EXECUTIVE SUMMARY

This Site Characterization Data Report presents results and findings from activities conducted by Geosyntec Consultants, Inc. on behalf of Unisys Corporation (Unisys) in accordance with the Site Characterization Work Plan for the Former Sperry Remington Site – North Portion (Site). The Site is located at the Elmira High School (EHS) property (formerly known as Southside High School), 777 South Main Street in Elmira, Chemung County, New York (see **Figure 1**). The EHS property is approximately thirty-four (34) acres in size. In June 2009, the Elmira City School District (ECSD) prepared an Environmental Management Plan (EMP) to formalize environmental management operations and practices at EHS. The intent of the EMP is to advise construction personnel and general community regarding the potential for exposure to Compounds of Potential Concern (COPC) that may be present in soil, groundwater and soil vapor on EHS property. In June 2013, the New York State Department of Environmental Conservation (NYSDEC) identified potential areas of concern (PAOCs) at the EHS property based on new information related to historical use of the EHS property and previous environmental investigations results. A Site Characterization Work Plan dated July 2014 and revised October 2014 was submitted by Unisys to NYSDEC for collection of data to document environmental conditions at the Site as it relates to PAOCs, historical information, and new findings.

Site Characterization activities presented herein, including former combined industrial sewer inspection, soil investigation, and groundwater investigation, are discussed for the purpose of 1) evaluating the former combined industrial sewer for potential migration pathways to media at the Site; 2) evaluating the nature and extent of constituents of concern in soil and groundwater at the Site; 3) providing findings for the investigated PAOCs and identifying data gaps; and 4) providing recommendations for updating the EMP and conducting additional investigation, if necessary. Other Site Characterization activities to evaluate sub-slab vapor and indoor air quality have been presented previously (Geosyntec, 2014). Based on investigations in July 2014, a vapor mitigation system was designed and installed in the F Wing of EHS in August 2014. Post-installation pressure testing and analytical results collected during the cooling and heating seasons indicated that the vapor mitigation system was effective in reducing indoor air concentrations of COPCs.

The former combined industrial sewer was inspected using geophysical methods and in-line camera surveys. The current EHS stormwater conveyance system, including sections of the former combined industrial sewer system, appeared intact and generally free of fine-grained material. Storm water and chiller water from EHS are discharged to adjacent wetlands to the east through a culvert located on the adjacent property to the south. Portions of the former combined industrial sewer that have not been incorporated into the EHS storm sewer system do not currently appear to be in active operation. The integrity of the easternmost section of the former combined industrial sewer appears compromised as indicated by several observed collapsed areas along the section. The westernmost section has been closed on the adjacent property to the south and is no longer active.

Soil investigation included collection of fifty-four (54) surface soil samples from fifty-four (54) locations (0 to 2 inches below the vegetative cover), forty-eight (48) shallow subsurface soil samples from sixteen (16) locations (0.17 to 3 feet below the ground surface) and one hundred ninety-one (191) subsurface soil samples from forty-two (42) locations (collected from 0.17 feet below the surface to the water table) and analyses for metals, cyanide, pesticides, polychlorinated biphenyls (PCBs), semi-volatile organic compounds (SVOCs) and volatile organic compounds (VOCs). Soil analytical results were compared to Restricted Residential Soil Cleanup Objectives (SCOs) presented in 6 NYCRR Subpart 375.

Analytical results for surface soils exceeded Restricted Residential SCOs for PCBs in six (6) out of fifty-four (54) samples and for polycyclic aromatic hydrocarbons (PAHs) in three (3) out of twenty-two (22) samples. Total PCB concentrations in surface soil that exceed the Restricted Residential SCO one (1) milligram per kilogram (mg/kg) range from 1.02 to 4.3 mg/kg. Those exceedances are limited to areas south of the EHS athletic stands (approximately 0.5 acres) and east of the EHS gymnasium (approximately 0.15 acres). PAH exceedances of Restricted Residential SCOs are limited to the EHS main parking lot and adjacent to the EHS athletic fields. Concentrations of benzo(a)fluoranthene and indeno(1,2,3-c,d)pyrene in surface soil that exceed the Restricted Residential SCO of 1 mg/kg and 0.5 mg/kg, respectively, range from 1.1 to 6.3 mg/kg and from 0.57 to 3.9 mg/kg. The remaining PAH exceedances were from a sample located in an area of the EHS main parking lot that was disturbed at the time of sampling by installation of a new curb around the median.

Subsurface soils had exceedances of Restricted Residential SCOs for metals, PCBs and PAHs. Thirty-seven (37) out of fifty-eight (58) subsurface soil sample locations had at least one (1) SCO exceedance. SCO exceedances for metals in subsurface soils are located primarily in the vicinity of the rear parking lot of EHS that was formerly used as a coal pile (approximately 0.75 acres) and may also contain fly ash and bottom ash from the power plant. SCO exceedances ranging from 1.02 to 690 mg/kg for PCBs in subsurface soils are primarily located in the vicinity of the EHS gymnasium, the rear parking lot that was formerly used as a coal pile, the football field and south of the athletic stands with a combined area of approximately two (2) acres. SCO exceedances for PAHs ranging from 0.38 to 6.9 mg/kg in subsurface soils are primarily located in the EHS main parking lot (approximately 0.7 acres). In comparison to the overall Site area of approximately thirty-four (34) acres, areas with SCO exceedances for metals, PCBs and PAHs are approximately 2.2 per cent (%), 5.8%, and 2.1% of the Site, respectively.

Areas of SCO exceedances for metals and PCBs overlap, resulting in approximately 2.7 acres or eight per cent (8 %) of the overall Site area with SCO exceedances in the subsurface soils. In general, SCO exceedances in subsurface soils at the Site can be managed by following soil management protocols presented in the EMP. Soil management areas presented in the EMP should be updated to include subsurface SCO exceedances found in the main and rear parking lots and north of the EHS F and G Wings. In select areas of the Site (approximately 0.4 acres; 1.2% of Site area), total PCB concentrations in subsurface soils exceed the limit of one hundred (100) milligrams per kilogram (mg/kg) for bulk PCB remediation wastes in low occupancy, capped areas, as defined in 40 CFR §761.3 and §761.6 (TSCA), for self-implementing PCB remediation. Further delineation of total PCBs in soils in those areas is recommended to define areas for potential remedial actions.

Groundwater investigations assessed the condition of the existing monitoring well network and confirmed the direction of groundwater flow. Twenty (20) existing groundwater monitoring wells were found to be in good condition. Similar to historical interpretations, groundwater beneath the Site generally flows east or northeast. The groundwater monitoring network is concentrated to north and east of the EHS building and does not extend to the rear parking lot or the south side of the EHS building where production wells for cooling water are located.

Groundwater quality was assessed by collecting grab water samples from existing monitoring wells and direct push soil boring and comparing groundwater analytical results to NYSDEC groundwater standards. VOCs, including acetone, cis-1,2-dichloroethene (cis-1,2-DCE), Freon 113, tetrachloroethene, and trichloroethene (TCE) were detected above groundwater standards to the east of the K Wing (Science Addition). Detections of cis-1,2-DCE and TCE ranged from seventy-seven (77) to three hundred fifty (350) micrograms per liter (µg/L) and from 0.57 to seventeen (17) µg/L, respectively. TCE was detected in grab samples collected from the north side of the EHS F Wing with concentrations ranging from 5.6 to 8.9 µg/L. SVOCs detected above groundwater standards in grab groundwater samples collected along the east side of the EHS gymnasium included benz(a)anthracene (3.7 to 6.1 µg/L, chrysene (7 to 7.9 µg/L), and indeno(1,2,3-c,d)pyrene (0.28 µg/L). PCBs were detected above groundwater standards to northeast of the EHS gymnasium ranging from 1.4 to 23 µg/L. Installation of new groundwater monitoring wells in the southeastern and southwestern portions of the rear parking lot is recommended to monitor groundwater flow and groundwater quality.

1. INTRODUCTION

1.1 Background

On behalf of Unisys Corporation (Unisys), Geosyntec Consultants, Inc. and its New York affiliate Beech and Bonaparte Engineering, P.C. (collectively Geosyntec) are submitting this Site Characterization Data Report (SC Data Report) for the Former Sperry Remington Site – North Portion, Site #808022 (Site) in accordance with the Order on Consent and Administrative Settlement (AOC) with the New York State Department of Environmental Conservation (NYSDEC) for the Site approved by NYSDEC on 7 July 2014. The Site is located at the Elmira High School (EHS) property (formerly known as Southside High School), 777 South Main Street in Elmira, Chemung County, New York (see **Figure 1**). The EHS property is approximately thirty-four (34) acres and as shown on **Figure 2** is bounded by South Main Street to the west, the Southern Tier Commerce Center (STCC) to the south, the Consolidated Rail Corp. property to the east and vacant land to the north. Miller Pond is located approximately one thousand (1,000) feet to the east.

A Preliminary Site Assessment (PSA) for the entire Former Sperry Remington Site was completed in 1988 on behalf of Unisys and submitted to NYSDEC (Dames & Moore, 1988). The EHS property has been the subject of additional environmental investigations between 1998 and 2013.

In June 2009, the Elmira City School District (ECSD) prepared an Environmental Management Plan (EMP) in response to a request from the State Education Department (SED) to formalize environmental management operations and practices at EHS. NYSDEC and the New York State Department of Health (NYSDOH) provided technical assistance to SED in development and review of the EMP. The intent of the EMP is to advise construction personnel and general community regarding the potential for exposure to Compounds of Potential Concern (COPC) that may be present in soil, groundwater and soil vapor on EHS property (Sterling, 2009). The components of the EMP include a Soil Management Plan (SMP), Indoor Air Quality Action Plan (IAQAP), Groundwater Management Plan (GMP), and an Operations, Monitoring and Maintenance (OM&M) Plan for Engineering Controls. The following presents a brief description of each component:

- The SMP addresses issues relating to the management of soil during future development or construction on the property; proposed and existing cover systems (engineering controls) used to prevent human contact with potential residuals in soil and to reduce the potential for COPC migration with surface water runoff from the EHS property; and guidelines and procedures established for management of soil/fill and cover systems, including site preparation, excavations, underground storage tank (UST)/buried drum handling, soil characterization procedures, and composite soil sampling. The SMP defined soil management areas for groups of COPCs including metals, polychlorinated biphenyls (PCBs), and volatile organic compounds (VOCs)/semi-volatile organic compounds (SVOCS).

- The IAQAP addresses issues and conditions contributing to indoor air quality in the EHS Main Building. It also establishes procedures to monitor sub-slab differential pressure and a program for sampling and evaluating indoor air and sub-slab vapor in the EHS Main Building. Past, present and future steps for protection of indoor air quality include positive pressurization by the heating, ventilation and air conditioning (HVAC) system, sub-slab depressurization, vapor barriers, air and vapor monitoring and chemical storage.
- The GMP addresses groundwater monitoring well maintenance and sampling and provides guidelines for managing and handling groundwater encountered during excavations.
- The OM&M Plan describes engineering controls that have been implemented including a soil cover system, and vapor barrier systems and sub-slab depressurization systems in the Gym and the Science Addition. Procedures for inspecting, evaluating and maintaining those systems are also identified.

The SMP defined soil management areas for groups of COPCs including metals, polychlorinated biphenyls (PCBs), and volatile organic compounds (VOCs)/semi-volatile organic compounds (SVOCS) based on results of previous investigations. Annual Certification Reports (ACRs) have been submitted to SED and copied to NYSDEC by ECSD to document EMP compliance (Sterling, 2011, 2012, 2013). In June 2013, NYSDEC identified potential areas of concern (PAOCs) at the EHS property based on new information related to historical use of the EHS property and previous environmental investigations results.

A Site Characterization Work Plan (Work Plan) dated July 2014 and revised October 2014 was submitted to NYSDEC to collect data to document environmental conditions at the Site as it relates to PAOCs, historical information, and new findings (Geosyntec, 2014a). The Work Plan was approved by NYSDEC on 2 December 2014. The specific objectives of the Work Plan included the following:

- Confirm historic detection of COPCs;
- Verify that concentrations of COPCs in cover soils are below standards, criteria, and guidance (SCGs);
- Validate that concentrations of COPCs in media do not pose an immediate risk to human health and the environment;
- Document waste disposal at the Site;
- Define the nature and extent of COPCs in media related to waste disposal at the Site; and
- Evaluate PAOC as potential sources, estimate contaminant mass and migration pathways or points of exposure.

PAOCs identified by NYSDEC and the scope of investigation proposed in the Work Plan for each PAOC are summarized on **Table 1**. The scope of work included former combined industrial sewer inspection, soil investigation, groundwater investigation, sub-slab vapor investigation, and indoor air investigation. The approximate location and extent of each PAOC identified by NYSDEC is shown on **Figure 3**. Other PAOCs identified by NYSDEC are being addressed by Unisys under AOCs for the Former Sperry Remington Site (NYSDEC Site #808043) and the Former Scott Technologies Site (NYSDEC Site #808049).

Implementation of the Work Plan was expedited in order to complete most field activities and obtain preliminary results prior to start of classes at EHS on 3 September 2014. Indoor air and sub-slab vapor investigations were conducted in July 2014. Based on those investigations, a vapor mitigation system was designed and installed in the F Wing of EHS in August 2014. Post-installation pressure testing and analytical results collected during the cooling and heating seasons indicated that the vapor mitigation system was effective in reducing indoor air concentrations. Results of the indoor air and sub-slab vapor investigations and construction of the vapor mitigation system have been presented previously in Vapor Intrusion Assessment and Mitigation Report (VI Report) submitted to NYSDEC and NYSDOH for review on 3 October 2014 (Geosyntec, 2014b). Verification of previous COPC analytical results in surface and shallow sub-surface soils were also conducted in July 2014 in order to confirm that COPCs did not pose an immediate risk to human health and the environment prior to the start of classes. NYSDEC and NYSDOH provided oversight and review during field activities. Changes requested by NYSDEC/NYSDOH in the field were incorporated into a revised Work Plan submitted to NYSDEC on 27 October 2014.

1.2 Purpose

This SC Data Report presents activities conducted in accordance with the Work Plan for the former combined industrial sewer inspection, soil investigation, and groundwater investigation and a discussion of data collected as part of those investigations conducted to date. Data presented herein will be discussed for the purpose of:

1. Evaluating the former combined industrial sewer for potential migration pathways to media at the Site;
2. Evaluating the nature and extent COPC in soil and groundwater at the Site;
3. Providing findings for the investigated PAOCs and identifying data gaps; and
4. Providing recommendations for updating the EMP and conducting additional investigation, if necessary.

Activities completed and data collected for the sub-slab vapor investigation, high-volume sampling testing, and indoor/outdoor air investigation portions of the Work Plan have been presented previously in the VI Report (Geosyntec, 2014b) submitted to NYSDEC and NYSDOH for review on 3 October 2014.

2. FIELD ACTIVITIES

Field activities were conducted between 21 July and 13 November 2014. The following sections describe those field activities performed. Unless otherwise described below, field activities were performed in accordance with the Work Plan and corresponding Quality Assurance Project Plan/Field Sampling Plan (QAPP/FSP). Significant deviations from the Work Plan are described in Section 2.5.

2.1 Former Combined Industrial Sewer Inspection

The inspection of the former combined industrial sewer (AOC-2) consisted of a comprehensive subsurface utility (CSUL) survey and in-line camera surveys. The extent of the former combined industrial sewer and piping infrastructure investigated is shown on **Figure 4.** The inspection builds upon previous inspections of storm sewer connections constructed prior to, and as part of, EHS construction. Those include storm sewer inspections conducted as part of the Interim Remedial Measure (IRM) Pre-Design Investigation (Geosyntec, 2013) for the Former Sperry Remington Site (NYSDEC Site #808043).

2.1.1 Comprehensive Subsurface Utility Survey

New York Leak Detection, Inc. (NYLD) completed a comprehensive utility survey on 25 August 2014 to evaluate access to storm sewer piping via surface structures (e.g., catch basins, manholes) and locate the piping segments connecting the structures. Piping was located using a tracer line and sonde designed to detect the tracer from ground surface. Ground Penetrating Radar (GPR) was also used south of the G Wing of EHS to locate storm sewer connections to the STCC property to the south but was not successful at identifying the piping due to suspected pipe depth and subsurface conditions beneath the Site. The field report of the CSUL survey, including a schematic of the current storm sewer system based on field observations, is included as **Appendix A**.

2.1.2 In-line Camera Surveys

In-line camera surveys of the former combined industrial sewer were conducted by Kandey Company Inc. (Kandey) between 9 and 11 September 2014. The extent and direction of the in-line camera surveys are shown on **Figure 4**. Storm sewer lines that were likely to have existed prior to school construction were selected for survey after review of the CSUL survey and historical school construction plans provided by NYSDEC. In-line camera surveys were conducted by lowering a robot crawler equipped with a video camera down a given surface structure (i.e. manhole or catch basin) into the connecting storm water pipe. The crawler was advanced down the pipe to the next structure and video was obtained of the pipe interior. When an obstruction (e.g. debris) was encountered, attempts were made for the crawler to advance around or over the obstruction. Due to obstructions encountered between structures CB-3 and CB-2, the robot crawler and camera were removed from the pipe and attempts were made to clear the blockage by flushing the pipe with water. Flushed water was recovered using a vacuum truck at a downgradient structure and transferred to a holding tank onsite for offsite disposition. The robot crawler was then reintroduced into the pipe to continue the survey. No attempts were made to clear pipes that were either collapsed or blocked by bulkheads. In such cases, the pipes were surveyed by approaching the blocked section of pipe from both ends. The survey length was calculated to be the distance between the entry structure and the point where blockage was encountered and the survey was abandoned. A summary of the observations noted during the surveys is presented in **Table 2** and further discussed in Section 4.1. Inspection reports developed by Kandey and video for each run are included for reference as **Appendix B**.

As part of the combined industrial sewer inspection section 5.1.3 of Work Plan called for inspection of manhole SW-73 and sampling if accumulated fine-grained material was encountered. However, the manhole could not be located for inspection or sampling and, as a result, those tasks could not be completed.

2.2 Soil Investigation

The soil investigation addressed data gaps in soil data at the Site as evaluated through the draft Conceptual Site Model (CSM) presented in the Work Plan based on historical soil analytical data and PAOCs identified by NYSDEC. This soil investigation included:

- Surface soil sampling (beneath the vegetative cover to approximately two (2) inches) for comparison to Restricted Residential Soil Cleanup Objectives (SCOs), presented in 6 NYCRR Subpart 375;
- Shallow subsurface soil sampling to depths of three (3) feet beneath vegetative cover to verify and delineate PCB and VOC soil management areas presented in the EMP; and
- Subsurface soil sampling to confirm historic detections of COPCs in soil, document waste disposal (if any), define the nature and extent of soil COPCs, and evaluate PAOCs as potential sources, potential migration pathways and potential points of exposure.

Surface soil sampling and shallow subsurface soil boring installation and sampling were completed on 21 and 22 July 2014 in order to provide preliminary results to NYSDEC and NYSDOH in the event that interim measures would be needed prior to the start of classes at EHS in September 2014. Subsurface soil boring installation and sampling were completed between 11 and 15 August 2014. Details regarding those methods used during the soil investigation are further described in the sections below.

2.2.1 Pre-Sampling Field Survey

Prior to initiating field sampling activities for each event, a field reconnaissance was completed to locate proposed soil sample locations and evaluate access at each location. A handheld Trimble GeoXH series global positioning system (GPS) unit with sub-meter accuracy was pre-loaded with the proposed sample coordinates and was used to navigate to each location. Once located, each proposed location was flagged. Utility surveys were then conducted by NYLD at each location where invasive investigation activities deeper than six (6) inches were performed in order to clear underground utilities, structures, or debris that may affect the investigation or may present health and safety or property damage risks. An area within a five-foot radius of each proposed location was cleared and utilities in the vicinity were marked, if present. If utilities conflicts were identified as potential hazards or access was problematic, sample locations were adjusted from those proposed. Locations of soil samples collected as part of the soil investigation are shown on **Figure 5**.

2.2.2 Surface Soil Sampling

Samples of surface soil (defined as soil zero to two (0 - 2) inches below the vegetative cover) at eighteen (18) locations to verify PCBs, SVOCs, and/or metals in cover soils meet the Restricted Residential SCOs. A summary of samples collected and analyses performed is presented on **Table 3A**. The locations of surface soil samples are shown on **Figure 5**.

To collect surface soil samples, a small section of sod from each location was cut and laid to the side. Plastic sheeting was placed over the sampling location and a hole was cut in the plastic sheeting large enough to allow a hand auger to pass. A hand auger was then used to advance a hole in the soil approximately two (2) inches below ground surface (bgs). The soil retrieved was visually inspected and screened with a photoionization detector (PID) equipped with an 11.7 eV lamp. Following field screening, the soil was homogenized, placed in laboratory-provided sample containers for shipment to, and analyses at, the TestAmerica Pittsburgh Laboratory in accordance with the QAPP/FSP. Each two (2) inch deep hole was filled with commercially available topsoil and the sod was replaced.

2.2.3 Shallow Subsurface Soil Boring Installation and Soil Sampling

Sixteen (16) shallow soil borings (approximately three (3) feet deep) were installed to verify and delineate PCBs or VOCs previously detected in surface or shallow subsurface soils at four (4) historical sample locations. These locations included the following:

- SSHS-FB7 and SSHS-B15, for verification of PCBs historically identified in subsurface soils;
- SSHS-SS12, for verification of PCBs historically identified is surface soils; and
- SSHS-FB5, for verification of trichloroethene (TCE) in shallow subsurface soils.

At each location, one (1) confirmatory boring and up to four (4) step out borings were installed. A summary of the samples collected and the analyses performed is presented on **Table 3B**. The locations of the shallow subsurface soil borings are shown on **Figure 5**.

To collect soil samples, shallow subsurface soil borings were advanced to approximately three (3) feet bgs using Direct Push Technology (DPT). First, a small section of sod from each location was cut and laid to the side and plastic sheeting was placed over the sampling location.

A hole was cut in the plastic sheeting large enough to allow the drill tooling to pass and a continuous soil core was collected in an acetate liner by the DPT rig. The liner was retrieved from the DPT tooling and opened and collected soil was logged and screened with a PID at approximately six (6) inch intervals. Each soil boring was divided into four (4) segments: zero to two (0-2) inches bgs, 0.17-1 feet bgs, one to two (1-2) feet bgs, and two to three (2-3) feet bgs. The sampling interval 0.17 -1 feet bgs was added at the request of NYSDEC during sampling. If PID readings were above background, samples were collected from the zone in each segment exhibiting the highest PID readings (if applicable), visual observation (e.g. staining), or presence of odors. If PID readings were not higher than background and no staining or odors were observed, the sample was collected from the middle of each segment.

For the SSHS-FB5 area, grab samples for VOC analyses were collected directly from the acetate sleeve within the desired sample interval using a Terra Core sampling kit. For other areas that required PCB sample collection only, soil in each interval was collected directly from the acetate sleeve, homogenized, and placed in laboratory-provided sample containers. Following collection, samples were handled in accordance with the QAPP/FSP and shipped to the TestAmerica Pittsburgh Laboratory for analyses.

2.2.4 Subsurface Soil Boring Installation and Soil Sampling

Subsurface soil borings were installed at forty-two (42) locations to confirm historic detections of COPCs in soils, document waste disposal, define the nature and extent of soil COPCs, and evaluate PAOCs as potential sources, potential migration pathways and potential points of exposure. A summary of borings installed at each PAOC, rationale for sample collection, samples collected, and analyses performed is presented on **Table 3C**. The locations of the subsurface soil borings are shown on **Figure 5**. Boring logs for each subsurface boring are included in **Appendix C**.

Similar to shallow subsurface samples described in Section 2.2.3 above, soil samples from subsurface soil borings were collected using DPT. Each DPT boring was advanced to a terminal depth corresponding with the water table (on average 15 feet below ground surface) or equipment refusal, which ever was encountered first. Borings were installed at each location by first placing plastic sheeting over the sampling location. A hole was cut in the plastic sheeting large enough to allow the drill tooling to pass and a continuous soil core was collected in an acetate liner by the DPT rig. The liner was retrieved from the DPT tooling and opened and collected soil was logged and screened with a PID at approximately six (6) inch intervals. Each soil boring was divided into five (5) segments: 0-2 inches bgs, 0.17-2 feet bgs, two to six (2-6) feet bgs, six to ten (6-10) feet bgs, and ten (10) feet bgs to the shallow water table. A sample from the surface soil segment (0-2 inches bgs) was not collected if asphalt covered the ground surface. If PID readings were above background, samples were collected from the zone in each segment exhibiting the highest PID readings (if applicable), visual observation (e.g. staining), or presence of odors. If PID readings were not higher than background and no staining or odors were observed, the sample was collected from the middle of each segment. Following field screening and visual observation, grab samples for VOC analyses were collected directly from the acetate sleeve within the desired sample interval using a terra core sampling kit. After VOC sample collection, remaining soil in each interval was collected from the acetate sleeve, homogenized, and placed in laboratory-provided sample containers for analyses of the non-volatile COPCs. Following collection, samples were handled in accordance with the QAPP/FSP and shipped to the TestAmerica Pittsburgh Laboratory for analyses.

2.2.5 Borehole Abandonment and Decontamination

Each borehole installed by DPT tooling was abandoned with bentonite chips to within two (2) inches of the ground surface, topped with commercially available topsoil, and sod was replaced (if present). For borings installed through asphalt, the asphalt surface was repaired with asphalt cold patch at each location. Between sampling locations, all reusable equipment was cleaned using the procedures described in the QAPP/FSP.

2.3 Groundwater Investigation

Site groundwater was investigated by collecting groundwater samples from select historical monitoring wells and DPT soil borings installed around the perimeter of the school building. A summary of historical monitoring wells and direct push borings sampled, collection rationale, and analyses performed is presented on **Table 4**. Locations of historical monitoring wells located during the investigation, and direct push groundwater sampling locations are depicted on **Figure 6**. Groundwater investigation methods are described below.

2.3.1 Well Inspection and Synoptic Water Level Measurement

Prior to sample collection, identification of up to twenty-eight (28) historical monitoring well locations identified in the Work Plan was attempted to verify well existence and perform well inspections to document monitoring well conditions and evaluate if the well was suitable for groundwater sampling (if applicable). Well inspection results are summarized on **Table 5**. In summary, twenty-two (22) monitoring wells were located and inspections were performed. Monitoring wells MW-28, MW-29, MW-14, MW-6, MW-8D and MW-D were not located. Twenty (20) monitoring wells were noted to be in good condition with only two (2) of the monitoring wells (MW-7 and MW-16) being reported in poor condition. An outer protection casing was not present at MW-16, the inner casing and plug was covered by rocks and soil, and appeared to be damaged by automobile traffic. In contrast to MW-16, an outer protective casing was present at MW-7; however, it was not bolted and the inner PVC casing was not capped. Although in poor condition, both MW-7 and MW-16 were dry during the inspections and are unlikely to be used for future groundwater sampling. Horizontal locations and reference point elevations of the existing monitoring wells were surveyed by Fagan Engineers and Land Surveyors (Fagan), a New York licensed land surveyor, on 10 September 2014. Survey results are presented in **Table 6**.

To measure the depth of the shallow water table across the Site and monitor for the presence of light non-aqueous phase liquid (LNAPL), a synoptic water level survey was performed with an oil-water interface meter at those monitoring wells shown in **Figure 6**. The survey was performed on 13 November 2014 by measuring the depth to water and LNAPL (if present) from the well reference point on the inner well casing to the nearest hundredth of a foot using a clean electronic oil-water interface meter. Results from the synoptic survey are summarized on **Table 6** and are discussed in Section 4.5.

2.3.2 Low-Flow Groundwater Sampling

In accordance with the approved Work Plan, groundwater sampling was completed at seven (7) historical monitoring wells (MW-8S, MW-10, MW-13, MW-30, MW-34, MW-38, and MW-41) on 20 through 22 August 2014, using low-flow sampling protocols detailed in the QAPP/FSP. A summary of samples collected and analyses performed is presented on **Table 4**. The location of the each monitoring well sampled is shown on **Figure 6**.

Monitoring wells were purged at low-flow rates (between one-tenth (0.1) and one-half (0.5) liters per minute) to minimize drawdown of the surrounding water table and minimize stress on the formation. Water was purged from the wells with a cleaned bladder pump and monitored for the following water quality field parameters: temperature, pH, specific conductivity, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity to document changes in water quality. Samples were collected when three (3) consecutive readings were within field parameter stabilization criteria. Samples were collected directly from the pump discharge tubing and placed directly in laboratory-provided pre-preserved sample containers for shipment to, and analyses at, the TestAmerica Pittsburgh Laboratory in accordance with the QAPP/FSP. Following sampling, purging equipment was removed from the monitoring well and reusable equipment was decontaminated using the procedures described in the QAPP/FSP. Groundwater sampling purge logs have been included as **Appendix D**.

2.3.3 Direct-Push Groundwater Sampling

Grab groundwater samples were collected using DPT methods at select soil boring locations on 12 and 13 August 2014. A summary of the samples collected, analyses performed, and sampling rationale is presented on **Table 4**. The location of each grab sample is shown on **Figure 6**. Samples were collected using the procedures described below.

Following DPT borehole installation and soil sample collection as described in section 2.2.4, groundwater samples were collected by inserting clean DPT sampling rods equipped with an expendable drive-point and extendable four- (4-) foot long stainless steel screen (DPT groundwater sampling apparatus). The DPT groundwater sampling apparatus was not installed directly into the soil boring used for soil sample collection, but rather within two to three (2-3) linear feet of the soil boring location. The DPT groundwater sampling apparatus was installed to a depth that was approximately six to seven (6-7) feet below the approximate water table depth identified during soil boring installation. Once the desired depth was reached, the DPT rods were retracted four (4) feet to expose the stainless steel screen and allow groundwater to enter.

Once retracted, the sampling apparatus was allowed to sit for at least ten (10) to minutes to allow sufficient time for groundwater to enter the temporary screen.

After at least ten (10) minutes, a minimum of three (3) temporary well volumes were purged prior to filling sample containers to reduce sample turbidity and draw formation quality water into the temporary screen. Groundwater purging and sample collection was completed using a peristaltic pump and Teflon tubing. Once purging was complete, water quality parameters (i.e., temperature, specific conductance, DO, ORP and turbidity) were measured using a calibrated water quality meter. Groundwater samples were obtained by directly filling clean, laboratory-provided sampling containers directly from the discharge tubing in accordance with the QAPP/FSP. Following sample collection, the DPT rods and screen were removed from the boring and the boring was abandoned as described in Section 2.2.5. The DPT tooling, screen, and other reusable equipment were cleaned between sampling locations as described in the QAPP/FSP.

2.4 Other Project Support Activities

2.4.1 Soil Boring and Monitoring Well Surveying

Following the completion of field sampling activities, a handheld Trimble GeoXH series GPS unit with sub-meter accuracy was used to collect horizontal coordinates of the actual soil boring locations. Survey markers and flagging were removed from the Site upon completion of the survey.

Fagan, a New York licensed land surveyor, surveyed the horizontal location and elevation of those twenty-two (22) existing groundwater monitoring wells located during the well inspection survey (see Section 2.3.1) on 10 September 2014. Surveyed locations were accurate to plus or minus one-hundredth (0.01) of one-foot vertically and plus or minus one-tenth (0.1) of a foot horizontally. Horizontal data were reported in reference to the North American Datum 1983 (NAD83) New York State Plane; vertical data were reported in reference to the North American Vertical Datum 1988 (NAVD88). Monitoring well elevations were measured at a reference point at the north side of the top of each inner well casing to the nearest one-tenth (0.1) foot. Location and elevation data provided by Fagan for each monitoring well are summarized on **Table 6**.

2.4.2 Management of Investigation Derived Materials

Investigation Derived Materials (IDM) generated during site characterization activities included disposable personal protective equipment (PPE), disposable sampling equipment, miscellaneous disposables that came in contact with investigation media, soil boring cuttings, decontamination water, purge water, and water collected during the combined industrial sewer cleanouts. All but the water collected during the combined industrial sewer inspection was containerized in fifty-five (55-) gallon Department of Transportation (DOT)-approved drums (drums) for characterization and offsite disposal. In total, four (4) drums of combined PPE, disposable sampling equipment, and miscellaneous disposables, three (3) drums of soil cuttings, and three

(3) drums of purge and decontamination water were generated during characterization activities. The drums were staged onsite in a Conex shipping container (used for equipment storage and work trailer) for temporary storage. In addition, approximately five hundred (500) gallons of water was collected from the sewer during the former combined industrial sewer inspection and transferred to a holding tank onsite for offsite disposition.

Composite samples were collected from drummed soil and purge/decontamination water to characterize IDM for offsite disposal. Samples were analyzed for RCRA characteristic waste parameters (i.e. Toxicity Characteristic Leaching Procedure analyses, ignitibility, corrosivity, and reactivity) as well as for PCBs and diesel range organics. Laboratory analytical results included in **Appendix E** indicate containerized IDM is RCRA non-hazardous. IDM, including the water collected from the former combined industrial sewer, remains staged onsite awaiting offsite disposal.

2.5 Work Plan and QAPP/FSP Deviations

The following deviations from the Work Plan and/or QAPP/FSP are noted:

- For DPT groundwater sampling, depth to water measurements were intended to be measured every five (5) to ten (10) minutes to evaluate groundwater recovery; however, the electronic oil/water interface probe was too large to fit down the inner DPT tooling and those measurements could not be collected. Although groundwater recovery was not documented by depth to water measurements, the borings produced adequate groundwater to purge a minimum of three (3) volumes from the sample intervals and fill required sample bottles.

- As part of the combined industrial sewer inspection, Section 5.1.3 of the Work Plan called for inspection of manhole SW-73 and sampling if accumulated fine-grained material was encountered. However, the manhole could not be located for inspection or sampling, and as a result, those tasks could not be completed.

3. DATA USABILITY

Analytical data packages generated by TestAmerica during Site Characterization activities presented herein are included in **Appendix E** and were validated by Geosyntec. Analytical data packages were reviewed for completeness, field and laboratory QC sample results were evaluated, significant laboratory control problems were assessed, and data qualifiers were assigned. Data validation was performed on analytical data generated during the Site Characterization to verify and validate the usability of those data. Stage 4 validation was performed on approximately five per cent (5%) of soil samples (sixty-two (62) samples) and one hundred percent (100%) of groundwater samples. Stage 2A validation was performed on those remaining soil samples. Verification and validation were based on completeness and compliance checks of sample receipt conditions, both sample-related and instrument-related QC results, recalculation checks, and review of actual instrument outputs. Data validation reports, delivered on 10 November 2014, are included in **Appendix F** and indicate qualification of data based on sample-related QC results. All data were found to be suitable for their intended use, except as noted in the validation reports.

4. RESULTS AND DISCUSSION

Results of the former combined industrial sewer inspection, soil investigation, and groundwater investigation conducted for Site Characterization are presented and discussed in the following sections. Results of the sub-slab vapor investigation, high-volume sampling testing, and indoor/outdoor air investigation conducted for Site Characterization have been presented previously in the VI Report (Geosyntec, 2014b) submitted to NYSDEC and NYSDOH for review on 3 October 2014.

4.1 Former Combined Industrial Sewer Inspection

The extent of the former combined industrial sewer and piping infrastructure investigated during the in-line camera survey is shown on **Figure 4** and a summary of the observations noted during the survey is presented in **Table 2**. Inspection reports developed by Kandey and video for each survey run are included for reference in **Appendix B**. General findings from in-line camera surveys are summarized as follows:

- The thirty-inch (30-in) former combined industrial sewer line running along the eastern side of the Site was surveyed from north of CB-24 to south of CB-3. The direction of storm water flow is assumed to be to the south. That sewer line is blocked and/or compromised in several areas. These areas are shown on **Figure 4**. During the camera survey the main line was observed to be predominantly dry upstream of CB-2 but contained water, fine-grained material, and debris downstream from CB-2. A sample of fine-grained material was not collected due to the distance at which the fine-grained material was encountered and the amount of water and debris present. The line is blocked at the northern end past CB-24 and collapsed at multiple locations along its run. The line branches to the south southeast of CB-3. The eastern branch is closed off with a brick bulkhead (i.e., a wall built to block flow) and the western branch was not accessible approximately forty-two (42) feet south of the branching. The compromised structural integrity of that combined industrial sewer line suggests that it is currently not in operation.

- Sewer lines from CB-3 to the southwest and south southwest towards the school building were also collapsed and closed off with a bulkhead. It is assumed that the direction of storm water flow is toward CB-3. The compromised structural integrity and blockage of those sewer lines suggests that they are currently not in operation.

- A twelve-inch (12-in) sewer line was surveyed from CB-1 toward CB-8. It is assumed that the direction of storm water flow is from CB-8 to CB-1. The line was observed to contain dry fine-grained material and gravel. Approximately seven (7) feet from CB-1, the 12-in line was observed to join with a ten-inch (10-in) line, continuing for approximately sixteen (16) feet where it was noted to be collapsed. The compromised structural integrity of that sewer line suggests that it is currently not in operation.

- The 30-in former combined industrial sewer line in- between the school building and the athletic field was surveyed between CB-9 and CB-5. That sewer line was observed to contain dry fine-grained material, gravel, and rocks in the line section between one hundred and ninety (190) feet and two hundred (200) feet from CB-9 toward CB-5. At CB-5, the invert from CB-9 appeared higher than the invert to CB-4 suggesting that the stormwater from the main parking lot area that is collected in CB-9 is conveyed through CB-5 toward CB-6 and eventually south of the Site to STCC property.

- Upstream connections to CB-9 were surveyed from CB-13, CB-18, CB-19 and CB-20. Those connections collect storm water from the football field, the main parking lot and the main entrance. Sewer lines were observed to be intact and drains were generally observed to be dry. Fine-grained material and mud were observed in the sewer line between CB-18 and CB-17 at a distance of approximately sixty-three (63) feet. Two (2) four-inch taps were observed at a distance of approximately seventy (70) and seventy-five (75) feet. Review of historical school construction plans suggests that those taps are roof drain connections.

- The thirty-three-inch (33-inch) former combined industrial sewer line east of the gymnasium was surveyed from CB-4 to CB-6. That line was dry and intact. As noted on **Table 2**, the combined industrial sewer line south of CB-6 was surveyed previously (Geosyntec, 2013). Storm water flow is assumed to be to the south toward STCC. The combined industrial sewer line was observed to be intact and is part of the current EHS storm sewer system.

- The twelve-inch (12-inch) sewer line at the south end of the rear parking lot was inspected from CB-7 until the line joined the 48-inch line south of CB-6. That line was dry and intact. The 48-inch line south of CB-6 was surveyed previously (Geosyntec, 2013) and was observed to be free of fine-grained material and debris. The 48-inch line connects to an eight (8) to twelve (12)-foot diameter covered concrete culvert on the STCC property that discharges to the adjacent wetlands to the east.

- The twenty-four-inch (24-inch) sewer line south of the EHS building was surveyed from CB-6 to CB-23 including the branch line to CB-21. Storm water flow is assumed to be toward CB-6. The branch line from CB-21 was observed to be dry and intact. The survey from CB-6 towards CB-22 was terminated at a distance of approximately 166 feet due to obstructions in the line and cascading flow. That flow is assumed to be coming from the chiller (See camera survey video from CB-6 to West Connection (chiller) in **Appendix B**. Due to the obstruction, the reverse survey was completed from CB-22 for a distance of approximately one hundred thirty-five (135) feet. Rocks observed in the line appear to be the source of obstruction and the cascading overflow of chiller water. The line from CB-6 to CB-22 was observed to be intact and carries the chiller water discharge to CB-6.

- The former combined industrial sewer line along the western end of the Site was surveyed from CB-25 on the STCC property toward the Site. It is assumed that the direction of storm water flow is to the south toward CB-25. The sewer line was closed off with a bulkhead just north of CB-25, suggesting that that sewer line is currently not in operation. The portion of the line that is on the EHS property could not be located from the ground surface with GPR geophysical tools. Based on the bulkhead, there does not appear to be a current pathway from the Site to STCC via that sewer line.

4.2 Lithology

Soil lithology was observed and recorded during site characterization activities. Boring logs for subsurface borings are presented in **Appendix C**. Generally, lithology observed during investigation activities was similar to with historical geologic interpretations for the Site (Sterling, 2009).

Descriptions of Site geology have been presented previously in the EMP and references therein. Generalized cross-sections for the Site were prepared, incorporating historical lithological data as well as data collected during site characterization activities (see boring logs in **Appendix C**). Cross-section alignments are depicted on **Figure 6**. The lithology along the eastern boundary of the Site is presented on cross-section A-A’ on **Figure 7A**. Cross-section B-B’ presents the lithology on the western side of the Site as shown on **Figure 7B**. The lithology underlying the central portion of the EHS building from the gymnasium in the east to the F Wing in the west is presented as cross-section C-C’ on **Figure 7C**.

A stratigraphic layer comprised of reworked native soils and fill material was encountered from the surface to approximately six (6) feet bgs (thickness varies). That fill unit is composed of primarily medium-to-fine sand with silt and medium-to-fine gravel and includes some red brick, concrete fragments, and wood debris. A dark gray/black ash-like layer was noted as generally five (5) to six (6) feet thick and was encountered in most borings beneath the rear parking lot. Observation of this ash-like layer is coincident with a former coal pile in the vicinity that may include fly ash and bottom ash from the power plant, as noted on Figure 18 of the PSA (Dames and Moore, 1988).

Two (2) continuous stratigraphic units were observed to underlie the fill unit. The upper unit is post-glacial outwash, consisting of gray-brown fine sand and sub-rounded to round coarse-to-fine gravel. The post-glacial outwash unit extends from approximately six (6) feet bgs to approximately thirty-eight (38) feet bgs.

The second unit is a glacio-lacustrine silt and clay. That unit appears to be relatively impermeable and consists of soft, gray-brown silt and clay, and extends from approximately thirty-eight (38) feet to approximately seven-eight (78) feet bgs in undisturbed areas. The top of weathered bedrock underlies the lacustrine unit and overlays competent shale which dips to the north.

4.3 Water Level/LNAPL Measurements and Potentiometric Surface

A synoptic groundwater level survey was completed on 13 November 2014 (see Section 2.3.1) and data are summarized on **Table 6**. Those data show that the water table beneath the site generally occurs at a depth of approximately fourteen to sixteen (14 to 16) feet bgs. A generalized potentiometric surface map of shallow groundwater elevations is presented on **Figure 8** and shows, similar to historical interpretations, that groundwater beneath the Site generally flows east or northeast. The potentiometric surface appears to be relatively flat with an average hydraulic gradient of 0.006 foot per foot (ft/ft). The groundwater monitoring network does not extend to the south side of the EHS building where two (2) production wells for cooling water are located.(see **Figure 8**). Those wells are approximately thirty (30) feet deep with pumping rates reportedly up to approximately six hundred (600) gallons per minute and drawdown of approximately 3.6 feet (Moody, 2000).

A thin film of LNAPL was measured at monitoring well MW33, located within the former petroleum remediation area that was performed by NYSDEC. LNAPL was not detected in any of the other monitoring wells gauged on 13 November 2014.

4.4 Nature and Extent of Constituents of Potential Concern

The following sections summarize the nature and extent of COPCs detected in soil and groundwater samples collected as part of Site Characterization activities presented herein. Soil analytical results are compared to Restricted Residential SCOs presented in 6 NYCRR Subpart 375, based on those environmental management strategies for soils presented in the EMP. **Table 7** presents Restricted Residential SCOs for soil constituents analyzed for during this Site Characterization. Soil COPCs identified in the Work Plan are highlighted on **Table 7** based on their exceedance of Restricted Residential SCOs in previous investigations. Total PCB concentrations in soil are also compared to the limit of one hundred (100) milligrams per kilogram (mg/kg) for bulk PCB remediation wastes in low occupancy, capped areas, as defined in 40 CFR §761.3 and §761.6 (TSCA), for self-implementing PCB remediation. TSCA limits are not presented as soil cleanup goals but are to be considered for PCB delineation. Groundwater analytical results are compared to NYSDEC *Technical Operational Guidance Series (TOGS) 1.1.1* (NYSDEC, 1998).

4.4.1 Surface Soil

Analytical results from surface soil samples (0-2 inches bgs) are summarized on **Table 8** and compared to Restricted Residential SCOs presented in **Table 7**. Of fifty-four (54) surface soil samples collected, nine (9) had at least one (1) exceedance of Restricted Residential SCOs. COPC concentrations in surface soil exceeded Restricted Residential SCOs for PCBs and/or SVOCs at select locations as shown on **Figure 9**, respectively. As discussed in Section 2.2.4, a sample from the surface soil segment was not collected if asphalt covered the ground surface. There were no exceedances of Restricted Residential SCOs in surface soil samples analyzed for

VOCs, pesticides, or cyanide. Results from those surface soil samples with SCO exceedances are discussed in further detail below:

- Sample location SSHS-B32-A is located approximately sixty (60) feet north of the northeastern corner of the EHS building. The surface soil sample SSHS-B32-A-SS had a total PCB concentration of 1.07 mg/kg, slightly above the Restricted Residential SCO of 1 mg/kg. Historical PCB data from one to four (1-4) feet bgs indicated the presence of above eight (8) mg/kg of total PCBs at the co-located SSHS-B32 location.

- Sample SSHS-FB9-A, located on the southwestern portion of the football field adjacent to the track, had a total PCB concentration of 2.09 mg/kg. The previous co-located sample, SSHS-FB9 had a concentration of sixty-eight (68) mg/kg from one to two (1-2) feet bgs. As shown on **Figure 9**, the SSHS-FB9-A sample is the only surface soil sample collected on the football field with a detection of PCBs above the Restricted Residential SCO.

- PCBs were detected in surface soil above the Restricted Residential SCO of 1 mg/kg in two (2) of six (6) surface soil samples collected in the vicinity of former boring locations SSHS-B15 and SSHS-SS12 to the south of the athletic stand. The surface soil sample from SSHS-B15-B had a total PCB concentration of 1.02 mg/kg. The surface soil sample at SSHS-SS12-B had a total PCB concentration of 4.3 mg/kg.

- Surface soil samples at SSHS-B29-A and SSHS-B99 located on the east side of the gymnasium had total PCB concentrations that exceeded the Restricted Residential SCO with concentrations of 1.04 mg/kg and 1.14 mg/kg, respectively.

- Polycyclic aromatic hydrocarbons (PAHs) that included benzo(a)fluoranthene and indeno(1,2,3-c,d)pyrene were detected above their respective SCOs (see **Table 7)**at SSHS-B47A with concentrations of 1.1 and 0.7 mg/kg, respectively. Those results are similar to the previous sample SSHS-B47 results and indicate that PAHs are above SCOs in surface soil at that location.

- Boring SSHS-B74 located in the grassy area in the southwestern corner of the main parking lot had a detection of benzo(a)fluoranthene of 1.1 mg/kg that slightly exceeded the SCO of 1 mg/kg.

- Boring SSHS-B91, located in the median strip between the EHS entrance road and the parking lot, had detections of several PAHs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene ranging from 0.88 to 6.3 mg/kg that were above SCOs presented in **Table 7**. It should be noted that the SSHS-B91 area was being disturbed at the time of sampling by installation of a new curb around the median. Also, low concentrations of PAHs in surface soil around parking areas, roadways, and urban areas in general are relatively common and not unexpected.

4.4.2 Subsurface Soil

Shallow subsurface soil borings were advanced in areas adjacent to historical borings SSHS-B15, SSHS-FB7, SSHS-SS12, and SSHS-FB5, as depicted on **Figure 5**. Laboratory analytical results for those shallow subsurface samples are summarized on **Table 9A** (PCBs) and **Table 9B** (VOCs). Analytical results for subsurface borings advanced to the water table are summarized on **Table 10**. COPC concentrations in subsurface soil exceeded Restricted Residential SCOs for PCBs, SVOCs, and metals at select locations as shown on **Figures 10, 11,** and **12**, respectively. The following sections discuss the nature and extent of COPCs in subsurface soils for select areas of the Site investigated to address PAOCs identified by NYSDEC as presented on **Table 1**.

4.4.2.1 Football Field

Five (5) soil borings were installed in the vicinity of former soil boring SSHS-FB7 located on the football field to verify and delineate PCBs that were detected in excess of one hundred (100) mg/kg from 1-3 ft bgs and confirm that PCB concentrations are below SCOs in surface soil. **Table 9A** summarizes subsurface soil samples collected at the FB7 area. As shown on **Figure 10**, PCBs were detected in the shallow subsurface above the SCO in most samples. Detected Arochlors included Arochlor 1248 and Arochlor 1254. The maximum concentration of total PCBs detected in the shallow subsurface was six hundred ninety (690) mg/kg from two to three(2-3) ft bgs at boring SSHS-FB7-D. The remainder of samples had PCB concentrations less than thirty-two (32) mg/kg. These locations are within the PCB soil management area presented in the EMP, but given the high concentration detected in the SSHS-FB7-D terminal sample, PCBs above one hundred (100) mg/kg are not delineated vertically or horizontally to the west.

Four (4) soil borings were installed in the vicinity of former soil boring SSHS-FB5 (FB5 area) to confirm the presence of trichloroethene (TCE) that was previously detected at one hundred ten (110) mg/kg at two to four (2-4) ft bgs as shown on **Figure 11**. Analytical results from the SSHS-FB5 subsurface samples are summarized on the **Table 9B**. Those results show that low concentrations of TCE were detected in several samples but were all well below the Restricted Residential SCO of twenty-one (21) mg/kg. Acetone, a common lab contaminant, was also detected at very low concentrations in a few samples. Other VOCs were not detected. TCE analytical results are contrary to historical results and suggest that TCE is not present in the subsurface at concentrations above the SCO at the FB5 area.

4.4.2.2 Main Parking Lot and Tennis Courts

Twenty-one (21) soil borings were installed in the main parking lot and tennis court areas of EHS. Locations for borings SSHS-B71 through SSHS-B91 are presented on **Figure 5**. In general, ground surface at those boring locations is covered by asphalt, concrete, or tennis courts with several grassy areas in medians adjacent to the parking lot and tennis courts. Only borings SSHS-B72, SSHS-B74 through SSHS-B77, and SSHS-B91 were installed in areas where the ground surface was exposed (i.e. grassy). Analytical results from those borings are summarized on **Table 10**.

Several PAHs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene ranging from 0.075 to twelve (12) mg/kg were detected above SCOs. Most of the PAH exceedances were detected above two (2) feet bgs and may be related to the asphalt cover; however, boring locations SSHS-B78 and SSHS-B73 had PAH exceedances in deeper soil. At SSHS-B78, indeno(1,2,3-c,d)pyrene was detected at a concentration (0.63 mg/kg) slightly above the SCO (0.5 mg/kg) at depth of 2-6 feet bgs. At SSHS-B73, various PAHs were detected above SCOs to a depth of 10-15 feet bgs. As shown on **Figure 11**, most of the PAH SCO exceedances in subsurface soil were outside the current VOC/SVOC soil management area presented in the EMP.

Constituents included in the inorganic, pesticide, PCB, and VOC analytical suites were not detected above SCOs.

4.4.2.3 Elmira High School – Perimeter of F and G Wings

As shown on **Figure 5**, seven (7) borings that included SSHS-B92 through SSHS-B98 were installed around the perimeter of the F and G wings of the EHS building, facing South Main Street. Those borings were installed to evaluate COPC concentrations in close proximity to the building and as well as near the former combined industrial sewer and other former operating areas. Analytical results from those borings are summarized on **Table 10**.

In subsurface soil, metals, PCBs, and indeno (1,2,3-c,d)pyrene were detected above SCOs. Lead was detected above the SCO of four hundred (400) mg/kg at two (2) samples that included SSHS-B-92 (450 mg/kg from 2-6 feet bgs) and SSHS-B95 (440 mg/kg from 0.17-2 feet bgs). Manganese was detected above the SCO of two thousand (2,000) mg/kg in only one (1) sample which was SSHS-B92 (2,100 mg/kg from 6-10 feet bgs). Nickel exceeded the SCO of three hundred ten (310) mg/kg at SSHS-B98 (390 mg/kg from 6-10 feet bgs). The sample collected from 6-10 feet bgs at SSHS-B-94 (1.73 mg/kg) was the only sample to exceed the SCO for total PCBs of one (1) mg/kg. Detected Arochlors included Arochlor 1248 and Arochlor 1260. Indeno (1,2,3-c,d)pyrene was detected above the SCO of 0.5 mg/kg at SSHS-B98 (0.58 mg/kg from 2-6 feet bgs). As shown on **Figures 10, 11,** and **12**, those SCO exceedances are outside of the soil management areas for SVOCs, PCBs and metals, respectively, as presented in the EMP.

Constituents included in the VOC and pesticide analytical suites were not detected above Restricted Residential SCOs in subsurface soils.

4.4.2.4 Rear Parking Lot

Eight (8) soil borings were installed in the rear parking lot as shown on **Figure 5** which included borings SSHS-B64 through SSHS-B69, SSHS-B100, and SSHS-B101. All borings in the area were installed through the asphalt covered parking lot. As a result, no surface soil samples were collected. Analytical data for samples collected in the rear parking lot are summarized on **Table 10** and show that several inorganics, PCBs, and PAHs were detected above SCOs.

Metals detected above Restricted Residential SCOs included arsenic, copper, lead, mercury, and nickel. Arsenic was the most widespread metal detected above SCOs with a maximum concentration of eighty-three (83) mg/kg at SSHS-B67 from two to six (2-6) feet bgs. Lead was detected above the SCO of four hundred (400) mg/kg at two (2) locations, SSHS-B67 (590 mg/kg from 0.17-2 feet bgs) and SSHS-B69 (1,800 mg/kg from two-to four (2-4) feet bgs). Mercury was detected above the SCO of 0.81 mg/kg at SSHS-B67 (0.85 from 2-6 feet bgs). As shown on **Figure 12**, six (6) of eight (8) borings had at least one (1) sample with metals concentrations exceeding SCOs. Soil borings SSHS-B66 through SSHS-B69 are located outside the metals soil management area presented in the EMP.

PCBs detections in excess of one (1) mg/kg were documented in all eight (8) borings installed in the rear parking lot. Detected Arochlors included Arochlor 1248 and Arochlor 1260. Vertical and horizontal distribution of PCBs in soil is depicted on **Figure 10**. A maximum PCB concentration of four hundred eight (408) mg/kg was detected in the rear parking lot at SSHS-B69 in the 2-4 feet bgs interval. Other sample intervals with concentrations above one hundred (100) mg/kg include borings SSHS-B67 from 0.17-2 feet bgs (272 mg/kg) and two to six (2-6) feet bgs (168.3 mg/kg) and SSHS-B68 from 0.17-2 feet bgs (104.9 mg/kg). All boring locations except SSHS-B100 are located within the PCB soil management area presented in the EMP; however, as noted above, multiple borings have PCB detections above one hundred (100) mg/kg which are not laterally delineated to the east and north of SSHS-B68/B69.

PAHs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and indeno(1,2,3-c,d)pyrene were detected above Restricted Residential SCOs at SSHS-B67 (2-6 feet bgs). Indeno(1,2,3-c,d)pyrene (0.6 mg/kg) was detected above the SCO (0.5 mg/kg) at SSHS-B69 (0.17-2 feet bgs). The distribution of PAH exceedances in the rear parking lot is shown on **Figure 11**. Borings SSHS-B67 and SSHS-B69 are not located in the VOC/SVOC soil management area presented in the EMP.

Most exceedances of Restricted Residential SCOs in the rear parking lot occurred at depths less than six (6) feet bgs which corresponds with very dark gray/black material encountered over much of the area. The material is suspected to be remnants of the former coal pile that was located in the vicinity historically. Fly ash and bottom ash from the power plant may be present in this area (Dames and Moore, 1988). Locations SSHS-B65, SSHS-B67, and SSHS-B101 were the only locations with SCO exceedances (arsenic and/or PCBs) below six (6) feet bgs.

Constituents included in the VOC and pesticide analytical suites were not detected above SCOs.

4.4.2.5 Gymnasium – East Side

Three (3) borings, SSHS-B26-A, SSHS-B29 and SSHS-B99, were installed on the eastern side of the EHS gymnasium, as shown on **Figure 5,** to verify historical data which indicated that PCB concentrations were greater than ten (10) mg/kg above four (4) feet bgs. Those borings were installed in the vicinity of the former earthen waste pits (AOC-4) that were located historically under and to the east of the gymnasium as shown on **Figure 3.** Analytical data collected from those borings are summarized on **Table 10** and show that PCBs and lead were the only constituents detected above SCOs.

PCBs were detected above Restricted Residential SCOs in all three borings and generally confirm historical results. Detected Arochlors included Arochlor 1248 and Arochlor 1260. The maximum total PCB concentration among the borings was detected in the 2-6 feet bgs sample at SSHS-B26-A (13.5 mg/kg). Lead was detected above the SCO of four hundred (400) mg/kg in the two to six (2-6) feet bgs sample at SSHS-B99 (680 mg/kg). As shown on **Figures 10** and **12**, those SCO exceedances are within the soil management areas for PCBs and VOCs/SVOCs, respectively, as presented in the EMP.

Constituents included in the VOC, SVOC, and pesticide analytical suites were not detected above Restricted Residential SCOs.

It should also be noted that petroleum-like odors and elevated PID readings were noted in soil collected from the lower portion boring SSHS-B29-A near the water table (see **Appendix C**). Also, as discussed in Section 4.5 below, presumed petroleum product droplets were encountered during DPT groundwater sample collection. Those observations are likely related to the historical petroleum remediation area in the vicinity.

4.4.2.6 Athletic Stand and Vicinity

Three (3) soil borings were installed in the vicinity of the former SSHS-B15 sample location (B15 area) to verify and delineate historical results. Historical results from SSHS-B15 detected total PCBs concentrations at seventy-four (74) mg/kg from four to five (4-5) ft bgs. **Table 9A** shows that total PCBs concentrations in samples from the B15 area ranged from 0.07 to 22 mg/kg. Detected Arochlors included Arochlor 1248, Arochlor 1254, and Arochlor 1262. Six (6) of twelve (12) samples collected exceeded the Restricted Residential SCO. Those results are below the previous detection at SSHS-B15 but are still above the SCO. Remaining detections of PCBs above the SCO were in the shallow subsurface.

Three (3) soil borings were installed in the vicinity of former boring location SSHS-SS12 (SS12 area) to confirm a historical detection of PCBs in surface soil in excess of three (3) mg/kg. Analytical results for the SSHS-SS12 subsurface soil samples are summarized on **Table 9A**. The maximum concentration detected in shallow subsurface soil was one hundred twenty-nine (129) mg/kg from two to three (2-3) ft bgs in boring SSHS-SS12-C. The remainder of the subsurface samples had detections of total PCBs between 0.54 and 32 mg/kg. PCB concentrations above one hundred (100) mg/kg were detected at SSHS-SS12-C and concentrations above one hundred (100) mg/kg are not vertically or horizontally delineated to the north and east.

One (1) boring, SSHS-SB70, was installed south of the athletic stand as shown on **Figure 5**. That boring was installed in the vicinity of the former Westinghouse Transformer Spill (AOC-4) as shown on **Figure 3** and is adjacent to the SS12 and B15 shallow subsurface samples described in Section 2.2.3. Analytical data from SSHS-SB70 are summarized on **Table 10**. Detected Arochlors are primarily Arochlor 1248 and Arochlor 1260 with detection of Arochlor 1254 but not Arochlor 1260 at ten to fourteen (10-14) feet bgs. The distribution of detected Arochlors in the vicinity of the athletic stands and at soil boring FB7 in the football field differs from the Arochlor distribution in soil samples collected in other areas of the Site. Arochlors in shallow subsurface soils in the vicinity of the athletic stands and the football field are Arochlor 1248 and Arochlor 1254 but not Arochlor 1260. Arochlors in other parts of the Site are Arochlor 1248 and Arochlor 1260 but not Arochlor 1254 (see Sections 4.4.2.2 through 4.4.2.5). The area south of the athletic stands is in the vicinity of AOC-8, the reported former Westinghouse transformer spill near Building 28A, and detections of PCBs and specifically Arochlor 1254 could be related to that release.

All four (4) subsurface samples exceed the Restricted Residential SCO with a maximum concentration of 41.3 mg/kg in the six to ten (6-10) feet bgs sample interval. As shown on **Figure 10**, the B15 and SS12 areas and SSHS-SB70 fall within the PCB soil management area presented in the EMP.

In addition to the SCO exceedances for PCBs at SSHS-B70, several PAHs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and indeno(1,2,3-c,d)pyrene were detected above SCOs in the two to four (2-4) and six to ten (6-10) feet bgs samples. Additional PAHs including chyrsene and dibenz(a,h)anthracene were also detected above SCOs in the six to ten (6-10) feet bgs sample. As shown on **Figure 11**, SSHS-SB70 falls within the VOC/SVOC soil management area presented in the EMP.

Constituents included in the inorganic, VOC, and pesticide analytical suites were not detected above Restricted Residential SCOs.

4.4.2.7 Athletic Fields

Two (2) soil borings, SSHS-B42-A and SSHS-B43-A, were installed in the athletic fields northwest of the tennis courts to evaluate COPCs concentrations in the vicinity of former dry wells as well as confirm historical metals SCO exceedances above two (2) feet bgs. The boring locations are depicted on **Figure 5** and laboratory analytical results are summarized on **Table 10**. Those data indicate that PAHs in the 0.17-2 feet bgs sample at SSHS-B42-A were the only COPCs detected above SCOs. Similar to other areas at the site, PAHs detected above SCOs included benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene. Although PAHs were detected above Restricted Residential SCOs at SSHS-B42-A, **Figure 11** shows that the boring is located within the VOC/SVOC soil management area presented in the EMP. In contrast to historical results, metals were not above Restricted Residential SCOs in either boring.

4.5 Groundwater

Groundwater monitoring consisted of low-flow groundwater sampling of existing monitoring wells and the collection of grab groundwater samples from DPT soil borings for screening. Seven (7) existing monitoring wells were sampled to further characterize groundwater in select areas of the Site. Groundwater grab samples were collected from ten (10) DPT borings to evaluate COPC concentrations in groundwater around EHS F and G wings and the gymnasium. A summary of historical monitoring wells and direct push borings sampled, rationale for sample collection, and analyses performed is presented on **Table 4**. Historical monitoring wells sampled and DPT groundwater sampling locations are depicted on **Figure 6**. Groundwater analytical results are summarized on **Table 11** and compared to TOGS 1.1.1 groundwater standards, as applicable. COPC concentrations in groundwater exceeded TOGS 1.1.1 groundwater standards for PCBs, SVOCs, and VOCs at select locations as shown on **Figure 13**. Historical exceedances of groundwater standards from previous sampling of other locations are also shown for reference.

4.5.1 Volatile Organic Compounds.

Samples for VOC analyses were collected from existing monitoring wells MW-8S, MW-13, and MW-30 and all ten (10) DPT sampling locations. Analytical results from those sample locations are summarized on **Table 11.** At MW-30, tetrachloroethene (PCE), TCE, cis-1,2-dichloroethene (cis-1,2-DCE), and Freon 113 were detected above TOGS 1.1.1 groundwater standards. Those COPCs were also detected at MW-8S but at lower concentrations as shown on **Table 11**. They were not detected in grab samples from DPT borings, SSHS-B26-A, SSHS-SB29-A, and SSHS-B99, located upgradient from M-30 or at MW-13. Only cis-1,2-DCE exceeded groundwater standards at MW-8S as shown on **Figure 13**. Historically, Freon 113 has been detected above groundwater standards at MW-12 and soil boring SSHS-SB1, adjacent to SSHS-B29A, and downgradient well MW-9, as shown on **Figure 13**.

Previous analytical results for chlorinated ethenes and Freon 113 at MW-30 and MW-8S are presented in **Table 12**. Comparison of groundwater chemistry data collected during Site Characterization activities indicates those COPC concentrations are lower than in the previous sampling event completed in July 2007. In example, PCE, TCE and cis-1,2-DCE at MW-30 decreased by 47%, 61% and 36%, respectively, while Freon 113 decreased by 88%. **Figure 14** presents time trend graphs for chlorinated ethene concentrations since April 2002 wells and suggests decreasing trends. As shown on **Figure 14**, cis-1,2-DCE concentrations are an order of magnitude higher than the concentrations of PCE or TCE detected at MW-30. The greater abundance of cis-1,2-DCE, a dechlorination daughter product of TCE, suggest that reductive dechlorination has been occurring in the vicinity of MW-30 and MW-8S.

TCE was also detected above groundwater standards in grab samples collected from SSHS-B92 and SSHS-B94 where concentrations of 5.6 micrograms per liter (µg/L) and 8.9 µg/L, respectively, were detected. As shown on **Figure 13**, those borings were located just outside the EHS F wing.

Acetone was detected in six (6) of thirteen (13) samples and exceeded the TOGS 1.1.1 value of 50 µg/L at SSHS-B29-A which had a concentration of 1,200 µg/L. Acetone, a common analytical laboratory contaminant, has been historically detected in several Site monitoring wells, but at lower concentrations. Those wells include MW-30 located hydraulically downgradient of SSHS-B29-A as shown on **Figure 13**. In three (3) samples collected at MW-30 from May 2003 to June 2005, acetone concentrations ranged from seventy-six (76) to ninety-seven (97) µg/L. Acetone was detected in the MW-30 sample collected as part of Site Characterization at an estimated concentration of 14 µg/L. Historically, acetone was detected above groundwater standards at MW-41 in March 2008 as shown on **Figure 13**.

Other VOCs were not detected at concentrations above TOGS 1.1.1 groundwater standards.

4.5.2 Semi-Volatile Organic Compounds.

SVOCs were analyzed in groundwater samples collected from DPT locations SSHS-B26-A, SSHS-SB29-A, and SSHS-B99. Those results are summarized on **Table 11** and show that a total of eight (8) PAHs were detected. Two (2) of those PAHs, benzo(a)anthracene and chrysene, were detected at concentrations above groundwater standards at all three (3) locations. Indeno(1,2,3-c,d)pyrene was also detected above groundwater standards at SSHS-B99. Concentrations of other detected PAHs did not exceed groundwater standards. The suite of PAHs detected in groundwater was similar to that detected in soils throughout the Site.

Historically, SVOCs were sampled on a limited basis at the Site and thus little historical data are available. Monitoring well MW-12, located adjacent to the DPT grab sample locations, had detections of benzo(a)anthracene and chrysene above groundwater standards in May 2000 as shown on **Figure 13**.

4.5.3 Polychlorinated Biphenyls

Two (2) DPT locations (SSHS-B29-A, and SSHS-B99) and four (4) historical monitoring wells (MW-10, MW-34, MW-38, and MW-41) were sampled for PCBs. Those samples were collected to verify the total PCB concentration of one hundred twenty (120) µg/L detected at monitoring well MW-41 in March 2008 and evaluate PCB concentrations in Site groundwater upgradient of MW-41. Analytical results for PCBs in groundwater are summarized on **Table 11** and locations are shown **Figure 6**. The only detected Arochlor was Arochlor 1248.

Analytical results indicate that PCBs were detected at a concentration of twenty-three (23) µg/L at MW-41. That concentration was lower than that previously detected in 2008, but remained above the TOGS 1.1.1 value of 0.9 µg/L. At hydraulically upgradient monitoring wells MW-34and MW-10 (see **Figure 13**), PCB concentrations were lower at MW-34 (1.4 µg/L) but still above groundwater standards and not detected at MW-10. PCBs were not detected at sidegradient well MW-38. PCBs were detected in both samples collected from the DPT locations, but concentrations were below TOGS 1.1.1 values.

4.5.4 Total Petroleum Hydrocarbons

During groundwater sample collection at SSHS-B99, a presumed petroleum product was observed during purging. In response to that observation, samples from SSHS-B26-A, SSHS-B29-A, and SSHS-B99 were submitted for Total Petroleum Hydrocarbons (TPH) – Diesel Range Organics (DRO) and Gasoline Range Organics (GRO). Samples from historical monitoring wells MW-8S, MW-13, and MW-30 were also submitted for TPH analyses. Groundwater analytical data are summarized on **Table 11** and sample locations are presented on **Figure 6**.

Analytical results from the six (6) locations detected the presence of TPH concentrations, primarily TPH-DRO. TPH-DRO concentrations in three (3) DPT groundwater samples ranged from one hundred thirty (130) milligrams per Liter (mg/L) at SSHS-B29-A to two hundred fifty (250) mg/L at SSHS-B99. Lesser concentrations were detected from three (3) monitoring well samples. TPH detections are adjacent to the former petroleum remediation area located in that vicinity of the Site.

4.5.5 Field Geochemistry

A summary of field geochemistry parameters collected during groundwater sampling are presented in **Table 13.** In summary, pH values range from 6.46 at MW-10 to 7.29 at MW-8S; DO concentrations range from 0.2 milligrams per liter (mg/L) at MW-41 to 6.6 mg/L at MW-8S; ORP values range from -155 millivolts (mV) at MW-8S to 41 mV at MW-30.

5. FINDINGS AND RECOMMENDATIONS

The following section summarizes the findings of the Site Characterization and identifies data gaps. Recommendations for updating the soil management areas presented in the EMP and additional investigation are also presented.

5.1 Former Combined Industrial Sewer

- Portions of the former combined industrial sewer that have not been incorporated into the EHS storm sewer system do not currently appear to be in active operation.

- The integrity of the easternmost section of the former combined industrial sewer (CB-24 to CB-3 as shown in Figure 4) appears compromised as indicated by several collapsed areas observed during video inspections. Upstream connections to that section in the vicinity of the EHS building have collapsed or have been bulkheaded to block flow. One downstream connection from CB-3 has been bulkheaded but the inspection of the other downstream connection could not be completed.

- The westernmost section has been bulkheaded on the STCC property north of CB-25. That connection to the STCC storm sewer system does not appear to be currently active.

- The current EHS stormwater conveyance system, including sections of the former combined industrial sewer system, appeared intact and generally free of fine-grained material. It does not currently appear to be an active migration pathway for COPCs in the subsurface.

- Collapsed sections of the former industrial sewer system represent potential pathways for COPCs to migrate to the surrounding subsurface. Historical soil boring SSHS-B25, SSHS-B27, SSHS-B28 and SSHS-B32 are located near the alignment of the collapsed sections (see **Figure 5)**. PCBs in soils at SSHS-B32 exceeded the Restricted Residential SCO as shown on **Figure 10.** Collapsed sections are located within soil management areas presented in the EMP shown on **Figures 10, 11** and **12**. Monitoring wells in the vicinity, including MW-9, MW-10, MW-32, MW-30 and MW-32 have groundwater concentrations that exceed TOGS 1.1.1 groundwater quality standards for PCBs and VOCs as shown on **Figure 13**.

- ➢ Recommendation: no additional work is planned for this area as it has been characterized and is not acting as a continued source to the off-site areas. Further investigation of the former combined industrial sewer downstream of CB-3 will be conducted as part of the remedial investigation of the Former Sperry Remington Site (NYSDEC #808043) to evaluate connections to the former oil skimmer (OS2).

5.2 Site-Wide Soils

5.2.1 General

- Geologic materials encountered during the investigation were generally consistent with historical interpretations for the Site.

- PCB Arochlors that included 1248, 1254, 1260, and 1262 were detected in Site soil. Of those, Arochlor 1248 was detected most frequently (132 detections out of 244 samples) and tended to comprise the largest component where detected. Arochlor 1254 and Arochlor 1260 were detected with similar frequency with fifty-nine (59) and fifty-six (56) detections, respectively, out of two hundred forty-four (244) samples. Arochlor 1254 was detected primarily in the vicinity of the athletic stands and the football field. Arochlor 1260 was detected primarily in the vicinity of the gymnasium and the rear parking lot.

- PAH compounds were the only SVOCs detected in soil at concentrations above Restricted Residential SCOs. Those PAHs included benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene. The range of detections were as follows with the Restricted Residential SCO in parentheses:

  - benzo(a)anthracene: 0.057 to 6.7 mg/kg (1 mg/kg);
  - benzo(a)pyrene: 0.064 to 5.8 mg/kg (1 mg/kg);
  - benzo(b)fluoranthene: 0.077 to 6.9 mg/kg (1 mg/kg);
  - chrysene: 0.073 to 6.8 mg/kg (3.9 mg/kg);
  - dibenz(a,h)anthracene: 0.015 to 0.97 mg/kg (0.33mg/kg), and
  - indeno(1,2,3-c,d)pyrene: 0.051 to 3.9 mg/kg (0.5 mg/kg).

- Arsenic, copper, lead, manganese, mercury, and nickel were the only metals constituents detected above Restricted Residential SCOs, primarily in the rear parking lot. The range of detections were as follows with the Restricted Residential SCO in parentheses:

  - arsenic: 3.2 to 83 mg/kg (16 mg/kg);
  - copper: 9.3 to 980 mg/kg (270 mg/kg);
  - lead: 4.2 to 1,800 mg/kg (400 mg/kg);
  - manganese: 44 to 2,100 mg/kg (2,000 mg/kg);

  - mercury: 0.036 to 0.85 mg/kg (0.81 mg/kg); and
  - nickel: 8.7 to 870 mg/kg (310 mg/kg).

- Constituents including cyanide, pesticides, and VOCs were not detected above Restricted Residential SCOs in any soil sample collected during Site Characterization Those constituents are not considered to be COPCs for the Site.

5.2.2 Surface Soil

- PCBs were detected above the Restricted Residential SCO in six (6) surface soil samples collected from locations that included SSHS-B15-B, SSHS-SS12-B, SSHS-B32-A, SSHS-FB9-A, SSHS-29-A, and SSHS-B99. Overall, PCBs were detected in thirty (30) out of fifty-four (54) samples with total PCB concentrations ranging from 0.053 to 4.3 mg/kg.

- PAHs were detected above Restricted Residential SCOs in three (3) locations that included SSHS-B47-A, SSHS-B74, and SSHS-B91. Overall, PAHs were detected in all twenty-two (22) surface soil samples analyzed for SVOCs.

- Characterization of surface soils is considered to be complete in unpaved areas of the Site.

➢ Recommendation: no additional characterization of surface soils is planned for the Site.

5.3 Assessment of PAOCs Identified by NYSDEC

5.3.1 Football Field

- Soil investigations in the football field addressed AOC-10 locations (PCBs at Location FB7, VOCs at Location FB5, and SVOCs at Location FB6) PAOC identified by NYSDEC.

- PCBs detected above the Restricted Residential SCO in surface soil are limited to only one (1) location, SSHS-FB9-A.

- VOCs were not detected above Restricted Residential SCOs at the FB5 area. Those results do not confirm historical results and suggest that TCE is not present in subsurface soils at concentrations in excess of the Restricted Residential SCO at the FB5 area.

- At the FB7 area, PCBs were detected above the Restricted Residential SCO in several subsurface samples and in excess of 100 mg/kg in the 2-3 feet bgs sample collected at SSHS-FB7-D. FB7 area is located within the PCB soil management area presented in the EMP:

- ➢ Recommendation: It is recommended that additional delineation of PCBs above one hundred (100) mg/kg vertically or horizontally to the west of SSHS-FB7-D be conducted.

5.3.2 Main Parking Lot and Tennis Courts

- Soil investigations in the main parking lot and in the vicinity of the tennis courts addressed the following PAOCs identified by NYSDEC:
    - AOC-7 (Drywell Structures);
    - AOC-8 (Westinghouse Transformer Spill near Building 28A);
    - AOC-10 (PCBs at Locations B15, SS12);
    - AOC-14 (Power Washer, Rust Prevention Dip Operation); and
    - AOC-16 (Machine Shop Area).
- In subsurface soil, PAHs were detected above Restricted Residential SCOs in several borings. Most of the PAH exceedances were detected above two (2) feet bgs and may be related to the asphalt cover; however, a few borings had PAH exceedances in deeper soil. Most PAH SCO exceedances in surface and subsurface soil were outside the current VOC/SVOC soil management area presented in the EMP.

- ➢ Recommendation: It is recommended that the VOC/SVOC soil management area be updated to include the main parking lot to include those locations with SCO exceedances.

5.3.3 Elmira High School – F and G Wings

- Soil and groundwater investigations around the perimeter of the F and G wings of the EHS building addressed the following PAOCs identified by NYSDEC:
    - AOC-12 (Plating, Heat Treatment and Tumbling Areas);
    - AOC-13 (Metals Cleaning, Vapor Degreaser and Solvent Still); and
    - AOC-6 (Concrete Vaults).
- Constituents including metals, PCBs, and PAHs were detected above Restricted Residential SCOs in subsurface soil. All but one (1) of those exceedances were detected below two (2) feet bgs. One (1) location on the north side of the F Wing (SSHS-B95) had a SCO exceedance for lead within two (2) feet bgs. Those SCO exceedances outside the F and G wings are outside of the soil management areas for SVOCs, PCBs and metals, respectively, as presented in the EMP.

- TCE was detected at concentrations above groundwater standards in grab samples collected from the north side of the F Wing. A sub-slab depressurization system was installed in the F Wing in August 2014 in response to concentrations of TCE and cis-1,2-DCE in sub-slab vapor (Geosyntec, 2014).

➢ Recommendation: It is recommended that the soil management areas for SVOCs, PCBs and metals be updated to include those locations with SCO exceedances.

➢ Recommendation: It is recommended that a new groundwater monitoring well on the north side of the F Wing of EHS be installed to monitor groundwater quality.

5.3.4 Rear Parking Lot

- Soil investigations in the rear parking lot addressed the following PAOCs identified by NYSDEC:
    - AOC-10 (Metals at Locations B24, B35); and
    - AOC-17 (Possible Disposal Areas – Former Coal Pile).
- Metals, including arsenic, copper, lead, mercury, and nickel, were detected above Restricted Residential SCOs in thirteen (13) out of twenty-nine (29) soil samples collected in the Rear Parking Lot. Arsenic exceedances were the most widespread with thirteen (13) exceedances.. Four (4) samples had SCO exceedances for metals other than arsenic. Soil borings SSHS-B66 through SSHS-B69 are located outside the metals soil management area presented in the EMP.
- PCBs were detected above the Restricted Residential SCO in all eight (8) borings installed in the rear parking lot. Of those borings, seven (7) had detection of total PCBs above 1 mg/kg within two (2) feet bgs. Total PCB concentrations at depths below two (2) feet bgs exceeded ten (10) mg/Kg at seven (7) locations. Several samples had total PCB concentrations greater than 100 mg/kg which are not laterally delineated to the east and north of SSHS-B68/B69. All boring locations except SSHS-B100 are located within the PCB soil management area presented in the EMP; however, as noted above, multiple borings had PCB detections above 100 mg/kg which are not laterally delineated.
- PAHs were detected above Restricted Residential SCOs in subsurface samples collected at SSHS-B67 and SSHS-B69. Those borings are not located in the VOC/SVOC soil management area presented in the EMP.
- Most exceedances of Restricted Residential SCOs in the rear parking lot occurred at depths less than six (6) feet bgs which corresponds with very dark gray/black material encountered over much of the area. The material is suspected to be remnants of the

former coal pile that was located in the vicinity historically that may include fly ash and bottom ash from the power plant.

- ➢ Recommendation: It is recommended that soil management areas for PCBs, metals and SVOCs be updated to include those SCO exceedances noted above.
- ➢ Recommendation: It is recommended that additional delineation of metals, SVOCs and PCBs in subsurface soil be conducted in the rear parking lot.

5.3.5 Gymnasium – East Side

- Soil and groundwater investigations adjacent to the gymnasium addressed the AOC-4 (Earthen Waste Pits near EHS Gym and Pool) PAOC identified by NYSDEC.
- PCBs were detected above Restricted Residential SCOs in all three borings and generally confirm historical results.
- Lead was detected above the Restricted Residential SCO at SSHS-B99.
- SCO exceedances are within the soil management areas for PCBs and metals, respectively, as presented in the EMP. Characterization of subsurface soil in this area is considered to be complete.
- Petroleum-like odors and elevated PID readings were noted in soil collected from the lower portion of SSHS-B29-A near the water table.
- NAPL was observed in grab water samples from borings along the east side of the gymnasium (i.e., SSHS-B26-A, SSHS-B29-A, and SSHS-B99) and at MW-33 which is downgradient of the gymnasium to the northeast.
- TPH-DRO was detected in grab groundwater samples from soil borings at concentrations ranging from 130 to 250 mg/L. Detections of SVOCs in grab groundwater samples exceeded groundwater standards at the same locations.
- The area east of the gymnasium has been previously remediated by NYSDEC to address petroleum in groundwater.

- ➢ Recommendation: It is recommended that the SMP be updated to include SCO exceedances detected as part of SC activities.
- ➢ Recommendation: It is recommended that LNAPL monitoring be continued as part of the monitoring well sampling protocol presented in the GMP.

5.3.6 Athletic Stands and Surrounding Vicinity

- Soil investigations in the area south of the athletic stands addressed the following PAOCs identified by NYSDEC:
    - AOC-8 (Westinghouse Transformer Spill near Building 28A); and
    - AOC-10 (PCBs at Locations B15, SS12).
- At SSHS-B70, PCB concentrations were detected above the Restricted Residential SCO in all subsurface samples. In addition to PCBs, PAHs were also detected in two (2) subsurface samples in excess of Restricted Residential SCOs.
- At the B15 area, total PCB concentrations were greater than 1 mg/kg at depths less than two (2) feet bgs and greater than 10 mg/kg at depths greater than two (2) feet bgs).
- At the SS12 area, PCBs were detected above the Restricted Residential SCO in surface soil at SSHS-SS12-B. PCBs were also detected above the Restricted Residential SCO in most subsurface samples and in excess of 100 mg/kg in the 2-3 feet bgs sample collected at SSHS-SS12-C.
- Evaluation of Arochlor distribution in shallow subsurface soils in the vicinity of the athletic stands indicates Arochlor 1254 is present. Arochlor 1260 has been detected at deeper soils (10 -14 ft bgs) but not shallow subsurface soils in this area. This area is coincident with the reported former Westinghouse transformer spill near Building 28A.
- SSHS-B70, the B15 area, and the SSHS12 area are located within the PCB and SVOC/VOC soil management areas presented in the EMP. However, PCBs above 100 mg/kg are not delineated vertically or horizontally to the north and east the SSHS-SS12-C.

➢ Recommendation: It is recommended that additional delineation of PCBs in subsurface soil be conducted in the SS12 area.

5.3.7 Athletic Fields

- Soil investigations in the athletic fields addressed the AOC-10 (Metals at Locations B42 and B43) PAOC identified by NYSDEC.
- PAHs in the 0.17-2 feet bgs sample at SSHS-B42-A were the only COPCs detected above SCOs. Exposure to PAHs in subsurface soil at that location is controlled by the VOC/SVOC soil management area presented in the EMP.
- In contrast to historical results, metals were not above Restricted Residential SCOs.

- Characterization of subsurface soil in this area is considered to be complete.

- Recommendation: It is recommended that soil management areas for SVOCs be updated to include those SCO exceedances noted above.

5.4 Site-Wide Groundwater

- Site-wide groundwater investigations addressed the following PAOCs identified by NYSDEC:
    - AOC-11 (VOC- and Petroleum-Impacted Groundwater);
    - AOC-11A (Measured Oil Product at MW8-10 and MW-32); and
    - AOC-11B (PCBs at MW-41).

- Twenty (20) monitoring wells were noted to be in good condition with only two (2) of the monitoring wells (MW-7 and MW-16) being reported in poor condition. Although in poor condition, both MW-7 and MW-16 were dry during the inspections and are unlikely to be used for future groundwater sampling.

- Similar to historical interpretations, groundwater beneath the Site generally flows east or northeast. The groundwater monitoring network is concentrated to north and east of the EHS building and does not extend to the rear parking lot or the south side of the EHS building where production wells for cooling water are located.

- VOCs were detected above TOGS at MW-30 and MW-8S to the east of the K Wing (Science Addition). Concentrations of chlorinated ethenes and Freon 113 have decreased since the previous sampling in July 2007. The most abundant VOC detected is cis-1,2-DCE. Geochemical conditions are reducing to mildly oxidizing. Those results suggest that reductive dechlorination is occurring in the vicinity of MW-8S and MW-30.

- PCBs were detected at MW-34 and MW-41 with higher concentrations at MW-41. Concentrations of PCBs have decreased at MW-41 since the previous sampling for PCBs in 2008.

- Recommendation: It is recommended that new groundwater monitoring wells be installed in the southeastern and southwestern portions of the rear parking lot is recommended to monitor groundwater flow and groundwater quality.

TABLES

TABLE 1
SCOPE OF PAOC INVESTIGATION
Former Sperry Remington Site – North Portion
Elmira, Chemung County, New York

Proposed Action: Storm water system inspections

Area of Concern	Description	NYSDEC Characterization	Prior Investigation	Notes/Comments
AOC-2	Pre-1979 Combined Industrial/Storm Sewer	• Structure / Integrity / Contents / Release • Extent • Collection of Surface & Subsurface Contaminants	2013 IRM PDI	Data gaps identified in IRM PDI Data Report and IRM Notification Letter Do these structures exist? Were they removed prior to school construction?
AOC-3	1979 Storm Sewer	Structure / Integrity / Contents / Release Collection of Surface & Subsurface Contaminants	2013 IRM PDI Data Report	Non-Remington Rand infrastructure Storm sewer system installed 1979-80 as part of EHS construction. Not in use when site was active industrial facility No investigation pending IRM pipe inspections and catch basin sampling (CB-5).

Proposed Actions: Investigation of EHS Football Field

NYSDEC Potential Area of Concern	Description	NYSDEC Characterization	Prior Investigation	Notes/Comments
AOC-10	Contaminated Subsurface Soils	Nature & Extent Delineation o PCBs at Locations B3, FB7 & B15 o VOCs at Location FB5 o Metals at Locations B24, B35, SS14, B42, B43 & B52 o SVOCs at Location FB6 o Oil Contaminated Soils at 1977 Empire Report Locations	2001 Sampling Report 2003 Health Consultation 2009 EMP	Surface soil sampling PCBs at Location FB7 • FB7 in football field; Total PCBs > 100 ppm 1-3 ft bgs; bounded FB7 confirmation sampling and delineation FB5 confirmation sampling and delineation • • TCE 110 ppm (2 – 4 ft) • • TCE 11 ppm (8 ft) • • MW11S/D: VOC not detected in 2003 Surface Sampling at FB6

Proposed Action: Investigation of EHS Athletic Stand and Vicinity

AOC-8	Westinghouse Transformer Spill near Building 28A	Nature & Extent of Release(s) PCB Contaminated Soils at locations B15 & FB7 Other PCB Containing Equipment During Westinghouse Site Operation	2001 Sampling Report 2003 Health Consultation 2009 EMP	Transformer oil release reported in November 1975 during renovations after Westinghouse acquisition of site. Located adjacent to EHS track and football field
AOC-10	Contaminated Subsurface Soils	Nature & Extent Delineation o PCBs at Locations B3, FB7 & B15 o VOCs at Location FB5 o Metals at Locations B24, B35, SS14, B42, B43 & B52 o SVOCs at Location FB6 o Oil Contaminated Soils at 1977 Empire Report Locations	2001 Sampling Report 2003 Health Consultation 2009 EMP	PCBs at Locations B15, SS12 • B15 in courtyard: Total PCBs 74 ppm 4-5 ft bgs B15 and SS12 confirmation sampling and delineation

TABLE 1
SCOPE OF PAOC INVESTIGATION
Former Sperry Remington Site – North Portion
Elmira, Chemung County, New York

Proposed Actions: Investigation of EHS Main Parking Lot and Tennis Courts:
- **Manhole/Catch Basin Inspection (AOC-2D)**
- **Soil investigation**

NYSDEC Potential Area of Concern	Description	NYSDEC Characterization	Prior Investigation	Notes/Comments
AOC-2D	Manhole SW-73 Near Building 28A	Structure / Integrity / Contents / Release o Extent	1952 DOH Waste Sampling 2001 Sampling Report 2003 Health Consultation 2009 EMP	Building 28A (Department 12) – power wash station Identified on EHS construction drawings as manhole but shown on Lancy Report Figure ROE 2 as "Remington Well" PCBs (74 ppm)and Benzo(a)pyrene (1.3 ppm) 4-5 ft bgs detected in soil in vicinity (B15)
AOC-7	Drywell Structures	Structure / Integrity / Contents / Release	2001 Sampling Report 2003 Health Consultation 2009 EMP	Drywell structures identified to the northwest of the tennis courts
AOC-14	Power Washer, Rust Prevention Dip Operation	Different Locations Over Period of Operation Solvent Emulsions • Spill Collection & Storage Pits, Sumps, Tanks • Material/Chemical Storage & Waste Discharge Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2009 EMP	Currently covered by paved parking No previous soil investigation
AOC-16	Machine Shop Area	Different Locations Over Period of Operation • Spill Collection & Storage Pits, Sumps, Tanks • Material/Chemical Storage & Waste Discharge Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Machine shop areas identified on 1931 Sanborn maps (pre-Remington Rand). Use changed with Remington Rand occupancy. Some overlap with Remington Rand era AOCs

Proposed Actions: Investigation of EHS Athletic Fields:

NYSDEC Potential Area of Concern	Description	NYSDEC Characterization	Prior Investigation	Notes/Comments
AOC-10	Contaminated Subsurface Soils	Nature & Extent Delineation o PCBs at Locations B3, FB7 & B15 o VOCs at Location FB5 o Metals at Locations B24, B35, SS14, B42, B43 & B52 o SVOCs at Location FB6 o Oil Contaminated Soils at 1977 Empire Report Locations	2001 Sampling Report 2003 Health Consultation 2009 EMP	Surface soil sampling Metals at Locations SS14, B42, B43 & B52 • B42, B43 located in baseball field confirmation of metal exceedances in surface soils

TABLE 1
SCOPE OF PAOC INVESTIGATION
Former Sperry Remington Site – North Portion
Elmira, Chemung County, New York

Proposed Action: Investigation of Rear Parking Lot
- **Soil Investigation**

NYSDEC Potential Area of Concern	Description	NYSDEC Characterization	Prior Investigation	Notes/Comments	
AOC-10	Contaminated Subsurface Soils	Nature & Extent Delineation o PCBs at Locations B3, FB7 & B15 o VOCs at Location FB5 o Metals at Locations B24, B35, SS14, B42, B43 & B52 o SVOCs at Location FB6 o Oil Contaminated Soils at 1977 Empire Report Locations	2001 Sampling Report 2003 Health Consultation 2009 EMP	Metals at Locations B24, B35 • B24 and B35 located in southwest corner of EHS property; metal exceedances unbounded; recent school construction activity	B24 and B35: soil investigation in context of AOC-17 coal pile; need information on current school construction activities
AOC-17	Possible Disposal Areas	Extent Delineation Potential Soil Sources	1988 PSA 2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Land disposal areas identified from historical aerial photographs by Dames and Moore (1988 PSA).	Soil investigation of former coal pile if not inaccessible due to construction

Proposed Action: Investigation along East Side of EHS Gymnasium

NYSDEC Potential Area of Concern	Description	NYSDEC Characterization	Prior Investigation	Notes/Comments
AOC-4	Earthen Waste Pits near EHS Gym and Pool	Structure / Integrity / Contents / Release Connection to Pre 1979 Combined Sewer Contaminated Soil Vapor	2001 Sampling Report 2003 Health Consultation 2004 IIWA GW Investigation 2009 EMP 2010 ACR	Partially covered by EHS Gym and Pool. SSDS installed during Gym renovation in 2010. Soil sampling followed by direct push groundwater sampling
AOC-10	Contaminated Subsurface Soils	Nature & Extent Delineation o PCBs at Locations B3, FB7 & B15 o VOCs at Location FB5 o Metals at Locations B24, B35, SS14, B42, B43 & B52 o SVOCs at Location FB6 o Oil Contaminated Soils at 1977 Empire Report Locations	2001 Sampling Report 2003 Health Consultation 2009 EMP	Surface soil sampling SS14 located adjacent to NE corner of EHS building; metal exceedance bounded

TABLE 1
SCOPE OF PAOC INVESTIGATION
Former Sperry Remington Site – North Portion
Elmira, Chemung County, New York

Proposed Action: Investigation of Perimeter EHS F and G Wings

- **Soil investigation outside of building footprint**

Area of Concern	Description	NYSDEC Characterization	Prior Investigation	Notes/Comments
AOC-12	Plating, Heat Treatment and Tumbling Areas	Different Locations Over Period of Operation • Spill Collection & Storage Pits, Sumps, Tanks • Material/Chemical Storage & Waste Discharge Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Partially covered by EHS building Adjacent to EHS Room 127 No exceedances of SCOs at 2001 borings B17, B18 and B19 to the west of EHS building
AOC-13	Metals Cleaning, Vapor Degreaser and Solvent Still	Different Locations Over Period of Operation • Spill Collection & Storage Pits, Sumps, Tanks • Material/Chemical Storage & Waste Discharge Characterization Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Partially covered by EHS building Adjacent to EHS Room 127
AOC-6	Concrete Vaults	Structure / Integrity / Contents / Release Connection to Pre 1979 Combined Sewer Contaminated Soil Vapor	None	Vaults not shown on Lancy stormwater sewer plans. Some vaults located on STCC property. Soil investigation south of football field

Proposed Action: Groundwater investigation

- **Inspect and gauge existing monitoring wells;**
- **Sampling and analyses for VOCs and TPH (and possibly for biogeochemical parameters to support MNA);**
- **Sampling MW-10, MW-34 and MW-38 for PCB analyses (Re-sample MW-41 if accessible)**

NYSDEC Potential Area of Concern	Description	NYSDEC Characterization	Prior Investigation	Notes/Comments
AOC-11	VOC- and Petroleum-Impacted Groundwater	Nature & Extent Delineation o Potential Soil / Structure Sources	1998 Spills EA Report 2004 IIWA GW Investigation 2009 EMP 2010-11 ACR	Groundwater monitoring has been completed by NYSDEC according to annual EMP certifications.
AOC-11A	Measured Oil Product at MW8-10 and MW-32	Extent Delineation Potential Soil / Structure Sources	1998 Spills EA Report 2004 IIWA GW Investigation 2009 EMP 2010-11 ACR	Area remediated by OIS (see AOC-11). TOGS 1.1.1 (June 1998) does not contain standards or guidance values for petroleum product classifications or TPH.
AOC-11B	PCBs at MW-41	Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2008 Spills GW Sampling 2009 EMP	MW-41 is outside EHS property adjacent to railroad tracks. Potential access issues Downgradient of AOC-8.

TABLE 1
SCOPE OF PAOC INVESTIGATION
Former Sperry Remington Site – North Portion
Elmira, Chemung County, New York

Proposed Action: Sub-slab Vapor and Indoor Air Investigation of EHS Building				
Area of Concern	**Description**	**NYSDEC Characterization**	**Prior Investigation**	**Notes/Comments**
AOC-1A	Contaminated Sub-Slab Vapors	• Delineation of Extent • Preferential Pathways o ƒUtilities o ƒStorm / Sanitary Sewer o ƒSteam Tunnels	2010 DOH Health Consultation 2011 2013 EMP Annual Reports	Unisys has conducted voluntary sub-slab pressure monitoring to evaluate effectiveness of existing HVAC as engineering control
AOC-1B	Indoor Air Quality	• Delineation of Extent • Monitoring • Engineering Controls o ƒHVAC o ƒSub-Slab Depressurization o ƒSlab Integrity	2010 DOH Health Consultation 2011 2013 EMP Annual Reports 2013 IA Sampling	Unisys has conducted voluntary indoor air sampling in August and December 2013. TCE concentrations in IA below DOH guidelines. Unisys made recommendations regarding HVAC operations at EHS.
AOC-2E	Waste Pit near Building 44	Structure / Integrity / Contents / Release o Extent	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 ACR	Located under current EHS gymnasium Previous soil excavation and installation of SSDS in 2010.
AOC-4	Earthen Waste Pits near EHS Gym and Pool	Structure / Integrity / Contents / Release Connection to Pre 1979 Combined Sewer Contaminated Soil Vapor	2001 Sampling Report 2003 Health Consultation 2004 IIWA GW Investigation 2009 EMP 2010 ACR	Partially covered by EHS Gym and Pool. SSDS installed during Gym renovation in 2010.
AOC-5	Sludge Tanks/Beds/Brick Pits near Building 64	Structure / Integrity / Contents / Release Connection to Pre 1979 Combined Sewer Contaminated Soil Vapor	2009 Indoor Air/Sub-slab Vapor Investigation 2013 IA Sampling No soil or groundwater investigation	Connection to OU-3/AOC-1: Located under Wings F (Room 127) and G of EHS and adjacent courtyard.
AOC-6	Concrete Vaults	Structure / Integrity / Contents / Release Connection to Pre 1979 Combined Sewer Contaminated Soil Vapor	None	Vaults not shown on Lancy stormwater sewer plans. Some vaults located on STCC property. Soil investigation south of football field
AOC-7	Drywell Structures	Structure / Integrity / Contents / Release	2001 Sampling Report 2003 Health Consultation 2009 EMP	Connection to OU-3/AOC-1: Located under existing EHS building
AOC-9	Oil Storage and Handling Oil House Waste Oil Storage Quench Oil Reservoir	Structure / Integrity / Contents / Release Connection to Pre 1979 Combined Sewer.	2010 DOH Health Consultation 2011 2013 EMP Annual Reports	Former oil sump and oil dip in heat treatment area Currently under EHS building

TABLE 1
SCOPE OF PAOC INVESTIGATION
Former Sperry Remington Site – North Portion
Elmira, Chemung County, New York

Proposed Action: Sub-slab Vapor and Indoor Air Investigation of EHS Building				
Area of Concern	**Description**	**NYSDEC Characterization**	**Prior Investigation**	**Notes/Comments**
AOC-12	Plating, Heat Treatment and Tumbling Areas	Different Locations Over Period of Operation • Spill Collection & Storage Pits, Sumps, Tanks • Material/Chemical Storage & Waste Discharge Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Partially covered by EHS building Adjacent to EHS Room 127 No exceedances of SCOs at 2001 borings B17, B18 and B19 to the west of EHS building
AOC-13	Metals Cleaning, Vapor Degreaser and Solvent Still	Different Locations Over Period of Operation • Spill Collection & Storage Pits, Sumps, Tanks • Material/Chemical Storage & Waste Discharge Characterization Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Partially covered by EHS building Adjacent to EHS Room 127
AOC-15	Wire Pickling Area	Different Locations Over Period of Operation • Spill Collection & Storage Pits, Sumps, Tanks • Material/Chemical Storage & Waste Discharge Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Adjacent to OU-3/AOC-2E Partially under EHS building
AOC-16	Machine Shop Area	Different Locations Over Period of Operation • Spill Collection & Storage Pits, Sumps, Tanks • Material/Chemical Storage & Waste Discharge Extent Delineation Potential Soil / Structure Sources	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Machine shop areas identified on 1931 Sanborn maps (pre-Remington Rand). Use changed with Remington Rand occupancy. Some overlap with Remington Rand era AOCs

TABLE 1
SCOPE OF PAOC INVESTIGATION
Former Sperry Remington Site – North Portion
Elmira, Chemung County, New York

Proposed Action: Storm water system inspections and catch basin sediment sampling as part of Former Sperry Remington Site (NYSDEC #808043) RI					
Area of Concern	**Description**	**NYSDEC Characterization**	**Prior Investigation**	**Notes/Comments**	
AOC-2	Pre-1979 Combined Industrial/Storm Sewer	• Structure / Integrity / Contents / Release • Extent • Collection of Surface & Subsurface Contaminants	2013 IRM PDI	Data gaps identified in IRM PDI Data Report and IRM Notification Letter	
AOC-2A	18” Clay Pipe at SE Property Corner	Structure / Integrity / Contents / Release o Extent	2001 Sampling Report 2003 Health Consultation 2009 EMP	Data gaps identified in IRM PDI Data Report and IRM Notification Letter	
AOC-2B	Drywell at SE Property Corner	Structure / Integrity / Contents / Release o Extent	2001 Sampling Report 2003 Health Consultation 2009 EMP	Drywell to be inspected during IRM. Interior inspection with video or caliper Sample interior soil/sediment Test pit to identify potential connections	
Proposed Action: Storm water system inspections as part of Former Scott Technologies Site (NYSDEC #808049) Site Characterization					
Area of Concern	**Description**	**NYSDEC Characterization**	**Prior Investigation**	**Notes/Comments**	
AOC-2E	Waste Pit near Building 44	Structure / Integrity / Contents / Release	2013 IRM PDI	Data gaps identified in IRM PDI Data Report and IRM Notification Letter	
Proposed Action: Soil Investigation as part of Former Scott Technologies Site (NYSDEC #808049) Site Characterization					
Area of Concern	**Description**	**NYSDEC Characterization**	**Prior Investigation**	**Notes/Comments**	
AOC-17	Possible Disposal Areas	Extent Delineation Potential Soil Sources	1988 PSA 2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs	Land disposal areas identified from historical aerial photographs by Dames and Moore (1988 PSA).	Soil investigation of possible disposal areas located on STCC property

TABLE 2
COMBINED INDUSTRIAL SEWER INSPECTION SUMMARY

Former Sperry Remington Site - North Portion
Elmira, New York

Survey Run	Distance/Length Covered (feet)	Pipe Type	Approx. Pipe Diameter (inches)	Pipe Condition	Observations and Comments
CB-1 to south towards CB-2	104.8	Concrete (non-reinforced)	30	Not intact	Survey was abandoned as the drain was collapsed; drain was dry; A 15” drain coming in from the right at 40.6 ft.
CB-1 to north northwest towards CB-24	35.97	Concrete (non-reinforced)	24	Not intact	Survey was abandoned as the drain was collapsed / blocked with dry fine-grained material / gravel; Drain was dry.
CB-3 to south southwest	16.25	Concrete (non-reinforced)	12	Intact	Survey ended at the downstream manhole; tie-in at the main line.
CB-3 to north towards CB-2	109.77	Concrete (non-reinforced)	30	Not intact	Survey was initially stopped as abundant debris and sticks were present at ~ 10 ft. The line was flushed to resume the survey. The survey was abandoned as the drain was collapsed / blocked with fine-grained material and gravel.
CB-3 to south southeast towards STCC	42.2	Brick	30	Not intact	Survey ended at the downstream manhole structure with two connecting drains; one was bulk headed and the other had water. The main line had water and fine-grained material
CB-3 to southwest	13.46	Concrete (non-reinforced)	30	Not intact	Survey was abandoned at the juncture with two connecting drain. The one drain was bulkheaded at 9.42 ft while the other was collapsed at 13.46 ft.
CB-4 to CB-5	349.34	Concrete (non-reinforced)	33	Intact	Survey ended at CB-5; drain was dry.
CB-4 to CB-6	189.3	Concrete (non-reinforced)	33	Intact	Survey was abandoned at 299.41 ft since the 48” sewer was previously inspected. Drain was dry, some plant roots and debris present on the roof of the drain.
CB-7 to east	22.47	Concrete (non-reinforced)	12	Intact	Survey ended at the downstream manhole with the connecting 48” drain.
CB-4 to west	82	Concrete (non-reinforced)	12	Intact	Survey ended at the downstream / western manhole; drain was dry.
CB-1 to CB-8	22.92	Concrete (non-reinforced)	12	Not Intact	Survey abandoned since the drain was collapsed / blocked with dry fine-grained material and gravel; drain was dry; change in drain size from 12” to 10” at ~ 7 ft. CB-8 was collapsed.
CB-6 to west towards the chiller	166.02	Concrete (non-reinforced)	24	Intact	Survey ended at the upstream connection from the chiller; the drain had water from the chiller drain.
San.-1 to north northeast	189.63	Clay Tile	12	Intact	Survey ended since the drain had abundant fine-grained material and debris; A 6” drain coming in from the top left at 2.26, 48.69, 93.57, and 154.25 ft. Another 6” drain coming in from top right at 26.35 and 162.48 ft. A 4” drain coming in from top right at 95.6 ft.
San.-1 to west	38.21	Clay Tile	12	Intact	Survey ended downstream. drain had water; a 6” drain coming in from top right at 38.21 ft.
CB-9 to CB-10	87.52	Concrete (non-reinforced)	24	Intact	Survey ended at upstream manhole; drain was dry
CB-9 to CB-11	22.09 ft	Concrete (non-reinforced)	18	Intact	Survey ended at upstream manhole; drain was dry
CB-11 to CB-12	133.76	Concrete (non-reinforced)	15	Intact	Survey ended at upstream manhole; drain was dry
CB-12 to CB-13	**99.42**	Concrete (non-reinforced)	15	Intact	Survey ended at upstream manhole; drain was dry.
CB-9 to east towards CB-5	221.26	Concrete (non-reinforced)	30	Intact	Survey ended at downstream manhole; drain had some construction debris at 219.73 ft.
CB-14 to CB-9	32.31	Concrete (non-reinforced)	18	Intact	Survey ended at downstream manhole; drain was dry.
CB-14 to CB-15	79.27	Concrete (non-reinforced)	18	Intact	Survey ended at upstream manhole; drain was dry.
CB-16 to CB-15	60.35	Concrete (non-reinforced)	18	Intact	Survey ended at downstream manhole; drain was dry.
CB-16 to CB-17	65.32	Concrete (non-reinforced)	15	Intact	Survey ended at upstream manhole; drain was dry.

TABLE 2
COMBINED INDUSTRIAL SEWER INSPECTION SUMMARY

Former Sperry Remington Site - North Portion
Elmira, New York

Survey Run	Distance/Length Covered (feet)	Pipe Type	Approx. Pipe Diameter (inches)	Pipe Condition	Observations and Comments
CB-18 to CB-17	145.72	Concrete (non-reinforced)	15	Intact	Survey ended at downstream manhole; drain had some fine-grained material and mud at 62.95 ft. Two 4” drains coming in – one from top right at 69.97 ft and the other from top left at 75.03 ft.
CB-19 to CB-10	33.17	Concrete (non-reinforced)	18	Intact	Survey ended at downstream manhole; drain was dry.
CB-11 to CB-20	49.98	Concrete (non-reinforced)	12	Intact	Survey ended at upstream manhole; drain was dry.
CB-21 to south southeast towards mainline at CB-6	56.16	Concrete (non-reinforced)	12	Intact	Survey ended at downstream connection to main line towards CB-6; drain was dry.
CB-22 to east toward CB-6	135.5	Concrete (non-reinforced)	24	Intact	Survey of the reverse line was completed / abandoned at the chiller line; drain contained water, fine-grained material, gravel / rocks, concrete, debris at 18.31 ft. Chiller plat access was observed at 35.06 ft.
CB-23 to east towards CB-22	53.9	Concrete (non-reinforced)	24	Intact	Survey ended at upstream manhole; drain was dry. A 10” line coming in from top left at 6.7 ft.
CB-24 to south towards CB-1	74.75	Concrete (non-reinforced)	24	Not Intact	Survey was abandoned as the drain was broken / blocked with soil, gravel, and debris. A hole with soil gravel was observed at 71.73 ft and the drain appeared broken at 72.83. ft
CB-24 to north northeast	9.4	Concrete (non-reinforced)	24	Not Intact	Survey was abandoned due to intruding lateral; the drain was dry. A 10” drain coming in from left at 8.08 ft.
CB-25 to north northwest towards SSHS	0.53	Clay Tile	30	Not intact	Survey was abandoned as the drain inlet was bulk headed.

TABLE 3A
SURFACE SOIL SAMPLING SUMMARY

Former Sperry Remington - North Portion
Elmira, New York

Historic Sample Location	Field ID	Sampling Interval	Analytical Program	Rationale
		Surface 0 to 2 in bgs		
SSHS-B46	SSHS-B46-A	X	PCBs	Confirm PCBs in surface soil > 1 mg/kg
SSHS-B47	SSHS-B47-A	X	SVOCs	Confirm PAHS in suface soil above SCOs
SSHS-B9	SSHS-B9-A	X	PCBs	Verify compliance with SCOs in surface soils
SSHS-B32	SSHS-B32-A	X	PCBs	PCBS > 8 mg/kg @ 1-4' bgs
SSHS-B34	SSHS-B34-A	X	PCBs	PCBs > 4 mg/kg @ 1-4' bgs
SSHS-B1S	SSHS-B1S-A	X	PCBs	Confirm composite sample (1-6' @ 4.5 mg/kg)
SSHS-B4SS	SSHS-B4SS-A	X	PCBs	Confirm PCBs in composite sample
SSHS-B9SS	SSHS-B9SS-A	X	PCBs	Confirm PCBs in composite sample
SSHS-FB1	SSHS-FB1-A	X	PCBs	Verify compliance with SCOs in surface soils
SSHS-FB2	SSHS-FB2-A	X	PCBs	Verify compliance with SCOs in surface soils
SSHS-FB3	SSHS-FB3-A	X	PCBs	Verify compliance with SCOs in surface soils

TABLE 3A
SURFACE SOIL SAMPLING SUMMARY

Former Sperry Remington - North Portion
Elmira, New York

Historic Sample Location	Field ID	Sampling Interval	Analytical Program	Rationale
		Surface 0 to 2 in bgs		
SSHS-SS2/SS7	SSHS-SS15	X	PCBs	Verify compliance with SCOs in surface soils between SSHS-S1 and SSHS-SS7
SSHS-SS1/SS7	SSHS-SS16	X	PCBs	Verify compliance with SCOs in surface soils between SSHS-S2 and SSHS-SS8

Notes:

SCO - Restricted Residential Soil Cleanup Objective (6 NYCRR Subpart 375)
PAHs - polynuclear aromatic hydrocarbons
PCBs - Polychlorinated Biphenyls
VOCs - volatile organic compound
SVOCs - semi-volatile organic compounds
in bgs - inches below ground surface
mg/kg -milligrams/kilogram
X - Sample obtained at this interval

TABLE 3B
SHALLOW SUBSURFACE SOIL BORING SAMPLING SUMMARY

Fomer Sperry Remington Site - North Portion
Elmira, New York

Historic Sample Location	Field ID	Sampling Interval			Analytical Program	Rationale
		Surface 0 to 2 in bgs	Sub 1 1 to 2 ft bgs	Sub 2 2 to 3 ft bgs

RESTRICTED RESIDENTIAL
SOIL CLEANUP OBJECTIVES

Former Sperry Remington - North Portion
Elmira, New York

VOCs	Restricted Residential SCO
Methyl-tert-butyl ether	100
Pentachlorophenol	6.7
Tetrachloroethene	19
Toluene	100
trans-1,2-dichloroethene	100
Trichloroethene	**21**
Vinyl chloride	0.9

Notes

SCO: Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375

PCBs: polychlorinated biphenyls

SVOCs: semi-volatile organic compounds

VOCs: volatile organic compounds

Compounds of Potential Concern (COPCs) have exceeded Restricted Residential SCOs based on soil analytical results from previous investigations and are shown shaded and in bold.

All values are in units of milligrams per kilogram (mg/kg).

Notes:

J: estimated value	SVOCs: semi-volatile organic compounds
U: non-detect	VOCs: volatile organic compounds
E: result exceeded calibration range	SOCs Restricted
mg/kg: milligrams per kilogram	ND: none of the individual Arochlors were detected above the method
- : not analyzed	**Detections are presented in bold.**
PCBs: polychlorinated biphenyls	Concentrations detected above the SCOs are presented in gray

Notes:

J: estimated value

U: non-detect

E: result exceeded calibration range

mg/kg: milligrams per kilogram

 - : not analyzed

PCBs: polychlorinated biphenyls

SVOCs: semi-volatile organic compounds

VOCs: volatile organic compounds

SCOs Restricted Residential Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375

ND: none of the individual Arochlors were detected above the method detection limit

Detections are presented in bold.

Concentrations detected above the SCOs are presented in gray

Notes:

J: estimated value

U: non-detect

E: result exceeded calibration range

mg/kg: milligrams per kilogram

 - : not analyzed

PCBs: polychlorinated biphenyls

SVOCs: semi-volatile organic compounds

VOCs: volatile organic compounds

SCOs Restricted Residential Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375

ND: none of the individual Arochlors were detected above the method detection limit

Detections are presented in bold.

Concentrations detected above the SCOs are presented in gray

Notes:

J: estimated value

U: non-detect

E: result exceeded calibration range

mg/kg: milligrams per kilogram

- : not analyzed

PCBs: polychlorinated biphenyls

SVOCs: semi-volatile organic compounds

VOCs: volatile organic compounds

SCOs Restricted Residential Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375

ND: none of the individual Arochlors were detected above the method detection limit

Detections are presented in bold.

Concentrations detected above the SCOs are presented in gray

Notes:

J: estimated value

U: non-detect

E: result exceeded calibration range

mg/kg: milligrams per kilogram

- : not analyzed

PCBs: polychlorinated biphenyls

SVOCs: semi-volatile organic compounds

VOCs: volatile organic compounds

SCOs Restricted Residential Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375

ND: none of the individual Arochlors were detected above the method detection limit

Detections are presented in bold.

Concentrations detected above the SCOs are presented in gray

Notes:

J: estimated value

U: non-detect

E: result exceeded calibration range

mg/kg: milligrams per kilogram

 - : not analyzed

PCBs: polychlorinated biphenyls

SVOCs: semi-volatile organic compounds

VOCs: volatile organic compounds

SCOs Restricted Residential Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375

ND: none of the individual Arochlors were detected above the method detection limit

Detections are presented in bold.

Concentrations detected above the SCOs are presented in gray

Notes:

J: estimated value

U: non-detect

E: result exceeded calibration range

mg/kg: milligrams per kilogram

 - : not analyzed

PCBs: polychlorinated biphenyls

SVOCs: semi-volatile organic compounds

VOCs: volatile organic compounds

SCOs Restricted Residential Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375

ND: none of the individual Arochlors were detected above the method detection limit

Detections are presented in bold.

Concentrations detected above the SCOs are presented in gray

Notes:
J: estimated value
U: non-detect
E: result exceeded calibration range
mg/kg: milligrams per kilogram
 - : not analyzed
PCBs: polychlorinated biphenyls
SVOCs: semi-volatile organic compounds
VOCs: volatile organic compounds
SCOs Restricted Residential Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375
ND: none of the individual Arochlors were detected above the method detection limit

Detections are presented in bold.

Concentrations detected above the SCOs are presented in gray

Notes:

J: estimated value

U: non-detect

E: result exceeded calibration range

mg/kg: milligrams per kilogram

- : not analyzed

PCBs: polychlorinated biphenyls

SVOCs: semi-volatile organic compounds

VOCs: volatile organic compounds

SCOs Restricted Residential Soil Cleanup Objectives presented in 6 New York State Department of Environmental Conservation Subpart 375

ND: none of the individual Arochlors were detected above the method detection limit

Detections are presented in bold.

Concentrations detected above the SCOs are presented in gray

Notes and Disclaimer

Areas of concern georeferenced from PDF drawings provided by New York State Department of Environmental Conservation (NYSDEC). Georeferenced items may include: historical site features, hand-drawn features, features that were not to scale, or features that were originally on a map that contained a different projection. Inherently, georeferencing introduces slight distortortions and inaccuracies in spatial data, but these distortions and inaccuracies may be exacerbated by the factors listed above. All reasonable efforts were made to accurately reflect the data provided.

Aerial imagery accessed via ArcGIS Online and provided by Microsoft on 05 February 2015. Image is dated 2 June 2010.

Notes and Disclaimer

Former Combined Industrial Sewer (Pre-1979) and Current Storm Water Sewer (Post-1979) are georeferenced from PDF drawings provided by New York State Department of Environmental Conservation (NYSDEC). Georeferenced items may include: historical site features, hand-drawn features, features that were not to scale, or features that were originally on a map that contained a different projection. Inherently, georeferencing introduces slight distortortions and inaccuracies in spatial data, but these distortions and inaccuracies may be exacerbated by the factors listed above. All reasonable efforts were made to accurately reflect the data provided.

Catch basin locations are approximate. Only catch basins related to the sewer inspection scope of work are presented on this figure.

Legend

- Production Well
- Monitoring Well (grounwater elevation ft amsl)
- Groundwater Contour (estimated elevation ft amsl)

Notes and Disclaimer

Aerial imagery accessed via ArcGIS Online and provided by Microsoft on 05 February 2015. Image is dated 2 June 2010.

Wells MW7, and MW16 were dry, and wells MW8S and MW15D were chosen as represented over their deeper "D" partner wells.

ft amsl: feet above mean sea level

Depth to groundwater measurements performed on 13 November 2014.

APPENDIX A

Comprehensive Utility Survey Report for the Former Combined Industrial Sewer

NYLD Infrastructure Field Report

NEW YORK LEAK DETECTION, INC.

Date: 8/25/2014 Technician: Mark Manzari

Customer: Geosyntec

Site Address: Elmira School, 777 South Main Street, Elmira, NY

Contact Person: Adam Gray Phone: 301-379-0933 cell

Scope of Work: sewer line location work

Type of Service:

☐ *Leak Detection*
☐ *Infrastructure Assessment*
☒ *Utility Location/GPR*
☐ *Utility Mapping/AutoCAD*
☐ *Video Inspection*

Type of Equipment Used

☐ *Profiler EMP 400*
☐ *LC2500 Leak Correlator*
☐ *S-30 Surveyor*
☒ *Sonde*
☐ *Leica Robotic Total Station*
☒ *RD4000*
☒ *Noggin 250 mHz*
☐ Noggin 500 mHz
☐ Conquest 1000 mHz
☐ *Leica GPS*
☒ MetroTech Vivax vLocPro2
☐ PosiTector UTG G3
☐ *Video Inspection Camera*
☐ *Helium # Bottles*

Marking Used

☒ *Paint*
☐ *Updated existing maps onsite*
☒ *Flags*
☐ *Other:* ____________________
☐ *Chalk*

Instructions from Onsite Contact: Perform sewer line location work using Sonde and GPR

Notes/Testing Results: See map below indicating located sewer lines. Due to diameter and depth of pipes video inspection with a tractor camera should be performed after a jetting of the lines. More accurate information and locations can be determined with a tractor camera.

Travel Hours: 3.0 hrs. Onsite Hours: 7.5 hrs.

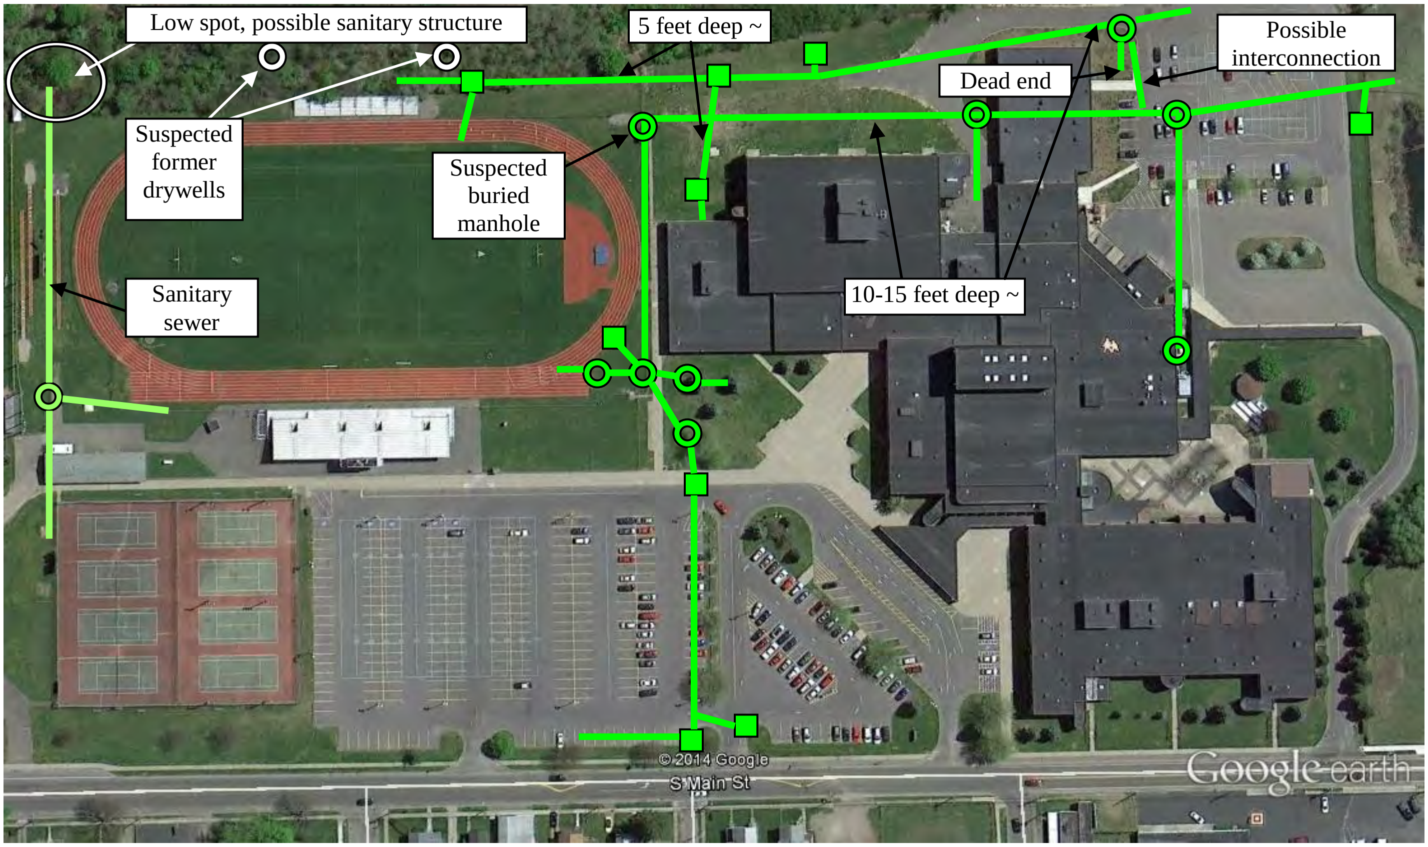
Information Transfer

☒ *Information relayed on site to:*

Adam Gray by telephone

☐ *Hand drawn map (forward to office for digital remake)*

☐ *All markings picked up by surveyors*



Low spot, possible sanitary structure
5 feet deep ~
Possible interconnection
Dead end
Suspected former drywells
Suspected buried manhole
Sanitary sewer
10-15 feet deep ~

GROUNDWATER SAMPLING LOG

Project Name Former Sperry Remington North
Date 8 / 21 / 2014
Project Number MN0832
Phase 20
Task 02
Location Elmira, NY
Personnel KWolf

Sample Type GW
Location Type Flush
DTW (feet) 14.56
Depth Measurement Location TOIC
DTB (feet) from prior data 20.00
Location ID MW-10
Screen Interval (ft) on file
Pump Setting (feet) 18.00
Duplicate ID MW-10 MS/MSD
Well Diameter (inches) 2

Purge Method Low flow
Rate (mL/min) 300
Time - Start 13:40
Time-End 14:30

Time	DTW (ft)	pH (S.U.)	Conductivity (µS/cm)	Temp. (°C)	Turbidity (NTU)	ORP (mV)	DO (mg/L)
13:40	Start	Pump, Grd settings.					
13:45	14.90	6.65	866	15.69	273	-7.0	1.03
13:50	14.90	6.62	887	15.25	111	-5.6	1.37
13:55	14.90	6.53	910	15.14	28.5	1.0	1.80

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Job ID: 180-35053-1

Laboratory: TestAmerica Pittsburgh

Narrative

This is a revised report. The 8082A PCB results have been revised. The chromatographic peaks for the aroclors have been re-integrated and reviewed based on data validation suggestions.

Job Narrative
180-35053-1

Receipt
The samples were received on 7/22/2014 8:55 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.6º C.

GC/MS VOA
Method(s) 8260C: Sample SSHS-FB5-B-SUB-1.5 had the recovery of surrogate toluene-d8 slightly above the control limits. The second terracore vial was analyzed, but had internal standards outside of criteria. Only the initial analysis with the high surrogate recovery was reported. A third analysis could not be completed as only two low level terracore vials were collected.

Method(s) 8260C: The laboratory control sample (LCS) for batch122620 recovered above the control limits for the following analyte: trans-1,3-dichloropropene. As this analyte was biased high in the LCS and was not detected in the associated sample, the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following sample was diluted to bring the concentration of target analytes within the calibration range: SSHS-B47-A-SS (180-35053-17). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8082A: The initial scoping of the project was set for routine PCB analysis. Bottles (125 ml amber glass bottles for the equipment blank, instead of 1 liter amber glass bottles for the low level PCB analysis) were submitted accordingly. The equipment blank, sample EB-20140721 (180-35053-23), was received in the 125 ml amber bottles. The entire volume was extracted, the reporting limits were elevated accordingly.

Method(s) 8082A: The soil samples appear to contain a mixture or aroclors 1248, 1254, and/or 1262; however, due to weathering or other environmental processes, the PCBs in the samples do not closely match the laboratory's aroclor standards used for instrument calibration. The samples have been quantified and reported as containing the various aroclors. Due to the poor match with the aroclor standards, there is increased qualitative and quantitative uncertainty associated with those results.

Method(s) 8082A: The soil samples were initially analyzed starting at a 10x dilution. Many of the samples contained aroclors above the instrument's calibration range and required further dilution. Several samples had the surrogates diluted out, with recoveries being flagged with a "D" qualifier.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits
*	LCS or LCSD exceeds the control limits
X	Surrogate is outside control limits

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery exceeds the control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD Recovery exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Geosyntec Consultants, Inc. TestAmerica Job ID: 180-35053-1

Project/Site: Former Sperry Remington Site - North

Laboratory: TestAmerica Pittsburgh

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

180-35053 Chain of Custody

Preservation Codes:

- A - HCL
- B - NaOH
- C - Zn Acetate
- D - Nitric Acid
- E - NaHSO4
- F - MeOH
- G - Amchlor
- H - Ascorbic Acid
- I - Ice
- J - DI Water
- K - EDTA
- L - EDA
- M - Hexane
- N - None
- O - AsNaO2
- P - Na2O4S
- Q - Na2SO3
- R - Na2S2SO3
- S - H2SO4
- T - TSP Dodecahydrate
- U - Acetone
- V - MCAA
- W - ph 4-5
- Z - other (specify)

Other:

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	False	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Case Narrative

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North

TestAmerica Job ID: 180-35053-2

Job ID: 180-35053-2

Laboratory: TestAmerica Pittsburgh

Narrative

This is a revised report. The 8082A PCB results have been revised. The chromatographic peaks for the aroclors have been re-integrated and reviewed based on data validation suggestions.

Job Narrative
180-35053-2

Receipt

The samples were received on 7/22/2014 8:55 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.6º C.

Due to the level of aroclors detected in sample SSHS-FB7-D-2-3 (180-35053-27), the cleint requested re-extraction/re-analysis. The initial analysis was completed using the 'Pittsburgh laboratory low level' variation of method 8082A, whereas due to the concentration of aroclors, the re-analysis was completed using the 'routine level' method 8082A analysis.

GC Semi VOA

Method(s) 8082A: The sample contained aroclors above the instrument's calibration range and required further dilution. The surrogates were diluted out.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North

TestAmerica Job ID: 180-35053-2

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Geosyntec Consultants, Inc.

List Source: TestAmerica Pittsburgh

List Number: 1

Creator: Butcher, Ryan M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	False	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Job ID: 180-35079-1

Laboratory: TestAmerica Pittsburgh

Narrative

This is a revised report (revision 2). The 8082A PCB results have been revised. The chromatographic peaks for the aroclors have been re-integrated and reviewed based on data validation suggestions.

This is a revised report. The sample ID for HHSH-B51-A-SS (180-35079-31) has been corrected to be HHSH-B1S-A-SS.

Job Narrative
180-35079-1

Receipt

The samples were received on 7/23/2014 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.6° C and 2.1° C.

GC/MS Semi VOA

Method(s) 8270D LL: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for prep batch 112437 recovered below the control limits for the following analyte: benzaldehyde. Benzaldehyde has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8082A: The initial scoping of the project was set for routine PCB analysis. Bottles (125 ml amber glass bottles for the equipment blank, instead of 1 liter amber glass bottles for the low level PCB analysis) were submitted accordingly. The equipment blank, sample EB-20140722 (180-35079-36), was received in the 125 ml amber bottles. The entire volume was extracted, the reporting limits were elevated accordingly.

Method(s) 8082A: The majority of the soil samples appear to contain a mixture or aroclors 1248, 1254, and/or 1262; however, due to weathering or other environmental processes, the PCBs in the samples do not closely match the laboratory's aroclor standards used for instrument calibration. The samples have been quantified and reported as containing the various aroclors. Due to the poor match with the aroclor standards, there is increased qualitative and quantitative uncertainty associated with those results.

Method(s) 8082A: The soil samples were initially analyzed starting at a 5x or 10x dilution. Many of the samples contained aroclors above the instrument's calibration range and required further dilution. Several samples had the surrogates diluted out, with recoveries being flagged with a "D" qualifier.

Method(s) 8082A: Several of the matrix spike recoveries may be biased high due to the sample matrix. This is especially prevalent in the matrix spike recoveries of sample SSHS-SS12-C-2-3 (180-35079-16).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD exceeds the control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery exceeds the control limits
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Method Summary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North

TestAmerica Job ID: 180-35079-1

Method	Method Description	Protocol	Laboratory
8270D LL	Semivolatile Organic Compounds by GC/MS - Low Level	SW846	TAL PIT
8082A	Polychlorinated Biphenyls (PCBs) (GC)	SW846	TAL PIT
2540G	SM 2540G	SM22	TAL PIT

Protocol References:

SM22 = SM22

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Laboratory References:

Login Sample Receipt Checklist

Client: Geosyntec Consultants, Inc.

Job Number: 180-35079-1

Login Number: 35079

List Source: TestAmerica Pittsburgh

List Number: 1

Creator: Butcher, Ryan M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Case Narrative

Job ID: 180-35729-1

Laboratory: TestAmerica Pittsburgh

Narrative

Job Narrative
180-35729-1

Receipt
The samples were received on 8/13/2014 1:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.6º C.

GC/MS VOA
Method(s) 8260C: The recovery of surrogate 1,2-dichloroethane-d4 was above the control limits for sample SSHS-B93-0.17-2 (1.5) (180-35729-17). As the recovery was high and there were no target compounds detected in the sample, the results were reported.

Method(s) 8260C: The recovery of surrogate dibromofluoromethane was above the control limits for sample 20140812-SOURCE BLANK (180-35729-37). As the recovery was high and there were no target compounds detected in the sample, the results were reported.

Method(s) 8260C: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch 115104 recovered above the control limits for the following analyte: 2-hexanone. As this analyte was biased high in the LCS/LCSD and was not detected in the associated samples, the results were reported.

Method(s) 8260C: The laboratory control sample duplicate (LCSD) for batch 115232 recovered slightly above the control limits for the following analyte: 1,3-dichlorobenzene. As this analyte was biased high in the LCSD and was not detected in the associated samples, the results were reported.

Method(s) 8260C: The laboratory control sample (LCS) for batch 114635 recovered above the control limits for the following analyte: 1,2-dichloroethene. As this analyte was biased high in the LCSD and was not detected in the associated samples, the results were reported.

Method(s) 8260C: The RPD between the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for prep batch 115242 was above the control limits for the following analyte: 1-2-dibromo-3 chloropropane. The recoveries were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: CCV 180-115680/22 was above criteria on column MR-1 for 4,4’-DDD and endosulfan II. As the CCV met criteria on column MR-2, and the results were either non-detects or below the reporting limit, the results were reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery exceeds the control limits
B	Compound was found in the blank and sample.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery exceeds the control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD Recovery exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Laboratory: TestAmerica Pittsburgh

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	**Program**	**EPA Region**	**Certification ID**	**Expiration Date**
New York	NELAP	2	11182	03-31-15

The following analytes are included in this report, but are not certified under this certification:

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	1,2,3-Trichlorobenzene
8260C	5035	Solid	Cyclohexane
8270D	3541	Solid	1,4-Dioxane

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids
8270D LL	3520C	Water	1,4-Dioxane

Laboratory: TestAmerica Canton

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Method Summary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North

TestAmerica Job ID: 180-35729-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds (GC/MS)	SW846	TAL PIT
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL PIT
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	TAL PIT
8270D LL	Semivolatile Organic Compounds by GC/MS - Low Level	SW846	TAL PIT
8015D	Gasoline Range Organics (GRO) (GC)	SW846	TAL CAN
8015D	Diesel Range Organics (DRO) (GC)	SW846	TAL CAN
8081B	Organochlorine Pesticides (GC)	SW846	TAL PIT
8081B_LL	Organochlorine Pesticides (GC)	SW846	TAL PIT
8082A	Polychlorinated Biphenyls (PCBs) (GC)	SW846	TAL PIT
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	TAL PIT
6010C	Metals (ICP)	SW846	TAL PIT
7470A	Mercury (CVAA)	SW846	TAL PIT
7471B	Mercury in Solid or Semisolid Waste (Manual Cold Vapor Technique)	SW846	TAL PIT
2540G	SM 2540G	SM22	TAL PIT
9014	Cyanide	SW846	TAL PIT

Login Number: 35729

List Source: TestAmerica Pittsburgh

List Number: 1

Creator: Kovitch, Christina M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Table of Contents

Case Narrative

Job ID: 180-35776-1

Laboratory: TestAmerica Pittsburgh

Narrative

Job Narrative
180-35776-1

This report contains the results of the first 40 samples listed on the COCs. The remainder of the samples are reported in laboratory job# 180-35776-2.

Receipt

The samples were received on 8/14/2014 1:08 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.9º C, 2.3º C, 2.5º C, 3.1º C and 3.2º C.

Sample SSHS-B90-0.17-2 (1) (180-35776-33) had the collection time on the sample containers as 11:34, whereas the COC listed 11:36. The time used for collection was 11:36.

The samples were delivered by Express Courier. The Express Courier personnel did not relinquish the COCs at the time of delivery to the laboratory.

GC/MS VOA

Method 8260C: Sample SSHS-B82-0.17-2 (1.5) (180-35776-13) was analyzed twice. The initial analysis had the internal standard area counts for 1,4-dichlorobenzene-d4 below criteria and surrogate recoveries for toluene-d8 above the control limits and 4-bromofluorobenzene below the control limits. The re-analysis had the internal standard area counts for 1,4-dichlorobenzene-d4 slightly below criteria and all surrogate recoveries within the control limits. Results of both analyses were reported. As the sample was collected in terracore vials, a third analysis could not be completed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270D: The following samples were diluted due to the nature of the sample matrix: SSHS-B73-10-15 (12.5) (180-35776-27), SSHS-B90-0.17-2 (1) (180-35776-33), and SSHS-91-SS (180-35776-37). Elevated reporting limits (RLs) are provided.

Method 8270D: The following sample was diluted due to abundance of target analytes : SSHS-B90-2-6 (4) (180-35776-34). As such, surrogate recoveries will be considered as estimated and elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8081B: CCV 180-115917/24 was slightly below criteria on column MR-1 for methoxychlor. As the CCV met criteria on column MR-2, results were reported from that column.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010C: The following sample was diluted to bring the concentration of calcium within the linear range of the instrument: SSHS-B82-10-15 (12.5) (180-35776-16). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method 9014: The following sample was diluted to bring the concentration of target analytes within the calibration range: SSHS-B85-2-6 (3.5) (180-35776-21). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	ISTD response or retention time outside acceptable limits
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery exceeds the control limits
E	Result exceeded calibration range.
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Laboratory: TestAmerica Pittsburgh

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date

Method Summary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North

TestAmerica Job ID: 180-35776-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL PIT
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	TAL PIT
8081B	Organochlorine Pesticides (GC)	SW846	TAL PIT
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	TAL PIT
6010C	Metals (ICP)	SW846	TAL PIT
7471B	Mercury in Solid or Semisolid Waste (Manual Cold Vapor Technique)	SW846	TAL PIT
2540G	SM 2540G	SM22	TAL PIT
9014	Cyanide	SW846	TAL PIT

Protocol References:

SM22 = SM22

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.
