- Mercury by EPA Method 7471B
- Total Cyanide by EPA Method 9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

180-68556-11	TRIP BLANK

The samples were received at the laboratory at 2.7°C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.
- Sample collection times were not documented on the COC for field duplicate samples DUP 17, 72517. The laboratory assigned collection times of 00:00.
- The sample ID listed on the COC for the trip blank was TRIP BLANK #1. The laboratory logged the sample in with the ID TRIP BLANK. In addition, no collection date or time were documented on the COC for the trip blank. The laboratory assigned collection date and time of 7/25/17, 00:00.
- There was rush sticker on the COC, obliterating part of the analysis request section of the COC.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 218214 and 218236). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WB7-8, S5, A 72517. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

One or both recoveries of carbon tetrachloride, n-propylbenzene, 1,1,1-trichloroethane and 1,2,4-trimethylbenzene were high, outside laboratory specified acceptance criteria. Since these compounds were not detected in sample WB7-8, S5, A 72517, no qualifications were applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

One trip blank, TRIP BLANK, accompanied the samples. VOCs were not detected in the trip blank above the MDLs, with the following exception.

Acetone was detected in the trip blank at a concentration greater than the RL. Since acetone was not detected in the associated samples, no qualifications were applied to the data.

1.8 Field Duplicate

One field duplicate, DUP 17 72517 was collected with the sample set. Acceptable precision [RPD <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicate and the original sample, WB6-7, S1, B 72517.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. 2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 218278). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WB7-8, S5, C 72517. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The MS recoveries of acenaphthylene, anthracene, benzo[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, phenanthrene, pyrene and pyridine were low, outside the laboratory specified acceptance criteria and the RPDs for these compounds were high outside the laboratory specified acceptance criteria. Therefore, based on the low recoveries, the non-detect result of pyridine in sample WB7-8, S5, C 72517 was UJ qualified as estimated less than the MDL and based on the low recoveries and high RPDs, the concentrations of acenaphthylene, anthracene, benzo[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, phenanthrene and pyrene in sample WB7-8, S5, C 72517 were J qualified as estimated.

In addition, the RPDs of the following compounds were high and outside laboratory specified acceptance criteria. Therefore, the concentrations of these compounds in sample WB7-8, S5, C 72517 were J qualified as estimated.

3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Methods 9010C/9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043,

NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-68622-1	WB6-7, S3, A 072617
180-68622-2	WB6-7, S3, B 072617
180-68622-3	WB6-7, S3, C 072617
180-68622-4	WB6-7, S4, A 072617

Laboratory ID	Client ID
180-68622-5	WB6-7, S4, B 072617
180-68622-6	WB6-7, S4, C 072617
180-68622-9	TRIP BLANK#1

The samples were received at the laboratory at 2.1°C within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.
- There was no time documented on the COC for the sample relinquishing.
- There was rush sticker on the COC, obliterating part of the analysis request section of the COC.
- Samples WB5-6, S1, A 072617 and WB5-6, S1, C 072617 were listed on the COC and reported in laboratory report 180-68622-2.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for vinyl chloride was high, outside method specified acceptance criteria in analytical batch 218353. The %D was 24%D, with a low bias; the method specified acceptance criteria is 20%D. Since the %D was within the validation guidance of 25%D, no qualifications were applied to the data.

The narrative indicated that the CCV %D for acetone was high, outside method specified acceptance criteria in analytical batch 218548. The %D was 26%D, with a low bias; the method limit is 20%D. Since the %D was within the validation guidance of 40%D, no qualifications were applied to the data.

1.2 Holding Times

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

- Mercury by EPA Method 7471B
- Total Cyanide by EPA Method 9010C/9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043,

NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID

180-68716-5	WB3-4, S2, B 072817
180-68716-6	WB3-4, S2, C 072817

Laboratory ID	Client ID
180-68716-7	WB3-4, S3, A 072817

180-68716-10	DUPE 19
180-68716-11	DUPE 18
180-68716-12	TRIP BLANK #1

The samples were received at the laboratory at 0.6ºC within the criteria of 0-6ºC. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- The VOC sample vials for sample TRIP BLANK#1 were received with air bubbles of approximately 6mm in diameter.
- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correctio and initials and date of person making the corrections.
- There was rush sticker on the COC, obliterating part of the analysis request section of the COC.
- The sample collection times were not documented on the COC for field duplicate samples DUP 18 and DUP 19 and the sample collection date and time were not documented for Trip Blank #1. The laboratory assigned collection times of 00:00 to the field duplicates and sample date and time of collection of 7/28/17, 00:00 to the trip blank.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent differences (%Ds) for vinyl chloride were high, outside method specified acceptance criteria in analytical batches 218535 and 218552. The %Ds were 20.5%D, with a low bias and 21.8%D, with a high bias, respectively; the method specified acceptance criteria is 20%D. Since the %Ds were within the validation guidance of 25%D, no qualifications were applied to the data.

The narrative indicated that the CCV %Ds for 1,1,1-trichloroethane, 1,2-dichloroethane, and n-butylbenzene were high, outside method specified acceptance criteria, with high biases in analytical batch 218566. Since 1,1,1-trichloroethane, 1,2-dichloroethane, and n-butylbenzene were not detected in the associated samples, no qualifications were applied to the data.

The VOC sample vials for sample TRIP BLANK #1 were received at the laboratory with air bubbles of approximately 6mm in diameter. No qualifications were applied to the trip blank data, but the data user should note the discrepancy.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding time for the VOC analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported (batches 218540, 218552 and 218570). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported with the sample set.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCS duplicate (LCSD) pair were reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

The LCS recoveries of carbon tetrachloride and 1,1,1-trichloroethane in the LCS in batch 218535 and the LCS recovery of 1,2-dichloroethane in the LCS in batch 218566 were high, outside laboratory specified acceptance criteria. Since these compounds were not detected in the associated samples, no qualifications were applied to the data.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

One trip blank, TRIP BLANK#1, accompanied the samples. VOCs were not detected in the trip blank above the MDLs.

1.8 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for VOCs, DUPE 19. Acceptable precision [RPD <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicate and the original sample, WB3-4, S3, B 7282017.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010.

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the CCV %Ds for 1,4-dioxane and pyridine in analytical batch 218855 and the CCV %Ds for hexachlorobutadiene and pyridine in analytical batch 219005 were high, outside method specified acceptance criteria, with high biases. Since 1,4-dioxane, hexachlorobutadiene and pyridine were not detected in the associated samples, no qualifications were applied to the data.

The narrative indicated that the CCV %D for benzo[g,h,i]perylene was high, outside method specified acceptance criteria in analytical batch 219005. The %D was 22.8%D, with a low bias; the method specified acceptance criteria is 20%D. Since the %D was within the validation guidance of 30%D, no qualifications were applied to the data.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 218811). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WB3-4, S1, C 072817. The recovery and RPD results were within the laboratory specified acceptance criteria with the following exceptions.

The recoveries acenaphthylene, anthracene, benzo[k]fluoranthene, dibenz(a,h)anthracene, dibenzofuran, fluorene, indeno[1,2,3-cd]pyrene, naphthalene and pyridine were low outside, laboratory specified acceptance criteria and the RPD for pyridine was high, outside laboratory

specified acceptance criteria. Therefore, the concentrations of acenaphthylene, anthracene, benzo[k]fluoranthene, dibenz(a,h)anthracene, dibenzofuran, fluorene, indeno[1,2,3-cd]pyrene and naphthalene in sample WB3-4, S1, C 072817 were J qualified as estimated and the non-detect result of pyridine was UJ qualified as estimated less than the MDL.

In addition, the recoveries of benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[g,h,i]perylene, chrysene, fluoranthene, phenanthrene and pyrene were flagged by the laboratory with '4' in the laboratory report, indicating the concentrations of these compounds in the parent sample were more than four times the spike concentrations and the laboratory control limits are not applicable. Based on professional and technical judgment, the concentrations of benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[g,h,i]perylene and chrysene in sample WB3-4, S1, C 072817 were J qualified as estimated. Due to the differences between the sample and the spike concentrations and professional and technical judgment, no qualifications were applied to the fluoranthene, phenanthrene and pyrene data.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for SVOCs, DUPE 18. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, WB3-4, S1, C 072817, with the following exceptions.

The field duplicate acceptance criteria were not met for acenaphthene, acenaphthylene, anthracene, benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[g,h,i]perylene, benzo[k]fluoranthene, chrysene, dibenz(a,h)anthracene, dibenzofuran, fluoranthene, fluorene, indeno[1,2,3-cd]pyrene, naphthalene, phenanthrene and pyrene. Therefore, based on professional and technical judgment, the concentrations of these compounds in the field duplicate pair were J qualified as estimated. The qualifications due to the field duplicate results are summarized in Attachment 3 at the end of this document.

2.8 Sensitivity

Sample WB3-4, S1, C 072817 was reported from two dilutions, 4X and 20X. The concentrations of fluoranthene, phenanthrene and pyrene from the 4X dilution exceeded the instrument linear calibration range; therefore, the concentrations of fluoranthene, phenanthrene and pyrene from the

20X dilution are the concentrations to use; the other SVOC results for sample WB3-4, S1, C 072817 from the 4X dilution are the results to use. The use of the results is indicated in the EDD with qualifiers file.

The samples were reported to the MDLs. Elevated non-detect results were reported for samples DUPE 18, WB3-4, S1, C 072817, WB3-4, S2, C 072817 and WB3-4, S3, C 072817 due to the dilutions analyzed.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010. It was noted that no NYSDEC DER10 App 5 Constituent Levels for Imported Fill were listed for the following compounds.

2,4,5-Trichlorophenol
2,4,6-Trichlorophenol
2,4-Dinitrotoluene
2-Methylphenol
Dibenzofuran
Hexachlorobenzene

Hexachlorobutadiene
Hexachloroethane
Methylphenol, 3 & 4
Nitrobenzene
Pyridine

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

3.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. 3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The narrative indicated that the CCV %Ds for PCB 1016, PCB 1048 and PCB 1254 were high, outside method specified acceptance criteria in analytical batch 218956 on gas chromatography (GC) column RTX-CLP2. The associated sample results were reported from the other GC column, RTX-CLP1, which had acceptable CCV %Ds. Therefore, no qualifications were applied to the data.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

3.2 Holding Times

No holding times are listed in the referenced method for PCB analyses. The samples were extracted and analyzed within 6 days of collection. Therefore, no qualifications were applied to the data, based on professional and technical judgment.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 218813). PCBs were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for PCBs, DUPE 18. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, WB3-4, S1, C 072817, with the following exceptions.

The field duplicate acceptance criteria were not met for PCB-1248 and PCB-1254. Therefore, based on professional and technical judgment, the concentrations of PCB-1248 and PCB-1254 in the field duplicate pair were J qualified as estimated.

4.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WB3-4, S1, C 072817. The recovery and RPD results were within the laboratory specified acceptance criteria with the following exceptions.

The MSD recovery of copper was low and the recovery of lead was high, both outside laboratory specified acceptance criteria. Therefore, the concentration of copper in sample WB3-4, S1, C 072817 was J- qualified as estimated with a low bias and the concentration of lead was J+ qualified as estimated with a high bias.

5.1 Overall Assessment

The mercury data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

5.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 218684). Mercury was not detected in the method blank above the MDL.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WB3-4, S1, C 072817. The RPD results were within the laboratory specified acceptance criteria. The recoveries of mercury were high, outside laboratory specified acceptance criteria. Therefore, the concentration of mercury in sample WB3-4, S1, C 072817 was J+ qualified as estimated with a high bias.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043,

NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-68756-1	W1-b, S1, A 073117

180-68756-17	TRIP BLANK #1
180-68756-18	DUP 20

The samples were received at the laboratory at 3.1°C and 3.6 °C within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- There was rush sticker on the COC, obliterating part of the analysis request section of the COC.

- Sample collection times were not documented on the COC for field duplicate sample DUP 20 and Trip Blank #1. The laboratory assigned collection times of 00:00.

- Samples DUP 21, WB4-5, S1, A 073117, WB4-5, S1, C 073117, WB4-5, S2, A 073117 and WB4-5, S2, C 073117 were listed on the COC and reported in laboratory report 180-68756-2.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 8260C and 5035/8260C.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent differences (%Ds) for 1,1,1-trichloroethane and 1,2-dichloroethane were high, outside method specified acceptance criteria, with high biases in analytical batch 218817. The %Ds were 21.4%D and 20.9%D, respectively. Since these two compounds were not detected in the associated samples, no qualifications were applied to the data. In addition, the CCV %D for 2-butanone was high, outside method specified acceptance criteria in analytical batch 218817, with a low bias. The %D was 23.4%. Since the %D was within the validation guidance acceptance criteria of 40%D, no qualifications were applied to the data.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding time for the VOC analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 218804 and 218835). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD pair was not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

One trip blank, TRIP BLANK#1, accompanied the samples. VOCs were not detected in the trip blank above the MDLs, with the following exceptions.

Acetone and toluene were detected at estimated concentrations greater than the MDLs and less than the RLs in the trip blank. Since acetone and toluene were not detected in the associated samples, no qualifications were applied to the data.

1.8 Field Duplicate

A field duplicate, DUP 20 was collected with the sample set. Acceptable precision [relative percent difference (RPD) <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicate and the original sample, W1-b, S4, A 073117.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043,

NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-68814-11	WB2-3, S1, A 08.01.17
180-68814-12	WB2-3, S1, B 08.01.17
180-68814-13	WB2-3, S1, C 08.01.17

The samples were received at the laboratory at 2.7°C within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- There was rush sticker on the COC, obliterating part of the analysis request section of the COC.

- The sample collection time was not documented on the COC for Trip Blank #1. The laboratory assigned collection time of 00:00 to the trip blank.

- Samples WB4-5, S3, A 08.01.17; WB4-5, S3, C 08.01.17; WB4-5, S4, A 08.01.17; WB4-5, S4, C 08.01.17; W9, S5, A 08.01.17; W9, S5, C 08.01.17; WB5-6, S2, A 08.01.17; WB5-6, S2, C 08.01.17; WB5-6, S3, A 08.01.17 and WB5-6, S3, C 08.01.17 were listed on the COC and reported in laboratory report 180-68814-1.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for 2-butanone was high, outside method specified acceptance criteria in analytical batch 218968. The %D was 20.8%D with a low bias. Since the %D was within the validation guidance acceptance criteria of 40%D, no qualifications were applied to the data.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding time for the VOC analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 218943 and 218980). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD pair was not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS and one LCS/LCS duplicate (LCSD) pair were reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

One trip blank, TRIP BLANK#1, accompanied the samples. VOCs were not detected in the trip blank above the MDLs, with the following exception.

Acetone was detected at an estimated concentration, greater than the MDL and less than the reporting limit (RL) in the trip blank. Since acetone was not detected in the associated samples, no qualifications were applied to the data.

1.8 Field Duplicate

A field duplicate was not collected with the sample set.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample date and time were included in the sample IDs in the EDD and not included in the sample IDs in

the laboratory report. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the CCV %Ds for 1,4-dioxane and pyridine in analytical batch 219126 and the CCV %Ds for 1,4-dioxane, hexachlorobutadiene and pyridine in analytical batch 219211 were high, outside method specified acceptance criteria, with high biases. Since these compounds were not detected in the associated samples, no qualifications were applied to the data.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 219075). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WB2-3, S1, C 08.01.17. The recovery and RPD results were within the laboratory specified acceptance criteria with the following exceptions.

The MS recoveries and RPDs of anthracene, benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[g,h,i]perylene, chrysene, fluoranthene, indeno[1,2,3-cd]pyrene, phenanthrene and pyrene were high and the MS/MSD recoveries of pyridine were low, outside laboratory specified acceptance criteria. Additionally, the RPD of benzo[k]fluoranthene was high, outside laboratory specified acceptance criteria. Therefore, the concentrations of anthracene, benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[g,h,i]perylene, benzo[k]fluoranthene, chrysene, fluoranthene, indeno[1,2,3-cd]pyrene, phenanthrene and pyrene were J qualified as estimated and the non-detect result of pyridine was UJ qualified as estimated less than the MDL in sample WB2-3, S1, C 08.01.17.

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. 3.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. 3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The narrative indicated that the CCV %D for PCB 1016 were high, outside method specified acceptance criteria in analytical batch 219079 on gas chromatography (GC) column RTX-CLP2. The associated sample results were reported from the other GC column, which had an acceptable CCV %D. Therefore, no qualifications were applied to the data.

The narrative also indicated that sample WB2-3, S1, C 08.01.17 exhibited a slight retention time shift for the internal standards, surrogates, and Aroclor peaks. As the patterns for the Aroclors were clearly present, no qualifications were applied to the data, based on technical and professional judgement.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043,

NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for 2-butanone was high in analytical batch 219096, outside method specified acceptance criteria. The %D was 21.1%D, with a low bias. Since the %D was within the validation guidance acceptance criteria of 40%D, no qualifications were applied to the data.

The CCV %D for 1,1,1-trichloroethane was high in analytical batch 219248, outside the method specified acceptance criteria. The %D was 20.5% with a high bias. Since 1,1,1-trichloroethane was not detected in the associated sample, no qualifications were applied to the data.

3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The narrative indicated that the CCV %D for PCB 1254 in analytical batch 220002 was high, outside method specified acceptance criteria on gas chromatography (GC) column RTX-CLP1. The associated sample results were reported from the other GC column, which had an acceptable CCV %D. Therefore, no qualifications were applied to the data.

The sample contains a mixture of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore,

there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in the sample were J qualified as estimated.

Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID # 180-68986-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of three solid samples, including one sample for matrix spike/matrix spike duplicate (MS/MSD) analysis, two equipment blanks and two trip blanks, collected August 03-04, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 8260C and 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3520C/8270D and 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3510C/8082A and 3541/8082A
- Metals by EPA Methods 3005A/6010C and 3050B/6010C
- Mercury by EPA Methods 7470A and 7471B
- Total Cyanide by EPA Methods 9010C/9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-68986-1	EQ BLK #1 08.03.17
180-68986-2	EQ BLK #2 08.04.17
180-68986-7	W5-b, S5, A 08.04.17
180-68986-7 MS	W5-b, S5, A 08.04.17 MS
180-68986-7 MSD	W5-b, S5, A 08.04.17 MSD

Laboratory ID	Client ID
180-68986-8	W5-b, S5, B 08.04.17
180-68986-9	W5-b, S5, C 08.04.17
180-68986-10	TRIP BLANK #1
180-68986-11	TRIP BLANK #2

The samples were received at the laboratory at 1.0°C and 4.4°C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- There was a rush sticker on the COC, obliterating part of the analysis request section of the COC.

- The sample collection time was not documented on the COC for the trip blanks. The laboratory assigned collection times of 00:00.

- The narrative indicated that both trip blanks were received with air bubbles of approximately 6 millimeters (mm) in diameter. Since the VOCs were not detected in the associated samples, no qualifications were applied to the data.

- Samples WB 1-2, S3, A 08.04.17, WB 1-2, S3, C 08.04.17, WB 1-2, S4, A 08.04.17 and WB 1-2, S4, C 08.04.17 were listed on the COC and reported in laboratory report 180-68986-2.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 8260C and 5035/8260C.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for 1,1,1-trichloroethane was high, outside method specified acceptance criteria in analytical batch 219248. The %D was 20.5%D with a high bias. Since 1,1,1-trichloroethane was not detected in the associated samples, no qualifications were applied to the data.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding time for the VOC analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 219341 and 219248). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate

One MS/MSD pair was reported, using sample W5-b, S5, A 08.04.17. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria

1.7 Equipment Blank

Two equipment blanks were collected with the samples, EQ BLK #1 08.03.17 and EQ BLK #2 08.04.17. VOCs were not detected in the equipment blanks above the MDLs.

1.8 Trip Blank

Two trip blanks, TRIP BLANK#1 and TRIP BLANK #2, accompanied the samples. VOCs were not detected in the trip blanks above the MDLs, with the following exceptions.

2-Butanone was detected at an estimated concentration, greater than the MDL and less than the reporting limit (RL) in TRIP BLANK #1. Acetone was detected at estimated concentrations, greater than the MDL and less than the reporting limit (RL) in both TRIP BLANK #1 and TRIP BLANK #2. Since 2-butanone and acetone were not detected in the associated samples, no qualifications were applied to the data.

As noted above, both trip blanks were received with air bubbles of approximately 6 mm in diameter. Since the VOCs were not detected in the associated samples, no qualifications were applied to the data.

1.9 Field Duplicate

A field duplicate was not collected with the sample set.

1.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

Sample W5-b, S5, C 08.04.17 contains a mixture of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in this sample were J qualified as estimated.

Hi Aron,

Soil samples were collected for import of up to 1000 cy from Brewer's Pit in Horseheads NY and analyzed by NYS ELAP certified ESC Lab Sciences, Mt Juliet, TN. The data from Analytical Report # L916338 dated June 20, 2017 was validated by Geosyntec Consultants on June 27, 2017 and compared to DER 10 appendix 5 for Restricted Residential site use. No exceedance of these comparative criteria were reported.

Provided that the 1000 cubic yards of material requested to import to the Former Sperry Remington – North Portion Site #c808022 is consistent with the material analyzed, approval is granted.

If additional soils are needed from this stockpile or area of the mine, then sampling frequency should be 2 VOC and 1 composite for every additional 1000 cubic yards in accordance with Table 5.4(e)10. If additional soils are from a different stockpile or area of the mine, then sampling frequency reverts back to the beginning of Table 5.4(e)10.

If you have any questions, feel free to contact me.

Dear Tim,

Please find attached the revised request to import soil for fill material and as the base material for the stockpiled soils with data validation of the chemical analyses. Geotechnical data were collected to assure that the soil met project requirements for structural fill. The fill material is not exempt from chemical testing under DER-10 Section 5.4(e)5 so the results for #80 sieve analysis are not shown.

Please let me know if this meets your needs for approval.

Regards,
Aron

Hi Aron,

Aggregate material from Brewer's Pit in Horseheads NY was analyzed by CME Associates on March 22, 2017. The annotated and PE certified Report No.: 29729L-04-0317 demonstrates that this material is exempt from chemical testing in accordance with NYSDEC DER-10 guidance.

Provided that the 500-800 cubic yards of material requested to import to the Former Sperry Remington – North Portion Site #c808022 is consistent with the material analyzed, approval is granted.

If you have any questions, feel free to contact me.

Attached is an example of what I need you to provide since the documentation does not show the 80 sieve… in your case you should reference the 80 sieve to the mm equivalent.

Hi Aron,

Soil samples were collected for import of up to 4000 additional cubic yards of soils from Brewer's Pit in Horseheads NY and analyzed by NYS ELAP certified ESC Lab Sciences, Mt Juliet, TN. The data from Analytical Report # L919054 dated July 10, 2017 was validated by Geosyntec Consultants on July 11, 2017 and compared to DER 10 appendix 5 for Restricted Residential site use. No exceedance of these comparative criteria were reported.

Provided that the additional 4000 cubic yards of soil requested to import to the Former Sperry Remington – North Portion Site #c808022 is consistent with the material analyzed, approval is granted.

Dear Tim,

Please find attached the revised request to import soil for fill material and as the base material for the stockpiled soils with data validation of the chemical analyses. Geotechnical data were collected to assure that the soil met project requirements for structural fill. The fill material is not exempt from chemical testing under DER-10 Section 5.4(e)5 so the results for #80 sieve analysis are not shown.

Please let me know if this meets your needs for approval.

Hi Aron,

I have reviewed the request to reuse package for stockpiled soils in windrows 1, 2 and 3. Chemical analyses of the soil, completed by the ELAP certified lab Test America and validated by Geosyntec Consultants on July 17, 2017, indicates minor exceedance of DER-10 appendix 5 for Restricted Residential site use for PCBs and a few SVOC constituents.

Levels of exceedance are not indicative of source levels of constituents and therefore may be re-used as back fill below approved cover systems at the Former Sperry Remington – North Portion Site #C808022. Please document the area and depths where these soils will be placed for future site management purposes.

Dear Tim,

Please find attached DEC Request to Import/Reuse Form for soils from Windrow 4 and 5 in the Material Staging Area (MSA) for the Former Sperry Remington Site – North Portion IRM in Elmira, New York. For your review. Upon approval, stockpiled soils with like analytical results will be consolidated within the MSA.

Date:	Monday, August 28, 2017 4:55:48 PM
Attachments:	image001.png image002.png

Hi Aron,

I have reviewed the request to reuse package for stockpiled soils in windrows W1-b, WB2-3, WB3-4, W6, WB6-7, W7, WB7-8, W8 and W9 as shown on Stockpile Area plan dated 23 Aug 2017. Chemical analyses of the soil, completed by the ELAP certified lab Test America and validated by Geosyntec Consultants on July 27 and August 14, 16, 20, 2017, indicates minor exceedance of DER-10 appendix 5 for Restricted Residential site use for PCBs and a few SVOC constituents.

Concentrations of PCBs and SVOCs are not indicative of source levels of constituents and therefore may be re-used as back fill below approved cover systems (2') at the Former Sperry Remington – North Portion Site #C808022.

Sections W1-b II, WB2-3 I & II, W3 I, WB3-4 I, II & III, W5 V, W7 I & II and W8 III should be consolidated and segregated for re-use below 2', below low permeable cover (concrete / asphalt) and at least 1' above seasonal high groundwater elevation.

Please document the area and depths where these soils will be placed for future site management purposes.

Best Regards,

Tim

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL (dry)	Reported Detection Limit.
RDL	Reported Detection Limit.
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
P	RPD between the primary and confirmatory analysis exceeded 40%.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Narrative

Job Narrative

Receipt
The samples were received on 5/17/2017 9:05 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.6º C, 1.5º C and 2.9º C.

GC Semi VOA
Method(s) 8082A: The following samples were diluted to bring the concentration of target analytes within the calibration range: SSHS-B792-SUB-8-10 (180-66369-1), SSHS-B792-SUB-12-14 (180-66369-3), SSHS-B791-SUB-2-4 (180-66369-5), SSHS-B796-SUB-4-6 (180-66369-7), PS-FD-2 (180-66369-12), SSHS-B782-SUB-2-4 (180-66369-16), SSHS-B804-SUB-10-12 (180-66369-28), SSHS-B804-SUB-12-14 (180-66369-29), SSHS-B811-SUB-12-14 (180-66369-32), SSHS-B797-SUB-4-6 (180-66369-43), SSHS-B797-SUB-6-8 (180-66369-44), SSHS-B794-SUB-4-6 (180-66369-46) and its matrix spikes, PS-FD-5 (180-66369-47), SSHS-B812-SUB-12-14 (180-66369-53), SSHS-B793-SUB-4-6 (180-66369-63) and its matrix spikes, and SSHS-B793-SUB-6-8 (180-66369-64). Several samples had the surrogates diluted out. The matrix spikes of sample SSHS-B793-SUB-4-6 (180-66369-63) should be considered diluted out. Elevated reporting limits (RLs) are provided.

Method 8082A: The matrix spike and matrix spike duplicate of sample SSHS-B794-SUB-4-6 (180-66369-46) recovered above the control limits for aroclor 1016. The recovery of the laboratory control sample was within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery is outside acceptance limits.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Narrative

Job Narrative
180-66432-1

Receipt
The samples were received on 5/18/2017 8:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.0º C and 5.8º C.

GC Semi VOA
Method(s) 8082A: The following samples were diluted to bring the concentration of target analytes within the calibration range: SSHS-B800-SUB-2-4 (180-66432-3), SSHS-B800-SUB-4-6 (180-66432-4), SSHS-B800-SUB-6-8 (180-66432-5), SSHS-B800-SUB-8-10 (180-66432-6) and its matrix spikes, SSHS-B800-SUB-12-14 (180-66432-8), SSHS-B790-SUB-2-4 (180-66432-10), SSHS-B805-SUB-10-12 (180-66432-25), SSHS-B802-SUB-8-10 (180-66432-26) and its matrix spikes, SSHS-B802-SUB-12-14 (180-66432-27), and SSHS-B801-SUB-4-6 (180-66432-29). Several samples had the surrogates diluted out. The matrix spikes of sample SSHS-B800-SUB-8-10 (180-66432-6) should be considered diluted out. Elevated reporting limits (RLs) are provided.

Method 8082A: The following sample had the recovery of surrogate decachlorobiphenyl above the control limits on one column: SSHS-B800-SUB-2-4 (180-66432-3). The recovery was within the control limits on the other column.

Method 8082A: The matrix spike and matrix spike duplicate of sample SSHS-B802-SUB-8-10 (180-66432-26) had the recoveries and RPD between the spikes above the control limits for aroclor 1016 and the matrix spike duplicate recovery was above the control limits for aroclor 1260. The recoveries of the laboratory control sample were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Receipt
The samples were received on 5/19/2017 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.1º C and 1.9º C.

GC Semi VOA
Method(s) 8082A: The continuing calibration verification (CCV) analyzed in batch 180-211798 was below criteria for arcolor 1248 (CCV 180-211798/4) on column RTX-CLP1. All positive detections in the associated samples were reported from column RTX-CLP2, which met criteria. The % difference between the sample results on both columns was <40%.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Comments
This report contains the semivolatiles and PCB results emailed preliminary on 6/3/17 along with results for two samples for metals removed from hold on 6/19/17.

Receipt
The samples were received on 5/24/2017 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.4º C, 2.1º C, 2.8º C, 4.0º C and 4.6º C.

The sample IDs for SSHS-B818… were changed to SSHS-B821… as directed by the sampler on 5/25/17.

GC/MS Semi VOA
Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 180-212795 recovered below the control limits for the following analyte: benzaldehyde. Benzaldehyde has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method(s) 8270D: The matrix spike (MS) of sample SSHS-B819-SUB-12-14 (180-66622-16) had nearly all recoveries above the control limits. The RPDs between the matrix spike and matrix spike duplicate were also above the control limits. It is believed matrix spiking and surrogate spiking solutions may have been added to the matrix spike twice. The recoveries of the laboratory control sample (LCS) recovery were within the control limits (with the exception of benzaldehyde as noted above).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 180-212748 was above criteria for the following analytes: 2,2'-oxybis[1-chloropropane] and di-n-octyl phthalate. As the CCV was biased high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 180-212904 was above criteria for the following analytes: 1,4-dioxane, 2,4-dinitrophenol, and 4-nitrophenol. As the CCV was biased high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 180-212904 was slightly below criteria for the following analyte: benzo[g,h,i]perylene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments
This is a revised report. At the request of the client, 2,4-dinitrotoluene, hexachlorobutadiene, hexachloroethane, nitrobenzene, pyridine, 2,4,5-trichlorophenol, and 2,4,6-trichlorophenol are now reported in the semivolatiles analysis.

Receipt
The samples were received on 7/11/2017 8:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.9º C, 2.0º C and 2.3º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-216640 was outside the method criteria for the following analyte(s): Vinyl Chloride recovered high. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 180-216675 and analytical batch 180-216666 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): DUP2 (180-68037-1), WINDROW1, SEC 3, C (180-68037-2), WINDROW1, SEC 4, C (180-68037-4), WINDROW1, SEC 2, C (180-68037-8), WINDROW1, SEC 1, C (180-68037-11), (180-68037-A-1-B MS) and (180-68037-A-1-C MSD). This was the lowest dilution possible on these samples. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The post digestion spike % recovery for manganese associated with prep batch 216814 was outside of the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Comments
This is a revised report. At the request of the client, 2,4-dinitrotoluene, hexachlorobutadiene, hexachloroethane, nitrobenzene, pyridine, 2,4,5-trichlorophenol, and 2,4,6-trichlorophenol are now reported in the semivolatiles analysis.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-216940 recovered above the upper control limit for pyridine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Receipt
The samples were received on 7/12/2017 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.2º C, 2.1º C and 3.1º C.

Receipt Exceptions
The following volatile samples were analyzed with significant headspace in two out of two voa vials: TRIP BLANK 1 (180-68096-37) and TRIP BLANK 2 (180-68096-38). Significant headspace is defined as a bubble greater than 6 mm in diameter.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217186 was outside the method criteria for the following analyte: Carbon Tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217056 was outside the method criteria for the following analyte(s): Carbon Tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217200 was outside the method criteria for the following analyte: 2-Butanone (MEK) and Acetone. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The following analyte recovered outside control limits for the LCS associated with analytical batch 180-217200: n-Butylbenzene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following samples was diluted to bring the concentration of target analytes within the calibration range (extract viscous, dark in color): W2, S5 C 71117 (180-68096-18) and W3, S1, C 71117 (180-68096-23). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): W1, S5, C 71117 (180-68096-3), W2, S1, C 71117 (180-68096-6), W2, S2, C 71117 (180-68096-9), W2, S3, C 71117 (180-68096-12), W2, S4, C 71117 (180-68096-15) and DUP-4 (180-68096-22). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and RPD's for preparation batch 180-216880 and analytical batch 180-216940 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the

associated laboratory control sample (LCS) recovery was within acceptance limits. They are at a 20x dilution due to matrix.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-216940 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): W3, S2, C 71117 (180-68096-26), W3, S3, C 71117 (180-68096-29), W3, S4, C 71117 (180-68096-32) and W3, S5, C 71117 (180-68096-36). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-217242 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was outside the method criteria for the following analyte(s): Benzo[g,h,i]perylene was >20% low. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The serial dilution performed for the following sample associated with prep batch 216920 was outside the control limits for manganese and zinc: W2, S1, C 71117 (180-68096-6)

Method(s) 6010C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for prep batch 216920 were outside the control limits for copper and zinc. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010C: The matrix spike / matrix spike duplicate (MS/MSD) precision for prep batch 216920 was outside the control limits for manganese. Sample matrix interference and/or non-homogeneity are suspected.

Method(s) 7471B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 217097 were outside the control limits for mercury. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments
This is a revised report. At the request of the client, 2,4-dinitrotoluene, hexachlorobutadiene, hexachloroethane, nitrobenzene, pyridine, 2,4,5-trichlorophenol, and 2,4,6-trichlorophenol are now reported in the semivolatiles analysis.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in 180-217155 was above criteria for the following analytes: 1,4-dioxane and pentachlorophenol. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Receipt
The samples were received on 7/14/2017 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.8º C, 0.8º C and 2.6º C.

Receipt Exceptions

The 3 coolers with the samples did not arrive at the lab. The client was notified. The VOA terra cores were recollected to ensure that the 48 hr holding times would be met. The coolers were received the following day within temperature . With the exception of the expired VOA terra cores, all other terra cores were logged into this job . The recollected VOA terra cores were logged into job 180-68219-2

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217186 was outside the method criteria for the following analyte: Carbon Tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: Internal standard responses were outside of acceptance limits for the following sample: W5, S1, A 71217 (180-68140-28). The sample shows evidence of matrix interference. Internal Standard TBA-d9 was low but is not used to calculate results for any target analytes. Internal Standard 1,4-Dichlorobenzene-d4 recovered low by three percent. This will be reported and narrated because when the sample was re-analyzed all internal standard recoveries were very low.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): W4, S2, C 71217 (180-68140-6), W5, S5, C 71217 (180-68140-18) and W5, S4, C 71217 (180-68140-21). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following samples was diluted to bring the concentration of target analytes within the calibration range: W4, S1, C 71217 (180-68140-3), W5, S3, C 71217 (180-68140-24), W5, S2, C 71217 (180-68140-27) and W5, S1, C 71217 (180-68140-30). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following sample was diluted due to the nature of the sample matrix (extract viscous, dark in color): DUP-6 (180-68140-31). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-217242 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was outside the method criteria for the following analyte(s): Benzo[g,h,i]perylene was >20% low. A CCV standard at or below the reporting limit (RL) was analyzed with the

affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8270D LL: The following samples was diluted to bring the concentration of target analytes within the calibration range (extract viscous, dark in color): W4, S3, C 71217 (180-68140-9), W4, S4, C 71217 (180-68140-12) and W4, S5, C 71217 (180-68140-15). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 7471B: The matrix spike (MS) recoveries for 217422 were outside the control limits for mercury. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 7471B: The matrix spike / matrix spike duplicate (MS/MSD) precision for 217422 was outside the control limits for mercury. Sample matrix interference is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	ISTD response or retention time outside acceptable limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Comments
This is a revised report. At the request of the client, 2,4-dinitrotoluene, hexachlorobutadiene, hexachloroethane, nitrobenzene, pyridine, 2,4,5-trichlorophenol, and 2,4,6-trichlorophenol are now reported in the semivolatiles analysis.

Method(s) 8270D LL: The matrix spike duplicate (MSD) of sample W6, S4, C 071317 (180-68219-12) had the recovery of pyridine slightly below the control limits.

Receipt
The samples were received on 7/15/2017 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 8 coolers at receipt time were 2.4º C, 2.6º C, 3.1º C, 3.1º C, 3.6º C, 3.6º C, 3.7º C and 4.8º C.

Trip Blank 4 was received, but was not listed on the COCs.

The container labels for the MS/MSD of sample W4, S4, A 71317 (180-68219-44) had a time of 15:45, where as the COC listed 15:15 The container labels list a collection time of 1545, while the parent sample says 1515. The COC lists a sample collection time of 1515 as well.

The results of the volatiles samples, IDs beginning with “W4”, are reported in job 180-68219-2.

GC/MS VOA
Method(s) 8260C: Several RPDs between the matrix spike/matrix spike duplicate (MS/MSD) of sample W8, S3, B 71317 (180-68219-38) were above the control limits. The recoveries were within the control limits.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-217322 was above criteria for the following analyte: vinyl chloride. As the CCV was high and vinyl chloride was not detected in the associated samples, the results were reported.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217610 was below criteria for the following analyte: carbon tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated. Carbon tetrachloride was not detected in the associated samples.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-217455 was above criteria for the following analytes: n-butylbenzene and vinyl chloride. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217455 was below criteria for the following analyte: carbon tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated. Carbon tetrachloride was not detected in the associated samples.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following samples were diluted to bring the concentration of target analytes within the calibration range: W7, S2, C 71317 (180-68219-27), W7, S1, C 71317 (180-68219-30), and W8, S3, C 71317 (180-68219-39). Elevated reporting limits (RLs) are provided. Sample W7, S2, C 71317 (180-68219-27) had the surrogates diluted out.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (viscous extracts and dark in color): W6, S1, C 071317 (180-68219-3) and its matrix spikes, W6, S2, C 071317 (180-68219-6), W6, S3, C 071317 (180-68219-9), W6, S4, C 071317 (180-68219-12), W6, S5, C 071317 (180-68219-15), W7, S4, C 71317 (180-68219-21), W8, S1, C 71317 (180-68219-33), W8, S2, C 71317 (180-68219-36), and DUP-10 (180-68219-54). Elevated reporting limits (RLs) are provided.

Job ID: 180-68219-1 (Continued)

Laboratory: TestAmerica Pittsburgh (Continued)

Method(s) 8270D LL: The matrix spike/matrix spike duplicate (MS/MSD) of sample W6, S1, C 071317 (180-68219-3) had several recoveries and RPDs between the spikes outside of the control limits. The recoveries of the laboratory control sample (LCS) were within the control limits.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was above criteria for the following analyte: pentachlorophenol. As the CCV was high and this analyte was not detected in the associated samples, the results were reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was below criteria for the following analyte: benzo[g,h,i]perylene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in 180-217155 was above criteria for the following analytes: 1,4-dioxane and pentachlorophenol. As the CCV was high and these analytes were not detected in the associated sample, the results were reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 7471B: The RPD between the matrix spike/matrix spike duplicate (MS/MSD) of sample W6, S1, C 71317 (180-68219-3) was above the control limits for mercury. The recoveries were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
