Re: Construction Completion Report
Northern Athletic Field
Former Sperry Remington Site – North Portion
777 South Main Street, City of Elmira, Chemung County, New York
NYSDEC Project Number C808022

Dear Terry:

The New York State Department of Environmental Conservation (NYSDEC), in consultation with New York State Department of Health (NYSDOH), has completed its review of the documents entitled "Construction Completion Report Northern Athletic Fields," revised date June 19, 2026 and corresponding "Response to Comments – Northern Athletic Field Construction Completion Report" letter dated June 19, 2026 and **accepts this report with the following exceptions**.

General Comments

1. Section 10.0 Soils Remaining at the Site above SCOs. Future actions proposed within the document text and figures for COPCs that remain in-place including "Final Remedy due to Technical Impracticability" and "Site Management" require Agency concurrence and approval. Interim Remedial Measures do not constitute the final remedy for the Site and therefore, proposed future actions will be evaluated further under the Site Remedial Investigation Report and related Site reporting.
2. Section 13.8.2 Off-Site Material Storage Area (MSA). The proposal to transfer the Off-Site MSA to the Site #C808054 ISMP is under Agency review and will be addressed under separate cover.
3. Section 14.3 Corrective Measures Maintenance Plan – NSRC Haul Road. The proposal to transfer the NSRC Haul Road corrective maintenance measures to the Site #C808054 ISMP is under Agency review and will be addressed under separate cover.

Within fifteen (15) days of the date of this letter, the Applicant must elect in writing (electronic notification is acceptable) one of the following options:

Option A: Accept Approval with Exceptions;

Option B: Invoke dispute resolution as set forth in 6 NYCRR Part 35-1.5(b)(2); or

Option C: Terminate the Brownfield Cleanup Agreement in accordance with 6 NYCRR Part 375-3.5.

If Option A is chosen, then a copy of the CCR approval with exceptions along with this letter attached must be placed in the document repository within 1 week of accepting Option A. Please provide notification to the Department that a copy of this work plan has been placed in the document repository (electronic notification is acceptable).

NYSDEC seeks to resolve outstanding differences in a mutually agreeable manner which addresses the requirements of the Brownfield Cleanup Agreement, Part 375, and all applicable laws, regulations, and guidance.

If you or your technical team have any questions or concerns regarding this request, please contact me via email at kaleigh.zappia-carvin@dec.ny.gov or at 585-226-5351.

Please contact me at (585) 226-5351 if you have questions regarding this letter.

Sincerely,

Kaleigh Zappia-Carvin

CERTIFICATIONS

I, Aron Krasnopoler, am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Interim Remedial Measures #5 Amendment 2 Work Plan and Interim Site Management Plan Excavation Work Plans were implemented and that construction activities were completed in substantial conformance with the Department-approved Interim Remedial Measures #5 Amendment 2 Work Plan and Interim Site Management Plan Excavation Work Plans for the Northern Athletic Field.

I certify that the documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that the information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Aron Krasnopoler of B&B Engineers & Geologists of New York, P.C, of 10211 Wincopin Circle, 4th floor, Columbia Maryland 21044, am certifying as the Remedial Party's Designated Site Representative for the site.

1.0 Background and Site Description

On behalf of Unisys Corporation (Unisys), Geosyntec Consultants, Inc. and its New York affiliate B&B Engineers & Geologists of New York, P.C. (collectively Geosyntec) are submitting this Northern Athletic Field (NAF) Construction Completion Report (CCR) for the Former Sperry Remington Site – North Portion (Site #c808022) (Site) in Elmira, New York.

The Site is located at the Elmira High School (EHS) property (formerly known as Southside High School), 777 South Main Street in Elmira, Chemung County, New York (**Figure 1)**. The Site is identified as Section 99 Block [16-1] and Lot [16] and Section 99 Block [20-1] Lot 74.2 on Chemung County Tax Maps. The Site is situated on an approximately 34-acre area bounded by South Main Street and residential properties to the west, the Southern Tier Commerce Center (STCC) to the south, Norfolk Southern Railway to the east and commercial or vacant land to the north. Miller Pond is located approximately 1,000 feet to the east (see **Figure 1**). The boundaries of the Site are fully described in **Appendix A**: Survey Map, Metes, and Bounds.

An Order on Consent and Administrative Settlement (Order) with the New York State Department of Environmental Conservation (NYSDEC) for the Site was approved by NYSDEC on 7 July 2014. Unisys conducted Site Characterization (SC) activities at the Site in accordance with the Order, the Site Characterization Work Plan (SC Work Plan) dated 29 July 2014 (revised 27 October 2014), and subsequent addenda dated 22 May 2016, 8 January 2016, 9 August 2016, 3 February 2017, and 16 March 2017. A SC Report was submitted to NYSDEC on 17 May 2017 that described SC and remedial activities conducted to date. NYSDEC provided conditional approval of the SC Report on 15 August 2018 and a revised SC Report was submitted to NYSDEC on 28 March 2019.

On 26 April 2016, Unisys applied to enter the Site into the NYSDEC Brownfields Cleanup Program (BCP) with the consent of Elmira City School District (ECSD). NYSDEC gave an initial determination that the BCP application was complete on 10 June 2016 and received public comments until 22 July 2016. Unisys entered into a Brownfield Cleanup Agreement with the NYSDEC on 23 March 2017, to investigate and remediate the Site located in Elmira, Chemung County, New York. The agreement indicated the property will be remediated to restricted residential (RR) use and will be used as a high school.

In 2003, New York State Department of Health (NYSDOH) completed a Health Consultation for Southside High School (now EHS) that recommended that ECSD develop a written soil management plan to "minimize potential public exposures to contaminated

subsurface materials…" In June 2009, ECSD prepared an Environmental Management Plan (EMP) in response to a request from the New York State Education Department (SED) to formalize environmental management operations and practices at EHS. NYSDEC and NYSDOH provided technical assistance to SED in development and review of the EMP. The intent of the EMP was to advise construction personnel and the general community regarding the potential for exposure to Contaminants of Potential Concern (COPCs) that may be present in soil, groundwater, and soil vapor on EHS property.

As Institutional and Engineering Controls (ICs and ECs) have since been incorporated into Site management to control potential exposure to COPCs that may be present in soil, groundwater, and soil vapor on EHS property, the EHS EMP was updated with the Interim Site Management Plan (ISMP). The ISMP was prepared to address ICs and ECs that have been implemented as interim measures until a Site remedy has been selected and to describe required monitoring and operation and maintenance (O&M) activities. It incorporates and replaces the current EHS EMP. The ISMP was submitted on 12 November 2019 and approved by the NYSDEC on 20 December 2019.

2.0 Summary of Interim Remedial Measure (IRM) #5A2

2.1 IRM Objectives

The purpose of Interim Remedial Measure #5 Amendment #2 was to conduct soil removal in the NAF in coordination with NAF restoration (**Figure 2**). Unisys identified Site soils with concentrations of total PCBs and metals that may be considered hazardous waste. To address these concentrations, a non-emergency IRM for soil removal was applicable to mitigate potential environmental or human exposures prior to capital improvement construction. Soil removal was conducted with following IRM cleanup goals:

- COPC concentrations in soils less than or equal to RR SCOs at depths less than 2 feet bgs;
- Total PCB concentrations less than or equal to 10 milligram per kilogram (mg/kg) at depths between 2 and 14 feet bgs;
- Total PCB concentrations less than or equal to 3.2 mg/kg at and above the water table, where PCB have been detected above groundwater standards, i.e., below 14 feet bgs;
- Metal concentrations less than 20 times the equivalent toxicity characteristic of hazardous waste with exception of lead below 2 feet bgs;
- Lead concentrations less than 200 times the equivalent lead toxicity characteristic, i.e., 1,000 mg/kg below 2 feet bgs;

- Total PAH concentrations greater than 100 mg/kg below 2 feet bgs; and
- Volatile organic compound (VOC) concentrations less than or equal to Protection of Groundwater (PoG) at or above the water table.

Total PCB concentrations were also compared to the Toxic Substances Control Act (TSCA) limit of 50 mg/kg for PCB remediation wastes for identification of those soils that may be classified as hazardous waste containing PCBs as defined in 6 New York Codes, Rules and Regulations (NYCRR) Part 371.4 (e);

Removal of an underground storage tank (UST), described in detail under Section 13.7, was completed in accordance with the approved Amendment #2 to the IRM #5 Work Plan (IRM #5A2) and DER-10 Section 5.5(c)(3)(iv).

IRM objectives were achieved as demonstrated by remedial performance sampling following soil removal discussed in Section 8 and the documentation of the construction of the EC soil cover system discussed in Section 11. Soils with COPCs above IRM cleanup goals were removed to the BCP Site boundary with some exceptions as presented in Section 10. The EC soil cover system, as presented in Section 11, is comprised of a minimum of 24-inches of imported material (Section 9) overlain by asphalt, concrete pavement, vegetative cover, or stone. A demarcation layer was placed prior to backfilling with clean fill material used for the cover system. Exceedances of IRM cleanup goals remaining in place will be managed under the interim and final SMP for Site#c808022 or will be addressed as part of the future RI and remedial measures associated with Site #c808054.

2.2 Description of IRM #5A2

The NAF was remediated in accordance with the final Revised Amendment #2, Interim Remedial Measure #5 (IRM #5A2) Work Plan dated 19 November 2021. NYSDEC provided an approved as modified letter on 14 December 2021 (**Appendix B)**.

IRM #5A2 utilized temporary infrastructure constructed in the NAF for use previously during IRM #4 and IRM #5. As indicated in the Work Plan, the components of IRM #5A2 were as follows:

1. Excavation of soil/fill with detections of COPCs in soil exceeding the IRM #5A2 objectives presented in Section 2.1.
2. Removal of subsurface utilities including electric, water, data communications, and storm sewer.
3. Management of excavated soils for reuse as fill below the soil cover system or transport and off-Site disposal as hazardous or non-hazardous waste:
    - Soils above the demarcation layer were stockpiled for anticipated reuse as backfill below 2 feet bgs but above 14 feet bgs;

- Soils with total PCB concentrations less than or equal to 10 mg/kg were considered for potential reuse as backfill below 2 feet bgs but above 14 feet bgs;
- Soils with total PCB concentrations greater than 10 mg/kg and less than 50 mg/kg were considered non-hazardous waste;
- Soils with total PCB concentrations greater than or equal to 50 mg/kg were considered PCB remediation wastes as defined in 40 United States Code of Federal Regulation (CFR) §761.3 TSCA and as hazardous waste containing PCBs as defined in 6 NYCRR Part 371.4 (e);
- Soils from at or near the water table with total PCB concentrations greater than 3.2 mg/kg and less than 50 mg/kg were considered as PCB remediation waste;
- Toxic Characterization Leaching Procedure (TCLP) metal results below Resource Conservation and Recovery Act (RCRA) toxicity characteristics were considered non-hazardous waste; and
- TCLP metals results above RCRA toxicity characteristics were managed as hazardous waste containing metals.

4. Decommissioning of temporary infrastructure utilized during IRM #5A2 construction activities.
5. Backfilling of excavations below a soil cover system with excavated soils approved for reuse or approved imported fill.
6. Construction and maintenance of a soil cover system to prevent human exposure to remaining contaminated soil/fill remaining at the Site. The soil cover system was to consist of a demarcation layer and at least 2 feet of approved imported fill with asphalt in paved areas and concrete in sidewalk areas and vegetated areas.
7. Off-Site transport and disposal of hazardous and non-hazardous soils.

Additional areas were excavated under Phase 2 and Phase 3 during Amendment #2 (**Figure 3A** and **3B**) due to additional stepout and stepdown excavations, additional former industrial sewer (FIS) and associated lateral removal, and encountered artifacts, objects, and structures. These excavation areas were used to manage IRM progress and are depicted on **Figure 4**. An IRM #5A2 excavation area breakdown is described in detail under Section 7.1 based on these changed conditions from the approved final Revised Amendment #2, Interim Remedial Measure #5 Work Plan.

Reuse was anticipated to be utilized below the cover system as approved backfill material as outlined in IRM #5A2; however, excavated reuse was shipped of as non-hazardous material due to poor geotechnical soil quality and is further discussed in Sections 7.3 and 7.4.2.

3.0 Summary of ISMP

3.1 Descriptions of ISMP Activities

Restoration of the EHS NAF, including the EHS baseball field, softball field, and northern practice fields, were planned following completion of remedial construction under IRM #5A2. A NAF restoration design prepared by Marathon Engineering (Marathon) and SWBR was submitted to NYSDEC with IRM #5A2 in November 2021 and was subsequently updated to incorporate comments from NYSDEC and ECSD as well as elements of the ECSD master plan capital improvements for the NAF in Addendum #9 (Section 13.11) to IRM #5A2 on 24 February 2023 which incorporated ECSD improvement plans beyond the scope of NAF restoration.

NAF restoration and improvement activities that required intrusive work in native soil or below the IRM #5A2 soil cover system that was outside the IRM #5A2 scope of work were conducted in accordance with the ISMP. ISMP Excavation Work Plan (EWP) Notifications/Work plans were submitted by Geosyntec on behalf of Unisys for NAF restoration activities and by Sterling Environmental on behalf of ECSD for NAF improvement activities for approval by the NYSDEC. Specific activities which required these work plans are further discussed in Sections 15 and 16, respectively.

4.0 Description of Remedial Actions Performed

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved Revised Final IRM #5A2 Work Plan for the Former Sperry Remington Site - North Portion between October 2021 through July 2024 and subsequent addendas. Additional remedial activities completed during NAF restoration and improvement activities were conducted in accordance with the ISMP submitted on 12 November 2019 and subsequent addendas. Deviations from the IRM Work Plan or ISMP addressed through subsequent addendas or work plans are described in Sections 13 through 16.

5.0 Governing Documents

5.1 Site Specific Health & Safety Plan (HASP)

Remedial work performed under this Remedial Action was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal Occupational Safety and Health Administration. The HASP was complied with for remedial and invasive work performed at the Site.

5.2 Quality Assurance Project Plan (QAPP)

The QAPP was included as Appendix D of Amendment #2 approved by the NYSDEC, which is included in **Appendix B**. The QAPP describes the specific policies, objectives, organization, functional activities and quality assurance/ quality control activities designed to achieve the project data quality objectives.

5.3 Construction Specifications

Construction specifications were included as Appendix B of the IRM #5A2 Work Plan and describe the scope of work and responsibilities of the IRM Contractor and the Engineer of Record during IRM construction (**Appendix B**). Specification sections addressed construction quality assurance (CQA), construction quality control, temporary facilities and controls, soils, removal and handling of contaminated soils, excavation support, equipment decontamination, and transportation and off-Site disposal.

NAF Restoration Plans to be addressed as part of IRM #5A2 were prepared by Marathon Engineering and SWBR and were included in Amendment #2 as Attachment #6 (**Appendix B**) and Addendum #9 (Section 13.11). Capital improvement plans beyond the scope of NAF restoration were prepared by Hunt (Section 3.1).

5.4 Storm-Water Pollution Prevention Plan (SWPPP)

The erosion and sediment controls (E&S) for remedial construction were performed in conformance with requirements presented in the NYS Guidelines for Urban Erosion and Sediment Control and the Site-specific Storm Water Pollution Prevention Plan submitted on 26 June 2019. An updated SWPPP for the NAF was submitted in November 2021. An updated SWPPP for the NAF was submitted to NYSDEC on 9 June 2023. A notice of termination for the SWPPP was submitted to NYSDEC on 28 August 2024.

5.5 Community Air Monitoring Plan (CAMP)

The Soil/Dust Control and Monitoring Plan (SDCMP) was included as Appendix G of Amendment #2 and incorporated the NYSDOH Generic CAMP. The SDCMP described requirements for dust control and the CAMP monitoring approach. Ambient air monitoring was conducted on-Site during IRM and ISMP activities to monitor potential impacts to the downwind community (potential receptors include the school community, residences, businesses, and workers not directly involved with IRM activities). The air monitoring program included four different types of ambient air quality measurements: (1) real-time dust monitoring using direct reading instruments with telemetry capabilities, (2) periodic time-integrated sampling using fixed laboratory measurements for PCBs, (3) real-time VOC monitoring using direct reading instruments with telemetry capabilities, and (4) real-time monitoring for mercury using direct reading vapor analyzers. The time-integrated sampling was used to provide chemical-specific data for the assessment of potential

impacts. Real-time dust monitoring using direct reading instruments was conducted during soil remediation activities whenever Site soils were disturbed or imported soils were handled on Site. Real-time mercury monitoring was conducted for the duration of IRM #5A2 Addendum #8 Phase 3 (Section 13.10).

5.6 CAMP Monitoring Locations

Air monitoring was conducted for IRM #5A2 and ISMP activities around the working areas and at designated upwind and downwind locations that varied as a result of daily prevailing wind patterns. During IRM #5A2, a minimum of one upwind and four downwind locations were used for real-time monitoring, unless otherwise approved in subsequent IRM #5A2 Addendums. A maximum of 20 monitors were utilized during IRM #5A2 excavations in 2022. The downwind locations were equally distributed along the perimeter of the work area. ISMP activities included a minimum of one upwind and one downwind location which included either utilization of exiting IRM #5A2 monitoring locations and/or additional locations identified in ISMP Notification/Work plans submitted by Sterling Environmental on behalf of ECSD (**Appendix B.5**). During work activities within 20 feet of potentially exposed populations or occupied structures, continuous monitoring locations were selected based on the nearest potentially exposed receptors. If action levels were exceeded at those locations, then the source of the exceedance was evaluated, and the positioning of upwind and downwind monitoring stations was reassessed. Monitoring locations decreased as work was completed on the NAF and after approval was provided by the NYSDOH for decommissioning.

One (1) continuous VOC monitor was installed on 5 January 2022 at the request of NYSDOH to be representative of the downwind direction and potential receptors during excavation of Area 2 (**Figure 4**) and was utilized throughout the duration of IRM #5A2 and NAF capital improvements until decommissioning of this unit was approved by NYSDOH on 6 February 2024. The CAMP was revised on 26 May 2022 to include two additional continuous VOC monitors in the upwind direction and in the direction of EHS, per instructions from NYSDOH, and were utilized periodically throughout excavation of IRM #5A2 when elevated photoionization detector (PID) readings were encountered, as discussed further in Section 5.7.

Up to three upwind and four downwind locations were utilized for time-integrated sampling for PCBs during excavation of PCB-impacted soils. On 17 March 2021, one PCB sampler (Tisch 1) was temporarily decommissioned and relocated due to immediate safety concerns for on-Site personnel on 17 March 2022 from an off-site disturbance. PCB air sampling units were decommissioned on 23 February 2023 with Agency approval after completion of TSCA soil excavations and handling.

One upwind and one downwind location was used for real-time mercury vapor sampling at the request of NYSDOH while work was being conducted under Addendum #8 Phase 3 (Section 13.10). Monitoring for mercury was implemented in the afternoon of 14 August 2022 and monitors were decommissioned on 5 September 2023.

An additional two CAMP monitors were implemented under the IRM #5A2 Addendum #6 Work Plan at the Off-Site Material Staging Area (MSA). CAMP monitors at the MSA were decommissioned upon receipt of NYSDOH approval on 6 February 2024 once non-hazardous shipment of soil had ceased. Further information related to Addendum #6 Work Plan is discussed in Section 13.8.2.

5.7 CAMP Methods

CAMP monitoring for IRM #5A2 and ISMP activities included real-time monitoring for particulate matter less than 10 micrometers in size (PM-10) using an aerosol monitor. Aerosol monitors utilized include TSI Incorporated (TSI) DustTrackII, TSI DustTrack 8530 (battery-powered), Met One ES-405 (solar-powered), and Met One E-Samplers (solar-powered). The equipment was equipped with telemetry to indicate action level exceedances in real time. In addition, fugitive dust migration was visually assessed during work activities. Particulate concentrations were monitored continuously at the perimeter of the work areas at the particulate monitoring locations. The monitoring equipment integrated over a period of 15 minutes (or less) for comparison to airborne particulate action levels. Readings were recorded, and air monitoring records were maintained electronically. Real-time monitoring data were downloaded at the end of each workday and attached to the Daily Field Reports (DFRs). The reports were sent to NYSDEC and NYSDOH by noon the following day. Copies of the DFRs are provided in **Appendix C** and CAMP data in **Appendix D**.

Time-integrated sampling was included in the collection of up to seven, eight-hour (8-hr) time-integrated air samples along the perimeter of the Site for laboratory analyses of PCBs. These time-integrated samples were used for assessing the potential for off-Site exposures. Up to three upwind and four downwind monitors were utilized for time-integrated sampling. Time integrated samples were collected during work hours from each sampling location using high-volume air samplers for each day during PCB-impacted soil excavation activities.

Samples for PCBs analyses were collected using Tisch TE-1000 Series High Volume Samplers with Poly-Urethane Foam (PUF). Five-point calibrations were performed on the PUF samplers each month, using certified calibration devices. Samples were collected on

a PUF glass cartridge or equivalent prepared by the laboratory. Samples were collected at flow rates of approximately 8 standard cubic feet per minute (SCFM). A gasoline powered generator was needed to power all PUF samplers. Generators were placed approximately 100 feet downwind from the PUF sampler to mitigate potential biases for the samples. The inlet of the sampling device was placed at a height of approximately 4.5 feet. Following collection, samples were wrapped in aluminum foil to mitigate light exposure, stored on ice, and transported to the laboratory under chain-of-custody protocols for analysis of PCBs by United States Environmental Protection Agency (USEPA) Method TO-4A at Eurofins, Test America. The sample hold time for USEPA Method TO-4A is seven days. The samples were analyzed under expedited three-day laboratory turnaround times (TAT). PCB concentrations did not exceed the PCB CAMP threshold of 0.11 µg/m^3 based on the IRM #5A2 Site specific CAMP. Analytical results for PCB air samples are included in **Table 1** and associated lab reports are included in **Appendix D.5**.

CAMP monitoring for IRM #5A2 and ISMP activities included real-time VOC monitoring using a Honeywell MiniRae 3000 (PID) monitor that was powered by solar or battery operated. The equipment was equipped with telemetry to indicate action level exceedances in real time. VOC concentrations were monitored continuously at the perimeter and/or downwind of the work areas integrated over a period of 15 minutes (or less). Readings were recorded, and air monitoring records were maintained electronically. Real-time monitoring data were downloaded at the end of each workday and attached to the DFRS. The reports were sent to NYSDEC and NYSDOH by noon the following day. Copies of the DFRs are provided in **Appendix C** and CAMP data in **Appendix D**.

For the duration of the work conducted under Addendum #8 Phase 3, further defined in Section 13.10, CAMP monitoring also included real-time monitoring for mercury using a Jerome J405 Mercury Vapor Analyzer. As with the airborne particulate monitors, this monitoring equipment can integrate over a period of 15 minutes (or less) for comparison to CAMP action levels. Readings were recorded and monitoring records were maintained electronically. Real-time monitoring data were downloaded at the end of the day and attached to the DFR and sent to the NYSDEC and NYSDOH by noon the following day. Copies of the DFRs are provided in **Appendix C** and CAMP data in **Appendix D**.

5.8 CAMP Action Levels and Response Measures

Downwind PM-10 particulate levels were compared to the background (upwind perimeter) PM-10 particulate level. If the difference between the downwind level and the background level exceeded 100 micrograms per cubic meter (µg/m^3) for the 15 minute averaging period or if airborne dust was visually observed leaving the work area, dust control measures, including increased water spraying, or stopping work, were employed. Monitor alarms were set to alert Site personnel if readings reached 100 µg/m^3 and dust control measures

were implemented. If, after implementing dust suppression techniques, particulate levels above background (upwind) exceeded 150 µg/m^3, work was suspended, and controls were re-evaluated. Work would resume once dust suppression measures and other controls were successful in reducing downwind particulate levels above background and below 150 µg/m^3 and visible dust migration was not observed. Also, if extreme wind conditions or other weather conditions made dust control ineffective, remedial actions were suspended. Real-time dust monitoring was suspended during sustained precipitation events. Suspension of monitoring during sustained precipitation events as well as other instances where exceedances were noted and mitigation occurred are provided in the Daily Field Reports (**Appendix C**).

Samples collected for PCB air analyses were compared to the Site specific CAMP action level of 0.11 µg/m^3. One exceedance of the Site-specific action level was detected on 31 March 2022 at 0.13 µg/m^3 and was D qualified. This result was located at sample location SSHS-IRM5A2-T5-03312022, which was located on the east central portion of the NAF, adjoining Area 2. The lab report, 200-62816-18 (**Appendix D.5**) reported that all samples collected on 31 March 2022 appeared "to contain PCBs; however, due to weathering or environmental processes, the PCBs in the samples do not closely match any of the laboratory's Aroclor standards used for instrument calibration. The samples have been quantified and reported as Aroclor 1248. Due to the poor match with the laboratory's Aroclor standards, there is increased qualitative and quantitative uncertainty associated with the result." In addition, the DFR for 31 March 2022 did not report that soils ≥ 50 mg/kg were excavated; however, PCB air monitors were run and samples collected as stepouts were completed on the northern portion of Area 2. Weather for that day indicated inclement weather (i.e., storms) happened in the afternoon while samples were being collected. Based on the information reported from the laboratory and the DFR, it is likely that the sample may have been impacted by the weather rather than elevated PCB concentration above the Site specific action level.

Downwind VOC levels were compared to background (upwind perimeter) VOC levels on 15-minute average periods. Consistent with the NYDEC Generic CAMP for Supplemental Investigation and IRM, the downwind VOC CAMP action level was 5 parts per million (ppm) above upwind measurements averaged over a 15 minute period. There were no downwind VOC readings exceeding the action level during the time that the monitors were utilized; therefore, no response measures were taken as a result of continuous VOC monitoring.

Downwind mercury vapor levels were compared to background (upwind) mercury vapor levels for the 15-minute averaging periods. Consistent with the recommendations from

NYSDOH, the downwind mercury CAMP action level was 1 ug/m^3 above the upwind measurement averaged over a 15 minute period. There were no downwind mercury vapor readings exceeding the action level during the time that the mercury vapor monitors were utilized; therefore, no response measures were taken as a result of mercury vapor monitoring.

5.9 Contractors Site Operations Plans (SOPs)

The Remediation Engineer reviewed the plans and submittals for this remedial project (i.e., those listed above plus contractor and subcontractor submittals) and confirmed that they followed the Amendment #2 work plan. The Contractor's Technical Execution Plan was submitted to NYSDEC and NYSDOH on 17 June 2019. Contractor information is provided in Section 6.1.

5.10 Community Participation Plan

A Community Participation Plan was included in the SC Work Plan dated October 2014 and had been updated for the BCP Remedial Investigation (RI) Work Plan submitted on 7 September 2018 (RI Work Plan), and was revised in accordance with NYSDEC comments, leading to a 29 May 2019 submittal (revised RI Work Plan). The NYSDEC gave conditional approval to the Revised RI Work Plan on 24 July 2019. The following community participation activities were undertaken for IRM #5A2 and related remedial activities at the Site:

- A Community Liaison Plan (CLP) for the Site and other NYSDEC sites related to the former Remington Rand facility was submitted to NYSDEC and NYSDOH on 02 September 2020. The CLP describes the project, project team members, community, and stakeholders. It functions as a guide to project personnel and the community on the best ways to communicate project information; answer questions; and raise issues and concerns voiced by the public to the proper sources for resolution.
- The Construction Manager served as the on-Site CLP liaison who could direct public inquiries to proper personnel for timely responses. Copies of the NYSDEC fact sheet and the CLP were kept on the Site and provided to Site visitors or people seeking information during the construction activities; and
- A public availability session was held on 29 September 2021 at Elmira High School, prior to IRM #5A2 construction. Representatives from NYSDEC, NYSDOH and Geosyntec were present to provide information about IRM #5A2 construction activities and controls to be implemented to protect public health. A second public availability session was held on 18 July 2022 that provided an update on IRM #5A2 progress.

6.0 Remedial Program Elements

6.1 Contractors and Consultants

Construction activities for IRM #5A2 were performed by Remedial Construction Services, L.P. (RECON) as the primary IRM contractor with responsibility for construction activities in accordance with the IRM #5A2 Work Plan, Construction Drawings and Construction Specifications. Construction activities for ISMP were performed by RECON and Edger Enterprises, Inc. (Edger) with responsibility for construction activities in accordance with ISMP EWPs submitted by Geosyntec on behalf of Unisys. Edger was responsible for implementing construction activities under ISMP Notification/Work plans submitted by Sterling Environmental on behalf of ECSD. Surveying services were provided by Hunt Engineers, Architects & Surveyors (Hunt EAS) for both parties.

Geosyntec provided CQA services and collected chemical samples in accordance with the QAPP. Aron Krasnopoler of B&B Engineers & Geologists of New York, P.C., a New York Professional Engineer, served as certifying Engineer of Record responsible for inspection of the work. On-Site and laboratory geotechnical soil testing services were provided by Terracon Consultants, B&B Engineers & Geologists of New York, P.C., and Waypoint Analytical. Soil sampling analyses, soil chemical characterization data, and air analyses were provided by Eurofins Test America Laboratories, Inc. Geotechnical information is provided in **Appendix K**.

6.2 Site Preparation

Initial Site preparation of the NAF was conducted concurrently with construction activities completed during IRM #5 on the football field. Temporary facilities utilized during construction activities on the NAF, in conjunction with IRM #5, included dedicated equipment laydown, soil stockpiling areas, hazardous waste accumulation bins and loadout areas. Site preparation for IRM #5A2 began in August 2021 with construction of the dedicated decontamination pad and temporary haul road from the Veterans of Foreign Wars (VFW) Post 901 parking lot at 113 Keefe Street to the Football Field Complex (FFC) and was completed by 15 September 2021.

Utility marker layout was completed on 22 October 2021, which is the same day excavation of IRM #5A2 began. Temporary fences with privacy screen installed during IRM #4 and IRM #5 were modified north of the tennis courts on 21 August 2021 to extend the limit of disturbance (LOD) to the property limits in preparation for Short Term Remedial Action (STRA) implementation. Further details regarding STRA implementation is included in Section 11.2. Temporary fences were also installed between the NAF and the FFC on 20 October 2021. Silt fence installation occurred between 1 October and 5 October 2021. Straw wattle, compost sock, and/or hay bales were installed in accordance with the SWPPP.

Documentation of Agency approvals required by Amendment #2 are included in **Appendix B**. Other non-Agency permits relating to the remediation project were not required**.**

6.3 General Site Controls

6.3.1 Site Security

Site security was maintained by perimeter controls in the form of fences with privacy screens and locks. Equipment was kept behind locked security gates and storage areas for contaminated materials and the work areas had physical barriers to restrict access. Visitors were required to check-in and -out at the project office upon arrival and departure, respectively. An overnight security company was hired to enhance site security measures from September 2021 until April 2023, following relocation of the office trailers to the VFW parking lot.

6.3.2 Job Site Record Keeping

The following records were maintained on site:

- DFRs
- Daily truck logs
- Waste manifests
- Storm water inspection reports
- Tailgate safety meetings
- Instrument calibration records
- Visitor log

Copies of the DFRs are provided in **Appendix C** and waste manifests in **Appendix G**.

6.3.3 Erosion and Sedimentation Controls

E&S controls were installed and inspected daily according to the SWPPP and construction drawings. These controls included inlet protection, silt fences, straw wattles, compost socks, sump pits, and constructed vehicle entrances and exits. Soil stockpiles were covered with tarps when not being accessed. Additional details on reducing erosion and sedimentation from soil stockpiles are included in the soil stockpile methods section below (Section 6.3.8).

Additional E&S controls were installed during implementation of IRM #5A2 Addendum #6 Work Plan during construction of the off-site MSA at STCC. Further information related to Addendum #6 Work Plan is discussed in Section 13.8.2.

6.3.4 Equipment Decontamination and Residual Waste Management

Vehicles and equipment potentially exposed to contaminated material were

decontaminated prior to leaving either the LOD or MSA. Equipment wash pads were constructed and lined with an 8-ounce (oz) geotextile and 30 mil polyethylene liner to capture solids. Visible debris on the equipment was brushed off manually onto the equipment wash pad. A high-pressure water was used to clean the wheels and base of the equipment leaving the Site. Each equipment wash pad included a lined sump pit with a sump pump. Water from the wash pad was collected in the sump pit and subsequently pumped into a frac tank for storage pending off-Site transport and disposal on a periodic basis during IRM #5A2 activities (Section 7.4.3).

Dedicated equipment was used for separate excavation and handling of TSCA and non-TSCA soils. Temporary transit roads covered in 8-oz geotextile were constructed over non-TSCA areas for TSCA equipment to move between TSCA excavation areas and the TSCA Accumulation Area and vice versa. Composite mats were used between the excavation and the decontamination pad at the exit/entrance of the LOD. These mats were periodically cleaned with a skid steer with a street sweeping attachment. Due to wet conditions at times on the Site, 8-oz geotextile was placed and layered as needed on the composite mats between the excavation and the decontamination pad at the exit/entrance of the LOD.

Four decontamination pads were utilized during Phase 1 through Phase 3 of Amendment #2 including one each beside the TSCA and RCRA bins, prior to exiting the construction entrance at the VFW, and prior to exiting the LOD onto the FFC. A TSCA and RCRA bin were not anticipated to be constructed during Phase 2; however, based on a change in Site conditions, these accumulation bins were re-constructed on the northern portion of the NAF in the reuse stockpile area **(Figure 3A** and **3B)**. The Phase 2 RCRA and TSCA bins were constructed between 10 August through 19 August 2022. Temporary facilities were constructed as per drawings depicted in Drawing 16 through 21 of the Construction Drawings included in the 2021 IRM #5A2 Work Plan. Decommissioning of the Phase 1 TSCA bin was completed by 24 August 2022 and the RCRA bin on 26 September 2022. The accumulation bins were decommissioned and excavated to a minimum depth of 2 feet bfg to facilitate Area 6 excavations (Figure 4). Additional detail regarding decommissioning and construction of Phase 1, 2, and 3 temporary infrastructures can be found in Sections 10.3, 13.5, 13.6, and 13.8.

An additional decontamination pad was constructed under the IRM #5A2 Addendum #6 Work Plan during Phase 3. This Work Plan included construction of an Off-Site MSA at the STCC property south of the Site due to limited space to stockpile soil on the NAF. Further information related to Addendum #6 Work Plan is discussed in Section 13.8.2.

6.3.5 Soil Screening

Results of pre-delineation from the RI presented in Amendment #2 were used to determine the limits of excavation and management of soils as hazardous waste, non-hazardous waste, or potential reuse as backfill. Post-excavation confirmation and documentation samples were collected during IRM #5A2 construction. End-point sampling results are discussed in

Section 10.

Excavations and soil stockpiles were inspected for visual or olfactory impacts, solid waste, bricks, or debris. Soil with visible staining, presence of foreign material, or soils which had an odor were segregated and sampled. Disposition of the material was based on the results of soil characterization.

6.3.6 Pre-Characterization and Test Pitting

In an effort to expedite non-hazardous waste approval for off-site disposal during IRM #5A2, Casella Waste System's Angelica, New York Landfill (Casella) was consulted regarding acceptable non-hazardous waste pre-characterization sampling methods. On 15 July 2021 a Non-Hazardous Waste Pre-Characterization Sampling Plan (Sampling Plan) was submitted to the NYSDEC and approved on 30 July 2021 (**Appendix B.2**).

The southern IRM #5A2 footprint was divided into forty-six 59-foot square grids. Each 2-foot vertical increment within the grid represented up to 500 tons of non-hazardous material given soil density at the Site. Based on grid placement within the IRM #5A2 design footprint, two to four points within each grid were identified for composite sampling. Sample increments of 0 to 2 feet, 2 to 4 feet and 4 to 6 feet where chosen based on the IRM #5A2 excavation design and RI results detailed in Amendment #2.

Pre-characterization sampling and test pitting under the approved Sampling Plan was conducted between 15 July through 5 August 2021. Test pits were advanced with a mini excavator up to a depth of 6 feet bgs. Following sample collection, the spoils were replaced at the same depths and compacted with the excavator bucket. Analytical results associated with pre-characterization were submitted to Casella as on 20 April 2022 and accepted on 5 May 2022 under profile #24448.

Additional pre-characterization was necessary and completed throughout the duration of IRM #5A2 either due to space constraints within the MSA or because the MSA had been re-located to STCC towards completion of remedial efforts. Prior to movement of soil to the STCC MSA, landfill approval was provided to the NYSDEC, which verified landfill acceptance and characterization of the material as non-hazardous. Further discussion regarding MSA relocation is discussed in Section 13.9.

The Sampling Plan and Agency approvals (**Appendix B.2**), analytical results (**Table 4D)**, laboratory reports (**Appendix H.3**), landfill correspondence and acceptance (**Appendix F**), and waste manifests (**Appendix G.7**) associated with pre-characterization and test pitting activities can be found in the attached appendices.

6.3.7 Soil Screening Kits

PCB soil screening kits were utilized throughout the duration of IRM #5A2 to assist in appropriate management of non-hazardous and hazardous soil excavated during

remediation activities. Soil screening consisted of Dexsil® Clor-N-Soil Kits® and were completed in areas of suspected PCB contamination and were approved for use by both the NYSDEC and accepting landfill facilities (**Appendix F**). If a soil screening kit was completed and was observed to be negative, a confirmation sample was collected and submitted to Eurofins, Test America. Results were based on a color metric scale where purple constituted a negative sample for TSCA level PCBs and yellow would be positive. If a soil screening kit was observed to be positive, excavation continued, and the material was managed as hazardous waste and transported to the TSCA accumulation bin. Additional waste characterization was then performed and submitted for landfill approval prior to shipment off-site.

6.3.8 Stockpile Methods

Stockpiles were maintained to avoid having steep sides or faces as specified in Addendum #2. During periods of extended inactivity and in the event of prevailing high winds or rainy conditions during the workday, stockpiles were covered with a tarp and weighted down with sandbags. Stockpiles were not placed within 25 yards of occupied buildings. Stockpiles were covered at the end of each workday.

Excavated soils were stockpiled based on pre-delineation results for the initial stages of IRM #5A2:

- Soils with total PCBs greater than or equal to 50 mg/kg were staged within the TSCA Accumulation Area as shown on **Figure 3A** and **3B.**
- Soils with total PCBs greater than or equal to 10 mg/kg but less than 50 mg/kg were loaded into haul trucks and stockpiled in a non-hazardous soil pile stockpile located in the MSA. These soils were covered with polyethylene sheeting and weighted down at end of each workday. Stockpiles were segregated from other material using straw wattle placed on the polyethylene sheeting around the base of the stockpile.
- Soils with total PCBs less than 10 mg/kg were staged in windrows within the MSA and sampled for evaluation for potential reuse. Windrows were not to exceed approximately 6 feet in height and were shaped using an excavator. Windrow length varied in length due to stockpiling capacity within the MSA. Samples were collected for characterizing each approximate 100 cubic yard section. Analytical results from these samples were submitted to NYSDEC in a request for reuse and once approval was received, windrow soils were moved to the reuse pile for staging as either reuse material or moved to the Non Haz stockpile for off-site disposal. See Section 7.3 for additional information related to management of reuse material during IRM #5A2.
- Soils with metals above TCLP criteria were staged within the RCRA Accumulation Areas constructed adjacent to the TSCA accumulation bin. These bins were utilized

during IRM #4 and #5.

Imported material approved by NYSDEC were stockpiled in a dedicated stockpile area on the northern portion of the NAF overtop of geotextile followed by imported fill.

The placement of the TSCA bin during IRM #5A2 Phase 2 slightly differed from the location outlined on Site Plan included in Amendment #2. Instead of re-constructing the TSCA bin on the northeast corner of the NAF, it was constructed on the northwestern portion with NYSDEC approval. Additionally, a RCRA bin was also constructed adjacent to the Phase 2 TSCA accumulation bin.

Due to limited space available on the NAF, a MSA was constructed at STCC to stockpile non-hazardous and potential reuse material. Hazardous material was not allowed on STCC property. Further discussion regarding operations and maintenance at the STCC MSA are further discussed in Section 13.8.2.

6.4 Nuisance controls

Vehicles exiting the LOD or MSA had to pass through the truck wash prior to leaving the Site. Dirt or dust tracking on roads leading out of the Site was cleaned by brushing and spraying down the roads with water.

When working on weekends, heavy equipment was not operated prior to 8:00 A.M. to avoid creating noise nuisances.

Dust control was carried out by restricting vehicle speeds and spraying water using fine atomized sprays. A direct spray was also used in order to clean off trucks and equipment or wet down materials depending on wind and soil conditions. Construction excavators were slowly unloaded and drop heights from the loader buckets were minimized. Trucks were staged within the LOD as far as possible from the perimeter. Trucks were not allowed to idle more than 5 minutes. Vehicle speeds were restricted to no more than 10 miles per hour while on-Site. Vehicular traffic was restricted to the haul roads and kept off the main streets to minimize exposure. Vehicle staging areas were restricted to immediately adjacent to the construction areas and not on public roads. Haul trucks were covered with tarps prior to transporting soil to or from the Site.

6.5 CAMP Results

Real-time dust monitoring readings were recorded and displayed as time series graphs which were included in the DFRs (**Appendix C**). The general response associated with exceedances was to implement dust control measures. These measures included an increase in water spraying activities and the frequency at which the water truck drove around the Site. Additionally, when certain Site activities such as breaking up concrete were conducted, a fine water mist was sprayed over the work area to prevent dust generation. When an alarm was triggered, the IRM Contractor was advised to slow equipment

movement to reduce dust generation . Copies of field data sheets relating to the CAMP are provided in electronic format in **Appendix D**.

A complete list of days on which the time weighted 15-minute average action levels of 150 µg/m³ were exceeded during the IRM, as well as the reason(s) for the exceedance, are provided in **Appendix D.1** through **D.4**. Common reasons for exceedances are listed below:

- IRM work activities;
- ECSD capital improvements;
- Dense fog and high humidity levels;
- Water impact as a result of dust suppression activities; and
- Poor regional air quality and wildfire smoke.

Real-time mercury vapor readings were also recorded and displayed as time series graphs and were included in the DFRs (**Appendix C**). There were no downwind mercury vapor readings exceeding the CAMP action level of 1 ug/m^3 above the upwind measurement averaged over a 15-minute period.

Results for PCB analyses of time-integrated air samples are presented in **Table 1.** None of these results during IRM #5A2 activities exceeded the PCB action level of 15 µg/m^3. Copies of CAMP analytical reports are provided in **Appendix D.5**.

6.6 Daily Field Reporting

DFRs were generated by the Engineer's representative on Site and reviewed prior to submittal to NYSDEC and NYSDOH. Reports included summaries of work progress, inspections carried out, material movement, and Site visitors. Construction photographs and daily air monitoring reports were also included with reports. Copies of DFRs are included in electronic format in **Appendix C**.

7.0 Soil and FIS Removal

7.1 Excavation Details

Excavations were laid out in 2-feet intervals to meet IRM #5A2 cleanup goals presented in Section 2.1. Soil data collected as part of the RI were used to pre-delineate the limits of excavation and the limits of PCB remediation waste within the excavations. As-Built Drawings are presented in **Appendix E**.

In accordance with Amendment #2, excavations were benched and sloped to support excavation below 4 feet bgs. Inactive electric, data communication, and irrigation (previously utilized by ECSD), and historic water utility lines encountered during excavation were removed. ECSD dry wells encountered during excavation were either

maintained, removed, or abandoned in place based on anticipated use during restoration of the NAF and planned ECSD capital improvement projects within the NAF. Additional details regarding management of encountered dry wells are provided in Section 13.2. During excavation, underground structures, objects, or artifacts including underground storage tanks (USTs), metals object, vaults, drums, brick manholes, concrete boxes, rail spur, historical wells, pipes/FIS, and concrete foundations were encountered at various depths. In accordance with Amendment #2, the majority of encountered concrete structures were broken up with a hoe-ram and fully removed in-tact from the excavation for disposal. Pipes and/or concrete structures that remain in place below the cover system were sampled to verify interior soil contents met SCOs. Several ECSD dry wells encountered during excavation were not removed and abandoned in place following confirmation that soil within the drywells passed PoG SCOs and approval from NYSDEC was received (Sections 13.2 through 13.2.5). Activities and subsequent work plans to address removal of the FIS, drywells, drums, UST, and metal object/pipes are discussed in Sections 7.2 and 13, respectively. The location of structures that remain in place below the cover system are presented on the As-Built Drawing 3C and 3D (**Appendix E)**. **Table 16** has been provided to further document where structures, objects or artifacts were identified during IRM #5A2 excavations. ISMP excavations were consistent with procedures completed during IRM #5A2.

Based on Amendment #2, excavation was conducted in a phased approach in the NAF as follows:

- Phase 1
  - Deep excavations in the northwest portion of the NAF, North of O'Gorman Street; and
  - Deep excavations in the varsity softball field (Area of Concern [AOC]-19)
- Phase 2
  - Deep excavations in the baseball field including FIS removal; and
  - Excavation in the baseball and varsity softball outfields.
- Phase 3
  - Excavation in the volleyball and basketball court areas to be restored as shot put and discus area and a parking area (referred to as "Florida" (based on the shape in the IRM #5A2 design).

Additional areas were excavated under Phase 1, 2, and Phase 3 due to additional stepout and stepdown excavations to address RRSCOs and IRM subsurface action levels, additional FIS lateral removal, and encountered artifacts, objects, and structures discussed above. These excavation areas are depicted on **Figure 4**. Completion packages, consisting of as-built limits of excavation and confirmation or documentation samples based on excavation areas identified in **Figure 4** or completed during ISMP activities, were provided

to the Agency to support a request to backfill. Completion packages, which provide documentation of excavation progression during IRM #5A2 and NAF restoration under ISMP, and Agency approvals are included in **Appendix B.6**

Post-excavation confirmation and documentation samples were collected from excavation sidewalls and bottom areas in accordance with Section 5.4 (b) of DER-10 as follows:

- One sample from the bottom of each sidewall for every 30 linear feet of sidewall; and
- One sample from the excavation bottom for every 900 square feet of bottom area.

At the direction of NYSDEC, bottom samples were collected within trenches at a frequency of every 30 linear feet.

As-Built Drawings 3A through 3D (**Appendix E**) are associated with IRM #5A2 activities and present the as-built subgrade elevations. As-Built Drawings 4A through 4C (**Appendix E**) are associated with ISMP activities and present the as-built subgrade elevations. The total volume of native excavation was 93,035 cubic yards for IRM #5A2 and 8,011 cubic yards for ISMP excavations. As-built extent of estimated cut and fill thicknesses for remedial activities at the site are included in As-Built Drawings (**Appendix E)**.

7.2 Former Industrial Sewer (FIS) Removal

Removal of the FIS was first completed in the FFC during IRM #5 to the limits of the NAF. It was believed a smaller segment (Segment 7) remained on the NAF and was to be addressed under Amendment #2. The extent of Segment 7 was not known prior to IRM #5A2. During excavation and removal of an historical rail spur (**Figure 4**) on the east central portion of the NAF on 12 December 2021, a section of 36-inch terracotta piping was uncovered at 8 feet bgs running north to south and believed to be the FIS. Additional test pitting was performed on 15 December 2021 to determine the limits and provide confirmation the terracotta piping uncovered on 12 December 2021 was the FIS (**Figure 7**).

Based on the proximity of the FIS to an eastern baseball field light pole, coordination with Musco Lighting, an ECSD capital improvement contractor, was performed as well as movement of temporary IRM #5A2 facilities (haul mats and portion of the non-hazardous MSA) prior to FIS removal. Haul mats positioned overtop of the FIS were removed on 5 June 2022. Excavation and removal of the FIS began on 7 June 2022, where after visual observation of the interior extent of the 36-inch pipe, it was determined to connect to Segment 7 and continue approximately 10-15 feet beyond the NAF onto the FFC. Further coordination was conducted with NYSDEC and ECSD based on the proximity of FFC capital improvement activities in relation to the remaining section of Segment 7.

Several FIS laterals ranging from 6 to 18-inches were identified during excavation of Area

2, Area 3, Area 4, and Area 5 (**Figure 4**), prior to removal of the 36-inch FIS as shown on **Figure 7**. Prior to removal of the 36-inch FIS segment, Elk Environmental performed a camera survey on identified laterals and to determine if any additional laterals remained below the surface. The camera survey was conducted on 10 June 2022 for the following:

- A 10 to 12-inch FIS lateral identified in Area 3/Area 4 running southwest from the NAF onto the FFC (FISLATSW). An attempt was made to survey the lateral; however, the pipe was blocked approximately 4 feet into the lateral.
- The remaining section of 36-inch FIS lateral was surveyed within a section of exposed piping in the northeast corner of the southeast non-hazardous MSA. The pipe was surveyed approximately 12 feet to the north and approximately 56 feet to the south. The entire length of the FIS was unable to be surveyed due to observed collapses.
- An 18-inch FIS lateral identified in Area 4 running east to west was surveyed approximately 22 feet to the west. Two additional laterals were identified during the survey (pipe 14).

Excavation of Segment 7 on the FFC began on 11 June 2022. Due to the close proximity of a concrete pad related to ECSD capital improvements, a trench box was utilized. Concrete encountered in the excavation was broken up with a hammer attachment on a mini excavator and removed. Temporary fencing was installed around the excavation zone while confirmation samples were pending. The remaining section of 36-inch FIS on the NAF was fully removed to 10 feet bgs on 13 June 2022. An additional two 18-inch FIS laterals were encountered running west into the NAF during removal. Excavated soils were managed as TSCA material in accordance with Amendment #2 and transported to the TSCA accumulation bin.

Elk Environmental returned to the site on 13 June 2022 to flush two FIS laterals. One approximately 10 to 12-inch diameter running southwest from the NAF towards the FFC (FISLATSW) and the second approximately 10 to 12-inch diameter identified during "Area 5 sub" excavation (**Figure 4**) as FIS-LAT1 running west towards O'Gorman Street beneath the temporary haul road. Water used to jet the pipes was flushed back onto the NAF within areas where further excavation was anticipated. The total length of survey for both pipes following flushing activities was 45 to 50 feet. On 30 June 2022, NYSDEC provided notice that corrective measures were required associated with sewer jetting activities by Elk Environmental on 13 June 2022. On 23 June 2022, a Sewer Jetting Investigation Derived Materials (IDM) Management Report/Corrective Measures Work Plan was submitted to NYSDEC and was approved via email on 30 June 2022 (**Appendix B.3**). Corrective Measures to address the sewer jetting included further excavation where IDM had discharged onto the soil for FISLATSW. The other location that had been jetted did not require corrective measures as minimal water had been displaced from the pipe into the

excavation. Corrective measures were addressed by 15 June 2022 concurrently with completion of stepout excavations in Area 3.

Numerous FIS laterals were encountered throughout the course of IRM #5A2 excavations in Area 2, Area 3, Area 4, Area 5, Area 5 sub, Area 6 (south and central), and Florida (north, central, and south) as shown on **Figure 4**. When laterals were encountered, interior samples were collected as confirmation and waste characterization. Laterals identified within the areas noted above were managed as TSCA material in accordance with Amendment #2, with the exception of pipe 14. Waste characterization results of pipe 14 were originally submitted for approval to Casella on 27 June 2022 based on non-hazardous analytical results; however, the approval request was rejected due to sulfide results of 1,500 mg/kg. The accepting facility communicated concerns related to reactivity and generation of toxic gases if it were to come in contact with pH conditions between 2 to 12.5. An approval request for pipe 14 was re-submitted on 1 July 2022 as hazardous waste to US Ecology (Republic) in Belleville, Michigan. At the request of the receiving facility, pipe 14 was further analyzed for reactive sulfide under SW-846 test method 9012A and modified method 9034. Upon receipt of results, the acceptance request was approved under an existing profile (G170001WDI) on 8 July 2022. Once pipe 14 was removed, this pipe was confirmed to be a lateral connected to the main 36-inch FIS. Post excavation confirmation samples were collected within the FIS lateral removal trench (pipe 14), identified as A3-FISLAT2 (**Appendix E**). Landfill correspondence and approvals related to pipe 14 are included in **Appendix F**. Waste characterization results for hazardous waste are included in **Table 4A**. Waste characterization results for pipe 14 are included in **Appendix H.3**.

Laterals confirmed to be connected to the main 36-inch FIS were removed to its full extent or until it was no longer feasible in accordance with Amendment #2. Two FIS laterals (FIS-LAT1 and FISLATSW) remain in place below the cover system as analytical results were below applicable SCOs and did not require removal. Locations of these pipes are shown in As-Built Drawing 3C (**Appendix E**).

7.3 On-Site Reuse

Soils from the IRM #5A2 excavation with total PCB concentrations less than 10 mg/kg were originally segregated for potential reuse as backfill below the approved soil cover system, i.e., below 2 feet bgs but above 14 feet bgs. Potential reuse soils were transported and stockpiled at the dedicated reuse stockpile areas on the NAF as shown on the Phase 1 Site Plan (**Figure 3A**). Layback soils from outside the limit of excavation were segregated in separate windrows. Soils stockpiled for potential reuse were inspected by the Qualified Environmental Professional (QEP) for visual or olfactory impacts, solid waste, bricks, or debris and screened with a PID for elevated VOC vapor levels. Soils that exhibited visual or olfactory impacts or that exhibited elevated PID readings were segregated for additional

testing at the direction of the QEP prior to re-use as backfill. Stockpiles with observed solid waste or debris were segregated for potential off-Site disposal. Stockpiles with observed bricks, concrete, or other inert materials were evaluated for use in structural backfill. Results from reuse sampling were submitted to NYSDEC for approval; however, reuse was not utilized during IRM #5A2 as discussed further below and in Section 14.1. Request to Reuse forms and Agency approvals have been omitted from this report due to these reasons.

Representative geotechnical samples were collected and submitted to Terracon Consultants for sieve and Standard Proctor analyses. Reuse material anticipated to be used as backfill material below the cover system contained a large percentage of river rock and was heavily saturated, even with adequate time to dry prior to utilization. On 17 November 2021, test pads were constructed of approved reuse material to determine if compaction would pass an in-place density test of at least 85 percent of Standard Proctor (ASTM D-698) maximum dry density and at a moisture content between -4 and +2 percent of optimum. Each test completed on the test pads failed both compaction and optimum moisture requirements. Additional efforts were completed to utilize the reuse through screening and crushing the excess river rock. This work was completed under a Temporary Rock Crushing and Dust Monitoring Plan further discussed in Section 14.2.

After attempts to reduce moisture in the reuse piles and utilize the material failed, it was determined that reuse stockpiles would be disposed as non-hazardous material. Remaining soils anticipated to be excavated as reuse material as shown in the Amendment #2 construction drawings were excavated as non-hazardous material and managed in accordance with requirements in Section 7.4.2. A design modification was submitted as IRM #5A2 Addendum #2 to remove reuse soils from the soil cover design as discussed in Section 13.5.

7.4 Disposal Details

Table 2 provides the total quantities of each category of material removed from the Site and subsequent disposal locations.

Correspondence from Applicants to disposal facility owners and acceptance letters from disposal facility owners are provided in **Appendix F**.

Manifests and bills of lading are included in electronic format in **Appendix G.**

7.4.1 Hazardous Waste

Soils identified for disposal as hazardous waste under IRM #5A2 were sampled for waste characterization at a frequency of one sample per 500 tons in accordance with receiving facility requirements. Samples in areas anticipated to be disposed as hazardous waste were analyzed for pH, cyanide, sulfide, flash point, total VOCs, semi-volatile organic compounds (SVOCs), and TCLP metals. A summary of analytical results provided to the disposal facility for IRM #5A2 hazardous waste is presented in **Table 4A**.

Five reuse piles were shipped off as hazardous waste as shown on **Table 4A**. These stockpiles include A2-16C, A2-19C, A2-23C, A2-A59C (DUP12C) and A2-A65C. Material was generated from Area 1 and Area 2 excavations (**Figure 4**)

A total of 22,837.5 tons of Profile G (TSCA) and 428.7 tons of Profile C (RCRA) hazardous waste were transported for off-Site disposal at the Wayne Disposal, Inc. Site #2 landfill and Michigan Disposal Waste Treatment Plant in Belleville, Michigan between 22 November 2021 and 16 November 2023. The transporter for Profile G (TSCA) and Profile C (RCRA) hazardous waste was US Bulk Transport Inc. (U.S. EPA ID PAD987347515). Copies of the hazardous waste manifests for Profile G (TSCA) and Profile C (RCRA) are included in electronic format in **Appendix G.1** and **G.2**, respectively.

Other hazardous waste generated by IRM #5A2 activities was waste associated with the drum nest (Profile CH2502908) identified in Area 2 (AOC-19). Additional information pertaining to the drum nest area can be found in Section 13.1. Samples to characterize these wastes for disposal were collected and analyzed pursuant to receiving facility frequency and parameter requirements prior to shipping off-Site. Analytical results provided to the disposal facility for Profile CH2502908 hazardous waste is presented in **Table 4A** and included in **Appendix H.3**.

A total of 38.09 tons of Profile CH2502908 hazardous waste was transported for off-Site disposal at Clean Harbors in Grantsville, Utah. The waste was transported by Horwith Trucking to Susquehanna Bulk System and Western Railway in North Bergen, New Jersey, then to Clean Harbors Aragonite LLC in Grantsville, Utah by Susquehanna Bulk System and Western Railway. Copies of the hazardous waste manifests for Profile CH2502908 can be found in **Appendix G.3**.

After the TSCA and RCRA material was loaded and transported for off-Site disposal, the underlying imported fill, 30 mil liner, and geotextile were loaded for off-Site disposal as hazardous waste. The bin blocks were pressure washed at the TSCA truck decontamination pad and transported to the STCC MSA area for storage.

There was no hazardous waste generated as part of ISMP activities.

7.4.2 Non-Hazardous Waste

Soils identified for disposal as non-hazardous waste under IRM #5A2 were sampled for waste characterization at frequency of approximately one sample per 500 tons in accordance with receiving facility requirements. Soils identified for disposal as non-hazardous waste under IRM #5A2 were also sampled for waste characterization by means of test pitting (pre-characterization) as discussed in Section 6.3.6. Samples in areas anticipated to be disposed as non-hazardous waste were analyzed for pH, cyanide, sulfide, flash point, TCLP VOCs, SVOCs, and metals. A summary of analytical results provided

to the disposal facilities for IRM #5A2 non-hazardous waste is presented in **Table 4B** and pre-characterization results in **Table 4D**.

Soils identified for disposal as non-hazardous waste under ISMP were sampled for waste characterization at frequency of approximately one sample per 500 tons in accordance with receiving facility requirements. Soils identified for disposal as non-hazardous waste under ISMP were also sampled for waste characterization by means of test pitting (pre-characterization). Samples in areas anticipated to be disposed as non-hazardous waste were analyzed for pH, cyanide, sulfide, flash point, TCLP VOCs, SVOCs, and metals. A summary of analytical results provided to the disposal facilities for ISMP non-hazardous waste is presented in **Table 4C** and pre-characterization results in **Table 4E**.

Soils previously identified for potential reuse were characterized for non-hazardous disposal based on the analytical data collected in accordance with DER-10 Section 5.4 (b). Casella approved this material for disposal as alternative daily cover under profile #23938 beginning on 15 January 2022 and profile #24488 on 1 June 2022 (**Appendix F**). Reuse shipped as non-hazardous material are identified in **Table 4F**, unless TSCA level concentrations were identified as shown in **Table 4A**. Reuse stockpiles identified as hazardous waste are further discussed in Sections 7.4.1 and 14.1**.**

A total of 61,315.97 tons of non-hazardous soils and debris was transported to Hyland Landfill in Angelica, New York for off-Site disposal as non-hazardous waste. A total of 108,652.45 tons of non-hazardous soil, including reuse material, was transported to the Ontario County Landfill in Stanley, New York for off-Site disposal as non-hazardous waste. Copies of the landfill approvals are included in **Appendix F** and non-hazardous waste manifests for soils and debris are including in electronic format in **Appendix G.6** through **G.15**.

A total of 217.6 tons of non-hazardous soils were transported to Hyland Landfill in Angelica, New York for off-Site disposal as non-hazardous waste generated from ISMP activities. The transporters for ISMP non-hazardous waste are consistent with IRM #5A2 and are listed below. Copies of the landfill approvals are included in **Appendix F** and non-hazardous waste manifests are including in electronic format in **Appendix G.16**.

The transporters for non-hazardous IRM and ISMP waste were:

- Butler Excavating and Concrete LLC
- Dale Robert Dapp / dba KA Transport
- Edger Civil & Utility, LLC,
- Edger Enterprises of Elmira, Inc.
- Elk Transportation, Inc.
- K&L Trucking Inc.

- L and V Smith, Inc.
- Leland F. Harris, INC – in care of L and V Smith, Inc.
- Leon Lacy, Inc.
- Maybee Enterprises, Inc.
- Silvarole Trucking Company
- T Coots Trucking – in care of L and V Smith, Inc.
- PAGE E.T.C., Inc.

7.4.3 Contact Water

Contact water generated from the collection of wash water from the equipment wash pads and groundwater that accumulated in excavations was stored in frac tanks maintained for this purpose. Samples to characterize these waters for disposal were collected and analyzed pursuant to receiving facility frequency and parameter requirements prior to shipping off-Site. A summary of analytical results for contact water is presented in **Table 5**. A total of 10,700 gallons of contact water was transported by Elk Transportation, Inc. to Environmental Recovery Corporation in Lancaster, Pennsylvania for off-Site disposal. Copies of the non-hazardous waste manifests are included in electronic format in **Appendix G.5**.

7.4.4 Other Wastes

Other non-hazardous waste generated by IRM #5A2 activities included solid and liquid waste from the UST removal. Samples to characterize these wastes for disposal were collected and analyzed pursuant to receiving facility frequency and parameter requirements prior to shipping off-Site. A total of 9,900 gallons of non-hazardous liquid waste from the UST was transported by Finger Lakes Envirotech, LLC to Covanta Environmental Solutions in Oriskany, New York for off-Site disposal. A total of 9,660 pounds of non-hazardous solid waste from the UST was transported by T&R Environmental to Weitsman Shredding, LLC in Hornell, New York for off-Site disposal and recycling. Copies of the waste manifests are included in electronic format in **Appendix G.4**. Further information regarding UST removal activities, analytical, and reporting can be found in Section 13.7

8.0 Remedial Performance/Documentation Sampling

8.1 IRM

End-point sampling to demonstrate that IRM #5A2 cleanup goals were achieved and document remaining COPCs was carried out by collecting post-excavation sidewall and bottom samples in accordance with Amendment #2 unless otherwise noted below. Post-excavation sampling of excavation sidewalls and bottoms was conducted in accordance with Section 5.4 (b) of DER-10:

- One sample from the bottom of each sidewall for every 30 linear feet of sidewall; and

- One sample from the excavation bottom for every 900 square feet of bottom area.

Sidewall and bottom samples were collected as confirmation samples unless collected along the BCP Site Boundary (property limits) as documentation samples. Samples collected within Area 1 (**Figure 4**) were submitted under expedited TAT for PCB and TAL metals analyses. SVOCs were collected from areas with observed staining. The remaining areas excavated under IRM #5A2 were submitted under expediated TAT for PCBs, TAL metals, SVOCs and VOCs. Additionally, 25% of samples collected during IRM #5A2 were submitted for emerging contaminants which included Per- and Polyfluoroalkyl Substances (PFAS) and 1-4 dioxane. Unvalidated analytical results were submitted to NYSDEC upon receipt when requests to backfill were submitted (**Appendix B.6**). Samples were collected as documentation samples along the property limits and submitted for PCBs, TAL metals, SVOCs, VOCs, and/or 25% emerging contaminant analyses with standard TAT. Confirmation and documentation samples were analyzed by Eurofins Test America in accordance with the QAPP. Analytical reports and data validation reports for post-excavation confirmation and documentation samples are presented in **Appendix H** and **Appendix I**, respectively.

Tables summarizing confirmation and documentation sampling results are included in **Tables 6** through **11**. As-builts showing the end-point sample locations with total PCB, metals, SVOCs, VOCs, and PFAS results for each 2-feet interval are presented in Drawings 5A through 24J **(Appendix E)**.

When confirmation sample results exceeded IRM #5A2 cleanup goals, an excavation step out plan was either submitted to NYSDEC for approval or coordinated with the NYSDEC on-Site representative in the field. The location of the exceedance was over-excavated and additional confirmation sidewall and bottom samples were collected. Once IRM #5A2 cleanup goals were demonstrated through analytical confirmation, a completion package request was submitted to NYSDEC with a request to backfill (**Appendix B.6**).

8.2 ISMP

Documentation sampling was carried out for ISMP activities by collecting post-excavation sidewall and bottom samples in accordance with the ISMP EWP notifications submitted by Geosyntec on behalf of Unisys or by Sterling Environmental on behalf of ECSD. Post-excavation sampling of excavation sidewalls and bottoms was conducted in accordance with Section 5.4 (b) of DER-10 as described in Section 8.1 above.

Sidewall and bottom samples were collected as documentation samples and were submitted under expediated TAT for PCBs, TAL metals, SVOCs, and VOCs. Additionally, 25% of

were submitted for emerging contaminants which included PFAS and 1-4 dioxane. Unvalidated analytical results were submitted to NYSDEC upon receipt. Documentation samples were analyzed by Eurofins TestAmerica. Analytical reports and data validation reports for post-excavation confirmation and documentation samples are presented in **Appendix H** and **Appendix I**, respectively. Once analytical results had been received, a completion package request was submitted to the NYSDEC with a request to backfill (**Appendix B.2**).

As-builts showing the documentation locations with total PCB, metals, SVOCs, VOCs, and PFAS results for each 2-feet interval are presented in Drawings 25A through 34F **(Appendix E)**.

8.3 Data Useability

Data Useability Summary Reports (DUSRs) were prepared for confirmation and documentation end-point samples as per the requirements set forth in DER-10 Section 2.2 and the QAPPP (Section 5.2) and are included in **Appendix I**. Confirmation and documentation end-point samples collected as part of IRM #5A2 or ISMP excavations are defined as samples which remain in place below the cover system upon completion of the remediation; therefore, excavated samples were not included in the DUSRs.

Data were found to be usable within the limit of qualification as noted in the DUSRs with the following exceptions:

- The non-detect result of chloromethane in sample SSHS-IRM5A2-DUP49 was R qualified as rejected due to less than 20% laboratory control sample (LCS) duplicate (LCSD) recovery.

- The non-detect results of 2,4-dinitrophenol and 4,6-dinitro-o-cresol in sample SSHS-IRM5A2S183 were R qualified as rejected due to less than 10% matrix spike/ matrix spike duplicate (MS/MSD) recoveries.

- The non-detect results of 3,3'-dichlorobenzidine, 2,4-dinitrophenol and 4,6-dinitro-o-cresol in sample SSHS-IRM5A2-S222 were R qualified as rejected due to less than 10% MS/MSD recoveries.

- The non-detect results of 2,4-dinitrophenol and 4,6-dinitro-o-cresol in sample SSHS-IRM5A2A3-FISRLAT1-S6 were R qualified as rejected due to less than 10% MS/MSD recoveries.

- The PFBA concentration in sample SSHS-IRM5A2-A3-FISRLAT1-B1 was R qualified as rejected due to less than 10% isotope dilution recovery.

- The recovery of 13C4 PFBA in sample SSHS-IRM5A2-A3-FISRLAT1-B1 were low and outside of the laboratory specified acceptance criteria. In addition, the 13C4 PFBA recovery was less than 10%. Therefore, the PFBA concentration was R qualified as rejected.

- The non-detect results of 2,4-dinitrophenol and 4,6-dinitro-o-cresol in sample SSHS-IRM5A2A3-B641 were R qualified as rejected due to less than 10% MS/MSD recoveries.

- The non-detect results of PCB-1016 and PCB-1260 in sample SSHS-IRM5A2-A3-B641 were R qualified as rejected due to less than 10% MS/MSD recoveries.

The rejected data did not impact compliance with the IRM objectives. Chloromethane, 3,3'-dichlorobenzidine, 2,4-dinitrophenol and 4,6-dinitro-o-cresol, and PFBA are not Site-related COPCs. Sample SSHS-IRM5A2-A3-B641 had no detections of PCB Aroclors (**Table 8**) so the inclusion of the rejected non-detect results of PCB-1016 and PCB-1260 would not have altered the result of non-detect for total PCBs.

8.4 Achievement of IRM Objectives

IRM objectives, presented in Section 2.1, are defined in the applicable Agency, approved work plan and supplementary work plans. Potential environmental or human exposures to potentially hazardous material has been mitigated by soil removal and establishment of an appropriate cover system. Achievement of the IRM objectives was demonstrated by remedial performance sampling following soil removal discussed above and the documentation of the construction of the EC soil cover system. COPCs remain in place below IRM cleanup goals with some exceptions as presented in Section 10.0. Exceedances of IRM cleanup goals remaining in place will be managed under the interim and final SMP or will be addressed as part of the RI of Site #c808054. The cover system, as presented in Section 11, is comprised of a minimum of 24-inches of imported material (Section 9) overlain by asphalt, concrete pavement, vegetative cover, or stone. A demarcation layer was placed prior to backfilling with clean fill material used for the cover system. Deviations from the planned objectives of the IRM are further discussed in Section 14.7.

9.0 Imported Backfill Material

9.1 IRM #5A2 and NAF Restoration

Approved imported material used as backfill during IRM #5A2 and restoration of the NAF consisted of Item #4 base material from Hawbaker's Lawrenceville Quarry and Brewer's Pit; topsoil and sand from Blackwell Pit; sod from Batavia Turf; #57 stone from

Hawbaker's Lawrenceville and Erwin Quarry; #3 stone from Hawbaker's Pleasant Gap Quarry; and #1 stone, #1/#2 mixed stone, and #3/#4 mixed stone from Steele Pit.

Materials to be imported including Item #4 base material, topsoil, sand, and sod were sampled and analyzed for PCBs, metals, pesticides, SVOCs, and VOCs at the frequency presented in Table 5.4 (e) 10 of DER-10. Analytical sampling was not required for imported stone. Per NYSDEC guidance received on 3 June 2019, imported soils were also analyzed for PFAS as emerging contaminants. Upon receipt of the analytical results, a request for import was submitted to NYSDEC for approval. Copies of the request to import forms, analytical data tables, email approvals, and additional facility information are included in **Appendix J.1** through **J.3**. Imported material totals used as backfill during IRM #5A2 are included in **Table 3**. Weight tickets are summarized and provided in **Appendix J.5** through **J.14**.

Additional imported material information was received by ECSD and their representatives from work completed under the EHS 2020 Stadium Renovations project in the FFC and the Shot Put and Discus area. Of these materials, topsoil and 1.5-inch rock were used as part of the IRM #5A2 Engineering cover system within the Shotput and Discus area. These additional imported materials are reflected in **Table 3** and weight tickets are summarized and provided in **Appendix J.15**. Further review of this information identified these materials that did not have the chemical sampling required by Table 5.4 (e) 10 of DER-10 nor was it accepted by the Agency for Import approval, resulting in a data gap. To address this data gap, further sampling and verification of soil cover quality of the topsoil and 1.5-inch rock were performed and are discussed further in Section 14.5 and Section 14.6, respectively.

Excavations that were backfilled with structural fill were compacted to an in-place density of at least 85 percent of Standard Proctor (ASTM D-698) maximum dry density and at a moisture content between -4 and +2 percent of optimum. Item #4 base material was tested for sieve and Standard Proctor analyses. Various stone and topsoil were tested for sieve analysis. Topsoil was additionally tested for organic content. Results were provided within the approved Construction Specifications provided in Amendment #2 (**Appendix B**) unless otherwise noted through NYDEC approvals presented in **Appendix J.1** through **J.3**. Standard Proctor, sieve, and organic content reports are provided in **Appendix K.1** and **K.2**. In addition, backfill placed was consistent with New York State Department of Transportation (NYSDOT) Select Granular Fill or Select Structural Fill criteria. During backfilling, nuclear density tests were performed and results indicate that compaction meeting Construction Specifications was achieved. Compaction results completed during IRM #5A2 are included as **Appendix K.3**.

The location, extent, and type of imported backfill used during IRM #5A2 are presented in As-Built Drawing 36 and 37 (**Appendix E**)**.**

9.2 ECSD Capital Improvements (ISMP)

Approved imported material used by ECSD for capital improvement activities as part of the final cover system include sod from Batavia Turf; stone dust from Steele Pit; clay conditioner, clay/sand mix, and mound clay from Varos Mine; crushed limestone from Windham Quarry; and top dressing sand from Poland S&G Mine. Sampling requirements were consistent with the information included in Section 9.1. Copies of the request to import forms, analytical data tables, email approvals, and additional facility information are included in **Appendix J.4**. Imported material totals used as backfill during ECSD capital improvements are included in **Table 3**. Weight tickets are summarized and provided in **Appendix J.15**.

10.0 Soils Remaining at the Site above SCOs

10.1 Post-Excavation End-Point Samples (IRM)

The purpose of IRM #5A2 was to conduct soil removal in the NAF in coordination with NAF restoration following completion of IRM #5 remediation activities on the FFC and in preparation for ECSD capital improvements. Soil samples were collected in accordance with requirements detailed in Section 8.

COPCs remain in-place at concentrations exceeding RRSCOs, PoG, and/or IRM action levels below the cover system. Proposed actions are depicted in Drawings 5A through 24J (**Appendix E).** ICs and ECs are required to recognize remaining in-place soil conditions to protect human health and the environment. These ICs/ECs are described in the following sections. Long-term management of these EC/ICs and residual contamination will be performed under the ISMP until a final remedy is selected for the Site. ICs/ECs included in the final remedy will be managed under a final SMP.

Proposed actions for COPCs that remain in-place, how each action will be addressed moving forward, and under what future or current administrative documents are defined as follows:

- Site Management: Managed in place under the ISMP and future Site Management Plan for #c808022.
- Future RI: Additional off-site investigation will be completed under Site #c808054.
- Final Remedy Due to Technical Impracticability: Pertains to sample locations at or below the water table which were technically impracticable to remove. These

locations will be managed as Site Management under the ISMP and future Site Management Plan for #c808022.

End-point samples as depicted in **Appendix E** and described below, consist of both confirmation and documentation samples collected as part of IRM #5A2. Below is a detailed breakdown of exceedances remaining in place above SCOs based on their respective depths.

*End-point samples remaining in place above RRSCOs from 0-2 feet below final grade (bfg) as depicted on **Figure 8** and **Table 12** include*:

- PCBs: There are no PCB exceedances remaining in place above RRSCOs from 0-2 feet bfg.
- Metals:
  - Arsenic- Four samples remain in place above RRSCOs ranging from 17 mg/kg to 34 mg/kg.
  - Barium- Two samples remain in place above RRSCOs ranging from 620 mg/kg to 1,800 mg/kg.
  - Chromium (III+VI) - One sample remains in place above RRSCOs at 120 mg/kg.
  - Copper- Three samples remain in place above RRSCOs ranging from 340 mg/kg to 3,600 mg/kg.
  - Mercury- Four samples remain in place above RRSCOs ranging from 0.92 mg/kg to 2.7 mg/kg.
  - Lead- Five samples remain in place above RRSCOs ranging from 450 mg/kg to 38,000 mg/kg.
- SVOCs:
  - Acenaphthylene- One sample remains in place above RRSCOs at 120 mg/kg.
  - Anthracene- One sample remains in place above RRSCOs at 210 mg/kg.
  - Benz(a)anthracene- Nine samples remain in place above RRSCOs ranging from 1.1 mg/kg to 240 mg/kg.
  - Benzo(a)pyrene - Eight samples remain in place above RRSCOs ranging from 1.3 mg/kg to 190 mg/kg.
  - Benzo(b)fluoranthene- Eleven samples remain in place above RRSCOs ranging from 1.1 mg/kg to 220 mg/kg.
  - Benzo(k)fluoranthene- Three samples remain in place above RRSCOs ranging from 4.4 mg/kg to 100 mg/kg.

- Benzo(g,h,i)perylene- One sample remains in place above RRSCOs at 120 mg/kg.
- Chrysene- Four samples remain in place above RRSCOs ranging from 4 mg/kg to 240 mg/kg.
- Dibenz(a,h)anthracene- Five samples remain in place above RRSCOs ranging from 0.57 mg/kg to 37 mg/kg.
- Dibenzofuran- One sample remains in place above RRSCOs at 100 mg/kg.
- Fluoranthene- One sample remains in place above RRSCOs at 520 mg/kg.
- Fluorene- One sample remains in place above RRSCOs at 130 mg/kg.
- Indeno (1,2,3-cd) pyrene- Ten samples remain in place above RRSCOs ranging from 0.65 mg/kg to 110 mg/kg.
- Phenanthrene- One sample remains in place above RRSCOs at 850 mg/kg.
- Pyrene- One sample remains in place above RRSCOS at 440 mg/kg.

o VOCs: There are no VOC exceedances remaining in place above RRSCOs from 0-2 feet bfg.

o PFAS: There is one PFAS exceedance remaining in place above RRSCOs for Perfluorooctanesulfonic acid (PFOS) at 63 micrograms per kilogram (µg/kg).

COPCs remaining in-place above RRSCOs within the top 2 feet are associated with samples collected at or beyond the BCP Site boundary and are considered "off-site" samples, with the exception of FL-S225 for mercury at 0.95 mg/kg collected along South Main Street. This exceedance was submitted to the Agency on 31 August 2022 in the "Florida Central" completion package and was approved to remain in place by NYSDEC on 7 September 2022 (**Appendix B.6**). FL-S225 is located below soil cover with a demarcation layer. Exceedances above RRSCOs along the BCP Site boundary were identified during Addendum 8 Phase 3 through Phase 7. Proposed further action for these exceedances include additional off-site RI. FL-S225 will remain in place under Site Management. **Figure 8** illustrates where sample locations were collected with respect to the BCP Site boundary and **Table 12** lists the proposed actions for each location.

End-point samples remaining in place above RRSCOs from 2-14 feet bfg include:

o PCBs: There are forty-four samples for total PCBs remaining in place above RRSCOS ranging from 1.02 mg/kg to 7.96 mg/kg.

o Metals:

- Arsenic- Thirty-six samples remain in place above RRSCOs ranging from 17mg/kg to 88 mg/kg.
- Barium- Six samples remain in place above RRSCOs ranging from 440 mg/kg to 920 mg/kg.
- Cadmium- Nine samples remain in place above RRSCOs ranging from 4.9 mg/kg to 17 mg/kg.
- Copper- Twenty-two samples remain in place above RRSCOs ranging from 280 mg/kg to 2,400 mg/kg.
- Lead- Ten samples remain in place above RRSCOs ranging from 410 mg/kg to 960 mg/kg.
- Mercury- Forty-four samples remain in place above RRSCOs ranging from 0.82 mg/kg to 3.9 mg/kg.
- Cyanide (Total)- One sample remains in place above RRSCOs at 67 mg/kg.
- Nickel- Three samples remain in place above RRSCOs ranging from 450 mg/kg to 7,300 mg/kg.
- Manganese- Five samples remain in place above RRSCOs ranging from 2,200 mg/kg to 9,800 mg/kg.

o SVOCs:

- Benz(a)anthracene- Seventy-six samples remain in place above RRSCOs ranging from 1.1 mg/kg to 7.4 mg/kg.
- Benzo(a)pyrene - Seventy-one samples remain in place above RRSCOs ranging from 1.1 mg/kg to 7.5 mg/kg.
- Benzo(b)fluoranthene- Seventy-five samples remain in place above RRSCOs ranging from 1.2 mg/kg to 8.2 mg/kg.
- Benzo(k)fluoranthene- One sample remains in place above RRSCOs at 7.3 mg/kg.
- Chrysene- Fifteen samples remain in place above RRSCOs ranging from 4.1 mg/kg to 7.1 mg/kg.
- Dibenz(a,h)anthracene- Forty-nine samples remain in place above RRSCOs ranging from 0.34 mg/kg to 4.6 mg/kg.
- Indeno(1,2,3-cd) pyrene- Seventy-six samples remain in place above RRSCOs ranging from 0.51 mg/kg to 6.8 mg/kg.

o VOCs: There are no VOC exceedances remaining in place above RRSCOs from 2-14 feet bfg.

- PFAS: There are no PFAS exceedances remaining in place above RRSCOs from 2-14 feet bfg.

COPCs remaining in place in subsurface soils at concentrations above RRSCOs but below IRM action levels will be managed as remaining contamination under the interim and final SMPs. The depths of COPCs remaining in place are presented on Drawings 5A through 24J (**Appendix E**). Potential exposure is mitigated by the overlying cover system and demarcation layer and the ICs presented in the interim and final SMPs.

End-point samples remaining in place above RRSCOs from 14-20 feet bfg include:

- PCBs: Thirteen samples remain in place above RRSCOs ranging from 1.16 mg/kg to 8.2 mg/kg.
- Metals: There are no metals exceedances remaining in place above RRSCOs from 14-20 feet bfg.
- SVOCs: There are two exceedances for Indeno(1,2,3-cd) pyrene remaining above RRSCOs ranging from 0.52 mg/kg to 0.58 mg/kg.
- VOCs: There are no VOC exceedances remaining in place above RRSCOs from 14-20 feet bfg.
- PFAS: There are no PFAS exceedances remaining in place above RRSCOs from 14-20 feet bfg.

COPCs remaining in place in subsurface soils at concentrations above RR SCOs but below IRM action levels will be managed as remaining contamination under the interim and final SMPs.

*End-point samples remaining in place above IRM subsurface action levels from 2-14 feet bfg as depicted on **Figure 9** and **Table 13** include:*

- PCBs: There are no PCB exceedances remaining in place above IRM subsurface action levels.
- Metals: Six samples (including duplicates) remain in place above IRM subsurface action levels for mercury ranging from 4.4 mg/kg to 14 mg/kg
- SVOCs: One sample remains in place for Total PAHs above IRM subsurface action level at 200.36 mg/kg.
- PFAS: There are no PFAS exceedances remaining in place above IRM subsurface action levels from 2-14 feet bfg.

- There are no IRM subsurface action levels for VOCs.

COPCs remaining in-place from 2-14 feet below the cover system as described above, included one total PAH exceedance and six for mercury. Four of the mercury exceedances and the total PAH exceedance are associated with samples collected at the BCP Site boundary under Addendum #8 and are off-site. These samples will be documented as remaining in place and will require additional off-site RI. **Figure 9** illustrates where sample locations were collected with respect to the BCP Site boundary and **Table 13** lists the proposed actions for each location. The depths of COPCs remaining in place are presented on Drawings 5A through 24J (**Appendix E**). Potential exposure is mitigated by the overlying cover system and demarcation layer and the ICs presented in the interim and final SMPs.

Samples with COPC concentrations above IRM subsurface action levels within the BCP Site boundary are discussed in more detail below:

- A3-S412 was collected at 4.41 feet bfg and exceeded for IRM subsurface action levels for mercury at 4.4 mg/kg. This sample was collected along the southern border between the NAF and FFC. Excavation of this exceedance was not feasible due to the proximity of the safety netting poles. The depth of the foundation pole was suspected to be at 6 feet bgs based on conversations with ECSD and further excavation could have impacted the integrity of the poles. TCLP samples were collected to document the soil was not hazardous. This information was provided to NYSDEC on 31 August 2022 along with evaluation of surrounding soil quality to delineate the extent of mercury contamination. NYSDEC accepted the evaluation and approved leaving A3-S412 in place below the cover system for long term site management on 15 September 2022. This approval is included in **Appendix B.6**.

- FISR-S4 was collected at 7.06 feet bfg and exceeded IRM subsurface action levels for mercury at 9.4 mg/kg. This sample was collected within the trench box excavation (Area 3) to remove Segment 7 and FIS on the southern portion of the NAF, extending approximately 10-15 feet onto the FFC. NYSDEC was notified of this exceedance on 1 July 2022 and a response was provided on 11 July 2022 providing options to address the IRM action level exceedance of mercury. Unisys opted to complete soil sampling to delineate, laterally and vertically, the extent of non-hazardous mercury as remaining contamination for long term site management, requested to the Agency on 22 July 2022. Agency approved to complete the borings to delineate Site sample FISR-S4 was provided on 29 July 2022. A request to backfill Area 3, including the trench box excavation onto the FFC, was submitted to the Agency on 29 July 2022 with a conditional approval to backfill received on 11 November 2022. Analytical data from the completed soil borings to delineate FISR-S4 was submitted to NYSDEC on 20 September 2022

and accepted the sample location to remain in place on 24 February 2023 (**Appendix B.6**).

*End-point samples remaining in place above PoG SCOs from 14-20 feet bgs as depicted on **Figure 10** and **Table 15** include:*

- PCBs: Fifteen samples, including two duplicates, remain in place above PoG SCOs ranging from 4.9 mg/kg to 710 mg/kg.
- Metals: There are no metals exceedances remaining in place above PoG from 14-20 feet bfg.
- SVOCs: There are no SVOC exceedances remaining in place above PoG SCOs from 14-20 feet bfg.
- VOCs: There are no VOC exceedances remaining in place above PoG SCOs from 14-20 feet bfg.
- PFAS: There are no PFAS exceedances remaining in place above PoG SCOs from 14-20 feet bfg.

COPCs remaining in-place at concentrations exceeding PoG below 14 feet bgs will be under Site Management and remain in place due to technical impracticability for removal at or below the water table. Fifteen samples remain in place above PoG SCOs for PCBs ranging from 4.9 mg/kg to 710 mg/kg. These exceedance locations were located at the base of Area 2 (AOC-19). The source of this contamination is related to drums removed from the excavation further discussed in Section 13.1.1 through 13.1.3. Sample locations are depicted in **Figure 10** and **Table 14** lists the proposed action for each location.

10.2 Post Excavation Documentation Samples (ISMP)

Documentation samples were collected following various ISMP excavations completed by ECSD contractors as part of the NAF capital improvement project. COPCs remain in-place at concentrations exceeding RRSCOs, PoG, and/or IRM action levels below the cover system. Documentation samples are depicted in **Appendix E.** Below is a detailed breakdown of exceedances remaining in place above SCOs based on their respective depths

Documentation samples remaining in place above RRSCOs from 0-2 feet bfg include:

- PCBs: There are no PCB exceedances remaining in place above RRSCOs from 0-2 feet bfg.
- Metals: There are no metals exceedances remaining in place above RRSCOs from 0-2 feet bfg.

- SVOCs: There are no SVOC exceedances remaining in place above RRSCOs from 0-2 feet bfg.

- VOCs: There are no VOC exceedances remaining in place above RRSCOs from 0-2 feet bfg.

- PFAS: there are no PFAS exceedances remaining in place above RRSCOs from 0-2 feet bfg.

Documentation samples remaining in place above RRSCOs from 2-14 feet bfg include:

- PCBs: Four exceedances for total PCBs remain in place above RRSCOs ranging from 1.07 mg/kg to 6.62 mg/kg.

- Metals:

    - Arsenic- Four samples remain in place above RRSCOs ranging from 19 mg/kg to 21 mg/kg.
    - Barium- Two samples remain in place above RRSCOs ranging from 1,100 mg/kg to 1,500 mg/kg.
    - Lead- One sample remains in place above RRSCOs at 740 mg/kg.
    - Manganese- One sample remains in place above RRSCOs at 3,100 mg/kg.

- SVOCs:
    - Benz(a)anthracene- Twelve samples remain in place above RRSCOs ranging from 1.1 mg/kg to 10 mg/kg.
    - Benzo(a)pyrene (BaP)- Thirteen samples remain in place above RRSCOs ranging from 1.1 mg/kg to 8 mg/kg.
    - Benzo(b)fluoranthene- Sixteen samples remain in place above RRSCOs ranging from 1.1 mg/kg to 8.8 mg/kg.
    - Chrysene- Three samples remain in place above RRSCOs ranging from 4.1 mg/kg to 8.6 mg/kg.
    - Dibenz(a,h)anthracene- Seven samples remain in place above RRSCOs ranging from 0.52 mg/kg to 2.5 mg/kg.
    - Indeno(1,2,3-cd)pyrene- Eighteen samples remain in place above RRSCOs ranging from 0.52 mg/kg to 5.2 mg/kg.

- VOCs: There are no VOC exceedances remaining in place above RRSCOs from 2-14 feet bfg.

- PFAS: There are no PFAS exceedances remaining in place above RRSCOs from 2-14 feet bfg.

COPCs remaining in place in subsurface soils at concentrations above RR SCOs but below IRM action levels will be managed as remaining contamination under the interim and final SMPs.

Documentation samples remaining in place above RRSCOs from 14-16 feet bfg include:

- PCBs: There are no PCB samples remaining in place above RRSCOs from 14-16 feet bfg.
- Metals: There are no metals exceedances remaining in place above RRSCOs from 14-16 feet bfg.
- SVOCs: There are no SVOC exceedances remaining in place above RRSCOs from 14-16 feet bfg.
- VOCs: There are no VOC exceedances remaining in place above RRSCOs from 14-16 feet bfg.
- PFAS: There are no PFAS exceedances remaining in place above RRSCOs from 4-16 feet bfg.

*Documentation samples remaining in place above IRM subsurface action levels from 2-14 feet bfg as depicted on **Figure 9** and **Table 14** include:*

- PCBs: There are no PCB sample exceedances remaining in place above IRM subsurface action levels from 2-14 feet bfg.
- Metals: There are no metals sample exceedances remaining in place above IRM subsurface action levels from 2-14 feet bfg.
- SVOCs: One sample remains in place above IRM subsurface action levels at 133.3 mg/kg.
- PFAS: There are no PFAS sample exceedances remaining in place above IRM subsurface action levels from 2-14 feet bfg.
- There are no IRM subsurface action levels for VOCs.

One exceedance above IRM subface action levels was reported for total PAHs (SVOCs) at NAF-UT-S65 collected at 3.82 feet bfg. This sample was collected during ISMP activities

within a storm trench excavation west of the softball field. Samples collected under the ISMP were collected as documentation samples. Utilities were installed and backfilled by ECSD contractors while analytical data was pending. This exceedance will be managed in place below the cover system under the interim and final SMP.

Documentation samples remaining in place above PoG SCOs from 14-16 feet bgs include:

- PCBs: There are no PCB exceedances remaining in place above PoG SCOs from 14-16 feet bfg.
- Metals: There are no metal exceedances remaining in place above PoG SCOs from 14-16 feet bfg.
- SVOCs: There are no SVOC exceedances remaining in place above PoG SCOs from 14-16 feet bfg.
- VOCs: There are no VOC exceedances remaining in place above PoG SCOs from 14-16 feet bfg.
- PFAS: There are no PFAS exceedances remaining in place above PoG SCOs from 14-16 feet bfg.

As reflected in further detail above, there are no exceedances for RRSCOs within the top 2 feet cover system associated with documentation samples. COPCs remaining in place in subsurface soils at concentrations above RR SCOs but below IRM action levels will be managed as remaining contamination under the interim and final SMPs. ICs and ECs are required to recognize remaining in-place soil conditions to protect human health and the environment. These ICs/ECs are described in the following sections. Long-term management of these EC/ICs and residual contamination will be performed under the ISMP until a final remedy is selected for the Site. ICs/ECs included in the final remedy will be managed under a final SMP.

10.3 Decommissioning of Temporary Infrastructure

Pursuant to decommissioning requirements outlined in construction drawings for Amendment #2, temporary infrastructure constructed over native material were excavated to a minimum depth of 2 feet bgs and were completed concurrently with IRM #5A2 excavations. Areas where temporary infrastructure was constructed over approved imported material under Addendum #2 had 6-inches of imported material scraped before post decommissioning samples were collected. Decompaction was completed following decommissioning of the Phase 2 and 3 MSA and temporary infrastructure within the northern portion of the NAF. This included use of a dozer with ripper attachments to break up compacted imported material below the former temporary infrastructure to improve

structure, fertility, and drainage. Decompaction activities were completed between January and April 2024 as detailed in the DFRs (**Appendix C.4**). Decommissioning of temporary infrastructure was completed in phases as excavations for IRM #5A2 progressed. Details regarding this process is described in further detail in Sections 13.5, 13.6, and 13.8 respectively. Results of temporary infrastructure post-decommissioning sampling were included in backfill packages submitted to the Agency, which can be found in **Appendix B.6**.

11.0 Engineering Controls

11.1 Soil Cover System

Exposure to COPCs in soil/fill at the Site is prevented by a protective soil cover system placed over the site. This cover system is comprised of a minimum of 24-inches of imported material overlain by asphalt, concrete pavement, vegetative cover, or stone. Unpaved areas were restored with either a minimum of 6-inches of topsoil or stone. Areas with topsoil had sod installed or were reseeded based on Design plans provided by ECSD. A demarcation layer was placed prior to backfilling with clean fill material used for the cover system. Further detail regarding the type of demarcation utilized is depicted on As-Built Drawing 35 **(Appendix E).** As-Built Drawing 36 **(Appendix E)** illustrates the NAF soil cover system with accompanying cross section details. The ISMP includes an Excavation Work Plan which outlines required procedures in the event the cover system and/or underlying residual contamination are disturbed. An Excavation Work Plan will be provided in the final SMP, subject to approval by NYSDEC. COPCs remaining in place at concentrations above RRSCOs but below IRM action levels below the soil cover system shown on As-Built Drawings 5A through 34F **(Appendix E)** will be managed as remaining contamination under the interim and final SMPs.

11.2 Outdoor Physical Education STRA

On 3 August 2021, a STRA – Interim Outdoor Physical Education (PE) STRA work plan was submitted to NYSDEC which proposed to construct a field suitable for physical education activities. These actions included installation of an interim outdoor physical education area and temporary emergency rally point. The temporary field consisted of 1) non-woven geotextile fabric, 2) a minimum of 3-inches of imported NYSDOT fill, 4) 4-inches of imported topsoil and 5) imported sod. Non-woven geotextile fabric was placed across the temporary field area and imported fill was graded to provide drainage to existing dry wells in the center of the area. Existing inlet covers were raised approximately 6-inches. The outer edge of the temporary field was sloped to match existing grade with a 1H:1V slope. Four inches of topsoil was placed on top of the imported fill, followed by sod. Imported fill, topsoil, and sod were delivered to the work area using the driveway north of

the EHS tennis courts.

A temporary rally point constructed on the EHS basketball courts during IRM #4 was removed after the completion of the 2020-2021 academic year to allow for completion of Amendment #2 excavations. The temporary rally point consisted of temporary bleachers with seating capacity of 1,500 students and faculty and designated areas for six wheelchairs and temporary fencing for access control. ECSD had requested that a temporary rally point with similar capacity be constructed in areas north of the EHS tennis courts and on the west side of the baseball field as shown on the Construction Drawings included in the STRA work plan. Access to the interim outdoor physical education area and the temporary rally point were controlled by a combination of existing chain link fencing and temporary chain link fencing. Temporary fencing consisted of privacy screen. A gate with a dedicated lock was installed to allow access to the EHS grounds maintenance shed. E&S controls were established within the LOD shown on the Construction Drawings submitted with the STRA Work plan. Decommissioning of the outdoor PE STRA is discussed in Section 13.6.

On 2021 August 5, RECON began installation of the outdoor PE STRA by removal of the ECSD basketball courts through 7 August 2021. Placement of non-woven geotextile was conducted 6 August through 9 August 2021. During geotextile installation, NYSDOT imported fill, approved by NYSDEC on 6 August 2021, was placed by RECON in 4-inch lifts. Topsoil, approved for import by NYSDEC on 5 August 2021, was delivered to the Site. Topsoil was placed on areas where grading of imported fill had been completed. Placement of import was completed on 12 August 2021 and topsoil by 13 August 2021. Installation of fencing surrounding the STRA was conducted between 14 August and 24 August 2024. Rich's Sports Field conducted sod installation from 16 August to 17 August 2021. Sod was approved for import by NYSDEC on 11 August 2021. RECON conducted #57 stone installation in preparation for bleacher installation 18 August through 23 August 2021. NYSDEC approved #57 stone for import on 12 August 2021. Bleachers were installed by Benchmark between 24 August and 25 August 2021. Additional temporary fencing installed between the baseball field and the STRA was completed on 26 August 2021. Additional details regarding installation of the STRA can be found on the Outdoor PE STRA Work Plan included in **Appendix B.2**, DFRs in **Appendix C.1**, and Requests to Import and Agency approvals in **Appendix J**.

12.0 Institutional Controls

A series of ICs have been developed to: (1) implement, maintain, and monitor EC systems; and (2) prevent future exposure to COPCs present in media at the Site. Adherence to these ICs will be implemented under the interim SMP. ECSD has agreed to accept an Environmental Easement on the property as part of the Site remedy since the IRM includes a cover system.

13.0 Supplemental IRM #5A2 Work Plans

13.1 Drum Nest Work Plans

On 5 January 2022, Geosyntec notified NYSDEC that drums were encountered in the proposed 2-4 feet excavation within Area 2 (AOC-19) of the IRM #5A2 limit of disturbance, coinciding with AOC-19. An odor was detected, and a black liquid was observed. PID measurements collected within the odorous and stained area were observed greater than 100 ppm. The following sections summarize three supplemental work plans relating to the excavation, management, and disposal of the drum nest that was encountered within Area 2.

13.1.1 Addendum #1

Upon discovery of the drums in Area 2, samples of the drum contents and surrounding soils were collected and submitted for laboratory analysis, and the area was secured by covering it with a tarp. On 11 January 2022, a temporary containment was constructed within a preexisting non-hazardous soil stockpile area. Drum carcasses and interior contents mixed with soil were placed in lined roll-offs within the containment. Soils classified as PCB remediation waste under 40 CFR §761.3 TSCA and New York hazardous waste under 6 NYCRR Part 371.4 (e) were stockpiled in the containment for further waste characterization and were transferred to lined roll-offs per NYSDEC's request on 12 January 2022.

Samples of the drum contents and soils were collected for total constituents and waste characterization on 12 January 2022. Sidewall samples within the drum removal excavation were collected on 13 January 2022, and bottom samples were collected on 16 January 2022 and 19 January 2022. Analytical results for total constituents and waste characterization reported hazardous waste concentrations for PCBs, with a maximum concentration of 21,830 mg/kg, and for VOCs including benzene (0.60 mg/L) and trichloroethene (1.2 mg/L). Analytical results for waste characterization samples can be found in **Table 4A**. Analytical results for total constituents and for sidewall and bottom samples collected on 16 and 19 January 2022 can be found in Addendum #3 Waste Management Plan Phase #1 report, discussed in Section 13.1.2 and included in **Appendix B.2**. Additionally, analytical reports can be found in **Appendix H.1** and waste manifests can be found in **Appendix G.3**.

The IRM #5A2 Addendum #1 work plan was prepared to provide NYSDEC documentation of the changed Site conditions within Area 2 and a schedule for timely movement and management of waste to approved non-hazardous, TSCA, or RCRA accumulation areas. This addendum was submitted to NYSDEC on 2 February 2022 and approved as modified on 3 February 2022. The material excavated within Area 2, following the submittal of the

Addendum #1 work plan, was managed in accordance with the work plan and stockpiled in the appropriate non-hazardous, TSCA, or RCRA accumulation areas identified therein. The temporary containment constructed on 11 January 2022 was decommissioned once soils and roll-off containers previously staged within it were removed.

13.1.2 Addendum #3 Waste Management Plan Phase #1

The Phase 1 RCRA Accumulation Area contained three 20-yard roll-off containers holding drum remnants, former drum contents, and impacted soils generated during IRM #5A2 excavations, totaling approximately 40 cubic yards of material. The roll-off containers were placed in the RCRA Accumulation Area pursuant to IRM #5A2 Addendum #1. In order to complete the approved IRM and NAF restoration activities in the location of the RCRA Accumulation Area and maintain schedule, the material staged in that area was relocated and the Phase 1 RCRA Accumulation Area was decommissioned under Phase #1 of a two-phased Waste Management Plan for the drum nest area. Phase #1 was presented in IRM #5A2 Addendum #3, which was submitted to NYSDEC on 15 September 2022 and approved as modified on 19 September 2022 (**Appendix B.2**).

The three roll-off containers initially staged in the Phase 1 RCRA Accumulation Area were relocated to the Phase 2 RCRA Accumulation Area, which was constructed in the northern portion of the property pursuant to IRM #5A2 Addendum #2 submitted on 16 June 2022 and approved as modified by NYSDEC on 19 July 2022. Roll-off 1 (RO-1) and RO-2 were too heavy to move safely with available equipment. As such, material was redistributed between roll-off containers, including RO-1 through RO-3 and a new roll-off (RO-4), after free liquid was stabilized using a moisture conditioning agent. The four roll-off containers were moved using integral rollers along the Phase 2 IRM haul road in Area 2, north toward the Phase 2 RCRA Accumulation Area. These activities were completed between 20 and 24 September 2022.

Prior to free liquid stabilization and redistribution, additional waste characterization samples were collected from the contents of the roll-offs to supplement the waste characterization efforts and waste profile. Waste characterization samples were also collected from a single drum of free liquids that were removed from one of the roll-offs that contained limited amounts of solids. Analytical results for these samples can be found in **Table 4A**. Additionally, laboratory analytical reports are included in **Appendix H.1** and **H.3** and other information pertaining to Phase #1 of the Waste Management Plan for the drum nest area can be found in corresponding Waste Management reports, included in **Appendix B.2**.

13.1.3 Addendum #5 – Waste Management Plan Phase #2

Analytical data included as Table 1 of the Phase #2 Waste Management Plan, indicated that the contents of the roll-off containers that were relocated and sampled under IRM

#5A2 Addendum #3 were a RCRA hazardous waste, as well as a TSCA under NYS hazardous waste. The roll-off contents were accepted as bulk waste for incineration at the Clean Harbors facility in Aragonite, Utah. The drums of free liquids were determined to be RCRA non-hazardous waste and were profiled and disposed of separately. Phase #2 of the Waste Management Plan, detailing the transfer of roll-off contents to containers provided by the disposal facility and the facilitation of off-Site transport and disposal, was presented in IRM #5A2 Addendum #5. Addendum #5 was submitted to NYSDEC on 7 October 2022 and approved on 13 October 2022.

Waste transfer activities were conducted on 20 September 2022 in accordance with the approved IRM #5A2 Work Plan, IRM #5A2 Addendum #5, and the Site-specific health and safety plan for IRM #5A2 prepared by RECON. CAMP monitors were utilized during transfer activities to monitor dust concentrations and VOCs continuously, both upwind and downwind of the work area. Loading occurred adjacent to the Phase 2 RCRA Accumulation Area, and an excavator with a dedicated bucket was utilized to transfer the material. The waste was transported to the Clean Harbors incineration facility in Utah for disposal. The Addendum #5 – Waste Management Plan Phase #2 can be found in **Appendix B.2**, DFRs in **Appendix C.2**, CAMP monitoring in **Appendix D.3**, letters from disposal facilities in **Appendix F**, waste manifests in **Appendix G.3**, laboratory reports in **Appendix H.1**, and waste characterization results in **Table 4A** .

13.2 Dry Well Work Plans

The following sections summarize four supplemental work plans associated with dry wells encountered during IRM #5A2 activities.

13.2.1 Northern Athletic Field (NAF) Dry Well Soil Quality Verification Plan

As part of NYSDEC approval of the IRM #5A2 work plan, it was requested that a soil quality evaluation be performed for dry well locations that would remain in place following final restoration of the NAF by Unisys and ECSD. As requested by NYSDEC, dry well locations were confirmed by Hunt EAS, ECSD's architectural firm. Based on discussion with Hunt EAS, final restoration included the anticipated installation, retainment, and removal of multiple dry wells as follows:

- Four new dry wells (DW-13, DW-14, DW-15, and DW-16) installed in the restored softball field.
- Three existing dry wells (DW-10, DW-11, and DW-12) retained in the restored baseball field.
- Four existing dry wells (DW-3A, DW-3B, DW-6, DW-7, and DW-8) retained in the shotput and discus area.

Soil quality with respect to PoG SCOs was evaluated within a 30-foot radius through RI

surrounding existing and proposed dry well locations to evaluate whether COPCs, including metals, PCBs, SVOCs, and VOCs, were reported at depths between the bottom of the dry wells (approximately 4 feet bgs) and the water table (encountered at approximately 16 feet bgs during the investigation). Several data gaps were identified within the existing data and addressed under the NAF Dry Well Soil Quality Verification Plan, which was submitted to NYSDEC on 18 March 2022 and was approved as modified on 28 April 2022.

The soil quality verification included evaluation of concentrations of COPCs relative to PoG SCOs defined under 6 NYCRR Part 375 in soil. Soil samples were collected using direct-push technology (DPT). Additional information and analytical results pertaining to this work will be reported under separate cover through the RI.

Following completion of this work, design changes were provided by ECSD which included installation of catch basins and an infiltration gallery to manage stormwater rather than utilization of existing dry wells or installation of new dry wells on the NAF for the ball fields. Section 13.2.2 through 13.2.4 discuss additional dry well abandonment or removal that was completed during excavation on the NAF. Dry wells identified in the shotput and discus area as discussed above, remained with the exception of DW-3B (13.2.4). These dry wells that were abandoned in place are shown on As-built Drawings 3C and 3D (**Appendix E**). Existing ECSD dry wells currently utilized in the shot and discus area are shown on As-Built Drawing 35 (**Appendix E**).

13.2.2 Dry Well Closure Plan (DW-20 and DW-21)

Dry well DW-20 was encountered in the Area A-5 excavation on 20 April 2022 at 2 feet bgs. Hunt EAS was notified of the finding. An 8-in diameter steel pipe connection to the south of the dry well was observed on 22 April 2022 during excavation. A soil sample was collected from the interior of DW-20 (IRM5A2-A5-DW1) on 25 April 2022 and submitted to the fixed laboratory for analyses for PCBs, metals, SVOCs, VOCs, and PFAS. Analytical results are included in **Table 8A**, and did not show exceedances of IRM #5A2 screening criteria or IRM action levels.

On 3 May 2022, a closed-circuit television crew for Your Quality Solutions, Inc. inspected the pipe connection to the south. A second dry well structure, DW-21, was observed approximately 90-inches south of the pipe opening. The IRM contractor probed the ground surface at the approximate location with a metal probe and encountered a solid object. The location was excavated using a shovel and a solid concrete top was observed at approximately 2.5 feet bgs. DW-21 was not sampled.

Both DW-20 and DW-21 were consistent with structures shown on historical drawings and extend to a depth of approximately 8 feet bgs. Hunt EAS indicated that dry wells DW-20 and DW-21 were not included in ECSD plans for future stormwater management at EHS.

Removal of DW-21 was not feasible due to its proximity to the NAF maintenance shed, as excavation to 8 feet bgs could impact the integrity of the shed. Therefore, a Dry Well Closure Plan for DW-20 and DW-21 was submitted to NYSDEC on 27 May 2022 and approved as modified on 9 June 2022.

The dry wells were abandoned in place using flowable fill. The top of DW-21 was exposed and the upper 8-inch diameter pipe was plugged, then flowable fill was installed at DW-21 so that it filled DW-21, the lower 8-inch diameter pipe, and DW-20. Flowable fill was vibrated to minimize void spaces during installation to 6-inches above the existing top of the lid of DW-21. DW-20 was opened for visual inspection confirming closure following the installation of fill. Dry well closure activities were completed on 4 August 2022.

DW-20 (A5-DW1) and DW-21 are located on As-built Drawing 3D (**Appendix E**) as an abandoned dry well. Additional information pertaining to the closure of dry wells DW-20 and DW-21 can be found in the Dry well Closure Plan, included in **Appendix B.2**.

13.2.3 Dry well Closure Plan (DW-10 and DW-12)

Dry wells DW-10 and DW-12 were exposed during soil removal excavations for IRM #5A2 in the NAF. Dry well DW-11 was observed during IRM #5A2 activities to be filled with soils and not functional. The Dry Well Closure Plan for DW-10 and DW-12 was submitted to NYSDEC on 7 April 2023 and approved on 13 April 2023. The approved Dry Well Closure Plan (DW-10 and DW-12) is included in Appendix B.2.

Dry wells DW-10 and DW-12 were abandoned in place on 17 May 2023 through placement of flowable fill to the top of the opening. Native soils were not disturbed during dry well closure. It was intended that DW-10 and DW-12 were to be utilized by ECSD for water discharge from the nearby baseball field. Based on changes in the infiltration gallery design (Section 15.1), dry wells on the NAF were not needed and were replaced with catch basins as noted in the Dry Well Soil Quality Verification Report submitted on 14 July 2023 and approved as modified on 11 August 2023. Activities documented in the Dry Well Soil Quality Verification Report are associated with RI activities for EHS. As-built drawings showing the locations of the dry wells are included in **Appendix E**.

13.2.4 Dry well 3B Soil Quality Verification Report

Dry wells DW-3A and DW-3B were exposed during soil removal excavations for IRM #5A2 in the EHS shotput and discus area. DW-3A was removed due to an exceedance of the PoG SCO for PCBs in a sidewall sample at 4-6 feet bgs, and soil was excavated to a depth of 6 feet bgs. ECSD indicated that a dry well was not needed in that location for stormwater management in the shotput and discus area, whereas DW-3B was planned to be retained for stormwater management.

Due to an exceedance of the PoG SCO for arsenic in a sidewall sample from an IRM #5A2

excavation approximately 28 feet northwest of DW-3B, Unisys submitted a dry well modification plan proposing interior grouting to NYSDEC on 23 August 2023. On 12 September 2023, NYSDEC provided a comment requesting demonstration that interior grouting would prevent infiltration from contact with the PoG SCO exceedance. In response, Geosyntec evaluated anticipated groundwater mounding at DW-3B under the present conditions. Based on the known groundwater conditions, Geosyntec concluded that stormwater infiltration from DW-3B would not result in groundwater contact with the area of the aforementioned PoG SCO exceedance and that modification of DW-3B was not necessary. Geosyntec presented this conclusion in the Dry Well DW-3B Soil Quality Verification Update submitted to NYSDEC on 22 November 2023 and received approval to leave the dry well in place on 18 December 2023.

13.2.5 Dry well Closure Plan (VFW Entrance)

During excavation along the Site boundary under the IRM #5A2 Addendum #8 Phase 7 on 9 April 2024, a dry well was observed on the Site at the northern entrance to the VFW property. The top of the dry well was encountered at approximately 1.5 feet bgs with the grade at the time being approximately 12-inches bfg. The dry well was approximately 8 to 10 feet deep and 10 feet in diameter. The bottom of the dry well appeared to be covered with gravel. The dry well location was identified on a plan identified as *Site Plan North Mechanical Electrical* by Gillum-Colaco Consulting Structural Engineers of New York dated 24 April 1978, and did not have a name associated with it. For the purposes of documentation and activities related to the dry well, the well is identified as DW-N. The construction of the dry well appeared consistent with other previously identified ECSD dry wells. Based on discussions with ECSD, the dry well was not needed for stormwater management at EHS.

On 10 April 2024, Geosyntec notified NYSDEC via email of the presence of the dry well and indicated a sample of fine-grained material would be collected from the bottom of the dry well. The sample was collected on 9 April 2024 and shipped to the fixed laboratory for analyses for PCBs, metals, SVOCs, and VOCs in accordance with the QAPP for the IRM#5 Work Plan. Analytical results for this sample can be found in **Tables 6A-D**. There were no detections above the NYSDEC PoG SCOs.

Dry Well Closure Plan Amendment #1, which addressed the abandonment in place of dry well DW-N, was submitted to NYSDEC on 17 April 2024 and was approved on 19 April 2024. On 19 April 2024, two concrete trucks from Porter's Concrete Service delivered 12 cubic yards of flowable fill that were used to fill dry well DW-N above the top of the structure and complete its abandonment. Imported fill was placed over the abandoned structure and compacted. Activities were documented in the IRM #5A2 DFR for 19 April 2024, which can be found in **Appendix C.4**. As-built drawings documenting the abandoned dry well are included in **Appendix E**. Additionally, photographs of the dry well, a copy of

the plan mentioned above entitled *Site Plan North Mechanical Electrical*, concrete delivery tickets, and email correspondence with ECSD regarding closure of dry well DW-N are included as attachments to the Dry Well Closure Report submitted to NYSDEC on 2 July 2024 and approved on 29 July 2024, which can be found in **Appendix B.1**.

13.3 NAF Well Decommissioning Plan

A network of twenty-four monitoring wells was installed across the NAF as part of RI activities completed in 2021. Of the 24 NAF wells, three wells (MW-50S/I and MW-52) fell within the excavation footprint for AOC 19 and were abandoned in accordance with Amendment #2, dated 8 October 2021 and approved as modified by NYSDEC on 22 October 2021.

The NAF began being used by EHS as student athletic fields following the completion of IRM #5A2. In anticipation of this use, the Northern Athletic Field Well Decommissioning Plan was prepared to address the decommissioning of seven wells that were located within the athletic fields and posed potential safety risks to students. The revised Northern Athletic Field Well Decommissioning Plan was originally submitted to NYSDEC on 4 May 2022 and approved as modified on 25 May 2022. A final revised work plan was submitted on 9 June 2022. An Addendum to the Northern Athletic Fields Well Decommissioning Plan addressing the decommissioning of two additional wells – MW-48 and MW-53 – was submitted on 5 July 2023 and approved as modified on 23 July 2023 (**Appendix B.2**).

The seven monitoring wells proposed for decommissioning were abandoned in accordance with CP-43 Groundwater Monitoring Well Decommissioning Policy (NYSDEC, November 2009). A licensed water well driller was retained for well decommissioning activities. Decommissioning was performed using the Grouting-in-Place method described in CP-43, as the wells were screened in the overburden layer and did not penetrate more than one water-bearing zone. Grout, consisting of a standard grouting mixture, was used to seal the borehole and monitoring well casing left in the ground. The wells were grouted from the bottom to a depth of approximately 5 feet bgs, at which point the well casing, surface completion, and associated well materials above the grout level were removed. The remaining open borehole was filled with clean imported fill. Additional information pertaining to the decommissioning of the seven NAF monitoring wells will be provided under separate cover for the RI.

13.4 Soil Cover Verification (SCV) Sampling Work Plans

The following section summarizes SCV Work Plan activities completed during IRM #5A2 including:

- NAF SCV Sampling Procedures
- Florida Area Soil Cover Verification Sampling Plan

- Continued NAF SCV Sampling Plan (15 November 2022)
- Continued NAF SCV Sampling Plan (14 March 2023)
- Continued NAF SCV Sampling Plan Update
- Continued NAF SCV Update (Florida West)
- Continued NAF SCV Update Amendment (Florida West)

SCV sampling was conducted to address comments provided by the Agency on Amendment #2 and initial SCV Work (NAF SCV Sampling Procedures) on 4 August 2021, 21 September 2021, 15 November 2021, and 2 March 2022. Comments received by the Agency on Amendment #2 requested additional sampling within the soil cover system that was not anticipated to be excavated under the IRM #5A2 design. Sampling included up to three composite intervals at varying depths for select COPCs within areas of native soil not disturbed by IRM activities, under decommissioned areas (MSA and haul road), or native soils remaining once 6-inches of soil was removed for construction. SCV work plans submitted above addressed these comments and subsequent changes in site conditions as IRM #5A2 progressed. Changes in site conditions are explained in further detail below.

SCV was proposed in the NAF SCV Sampling Procedures Work Plan which proposed sampling from 0-6-inches, 6-12-inches, and 12-24-inches bgs intervals within undisturbed areas that were not anticipated to be excavated under IRM #5A2. Soil boring advancement was to be completed by the RI and advanced using direct push technology (DPT). In addition, discreet samples were proposed within areas of decommissioned infrastructure and other disturbed areas to ensure these areas were properly decommissioned. Proposed sampling locations are depicted in the NAF SCV Sampling Procedure Work Plan included in **Appendix B.2**. On 28 June 2022, a DPT mobilized to the Site to complete work set forth under the above discussed work plan; however, due to changed conditions on the NAF, additional areas previously deemed as undisturbed had been excavated to address RRSCO and IRM action level exceedances identified during Florida excavation (**Figure 4**). The DPT rig was utilized to collect pre-characterization samples for additional proposed IRM excavations due to limited space in the Phase 2 non-hazardous MSA.

Initial soil cover verification sampling occurred on 29 June 2022 and was conducted in accordance with the Florida Area Soil Cover Verification Sampling Plan (the Sampling Plan) dated 24 June 2022, which addressed comments from NYSDEC presented in their letter dated 9 June 2022 regarding approval of the modified conceptual approach. Three locations in the EHS Shot Put and Discus Area (the "Florida Area") identified as SCV01, SCV02, and SCV03 were sampled as part of this initial soil cover verification sampling by DPT under the RI. Results from the June soil sampling were reported to NYSDEC on 7 September 2022 in an Interim Soil Cover Verification Sampling Report, which was accepted by NYSDEC in a 15 September 2022 email and will be reported under separate cover under the RI.

Continued soil cover verification sampling occurred in October and November 2022 and was conducted in accordance with the Continued NAF Soil Cover Verification Sampling Plan dated 15 November 2022 and approved as modified by NYSDEC on 7 December 2022. Alternative verification sampling in the Northern NAF Area in the vicinity of the active natural gas main was authorized during a 10 November 2022 teleconference with NYSDEC and by letter from NYSDEC, approved as modified on 7 December 2022. The IRM excavation proceeded within five feet laterally of the active natural gas main located along the northern and western periphery of the NAF. The top six inches of soil were removed from the surface above the active natural gas main prior to soil sample collection. The results from the October and November 2022 soil sampling were reported to NYSDEC on 14 March 2023 in the Continued NAF Soil Cover Verification Interim Sampling Report (Revised).

In March 2023, the majority of the NAF had been excavated to a minimum of 24 inches below final restoration grade, except for areas along the property boundary where native soils will remain to maintain integrity of the property line fencing and established trees located on adjacent properties as well as along active utility corridors. On 14 March 2023, a Continued NAF Soil Cover Verification Sampling Plan was submitted to NYSDEC outlining sampling to be performed in two such areas, the eastern property boundary of the Northern Athletic Fields (NAF) and along the Site boundary with off-site properties that lie along the northern side of O'Gorman Street and along South Main Street. The sampling plan followed the same sampling strategy and methodology as approved in the 24 June 2022 and 15 November 2022 work plans. NYSDEC provided approval as modified by on 3 April 2023, and an acceptance letter provided by Unisys to the NYSDEC on 5 April 2023. The results from the October 2023 soil sampling were reported to NYSDEC on 26 June 2023 in the Continued NAF Soil Cover Verification Interim Sampling Report #2.

A Continued NAF Soil Cover Verification Sampling Plan Update was submitted to NYSDEC on 31 August 2023 to complete Soil Cover Verification sampling in the western portion of the Florida Area in coordination with asphalt removal to be conducted by ECSD as part of construction of the EHS Shot Put and Discus Area. NYSDEC gave contingent approval of this Sampling Plan Update on 18 October 2023 with requests for clarification. Acceptance of the contingent approval was provided on 26 October 2023. On 8 November 2023, Geosyntec notified NYSDEC of the completion of asphalt removal by ECSD and met with NYSDEC by teleconference to discuss modifications to the sampling plan. As a result of that meeting, NYSDEC requested additional information on 9 November 2023 in the form of a cross section of the utility corridor. The cross section was provided on 1 December 2023. NYSDEC provided comments based on the information provided on 21

December 2023. Geosyntec provided a response to comments on 19 January 2024 and NYSDEC responded on 1 February 2024. Geosyntec provided further information on 11 March 2024 and 7 June 2024. NYSDEC accepted the responses on 11 July 2024. Samples were collected in November 2023 and January 2024. A revised Sampling Plan Update was submitted to NYSDEC on 16 August 2024.

A Revised Final SCV Report was submitted to NYSDEC on 21 February 2025 and accepted on 13 June 2025 which documents the results collected under the above discussed work plans. The discussion of results in the Final SCV Report indicates the objectives of each SCV scope were met with the exception of sampling collected along South Main Street. Sample location FL-S225 had a detection of mercury above the RR SCO (0.81 mg/kg) at a depth of 1.34 ft bgs. FL-S225 was collected above a historic concrete wall and removal was not possible due to the structure and adjacent subsurface utilities. The mercury exceedance at FL-S225 will be managed in place under Site Management. Additional intermediate SCV samples will be collected, following sidewalk removal by ECSD as depicted in Drawing 36 (**Appendix E**). Work plans submitted as part of SCV efforts on the NAF and associated SCV Interim Sampling Reports are included in **Appendix B.2**.

Based on the analytical data received for work activities completed under the above work plans which exceeded both RRSCO and IRM subsurface action levels, additional excavations were requested by NYSDEC along the property line. Additional work plans were submitted to complete this work under IRM #5A2 Addendum 8, discussed in Section 13.10.

13.5 Addendum #2 – Soil Cover Design and Phase 2 Site Plan

As presented in Amendment #2, planned backfill material for IRM #5A2 included excavated soils approved for reuse and imported fill. Soils approved for reuse were to meet the requirements of Section 5.4 of DER-10 for use below a soil cover system over a demarcation layer. Geosyntec submitted requests to reuse soils excavated for IRM #5A2 Area 2 between 8 December 2021 and 14 February 2022, and approvals were received between 3 January 2022 and 22 February 2022. After failing to meet project specifications for compaction and moisture content as discussed in Sections 7.3.3 and 14.2, IRM #5A2 soils with the potential for reuse were not considered suitable for use as structural fill. As such, they had to be shipped off-Site as non-hazardous waste, resulting in an increase in the volume of soils to be transported off-Site.

Additionally, confirmation sampling in Area 2 identified TSCA soils on the east side of the Phase 1 temporary haul road. This resulted in soils categorized as potentially reuse material, as shown in the Amendment #2 construction drawings, to be excavated as TSCA material. TSCA soils were excavated as part of the Area 6 O'Gorman (**Figure 4**)

excavation.

Addendum #2 to the IRM #5A2 Work Plan was prepared to modify the IRM #5A2 design for backfilling and construction of the engineering control and Phase 2 Site Plan. Addendum #2 was submitted to NYSDEC on 16 June 2022 and approved as modified on 18 July 2022.

Consistent with Addendum #2 design modifications, backfill material for the remainder of IRM #5A2 consisted of imported fill certified to meet the requirements of Section 5.4 of DER-10 for unrestricted use as fill for soil cover system including emerging contaminants. Aggregate certified to meet the requirements of Section 5.4 of DER-10 for unrestricted use was used as backfill at the water table where groundwater was present. Geotextile fabrics were placed above the aggregate as a demarcation layer, and the extent and elevation of demarcation layers were surveyed by a NYS licensed surveyor to document as-built conditions.

Phase 2 design modifications to temporary infrastructure were presented in Attachment #3 of the Addendum #2 Work Plan (**Appendix B.2**) which included a TSCA bin on the west side of the IRM #5A2 haul road to utilize during excavation of Area 6 (**Figure 4**), a temporary haul road on the north side of the temporary STRA in Florida (Section 11.2) to be utilized for delivery of imported fill from South Main Street, turnaround areas on haul roads and loading areas for trucks transporting non-hazardous and hazardous waste. Areas anticipated for reuse stockpiling as shown on the Phase 2 Site Plan were converted to non-hazardous stockpile areas based on the reasons discussed above. Pursuant to decommissioning requirements outlined in construction drawings for Amendment #2, temporary infrastructure constructed over native material were excavated to a minimum depth of 2 feet bgs and were completed concurrently with IRM #5A2 excavations. Areas where temporary infrastructure was constructed over approved imported material under Addendum #2, had 6-inches of imported material scraped and post decommissioning samples were collected. An approved as modified letter was received from the Agency on 31 October 2022 for an ISMP EWP Notification submitted for the softball field (Section 15.3) requested the haul roads, Phase 2 non-hazardous MSAs, and RCRA and TSCA bins were removed prior to proceeding with that activity. A technical call was held with the Agency on 10 November 2022 to further discuss the sequencing of temporary infrastructure decommissioning as required in the 31 October 2022 approved as modified letter. On 17 November 2022, an acceptance of the Agency's 31 October 2022 letter was provided which included decommissioning of temporary infrastructure constructed overtop of anticipated ISMP excavations. Temporary infrastructure included a portion of the haul road and Phase 2 MSA, TSCA bin and RCRA bin. Portions of the Phase 2 MSA and other temporary infrastructure remained in place to support additional excavations under IRM #5A2. A notification was provided to NYSDEC on 6 December 2022 that the RCRA bin

would be decommissioned that afternoon. The TSCA bin was decommissioned on 2 February 2022. Post decommissioning samples were collected during removal of both bins. On 17 February 2023, results of post decommissioning samples from the footprint of the former TSCA bin were submitted to the Agency on 17 February 2023. Post-decommissioning samples following removal of the RCRA bin were not submitted; however, following removal of both bins, the Phase 2 non-hazardous MSA was expanded over top of the former locations to support additional non-hazardous soil storage. Post-decommissioning samples related to decommissioning of temporary facilities are further discussed in Sections 13.8.1 and 13.8.3. Agency correspondence and approvals associated with Addendum #2 are included in **Appendix B.2**. Requests to import structural fill and import tickets are provided in **Appendix J**.

13.6 STRA – PE Area Removal and Phase 3 Excavation Work Plan

At the request of ECSD, a temporary PE area within the STRA was constructed in August 2021 using imported sod, topsoil, and fill material (Section 11.2). On 21 June 2021, ECSD informed Geosyntec that the PE area was no longer needed. The work plan for the PE Area Removal and subsequent Phase 3 Excavation was submitted via email to NYSDEC on 23 June 2022 with notice to proceed on 24 June 2022. An additional stamped construction detail was provided for the temporary transit road on 27 June 2023 as per the Agency's notice to proceed email (**Appendix B.2**)

Temporary bleachers installed as part of the Outdoor Physical Education STRA Work Plan (Section 11.2) on the east side of the STRA were dismantled on 18 June 2022 and temporary fencing surrounding the STRA was taken down on 22 June 2022 in preparation for decommissioning. A temporary transit road and ramp was installed on 22 June 2022 across excavations completed in Area 4 to the west into Florida (**Figure 4**) as per the stamped engineer drawing provided to the Agency on 27 June 2023. Dedicated equipment was used to remove the PE area beginning on 22 June 2022 in order to avoid cross-contamination between the imported materials and IRM #5A2 impacted material. Equipment crossed the IRM #5A2 excavation using a temporary haul road and was decontaminated using existing infrastructure. Imported materials were segregated and stockpiled within the IRM #5A2 LOD.

Phase 3 excavations within Florida (**Figure 4**) began on 29 June 2022, once the removal of the PE area was completed on 28 June 2022. Non-hazardous soils were transported within the LOD to the existing non-hazardous soil MSA, and the temporary haul road remained in place throughout the Phase 3 excavations to protect completed IRM #5A2 excavations. The temporary transit road installed on 22 June 2022 was decommissioned on 14 September 2022. A portion of the temporary transit road was also utilized for UST decontamination as discussed in Section 13.7. Both the limits of the temporary transit road and UST decontamination area were surveyed by a NYS licensed survey prior to

decommissioning. Post decommissioning samples were collected on 14 September 2022. Analytical data and figures associated with decommissioning samples and as-built surveys of both the areas were submitted to the Agency on 5 October 2022 with approval to backfill on 14 October 2022 (**Appendix B.6**).

13.7 UST Removal Plan

On 14 July 2022, on-Site personnel encountered a riveted, steel UST at approximately 8-10 feet bgs within the IRM #5A2 Phase 3 excavation. Discovery of the tank was reported to the NYSDEC Region 8 SPILLS coordinator by the Site's Engineer of Record on 15 July 2022. A UST Removal Plan was submitted to NYSDEC on 16 August 2022 and approved by NYSDEC with modifications on 17 August 2022. Before beginning work on the UST, a NYSDEC Pre-Work Notification for Bulk Storage Tank Installation or Closure form was completed and submitted to the NYSDEC in accordance with the Petroleum Bulk Storage regulations. A copy of the NYSDEC Pre-Work Notification is provided as an attachment to the UST Closure Report included in **Appendix B.2**.

After uncovering the tank, on-Site personnel collected PID measurements of the breathing zones around the excavation, which measured <1 ppm. A PID measurement of the headspace within the excavation measured 230 ppm. The UST was observed to be approximately 30 feet long, by 8 feet wide, by 8 feet tall with an estimated capacity of 10,000 gallons. An entryway or manhole to the tank was observed and water was seen to the top of the UST structure. The tank showed no indications of punctures, holes, or corrosion. The origin and age of the UST are not known.

One grab soil sample from the soils surrounding the tank was collected on 18 July 2022 and one water sample was collected from the tank on 19 July 2022. A continuous VOC monitor was relocated downwind of the excavation area (southwest) to monitor air quality around the excavation.

Removal of the soil surrounding the UST began on 23 August 2022 by RECON. Soils surrounding the UST were transported to the non-hazardous stockpile area within the IRM #5A2 MSA utilizing a temporary transit road installed during removal of the PE STRA (Section 13.6). Once soils surrounding the UST were removed, RECON utilized an excavator to pull the UST from a concrete casing observed at the base. On 24 August 2022, Elk Environmental and T&R Environmental decontaminated the UST in a lined and bermed area in the southeast portion of the Phase 3 excavation area (Florida). Decontamination fluids generated from the decontamination activities were transported to Covanta Environmental Solutions in Niagara Falls, New York for disposal. Decommissioning of the temporary decontamination area coincided with the temporary transit road utilized for the STRA removal discussed in Section 13.7.

Field activities identified in the UST Removal Plan pertaining to the excavation, removal,

and backfill of the former UST were conducted between 18 July 2022 and 10 October 2022. Activities also included the abandonment of monitoring well MW-65, installation of a replacement monitoring well (MW-65R), and the removal of additional structures that were encountered during the excavation.

Confirmation sampling (**Table 8** and **10**) surrounding the UST was completed in accordance with the approved Amendment #2 to the IRM #5 Work Plan and DER-10 Section 5.5(c)(3)(iv), in which a minimum of five soil samples were collected, consisting of four sidewall and one bottom sample for each 15 linear feet of trench. Samples were biased toward the location of greatest assumed impact based on field screening. A completion package and request to backfill the UST excavation was submitted to the Agency on 21 September 2022 and approved to backfill on 10 October 2022 (**Appendix B.6**). Also, in accordance with DER-10 Section 5.5(c)(3)(iv), one groundwater sample was collected within 25 feet of the tank hydraulically down gradient. This sample was collected from replacement monitoring well MW-65R, which was installed within 25 feet downgradient of the UST. Monitoring well MW-65R was installed in August 2023 after the UST Area and adjacent IRM #5A2 excavations had been backfilled to facilitate drill rig access. Analytical results for confirmation samples associated with the UST can be found in **Tables 8 and 10**. Additionally, analytical reports, waste disposal manifests, waste profiles, well abandonment and re-installation, and as-built drawings are provided as attachments to the UST Closeout Report included in **Appendix B.2**.

13.8 MSA Work Plans

The following sections summarize the three supplemental work plans associated with IRM #5A2 MSAs, i.e. Addendum #4 – MSA Decommissioning Design Modification, Addendum #6 – Off-site Material Storage Area and Addendum #10 – MSA Decommissioning Work Plan.

13.8.1 Addendum #4 – MSA Decommissioning Design Modification

MSAs were constructed in the NAF in accordance with approved IRM designs for IRM#4, IRM#5, and Amendment #2 for use to stockpile and manage excavated soils for potential reuse and transport and disposal of non-hazardous soils. MSA locations for Phase 1 and Phase 2 of IRM #5A2 construction were presented on Site Plans and modified with Agency approval as construction progressed. Addendum #4 to the IRM #5A2 Work Plan was prepared to modify the IRM #5A2 design for decommissioning the remaining MSAs and other temporary infrastructure components (i.e. temporary haul roads, equipment wash pads, etc.). The revised Addendum #4 was submitted to NYSDEC on 21 October 2022 and approved on 27 October 2022.

Following the submission and approval of IRM #5A2 Addendum #4, remaining MSAs and other temporary infrastructure components were decommissioned by removal of imported

fill, geotextile fabric, and other components followed by the removal of soils to a depth of 6-inches bfg. Sheet 16 of IRM #5A2 Construction Drawings was revised and can be found in **Appendix B.1**. The extent of the temporary infrastructure to be decommissioned was surveyed to document the areas to be restored following the completion of remedial activities.

Bottom samples were collected at a sampling frequency of one sample per 900 square feet from 6-12 inches bfg for analyses for PCBs, metals, SVOCs, and VOCs using hand augers or similar equipment. In addition, analyses for emerging contaminants (e.g., PFAS) were requested for at least 25 percent of samples. If COPCs were detected above Restricted RRSCOs, then soil was removed from the affected area to the nearest location where COPCs did not exceed RRSCOs to a minimum depth of 24 inches bgs, and additional documentation samples were collected. Documentation sample results were compared to IRM subsurface action levels; an exceedance of a subsurface IRM action level was removed by a two-foot stepdown excavation in the affected area. The footprint of the temporary infrastructure and affected areas were surveyed and contained a demarcation layer prior to backfilling in accordance with the final cover system requirements.

Soil cover verification (SCV) sampling was conducted in compliance with an Agency-approved work plan for areas where native soils remained in place (i.e., 0-24 inches bgs from final restoration grade) beneath the surveyed footprints of decommissioned temporary infrastructure. Native soils were excavated beyond the limit of the IRM #5A2 excavation design in order to provide a minimum of two feet of soil cover as part of NAF restoration. Excavations were completed in accordance with the approved Amendment #2 (i.e., material management and post-excavation sampling). The limits of the extended IRM #5A2 excavation were surveyed by a NYS Licensed Land Surveyor and compared against the BCP limits. Completion packages demonstrating achievement of IRM action levels and a minimum of two feet of soil cover were prepared, and, upon approval, a demarcation layer was placed and its extent surveyed by a NYS Licensed Land Surveyor. Backfill with Agency-approved imported fill was completed as part of NAF restoration by the restoration contractor. Native soils remaining in place between the excavation limits and BCP limits were subject to SCV sampling.

In November 2023, the IRM #5A2 Phase 2 haul road was decommissioned in accordance with the Agency-approved revised IRM #5A2 Addendum #4. The Haul Road Decommissioning Completion Package, which documents the excavations, sampling performed, and analytical results were submitted to NYSDEC on 30 November 2023 and approved on 6 February 2024 (**Appendix B.6**).

13.8.2 Addendum #6 – Off-Site Material Storage Area

The Phase 1 and Phase 2 MSAs were constructed in the NAF in accordance with approved

IRM designs for IRM#4, IRM#5, and Amendment #2 for use to stockpile and manage excavated soils for potential reuse and transport and disposal of non-hazardous soils. As IRM #5A2 construction progressed, Unisys required an additional MSA outside the NAF in order to maintain schedule and efficiently complete NAF restoration. Unisys completed an access agreement for MSA construction and use on the STCC property south of EHS. Addendum #6 to the IRM #5A2 Work plan, which presented the plans for the Off-Site MSA to be constructed on STCC property, was submitted to NYSDEC on 22 November 2022 and approved as modified on 2 December 2022. Unisys accepted these conditions on 19 December 2022. Additional schedule updates were provided on 18 January and 8 February 2022, respectively.

Phase 1 of construction for the Off-Site MSA began the week of 23 January 2023 and Phase 2 of MSA construction began the week of 6 February 2023. Shipment of non-hazardous waste for off-Site disposal began on 24 March 2023. Trees within the MSA construction footprint were removed with owner approval, and disturbance of impacted soils was mitigated by leaving tree stumps and root balls in place. Construction of the non-hazardous soil stockpile area for the Off-Site MSA was consistent with previous IRM #5A2 construction in the NAF. Imported fill was placed over geotextile fabric and a silt fence was installed around the area for E&S controls. E&S controls were maintained and continually evaluated, and enhanced controls were implemented as needed. A stabilized construction entrance and equipment decontamination pad were installed for use by vehicles entering and exiting the area. Equipment laydown and construction support areas were constructed with appropriate surface cover material per NYSDEC's specifications to prevent soil rutting and contact with impacted native surface soils. Permanent fencing was installed on the east and west sides of the MSA to limit access, and privacy screening was installed on the west side to limit visibility from South Main Street and the adjacent residential properties. Fencing in the area was permanent, with fence posts stabilized in concrete, per the property owner's request. Spoils from post hole installation were placed on poly sheeting next to the hole and were segregated and stockpiled until waste characterization was complete. Additionally, a temporary fence without privacy screening was installed on the north side. Dust control measures were implemented for construction areas on the STCC property, including on the intra-Site and off-Site haul roads. CAMP dust monitors were deployed during ground intrusive activities, including installation of the fence posts.

Soils from the IRM #5A2 excavations and related excavations conducted under the ISMP and non-hazardous soils previously stockpiled in the Phase 2 MSA were transported to the STCC property for stockpiling within the Off-Site MSA after characterization was completed. Vehicles transporting material traveled on a truck route which avoided truck traffic on South Main Street in front of EHS. Each vehicle was covered, the tailgate

secured, and the wheels, sides, and underbody were decontaminated prior to departure from the Site. Non-hazardous material moved from the EHS property to the STCC property was approved by NYSDEC prior to transport. Stockpiles in the Off-Site MSA were maintained and secured so that soils did not migrate from staging and stockpile locations.

Soils approved for disposal as non-hazardous waste were stockpiled in non-hazardous soil stockpile areas for off-Site transport and disposal. Trucks were loaded in the non-hazardous soil stockpile area for transport to an appropriate facility for off-Site disposal. Each vehicle was lined and covered, with its tailgate secured, and was inspected prior to shipment. The wheels, sides, and underbody were decontaminated prior to departure from the Site. Each shipment had the required manifest, labeling, and placarding in accordance with Federal and state laws and regulations, and trucks hauling impacted soil on the public roadway had a valid NYS Part 364 Waste Transporter Permit. Trucks entered and exited the STCC property between the hours of 7:00 AM and 5:00 PM and traveled on approved routes.

A revised IRM #5A2 Addendum #6 Off-Site MSA updated work plan was initially submitted on 29 June 2023, revised on 15 November 2023 based on Agency comments, and approved as modified on 26 January 2024. This update allowed for the staging and testing of potential reuse soils in the off-Site MSA and for the transport of materials approved for reuse by NYSDEC to EHS. An Imported Material Stockpile Area was separated from the Potential Reuse Stockpile Area using bin blocks. Reuse material was limited to use as fill below the soil cover or temporary infrastructure pending Agency approval.

It is anticipated that the Off-Site MSA will be maintained for use during potential, future IRMs at the Site and the Former Scott Technologies Site after off-Site transport and disposal of IRM #5A2 non-hazardous waste. The MSA will be used for staging of materials from decommissioning of IRM #5A2 temporary infrastructure including previously approved fill material and aggregate and composite mats for future use. Access to areas where future soil investigations are planned will be maintained. In the event that soil investigations require invasive activities below the MSA base layer, the base layer consisting of imported fill and geotextile fabric will be restored upon completion of investigation activities.

The Off-Site MSA will be inspected weekly during active operations and monthly when the Off-Site MSA is not in use. Inspection and maintenance will be documented on an inspection form included as Attachment 2. Completed inspection forms will be submitted with the monthly Project Status Report for the Site.

The Off-Site MSA will be administered under IRM #5A2 until operation and maintenance is transitioned to a subsequent work plan to be approved by the Agency. Unisys has proposed transfer of the Off-Site MSA to the Site #c808054 ISMP (in preparation) during

periods with no remedial construction activity. In the event that the Off-Site MSA will not be operated beyond IRM #5A2 restoration, a decommissioning plan will be submitted for Agency approval under separate cover.

13.8.3 Addendum #10 – MSA Decommissioning Work Plan

In January 2022, the Phase 2 MSA was constructed on top of imported fill in the northwest portion of the NAF, placed in December 2021 as part of the IRM #5A2 EC soil cover following remedial excavation. The MSA was used to stage non-hazardous soils for off-Site transport and disposal. The Phase 2 MSA was decommissioned by removal of the sacrificial layer of non-hazardous material, removal of geotextile layer, and scraping of 6-inches off imported material. These activities were completed in March 2023 in accordance with IRM #5A2 Addendum #4, which is summarized in Section 13.8.1 of this report. Eighty-five post-decommissioning samples were collected between 28 and 30 March 2023 in accordance with IRM #5A2 Addendum #4. Post-decommissioning samples were collected at approximately 6-inches bgs within areas previously backfilled with approved imported fill. Two samples exceeded the RRSCO of 16 mg/kg for arsenic within the cover system (IRM5A2-MSA-B22 and IRM5A2-MSA-B74) and one sample had a detection of total chromium exceeding the PoG SCO for hexavalent chromium (IRM5A2-MSA-B35). Soils in the vicinity of the sample that contained the chromium exceedance were addressed as part of the IRM #5A2 Addendum #8 Phase 2 Area B (Section 13.10) excavation. Analytical results for samples collected during Phase 2 MSA decommissioning can be found in Table 1 included in the Addendum #10 MSA Decommissioning Work Plan (**Appendix B.2**) and laboratory analytical reports are included in **Appendix H.2**. IRM #5A2 Addendum #10 addresses the additional excavations that were required to address RRSCO exceedances within the soil cover following MSA decommissioning. IRM #5A2 Addendum #10 was submitted to NYSDEC on 25 May 2023 and approved on 6 June 2023.

Excavation to remove areas with arsenic exceedances (MSA-B22 and MSA-B74) from the IRM #5A2 EC soil cover system was conducted in accordance with the procedures for excavation and soil management under Amendment #2. In accordance with IRM #5A2 Addendum #4, soil was removed from the affected area to the nearest locations where COPCs that did not exceed RRSCOs to a minimum depth of 24 inches bgs. MSA-B22 was excavated on 9 June 2023 and MSA-B74 on 5 July 2023. Based on the analytical results from the post-decommissioning sampling, excavated soils were determined to be non-hazardous. Excavated soils were then live loaded and transported to the non-hazardous stockpile area within the Off-Site MSA at STCC constructed in accordance with IRM #5A2 Addendum #6 (see Section 13.8.2). Proof of landfill acceptance under profile #30409 was provided to the Agency on 9 June 2023 prior to excavation and transport of the material off-site. Trucks hauling the non-hazardous materials were properly permitted and decontaminated, and they traveled on temporary haul roads across areas that had been

completed or backfilled. Letters from disposal facilities are included in **Appendix F** and waste manifests are included in **Appendix G.12**.

Following excavation of MSA-B22 on 9 July 2023, only bottom post-decommissioning/documentation samples were collected as represented by MSA-B22A and MSA-B22B. Samples were collected at depths of 2.10 and 2.59 feet bfg, respectively. Bottom samples were also collected following excavation of MSA-B74 on 5 July 2023 as represented by MSA-B74A and MSA-B74B. Samples were collected at depths of 3.10 feet bfg and 2.14 feet bfg, respectively. Sidewalls were not collected nor present in both excavations, as the limits tied into previously excavated areas. Sample locations, elevation, and the horizontal and vertical extent of excavations were surveyed by a NYS licensed surveyor. Upon receipt of unvalidated sample results, partial backfill packages were submitted to the Agency with a request to backfill on 30 June and 19 July 2023, to document completion of the excavation. These packages were approved by NYSDEC on 7 July and 20 July 2023, respectively. Demarcation was placed, and the extent and elevation surveyed by a NYS licensed surveyor. Completed areas were backfilled during NAF restoration. Completion packages and Agency approvals are provided in **Appendix B.6**.

13.9 Addendum #7 – Area A-6 North Metal Object Sampling and Containment

On 30 November 2022, Geosyntec notified NYSDEC that a previously unknown metal object was encountered on 29 November 2022 during IRM #5A2 excavation in Area A-6 North after removal of the temporary IRM haul road. The metal object measured approximately 29-inches by 42-inches and was encountered at a depth of 3-4 inches below current grade in the northern portion of the planned Area A-1 excavation that was previously inaccessible due to the presence of the IRM haul road. After the initial discovery of the object, excavation activities within 30 feet of the object were immediately ceased and the on-Site NYSDEC representative (WSP) was notified. Planned excavations outside of the 30-foot buffer area continued.

The object appeared to contain a yellow viscous substance, a small amount of which was visibly identified on the nearby soils, near three holes that were identified on the top and sides of the object. A PID and multi-gas detector were used to assess the nearby breathing zones, and the screening results indicated non-detect concentrations. A PID headspace reading of the interior contents indicated a concentration of 489 ppm. After visual inspection of the object and the surrounding area, it appeared that additional metal piping may have been present underneath the object, but since the object was not moved from its discovered location, the additional piping could not be confirmed at that time. Holes observed near the object appeared to be associated with RI soil borings. A review of RI data in the vicinity of the object indicated that two soil borings were advanced near the object, and marks on the object suggest that one of these borings skimmed the object during

advancement. In three RI samples collected from this area, PCBs concentrations exceeding the IRM action level were detected and metal detections were below applicable IRM action levels.

The object and the surrounding area were covered with heavy-duty polypropylene sheeting that was secured in place. Due to the PID headspace reading, two additional continuous VOC monitors were deployed on 1 December 2022 downgradient and between the object and potential receptor areas as part of the IRM #5A2 CAMP. These additional monitors remained deployed until the object and associated wastes were removed from the Site.

Addendum #7 to the IRM #5A2 Work plan, which documents the changed Site conditions within Areas 6 North and addresses the management and disposal of the metal object, was submitted to NYSDEC on 7 December 2022 and approved as modified on 7 December 2022. Elk Environmental (Elk) was contracted by RECON to inspect, sample, and organize the disposal of the metal object. On 8 December 2022, Elk removed the object and sampled the interior contents, which were accessed through a large hole on the bottom of the object. One confirmation sample and one waste characterization sample were collected from the composited material. One additional confirmation sample was collected from the soil directly underneath the object. Analytical results for these samples can be found in **Table 4B** and **Table 8A**, respectively. Soil directly surrounding the object was placed into an overpack, and the metal object was cut into four pieces, which were also placed in overpacks. Three total overpacks were used to containerize the materials, and they were transferred to the TSCA accumulation area for disposal. Waste characterization data from the metal object was determined to be non-hazardous and was shipped under profile 23953 to Casella on 17 February 2023. A summary of the activities pertaining to the inspection and removal of the metal object by Elk is presented in the DFR for 8 December 2022, included in **Appendix C.2**. Landfill acceptance letters are included in **Appendix F** and waste manifests in **Appendix G.10**. Analytical reports for the samples collected can be found in **Appendix H.1**.

13.10 Addendum #8 Work plans

The following section summarizes various phases to IRM #5A2 Addendum #8 which include:

- Addendum #8 – NAF Final Grade and Soil Cover – Changed Conditions Phase 2
- Addendum #8 – Phase 3 (Eastern Property Line)
- Addendum #8 – Phase 4
- Addendum #8 Phase 3 – Amendment #1
- Addendum #8 Phase 5
- Addendum #8 Phase 6
- Addendum #8 Phase 7

- Addendum #8 Phase 7 Update

The IRM #5A2 design included construction of an Engineering Control (EC) soil cover as part of NAF restoration. As presented in Amendment #2, the EC soil cover system will consist of a minimum of two feet of soil cover, pavement, and buildings to limit exposure to soils with concentrations of COPCs above RR SCOs. Proposed IRM #5A2 excavations in the ballfields were based on final grades in NAF restoration plans provided as Attachment 6 to Amendment #2. In August 2022, ECSD provided Unisys with plans for NAF improvements that altered the ballfield layouts, final grade and stormwater management plans for the NAF (not including the EHS shotput and discus area and parking lot north of the tennis courts). Based on modification to stormwater management originally included in Amendment #2 an updated final grading plan was provided by ECSD on 6 February 2023. Hunt EAS provided revisions to the final grading plan on 3 April, 13 April, 25 April, 22 June, 19 October, and 21 November 2023 on behalf of ECSD. Revisions to the grading plan resulted in areas where a two feet soil cover was not achieved.

Addendum #8 (Appendix B.2) was submitted on 9 February 2023 and Addendum #8 Phase 2 on 5 April 2023. Addendum #8 and Addendum #8 Phase 2 (**Appendix B.2**) provided scopes of work for additional excavation to achieve subgrade elevations that will provide a minimum of two feet of soil cover and/or elevations that will ensure that the irrigation system is installed within the soil cover based on proposed final grade elevations received on 6 February 2023 and subsequent revisions received on 3 April 2023. NYSDEC approved Addendum #8 with modifications on 16 February 2023 and those modifications were accepted on 17 February 2023. NYSDEC approved Addendum #8 Phase 2 with modifications on 12 April 2023 and those modifications were accepted on 13 April 2023. Excavations for Addendum #8 Phases 1 and 2 including stepdown excavations to address IRM action level exceedances were completed on 15 August 2023. Completion packages for Addendum #8 and Addendum #8 Phase 2 were submitted on 14 April 2023 and 18 October 2023, respectively and are included in **Appendix B.2**.

In some areas where further excavation was not feasible, e.g., due to the property line or subsurface utilities, SCV samples were collected to document soil cover quality. Information related to SCV sampling is discussed in Section 13.4. Subsequent interim sampling reports for the SCV sampling events along the north, east, and west boundaries of the NAF noted exceedances of RRSCOs and IRM #5A2 subsurface IRM Action Levels in native soils which were intended to remain in place as part of the IRM #5A2 EC soil cover system (Section 13.4). On 6 September 2023, NYSDEC provided comments on the revised Addendum #9 dated 11 August 2023 and requested additional actions to prevent exposure to soil cover RRSCO exceedances and the final remedy within the NAF property boundary (BCP Site Boundary) as part of IRM #5A2.

Below is a breakdown of Agency work plan and approvals included in Appendix B.2. Addendum 8 phases broken down below are depicted in **Figure 4**.

- Addendum #8 Phase 3
  - Submitted on 28 July 2023
  - Approved as modified received on 2 August 2023
  - Accepted modifications on 2 August 2023
- Addendum #8 Phase 4
  - Submitted on 6 October 2023
  - Approved as modified received on 13 October 2023
  - Accepted modifications on 17 October 2023
- Addendum #8 Phase 3 – Amendment #1
  - Submitted on 31 October 2023
  - Approved as modified received on 8 November 2023
  - Accepted modifications on 8 November
- Addendum #8 Phase 5
  - Submitted on 20 November 2023
  - Approved as modified received on 1 December 2023
  - Accepted modifications on 4 December 2023
- Addendum #8 Phase 6
  - Submitted on 3 January 2024
  - Approved as modified received on 9 January 2024
  - Accepted modifications on 10 January 2024
- Addendum #8 Phase 7
  - Submitted on 20 February 2024
  - Approved as modified received on 28 February 2024
  - Accepted modifications on 4 March 2024
- Addendum #8 Phase 7 Update
  - Submitted on 21 March 2024
  - Approved as modified received on 22 March 2024
  - Accepted modifications on 22 March 2024

A completion package for Addendum #8 Phase 3 was submitted on 10 November 2023 and accepted on 22 December 2023. A partial completion package was submitted for the southern excavation under Addendum #8 Phase 3 – Amendment #1 on 28 November 2023 and accepted on 1 December 2023. An additional completion package was submitted for the northern excavation under Addendum #8 Phase 3 – Amendment #1 on 12 January 2024. Additional completion packages were submitted for Addendum #8 Phase 4, Phase 5 and

Phase 6 on 5 January 2024, 19 January 2024, and 9 February 2024, respectively. Work plans, Agency approvals, and completion packages referenced above are included in **Appendix B.2** and **B.6**, respectively.

NYSDEC comments received via electronic mail on 12 January 2024 required further remedial action to address RRSCO exceedances in the vicinity of the natural gas line located along the northern and western boundaries of the Northern Athletic Fields (NAF). Addendum #8 Phase 7 work plan and Addendum #8 Phase 7 Update work plan proposed additional measures to remove RRSCO exceedances within the soil cover and determine the depth of the active gas line. Those include exceedances identified by SCV sampling (Section 13.4) as well as exceedances left in place after IRM #5A2 excavation due to the proximity to the active gas line on EHS property. A completion package for documentation samples collected along the gas line was submitted on 24 May 2024 and approved on 20 June 2024. The work plans, Agency approvals, and completion package are included in **Appendix B.2** and **B.6**, respectively.

13.11 Addendum #9

Addendum #9 Work Plan was submitted on 24 February 2023 and revised on 3 May 2023 to address updated plans for NAF restoration completed by both Unisys and ECSD. Agency comments were received on 14 March and 19 May 2023, respectively. Concurrently, ECSD provided updates to the NAF master plan in April and June 2023. A second revision to Addendum #9 was submitted on 21 June 2023 and Agency comments were received on 12 July 2023. A third revision to Addendum #9 was submitted on 11 August 2023 and Agency comments were received on 6 September 2023. A fourth revision was submitted on 29 July 2024, following completion of NAF restoration, and Agency comments were received on 7 November 2024. A response to comments was provided to the Agency on 25 November and 13 December 2024, respectively. It is anticipated that an approval with modifications following review of the 13 December 2024 response is forthcoming.

The IRM #5A2 design includes construction of an EC soil cover as part of NAF restoration. NAF restoration plans prepared by Marathon Engineering and SWBR for Unisys were provided as Attachment 6 to Amendment #2 included in **Appendix B.1**. In August 2022, ECSD provided Unisys with plans for NAF improvements that altered the ballfield layouts, final grades, and stormwater management plans for the NAF (not including the EHS shotput and discus area and parking lot north of the tennis courts). Subsequently, multiple discussions were conducted regarding final grades and stormwater management with support from NYSDEC between August 2022 and January 2023. Based on those discussions, ECSD provided Unisys with updated bid documents for NAF improvements on 6 February 2023 and a bid addendum on 16 February 2023. In March 2023, these parties had further discussions regarding final grades and stormwater management with support

from NYSDEC. Based on those discussions, ECSD provided Unisys with a revised final grading plan for the NAF on 4 April 2023 and a revised stormwater management plan on 13 April 2023. Those updated plans included updated grading plans, utility plans, and utility construction details were used to update the NAF restoration plans provided by SWBR and Marathon as Attachment 1 in Addendum #9. The updated ECSD master plan including utility construction details and NAF improvements were provided by Hunt as Attachment 2. The NAF Restoration Plans provided for an in-kind restoration of the NAF with consideration of the ECSD master plan for the NAF as agreed upon by Unisys and ECSD. The NAF Improvement Plans (Attachment 2) provided plans for items that are not considered in-kind restoration (e.g., dugouts, lighting, and ballfield underdrains). The updated stormwater management design includes options for additional storage capacity for the proposed infiltration gallery, however, excavation for that future capacity is not planned. As-built Drawing 36 (**Appendix E**) presents the comprehensive cover system plan that incorporates NAF restoration and improvements based on construction plans and details provided in Attachments 1 and 2 of Addendum #9 and as-built conditions presented in a topographic survey of the NAF restoration including the Shot Put and Discus Area constructed as part of the ECSD Stadium Improvement project (Attachment 3**)**. The cover system includes areas with seeded vegetative cover, sod, infield clay, concrete, and asphalt underlain by imported fill to provide a minimum of two feet of cover as well as native soils where soil quality has been verified to meet the requirements for soil cover. Details of the different cover types are provided on As-built Drawing 36 (**Appendix E**). This Drawing also presents the location of an infiltration gallery (IG) that receives stormwater from inlet structures, perimeter drains, and underdrains presented in the utility plans in NAF Restoration Plans (Attachment 1) and NAF Improvement Plans (Attachment 2). A cross-section of the IG presented in As-Built Drawing 37 (**Appendix E**) shows the IG components underlain by imported sand and a demarcation layer. The feasibility of the IG with respect to hydrology, soil quality, and groundwater quality had been presented in the Interim Site Management Notification - Revised Infiltration Gallery Evaluation Report dated 19 June 2023 and discussed in Sections 15.4 through 15.6. An additional updated capital improvement plan was received by ECSD on 22 June 2023, which addressed additional changes to storm water components and grade changes at the maintenance building and surrounding catch basin #1.

IRM #5A2 provides an EC soil cover through excavation and restoration with a minimum of two feet of soil cover and verification that the soil quality of existing soil cover meets IRM #5A2 cleanup goals. In some areas, the minimum soil cover thickness was 30 inches which allowed for installation of main irrigation lines within the soil cover. Subsequently, modifications to the depth of the irrigation main lines from 30 inches to 18 inches was revised by Site One and provided by ECSD on 7 July 2023.

The required soil cover was achieved through excavation and placement of imported fill that meets soil cover quality requirements. An as-built survey of the NAF final grade elevations is included as Attachment 3 of Addendum #9**.** By comparing as-built final grade elevations to the as-built IRM 5A2 excavation subgrade elevations, the survey confirms that IRM #5A2 has provided the required soil cover with the completion of NAF restoration. Previous comparisons of proposed final grade and as-built excavation subgrade surfaces identified areas that had less than the minimum difference of 24 inches for soil cover or less than a minimum difference of 30 inches for the installation of irrigation main lines based on the original design. Additional work to address soil cover deficiencies is discussed under IRM #5A2 Addendum #8 Phase 2 (Section 13.10). Revisions to Addendum #9 were completed to address Agency comments and to incorporate revisions to the ECSD capital improvement project received on 6 February, 4 April, 13 April, 22 June, and 7 July 2023, respectively, as referenced above. As-built documentation of EC cover system construction and COPCs remaining in place area included in **Appendix E**.

14.0 Issues Encountered

14.1 Corrective Measures – TSCA in Reuse Piles from Area 2

On 29 November 2021, NYSDEC requested a correction measures plan for both the MSA and excavations within Area 2 (AOC-19) due to several reuse stockpile results reporting TSCA level concentrations. Reuse stockpiles originated from an excavation completed on the central portion of AOC-19 from 0-2 feet bgs that included an area where a rail spur was encountered on 16 and 17 November 2021. A corrective measures response was provided to NYSDEC via email on 30 November 2021 identifying TSCA level concentrations in reuse stockpiles A2-A16C, A2-A19C, and A2-A23C. Corrective measures, outlined in the email to NYSDEC, included movement of the stockpiles to the TSCA accumulation bin. Additional material from adjacent stockpiles was also transported to the TSCA bin since the piles were stockpiled in windrows. The underlying base layer and geotextile fabric of the MSA was then removed as non-hazardous material and replaced to eliminate concerns for cross contamination. Tisch monitors were deployed during relocation of TSCA piles and during additional excavation within AOC-19. Soil screening kits, as discussed in Section 6.8.2, were also utilized during excavation of AOC-19 as an additional measure of field screening. A response was received from NYSDEC on 30 November 2021 requesting confirmation samples for SVOCs and VOCs be completed for excavations within Area 2 and enhanced procedures would need to be implemented under the Field Sampling Plan and other current work plans.

Two additional reuse stockpiles were reported as TSCA level concentrations from Area 2

including A2-A59C and A65C. Stockpiles were managed in the same manor described in the correctives measure response to the Agency on 30 November 2021.

Enhanced sampling procedures that were implemented in the field following the 30 November 2021 Agency correspondence include continuous PCB sampling by Tisch monitors, additional samples for SVOCs, VOCs, and 25% emerging contaminants, implementation of a continuous VOC monitor downwind of the work activities, and PID headspace readings of the targeted sample locations. During colder months, headspace readings were collected after allowing the soil to heat to room temperature. If elevated readings (less than 10 ppm) were recorded, the on-Site Agency representative was notified.

14.2 Temporary Rock Crushing, Dust Control/Monitoring

Reuse material anticipated to be used as backfill material below the cover system contained a large percentage of river rock and failed to pass compaction tests after not meeting either density or optimum moisture requirements as described in Section 7.3.5. Additional efforts to utilize the reuse by screening and crushing the excess river rock were performed under the Temporary Rock Crushing and Dust Monitoring Plan, submitted on 26 January 2022 and approved as modified by NYSDEC on 1 February 2022.

A McLoskey J45R High Production Jaw Crusher (Jaw Crusher) was used to process approved reuse piles in an attempt to meet requirements for backfill material at a maximum rate of 150 tons per hour. Crushing activities were conducted between the hours of 8:00 and 4:00 PM, Monday through Friday, and notification letters were distributed to the residents in surrounding areas one week in advance of crushing operations. The Jaw Crusher was positioned on the north-central portion of the Phase 2 MSA, over 200 feet from the nearest residential property line, as required by NYSDEC.

Dust control measures were utilized to prevent visible dust as determined by visual observation and continuous dust monitoring in accordance with the SDCMP and were applied as needed. A QEP monitored dust conditions while crushing activities were conducted and documented such activities in DFRs, which can be found in **Appendix C.2**. In order to address potential dust migration in the direction of the VFW, an additional CAMP monitor was deployed northeast of the Jaw Crusher. Associated CAMP reports are included in **Appendix D.2**. Additionally, Visual Emission opacity testing was performed in accordance with USEPA Reference Method 9. A certified Visual Emissions Observer (VEO) performed triplicate 60-minute tests run at the maximum 150 tons per hour to confirm NYSDEC operational parameters of opacity less than 20% over a six-minute timed average, not exceeding one event above 57% opacity.

A test run of crushing operations was performed on 7 February 2022 including noise measurements and visual emissions testing, and a sample of the crushed material was collected for geotechnical testing. Test pads were constructed on 23 February 2022 to test

the compaction of the crushed material. Compaction did not meet project specifications for density and moisture. On 8 March 2022, test pads were constructed with crushed material mixed with 5% and 10% lime kiln dust to reduce moisture. Compaction tests were performed on the mixed material on 9 March 2022, and measured density and moisture again did not meet project requirements. Thus, rock crushing activities were discontinued under the approved work plan. The Temporary Rock Crushing and Dust Monitoring Plan, Visual Emissions Report, and noise measurements are included in **Appendix B.3**.

After attempts to reduce moisture in the reuse piles and utilize the material failed, it was determined that reuse stockpiles would be disposed as non-hazardous material. Casella approved this material for disposal as alternative daily cover under profile #23938 beginning on 15 January 2022 and #24488 on 1 June 2022. Waste manifests for these profiles are included in **Appendix G.6** and **Appendix G.9**, respectively.

14.3 Corrective Measures Maintenance Plan –NSRC Haul Road

Consistent with the Final (100%) IRM#4 Work Plan dated 30 April 2020, last revised 19 May 2020, and approved as modified on 28 May 2020, temporary haul roads were installed on the Norfolk Southern Railroad Company (NSRC) property in June 2020 as part of IRM #4 to facilitate the transport of soils between excavation and stockpile areas and provide access for construction equipment and materials to complete the remedial action. The haul roads included an eastern temporary TSCA Haul Road for transport of TSCA material and a western temporary haul road, used for transport of non-TSCA soils, imported fill, and general construction activities.

On 20 June 2022, Unisys requested to reuse the NY #3 stone from the Temporary Haul Road to construct the Phase 2 Temporary Haul Road for IRM #5A2 in the NAF, and NYSDEC approved the request as modified on 30 June 2022. On 8 July 2022, while the IRM contractor was stripping stone from the Temporary Haul Road, underlying geotextile and an undetermined quantity of native soils were also removed and mixed with the stone. The IRM contractor also inadvertently disturbed portions along the western edge of the Temporary TSCA Haul Road along an approximately 450-linear foot section. While the majority of the temporary TSCA road remained intact, some materials including stone, straw wattle, geomembrane, underlying mulch, and native soils on the western portion road were stripped and mixed with the materials from the non-hazardous roadway in stockpiles currently on or adjacent to the Temporary Haul Road footprint. The on-Site QEP conducted field screening for TSCA at five stockpiles that included native soils located along the impacted area on 9 July 2022. One stockpile screened positive for TSCA, and a composite sample from the five stockpiles was collected for waste characterization. The stockpiles, haul road footprints, and impacted areas were covered and ballasted on 10 July 2022 and NYSDEC was notified of the incident and corrective measures taken on 11 July 2022. Neither the waste characterization sample nor a subsequent discrete sample from the

stockpile that screened positive confirmed the TSCA screening. Sample locations were presented in Figure 2 of the Corrective Measures Maintenance Plan for NSRC and analytical reports in Attachment #1 (Appendix B.3).

The revised Corrective Measures and Maintenance Plan for the NSRC Haul Road presents plans for temporary haul road maintenance and corrective measures related to the Temporary TSCA Haul Road disturbance on 8 July 2022. The Plan was submitted on 16 December 2022 and approved by NYSDEC on 4 January 2022. Consistent with the Corrective Measures and Maintenance Plan, stockpiles were covered with ballasted, low-permeability tarps, and temporary fencing was reinforced for long-term use. Site conditions have been inspected monthly and after adverse weather events since the approval of this Plan, and the conditions have been documented on inspection forms. Monthly inspections are still ongoing and have been documented in DFRs at the beginning of each month since March 2023 (**Appendices C.3** and **C.4**). Continued obligations set forth in this work plan (Amendment #1 discussed below) and the decommissioning of the haul road will be transferred and addressed under a separate, forthcoming work plan. Unisys has proposed transfer of the Off-Site MSA to the Site #c808054 ISMP (in preparation) during periods with no remedial construction activity.

14.3.1 Corrective Measures and Maintenance Plan – NSRC Amendment #1

Given the scope of off-Site RI work to be conducted on NSRC property, Geosyntec and Unisys met with NYSDEC on 24 July 2024 to propose a scope of work under IRM #5A2 that would facilitate RI activities in the haul road area. NYSDEC responded on 25 July 2024, accepting that the proposed scope of work was to be presented as an amendment to the Corrective Measures and Maintenance Plan for the NSRC Haul Road. Amendment #1 was submitted on 12 August 2024 and approved as modified by NYSDEC on 16 August 2024.

Under Amendment #1 to the NSRC Corrective Measures and Maintenance Plan, maintenance within the haul road area was performed in coordination with the removal of composite mats and geosynthetic liner to facilitate off-Site RI activities. At each RI soil boring location that fell within an area requiring access through a mat, the geosynthetic cover was cut out in a section, the composite mat removed, the NY #3 stone pulled back, and the underlying geosynthetic liner cut for access. Upon completion of the boring, the existing NY #3 stone was smoothed out, the composite mats returned to their place, and the geosynthetic cover replaced. At boring locations not requiring access through a mat but still through a liner, the geosynthetic cover was cut out and materials or infrastructure below was moved to the side to allow access then replaced once the boring was complete.

After the completion of RI activities, a new geosynthetic cover was placed over the existing cover in the Temporary TSCA Haul Road and former Temporary Non-hazardous Haul

Road areas, covering an area of approximately 42-feet by 550-feet. The new cover was secured using existing NY #3 stone, imported fill, and sandbags. Equipment necessary for mat removal and replacement accessed the haul road through the EHS property, with approval from ECSD, and was thoroughly inspected and decontaminated prior to exiting NSRC property. Permanent fencing was also installed to replace the temporary fencing, making it more stable for long-term maintenance of the haul road area. Activities related to this Amendment #1 occurred between 19 August 2024 and 30 August 2024 and are documented in the corresponding DFRs, included in **Appendix C.4**.

Haul road maintenance and fence installation resulted in minor disturbance of native soils. Two particulate monitors and one PCB monitor were deployed around the perimeter of the work area in accordance with the CAMP and NYSDEC requirements. Dust control measures were implemented as necessary.

14.4 Hydraulic Fluid Leak

On 8 September 2023, a hydraulic line on a GPS dozer burst onto the cover system, leaking approximately 1- to 2-gallons of hydraulic fluids. NYSDEC was notified of the leak on the same day. Corrective measures were immediately implemented to soak up the fluid, and the impacted area was bermed and tarped until further corrective measures could be performed the following day. The area of impact was measured as approximately 20 feet by 10 feet. Mechanics were on-Site on 9 September 2023 to service the equipment and move the equipment from the area

The spill was reported to NYSDEC Spills Hotline on 11 September 2023 and a case number of 2305037 was provided. Approximately 6-inches of import material were scraped and one documentation sample was collected from the bottom of the impacted area on the same day. Impacted imported material scraped to 6-inches within the cover system was transported to the STCC and stockpiled on the northern reuse stockpile area.

Additional excavation occurred on 21 September 2023 under the Corrective Measures Plan – Hydraulic Fluid Leak in the NAF submitted to NYSDEC on 20 September 2023 and approved 21 September 2023. Post-excavation samples were collected from below the 2-foot cover system along with a pre-characterization sample. Response actions were determined to be successful based on the documentation sample results. A Hydraulic Fluid Leak Corrective Measures Report summarizing the response actions pertaining to the hydraulic fluid leak was submitted to NYSDEC on 22 November 2023 and approved on 1 December 2023.

Analytical results and a figure for the documentation samples and results for the pre-characterization sample were included in the Hydraulic Fluid Leak Corrective Measures Report (**Appendix B.3)**. Laboratory analytical reports can be found in **Appendix H.2**. The pre-characterization sample is included in **Table 4D**.

14.5 IRM #5A2 (NAF) Corrective Measures Work Plan

Review of the dates of topsoil import by ECSD and their representatives during the EHS 2020 Stadium Renovations project and the corresponding DFRs and drone photographs from those dates determined that approximately half of the imported topsoil was placed in the Shotput and Discus Area, which restoration activities are described within the NAF CCR. This material did not have the chemical sampling required by Table 5.4 (e) 10 of DER-10 nor was it accepted by the Agency for Import approval, resulting in a data gap regarding the imported backfill material presented in Section 9.0. Additional SCV sampling was proposed under the IRM #5A2 (NAF) Corrective Measures Work Plan (CMWP) in lieu of required analytical data to verify that topsoil placed by ECSD and their representatives met criteria for restricted use in accordance with 6 NYCRR Part 375 6.8(b), i.e., RRSCOs. The CMWP was submitted to NYSDEC on 25 February 2026 and a conditional approved as modified was received on 27 February 2026. (**Appendix B.3**).

SCV sampling was performed between 4 March and 6 March 2026 where all samples were reported below RRSCOs and met the criteria for soil cover quality as part of the IRM #5A2 Engineering cover system. A summary of work events and associated analytical data (figures and tables) were reported in an IRM #5A2 (NAF) CMWP Interim Data Report (IDR) submitted to the NYSDEC on 1 April 2026 and approved on 22 May 2026 (**Appendix B.3**). During this sampling event, the variance in topsoil thickness was recorded to range between 2 to 11-inches. Updated final grades and topsoil thickness have been updated in **Appendix E** to reflect recent information surveyed during this sampling event. Restoration of each borehole was completed through use of commercially available topsoil. A receipt of purchase was included in the IDR (**Appendix B.3**).

SCV laboratory analytical reports can be found in **Appendix H.7**. Validated data are included in **Appendix I**.

14.6 IRM #5A2 (NAF) Corrective Measures Work Plan – Addendum #1

Addendum #1 to the Revised IRM #5A2 (NAF) CMWP was submitted to NYSDEC on 4 March 2026 and conditional approval was provided on 25 March 2026 (**Appendix B.3**). This addendum proposed additional sampling of 1.5-inch rock placed by ECSD and their representatives around the perimeter of the Shotput and Discus parking lot and stone dust utilized in the Shotput and Discus throwing circles. At the time of submittal, both materials did not have documentation that sieve analysis or chemical sampling were performed nor was either material accepted by the Agency.

Following submission to the Agency, additional information was received from ECSD and their representatives for the stone dust. This information documented that the Agency authorized sampling of the stone dust after placement. The Request to Import was submitted on 28 February 2023 and approved by NYSDEC on 7 March 2023. This

information was submitted to the Agency on 11 March 2023 communicating that sampling of the stone dust was no longer necessary. The Agency approved omittance of sampling the stone dust under Addendum #1 on 25 March 2026.

Given the limited amount of 1.5-inch rock placed around the perimeter of the Shotput and Discus parking lot (84.8 tons), one sample was collected for sieve analysis composited from five discrete locations. The sample was collected with hand tools, backfilled with 1.5-inch rock from the surrounding area, and submitted for geotechnical analysis. Geotechnical testing was performed following approval from the Agency and results were received on 30 March 2026. Results of the sieve analysis determined that the material met the exemption for chemical analysis (less than 10% passing a size 100 sieve by weight) and met the criteria for soil cover quality as part of the IRM #5A2 Engineering cover system. Results were included in IRM #5A2 (NAF) CMWP IDR submitted to the NYSDEC on 1 April 2026 (**Appendix B.3**).

Appendix E and **Figure 6** have been updated to incorporate information regarding the 1.5-inch rock utilized as part of the IRM #5A2 cover system. **Appendix J.4** includes the Request to Import and DEC acceptance of the stone dust utilized in the Shotput and Discus throwing circles. **Appendix K.2** includes the sieve results of the 1.5-inch rock.

14.7 Deviations From IRM Objectives

Per Section 13.8 and 14.3, the haul road constructed on NSRC property and the Off-Site MSA at STCC were not decommissioned as required as part of the IRM #5A2 Work Plan. The haul road and MSA are currently tarped and inspected monthly. This off-site temporary infrastructure is intended to be utilized for remedial work at Site #c808054; therefore, Addendum #6 to IRM #5A2 and the Revised NSRC Haul Road Corrective Measures and Maintenance Plan will be transferred to the ISMP for Site #c808054.

15.0 ISMP EWP Notifications (Unisys)

The following sections summarize the ground intrusive activities that were completed under the ISMP in accordance with the EWP by Unisys.

15.1 Florida Area Infiltration Gallery ISMP Notification

The ISMP EWP Notification/Work Plan – Infiltration Gallery and Associated Stormwater Utilities was submitted on 15 July 2022 and approved as modified by NYSDEC on 2 August 2022. Under this work plan, excavation was completed for the construction of an infiltration gallery and associated stormwater utilities in the Florida area. Existing storm utilities, including two dry wells and a suspected infiltration gallery, were also demolished. Documentation samples were collected, and corresponding analytical results are included in **Tables 9A-E**. Work was completed on 3 August 2022 and 4 August 2022. In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed, and CAMP

monitors were positioned upwind and downwind of work activities. An Activity Log signed by parties consisting of the Unisys representative (QEP), Engineer of Record, and ISMP contractor, which outlines roles and responsibilities, was completed on 3 August 2022 and submitted to the Agency.

Unisys ISMP Notification Work Plans and Agency approvals are presented in **Appendix B.4**. Backfill packages and Agency approvals are included in **Appendix B.6**. Non-hazardous waste characterization and pre-characterization data associated with the ISMP are presented in **Tables 4C** and **4E,** respectively. Laboratory analytical reports for ISMP documentation samples and ISMP characterization samples can be found in **Appendix H.2** and **Appendix H.4,** respectively. Non-hazardous waste generated under the ISMP was shipped under profile #23896, and associated waste disposal manifests can be found in **Appendix G.16**.

15.2 Baseball Field Dugout and Press Box Foundation

The ISMP EWP Notification/Work Plan – Baseball Field Dugout and Press Box Foundation was first submitted on 12 July 2022, and revisions were requested by NYSDEC on 1 August 2022. The Notification/Work Plan was revised and resubmitted on 3 August 2022 and notice to proceed was provided by NYSDEC with contingencies on 5 August 2022. Under this work plan, excavations for the baseball field dugouts and press box foundations were completed in coordination with IRM #5A2 remedial construction so NAF restoration and improvement construction was within and above the IRM #5A2 EC soil cover system. Excavations included completion of the south line of IRM #5A2 EC soil cover system to tie into the EHS stadium EC soil cover system to the south, first and third base dugout, and the press box. Excavations of these features were complete during stepout/stepdown excavations of Area 3 and excavation of the UST (Section 13.7). Due to these reasons, confirmation sampling performed under IRM #5A2 supported sampling requirements under this work plan. Dedicated sampling for the softball dugouts and press box were not performed.

Unisys ISMP Notification Work Plans and Agency approvals are presented in **Appendix B.4**. Backfill packages and Agency approvals are included in **Appendix B.6**.

15.3 Softball Field Dugout and Press Box Foundation

The ISMP EWP Notification/Work Plan – Softball Field Dugouts and Press Box Foundation was submitted on 4 October 2022 and approved as modified by NYSDEC on 31 October 2022. Geosyntec submitted an acceptance and response to comments letter on 17 November 2022. Under this work plan, excavations for the softball field dugouts and press box foundations were completed following the decommissioning and post-decommissioning sampling of the Phase 2 TSCA and RCRA Accumulation Areas and portions of the IRM #5A2 Haul Road and Phase 2 MSA. Documentation samples were

collected, and corresponding analytical results are included in **Table 9**. Work was completed on 5 December 2022 and 16 February 2023.

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed, and CAMP monitors were positioned upwind and downwind of work activities. Activity Logs signed by parties consisting of the Unisys representative (QEP), Engineer of Record, and ISMP contractor, which outline roles and responsibilities, were completed on 5 December 2022 and 16 February 2023. Documentation samples collected under this work plan are included in **Appendix E**.

Unisys ISMP Notification Work Plans and Agency approvals are presented in **Appendix B.4**. Non-hazardous waste characterization and pre-characterization data associated with the ISMP are presented in **Tables 4C** and **4E,** respectively. Laboratory analytical reports for ISMP documentation samples and ISMP characterization samples can be found in **Appendix H.2** and **Appendix H.4,** respectively. Non-hazardous waste generated under the ISMP was shipped under profile #23896, and associated waste disposal manifests can be found in **Appendix G.16**.

15.4 NAF Drainage Structure and Water Supply

The ISMP EWP Notification/Work Plan – Northern Athletic Fields Drainage Infrastructure and Water Supply was submitted on 12 May 2023 and approved by NYSDEC on 18 May 2023, with the exception of the Attachment #1 – Interim Site Management Notification Revised Infiltration Gallery Evaluation Report which was approved on 11 July 2023.

Restoration of the EHS Northern Athletic Fields (NAF), including the EHS baseball field, softball field, and practice fields, were planned following completion of remedial construction under IRM #5A2. Restoration included installation of catch basins and an infiltration gallery (IG) for stormwater drainage and water supply lines for irrigation. An ISMP notification submitted on 24 February 2023 provided an evaluation of the feasibility of the proposed infiltration gallery and plans for preconstruction and post-construction monitoring of water quality and water elevations and will be reported under separate cover under the RI. NYSDEC and Unisys representatives met on 8 March 2023 to discuss preliminary comments to the ISMP notification and incorporation of those preliminary comments into this EWP notification/work plan. Modifications to the ISMP notification include additional soil quality maps, additional groundwater quality maps, and tables summarizing previous soil and groundwater sampling events in the vicinity of the proposed infiltration gallery. Soil quality data for the IG footprint and four-foot buffer area, soil cover, and subsurface soils were compared to PoG SCOs, RRSCOs, and IRM #5A2 subsurface cleanup goals, respectively and are included in **Appendix B.4**. Additional Agency comments were received on 24 March 2023. A revised ISMP EWP notification was submitted in response to Agency comments on 31 March 2023 along with a Pre-

Construction Monitoring Plan and Post-Construction Monitoring Plan and is included as Attachment 1 (**Appendix B.4**). The Pre-Construction Monitoring Plan was approved with modifications on 18 April 2023 and the Post-Construction Monitoring Plan was approved with modifications on 20 April 2023. ECSD provided a revised master plan on 13 April 2023 with updated plans for final grading and stormwater management. A revised Addendum #9 including an updated NAF restoration design that incorporates the updated ECSD master plan are discussed under Section 13.11. Excavations were proposed for this work plan for the catch basins, infiltration gallery, and associated piping and the irrigation water supply line in coordination with IRM #5A2 remedial construction so NAF restoration construction were within and above the IRM #5A2 Engineering Control (EC) soil cover system. An Activity Log signed by parties consisting of the ECSD representative, Unisys representative (QEP), Engineer of Record, and ECSD contractor which outlines roles and responsibilities was submitted to NYSDEC on 23 May 2023 and included in **Appendix B.4.**

Drainage infrastructure and grading were designed by Hunt EAS and incorporated into the NAF restoration design. ISMP excavations were completed in areas where IRM #5A2 excavations have been completed and demarcation has been placed for the EC soil cover system. In some areas, imported fill had been placed to backfill those areas to IRM final grades prior to NAF restoration. Native material anticipated to be generated during the infiltration gallery and stormwater utility tranches was pre-approved by Casella on 25 May, 30 May, 31 May, and 4 June 2023 utilizing existing confirmation samples under profile #30409 (**Appendix F**) and was provided to the Agency on 25 May and 6 June 2023, respectively.

Excavation of the infiltration gallery was performed by RECON and was completed between 26 May and 2 June 2023. Imported material previously backfilled as part of IRM #5A2 excavations was removed and off-loaded in a staging area on the northeast portion of the NAF. Native material, approved for non-hazardous disposal, was transported to the STCC MSA during excavation of the IG. Documentation samples were collected from 2 to 16 feet bfg and are depicted in As-Built Drawings 24A to 34F (**Appendix E**) and included in **Table 9** and **Table 11**. As-built conditions and documentation samples collected from the IG were provided to the Agency on 27 June 2023. A request was received from the Agency on 7 August 2023 to provide an as-builts showing that samples SSHS-ISMP-NAF-IG-S19 and corresponding duplicate (DUP5A), which had arsenic exceedances above PoG, were located outside the 4-foot buffer of the IG. An updated data package was provided to the Agency on 10 August 2023, which depicted the extent of the 4-foot buffer zone at the bottom of the excavation. Data associated with the IG were approved by the Agency on 14 August 2023. An additional as-built survey was provided

to the Agency from a licensed NYS surveyor depicting the limits of the infiltration gallery, limits of the 4-foot buffer zone, and limits of the IG chambers on 23 August 2023. On 24 August 2023, approval was received from the Agency which included approval for final connections of the IG to allow stormwater infiltration.

Installation of the infiltration gallery and associated backfilling was performed by Edger from 21 June to 10 July 2023, with the exception of manhole locations on the north and south side of the IG. These areas were not backfilled as to allow for final stormwater connections which would allow stormwater infiltration to the IG. On 24 August 2023, approval was received from the Agency. On 20 October 2023 an as-built package was submitted to the Agency which depicted each IG layer as it progressed in construction as well as each layer of approved imported material utilized during backfill of the IG. As-builts were approved by the Agency on 27 November 2023. Material included Hawbaker #3 stone, Breesport sand, and Brewer's Pit item #4 (fill). Requests to import and import tickets associated with this material are included in **Appendix J**.

Excavation of the stormwater drainage and water supply lines for irrigation into native material was completed between 10 July and 18 August 2023. RECON completed excavation of the stormwater utilities into native material and Edger completed excavation of stormwater utilities into approved imported material backfilled during IRM #5A2 excavations. Post-excavation documentation samples completed during utility excavation are depicted in Drawings 24A to 34F (**Appendix E**) and included in **Table 9**. A completion package documenting as-built conditions and analytical from documentation samples was submitted to the Agency on 31 October 2023 and approved as modified on 6 December 2023 (**Appendix B.6**).

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed, and CAMP monitors were positioned upwind and downwind of work activities. Unisys ISMP Notification Work Plans and Agency approvals are presented in **Appendix B.4**. Backfill packages and Agency approvals are included in **Appendix B.6**. DFRs are included in **Appendix C.3**. Laboratory analytical reports for ISMP documentation samples can be found in **Appendix H.2**. Non-hazardous waste generated under the ISMP was shipped under profile #30409, and associated waste disposal manifests can be found in **Appendix G.12**.

15.5 Baseball Sports Lighting

The ISMP EWP Notification/Work Plan – Northern Athletic Fields Electrical Restoration was submitted on 8 September 2023 and approved as modified by NYSDEC on 19 September 2023. Under this work plan, excavations for the restoration of electrical service to the baseball right field light poles were completed by Edger on 21 September 2023 and

a pull box and a conduit were installed. Native material generated during this activity was placed into four 55-gallon drums staged on poly adjacent to the excavation. Native material was pre-characterized prior to work execution using surrounding confirmation sample data and approved by Casella on 12 September 2023 under profile #23896. Documentation samples (ISMP-LP2-S1 through S3 and LP2-B1) were collected on 22 September 2023 and are reflect on As-Built Drawings 30A through 34F (**Appendix E**) and corresponding analytical results are included in **Table 9**. A completion package documenting as-built conditions and documentation samples collected was submitted to the Agency on 2 November 2023 and approved on 17 November 2023 (**Appendix B.6**).

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed, and CAMP monitors were positioned upwind and downwind of work activities. An Activity Log signed by parties consisting of the Unisys representative (QEP), Engineer of Record, and ISMP contractor, which outlines roles and responsibilities, was completed on 19 September 2023.

Unisys ISMP EWP Notification Work Plans and Agency approvals are presented in **Appendix B.4**. Backfill packages and Agency approvals are included in **Appendix B.6**. Laboratory analytical reports for ISMP documentation samples can be found in **Appendix H.2**. Non-hazardous waste generated under the ISMP was shipped under profile #23896, and associated landfill correspondence and waste disposal manifests can be found in **Appendix F** and **G.16,** respectively.

16.0 ISMP Work Plans (ECSD)

The following sections summarize work conducted by ECSD under the ISMP.

16.1 ECSD Shotput and Discus Area

An ISMP Notification/Work Plan for work to be completed in the shotput and discus area was submitted by Sterling Environmental on behalf of ECSD on 4 November 2022 and approved with contingencies by NYSDEC on 11 November 2022. Activities completed under this Notification included the installation of two fence posts along the western EHS property boundary and the removal of approximately 200 square feet of asphalt between the shotput and discus area and the South Main Street sidewalk. The Agency responded with a contingent approval on 11 March 2022. An additional Addendum (Addendum #2) was submitted to the Agency associated with asphalt removal and is discussed below.

On 21 August 2023, Sterling Environmental submitted an Addendum (Addendum #1) to the ISMP Notification/Work Plan for activities proposed above in the shotput/discus area to include installation of light pole foundations. This Addendum was approved as modified on 26 April 2023. This Addendum included the installation of four concrete light pole

foundations within the new parking area for the shot-put/discus area by excavating to a depth of 5 feet below the final cover system grade. Two locations were anticipated to generate native material below the cover system. An Activity Log signed by parties consisting of the Unisys representative (QEP), Engineer of Record, and ISMP contractor, which outlines roles and responsibilities, was completed on 19 May 2023. Light pole locations are presented in Appendix A of Addendum #1 (**Appendix B.5**). Excavation of light poles into native material within the shotput/discus area was completed on 23 May 2023 with QEP oversight conducted by Sterling Environmental. ISMP documentation samples are shown in Drawing 30A through 34F (**Appendix E**) and included **Table 9**. A data package documenting as-built conditions and associated ISMP documentation samples collected was provided to the Agency 4 August 2023 and approved on 29 August 2023. Material generated during this activity was off-loaded into a roll off staged north of the EHS maintenance shed. This roll off was subsequently moved to the northern portion of the NAF. Waste characterization samples were collected from six roll offs (D1-D6) by Sterling Environmental and submitted to Alpha Analytical. Waste characterization samples reported by Alpha Analytical are included in **Appendix H.4**. Waste was approved by Casella on 7 September 2023 by Casella under profile #23896.

Addendum #2 to the ISMP Notification/Work Plan in the shotput/discus area was submitted to the Agency on 15 June 2023 with an approved as modified received on 3 July 2023. Addendum #2 was submitted to include revisions to the 3 November 2022 ISMP Notification/ Work Plan, contingently approved by the NYSDEC on 11 November 2022, for the excavation and management of existing asphalt pavement. An Activity Log signed by parties consisting of the ECSD representative, Unisys representative (QEP), Engineer of Record, and ECSD contractor which outlines roles and responsibilities was submitted to NYSDEC on 2 November 2023 and included in **Appendix B.5.** Approximately 140 square feet of existing asphalt was removed along the western property line on 7 November 2023 between the South Main Street sidewalk and the IRM #5A2 excavation limits. Approximately 50 square feet of asphalt was determined to be located on ECSD property, and the remaining 90 square feet was located beyond the property limits. Existing asphalt was removed to allow restoration with topsoil and grass. The asphalt removal did not remove or impact native material. Historical design drawings were provided as Appendix B of the ISMP Notification/Work Plan which depicted installation of asphalt and sub-base material when initially installed. Asphalt was loaded directly into an awaiting truck for off-Site recycling. Waste characterization was not required to be performed. Following asphalt removal, SCV sampling was completed under the Continued NAF Soil Cover Verification Sampling Plan Update submitted to NYSDEC on 31 August 2023 with contingent approval of the Sampling Plan Update on 18 October 2023 which is further discussed in Section 13.4.

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed by implementation of an upwind and downwind monitor. DFRs are included in **Appendix C.3**. Analytical reports are included in **Appendix H.2.** Letters from disposal facilities, if applicable, are included in **Appendix F** and waste disposal manifests in **Appendix G.16.**

16.2 Addendum #7 – ECSD Baseball Field Scoreboard

The ISMP Notification/Addendum #7 was submitted by Sterling Environmental on behalf of ECSD on 9 December 2022 and contingent approved by NYSDEC on 14 December 2022. Due to the baseball field scoreboard originally being installed at too high an elevation, soils surrounding the foundation had to be excavated and the foundation demolished so a new concrete pile cap could be installed between 6 February and 8 February 2023. Concrete pillars previously installed during FFC capital improvement work were removed and backfilled with approved imported fill. Based on this information, the demolished concrete was transported by Edger to a recycling facility. Un-characterized material was transported to the non-hazardous MSA in the northeast portion of the NAF and windrowed with existing ISMP generated material awaiting waste characterization sampling under profile #23896 and included in **Table 4C**. Five documentation samples were collected (ISMP-BB-S1 through S4 and BB-B1). Documentation samples are depicted in Drawings 30A through 34F (**Appendix E**) and included in **Table 9**. QEP oversight was performed by Sterling Environmental. A completion package documenting as-built conditions and documentation samples was submitted to the Agency on 27 November 2023 and approved on 7 December 2023 (**Appendix B.6**).

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed by utilization of existing CAMP monitors for IRM #5A2. An Activity Log signed by parties consisting of the ECSD representative, Unisys representative (QEP), Engineer of Record, and ECSD contractor which outlines roles and responsibilities was submitted to NYSDEC on 1 February 2023 and included in **Appendix B.5** and backfill packages in **Appendix B.6**. DFRs are included in **Appendix C.3**. Analytical reports are included in **Appendix H.2.** Letters from disposal facilities are included in **Appendix F** and waste disposal manifests in **Appendix G.16.**

16.3 Addendum #8 ISMP Notification/Work Plan for ECSD Fence Installation

This ISMP Notification/Work Plan was submitted by Sterling Environmental on 2 June 2023 and was approved as modified by the Agency on 14 June 2023. Although this work plan was submitted as part of the FFC capital improvement work, these activities were completed and managed as part of ISMP activities completed for NAF restoration and discussed herein.

Fence installation under this work plan completed as part of ISMP for NAF restoration included the installation of approximately 210 feet of fencing with fence posts installed at

a 10-feet spacing along the boundary of the NAF and FFC. Twenty-three fence posts were installed consisting of augering post foundations to a depth of 5 feet below the final cover system grade. Post foundations were augured using 12-inch diameter augers for regular fence post and 18-inch diameter augers for end and corner posts. Fence post locations are presented in Appendix A of Addendum #8 (**Appendix B.5**). Fence post installation between the NAF and FFC was completed on 16 November 2023 by Whitmore Fencing Company.

A second fence post installation activity included approximately 200 feet of fencing with fence posts installed at a 10-feet spacing along the west boundary of the shotput/discus area. Twenty-one fence posts were installed consisting of augering post foundations to a depth of 5 feet below the final cover system grade. Post foundations were excavated using 12-inch diameter augers for regular fence post and 18-inch diameter augers for end and corner posts. Fence post locations are presented in Appendix A of Addendum #8 (**Appendix B.5**) Fence post installation on the west side of the shotput/discus area was completed on 20 November 2023 by Whitmore Fencing Company.

Additional fence installation activities on the FFC included under Addendum #8 ISMP Notification/Work Plan will be included under separate cover as part of the FFC CCR. Waste generated during the activities discussed above were transported by Edger and off-loaded into roll offs staged in the northeast corner of the NAF. Waste characterization samples were collected as ISMP-D14 and D15 (**Table 4C**) and was approved by Casella on 6 December 2023 to be shipped under profile #23896.

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed by utilization of the existing IRM #5A2 CAMP for the first activity, and implementation of two dust monitors upwind and downwind of the work activity for the second. An Activity Log signed by parties consisting of the ECSD representative, Unisys representative (QEP), Engineer of Record, and ECSD contractor which outlines roles and responsibilities was submitted to NYSDEC on 3 November 2023 and included in **Appendix B.5**. DFRs are included in **Appendix C.3**. Analytical reports are included in **Appendix H.2.** Letters from disposal facilities are included in **Appendix F** and waste disposal manifests in **Appendix G.16**.

16.4 Excavation of Native Soils during NAF Restoration

The ISMP Notification/Work Plan for native soil excavations activities during NAF restoration was submitted by Sterling Environmental on behalf of ECSD on 30 June 2023 and approved as modified by NYSDEC on 20 July 2023. Activities completed under this Notification included the installation of four concrete foundations for light poles around the softball field, one concrete foundation for the softball field scoreboard, and electrical

and communication utilities connecting the NAF to Fieldhouse 1. Following submittal of this ISMP Notification/Work Plan, it was determined that excavation of the football field scoreboard was to be completed entirely within approved imported material based on elevations of subgrade excavations. Additional sampling within imported material was not required and native material was not generated.

Light pole foundation excavations were depicted in the ISMP Notification/Work Plan Excavation in Appendix A and identified as light pole foundation A1, A2, B1, and B2. Light pole location A1, B1, and B2 were anticipated to encounter native material below the cover system. Light pole B2 excavation into native was completed by RECON due to overlap of stepout excavations completed for Area F under Addendum #8 Phase 2 (Section 13.10). ISMP documentation samples were collected as ISMP-NAF-LP-S1 through S7 and LP-B1. Documentation samples were submitted with the Addendum 8 Phase 2 completion package to the Agency on 18 October 2023 and approved on 14 November 2023. Documentation samples are depicted in Drawings 25A through 29G (**Appendix E**) and included in **Table 9**. Non-hazardous material generated by overlapping Area F and ISMP excavations was pre-characterized prior to removal by utilization of existing confirmation data. Material was pre-approved by Casella on 12 August 2023 under profile #30409.

Light pole foundations A1 and A2 were excavated by Musco Lighting, a subcontractor for ECSD, on 9 October 2023. Material generated during the excavations were placed in roll-off bins staged on the northern portion of the NAF. Documentation samples collected from light pole foundation A1 (ISMP-NAF-LPA1-S1 through S4 and LPA1-B1) and A2 (ISMP-NAF-LPA1-S1 through S4 and LPA2-B1) are depicted on Drawings 25A through 29G (**Appendix E**) and included in **Table 9**. As-built conditionals and analytical data collected under this work plan activity were submitted to the Agency on 20 November 2023 and approved on 30 November 2023. Waste characterization samples were collected from the roll off bins as ISMP-D7 through D13 (**Table 4C**), submitted to Casella on 27 October 2023, and approved under profile #23896 on 1 November 2023.

Excavation of native material for electrical and communication utility installation to Field House #1 occurred on 20 September 2023. Documentation samples were collected within the utility trench on 25 September 2023 as ISMP-EL-S1 through S8 and ISMP-EL-B1 through B4, depicted on Drawings 30A through 34F (**Appendix E**), and included in **Table 9**. Material generated during Waste characterization samples were collected from the roll-offs as ISMP-D7 through D13 (**Table 4C**), submitted to Casella on 27 October 2023, and approved under profile #23896. On 1 November 2023, excavation spoils were off-loaded into roll-off bins staged on the northern portion of the NAF. As-built conditions and documentation samples collected under this work plan activity were submitted to the Agency on 9 February 2024 and approved as modified on 14 March 2024 (**Appendix B.6**).

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed

utilizing existing IRM #5A2 CAMP monitors positioned upwind and downwind of work activities. An Activity Log signed by parties consisting of the ECSD representative, Unisys representative (QEP), Engineer of Record, and ECSD contractor which outlines roles and responsibilities for the ISMP excavation activities was submitted on 20 October 2023 and included in **Appendix B.5** and backfill packages in **Appendix B.6**. DFRs are included in **Appendix C.3**. Analytical reports are included in **Appendix H.2 and H.4,** respectively**.** Letters from disposal facilities are included in **Appendix F** and waste disposal manifests in **Appendix G.16.**

16.5 Augering of Native Soils during NAF Restoration

The ISMP Notification/Work Plan for augering activities during NAF restoration was submitted by Sterling Environmental on behalf of ECSD on 30 June 2023 and approved as modified by NYSDEC on 20 July 2023. Augering activities included the installation of two concrete post foundations for electrical supply panels, 175 fence posts around the softball and baseball field perimeters (corresponding to approximately 1,750 total linear feet of fencing), three post foundations for a sliding gate, four post foundations for softball and baseball field foul poles, 31 fence posts for softball and baseball field backstop fencing (corresponding to approximately 310 total linear feet of fencing), and eight post foundations for two batting cages. Documentation samples were not required to be collected as per the ISMP Notification/ Work Plan (**Appendix B.5**).

Augering of the baseball field perimeter fence posts was completed by Whitmore Fence company, an ECSD sub-contractor, on 10 August and 11 August 2023. Augering of baseball backstops and foul poles were completed by Track and Field Installers (TFI), an ECSD subcontractor, on 30 August 2023 and softball backstop and foul poles from 31 August through 1 September 2023. Native material generated during augering activities were transported by Edger (ECSD contractor) into roll off bins staged on the northern portion of the NAF. Waste characterization samples were collected from six roll off bins (D1-D6) by Sterling Environmental and submitted to Alpha Analytical. Waste characterization samples reported by Alpha Analytical are included in **Appendix H.4**. Waste was approved by Casella on 7 September 2023 by Casella under profile #23896.

Softball perimeter fencing was completed by Whitmore Fence company from 5 September through 7 September 2023. Native material generated during augering activities were transported by Edger (ECSD contractor) into roll off bins staged on the northern portion of the NAF. Waste characterization samples were collected by Geosyntec as ISMP-D7 through D13 and are included in **Table 4C**. Waste was approved by Casella on 27 October 2023 and approved under profile #23896 on 1 November 2023.

Augering for the electrical panel installation and slide gate installation along O'Gorman Street were addressed during excavation of IRM #5A2 Addendum #8 Phase 4 (13.10) and

confirmation samples were collected under this work plan. Additional ISMP documentation samples were not collected.

Augering for the baseball field batting cage was completed between 3 January and 5 January 2024 by ECSD grounds crew. Soils generated during augering activities were transported to roll off bins staged north of the maintenance shed. Waste characterization samples were collected by Geosyntec as ISMP-D16 and D17 and are included in **Table 4C**. The waste was approved by Casella on 30 January 2024 under profile #23896.

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed by utilization of existing IRM #5A2 CAMP monitors and positioned upwind and downwind of work activities. An Activity Log signed by parties consisting of the ECSD representative, Unisys representative (QEP), Engineer of Record, and ECSD contractor which outlines roles and responsibilities, was completed on 3 August 2023 and 28 December 2023, respectively and included in **Appendix B.5**. DFRs are included in **Appendix C.3**. Analytical reports are included in **Appendix H.4** respectively**.** Letters from disposal facilities are included in **Appendix F** and waste disposal manifests in **Appendix G.16.**

16.6 Softball Field Perimeter Fence Drain Corrective Measures Work Plan

On 11 January 2024, during augering activities associated with the installation of fence posts for softball field batting cages as described in Section 16.4, a perforated drainage pipe for the softball field perimeter drain and the underlying drainage liner were damaged. Geosyntec and NYSDEC on-Site personnel were notified. The Football Field Perimeter Fence Drain Corrective Measures Work Plan was submitted by Sterling Environmental on behalf of ECSD on 1 March 2024 and approved by NYSDEC on 13 March 2024 (**Appendix B.5**). Corrective measures included excavating a shallow trench to expose the damaged pipe section then installing new impermeable drainage liner and a new section of drainage pipe connecting to the existing pipe. Activities occurred within imported backfill material; potentially impacted native soil was not encountered. The response actions were implemented following the receipt of NYSDEC approval by ECSD, and the shallow trench was backfilled using the same excavated material. A QEP was not required during implementation of these corrective measures.

16.7 Batting Cage Installation – Augering Activities

The ISMP Notification/Work Plan for augering activities associated with two additional batting cages was submitted by Sterling Environmental on behalf of ECSD on 18 March 2025 and approved as modified by NYSDEC on 26 March 2025. Augering activities included 12 post foundations for two batting cages. Documentation samples were not required to be collected as per the ISMP Notification/ Work Plan (**Appendix B.5**).

Augering for the baseball and softball field batting cage was completed between 4 April

and 5 April 2025 by ECSD grounds crew, under the oversight of Sterling Environmental as the QEP. Soils generated during augering activities were transported to a roll off bin staged north of the maintenance shed. Reuse samples were collected by Sterling Environmental and included in **Appendix B.5**. On 8 July 2025, Sterling Environmental submitted the results of reuse characterization sampling to the NYSDEC, indicating that the results met reuse criteria; however, ECSD did not have a use for the soil. It was requested that the material be relocated to the STCC MSA to support future remedial activities. The NYSDEC accepted the transport request on 12 September 2025 (**Appendix B.5**). This material was not utilized as backfill on the NAF.

In accordance with Section G-15 of the ISMP/EWP, dust monitoring was performed by utilization of two CAMP monitors and positioned upwind and downwind of work activities. An Activity Log signed by parties consisting of the NYSDEC representative, QEP, Engineer of Record, and ECSD contractor which outlines roles and responsibilities, was completed on 4 April 2025. Additional documentation generated by Sterling Environmental including and activity log, DFR, CAMP data, reuse characterization results, and Agency correspondence are included in **Appendix B.5. Appendix E**, **Figure 2** and **Figure 6** have been updated to incorporate the additional batting cage installations.

Notes:
CAMP - Community Air Monitoring Program
PCB - polychlorinated biphenyls
Lab Method used: TO4A - PCBs
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
T - Indicates that a quality control parameter has exceeded laboratory limits
D - Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U - non-detect at the value indicated
µg/m3 - micograms per cubic meter
PCB concentrations detected above CAMP Threshold OF 0.11 ug/m3 are presented in light gray.

Notes:
Samples that do not exceed applicable thresholds are shown based on Workplan requirements and landfill correspondence as reflected in Appendix F. Samples shown were disposed as Hazardous Waste B -
Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
Samples that do not exceed applicable thresholds are shown based on Workplan requirements and landfill correspondence as reflected in Appendix F. Samples shown were disposed as Hazardous Waste B -
Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
Samples that do not exceed applicable thresholds are shown based on Workplan requirements and landfill correspondence as reflected in Appendix F. Samples shown were disposed as Hazardous Waste B -
Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above 20x RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4A
Summary of IRM#5A2 Analytical Results - Waste Characterization (Hazardous Waste)

Notes:
Samples that do not exceed applicable thresholds are shown based on Workplan requirements and landfill correspondence as reflected in Appendix F. Samples shown were disposed as Hazardous Waste B -
Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above 20 RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4B
Summary of IRM#5A2 Analytical Results - Waste Characterization (Non-Hazardous Waste)

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1020 - Ignitability
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
Waste characterization samples collected by ECSD's consultant were reported by a separate laboratory and are included in Appendix H.
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Concentrations detected above RCRA Toxicity Characteristics are presented in grey
PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits .
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4D
Summary of IRM#5A2 Analytical Results - Pre-Characterization

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4D
Summary of IRM#5A2 Analytical Results - Pre-Characterization

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371. 4 (e)) are presented in dark grey

Table 4D
Summary of IRM#5A2 Analytical Results - Pre-Characterization

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4D
Summary of IRM#5A2 Analytical Results - Pre-Characterization

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Concentrations detected above RCRA Toxicity Characteristics are presented in grey

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4F
IRM#5A2 Reuse Shipped as Non-Hazardous Material

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile orgamic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4F
IRM#5A2 Reuse Shipped as Non-Hazardous Material

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-deteet at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlornated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlornated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Table 4F

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey.

Table 4F
IRM#5A2 Reuse Shipped as Non-Hazardous Material

Former Sperry Remington Site - North
Elmira, New York

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

Notes:
B - Compound detected in method blank
H - Sample was received and analyzed past holding time.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs

Concentrations detected above 20X RCRA Toxicity Characteristics are presented in grey. Metals above 20x RCRA Toxicity Characterisitics were accepted by a non-hazardous receiving facility shown in Appendix F.

PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

	Mercury	mg/L	<0.00020U	<0.00020U
	Selenium	mg/L	<0.10U	<0.10U
	Silver	mg/L	<0.050U	<0.050U

Notes:
J - estimated value
U - non-detect
µg/L - Micrograms per liter
mg/L - Milligrams per liter
PCBs - polychlorinated biphenyls
VOCs - volatile organic compounds
SVOC - semi volatile organic compounds
Lab Method used: SW8082A - PCBs
Lab Method used: SW6010C/SW6010D - Metals,
SW7470A - Mercury
Lab Method used: SW8270D/8270E - SVOCs
Lab Method used: SW8260C/SW8260D - VOCs
Lab Method used: SW1010 - Flash Point
Lab Method used: SW9040C - pH
Lab Method used: SW9014 - Cyanide
Lab Method used: SW9034 - Sulfide
Lab Method used: SW8081B/SW8151A - Pesticides

Table 6A
Summary of End Point Sampling Results - PCBs (0-2 ft bgs)
Former Sperry Remington Site - North Portion
Elmira, NY

TABLE (6A) - Summary of End Point Sampling Results - PCBs (0-2 ft bgs)									PCBs									
									Total PCBs	Aroclor 1016	Aroclor 1221	Aroclor 1232	Aroclor 1242	Aroclor 1248	Aroclor 1254	Aroclor 1260	Aroclor 1262	Aroclor 1268

Notes
PCBs - Polychlorinated Biphenyls
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
ND - Non Detect
Lab Method used: SW8082A - PCBs
MDL - Method Detection Limit
ft bgs - Feet Below Ground Surface
B - Compound detected in method blank
E - Exceeds instrument calibration range.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray
Analyte concentrations detected above New York State Hazardous Waste Criteria are presented in black

TABLE (6B) - Summary of End Point Sampling Results - Metals (0-2 ft bgs)

									Metals											
									Aluminum mg/kg	Antimony mg/kg	Arsenic mg/kg	Barium mg/kg	Beryllium mg/kg	Cadmium mg/kg	Calcium mg/kg	Chromium (III+VI) mg/kg	Chromium, Hexavalent mg/kg	Cobalt mg/kg	Copper mg/kg	Iron mg/kg
Restricted - Residential											16	400	72	4.3		110	110		270	
Protection of Groundwater											16	820	47	7.5		19	19		1720	
IRM Subsurface Action Level											100	2000		20		100

Notes
ft bgs - Feet Below Ground Surface
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
MDL - Method Detection Limit
Dashes indicate sample was not analyzed for analyte
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

Notes
ft bgs - Feet Below Ground Surface
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
MDL - Method Detection Limit
Dashes indicate sample was not analyzed for analyte
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measu
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

TABLE (6C) - Summary of End Point Sampling Results - SVOCs (0-2 ft bgs)

									Total PAH'S	Acenaphthene	Acenaphthylene	Acetophenone	Anthracene	Atrazine	1,1-Biphenyl	Benzaldehyde	Benz(a)anthracene	Benzo(a)pyrene (BaP)	Benzo(b)fluoranthene	Benzo(k)fluoranthene
									mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg
Restricted - Residential										100	100		100				1	1	1	3.9
Protection of Groundwater										98	107		1000				1	22	1.7	1.7
IRM Subsurface Action Level									100											
Location	Sample Name	Sample Date	Sample Depth (ft bgs)	Sample Elevation	Final Grade Elevation	Elevation Difference	Lab Report	Site Location

Notes
SVOCs - Semivolatile Organic Compounds
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
ft bgs - Feet Below Ground Surface
Lab Method used: SW8270D/8270E - SVOCs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

Notes
SVOCs - Semivolatile Organic Compounds
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
ft bgs - Feet Below Ground Surface
Lab Method used: SW8270D/8270E - SVOCs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measu
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

Notes
SVOCs - Semivolatile Organic Compounds
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
ft bgs - Feet Below Ground Surface
Lab Method used: SW8270D/8270E - SVOCs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measu
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

Notes
SVOCs - Semivolatile Organic Compounds
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
ft bgs - Feet Below Ground Surface
Lab Method used: SW8270D/8270E - SVOCs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measu
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

Notes
SVOCs - Semivolatile Organic Compounds
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
ft bgs - Feet Below Ground Surface
Lab Method used: SW8270D/8270E - SVOCs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measu
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

TABLE (6D) - Summary of End Point Sampling Results - VOCs (0-2 ft bgs)

Location	Sample Name	Sample Date	Sample Depth (ft bgs)	Sample Elevation	Final Grade Elevation	Elevation Difference	Lab Report	Site Location	**Acetone** mg/kg	**Benzene** mg/kg	**Bromochloromethane** mg/kg	**Bromodichloromethane** mg/kg	**Bromoform** mg/kg	**Bromomethane** mg/kg	**Carbon disulfide** mg/kg	**Carbon Tetrachloride** mg/kg	**Chlorobenzene** mg/kg	**Chlorodibromomethane** mg/kg	**Chloroethane** mg/kg	**Chloroform** mg/kg	**Chloromethane** mg/kg	**Cyclohexane** mg/kg	**1,2-Dibromo-3-Chloropropane** mg/kg	**Dichloromethane** mg/kg	**1,2-Dibromoethane** mg/kg
Restricted - Residential									100	4.8						2.4	100			49				100	
Protection of Groundwater									0.05	0.06						0.76	1.1			0.37				0.05

Notes
VOCs - Volatile Organic Compounds
mg/kg - milligrams per kilogram
ft bgs - Feet Below Ground Surface
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
Lab Method used: SW8260C/SW8260D - VOCs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font

Notes
VOCs - Volatile Organic Compounds
mg/kg - milligrams per kilogram
ft bgs - Feet Below Ground Surface
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
Lab Method used: SW8260C/SW8260D - VOCs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and preci
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font

TABLE (6D) - Summary of End Point Sampling Results - VOCs (0-2 ft bgs)

Location	Sample Name	Sample Date	Sample Depth (ft bgs)	Sample Elevation	Final Grade Elevation	Elevation Difference	Lab Report	Site Location	Isopropylbenzene mg/kg	Methyl Acetate mg/kg	Methylcyclohexane mg/kg	Methyl Ethyl Ketone mg/kg	4-Methyl-2-pentanone mg/kg	Methyl-tert-butyl ether mg/kg	Styrene mg/kg	1,1,2,2-Tetrachloroethane mg/kg	Tetrachloroethene mg/kg	Toluene mg/kg	1,2,3-Trichlorobenzene mg/kg	1,2,4-Trichlorobenzene mg/kg	1,1,1-Trichloroethane mg/kg	1,1,2-Trichloroethane mg/kg	Trichloroethene mg/kg	Trichlorofluoromethane mg/kg	Vinyl chloride mg/kg
Restricted - Residential												100		100			19	100			100		21		0.9
Protection of Groundwater												0.12		0.93			1.3	0.7			0.68		0.47		0.02

Notes
VOCs - Volatile Organic Compounds
mg/kg - milligrams per kilogram
ft bgs - Feet Below Ground Surface
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
Lab Method used: SW8260C/SW8260D - VOCs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and preci
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font

TABLE (6D) - Summary of End Point Sampling Results - VOCs (0-2 ft bgs)

Location	Sample Name	Sample Date	Sample Depth (ft bgs)	Sample Elevation	Final Grade Elevation	Elevation Difference	Lab Report	Site Location	Xylene (m) mg/kg	Xylene (o) mg/kg	Xylenes (Total) mg/kg
Restricted - Residential											100
Protection of Groundwater											1.6

Notes
VOCs - Volatile Organic Compounds
mg/kg - milligrams per kilogram
ft bgs - Feet Below Ground Surface
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
Lab Method used: SW8260C/SW8260D - VOCs
MDL - Method Detection Limit
^ - ICV,CCV,JCB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time ouside acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and preci
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font

Notes
PFAS - Per- and Polyfluoroalkyl Substances
µg/kg - micrograms per kilogram
ft bgs - Feet Below Ground Surface
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
Lab Method used: E537(M) - PFAS
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
I - Value is EMPC (estimated maximum possible concentration)
EMPC - Estimated maximum possible concentration
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font

Notes
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation
ND - Non Detect
Lab Method used: SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7471B - Mercury
MDL - Method Detection Limit
ft bgs - Feet Below Ground Surface
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

Notes
SVOCs - Semivolatile Organic Compounds
mg/kg - milligrams per kilogram
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation
ND - Non Detect
Lab Method used: SW8270D/8270E - SVOCs
MDL - Method Detection Limit
ft bgs - Feet Below Ground Surface
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit o
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray

Former Sperry Remington Site - North Portion
Elmira, NY

TABLE (7E) - Summary of Documentation Sampling Results - PFAS (0-2 ft bgs)									**Perfluorooctanesulfonic acid (PFOS)**	**Perfluorooctanoic acid (PFOA)**	**Perfluoropentanoic acid (PFPeA)**	**Perfluorotetradecanoic acid (PFTeA)**	**Perfluorotridecanoic acid (PFTriA)**	**Perfluoroundecanoic acid (PFUnA)**
									ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg
Restricted - Residential									44	33				
Protection of Groundwater									3.7	1.1				
Location	Sample Name	Sample Date	Sample Depth (ft bgs)	Sample Elevation	Final Grade Elevation	Elevation Difference	Lab Report	Site Location						
SSHS-ISMP-NAF-EL-S2	SSHS-ISMP-NAF-EL-S2	9/22/2023	0 - 2ft	854.818	856.64	1.82	1801629182	ISMP	0.046 J	< 0.19 U	< 0.19 U	< 0.19 U	< 0.19 U	< 0.19 U

Notes
PFAS - Per- and Polyfluoroalkyl Substances
µg/kg - micrograms per kilogram
ft bgs - Feet Below Ground Surface
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary.
Elevation difference was not calculated
Lab Method used: E537(M) - PFAS
B - Compound detected in method blank
I - Value is EMPC (estimated maximum possible concentration)
EMPC - Estimated maximum possible concentration
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual

Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray

Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font

Notes
PCBs - Polychlorinated Biphenyls
mg/kg - milligrams per kilogram
ND - Non Detect
ft bgs - Feet Below Ground Surface
Bolded samples in the Location column were added to exceedances listed as "Final Remedy Due to Technical Impracticability, Site Management or Offsite RI"
Calculated Elevation Differences depicted as -- were collected outside the final design/lateral design limits for the NAF Restoration and are beyond the BCP site boundary. Elevation difference was not calculated
Lab Method used: SW8082A - PCBs
MDL - Method Detection Limit
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time oustide acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H3 - Sample was received and analyzed past holding time.
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations detected above Subsurface IRM Action Levels are presented in dark gray
Analyte concentrations detected above New York State Hazardous Waste Criteria are presented in black
