD.

7.0 METALS

Seventy-five solid samples, eight solid field duplicate samples, five MS/MSD pairs and one equipment blank were analyzed for metals per EPA Methods 3005A/6010C and 3050B/6010C (Mercury evaluated separately in Section 8.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverables Review

7.1 Overall Assessment

The metals data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

7.2 Holding Times

The holding times for metals analysis of water and solid samples are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

7.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 115610, 115611, 115612, 115613, 115614 and 115230). Metals were not detected in the method blanks above the MDLs, with the following exceptions.

Cadmium, chromium, vanadium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115610. Since chromium, vanadium and zinc were detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the chromium, vanadium and zinc data. However, the estimated concentrations of cadmium in the associated samples were U qualified as not detected at the RLs.

Cadmium, selenium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115611. Since zinc was detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the zinc data. However, the estimated concentrations of selenium and zinc were U qualified as not detected at the RLs.

Zinc was detected at an estimated concentration greater than the MDL and less than the RL in the method blank in batch 115612. Since zinc was detected in the associated sample at concentrations greater than the RL, no qualifications were applied to the data.

Cadmium, iron, potassium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115613. Since iron, potassium and zinc were detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the iron, potassium and zinc data. However, the estimated concentrations of cadmium in the associated samples were U qualified as not detected at the RL.

Cadmium, iron, nickel and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115614. Since iron, nickel and zinc were detected in the associated sample at concentrations greater than the RLs, no qualifications were applied to the iron, nickel and zinc data. However, the estimated concentrations of cadmium in the associated samples were U qualified as not detected at the RL.

Sodium and manganese were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115230. Therefore, the estimated concentrations of sodium and manganese in the associated sample were U qualified as not detected at the RLs.

7.4 Matrix Spike/Matrix Spike Duplicate

Five sample set specific MS/MSD pairs, using samples SSHS-B67-2-6 (4.5), SSHS-B84-0.17-2 (1), SSHS-B75-2-6 (3), SSHS-B79-2-6 (4.5) and DUP-12 were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria, with the following exceptions.

One or both of the recoveries of arsenic, calcium and chromium and the RPDs for calcium, chromium, lead, nickel and zinc were high and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B67-2-6 (4.5). Also, the recoveries of antimony, chromium, nickel and zinc were low and outside the QAPP specified acceptance criteria in the MSD using sample SSHS-B67-2-6 (4.5). Lead and magnesium had both a low and high recovery outside the QAPP specified acceptance criteria. A post digestion spike (PDS) was analyzed, with the recoveries of these metals within the laboratory specified acceptance criteria. Therefore, the concentrations of these metals in sample SSHS-B67-2-6 (4.5) were J qualified as estimated.

One or both of the recoveries of barium and calcium and the RPDs for barium, calcium and zinc, were high and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B84-0.17-2 (1). Also, one or both the recoveries of antimony, chromium, copper and zinc were low and outside the QAPP specified acceptance criteria. A PDS was analyzed, with the recoveries of these metals within the laboratory specified acceptance criteria. Therefore, the concentrations of these metals in sample SSHS-B84-0.17-2 (1) were J qualified as estimated.

One or both the recoveries of antimony, calcium and copper were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B75-2-6 (3). A PDS was also analyzed, with the recoveries of these metals within the laboratory specified acceptance criteria. Therefore, the undetected value of antimony was UJ qualified as estimated less than the MDL and the concentrations of calcium and copper in sample SSHS-B75-2-6 (3) were J qualified as estimated.

One or both of the recoveries of antimony, calcium, lead and selenium were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B79-2-6 (4.5). A PDS was analyzed, with the recoveries of these metals within the laboratory specified acceptance criteria. Therefore, the concentrations of these metals were J qualified as estimated in sample SSHS-B79-2-6 (4.5).

One or both of the recoveries of antimony, calcium and copper were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample DUP-12. A PDS was analyzed, with the recoveries of these metals within the laboratory specified acceptance criteria. Therefore, the concentrations of antimony, calcium and copper in sample DUP-12 were J qualified as estimated.

It was noted that the recovery criteria for aluminum, copper, iron and manganese in sample SSHS-B67-2-6 (4.5), aluminum, iron and manganese in samples SSHS-B84-0.17-2 (1), SSHS-B75-2-6 (3), SSHS-B79-2-6 (4.5) DUP-12 were not applicable since the concentrations of these metals in the

sample were greater than four times the spike concentrations. No qualifications were applied to the data.

Sample ID	**Compound**	**Laboratory Concentration (mg/kg)**	**Laboratory Flag**	**Validation Concentration (mg/kg)**	**Validation Qualifier**	**Reason Code**

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL
B-compound was detected in both the method blank and sample
U-not detected at the reported MDL
NA-not applicable

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six LCSs were analyzed. The results for the LCSs were within the QAPP specified acceptance criteria for recovery.

7.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. The metals were not detected in the source blank above the MDLs, with the following exceptions.

Potassium and sodium were detected at estimated concentrations greater than the MDLs and less the RLs. Since the potassium and sodium concentrations in the source blank were U qualified as not detected at the RLs based on the method blank contamination, no additional qualifications were applied to the potassium and sodium data.

7.7 Equipment Blank

One equipment blank, 20140814-EQUIPMENT BLANK- SOIL, was collected with the samples. The metals were not detected above the MDL with the following exceptions.

Calcium, chromium, copper, nickel, potassium, sodium and manganese were detected at estimated concentrations greater than the MDLs and less than the RLs and iron (soil equivalent concentration 14 mg/kg) was detected above RL. Since the sodium and manganese concentrations in the equipment blank were U qualified as not detected at the RLs based on the method blank contamination, no qualifications were applied to the sodium and manganese data. Chromium, copper and nickel were detected above the RLs in the associated samples; therefore, no qualifications were applied to the chromium, copper and nickel data. The iron concentrations in the associated samples were greater than ten times the soil equivalent concentration in the equipment blank, so no qualifications were applied to the iron data. However, the estimated concentrations of calcium and potassium in the associated samples were U qualified as not detected at the RLs.

Sample ID	**Compound**	**Laboratory Concentration (mg/kg)**	**Laboratory**	**Validation Concentration (mg/kg)**	**Validation**	**Reason Code**

SSHS-B77-6-10 (8)	Potassium	530	J	540.0	U	3
SSHS-B81-10-13.5 (10.5)	Potassium	520	J	540.0	U	3
SSHS-B84-2-6 (4)	Potassium	400	J	520.0	U	3
SSHS-B87-0.17-2 (1.5)	Potassium	490	J	510.0	U	3

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL

7.8 Field Duplicate

Eight field duplicate samples, DUP-12, DUP-13, DUP-14, DUP-15, DUP-16, DUP-17, DUP-18 and DUP-19, were collected with the sample set. Acceptable precision (RPD ≤50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B81-2-6 (4), SSHS-B84-6-10 (8), SSHS-B78-2-6 (3.5), SSHS-B80-2-6 (5), SSHS-B26-A-13.5-15.5 (15), SSHS-B101-3-6 (4), SSHS-B69-4-6R (5) and SSHS-B77-6-10 (8), respectively, with the following exceptions.

The following metals were >50% in the field duplicate pairs: Calcium in SSHS-B84-6-10 (8)/DUP-13, lead in SSHS-B78-2-6 (3.5)/DUP-14 and chromium and lead in SSHS-B69-4-6R (5)/DUP-18. Therefore, the concentrations of these metals in the field duplicate pairs were J qualified as estimated. The other compounds/field duplicate pairs with RPDs greater than 50% had one or both sample concentrations less than five times the RL; therefore, per the specifications of the QAPP, no qualifications were applied to the data for these compounds.

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL
B-compound was detected in both the method blank and sample
U-not detected at the reported MDL
ND-not detected at or above the MDL
NC-not calculable
NA-not applicable

7.9 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for antimony in sample SSHS-B77-10-15 (12.5) due to sample dilution. The MDLs and RLs were the same as those listed in Table C.1 in the QAPP.

7.10 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was truncated to 20140814-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

8.0 MERCURY

Seventy-five solid samples, eight solid field duplicate samples, five MS/MSD pairs and one equipment blank were analyzed for mercury per EPA Methods 7470A and 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverables Review

8.1 Overall Assessment

The mercury data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

8.2 Holding Times

The holding time for mercury analysis of waters and solids are 28 days from sample collection to analysis. The holding times were met for the sample analyses.

8.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 116176, 116177, 115423, 116179, 116180 and 116181). Mercury was not detected in the method blanks above the MDL.

8.4 Matrix Spike/Matrix Spike Duplicate

Five sample set specific MS/MSD pairs, using samples SSHS-B67-2-6 (4.5), SSHS-B81-6-10 (8), SSHS-B75-2-6 (3), SSHS-B79-2-6 (4.5) and DUP-17 were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria.

It was noted that the recovery criteria for mercury in samples SSHS-B67-2-6 (4.5) were not applicable since the concentrations of mercury in sample SSHS-B67-2-6 (4.5) was greater than four times the spike concentrations. No qualifications were applied to the data.

8.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair and five LCSs were analyzed. The results for the LCS/LCD pair and LCSs were within the QAPP specified acceptance criteria for recovery and RPD.

8.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Mercury was not detected in the source blank above the MDL.

8.7 Equipment Blank

One equipment blank, 20140814-EQUIPMENT BLANK- SOIL, was collected with the samples. Mercury was not detected in the equipment blank above the MDL.

8.8 Field Duplicate

Eight field duplicate samples, DUP-12, DUP-13, DUP-14, DUP-15, DUP-16, DUP-17, DUP-18 and DUP-19, were collected with the sample set. Acceptable precision (RPD ≤50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B81-2-6 (4), SSHS-B84-6-10 (8), SSHS-B78-2-6 (3.5), SSHS-B80-2-6 (5), SSHS-B26-A-13.5-15.5 (15), SSHS-B101-3-6 (4), SSHS-B69-4-6R (5) and SSHS-B77-6-10 (8), respectively.

Compounds/field duplicate pairs with RPDs greater than 50% had one or both sample results less than five times the RLs; therefore, per the specifications of the QAPP, no qualifications were applied to the data for these compounds.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD
SSHS-B81-2-6 (4)	Mercury	0.018	J	NC
DUP-12	Mercury	0.015	J	
SSHS-B84-6-10 (8)	Mercury	0.012	U	0
DUP-13	Mercury	0.011	U	
SSHS-B78-2-6 (3.5)	Mercury	0.058	NA	21
DUP-14	Mercury	0.047	NA	
SSHS-B80-2-6 (5)	Mercury	0.012	U	NC
DUP-15	Mercury	0.013	J	
SSHS-B26-A-13.5-15.5 (15)	Mercury	0.011	U	0
DUP-16	Mercury	0.011	U	
SSHS-B101-3-6 (4)	Mercury	0.13	NA	67
DUP-17	Mercury	0.065	NA	
SSHS-B69-4-6R (5)	Mercury	0.11	NA	17
DUP-18	Mercury	0.13	NA	
SSHS-B77-6-10 (8)	Mercury	0.011	U	0
DUP-19	Mercury	0.011	U	

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL
U-not detected at the reported MDL
NC-not calculable
NA-not applicable

8.9 Sensitivity

The sample was reported to the MDL. No elevated nondetect results were reported. The MDL and RL were the same as those listed in Table C.1 in the QAPP.

8.10 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was truncated to 20140814-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II reports and the EDDs.

9.0 CYANIDE

Seventy-five solid samples, eight solid field duplicate samples, four MS/MSD pairs and one equipment blank were analyzed for cyanide per EPA Methods 9010C/9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverables Review

9.1 Overall Assessment

The cyanide data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

9.2 Holding Times

The holding times for cyanide analysis of a waters and solids are 14 days from sample collection to analysis. The holding times were met for the sample analyses.

9.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Seven method blanks were reported with the data (batches 115605, 115650, 115799, 115921, 116102, 115800 and 116219). Cyanide was not detected in the method blanks above the MDL, with the following exceptions.

Cyanide was detected at estimated concentrations greater than the MDL and less than the RL in the method blanks in batches 115921 and 116219. Therefore, the estimated concentrations of cyanide in the associated samples were U qualified as not detected at the RL.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
SSHS-B101-12-15.5R (15)	Cyanide, Total	0.21	J,B	0.57	U	3
SSHS-B101-8-10 (9)	Cyanide, Total	0.46	J,B	0.62	U	3
SSHS-B26-A-0.17-2 (0.5)	Cyanide, Total	0.52	J,B	0.58	U	3
SSHS-B81-0.17-2 (1.5)	Cyanide, Total	0.30	J,B	0.55	U	3
SSHS-B26-A-6-8 (7)	Cyanide, Total	0.47	J,B	0.55	U	3
SSHS-B26-A-SS	Cyanide, Total	0.27	J,B	0.68	U	3
SSHS-B70-0.17-2 (1)	Cyanide, Total	0.17	J,B	0.56	U	3
SSHS-B70-10-14 (12.5)	Cyanide, Total	0.17	J,B	0.58	U	3

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
SSHS-B70-2-6 (3.5)	Cyanide, Total	0.2	J,B	0.55	U	3
SSHS-B70-SS	Cyanide, Total	0.34	J,B	0.64	U	3

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL
B-compound was detected in both the method blank and sample
U-not detected at the reported MDL
NA-not applicable

9.4 Matrix Spike/Matrix Spike Duplicate

Four sample set specific MS/MSD pairs, using samples SSHS-B67-2-6 (4.5), SSHS-B81-0.17-2 (1.5), SSHS-B75-2-6 (3) and SSHS-B79-2-6 (4.5) and four MSs using samples SSHS-B65-8-10 (9), SSHS-B81-2-6 (4), SSHS-B84-10-14 (12) and SSHS-B70-2-6 (3.5) were reported. The recovery and RPD results of the MS/MSD pairs and MSs were within the laboratory specified acceptance criteria, with the following exception; there were no cyanide acceptance criteria in the QAPP.

The recovery of cyanide was high in the MS using sample SSHS-B81-2-6 (4). Therefore, the cyanide concentration in sample SSHS-B81-2-6 (4) was J+ qualified as estimated with a high bias.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flab	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
SSHS-B81-2-6 (4)	Cyanide, Total	0.36	J	0.36	J+	4

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL

9.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Seven LCSs, seven low LCSs (LLCS) and seven high LCSs (HLCS) were reported. The results for the LCSs, LLCSs and HCLSs were within the laboratory specified acceptance criteria for recovery; there were no cyanide acceptance criteria in the QAPP.

9.6 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Cyanide was not detected in the source blank above the MDL in the source blank.

9.7 Equipment Blank

One equipment blank, 20140814-EQUIPMENT BLANK-SOIL, was collected with the soil samples. Cyanide was not detected in the equipment blank above the MDL.

9.8 Field Duplicate

Eight field duplicate samples, DUP-12, DUP-13, DUP-14, DUP-15, DUP-16, DUP-17, DUP-18 and DUP-19, were collected with the sample set. Acceptable precision (RPD $\leq$50% for solid samples, if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B81-2-6 (4), SSHS-B84-6-10 (8), SSHS-B78-2-6 (3.5), SSHS-B80-2-6 (5), SSHS-B26-A-13.5-15.5 (15), SSHS-B101-3-6 (4), SSHS-B69-4-6R (5) and SSHS-B77-6-10 (8), respectively.

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL
B-compound was detected in both the method blank and sample
U-not detected at the reported MDL
NC-not calculable

NA-not applicable

9.9 Sensitivity

The sample was reported to the MDLs. No elevated nondetect results were reported. The MDL and RL were not listed for cyanide in Table C.1 in the QAPP.

9.10 Electronic Data Deliverables Review

Results and sample IDs in the EDDs were reviewed against the information provided by the associated level II report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDDs included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level II report and the EDDs.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Subject: **Stage 4 Data Validation - Level IV Data Deliverable – Volatile Organic Compounds by EPA Methods 5030C/8260C and 5035/8260C, Semivolatile Organic Compounds by EPA Methods 3520C/8270D and 3541/8270D, Organochlorine Pesticides by EPA Methods 3510C/8081B and 3541/8081B, Polychlorinated Biphenyls by EPA Methods 3510C/8082A and 3541/8082A, Metals by EPA Methods 3005A/6010C and 3050B/6010C, Mercury by EPA Methods 7470A and 7471B, Cyanide by EPA Methods 9010C/9014 and Percent Moisture/Solids by Standard Method 2540G – TestAmerica Work Order Numbers 180-35858-1**

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 4 data validation of twenty-two solid samples, two solid field duplicate samples, two matrix spike/matrix spike duplicate (MS/MSD) pairs and one equipment blank, collected on August 15, 2014, as part of the Former Sperry Remington Site-North sampling event. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- EPA Methods 5030C/8260C and 5035/8260C - Volatile Organic Compounds (VOCs) and Tentatively Identified Compounds (TICs)
- EPA Methods 3520C/8270D and 3541/8270D - Semivolatile Organic Compounds (SVOCs) and TICs
- EPA Methods 3510C/8081B and 3541/8081B – Organochlorine Pesticides
- EPA Methods 3510C/8082A and 3541/8082A - Polychlorinated Biphenyls (PCBs)
- EPA Methods 3005A/6010C and 3050B/6010C – Metals
- EPA Methods7470A and 7471B – Mercury
- EPA Methods 9010C/9014 - Cyanide

- Standard Method 2540G - Percent Moisture/Solids

EXECUTIVE SUMMARY

The samples were handled, prepared and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 4 data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exceptions. Qualified data should be used within the limitations of the qualification.

The average relative response factors (RRFs) in the initial calibrations for 1,4-dioxane by Method 8260B were below the method and validation specified acceptance criteria; therefore, the undetected values of 1,4-dioxane in the associated water and soil samples were R qualified as rejected.

Based on professional and technical judgment and MS/MSD recoveries less than 20%, the undetected value of benzaldehyde in sample SSHS-B72-6-10 (8) was R qualified as rejected.

The organic data were reviewed based on the Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP), Former Sperry Remington Site-North Portion, 777 South Main Street, City of Elmira, Chemung County, NY, NYSDEC Project 808022, Geosyntec Project Number MN0832, July 2014, Agency Review Draft, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008 (USEPA-540-R-08-01), as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The inorganic data were reviewed based on the QAPP/FSP, USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, OSWER 9240.1-51, EPA 540-R-10-011, January 2010, as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The following samples were analyzed and validated at a Stage 4 level in the data set:

Laboratory ID	Client ID
180-35858-1	SSHS-B72-SS
180-35858-2	SSHS-B72-0.17-2 (1)
180-35858-3	SSHS-B72-3-5 (4)

180-35858-26	SSHS-B42-A-11-13 (12)
180-35858-27	DUP-20
180-35858-28	DUP-21
180-35858-29	20140815-EQUIPMENT BLANK-SOIL

The samples were received at the laboratory at temperatures within the QAPP criteria of <6°C. No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the chain of custody (COC). The proper procedure of a single strike-through correction and initials and date of the person making the correction was not followed.

No times of collection were listed on the COC for the field duplicate samples. The laboratory assigned the collection times of 00:00.

It was noted that the sample ID for the equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was truncated to 20140815-EQUIPMENT BLANK-SO in the electronic data deliverable (EDD). In addition, the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC.

The solids data, used to report the samples on a dry weight bases, were not validated. In addition, TICs were reported with the VOC and SVOC data. As there is no validation guidance for TICs, the TIC data were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

Twenty-two solid samples, two field duplicate samples, two MS/MSD pairs and one equipment blank were analyzed for VOCs per EPA Methods 5030C/8260C and 5035/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment

⊗ Sensitivity
⊗ Electronic Data Deliverables Review

1.1 Overall Assessment

The VOC data reported in this package are considered to be usable for meeting project objectives, with the following exceptions. The average RRFs in the initial calibrations for 1,4-dioxane were below the method and validation specified acceptance criteria; therefore, the undetected values of 1,4-dioxane in the associated soil and water samples were R qualified as rejected. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 98.4%.

1.2 Holding Times

The holding times for a solid sample are 48 hours from collection to extraction and 14 days from collection to analysis. The holding time for a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Instrument Performance Check

An instrument performance check sample (tune standard) was analyzed at the beginning of each 12-hour period during sample analysis. The samples were analyzed within the 12-hour period. All ion abundance criteria were met for bromofluorobenzene (BFB).

1.4 Initial Calibration

Appropriate initial calibrations were performed for each analyte. Based on the method of calibration, the laboratory calculated percent relative standard deviation (%RSD) of the RRFs. For the target analytes, the average RRFs and the %RSDs were within the method and validation criteria for the target compounds or the coefficient of determination (r^2) was greater than or equal to 0.990 for the curve fit calibrations. The minimum average RRFs for compounds were above the method and/or the validation criteria, with the following exceptions.

The average RRFs for 1,4-dioxane in the initial calibrations associated with the soil and water samples were below the method criteria of 0.0100 (0.0024, 0.0024 and 0.0022) and also below the validation criteria of 0.0050. Therefore, the undetected values of 1,4-dioxane in the associated soil and water samples were R qualified as rejected.

The method recommends the recalculation of the low initial calibration standard when linear curve fits are used, to verify the viability of detections at the low end of the calibration curve; the recalculated concentration of the low calibration point should be within ± 30% of the standard's true concentration. The percent differences (%Ds) for the target compounds were within the method specified acceptance criteria, with the following exception.

The %Ds for the recalculations of the low initial calibration standard analyzed on 08/04/14 on instrument CHHP4 of bromoform (45.4%) and 2-hexanone (53.3%) were high and outside the method specified acceptance criteria, with high biases; in addition, the %Ds for 1,4-dichlorobenzene (67.7%), 1,2-dichlorobenzene (35.4%) and 1,2,3-trichlorobenzene (34.9%) were high and outside the method specified acceptance criteria, with low biases. Since bromoform and 2-hexanone were not detected in the associated sample, no qualifications were applied to the data. However, the undetected values of 1,2-dichlorobenzene, 1,4-dichlorobenzene and 1,2,3-trichlorobenzene were UJ qualified as estimated less than the method detection limits (MDLs) in the associated sample, based on professional and technical judgment.

1.5 Continuing Calibration Verification (CCV)

For the target analytes, the CCVs were performed at the required frequency. The percent difference or percent drift (%D) between the RRFs in the initial and continuing calibration standards for the target analytes were within the method acceptance criteria of less than or equal to 20% and/or the validation criteria of 40% for poor performing compounds and 25% for the other compounds.

1.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported with the data (batches 115538, 115669, 115779, 115874, 115842 and 115910). VOCs were not detected in the method blanks above the MDLs.

1.7 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs, using samples SSHS-B43-A-2-6 (4) and SSHS-B72-6-10 (8), were reported. The MS/MSD pairs had recovery and relative percent difference (RPD) results within the QAPP and laboratory (for 1,4-dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria, with the following exception.

The recovery of vinyl chloride in the MSD using sample SSHS-B72-6-10 (8) was high and outside the QAPP specified acceptance criteria. Since vinyl chloride was not detected in sample SSHS-B72-6-10 (8), no qualifications were applied to the data.

1.8 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs and three LCS/LCSD pairs were reported. The results for the LCSs and LCS/LCSD pairs were within the QAPP and laboratory (for 1,4-dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria for recovery and RPD, with the following exceptions.

One or both the recoveries of trans-1,2-dichloroethene, 1,1,1-trichloroethane, 1,1,2-trichloro-1,2,2-trifluoroethane and carbon tetrachloride in the LCS/LCSD pair in batch 115779 were high and outside the QAPP specified acceptance criteria. Since these four compounds were not detected in the associated samples, no qualifications were applied to the data.

The recoveries of bromomethane and chloroethane were high and the recovery of 1,2-dibromoethane was low, outside the QAPP specified acceptance criteria in the LCSD in batch 115842. Since bromomethane and chloroethane were not detected in the associated samples, no qualifications were applied to the bromomethane and chloroethane data. However, the undetected value of 1,2-dibromoethane in the associated sample was UJ qualified as estimated less than the MDL.

The recoveries of 1,1,2-trichloro-1,2,2-trifluoroethane, carbon tetrachloride, trans-1,2-dichloroethene and 1,1,1-trichloroethane in the LCS/LCSD pair in batch 115874 were high and outside the QAPP specified acceptance criteria. Since these four compounds were not detected in the associated samples, no qualifications were applied to the data.

Sample ID	Compound	Laboratory Result (µg/kg)	Laboratory Flag	Validation Result (µg/kg)	Validation Qualifier	Reason Code
SSHS-B43-A-SS	1,2-Dibromoethane	33	U,*	33	UJ	5

µg/L-microgram per liter
*- LCS or LCSD exceeds the control limits
U-not detected at or above the MDL

1.9 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses, with the following exception.

The recovery of 1,2-dichloroethane-d4 in sample SSHS-B42-A-7-9 (8) was high and outside the laboratory specified acceptance criteria. Since VOCs were not detected in sample SSHS-B42-A-7-9 (8) and the other surrogate recoveries were acceptable, no qualifications were applied to the data.

1.10 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. VOCs were not detected in the source blank above the MDLs.

1.11 Equipment Blank

An equipment blank, 20140815-EQUIPMENT BLANK- SOIL, was collected with the sample set. VOCs were not detected in the equipment blank above the MDLs, with the following exception.

Methylene chloride was detected at an estimated concentration greater than the MDL and less than the reporting limit (RL). Since methylene chloride was not detected in the associated samples, no qualifications were applied to the data.

1.12 Trip Blank

A trip blank was not submitted with the sample set.

1.13 Field Duplicate

Two field duplicate samples, DUP-20 and DUP-21, were collected with the sample set. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B71-6-10 (8) and SSHS-B100-10-13.5 (12), respectively.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**RPD**
SSHS-B71-6-9.5R (8)	The VOCs	ND	NA	0
DUP-20	The VOCs	ND	NA	
SSHS-B100-10-13.5 (12)	2-Butanone (MEK)	0.90	U	NC
DUP-21	2-Butanone (MEK)	1.3	J	
SSHS-B100-10-13.5 (12)	Acetone	5.4	J	NC
DUP-21	Acetone	6.2	J	
SSHS-B100-10-13.5 (12)	The other VOCs	ND	NA	0
DUP-21	The other VOCs	ND	NA	

µg/kg-microgram per kilogram
U-not detected at the reported MDL
J-estimated concentration less than the RL and greater than the MDL
NC-not applicable
ND-not detected at the MDL
NA-not applicable

1.14 Internal Standards

The internal standard areas and retention times were within method limits.

1.15 Target Compound Identifications

The target compound identifications were within the validation criteria.

1.16 Target Compound Quantitation

The compound quantitations were within the validation criteria.

1.17 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for sample SSHS-B43-A-SS; the sample was analyzed as a “high concentration” sample, per EPA method 5035.

The MDLs and RLs were the same as those listed in Tables C.1 and C.2 in the QAPP. It was noted that total 1,2-dichloroethene and total xylenes were not reported by the laboratory, but cis- and trans- 1,2-dichloroethene and o- and m&p- xylenes were reported. The summation of the MDLs and RLs for cis- and trans-1,2-dichloroethene and o- and m-&p-xylene were within the QAPP criteria for total 1,2-dichloroethene and total xylenes, respectively. In addition, 1,4-dioxane and 1,2,3-trichlorobenzene were reported by the laboratory, but not listed in Tables C.1 and C.2 in the QAPP.

The water sample MDLs for 1,2-dibromo-3-chloropropane and 1,2-dibromoethane were greater than the screening criteria listed in Table C.2 of the QAPP.

Compound	**Laboratory MDL (µg/L)**	**QAPP Screening Criteria (µg/L)**
1,2-Dibromoethane	0.18	0.00060
1,2-Dibromo-3-Chloropropane	0.14	0.040

µg/L-microgram per liter

1.18 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was truncated to 20140815-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

Twenty-two solid samples, two field duplicate samples, two MS/MSD pairs and one equipment blank were analyzed for SVOCs per EPA Methods 3520C/8270D and 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Sensitivity
⊗ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered to be usable for meeting project objectives, with the following exception. Based on professional and technical judgment and MS/MSD recoveries less than 20%, the undetected value of benzaldehyde in sample SSHS-B72-6-10 (8) was R qualified as rejected. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 99.9%.

2.2 Holding Times

The holding times for the SVOC analysis of a solid sample are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for the SVOC analysis of a water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Instrument Performance Check

An instrument performance check sample (tune standard) was analyzed at the beginning of each 12-hour period during sample analysis. The samples were analyzed within the 12-hour period. All ion abundance criteria were met for decafluorotriphenylphosphine (DFTPP).

Method 8270D describes the analysis of a standard to assess the gas chromatography (GC) column performance and injection port inertness; analyses of the standard resulted in acceptable results.

2.4 Initial Calibration

Appropriate initial calibrations were performed for each analyte. Based on the method of calibration, the laboratory calculated the %RSDs of the RRFs. For the target analytes, the average RRFs were within the method (20% RSD) and/or validation (20% RSD for compounds not considered poor responders, 40% for poor responders) criteria for the compounds or the coefficient of determination (r^2) was greater than or equal to 0.990 for the curve fit calibrations. The minimum average RRFs for the compounds were above the method criteria.

The method recommends the recalculation of the low initial calibration standard when linear curve fits are used, to verify the viability of detections at the low end of the calibration curve; the recalculated concentration of the low calibration point should be within ± 30% of the standard's true concentration. The %Ds for the target compounds were within the method specified acceptance criteria, with the following exceptions.

The %Ds for the recalculations of pentachlorophenol were high, 68.4%D and 36.3%D, respectively, with high biases in the low initial calibration standards analyzed on 7/28/14 on instrument CH732 and 8/5/14 on instrument CH731. Since pentachlorophenol was not detected in the associated samples, no qualifications were applied to the data

The %Ds for the recalculations for 2,4-dinitrophenol and pentachlorophenol were high, 33.3%D and 53.8%D, respectively, with high biases in the low initial calibration standard analyzed on

8/28/14 on instrument CH731. Since 2,4-dinitrophenol and pentachlorophenol were not detected in the associated samples, no qualifications were applied to the data.

2.5 Continuing Calibration Verification

For the target analytes, the CCV was performed at the required frequency. The CCV RRFs met the method and validation criteria. The %Ds between the RRFs in the initial and continuing calibration standards for the target analytes were within the method acceptance criteria of less than or equal to 20%D and the validation criteria of 40%D for poor performing compounds and 25% D for the compounds, with the following exceptions.

The %Ds for 1,4-dioxane, hexachlorocyclopentadiene and pyrene were high, 30.3%D, 26.4%D and 22%D, respectively, with high biases in the CCV analyzed on 8/25/14 on instrument CH731. Since the aqueous method blank and LCS/LCSD associated with the equipment blank were the only samples associated with this CCV, no qualifications were applied to the data.

2.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 115557, 116334 and 116431). SVOCs were not detected in the method blanks above the MDLs.

2.7 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). Two sample set specific MS/MSD pairs, using samples SSHS-B43-A-2-6 (4) and SSHS-B72-6-10 (8), were reported. The MS/MSD pairs had recovery and RPD results within the QAPP and laboratory (for 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol only) specified acceptance criteria, with the following exceptions.

The recoveries of benzaldehyde were low in both MS/MSD pairs. The recoveries were both 9% in the MS/MSD pair using sample SSHS-B72-6-10 (8) and both 25% in the MS/MSD pair using sample SSHS-B43-A-2-6 (4). Therefore, based on professional and technical judgment and recoveries less than 20%, the undetected value of benzaldehyde in sample SSHS-B72-6-10 (8) was R qualified as rejected and the undetected value of benzaldehyde in sample SSHS-B43-A-2-6 (4) was UJ qualified as estimated less than the MDL.

Sample ID	Compound	Laboratory Result (µg/kg)	Laboratory Flag	Validation Result (µg/kg)	Validation Qualifier	Reason Code
SSHS-B72-6-10 (8)	Benzaldehyde	61	U	61	R	4
SSHS-B43-A-2-6 (4)	Benzaldehyde	56	U	56	UJ	4

µg/kg-microgram per kilogram
U-not detected at or above the MDL

2.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were reported. The results for the LCSs and LCS/LCSD pair were within the laboratory and QAPP and laboratory (for 1,4-dioxane, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol only) specified acceptance criteria for recovery and RPD.

2.9 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

2.10 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. The SVOCs were not detected in the source blank above the MDLs, with the following exceptions.

Bis(2-ethylhexyl) phthalate (1.3 µg/L, soil equivalent concentration 23 µg/kg) and butyl benzyl phthalate (0.32 µg/L, soil equivalent concentration 5.5 µg/kg) were detected at estimated concentrations greater than the MDLs and less than the RLs in the source blank. Since the soil equivalent concentrations for these two compounds were less than the soil MDLs, no qualifications were applied to the soil samples. However, for the equipment blank, the estimated concentration of butyl benzyl phthalate was U qualified as not detected at the RL.

Sample ID	Compound	Laboratory Result (µg/L)	Laboratory Flag	Validation Result (µg/L)	Validation Qualifier	Reason Code
EQUIPMENT BLANK-SO	Butyl benzyl phthalate	0.84	J	1.0	U	3

µg/L-microgram per liter
U-not detected at or above the MDL

2.11 Equipment Blank

One equipment blank, 20140815-EQUIPMENT BLANK- SOIL, was collected with the samples. SVOCS were not detected in the equipment blank above the MDLs, with the following exceptions.

Bis(2-ethylhexyl) phthalate was detected at a concentration greater than the RL, 6.0 µg/L; butyl benzyl phthalate and di-n-butyl phthalate were detected at estimated concentrations greater than the MDLs and less than the RLs. The concentration of butyl benzyl phthalate in the equipment blank was U qualified as not detected at the RL due to the source blank contamination. Since bis(2-ethylhexyl) phthalate and di-n-butyl phthalate were not detected in the soil samples, no qualifications were applied to the data.

2.12 Field Duplicate

Two field duplicate samples, DUP-20 and DUP-21, were collected with the sample set. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B71-6-10 (8) and SSHS-B100-10-13.5 (12), respectively. The RPDs between the results were 0%.

2.13 Internal Standards

The internal standard areas and retention times were within the method specified acceptance criteria.

2.14 Target Compound Identifications

The target compound identifications were within the validation criteria.

2.15 Compound Quantitation

The compound quantitations were within the validation criteria.

2.16 Sensitivity

The sample was reported to the MDLs. No elevated nondetect results were reported.

The MDLs and RLs reported were 1/10 of those listed in Table C.1 in the QAPP. In addition, 1,2,4,5-tetrachlorobenzene and 2,3,4,6-tetrachlorophenol were reported by the laboratory, but not listed in Table C.1 in the QAPP.

2.17 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was truncated to 20140815-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

3.0 ORGANOCHLORINE PESTICIDES

Twenty-two solid samples, two field duplicate samples, two MS/MSD pairs and one equipment blank were analyzed for organochlorine pesticides per EPA Methods 3510C/8081B and 3541/8081B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment

⊗ Electronic Data Deliverable Review

3.1 Overall Assessment

The pesticide data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

3.2 Holding Times

The holding times for the pesticide analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for pesticide analysis of water samples are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Performance Evaluation Mixture (PEM)

The PEM standards were analyzed at the required frequency. The method specified breakdown criteria of ≤ 15% for endrin and 4,4’-DDT were met.

3.4 Initial Calibration

Initial calibration of the target compounds was performed as required by the method. The %RSDs were less than or equal to the method specified criteria of 20%.

3.5 Continuing Calibration Verification

Continuing calibration verification was performed at the required frequency. The %Ds between the calibration factors in initial calibrations and CCVs were within the method specified criteria of 20%D.

3.6 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 115137, 116335 and 116429). The organochlorine pesticides were not detected in the method blanks above the MDLs.

3.7 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs, using samples SSHS-B43-A-2-6 (4) and SSHS-B72-6-10 (8), were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria, with the following exceptions.

The MS recovery of endrin aldehyde in the MS/MSD pair using sample SSHS-B43-A-2-6 (4) was low and outside the QAPP specified acceptance criteria. The MSD recovery of endosulfan II was low and the RPD was high, both outside the QAPP specified acceptance criteria, in the MS/MSD pair using sample SSHS-B72-6-10 (8). The concentration of endrin aldehyde in sample SSHS-B43-A-2-6 (4) was U qualified as not detected at the RL due to presence of PCBs in the sample; no additional qualifications were applied to this sample based on professional judgment. However, due to the low MSD recovery, the undetected value of endosulfan II in sample SSHS-B72-6-10 (8) was UJ qualified as estimated less than the MDL.

Sample ID	**Compound**	**Laboratory Result (µg/kg)**	**Laboratory Flag**	**Validation Result (µg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-B72-6-10 (8)	Endosulfan II	0.35	U	0.35	UJ	4

µg/kg-microgram per kilogram
U-not detected at or above the MDL

3.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were reported. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

3.9 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria.

3.10 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Organochlorine pesticides were not detected in the source blank above the MDLs, with the following exceptions.

Aldrin and beta-BHC were detected at concentrations greater than the RL, 0.0023 µg/L and 0.0021 µg/L, respectively. Since the aldrin concentrations in the associated soil samples were U qualified as not detected at the RL or U qualified as not detected at the reported concentrations due to presence of PCBs in the samples, no additional qualifications were applied to the soil samples based on professional and technical judgment. Beta-BHC was either not detected or U qualified as not detected at the reported concentrations due to presence of PCBs in the associated samples; therefore, no qualifications were applied to the beta-BHC data. However, the concentration of aldrin the equipment blank was U qualified as not detected at the reported concentration, based on professional and technical judgment.

Sample ID	Compound	Laboratory Result (µg/L)	Laboratory Flag	Validation Result (µg/L)	Validation Qualifier	Reason Code
20140815-EQUIPMENT BLANK-SO	Aldrin	0.0021	NA	0.0021	U	3

µg/L-microgram per liter
NA-not applicable

3.11 Equipment Blank

One equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was collected with the samples. Organochlorine pesticides were not detected in the equipment blank above the MDLs, with the following exception.

Gamma-BHC and aldrin were detected in the equipment blank at concentrations greater than the RLs, both at 0.0021 µg/L (equivalent soil concentrations of 0.14 µg/kg). Since the aldrin concentration in the equipment blank was U qualified as not detected at the reported concentration due to the source blank contamination, no additional qualifications were applied to the aldrin data based on professional judgment. The only detection of gamma-BHC was in sample SSHS-B72-0.17-2 (1), at 6.5 µg/kg. Due to the difference in the equivalent soil concentration in the equipment blank and sample SSHS-B72-0.17-2 (1), no qualifications were applied to the data, based on professional and technical judgment.

3.12 Field Duplicate

Two field duplicate samples, DUP-20 and DUP-21, were collected with the sample set. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B71-6-10 (8) and SSHS-B100-10-13.5 (12), respectively. The RPDs between the results were 0%.

3.13 Target Compound Identification

The samples were analyzed on two different gas chromatography (GC) columns, per the method protocol. Both PCBs and organochlorine pesticides were reported in some of the samples. Review of the raw data indicated that PCBs 1248 and 1260 were present in these samples; based on professional and technical judgment, the detections of the multi-peak PCBs resulted in false positives for some of the single peak organochlorine pesticides. Therefore, based on professional and technical judgment, for organochlorine pesticides with RPD results between the two columns greater than 25%, the estimated concentrations of the organochlorine pesticides were U qualified as not detected at the RL and concentrations greater than the RL were U qualified as not detected at the reported concentration. The qualifications are summarized in Attachment 3.

In addition, both estimated pesticide concentrations and concentrations above the RL in some of the soil samples were flagged by the laboratory with p, indicating the RPD between the two columns was greater than 40% RPD and the lower concentration was reported; PCBs were reported as not detected in these samples. Therefore, based on professional and technical judgment, the p-flagged estimated concentrations were J qualified as estimated. These qualifications are also summarized in Attachment 3

3.14 Target Compound Quantitation

The compound quantitations were within the validation criteria.

3.15 Sensitivity

The samples were reported to the MDLs. No elevated nondetect results were reported.

The MDLs and RLs reported were 1/10 of those listed in Table C.1 in the QAPP.

3.16 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was truncated to 20140815-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

4.0 POLYCHLORINATED BIPHENYLS

Twenty-two solid samples, two solid field duplicate samples, two MS/MSD pairs and one equipment blank were analyzed for PCBs per EPA Methods 3510C/8082A and 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

4.1 Overall Assessment

The PCB (Aroclor) data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

4.2 Holding Times

The holding times for the PCB analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times for the PCB analysis of water samples are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

4.3 Initial Calibration

Initial calibration of the target compounds was performed as required by the method. The %RSDs of the response factors were less than or equal to 20%.

4.4 Continuing Calibration Verification

Continuing calibration verification was performed at the required frequency. The %Ds between the calibration factors in initial calibrations and the CCVs were within the method specified 20%D criteria.

4.5 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 115137, 116335 and 116429). PCBs were not detected in the method blanks above the MDLs.

4.6 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs, using samples SSHS-B43-A-2-6 (4) and SSHS-B72-6-10 (8) were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria.

4.7 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were analyzed. The results for the LCSs and LCS/LCSD pair were within the QAPP specified acceptance criteria for recovery and RPD.

4.8 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria.

4.9 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. PCBs were not detected in the source blank above the MDLs.

4.10 Equipment Blank

One equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was collected with the samples. PCBs were not detected in the equipment blank above the MDLs.

4.11 Field Duplicate

Two field duplicate samples, DUP-20 and DUP-21, were collected with the sample set. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B71-6-10 (8) and SSHS-B100-10-13.5 (12), respectively. The RPDs between the results were 0%.

4.12 Target Compound Identification

The target compound identifications were within the validation criteria.

4.13 Target Compound Quantitation

The samples were analyzed on two different GC columns. One PCB concentration, in sample SSHS-B72-0.17-2 (1), was flagged by the laboratory with p, indicating the RPD between the two columns was greater than 40% RPD and the lower concentration was reported. Therefore, based on professional and technical judgment, the p-flagged concentration in this sample was J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (µg/kg)	Laboratory Flag	Validation Concentration (µg/kg)	Validation Qualifier	Reason Code
SSHS-B72-0.17-2 (1)	PCB-1260	7.5	Jp	7.5	J	13

µg/kg-microgram per kilogram
p-laboratory flag indicating the RPD between the two columns is greater than 40% RPD; the lower concentration was reported
J-estimated concentration greater than the MDL and less than the RL

4.14 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for sample SSHS-B100-0.17-2 (1.5) due to the dilution analyzed.

The MDLs and RLs were the same as those listed in Table C.1 in the QAPP. It was noted that total PCBs were listed in Table C.1 in the QAPP, but not reported by the laboratory.

4.15 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was truncated to 20140815-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

5.0 METALS

Twenty-two solid samples, two solid field duplicate samples, three MS/MSD pairs and one equipment blank were analyzed for metals per EPA Methods 3005A/6010C and 3050B/6010C (Mercury evaluated separately in Section 6.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

5.1 Overall Assessment

The metals data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

5.2 Holding Times

The holding times for metals analysis of waters and solids are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Initial Calibration

The initial calibration requirements were met for the inductively coupled plasma-atomic emission spectrometer (ICP-AES).

The reporting limit standards were within the method specified acceptance criteria.

The interference check standards (ICSA and ICSAB) met the method specified acceptance criteria.

5.4 Initial and Continuing Calibration Verifications (ICV and CCV)

The percent recoveries in the associated ICVs and CCVs were within the method specified acceptance criteria.

5.5 Initial and Continuing Calibration Blanks (ICB and CCB)

The ICBs and CCBs met the specified acceptance criteria. However, there were estimated concentrations greater than the MDLs and less than the RLs of barium, cobalt, copper, magnesium, manganese, nickel, potassium, silver, sodium, thallium and vanadium in the CCBs bracketing some of the samples. Therefore, the estimated concentrations of these metals in the associated samples were U qualified as not detected at the RLs.

Sample ID	Compound	Laboratory Result (µg/L)	Laboratory Flag	Validation Result (µg/L)	Validation Qualifier	Reason Code
20140815-EQUIPMENT BLANK-SOIL	Cobalt	0.47	J	50	U	3
20140815-EQUIPMENT BLANK-SOIL	Copper	1.2	J	25	U	3
20140815-EQUIPMENT BLANK-SOIL	Nickel	5.7	J	40	U	3
20140815-EQUIPMENT	Sodium	52	J,B	5000	U	3

BLANK-SOIL						

µg/L-microgram per liter
J-estimated concentration greater than the MDL and less than the RL
B-compound was detected in both the method blank and sample

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
SSHS-B100-0.17-2 (1.5)	Potassium	430	J	550	U	3

mg/kg-milligram per kilogram
J-estimated concentration greater than the MDL and less than the RL

5.6 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 115230, 116030 and 116032). Metals were not detected in the method blanks above the MDLs, with the following exceptions.

Sodium and manganese were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 115230. Since manganese was detected in the associated sample at a concentration greater than the RL and the estimated sodium concentration in the associated sample was U qualified as not detected at the RL based on the CCB contamination, no additional qualifications were applied to the data.

Nickel and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 116030. Since nickel and zinc were detected in the associated samples at concentrations greater than the RLs, no qualifications were applied to the data.

Chromium and zinc were detected at estimated concentrations greater than the MDLs and less than the RLs in the method blank in batch 116032. Since chromium and zinc were detected in the associated samples at concentrations greater than the RLs, no qualifications were applied to the data.

5.7 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). Three sample set specific MS/MSD pairs, using samples 20140815-EQUIPMENT BLANK-SOIL, SSHS-B43-A-2-6 (4) and SSHS-B72-6-10 (8) were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria, with the following exceptions.

One or both of the recoveries of antimony, magnesium and zinc were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B72-6-10 (8). A post digestion spike (PDS) was also analyzed, with the antimony, magnesium and zinc recoveries within the laboratory specified acceptance criteria. Therefore, the undetected value of antimony was UJ qualified as estimated less than the MDL and the concentrations of arsenic and magnesium were J qualified as estimated in sample SSHS-B72-6-10 (8).

One or both of the recoveries of antimony, arsenic and copper were low and outside the QAPP specified acceptance criteria in the MS/MSD pair using sample SSHS-B43-A-2-6 (4). A PDS was also analyzed, with the antimony, arsenic and copper recoveries within the laboratory specified acceptance criteria. Therefore, the undetected value of antimony was UJ qualified as estimated less than the MDL and the concentrations of arsenic and copper were J qualified as estimated in sample SSHS-B43-A-2-6 (4).

Sample ID	**Compound**	**Laboratory Result (mg/kg)**	**Laboratory Flag**	**Validation Result (mg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-B43-A-2-6 (4)	Antimony	0.22	U	0.22	UJ	4
SSHS-B43-A-2-6 (4)	Arsenic	11	NA	11	J	4
SSHS-B43-A-2-6 (4)	Copper	21	NA	21	J	4
SSHS-B72-6-10 (8)	Antimony	0.25	U	0.25	UJ	4
SSHS-B72-6-10 (8)	Magnesium	11000	NA	11000	J	4
SSHS-B72-6-10 (8)	Zinc	50	B	50	J	4

mg/kg-milligram per kilogram
U-not detected at the reported MDL
B-compound was detected in both the method blank and sample
NA-not applicable

5.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were analyzed. The results for the LCSs were within the QAPP specified acceptance criteria for recovery.

5.9 Serial Dilution

Three serial dilutions, using samples SSHS-B72-6-10 (8), SSHS-B43-A-2-6 (4) and 20140815-EQUIPMENT BLANK-SOIL, were reported. The %D results were within the laboratory specified acceptance criteria, with the following exceptions.

The %D results for manganese, sodium and zinc in the serial dilution using sample SSHS-B72-6-10 (8) were high and outside the laboratory specified acceptance criteria. Since the concentration of sodium in sample SSHS-B72-6-10 (8) was an estimated concentration greater than the MDL and less than the RL, no qualifications were applied to the sodium data. However, the concentrations of manganese and zinc in sample SSHS-B72-6-10 (8) were J qualified as estimated.

The %D result for manganese in the serial dilution using sample SSHS-B43-A-2-6 (4) was high and outside the laboratory specified acceptance criteria. Therefore, the concentration of manganese in sample SSHS-B43-A-2-6 (4) was J qualified as estimated.

Sample ID	**Compound**	**Laboratory Result (mg/kg)**	**Laboratory Flag**	**Validation Result (mg/kg)**	**Validation Qualifier**	**Reason Code**
SSHS-B72-6-10 (8)	Manganese	350	NA	350	J	8
SSHS-B72-6-10 (8)	Zinc	50	B	50	J	8
SSHS-B43-A-2-6 (4)	Manganese	650	NA	650	J	8

mg/kg-milligram per kilogram
U-not detected at the reported MDL
B-compound was detected in both the method blank and sample
NA-not applicable

5.10 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Metals were not detected in the source blank above the MDLs, with the following exceptions.

Potassium and sodium were detected at estimated concentrations greater than the MDLs and less the RLs. Since the potassium and sodium concentrations in the source blank were U qualified based on the method blank contamination, no additional qualifications were applied to the potassium and sodium data.

5.11 Equipment Blank

One equipment blank, 20140815-EQUIPMENT BLANK- SOIL, was collected with the samples. Aluminum, cobalt, copper, nickel, potassium, sodium, calcium and magnesium were detected in the equipment blank at estimated concentrations greater than the MDLs and less than the RLs and iron (100 µg/L, soil equivalent concentration, 5.0 mg/kg), chromium (9.2 µg/L, soil equivalent concentration, 0.46 mg/kg) and manganese (18 µg/L, soil equivalent concentration, 0.90 mg/kg) were detected above the RLs. However, no additional qualifications were applied based on professional judgment and the following.

- The estimated concentrations of cobalt, copper, nickel and sodium in the equipment blank were U qualified based on the CCB contaminations.
- Aluminum, calcium and magnesium were detected above the RLs in the associated samples.
- The concentrations of potassium in the associated samples were either U qualified as not detected at the RL based on the CCB contamination or were detected above the RL.
- Iron, chromium and manganese were detected in the associated soil samples at concentrations greater than ten times the soil equivalent concentrations.

5.12 Field Duplicate

Two field duplicate samples, DUP-20 and DUP-21, were collected with the sample set. Acceptable precision (RPD $\leq$50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B71-6-10 (8) and SSHS-B100-10-13.5 (12), respectively, with the following exception.

The RPD for arsenic was > 50% in the field duplicate pair SSHS-B71-6-9.5R (8)/DUP-20 and the concentrations were greater than five times the RL. Therefore, the concentrations of arsenic in field duplicate pair SSHS-B71-6-9.5R (8)/DUP-20 were J qualified as estimated.

NC-not calculable
NA-not applicable

5.13 Compound Quantitations

The compound quantitations were within the validation criteria.

5.14 Sensitivity

The samples were reported to the MDLs. No elevated nondetect results were reported.

The MDLs and RLs were the same as those listed in Tables C.1 and C.2 in the QAPP.

5.15 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was truncated to 20140815-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

6.0 MERCURY

Twenty-two solid samples, two solid field duplicate samples, two MS/MSD pairs and one equipment blank were analyzed for mercury per EPA Method 7470A and 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

6.1 Overall Assessment

The mercury data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

6.2 Holding Times

The holding times for mercury analysis of water and solid samples are 28 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Initial Calibration

The initial calibration requirements were met. The coefficient of determination (r^2) was greater than or equal to 0.990 for the linear calibration.

The reporting limit standard was within the method specified acceptance criteria.

6.4 Initial and Continuing Calibration Verifications

The percent recoveries in the associated ICVs and CCVs were within the method specified acceptance criteria.

6.5 Initial and Continuing Calibration Blanks

The ICBs and CCBs met the method specified acceptance criteria.

6.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported with the data (batches 115423, 116358 and 116360). Mercury was not detected in the method blanks above the MDL.

6.7 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs, using samples SSHS-B43-A-2-6 (4) and SSHS-B72-6-10 (8) were reported. The MS/MSD pairs had recovery and RPD results within the QAPP specified acceptance criteria.

6.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were analyzed. The results for the LCSs and LCS/LCD pair were within the QAPP specified acceptance criteria for recovery and RPD.

6.9 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Mercury was not detected in the source blank above the MDL.

6.10 Equipment Blank

One equipment blank, 20140815-EQUIPMENT BLANK- SOIL, was collected with the samples. Mercury was not detected in the equipment blank above the MDL.

6.11 Field Duplicate

Two field duplicate samples, DUP-20 and DUP-21, were collected with the sample set. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B71-6-10 (8) and SSHS-B100-10-13.5 (12), respectively.

Sample ID	**Compound**	**Laboratory Result (mg/kg)**	**Laboratory Flag**	**RPD**
SSHS-B71-6-9.5R (8)	Mercury	0.011	U	0
DUP-20	Mercury	0.011	U	
SSHS-B100-10-13.5 (12)	Mercury	0.028	J	NC
DUP-21	Mercury	0.022	J	

mg/kg-milligram per kilogram
U-not detected at or above the MDL
J-estimated concentration greater than the MDL and less than the RL
NC-not calculable

6.12 Compound Quantitation

The compound quantitations were within the validation criteria.

6.13 Sensitivity

The sample was reported to the MDL. No elevated nondetect results were reported.

The MDL and RL were the same as those listed in Table C.1 in the QAPP.

6.14 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was truncated to 20140815-EQUIPMENT BLANK-S in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

7.0 CYANIDE

Twenty-two solid samples, two solid field duplicate samples, two MS/MSD pairs and one equipment blank were analyzed for cyanide per EPA Methods 9010C/9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

7.1 Overall Assessment

The cyanide data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

7.2 Holding Times

The holding times for cyanide analysis of preserved waters and solids are 14 days from sample collection to analysis. The holding times were met for the sample analyses.

7.3 Initial Calibration

The initial calibration requirements were met. The coefficient of determination (r^2) was greater than or equal to 0.990 for the linear calibration.

7.4 Initial and Continuing Calibration Verifications

The percent recoveries in the associated ICVs and CCVs were within the method specified acceptance criteria.

7.5 Initial and Continuing Calibration Blanks

The ICBs and CCBs met the method specified acceptance criteria.

7.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four method blanks were reported with the data (batches 116102, 116219, 116348 and 116351). Cyanide was not detected in the method blanks above the MDL, with the following exception.

Cyanide was detected at an estimated concentration greater than the MDL and less than the RL in the method blank in batch 116219. Since cyanide was not detected in the associated sample, no qualifications were applied to the data.

7.7 Matrix Spike/Matrix Spike Duplicate

Three sample set specific MS/MSD pairs, using samples SSHS-B42-A-11-13 (12), SSHS-B43-A-2-6 (4) and SSHS-B72-6-10 (8) and one MS using sample SSHS-B72-3-5 (4) were reported. The MS/MSD pairs and MS had recovery and RPD results within the laboratory specified acceptance criteria; there were no cyanide acceptance criteria in the QAPP.

7.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four LCSs, four low LCSs (LLCS) and four high LCSs (HLCS) were reported. The results for the LCSs, LLCSs and HCLSs were within the laboratory specified acceptance criteria for recovery; there were no cyanide acceptance criteria in the QAPP.

7.9 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. Cyanide was not detected in the source blank above the MDL in the source blank.

7.10 Equipment Blank

One equipment blank, 20140815-EQUIPMENT BLANK-SOIL, was collected with the soil samples. Cyanide was not detected in the equipment blank above the MDL.

7.11 Field Duplicate

Two field duplicate samples, DUP-20 and DUP-21, were collected with the sample set. Acceptable precision (RPD ≤50% if both results are greater than five times the RL) was demonstrated between the field duplicates and the original samples, SSHS-B71-6-10 (8) and SSHS-B100-10-13.5 (12), respectively. The RPDs between the results were 0%.

7.12 Compound Quantitation

The compound quantitations were within the validation criteria.

7.13 Sensitivity

The samples were reported to the MDLs. MDLs and RLs were not listed for cyanide in Table C.1 in the QAPP.

7.14 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample ID for the equipment blank, 20140812-EQUIPMENT BLANK-SOIL, was truncated to 20140812-EQUIPMENT BLANK-SO in the EDD and the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

Subject: Stage 4 Data Validation - Level IV Data Deliverable – Volatile Organic Compounds by EPA Methods 5030C/8260C, Polychlorinated Biphenyls by EPA Methods 3510C/8082A, Gasoline Range Organics by EPA Methods 5030C/8015D and Diesel Range Organics by EPA Methods 3520C/8015D– TestAmerica Work Order Numbers 180-36053-1

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 4 data validation of seven water samples, two field duplicate samples, two matrix spike/matrix spike duplicate (MS/MSD) pairs, two equipment blanks and one trip blank, collected on August 20-22, 2014, as part of the Former Sperry Remington Site-North sampling event. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- EPA Methods 5030C/8260C - Volatile Organic Compounds (VOCs) and Tentatively Identified Compounds (TICs)
- EPA Methods 3510C/8082A - Polychlorinated Biphenyls (PCBs)
- Gasoline Range Organics (GRO) by EPA Methods 5030C/8015D
- Diesel Range Organics (DRO) by EPA Method 3520C/8015D

EXECUTIVE SUMMARY

The samples were handled, prepared and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 4 data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exception. Qualified data should be used within the limitations of the qualification.

The average relative response factor (RRF) of 1,4-dioxane by Method 8260B in the initial calibration was below the method and validation specified acceptance criteria; therefore, the undetected values of 1,4-dioxane in the associated samples were R qualified as rejected.

The organic data were reviewed based on the Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP), Former Sperry Remington Site-North Portion, 777 South Main Street, City of Elmira, Chemung County, NY, NYSDEC Project 808022, Geosyntec Project Number MN0832, July 2014, Agency Review Draft, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008 (USEPA-540-R-08-01), as well as by the pertinent methods referenced by the data package and professional and technical judgment.

The following samples were analyzed and validated at a Stage 4 level in the data set:

Laboratory ID	Client ID
180-36053-1	MW-8
180-36053-1MS	MW-8MS
180-36053-1MSD	MW-8MSD
180-36053-2	MW-13
180-36053-3	DUP-1
180-36053-4	MW-30
180-36053-5	MW-10
180-36053-5MS	MW-10MS

Laboratory ID	Client ID
180-36053-5MSD	MW-10MSD
180-36053-6	EB-1
180-36053-7	MW-38
180-36053-8	EB-2
180-36053-9	MW-34
180-36053-10	DUP-2
180-36053-11	MW-41
180-36053-12	TB-1

The samples were received at the laboratory within the QAPP criteria of $<6^{o}$C. No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the chain of custody (COC). The proper procedure of a single strike-through correction and initials and date of the person making the correction was not followed.

No times of collection were listed on the COC for the trip blank or field duplicate samples. The laboratory assigned the collection times of 00:00.

1.0 VOLATILE ORGANIC COMPOUNDS

Three water samples, one field duplicate sample, one MS/MSD pair, one equipment blank and one trip blank were analyzed for VOCs per EPA Methods 5030C/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

1.1 Overall Assessment

1.1.1 Completeness

The VOC data reported in this package are considered to be usable for meeting project objectives, with the following exceptions. The average RRF of 1,4-dioxane in the initial calibration was below the method and validation specified acceptance criteria; therefore, the undetected values of 1,4-dioxane in the associated water samples were R qualified as rejected. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 98.1%.

1.1.2 Analysis Anomaly

Sample MW-30 was reported at both 1:5 and 1:12.5 dilutions. The cis-1, 2-dichloroethene result in the 1:5 dilution was E flagged by the laboratory, indicating the result exceeded the calibration range. Therefore, cis-1, 2-dichloroethene was the only result considered for validation in the 1:12.5 dilution. The remaining compounds were validated using the 1:5 dilution.

Sample MW-8 was reported at both an undiluted analysis and a 1:5 dilutions. The cis-1,2-dichloroethene result in the undiluted analysis was E flagged by the laboratory indicating the result exceeded the calibration range. Therefore, cis-1,2-dichloroethene was the only result considered for validation in the 1:12.5 dilution. The remaining compounds were validated using the undiluted analysis.

The results that were not considered for validation were set to not reportable in the EDD with qualifier file (a column was added to the EDD with qualifier file).

1.2 Holding Times

The holding time for a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Instrument Performance Check

An instrument performance check sample (tune standard) was analyzed at the beginning of each 12-hour period during sample analysis. The samples were analyzed within the 12-hour period. All ion abundance criteria were met for bromofluorobenzene (BFB).

1.4 Initial Calibration

Appropriate initial calibrations were performed for each analyte. Based on the method of calibration, the laboratory calculated percent relative standard deviation (%RSD) of the RRFs. For the target analytes, the average RRFs and the %RSDs were within the method and validation criteria for the target compounds. The minimum average RRFs for compounds were above the method and/or the validation criteria, with the following exception.

The average RRF for 1,4-dioxane in the initial calibration associated with the samples was 0.0024, below the method criteria of 0.0100 and also below the validation criteria of 0.0050. Therefore, the undetected values of 1,4-dioxane in the associated samples were R qualified as rejected.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier*	Reason Code**
DUP-1	1,4-Dioxane	34	U	34	R	9
EB-1	1,4-Dioxane	34	U	34	R	9
MW-13	1,4-Dioxane	34	U	34	R	9
MW-30	1,4-Dioxane	170	U	170	R	9
MW-8RA	1,4-Dioxane	34	U	34	R	9
TB-1	1,4-Dioxane	34	U	34	R	9

µg/L-microgram per liter
U-not detected at or above the method detection limit (MDL)
*Validation qualifiers are defined in Attachment 1 at the end of this report
** Reason codes are defined in Attachment 2 at the end of this report

1.5 Continuing Calibration Verification (CCV)

For the target analytes, the CCVs were performed at the required frequency. The percent difference or percent drift (%D) between the RRFs in the initial and continuing calibration standards for the target analytes were within the method acceptance criteria of less than or equal to 20% and/or the validation criteria of 40% for poor performing compounds and 25% for the other compounds.

1.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported with the data (batches 116303 and 116723). VOCs were not detected in the method blanks above the MDLs.

1.7 Matrix Spike/Matrix Spike Duplicate

A sample set specific MS/MSD pair, using sample MW-8, was reported. The MS/MSD pair had recovery and relative percent difference (RPD) results within the QAPP and laboratory (for 1,4-dioxane and 1,2,3-trichlorobenzene only) specified acceptance criteria, with the following exceptions.

The recoveries of cis-1,2-dichloroethene were high and outside the laboratory specified acceptance criteria. Therefore, the concentration of cis-1,2-dichloroethene in sample MW-8 was J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
MW-8	cis-1,2-Dichloroethene	77	NA	77	J	4

µg/L-microgram per liter
NA-not applicable

1.8 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs were reported. The results for the LCSs were within the QAPP specified acceptance criteria for recovery.

1.9 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

1.10 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. VOCs were not detected in the source blank above the MDLs.

1.11 Equipment Blank

Two equipment blanks were collected with the sample set; one, EB-1, was reported for VOCs. VOCs were not detected in the equipment blank above the MDLs, with the following exception.

Methylene chloride was detected in the equipment blank at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated concentration of methylene chloride in the associated sample was U qualified as not detected at the RL.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
MW-30	Methylene Chloride	1.6	J	5.0	U	3

µg/L-microgram per liter
J-estimated concentration less than the RL and greater than the MDL

1.12 Trip Blank

A trip blank, TRIP BLANK, was collected with the sample set. VOCs were not detected in the trip blank above the MDLs.

1.13 Field Duplicate

Two field duplicate samples were collected with the sample set; only DUP-1 was analyzed for VOCs. Acceptable precision (RPD $\leq$30% if both results are greater than five times the quantitation limit) was demonstrated between the field duplicate sample and the original sample, MW-13. The RPDs between the results were 0%.

1.14 Internal Standards

The internal standard areas and retention times were within method limits.

1.15 Target Compound Identifications

The target compound identifications were within the validation criteria.

1.16 Target Compound Quantitation

The compound quantitations were within the validation criteria.

1.17 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for samples MW-30 and MW-8 due to sample dilutions analyzed.

The MDLs and RLs were the same as those listed in Table C.2 in the QAPP. It was noted that total 1,2-dichloroethene and total xylenes were not reported by the laboratory, but the summation of cis- and trans-1,2-dichloroethene and o- and m-&p-xylene were within the QAPP criteria. In addition, 1,4-dioxane and 1,2,3-trichlorobenzene were reported by the laboratory, but not listed in Table C.2 in the QAPP.

The reported MDLs for 1,2-dibromo-3-chloropropane and 1,2-dibromoethane in the samples were greater than the screening criteria listed in table C.2 of the QAPP.

Compound	Laboratory MDL (µg/L)	QAPP Screening Criteria (µg/L)
1,2-Dibromoethane	0.18	0.00060

Compound	Laboratory MDL (µg/L)	QAPP Screening Criteria (µg/L)
1,2-Dibromo-3-Chloropropane	0.14	0.040

µg/L-microgram per liter

1.18 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

2.0 POLYCHLORINATED BIPHENYLS

Four water samples, one field duplicate sample, one MS/MSD pair and one equipment blank were analyzed for PCBs per EPA Methods 3510C/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

2.1 Overall Assessment

The PCB (Aroclor) data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

2.2 Holding Times

The holding times for PCB analysis of water samples are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Performance Evaluation Mixture (PEM)

The PEM standards were analyzed at the required frequency. The method specified breakdown criteria of $\leq$ 15% for endrin and 4,4'-DDT were met

2.4 Initial Calibrations

Initial calibration of the target compounds was performed as required by the method. The %RSDs were less than or equal to the method specified criteria of 20%.

2.5 Continuing Calibration Verification

Continuing calibration verification was performed at the required frequency. The %Ds between the calibration factors in initial calibrations and CCVs were within the method specified criteria of 20%D.

2.6 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 116110). PCBs were not detected in the method blank above the MDLs.

2.7 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). A sample set specific MS/MSD pair, using sample

MW-10, was reported. The MS/MSD pair had recovery and RPD results within the QAPP specified acceptance criteria.

2.8 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The results for the LCS were within the laboratory and QAPP specified acceptance criteria for recovery and RPD.

2.9 Surrogate

The surrogate recoveries were within the laboratory specified acceptance criteria.

2.10 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. PCBs were not detected in the source blank above the MDLs.

2.11 Equipment Blank

Two equipment blanks were collected with the sample set; one, EB-2, was reported for PCBs. PCBs were not detected in the equipment blank above the MDLs.

2.12 Field Duplicate

Two field duplicate samples were collected with the sample set; only DUP-2 was analyzed for PCBs. Acceptable precision (RPD ≤30% for water samples if both results are greater than five times the quantitation limit) was demonstrated between the field duplicate sample and the original sample, MW-34.

Sample ID	**Compound**	**Laboratory Result (µg/L)**	**Laboratory Flag**	**RPD**
DUP-2	PCB-1248	1.9	NA	30
MW-34	PCB-1248	1.4	NA	
DUP-2	The other PCBs	ND	NA	0
MW-34	The other PCBs	ND	NA	

µg/L-microgram per liter
NA-not applicable
ND-not detected at the MDL

2.13 Target Compound Identifications

The target compound identifications were within the validation criteria.

2.14 Target Compound Quantitation

The compound quantitations were within the validation criteria.

2.15 Sensitivity

The samples were reported to the MDLs. Elevated nondetect results were reported for samples DUP-2, MW-34 and MW-41 due to the dilutions analyzed.

The MDLs and RLs were the same as those listed in Table C.2 in the QAPP. It was noted that total PCBs were listed in Table C.2 in the QAPP, but not reported by the laboratory.

2.16 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

3.0 GASOLINE RANGE ORGANICS

Three water samples, one field duplicate sample, one MS/MSD pair and one equipment blank were analyzed for GRO per EPA Methods 5030C/8015D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

3.1 Overall Assessment

The GRO data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

3.2 Holding Times

The holding time for GRO analysis of a preserved water sample is 14 days from sample collection to analysis. The holding time was met for the sample analyses.

3.3 Initial Calibration

Appropriate initial calibrations were performed. Based on the method of calibration, the laboratory calculated %RSD of the calibration factors (CFs). The %RSDs were within the method and validation criteria for the target compounds.

3.4 Continuing Calibration Verification

For the target analyte, the CCVs were performed at the required frequency. The percent difference or percent drift (%D) between the CFs in the initial and continuing calibration standards for the target analyte were within the method acceptance criteria of less than or equal to 20%.

3.5 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported with the data (batch 144784). GRO was not detected in the method blank above the MDL.

3.6 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). One sample set specific MS/MSD pair, using sample MW-8, was reported. The MS/MSD pair had recovery and RPD results within the QAPP specified acceptance criteria.

3.7 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The result for the LCS was within the laboratory and QAPP specified acceptance criterion for recovery.

3.8 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses.

3.9 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. GRO was not detected in the source blank above the MDL.

3.10 Equipment Blank

Two equipment blanks were collected with the sample set; EB-1, was reported for GRO. GRO was detected in the equipment blank at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated concentrations of GRO in the associated samples were U qualified as not detected at the RL.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
DUP-1	Gasoline Range Organics [C6 - C10]	27	J	100	U	3
MW-13	Gasoline Range Organics [C6 - C10]	27	J	100	U	3
MW-30	Gasoline Range Organics [C6 - C10]	58	J	100	U	3
MW-8	Gasoline Range Organics [C6 - C10]	35	J	100	U	3

µg/L-microgram per liter
J-estimated concentration greater than the MDL and less than the RL

3.11 Field Duplicate

Two field duplicate samples were collected with the sample set; only DUP-1 was analyzed for GRO. Acceptable precision (RPD ≤30% for water samples if both results are greater than five times the quantitation limit) was demonstrated between the field duplicate sample and the original sample, MW-13.

Sample ID	Compound	Laboratory Result (µg/L)	Laboratory Flag	RPD
MW-13	Gasoline Range Organics [C6 - C10]	27	J	NC
DUP-1	Gasoline Range Organics [C6 - C10]	27	J	

µg/L-microgram per liter
J-estimated concentration greater than the MDL and less than the RL
NC-not calculable

3.12 Target Compound Identifications

The target compound identifications were within the validation criteria.

3.13 Target Compound Quantitation

The compound quantitations were within the validation criteria.

3.14 Sensitivity

The sample was reported to the MDLs. The MDLs and RLs reported were the same as those listed in Table C.2 in the QAPP. Screening criteria for GRO was not listed in table C.2 of the QAPP.

3.15 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

4.0 DIESEL RANGE ORGANICS

Three water samples, one field duplicate sample, one MS/MSD pair and one equipment blank were analyzed for DRO per EPA Methods 3520C/8015D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

4.1 Overall Assessment

4.1.1 Completeness

The DRO data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for the project is 100%.

4.1.2 Analysis Anomaly

Sample MW-30 was analyzed twice. The surrogate recovery was low in the initial analysis and acceptable in the reextraction/reanalysis. Only the reextraction/reanalysis was considered for validation based on the acceptable surrogate recovery. The result that was not considered for validation was set to not reportable in the EDD with qualifier file (a column was added to the EDD with qualifier file).

4.2 Holding Times

The holding times for DRO analysis of a preserved water sample are 7 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses, with the following exception.

The reextraction of sample MW-30 was prepared 12 days after sample collection, outside the holding time of 7 days from sample collection. Therefore, the concentration of DRO in sample MW-30 was J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (µg/L)	Laboratory Flag	Validation Concentration (µg/L)	Validation Qualifier	Reason Code
MW-30	Diesel Range Organics [C10 - C28]	13000	H	13000	J	2

µg/L-microgram per liter
H-laboratory flag indicating that the sample was prepped or analyzed beyond the specified holding time

4.3 Initial Calibration

Appropriate initial calibrations were performed for DRO. Based on the method of calibration, the laboratory calculated percent %RSD of the calibration factor (CF). For the target analyte, the %RSD was within the method criteria for DRO.

4.4 Continuing Calibration Verification

For the target analytes, the CCVs were performed at the required frequency. The %Ds between the CFs in the initial and the CCVs were within the method acceptance criteria of less than or equal to 20%.

4.5 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported with the data (batches 144632 and 145081). DRO was not detected in the method blanks above the MDL.

4.6 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). One sample set specific MS/MSD pair, using sample MW-8, was reported. The MS/MSD pair had recovery and RPD results within the QAPP specified acceptance criteria.

4.7 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs were reported. The results for the LCSs were within the laboratory and QAPP specified acceptance criterion for recovery.

4.8 Surrogate

Acceptable surrogate recoveries were reported for the sample analyses, with the following exception.

The recovery of o-terphenyl was low and outside the laboratory specified acceptance criteria in the initial analysis of sample MW-30. MW-30 was reextracted/reanalyzed with acceptable surrogate recovery. Therefore, no qualifications were applied to the data based on surrogate recoveries.

4.9 Source Blank

One source blank, 20140812-SOURCE BLANK, was reported in laboratory report 180-35729-1. DRO was not detected in the source blank above the MDL.

4.10 Equipment Blank

Two equipment blanks were collected with the sample set; one, EB-1, was reported for DRO. DRO was not detected in the equipment blank above the MDL.

4.11 Field Duplicate

Two field duplicate samples were collected with the sample set; only DUP-1 was analyzed for DRO. Acceptable precision (RPD $\leq$30% for water samples if both results are greater than five times the quantitation limit) was demonstrated between the field duplicate sample and the original sample, MW-13. The RPD was greater than 50%; however, since the concentrations in the field duplicate pair were less than five times the RLs, no qualifications were applied to the data.

Sample ID	**Compound**	**Laboratory Result (µg/L)**	**Laboratory Flag**	**RPD**
MW-13	Diesel Range Organics [C10 - C28]	700	NA	32
DUP-1	Diesel Range Organics [C10 - C28]	970	NA	

µg/L-microgram per liter
NA-not applicable

4.12 Target Compound Identifications

The target compound identifications were within the validation criteria.

4.13 Target Compound Quantitation

The compound quantitations were within the validation criteria.

4.14 Sensitivity

The sample was reported to the MDLs. The MDLs and RLs reported were the same as those listed in Table C.2 in the QAPP. Screening criteria for DRO were not listed in table C.2 of the QAPP.

4.15 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level IV report at a minimum of 20%. It was noted that the sample IDs in the EDD included the date and time of laboratory receipt in the prefix; this prefix was not listed on the COC. No other discrepancies were identified between the level IV report and the EDD.

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference
