Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL (dry)	Reported Detection Limit.
RDL	Reported Detection Limit.
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
P	RPD between the primary and confirmatory analysis exceeded 40%.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

T. Alan Harvill
Technical Service Representative

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL (dry)	Reported Detection Limit.
RDL	Reported Detection Limit.
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Rec.	Recovery.

Qualifier	Description
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**

***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Memorandum

Date:	27 June 2017
To:	Aron Krasnopoler
From:	Chris Pracheil
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level II Data Deliverable, ESC Lab Sciences Sample Delivery Group # L916338 and L917680**

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of seven solid samples collected June 14, 2017, as part of the Former Sperry Remington Site-North soil import request. The analyses were performed at ESC Lab Sciences, Mount Juliet, Tennessee. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3546/8270D
- Organochlorine Pesticides by EPA Methods 3546/8081
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3546/8082
- Metals by EPA Methods 3050B/6010B
- Mercury by EPA Method 7471B
- Hexavalent Chromium by EPA Methods 3060A/7196A
- Total Cyanide by EPA Method 9012B
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data was validated based on the following documents as well as by the pertinent methods and professional and technical judgment:

- Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010
- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, August 2014 (EPA 540-R-014-002)
- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, August 2014 (EPA 540-R-013-001)

The following samples were analyzed and validated at Stage 2A level in the data sets:

Laboratory ID	Client ID
L916338-01	BREWERS_PIT_1
L916338-02	BREWERS_PIT_2
L916338-03	BREWERS_PIT_3
L916338-04	BREWERS_PIT_4
L916338-05	BREWERS_PIT_5
L916338-06	BREWERS_PIT_6
L916338-07	BREWERS_PIT_7

Laboratory ID	Client ID
L917680-01	BREWERS_PIT_1
L917680-02	BREWERS_PIT_2
L917680-03	BREWERS_PIT_3
L917680-04	BREWERS_PIT_4
L917680-05	BREWERS_PIT_5
L917680-06	BREWERS_PIT_6
L917680-07	BREWERS_PIT_7

Seven samples were received by the laboratory and were logged in and reported in two separate reports.

The samples were received at the laboratory at 5.3^{o}C, within the QAPP criteria of <6°C. No sample preservation issues were noted by the laboratory.

No collection times were listed on the chain of custody (COC) for the samples; the laboratory assigned collection times of 00:00.

Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

The solids data, used to report the samples on a dry weight bases, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered to be usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

1.1.1 Analytical Anomalies

The continuing calibration verification (CCV) percent difference (%D) for 2-butanone was high, outside laboratory specified acceptance criteria, with low bias. Therefore, the non-detect results of 2-butanone in the associated samples were UJ qualified, as estimated less than the reporting limit (RL).

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier*	Reason Code**
BREWERS_PIT_1	2-Butanone	0.0106	U	0.0106	UJ	9
BREWERS_PIT_2	2-Butanone	0.0107	U	0.0107	UJ	9
BREWERS_PIT_3	2-Butanone	0.0105	U	0.0105	UJ	9
BREWERS_PIT_4	2-Butanone	0.0104	U	0.0104	UJ	9
BREWERS_PIT_5	2-Butanone	0.0105	U	0.0105	UJ	9
BREWERS_PIT_6	2-Butanone	0.0104	U	0.0104	UJ	9
BREWERS_PIT_7	2-Butanone	0.0105	U	0.0105	UJ	9

mg/kg-milligrams per kilogram
U-not detected at or above the MDL

* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.2 Holding Times

The QAPP specified holding time for VOC analysis of a solid sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG990989). VOCs were not detected in the method blank above the method detection limits (MDLs, with the following exception.

Methylene chloride was detected at an estimated concentration, greater than the MDL and less than the (RL) in the method blank associated with batch WG990989. Since methylene chloride was not detected in the associated samples, no qualifications were applied to the data.

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD pair was not reported with the VOC analyses.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/laboratory control sample duplicate (LCSD) pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The LCS recoveries of cis-1,2-dichloroethene and trans-1,2-dichloroethene were high, outside laboratory specified acceptance criteria. Since cis-1,2-dichloroethene and trans-1,2-dichloroethene were not detected in the associated samples, no qualifications were applied to the data.

1.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

1.7 Trip Blank

A trip blank did not accompany the samples.

1.8 Field Duplicate

Field duplicates were not collected with the samples.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported. The MDLs were at or below the soil cleanup objectives listed in table 2 of the QAPP.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs, however the EDD reports non-detects at the RL. Additionally, the QC data was not included in the EDDs, no other discrepancies were identified between the level II report and the EDDs.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3546/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered to be usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid

analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

2.2 Holding Times

The holding times for SVOC analysis of preserved solid samples are 14 days from sample collection to sample preparation and 40 days from sample preparation to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG990189). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported with the SVOC analyses.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

One or both recoveries of benzidine and 3,3-dichlorobenzidine and the relative percent difference (RPD) for 2,4-dinitrophenol were high, outside laboratory specified acceptance criteria in the LCS/LCSD pair. Since benzidine, 3,3-dichlorobenzidine and 2,4-dinitrophenol were not detected in the associated samples, no qualifications were applied to the data.

2.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

2.7 Field Duplicate

Field duplicates were not collected with the samples.

2.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported. The MDLs were at or below the soil cleanup objectives listed in table 2 of the QAPP.

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs however, the EDD reports non-detects at the RL. Additionally, the QC data was not included in the EDDs, no other discrepancies were identified between the level II report and the EDDs.

3.0 ORGANOCHLORINE PESTICIDES

The samples were analyzed for organochlorine pesticides by EPA Methods 3546/8081.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

3.1 Overall Assessment

The organochlorine pesticide data reported in this package are considered to be usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

3.2 Holding Times

The holding times for organochlorine pesticide analysis of preserved solid samples are 14 days from sample collection to sample preparation and 40 days from sample preparation to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG990183). Pesticides were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported with the pesticide analyses.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

3.7 Field Duplicate

Field duplicates were not collected with the samples.

3.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported. The MDLs were at or below the soil cleanup objectives listed in table 2 of the QAPP.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs however, the EDD reports non-detects at

the RL. Additionally, the QC data was not included in the EDDs, no other discrepancies were identified between the level II report and the EDDs.

.

4.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for polychlorinated biphenyls (PCBs) by EPA Methods 3546/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

4.1 Overall Assessment

The PCB data reported in this package are considered to be usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

4.2 Holding Times

The QAPP lists the holding times for PCB analysis of preserved solid samples are 14 days from sample collection to sample preparation and 40 days from sample preparation to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG990183). PCBs were not detected in the method blank above the MDLs.

4.4 Matrix Spike/Matrix Spike Duplicate

A batch MS/MSD pair was reported with the PCB analyses. Since this was batch QC there was not impact on the data and no qualifications were applied.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

4.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

4.7 Field Duplicate

Field duplicates were not collected with the samples.

4.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported. The MDLs were at or below the soil cleanup objectives listed in table 2 of the QAPP.

4.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs however, the EDD reports non-detects at the RL. Additionally, the QC data was not included in the EDDs, no other discrepancies were identified between the level II report and the EDDs.

5.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010B (Mercury evaluated separately in Section 6.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate

- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

5.1 Overall Assessment

The metals data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

5.2 Holding Times

The holding time for metals analysis of solid samples is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG991813). The metals were not detected in the method blank above the MDLs.

5.4 Matrix Spike/Matrix Spike Duplicate

A batch MS/MSD pair was reported with the metals analyses. Since this was batch QC there was not impact on the data and no qualifications were applied.

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported with the sample set.

5.7 Field Duplicate

Field duplicates were not collected with the samples.

5.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported. The MDLs were at or below the soil cleanup objectives listed in table 2 of the QAPP.

5.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs however, the EDD reports non-detects at the RL. Additionally, the QC data was not included in the EDDs, no other discrepancies were identified between the level II report and the EDDs.

6.0 MERCURY

The samples were analyzed for mercury by EPA methods 7471A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

6.1 Overall Assessment

The mercury data reported in this package are considered to be usable for meeting project objectives. The results are considered to be valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

6.2 Holding Times

The holding time for mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG991670). Mercury was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

A batch MS/MSD pair was reported with the mercury analyses. Since this was batch QC there was not impact on the data and no qualifications were applied.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

A laboratory duplicate was not reported.

6.7 Field Duplicate

Field duplicates were not collected with the samples.

6.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported. The MDL was at or below the soil cleanup objective listed in table 2 of the QAPP.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs however, the EDD reports non-detects at the RL. Additionally, the QC data was not included in the EDDs, no other discrepancies were identified between the level II report and the EDDs.

7.0 HEXAVALENT CHROMIUM

The samples were analyzed for hexavalent chromium by EPA Methods 3060A/7196A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Electronic Data Deliverables Review

7.1 Overall Assessment

The hexavalent chromium data reported in this package are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical

results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

7.2 Holding Times

The holding times for the hexavalent chromium analysis of solid samples are 30 days from sample collection to extraction and 7 days from extraction to analysis. The holding times were met for the sample analyses.

7.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG991554). Hexavalent chromium was not detected in the method blank above the MDL.

7.4 Matrix Spike

A batch MS/MSD pair was reported with the hexavalent chromium analyses. Since this was batch QC there was not impact on the data and no qualifications were applied.

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD result was within the laboratory specified acceptance criteria.

7.6 Laboratory Duplicate

A sample set specific laboratory duplicate was reported for hexavalent chromium using sample BREWERS_PIT_7. The RPD result was within the laboratory specified acceptance criteria. A batch laboratory duplicate was also reported with the hexavalent chromium analyses. Since this was batch QC there was not impact on the data and no qualifications were applied.

7.7 Field Blank

A field blank was not collected with the sample set.

7.8 Field Duplicate

A field duplicate was not collected with the sample set.

7.9 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported. The MDL was at or below the soil cleanup objective listed in table 2 of the QAPP.

7.10 Electronic Data Deliverables Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs however, the EDD reports non-detects at the RL. Additionally, the QC data was not included in the EDDs, no other discrepancies were identified between the level II report and the EDDs.

8.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9012B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

8.1 Overall Assessment

The cyanide data reported in this package are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

8.2 Holding Times

The holding time for the hexavalent chromium analysis of solid samples is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

8.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG991738). Hexavalent chromium was not detected in the method blank above the MDL.

8.4 Matrix Spike

An MS/MSD pair was not reported with the cyanide analyses.

8.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD result was within the laboratory specified acceptance criteria.

8.6 Laboratory Duplicate

A sample set specific laboratory duplicate was reported for hexavalent chromium using sample BREWERS_PIT_4. The RPD result was within the laboratory specified acceptance criteria.

8.7 Field Duplicate

A field duplicate was not collected with the sample set.

8.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported. The MDL was at or below the soil cleanup objective listed in table 2 of the QAPP.

8.9 Electronic Data Deliverables Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs however, the EDD reports non-detects at

the RL. Additionally, the QC data was not included in the EDDs, no other discrepancies were identified between the level II report and the EDDs.

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Restricted Residential Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 800-1000

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Seven (7) Discrete Samples were collected and analyzed for VOCs. Two (2) Composite Samples were collected and analyzed for SVOCs, Inorganics, and PCBs/Pesticides. The chain of custody incorrectly shows the same Sample ID for the composite samples and the first two discrete VOC samples. The Analytical Results have been attached to this form.

Two (2) composite samples were collected and analyzed for grain size distribution and moisture-density.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Analytical results are compared to Restricted Residential SCO.

VOC analyses: acetone, benzene, toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and total xylenes were detected in 7 of 7 samples at levels below Restricted Residential SCOs.

There were no detections of SVOCs, PCBs, or pesticides in the two composite samples.

Metals analyses: arsenic, barium, beryllium, copper, lead manganese, nickel, zinc, and mercury were detected at levels below Restricted Residential SCOs.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Edger Enterprises

Location where fill was obtained:

Brewer's Pit located in Horseheads NY

Identification of any state or local approvals as a fill source:

NYSDEC Facility ID 8-0734-00150

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Geotechnical Data and the Chemical Analysis Reports

The information provided on this form is accurate and complete.

ANALYTICAL REPORT

July 10, 2017

Remedial Construction Services, L.P.

Sample Delivery Group:	L919054
Samples Received:	06/28/2017
Project Number:	23925
Description:	Elmira, NY

Report To:

Mr. John Geary
950 West Valley Rd.
Suite 2802
Wayne, PA 19087

Entire Report Reviewed By:

T. Alan Harvill
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

T. Alan Harvill

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL (dry)	Reported Detection Limit.
RDL	Reported Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Memorandum

Date:	11 July 2017
To:	Aron Krasnopoler
From:	Mary Tyler
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level II Data Deliverable, ESC Lab Sciences Sample Delivery Group # L919054**

SITE: Former Sperry Remington Site-North

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of twelve solid samples, collected June 27, 2017, as part of the Former Sperry Remington Site-North soil import request. The analyses were performed at ESC Lab Sciences, Mount Juliet, Tennessee. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3546/8270D
- Organochlorine Pesticides by EPA Methods 3546/8081
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3546/8082
- Metals by EPA Methods 3050B/6010B
- Trivalent Chromium by Calculation
- Mercury by EPA Method 7471A
- Hexavalent Chromium by EPA Methods 3060A/7196A
- Total Cyanide by EPA Method 9012B
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exception. The nondetect benzidine results were R qualified as rejected due to no laboratory control

sample/laboratory control sample duplicate (LCS/LCSD) recoveries (0%) and professional and technical judgment.

The remaining qualified data should be used within the limitations of the qualification.

The data were validated based on the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
L919054-01	BP-1000-2000-COMP
L919054-02	BP-2000-3000-COMP
L919054-03	BP-3000-4000-COMP
L919054-04	BP-4000-5000-COMP
L919054-05	BP-1000-2000-GRAB #1
L919054-06	BP-1000-2000-GRAB #2

Laboratory ID	Client ID
L919054-07	BP-2000-3000-GRAB #1
L919054-08	BP-2000-3000-GRAB #2
L919054-09	BP-3000-4000-GRAB #1
L919054-10	BP-3000-4000-GRAB #2
L919054-11	BP-4000-5000-GRAB #1
L919054-12	BP-4000-5000-GRAB #2

The samples were received at the laboratory at 1.3ºC, within the criteria of 0≤6ºC. No sample preservation issues were noted by the laboratory.

The chain of custody (COC) had a note that indicated two trip blanks were sent in with the samples; the trip blank IDs were not listed on the COCs for analysis and trip blank results were not reported. Additional information from the laboratory indicated that trip blanks are sent to the field with the empty sample containers; analysis is performed if indicated on the COC.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times

⊗ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Trip Blank
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The nondetect results for acetone, 1,2-dibromo-3-chloropropane, 2-butanone and 4-methyl-2-pentanone were flagged with J0, indicating that the continuing calibration verification (CCV) percent differences (%D) were high, outside laboratory specified acceptance criteria. Additional information was sent by the laboratory with the specific %D results for the compounds; the biases in the CCV for these compounds were high. Therefore, since these four compounds were not detected in the associated samples, no qualifications were applied to the data.

1.2 Holding Times

The holding time for the VOC analysis of a preserved solid sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch R3230983). VOCs were not detected in the method blank above the method detection limits (MDLs), with the following exception.

1,2,3-Trichlorobenzene was detected at an estimated concentration, greater than the MDL and less than the (RL). Therefore, the estimated 1,2,3-trichlorobenzene concentration in sample BP-1000-2000-GRAB #1 was U qualified as not detected at the RL.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier*	Reason Code**
BP-1000-2000-GRAB #1	1,2,3-Trichlorobenzene	0.000714	B J	0.00103	U	3

mg/kg-milligrams per kilogram
J-laboratory flag indicating that the identification of the analyte is acceptable; the reported value is an estimate
B- laboratory flag indicating that the same analyte is found in the associated blank
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

The LCS recovery of trichlorofluoromethane and the LCSD recoveries of dichlorodifluoromethane, 1,1-dichloroethene and 1,1,2-trichlorotrifluoroethane were high, outside laboratory specified acceptance criteria. Since these four compounds were not detected in the associated samples, no qualifications were applied to the data.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

A trip blank did not accompany the samples.

1.8 Field Duplicate

Field duplicates were not collected with the sample set.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010 listed in the electronic data deliverable (EDD). It was noted that no NYSDEC constituent levels were listed in the EDD for the following compounds:

Acrylonitrile
Bromobenzene
Bromodichloromethane
Bromoform
Bromomethane
Chlorodibromomethane
Chloroethane
Chloromethane
2-Chlorotoluene
4- Chlorotoluene
1,2-Dibromo-3-Chloropropane
1,2-Dibromoethane
Dibromomethane
Dichlorodifluoromethane
1,2-Dichloropropane
1,1- Dichloropropene
1,3- Dichloropropane
CIS-1,3- Dichloropropene

Trans-1,3- Dichloropropene
2,2- Dichloropropane
Di-isopropyl Ether
Hexachloro-1,3-butadiene
Isopropylbenzene
p-Isopropyltoluene
4-Methyl-2-Pentanone (MIBK)
Styrene
1,1,1,2-Tetrachloroethane
1,1,2,2- Tetrachloroethane
1,1,2-Trichlorotrifluoroethane
1,2,3-Trichlorobenzene
1,2,4- Trichlorobenzene
1,1,2-Trichloroethane
Trichlorofluoromethane
1,2,3-Trichloropropane
1,2,3-Trimethylbenzene

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs; however, the EDD listed the non-detect results at the RLs. Additionally, the QC data was not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3546/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
⊗ Laboratory Control Sample
✓ Surrogates
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this data set are considered usable for meeting project objectives, with the following exceptions. The nondetect benzidine results were R qualified as rejected due to no LCS/LCSD recoveries (0%) and professional and technical judgment. Therefore, the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 98%.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch R3231515). SVOCs were not detected in the method blank above the MDLs, with the following exceptions.

The following compounds were detected in the method blank, at estimated concentrations greater than the MDLs and less than the RLs. Since these compounds were not detected in the associated samples, no qualifications were applied to the data.

Anthracene
Benzo(a) anthracene
Benzo(k)fluoranthene
Benzo(g,h,i)perylene
Benzo(a)pyrene

Chrysene
Fluoroanthene
Indeno(1,2,3-cd)pyrene
Isophorone
Nitrobenzene

N-Nitrosodiphenylamine	Diethyl Phthalate
Phenanthrene	Dimethyl Phthalate
Bis(2-ethylhexyl)Phthalate	4-Chloro-3-methylphenol

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

There were no recoveries of benzidine (0%), low and outside laboratory specified acceptance criteria. Therefore, based on professional and technical judgment, the nondetect results of benzidine in the associated samples were R qualified as rejected.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
BP-1000-2000-COMP	Benzidine	0.0659	U J4	0.0659	R	5
BP-2000-3000-COMP	Benzidine	0.0655	U J4	0.0655	R	5
BP-3000-4000-COMP	Benzidine	0.0657	U J4	0.0657	R	5
BP-4000-5000-COMP	Benzidine	0.0663	U J4	0.0663	R	5

mg/kg-milligrams per kilogram
U-not detected at or above the listed MDL
J4-laboratory flag indicating that the associated batch QC was outside the established quality control range for accuracy

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Field duplicates were not collected with the sample set.

2.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD. It was noted that NYSDEC constituent levels were listed in the EDD for the following compounds; the other SVOCs did not have NYSDEC constituent levels listed.

Acenaphthene
Acenaphthylene
Anthracene
Benzo(a) anthracene
Benzo(k)fluoranthene
Benzo(b)fluoranthene
Benzo(g,h,i)perylene
Benzo(a)pyrene
Chrysene
Dibenz(a,h)anthracene

Fluoranthene
Fluorene
Hexachlorobenzene
Indeno(1,2,3-cd)pyrene
Naphthalene
Phenanthrene
Pyrene
Pentachlorophenol
Phenol

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs; however, the EDD listed the non-detect results at the RLs. Additionally, the QC data was not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

3.0 ORGANOCHLORINE PESTICIDES

The samples were analyzed for organochlorine pesticides by EPA Methods 3546/8081.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

3.1 Overall Assessment

The organochlorine pesticide data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

3.2 Holding Times

The holding times for organochlorine pesticide analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch R3231461). The organochlorine pesticides were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

3.7 Field Duplicate

Field duplicates were not collected with the sample set.

3.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD. It was noted that no NYSDEC constituent levels were listed in the EDD for endrin aldehyde, endrin ketone, heptachlor expoxide, methoxychlor, chlordane and toxaphene.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs; however, the EDD listed the non-detect results at the RLs. Additionally, the QC data was not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

4.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3546/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment

⊗ Electronic Data Deliverable Review

4.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

4.2 Holding Times

No holding times are listed in the referenced method for PCB analyses. The samples were extracted and analyzed within 10 days of collection. Therefore, no qualifications were applied to the data, based on professional and technical judgment.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch R3231608). PCBs were not detected in the method blank above the MDLs.

4.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

4.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

4.7 Field Duplicate

Field duplicates were not collected with the sample set.

4.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

It was noted that no NYSDEC constituent levels were listed in the EDD for PCBs.

4.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs; however, the EDD listed the non-detect results at the RLs. Additionally, the QC data was not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

5.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010B (Mercury evaluated separately in Section 6.0, below). The trivalent chromium results were determined by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Laboratory Duplicate
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

5.1 Overall Assessment

The metals data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

5.2 Holding Times

The holding time for the metals analysis of solid samples is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch R3230566). The metals were not detected in the method blank above the MDLs, with the following exception.

Zinc was detected at an estimated concentration greater than the MDL and less than the RL. Since the concentrations of zinc in the associated samples were greater than the RL, no qualifications were applied to the data.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample BP-4000-5000-COMP. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

One or both of the recoveries of manganese and zinc were low and outside the laboratory specified acceptance criteria. Since the concentration of manganese in sample BP-4000-5000-COMP was greater than four times the spike concentration, no qualifications were applied to the manganese data. The laboratory sent information by email concerning the serial dilution result for zinc, since the laboratory flag on the zinc result for sample BP-4000-5000-COMP indicated that the serial dilution failed the acceptance criteria. The zinc %D for the serial dilution was high and outside the method specified acceptance criteria. Therefore, due to the low MS zinc recovery and the high serial dilution %D, the concentration of zinc in sample BP-4000-5000-COMP was J qualified as estimated.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
BP-4000-5000-COMP	Zinc	84	J6 O1	84	J	4, 8

mg/kg-milligrams per kilogram
J6- laboratory flag indicating that the sample matrix interfered with the ability to make any accurate determination; spike value is low
O1-laboratory flag indicating that the analyte failed the method required serial dilution test and/or subsequent post-spike criteria; this failure indicate matrix interference

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported.

5.7 Field Duplicate

Field duplicates were not collected with the sample set.

5.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD. It was noted that no NYSDEC constituent level was listed in the EDD for chromium.

5.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs, however the EDD listed the non-detect results at the RLs. Additionally, the QC data was not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

6.0 MERCURY

The samples were analyzed for mercury by EPA method 7471A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

6.1 Overall Assessment

The mercury data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

6.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch R3230650). Mercury was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

A batch MS/MSD pair was reported. Since this was batch QC, there was no impact on the data and no qualifications were applied to the data.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

A laboratory duplicate was not reported.

6.7 Field Duplicate

Field duplicates were not collected with the sample set.

6.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs; however, the EDD listed the non-detect results at the RLs. Additionally, the QC data was not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

7.0 HEXAVALENT CHROMIUM

The samples were analyzed for hexavalent chromium by EPA Methods 3060A/7196A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

7.1 Overall Assessment

The hexavalent chromium data reported in this data set are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

7.2 Holding Times

The holding times for the hexavalent chromium analysis of solid samples are 30 days from sample collection to digestion and 7 days from digestion to analysis. The holding times were met for the sample analyses.

7.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch R3231106). Hexavalent chromium was not detected in the method blank above the MDL.

7.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one pair per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample BP-1000-2000-COMP. The recovery and RPD results were within the laboratory specified acceptance criteria.

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD result was within the laboratory specified acceptance criteria.

7.6 Laboratory Duplicate

A sample set specific laboratory duplicate was reported using sample BP-1000-2000-COMP. The RPD result was within the laboratory specified acceptance criteria.

7.7 Field Duplicate

A field duplicate was not collected with the sample set.

7.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD.

7.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The laboratory report includes both the MDLs and the RLs; however, the EDD listed the non-detect results at the RLs. Additionally, the QC data was not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

8.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9012B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

8.1 Overall Assessment

The total cyanide data reported in this data set are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

8.2 Holding Times

The holding time for the total cyanide analysis of solid samples is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

8.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch R3230775). Cyanide was not detected in the method blank above the MDL.

8.4 Matrix Spike

A batch MS/MSD pair was reported. Since this was batch QC, there was no impact on the data and no qualifications were applied to the data.

8.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

8.6 Laboratory Duplicate

Two batch laboratory duplicates were reported. Since these were batch QC, there was no impact on the data and no qualifications were applied to the data.

8.7 Field Duplicate

A field duplicate was not collected with the sample set.

8.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD.

8.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The

laboratory report includes both the MDLs and the RLs; however, the EDD listed the non-detect results at the RLs. Additionally, the QC data was not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Restricted Residential Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 800-1000

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Seven (7) Discrete Samples were collected and analyzed for VOCs. Two (2) Composite Samples were collected and analyzed for SVOCs, Inorganics, and PCBs/Pesticides. The chain of custody incorrectly shows the same Sample ID for the composite samples and the first two discrete VOC samples. The Analytical Results have been attached to this form.

Two (2) composite samples were collected and analyzed for grain size distribution and moisture-density.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Analytical results are compared to Restricted Residential SCO.

VOC analyses: acetone, benzene, toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and total xylenes were detected in 7 of 7 samples at levels below Restricted Residential SCOs.

There were no detections of SVOCs, PCBs, or pesticides in the two composite samples.

Metals analyses: arsenic, barium, beryllium, copper, lead manganese, nickel, zinc, and mercury were detected at levels below Restricted Residential SCOs.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Edger Enterprises

Location where fill was obtained:

Brewer's Pit located in Horseheads NY

Identification of any state or local approvals as a fill source:

NYSDEC Facility ID 8-0734-00150

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Geotechnical Data and the Chemical Analysis Reports

The information provided on this form is accurate and complete.

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Notes
- Electrical trench material added to Windrow 5-653
- Drawing not to scale.

Job ID: 180-69679-1

Laboratory: TestAmerica Pittsburgh

Narrative

Job Narrative
180-69679-1

Receipt
The samples were received on 8/25/2017 7:55 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.1° C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-221134 was below criteria for the following analytes: 2-butanone and vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-221263 was above criteria for the following analytes: 1,4-dioxane, pentachlorophenol, and pyridine. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 7471B: The matrix spike (MS) recovery of sample Wb4-5, S2C 82417 (180-69679-3) was above the control limits for mercury. The RPD between the spikes and the recoveries of the matrix spike duplicate (MSD) and laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North IRM

TestAmerica Job ID: 180-69679-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Geosyntec Consultants, Inc. TestAmerica Job ID: 180-69679-1
Project/Site: Former Sperry Remington Site - North IRM

Laboratory: TestAmerica Pittsburgh

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11182	03-31-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids
8270D LL	3541	Solid	1,4-Dioxane

Login Sample Receipt Checklist

Client: Geosyntec Consultants, Inc.

Job Number: 180-69679-1

Login Number: 69679
List Number: 1
Creator: Colussy, Jill L

List Source: TestAmerica Pittsburgh

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
180-69728-1

Receipt
The samples were received on 8/26/2017 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following sample was diluted due to the nature of the sample matrix (extract was dark and viscous): Wb5-6, S3C, 82517 (180-69728-2). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-221833 was below method criteria for the following analyte: pentachlorophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected sample and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Geosyntec Consultants, Inc. TestAmerica Job ID: 180-69728-1
Project/Site: Former Sperry Remington Site - North IRM

Laboratory: TestAmerica Pittsburgh

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11182	03-31-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids
8270D LL	3541	Solid	1,4-Dioxane

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Memorandum

Date:	31 August 2017
To:	Aron Krasnopoler
From:	Mary Tyler
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID # 180-69679-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of six solid samples and two field duplicate samples, collected August 24, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Methods 9010C/9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043,

NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-69679-1	Wb4-5, S2A 82417
180-69679-2	Wb4-5, S2B 82417
180-69679-3	Wb4-5, S2C 82417
180-69679-4	Wb5-6, S2A 82417

Laboratory ID	Client ID
180-69679-5	Wb5-6, S2B 82417
180-69679-6	Wb5-6, S2C 82417
180-69679-7	DUP 22
180-69679-8	DUP 23

The samples were received at the laboratory at 3.1°C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- Sample collection times were not documented on the COC for the field duplicate samples. The laboratory assigned collection times of 00:00.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample

- ✓ Surrogates
- ✓ Trip Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent differences (%Ds) for 2-butanone and vinyl chloride were high in analytical batch 221134, outside method specified acceptance criteria. The %Ds were both 21.1%D, with low biases. Since the %Ds were within the validation guidance acceptance criteria of 40%D and 30%D, respectively, no qualifications were applied to the data.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221134). VOCs were not detected in the method blank above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD pair was not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

A trip blank did not accompany the sample set. No qualifications were applied to the data, but the omission should be noted by the data user.

1.8 Field Duplicate

Two field duplicate samples were collected with the sample set. One field duplicate was analyzed for VOCs, DUP 23. Acceptable precision [relative percent difference (RPD) <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicate and the original sample, Wb5-6, S2A 82417.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment

- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

The narrative indicated that the CCV %Ds for 1,4-dioxane, pentachlorophenol and pyridine were high in analytical batch 221263, outside method specified acceptance criteria. The %Ds were 32.8%D, 30.9%D and 40.3%D, respectively, with high biases. Since the %Ds were within the validation guidance acceptance criteria of 40%D, no qualifications were applied to the data.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221247). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Two field duplicate samples were collected. One field duplicate was analyzed for SVOCs, DUP 22. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, Wb4-5, S2C 82417.

2.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010. It was noted that no NYSDEC DER10 App 5 Constituent Levels for Imported Fill were listed for the following compounds:

2,4,5-Trichlorophenol
2,4,6-Trichlorophenol
2,4-Dinitrotoluene
2-Methylphenol
Dibenzofuran
Hexachlorobenzene

Hexachlorobutadiene
Hexachloroethane
Methylphenol, 3 & 4
Nitrobenzene
Pyridine

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

3.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times
✓ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248 and 1254. There are peaks in 1248 and 1254 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248 and 1254 in the samples were J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier*	Reason Code**
DUP 22	PCB-1248	0.11	NA	0.11	J	13
DUP 22	PCB-1254	0.031	NA	0.031	J	13
Wb4-5, S2C 82417	PCB-1248	0.12	NA	0.12	J	13
Wb4-5, S2C 82417	PCB-1254	0.032	NA	0.032	J	13
Wb5-6, S2C 82417	PCB-1248	0.14	NA	0.14	J	13
Wb5-6, S2C 82417	PCB-1254	0.041	NA	0.041	J	13

mg/kg-milligrams per kilograms

NA-not applicable
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

3.2 Holding Times

No holding times are listed in the referenced method for PCB analyses. The samples were extracted and analyzed within 13 days of collection. Therefore, no qualifications were applied to the data, based on professional and technical judgment.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221249). PCBs were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCS duplicate (LCSD) pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported.

3.7 Field Duplicate

Two field duplicate samples were collected. One field duplicate was analyzed for PCBs, DUP 22. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, Wb4-5, S2C 82417.

3.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

It was noted that no NYSDEC constituent levels were listed for PCBs.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

4.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010C (Mercury evaluated separately in Section 5.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment

4.1 Overall Assessment

The metals data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.2 Holding Times

The holding time for the metals analysis of a solid sample is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221352). The metals were not detected in the method blank above the MDLs.

4.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

A laboratory duplicate was not reported.

4.7 Field Duplicate

Two field duplicate samples were collected. One field duplicate was analyzed for metals, DUP 22. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, Wb4-5, S2C 82417.

4.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010. It was noted that no NYSDEC constituent level was listed for chromium.

4.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample

IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

5.0 MERCURY

The samples were analyzed for mercury by EPA method 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Laboratory Duplicate
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

5.1 Overall Assessment

The mercury data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

5.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221438). Mercury was not detected in the method blank above the MDL.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample Wb4-5, S2C 82417. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exception.

The MS recovery was high and outside the laboratory specified acceptance criteria. Therefore, the concentration of mercury in sample Wb4-5, S2C 82417 was J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier*	Reason Code**
Wb4-5, S2C 82417	Mercury	0.016	J, F1	0.016	J	4

mg/kg-milligrams per kilograms
J- Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
F1-laboratory flag indicating that the MS and/or MSD recovery is outside acceptance limits

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery result was within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported.

5.7 Field Duplicate

Two field duplicate samples were collected. One field duplicate was analyzed for mercury, DUP 22. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, Wb4-5, S2C 82417.

5.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010.

5.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

6.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9010C/9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Laboratory Duplicate
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

6.1 Overall Assessment

The total cyanide data reported in this data set are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

6.2 Holding Times

The holding time for the total cyanide analysis of solid samples is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221468). Cyanide was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

Laboratory duplicates were not reported.

6.7 Field Duplicate

Two field duplicate samples were collected. One field duplicate was analyzed for cyanide, DUP 22. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, Wb4-5, S2C 82417.

6.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Memorandum

Date:	11 September 2017
To:	Aron Krasnopoler
From:	Mary Tyler
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID # 180-69728-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of two solid samples, collected August 25, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Methods 9010C/9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043,

NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-69728-1	Wb5-6, S3A, 82517

Laboratory ID	Client ID
180-69728-2	Wb5-6, S3C, 82517

The samples were received at the laboratory at 2.4°C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Trip Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221413). VOCs were not detected in the method blank above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample Wb5-6, S3A, 82517. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

A trip blank did not accompany the sample set. No qualifications were applied to the data, but the omission should be noted by the data user.

1.8 Field Duplicate

Field duplicate samples were not collected with the sample set.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for pentachlorophenol was high in analytical batch 221833, outside method specified acceptance criteria. The %D was 38.5%D, with a low bias. Since the %D was within the validation guidance acceptance criteria of 40%D, no qualifications were applied to the data.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221762). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Field duplicate samples were not collected with the sample set.

2.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010. It was noted that no NYSDEC DER10 App 5 Constituent Levels for Imported Fill were listed for the following compounds:

2,4,5-Trichlorophenol
2,4,6-Trichlorophenol
2,4-Dinitrotoluene

2-Methylphenol
Dibenzofuran
Hexachlorobenzene

Hexachlorobutadiene
Hexachloroethane
Methylphenol, 3 & 4

Nitrobenzene
Pyridine

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

3.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times
✓ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

Sample Wb5-6, S3C, 82517 contains a mixture of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a

sample. Based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in this sample were J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier*	Reason Code**
Wb5-6, S3C, 82517	PCB-1248	2.1	NA	2.1	J	13
Wb5-6, S3C, 82517	PCB-1254	0.99	NA	0.99	J	13
Wb5-6, S3C, 82517	PCB-1260	0.13	NA	0.13	J	13

mg/kg-milligrams per kilograms
NA-not applicable
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

3.2 Holding Times

No holding times are listed in the referenced method for PCB analyses. The samples were extracted and analyzed within 13 days of collection. Therefore, no qualifications were applied to the data, based on professional and technical judgment.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221764). PCBs were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCS duplicate (LCSD) pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported.

3.7 Field Duplicate

Field duplicate samples were not collected with the sample set.

3.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

It was noted that no NYSDEC constituent levels were listed for PCBs.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

4.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010C (Mercury evaluated separately in Section 5.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

4.1 Overall Assessment

The metals data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.2 Holding Times

The holding time for the metals analysis of a solid sample is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221454). The metals were not detected in the method blank above the MDLs.

4.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

A laboratory duplicate was not reported.

4.7 Field Duplicate

Field duplicate samples were not collected with the sample set.

4.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010. It was noted that no NYSDEC constituent level was listed for chromium.

4.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample

IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

5.0 MERCURY

The samples were analyzed for mercury by EPA method 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

5.1 Overall Assessment

The mercury data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

5.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 221438). Mercury was not detected in the method blank above the MDL.

5.4 Matrix Spike/Matrix Spike Duplicate

An MS/MSD pair was not reported.

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery result was within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported.

5.7 Field Duplicate

Field duplicate samples were not collected with the sample set.

5.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010.

5.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

6.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9010C/9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

An MS/MSD pair was not reported.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

Laboratory duplicates were not reported.

6.7 Field Duplicate

Field duplicate samples were not collected with the sample set.

6.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample collection date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Restricted Residential Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 800-1000

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Seven (7) Discrete Samples were collected and analyzed for VOCs. Two (2) Composite Samples were collected and analyzed for SVOCs, Inorganics, and PCBs/Pesticides. The chain of custody incorrectly shows the same Sample ID for the composite samples and the first two discrete VOC samples. The Analytical Results have been attached to this form.

Two (2) composite samples were collected and analyzed for grain size distribution and moisture-density.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Analytical results are compared to Restricted Residential SCO.

VOC analyses: acetone, benzene, toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and total xylenes were detected in 7 of 7 samples at levels below Restricted Residential SCOs.

There were no detections of SVOCs, PCBs, or pesticides in the two composite samples.

Metals analyses: arsenic, barium, beryllium, copper, lead manganese, nickel, zinc, and mercury were detected at levels below Restricted Residential SCOs.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Edger Enterprises

Location where fill was obtained:

Brewer's Pit located in Horseheads NY

Identification of any state or local approvals as a fill source:

NYSDEC Facility ID 8-0734-00150

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Geotechnical Data and the Chemical Analysis Reports

The information provided on this form is accurate and complete.

Lab Qualifiers:J: The identification of the analyte is acceptable; the reported value is an estimate.J0: J0: Calibration verification outside of acceptance limits. Result is estimated.J3: The associated batch QC was outside the established quality control range for precision.J4: The associated batch QC was outside the established quality control range for accuracyJ5: The sample matrix interfered with the ability to make any accurate determination; spike value is highJ6: The sample matrix interfered with the ability to make any accurate determination; spike value is low

VALIDATION QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Lab Qualifiers:J: The identification of the analyte is acceptable; the reported value is an estimate.J0: J0: Calibration verification outside of acceptance limits. Result is estimated.J3: The associated batch QC was outside the established quality control range for precision.J4: The associated batch QC was outside the established quality control range for accuracy.J5: The sample matrix interfered with the ability to make any accurate determination; spike value is highJ6: The sample matrix interfered with the ability to make any accurate determination; spike value is low

VALIDATION QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Lab Qualifiers:J: The identification of the analyte is acceptable; the reported value is an estimate.J0: J0: Calibration verification outside of acceptance limits. Result is estimated.J3: The associated batch QC was outside the established quality control range for precision.J4: The associated batch QC was outside the established quality control range for accuracyJ5: The sample matrix interfered with the ability to make any accurate determination; spike value is highJ6: The sample matrix interfered with the ability to make any accurate determination; spike value is low

VALIDATION QUALIFIER DEFINITIONS

U□ The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J □ The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+□ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J-□ The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ□ The analyte was not detected above the in the sample.

R□ The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ANALYTICAL REPORT

July 28, 2017

Remedial Construction Services, L.P.

Sample Delivery Group:	L923206
Samples Received:	07/19/2017
Project Number:	23925
Description:	Elmira, NY

Report To:

Mr. John Geary
950 West Valley Rd.
Suite 2802
Wayne, PA 19087

Entire Report Reviewed By:

T. Alan Harvill
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL (dry)	Reported Detection Limit.
RDL	Reported Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Subject: Stage 2A Data Validation - Level II Data Deliverable, ESC Lab Sciences Sample Delivery Group # L923206

SITE: RECON Submittal 02-3925-010 Topsoil

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of nine solid samples, including two samples for matrix spike/matrix spike duplicate (MS/MSD) analyses and two field duplicate samples, collected July 18, 2017, as part of the RECON Submittal 02-3925-010 Topsoil project. The analyses were performed at ESC Lab Sciences, Mount Juliet, Tennessee. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3546/8270D
- Organochlorine Pesticides by EPA Methods 3546/8081
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3546/8082
- Metals by EPA Methods 3050B/6010B
- Trivalent Chromium by Calculation
- Mercury by EPA Method 7471A
- Hexavalent Chromium by EPA Methods 3060A/7196A
- Total Cyanide by EPA Method 9012B
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following

exceptions. One or both MS/MSD recoveries of 1,3-dichlorobenzene, naphthalene, styrene, 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene, n-butylbenzene, 2-chlorotoluene, 4-chlorotoluene, 1,2-dichlorobenzene, 1,4-dichlorobenzene and hexachloro-1,3-butadiene were less than 20%, outside the validation guidance acceptance criteria. Therefore, the nondetect results of these compounds in sample GRAB 7 were R qualified as rejected. In addition, the nondetect benzidine result in sample COMPOSITE 2 was R qualified as rejected due to no MS/MSD recoveries (0%).

The remaining qualified data should be used within the limitations of the qualification.

The data were validated based on the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
L923206-01	COMPOSITE 2
L923206-01MS	COMPOSITE 2MS
L923206-01MSD	COMPOSITE 2MSD
L923206-02	GRAB 4
L923206-03	GRAB 1
L923206-04	GRAB 6
L923206-05	GRAB 5
L923206-06	DUP 1

Laboratory ID	Client ID
L923206-07	GRAB 7
L923206-07MS	GRAB 7MS
L923206-07MSD	GRAB 7MSD
L923206-08	GRAB 3
L923206-09	GRAB 2
L923206-10	COMPOSITE 1
L923206-11	DUP 2

The samples were received at the laboratory at 5.3ºC, within the criteria of 0-6ºC. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- The chain of custody (COC) had a note that indicated two trip blanks were sent in with the samples; the trip blank IDs were not listed on the COC for analysis and trip blank results were not reported. Additional information from the laboratory indicated that trip blanks are sent to the field with the empty sample containers; analysis is performed if indicated on the COC.

- Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- Sample collection times were not documented on the COC for field duplicate samples DUP 1 and DUP 2. The laboratory assigned collection times of 00:00.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this data set are considered usable for meeting project objectives, with the following exceptions. One or both MS/MSD recoveries of 1,3-dichlorobenzene, naphthalene, styrene, 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene, n-butylbenzene, 2-chlorotoluene, 4-chlorotoluene, 1,2-dichlorobenzene, 1,4-dichlorobenzene and hexachloro-1,3-butadiene were less than 20%, outside the validation guidance acceptance criteria. Therefore, the nondetect results of these compounds in sample GRAB 7 were R qualified as rejected. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 97.9%.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG1000613). VOCs were not detected in the method blank above the method detection limits (MDLs), with the following exception.

Methylene chloride was detected at an estimated concentration, greater than the MDL and less than the (RL). Since methylene chloride was not detected in the associated samples, no qualifications were applied to the data.

1.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample GRAB 7. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of acetone and the RPDs for 1,3-dichlorobenzene and styrene were high and outside the laboratory specified acceptance criteria. Since 1,3-dichlorobenzene and styrene were not detected in sample GRAB 7, no qualifications were applied to the 1,3-dichlorobenzene and styrene data due to the RPD results. However, due to the high recoveries, the concentration of acetone in sample GRAB 7 was J qualified as estimated.

One or both MS/MSD recoveries of 1,3-dichlorobenzene, naphthalene, styrene, 1,2,3-trichlorobenzene and 1,2,4-trichlorobenzene were low and outside the laboratory specified acceptance criteria; the MS/MSD recoveries were less than 20%, outside the validation guidance acceptance criteria. Therefore, the nondetect results of these compounds in sample GRAB 7 were R qualified as rejected.

One or both MS/MSD recoveries of the following compounds were within the laboratory specified acceptance criteria, but less than 20%, outside the validation guidance acceptance criteria. Therefore, based on professional and technical judgment, the nondetect results of these compounds in sample GRAB 7 were R qualified as rejected.

Bromobenzene	4-Chlorotoluene	Hexachloro-1,3-Butadiene
N-Butylbenzene	1,2-Dichlorobenzene	1,2,4-Trimethylbenzene
2-Chlorotoluene	1,4-Dichlorobenzene	1,3,5-Trimethylbenzene

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier*	Reason Code**
GRAB 7	Acetone	0.0386	J J5	0.0386	J	4
GRAB 7	Bromobenzene	0.000332	U	0.000332	R	4

mg/kg-milligrams per kilogram
U-not detected at or above the stated MDL
J-laboratory flag indicating that the identification of the analyte is acceptable; the reported value is an estimate
J5-laboratory flag indicating that the sample matrix interfered with the ability to make any accurate determination; spike value is high
J3-laboratory flag indicating that the associated batch QC was outside the established quality control range for precision
J6-laboratory flag indicating that the sample matrix interfered with the ability to make any accurate determination; spike value is low
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The LCS recovery of bromoform and the acetone RPD were high, outside laboratory specified acceptance criteria. Since bromoform was not detected in the associated samples, no qualifications were applied to the bromoform data. However, based on professional and technical judgment, the concentrations of acetone in the associated samples were J qualified as estimated.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
GRAB 4	Acetone	0.0231	J J3	0.0231	J	5
GRAB 1	Acetone	0.0351	J J3	0.0351	J	5
GRAB 6	Acetone	0.0356	J J3	0.0356	J	5
GRAB 5	Acetone	0.0324	J J3	0.0324	J	5
DUP 1	Acetone	0.0254	J J3	0.0254	J	5
GRAB 7	Acetone	0.0386	J J5	0.0386	J	5
GRAB 3	Acetone	0.0308	J J3	0.0308	J	5
GRAB 2	Acetone	0.0466	J J3	0.0466	J	5

mg/kg-milligrams per kilogram
J-laboratory flag indicating that the identification of the analyte is acceptable; the reported value is an estimate
J5-laboratory flag indicating that the sample matrix interfered with the ability to make any accurate determination; spike value is high
J3-laboratory flag indicating that the associated batch QC was outside the established quality control range for precision

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

Two trip blanks accompanied the samples, but were not analyzed. No qualifications were applied to the data, but this should be noted by the data user.

1.8 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for VOCs, DUP 1. Acceptable precision [RPD <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicate and the original sample, Grab 3.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010 listed in the electronic data deliverable (EDD). It was noted that no NYSDEC constituent levels were listed in the EDD for the following compounds:

Acrylonitrile
Bromobenzene
Bromodichloromethane
Bromoform
Bromomethane
Chlorodibromomethane
Chloroethane
Chloromethane
2-Chlorotoluene
4- Chlorotoluene
1,2-Dibromo-3-Chloropropane
1,2-Dibromoethane
Dibromomethane
Dichlorodifluoromethane
1,2-Dichloropropane
1,1- Dichloropropene
1,3- Dichloropropane
CIS-1,3- Dichloropropene

Trans-1,3- Dichloropropene
2,2- Dichloropropane
Di-isopropyl Ether
Hexachloro-1,3-butadiene
Isopropylbenzene
p-Isopropyltoluene
4-Methyl-2-Pentanone (MIBK)
Styrene
1,1,1,2-Tetrachloroethane
1,1,2,2- Tetrachloroethane
1,1,2-Trichlorotrifluoroethane
1,2,3-Trichlorobenzene
1,2,4- Trichlorobenzene
1,1,2-Trichloroethane
Trichlorofluoromethane
1,2,3-Trichloropropane
1,2,3-Trimethylbenzene

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The samples were reported to the MDLs in the hardcopy report; the nondetect results in the EDD were reported

to the RLs. In addition, the QC data were not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3546/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this data set are considered usable for meeting project objectives, with the following exceptions. The nondetect benzidine results were R qualified as rejected due to no MS/MSD recoveries (0%) and professional and technical judgment. Therefore, the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 99.4%.

The nondetect hexachlorocyclopentadiene results in the samples were flagged with J0, indicating the calibration verification was outside of acceptance limits and the result was estimated. Additional information sent by the laboratory indicated the continuing calibration verification (CCV) percent difference (%D) for hexachlorocyclopentadiene was 70%D, with a low bias. Therefore, based on professional and technical judgment, the nondetect hexachlorocyclopentadiene results in the associated samples were UJ qualified as estimated less than the MDL.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
COMPOSITE 2	Hexachloro-cyclopentadiene	0.0667	U J0	0.0667	UJ	9
COMPOSITE 1	Hexachloro-cyclopentadiene	0.0657	U J0 J3	0.0657	UJ	9
DUP 2	Hexachloro-cyclopentadiene	0.0658	U J0 J3	0.0658	UJ	9

mg/kg-milligrams per kilogram
U-not detected at or above the stated MDL
J3-laboratory flag indicating that the associated batch QC was outside the established quality control range for precision
J0-laboratory flag indicating that the calibration verification was outside of acceptance limits and the result was estimated

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG1002043). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample COMPOSITE 2. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

There were no recoveries of benzidine (0%). Therefore, based on professional and technical judgment, the nondetect results of benzidine sample COMPOSITE 2 was R qualified as rejected. In addition, the RPDs for benzo(a)anthracene, chrysene, fluoranthene, phenanthrene and pyrene were high and outside laboratory specified acceptance criteria. Therefore, the concentrations of anthracene, chrysene, fluoranthene, phenanthrene and pyrene in sample COMPOSITE 2 were J qualified as estimated.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
COMPOSITE 2	Benzidine	0.0723	U J6	0.0723	R	4
COMPOSITE 2	Benzo(a)anthracene	0.0323	J J3	0.0323	J	4
COMPOSITE 2	Chrysene	0.0317	J J3	0.0317	J	4
COMPOSITE 2	Fluoranthene	0.0543	J3	0.0543	J	4
COMPOSITE 2	Phenanthrene	0.0234	J J3	0.0234	J	4
COMPOSITE 2	Pyrene	0.0456	J3	0.0456	J	4

mg/kg-milligrams per kilogram
U-not detected at the stated MDL
J-laboratory flag indicating that the identification of the analyte is acceptable; the reported value is an estimate
J3-laboratory flag indicating that the associated batch QC was outside the established quality control range for precision
J6-laboratory flag indicating that the sample matrix interfered with the ability to make any accurate determination; spike value is low

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The RPDs of the following compounds were high and outside laboratory specified acceptance criteria. Since these compounds were not detected in the associated samples, no qualifications were applied to the data, based on professional and technical judgment.

Bis(2-chloroethyl)ether
Bis (2-chloroisopropyl) ether
2-Chloronaphthalene
Hexachloro-1,3-butadiene
Hexachlorocyclopentadiene
Hexachloroethane
Naphthalene

Nitrobenzene
N-Nitroso-n-propylamine
1,2,4-Trichlorobenzene
2-Chlorophenol
2-Nitrophenol
Phenol

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for SVOCs, DUP 2. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, COMPOSITE 1.

2.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD. It was noted that NYSDEC constituent levels were listed in the EDD for the following compounds; the other SVOCs did not have NYSDEC constituent levels listed.

Acenaphthene
Acenaphthylene
Anthracene
Benzo(a) anthracene
Benzo(k)fluoranthene
Benzo(b)fluoranthene
Benzo(g,h,i)perylene
Benzo(a)pyrene
Chrysene
Dibenz(a,h)anthracene

Fluoranthene
Fluorene
Hexachlorobenzene
Indeno(1,2,3-cd)pyrene
Naphthalene
Phenanthrene
Pyrene
Pentachlorophenol
Phenol

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The samples were reported to the MDLs in the hardcopy report; the nondetect results in the EDD were reported to the RLs. In addition, the QC data were not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

3.0 ORGANOCHLORINE PESTICIDES

The samples were analyzed for organochlorine pesticides by EPA Methods 3546/8081.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Electronic Data Deliverable Review

3.1 Overall Assessment

The organochlorine pesticide data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

3.2 Holding Times

The holding times for organochlorine pesticide analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG1000657). The organochlorine pesticides were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample COMPOSITE 2. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

3.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for organochlorine pesticides, DUP 2. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, COMPOSITE 1.

3.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD. It was noted that no NYSDEC constituent levels were listed in the EDD for endrin aldehyde, endrin ketone, heptachlor expoxide, methoxychlor, chlordane and toxaphene.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The samples were reported to the MDLs in the hardcopy report; the nondetect results in the EDD were reported to the RLs. In addition, the QC data were not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

4.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3546/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Field Duplicate
- ✓ Sensitivity
- ⊗ Electronic Data Deliverable Review

4.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

4.2 Holding Times

No holding times are listed in the referenced method for PCB analyses. The samples were extracted and analyzed within 4 days of collection. Therefore, no qualifications were applied to the data, based on professional and technical judgment.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG1000657). PCBs were not detected in the method blank above the MDLs.

4.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample COMPOSITE 2. The recovery and RPD results were within the laboratory specified acceptance criteria.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

4.6 Surrogates

Acceptable surrogate recoveries were reported for the sample analyses.

4.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for PCBs, DUP 2. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, COMPOSITE 1.

4.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

It was noted that no NYSDEC constituent levels were listed in the EDD for PCBs.

4.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The samples were reported to the MDLs in the hardcopy report; the nondetect results in the EDD were reported to the RLs. In addition, the QC data were not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

5.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010B (Mercury evaluated separately in Section 6.0, below). The trivalent chromium results were determined by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Laboratory Duplicate
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

5.1 Overall Assessment

The metals data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

5.2 Holding Times

The holding time for the metals analysis of solid samples is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG1002245). The metals were not detected in the method blank above the MDLs.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample COMPOSITE 2. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of manganese were high and outside the laboratory specified acceptance criteria. Therefore, the concentration of manganese in sample COMPOSITE 2 was J+ qualified as estimated with a high bias.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
COMPOSITE 2	Manganese	388	J5	388	J+	4

mg/kg-milligrams per kilogram
J5-laboratory flag indicating that the sample matrix interfered with the ability to make any accurate determination; spike value is high

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported.

5.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for metals, DUP 2. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, COMPOSITE 1.

5.8 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD. It was noted that no NYSDEC constituent level was listed in the EDD for chromium.

5.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The samples were reported to the MDLs in the hardcopy report; the nondetect results in the EDD were reported to the RLs. In addition, the QC data were not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

6.0 MERCURY

The samples were analyzed for mercury by EPA method 7471A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Laboratory Duplicate
✓ Field Duplicate
✓ Sensitivity
⊗ Electronic Data Deliverable Review

6.1 Overall Assessment

The mercury data reported in this data set are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

6.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG1000398). Mercury was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using

sample COMPOSITE 2. The recovery and RPD results were within the laboratory specified acceptance criteria.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

A laboratory duplicate was not reported.

6.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for mercury, DUP 2. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, COMPOSITE 1.

6.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The samples were reported to the MDL in the hardcopy report; the nondetect results in the EDD were reported to the RL. In addition, the QC data were not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

7.0 HEXAVALENT CHROMIUM

The samples were analyzed for hexavalent chromium by EPA Methods 3060A/7196A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Laboratory Duplicate
- ✓ Field Duplicate
- ✓ Sensitivity
- ⊗ Electronic Data Deliverable Review

7.1 Overall Assessment

The hexavalent chromium data reported in this data set are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

7.2 Holding Times

The holding times for the hexavalent chromium analysis of solid samples are 30 days from sample collection to digestion and 7 days from digestion to analysis. The holding times were met for the sample analyses.

7.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches WG1000369 and WG1000857). Hexavalent chromium was not detected in the method blanks above the MDL.

7.4 Matrix Spike/Matrix Spike Duplicate

One sample set specific MS/MSD pair was reported, using sample COMPOSITE 2. The RPD result was within the laboratory specified acceptance criteria. The recoveries were low and outside the laboratory specified acceptance criteria. In addition, the laboratory indicated that this sample was in a reductive state. Additional information was sent by the laboratory, documenting the reductive nature of the sample. Therefore, based on professional and technical judgment, no qualification was applied to the hexavalent chromium result in sample COMPOSITE 2.

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCS/LCSD pairs were reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

7.6 Laboratory Duplicate

Three batch laboratory duplicates were reported. Since these were batch QC, there was no impact on the data and no qualifications were applied to the data.

7.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for hexavalent chromium, DUP 2. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, COMPOSITE 1.

7.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD.

7.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The samples were reported to the MDL in the hardcopy report; the nondetect results in the EDD were reported to the RL. In addition, the QC data were not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

8.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9012B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample

✓ Sensitivity
✓ Electronic Data Deliverable Review

8.1 Overall Assessment

The total cyanide data reported in this data set are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

8.2 Holding Times

The holding time for the total cyanide analysis of solid samples is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

8.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch WG1001620). Cyanide was not detected in the method blank above the MDL.

8.4 Matrix Spike

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample COMPOSITE 2. The RPD result was within the laboratory specified acceptance criteria. The recoveries were low and outside the laboratory specified acceptance criteria. Therefore, the concentration of cyanide in sample COMPOSITE 2 was J- qualified as estimated with a low bias.

Sample ID	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
COMPOSITE 2	Cyanide	0.0505	J J6	0.0505	J-	4

mg/kg-milligrams per kilogram

J6-laboratory flag indicating that the sample matrix interfered with the ability to make any accurate determination; spike value is low

8.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

8.6 Laboratory Duplicate

Two batch laboratory duplicates were reported. Since these were batch QC, there was no impact on the data and no qualifications were applied to the data.

8.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for cyanide, DUP 2. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, COMPOSITE 1.

8.8 Sensitivity

The samples were reported to the MDL. No elevated non-detect results were reported.

The MDL was at or below the NYSDEC DER10 App 5 Constituent Level for Imported Fill or Soil Restricted Residential Use May 2010 listed in the EDD.

8.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The samples were reported to the MDL in the hardcopy report; the nondetect results in the EDD were reported to the RL. In addition, the QC data were not included in the EDD. No other discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Restricted Residential Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 800-1000

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Seven (7) Discrete Samples were collected and analyzed for VOCs. Two (2) Composite Samples were collected and analyzed for SVOCs, Inorganics, and PCBs/Pesticides. The chain of custody incorrectly shows the same Sample ID for the composite samples and the first two discrete VOC samples. The Analytical Results have been attached to this form.

Two (2) composite samples were collected and analyzed for grain size distribution and moisture-density.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Analytical results are compared to Restricted Residential SCO.

VOC analyses: acetone, benzene, toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and total xylenes were detected in 7 of 7 samples at levels below Restricted Residential SCOs.

There were no detections of SVOCs, PCBs, or pesticides in the two composite samples.

Metals analyses: arsenic, barium, beryllium, copper, lead manganese, nickel, zinc, and mercury were detected at levels below Restricted Residential SCOs.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Edger Enterprises

Location where fill was obtained:

Brewer's Pit located in Horseheads NY

Identification of any state or local approvals as a fill source:

NYSDEC Facility ID 8-0734-00150

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Geotechnical Data and the Chemical Analysis Reports

The information provided on this form is accurate and complete.

LABORATORY TEST REPORT

PROJECT: **Material Testing – U-Haul**
CLIENT: Edger Enterprises
SAMPLE TYPE: Drainage Fill
SOURCE: **Brewer Pit**

REPORT NO.: 29729L-04-0317
SAMPLE NO.: EL 3055
DATE DELIVERED: March 22, 2017

Test Identification	Sample Result	Specification
Dry Rodded Unit Weight ASTM C 29	96.2 pcf	
Specific Gravity ASTM C 127 (Bulk)	2.644	
Porosity	42%	Greater than 40%

The sample tested meets the specified Porosity.

Note on #80 sieve added by A. Krasnopoler

Note: A size 80 sieve is 0.007 inches (0.177 mm). It is shown above that 1% of the sample by weight passes through a sieve of 3/8 inches. Therefore, the material is exempt by DER-10 Section 5.4(e)5.

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

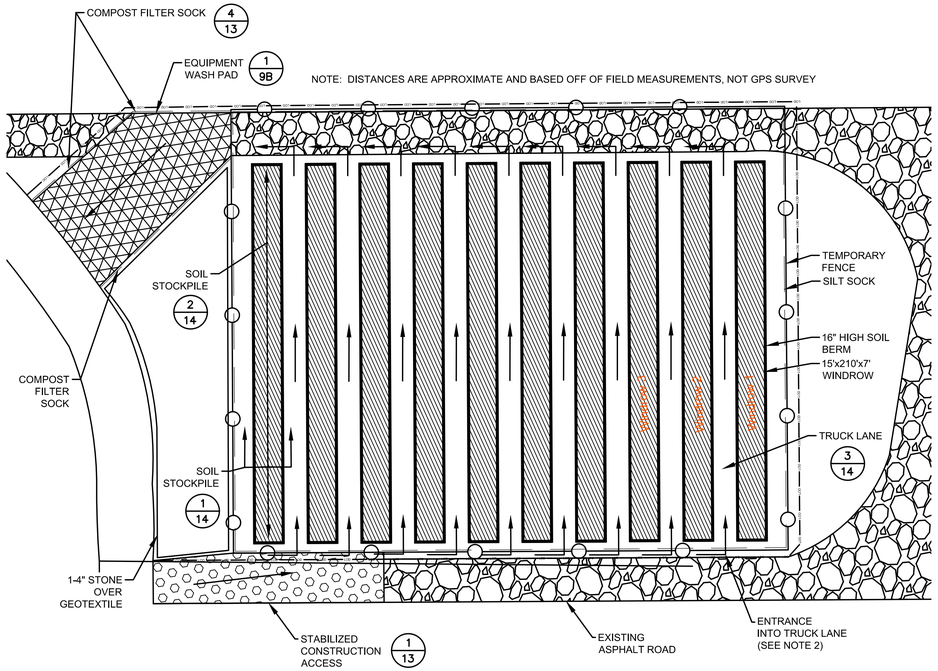
DATA QUALIFIER DEFINITIONS



U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

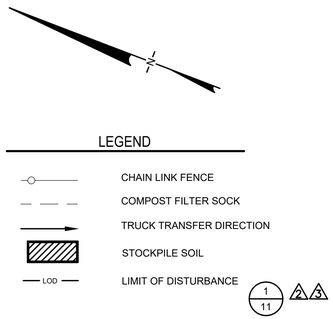
DATA QUALIFIER DEFINITIONS

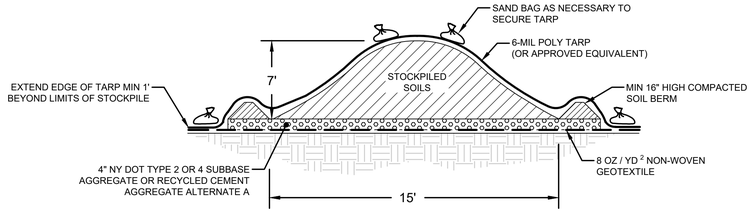
U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.



1/14 PLAN
STOCKPILE AREA
NTS

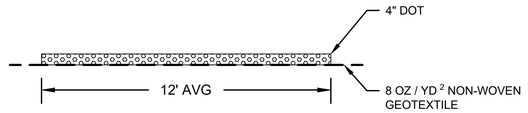
UNLOADING SEQUENCE:

1. TRUCK ENTERS TEMPORARY ENTRANCE INTO MSA.
2. TRUCK PULLS UP TO END OF ACTIVE WINDROW.
3. TRUCK BACKS ONTO ACTIVE WINDROW.
4. TRUCK UNLOADS AT END OF ACTIVE WINDROW.
5. TRUCK PULLS FORWARD INTO TRUCK LANE.
6. TRUCK EXITS ONTO ASPHALT ROAD
7. TRUCK ENTERS EQUIPMENT WASH PAD FOR WET DECON.
8. TRUCK EXITS EQUIPMENT WASH PAD AND RETURNS TO EXCAVATION AREA.

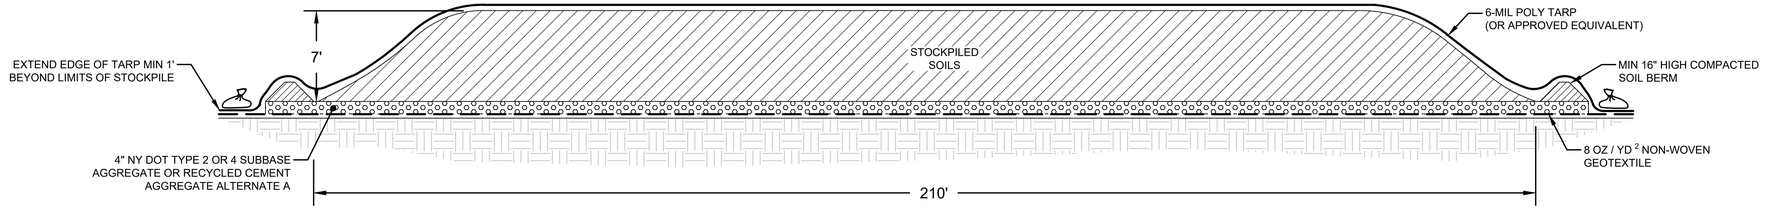


LOADING SEQUENCE:

1. TRUCK ENTERS TEMPORARY ENTRANCE INTO MSA.
2. TRUCK PULLS UP TO ACTIVE WINDROW TO BE LOADED, STAYING IN TRUCK LANE.
3. TRUCK IS LOADED BY EXCAVATOR.
4. TRUCK EXITS ONTO ASPHALT ROAD.
5. TRUCK ENTERS EQUIPMENT WASH PAD FOR WET DECON.
6. TRUCK EXITS EQUIPMENT WASH PAD AND RETURNS TO EXCAVATION AREA.



NOTES:



1. CONTRACTOR SHALL UTILIZE EARTH DIKE, COMPOST FILTER SOCK, AND DEWATERING SUMP PIT. 6
2. CONTRACTOR SHALL INSTALL TEMPORARY 6' TALL CHAIN LINK FENCING PARALLEL TO THE LIMITS OF CONSTRUCTION DISTURBANCE. FENCING SHALL INCLUDE VISUAL SCREENING.
3. SECTION(S) OF TEMPORARY FENCE WILL BE REMOVED TO CREATE AN ENTRANCE TO THE MSA AT THE BEGINNING OF EACH DAY OF UNLOADING OR LOADING OPERATIONS. SECTION LOCATION(S) MAY VARY. REMOVED SECTIONS SHALL BE RESTORED AND SECURED AT THE END OF EACH DAY OF MSA OPERATIONS.
4. STOCKPILING OF SOILS FOR POTENTIAL RE-USE SHALL BEGIN AT THE SOUTH END OF THE MSA.
5. STOCKPILING OF SOILS FOR POTENTIAL OFF-SITE TRANSPORT AND DISPOSAL AS NON-HAZARDOUS WASTE WILL BEGIN AT THE NORTH END OF THE MSA.
6. WINDROW LAYOUT ALLOWS FOR STOCKPILING OF APPROX. 4000 CUBIC YARDS (CY) OF SOIL. IF GREATER VOLUME IS REQUIRED, CONTRACTOR MAY REQUEST STOCKPILING OF SOILS WITH LIKE ANALYTICAL RESULTS APPROVED FOR RE-USE OR OFF-SITE DISPOSAL.
7. APPROX. 30 LINEAR FEET OF WINDROW IS EQUIVALENT TO 100 CY.
8. ALL TRUCKS WILL BE WET DECONNED BEFORE LEAVING THE MSA.

Receipt
The samples were received on 7/11/2017 8:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.9º C, 2.0º C and 2.3º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-216640 was outside the method criteria for the following analyte(s): Vinyl Chloride recovered high. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 180-216675 and analytical batch 180-216666 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): DUP2 (180-68037-1), WINDROW1, SEC 3, C (180-68037-2), WINDROW1, SEC 4, C (180-68037-4), WINDROW1, SEC 2, C (180-68037-8), WINDROW1, SEC 1, C (180-68037-11), (180-68037-A-1-B MS) and (180-68037-A-1-C MSD). This was the lowest dilution possible on these samples. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The post digestion spike % recovery for manganese associated with prep batch 216814 was outside of the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Geosyntec Consultants, Inc. TestAmerica Job ID: 180-68037-1
Project/Site: Former Sperry Remington Site - North IRM

Laboratory: TestAmerica Pittsburgh

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11182	03-31-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids
8270D LL	3541	Solid	1,4-Dioxane

Login Number: 68037
List Number: 1
Creator: Dunlap, David A

List Source: TestAmerica Pittsburgh

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	COC not relinquished
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	see notation on COC
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
180-68037-2

Comments
No additional comments.

Receipt
The samples were received on 7/11/2017 8:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.9º C, 2.0º C and 2.3º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217200 was outside the method criteria for the following analyte: 2-Butanone (MEK) and Acetone. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The following analyte recovered outside control limits for the LCS associated with analytical batch 180-217200: n-Butylbenzene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Geosyntec Consultants, Inc.

TestAmerica Job ID: 180-68037-2

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Client: Geosyntec Consultants, Inc.

Job Number: 180-68037-2

Login Number: 68037
List Number: 1
Creator: Dunlap, David A

List Source: TestAmerica Pittsburgh

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	COC not relinquished
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	see notation on COC
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
180-68096-1

Comments
No additional comments.

Receipt
The samples were received on 7/12/2017 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.2º C, 2.1º C and 3.1º C.

Receipt Exceptions
The following volatile samples were analyzed with significant headspace in two out of two voa vials: TRIP BLANK 1 (180-68096-37) and TRIP BLANK 2 (180-68096-38). Significant headspace is defined as a bubble greater than 6 mm in diameter.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217186 was outside the method criteria for the following analyte: Carbon Tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217056 was outside the method criteria for the following analyte(s): Carbon Tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217200 was outside the method criteria for the following analyte: 2-Butanone (MEK) and Acetone. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The following analyte recovered outside control limits for the LCS associated with analytical batch 180-217200: n-Butylbenzene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following samples was diluted to bring the concentration of target analytes within the calibration range (extract viscous, dark in color): W2, S5 C 71117 (180-68096-18) and W3, S1, C 71117 (180-68096-23). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): W1, S5, C 71117 (180-68096-3), W2, S1, C 71117 (180-68096-6), W2, S2, C 71117 (180-68096-9), W2, S3, C 71117 (180-68096-12), W2, S4, C 71117 (180-68096-15) and DUP-4 (180-68096-22). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and RPD's for preparation batch 180-216880 and analytical batch 180-216940 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. They are at a 20x dilution due to matrix.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-216940 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Job ID: 180-68096-1 (Continued)

Laboratory: TestAmerica Pittsburgh (Continued)

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): W3, S2, C 71117 (180-68096-26), W3, S3, C 71117 (180-68096-29), W3, S4, C 71117 (180-68096-32) and W3, S5, C 71117 (180-68096-36). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-217242 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was outside the method criteria for the following analyte(s): Benzo[g,h,i]perylene was >20% low. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The serial dilution performed for the following sample associated with prep batch 216920 was outside the control limits for manganese and zinc: W2, S1, C 71117 (180-68096-6)

Method(s) 6010C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for prep batch 216920 were outside the control limits for copper and zinc. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010C: The matrix spike / matrix spike duplicate (MS/MSD) precision for prep batch 216920 was outside the control limits for manganese. Sample matrix interference and/or non-homogeneity are suspected.

Method(s) 7471B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 217097 were outside the control limits for mercury. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North IRM

TestAmerica Job ID: 180-68096-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits
F1	MS and/or MSD Recovery is outside acceptance limits.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Geosyntec Consultants, Inc. TestAmerica Job ID: 180-68096-1
Project/Site: Former Sperry Remington Site - North IRM

Laboratory: TestAmerica Pittsburgh

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11182	03-31-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids
8270D LL	3541	Solid	1,4-Dioxane

Memorandum

Date:	17 July 2017
To:	Aron Krasnopoler
From:	Mary Tyler
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID 180-68037-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of twelve solid samples and two field duplicate samples, collected July 10, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Method 9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04,

July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data sets:

Laboratory ID	Client ID
180-68037-1	DUP2
180-68037-2	WINDROW1, SEC 3, C
180-68037-3	WINDROW1, SEC 3, B
180-68037-4	WINDROW1, SEC 4, C
180-68037-5	DUP1
180-68037-6	WINDROW1, SEC 3, A
180-68037-7	WINDROW1, SEC 4, B

Laboratory ID	Client ID
180-68037-8	WINDROW1, SEC 2, C
180-68037-9	WINDROW1, SEC 2, A
180-68037-10	WINDROW1, SEC 1, A
180-68037-11	WINDROW1, SEC 1, C
180-68037-12	WINDROW1, SEC 4, A
180-68037-13	WINDROW1, SEC 2, B
180-68037-14	WINDROW1, SEC 1, B

The samples were received at the laboratory at 1.9-2.3^{o}C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following issues were noted with the chain of custody (COC):

- Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.
- No collection times were listed on the COC for the field duplicate samples; the laboratory assigned collection times of 00:00.
- There was no relinquishing signature on the first page of the COC and no relinquishing documentation (no signature, date or time) on the second page of the COC.
- The laboratory edited the analyses requested for field duplicate DUP1; the analyses were crossed off with the exception of the VOCs.
- A trip blank was listed on the COC for VOC analysis, but was not reported in this laboratory report.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Trip Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for vinyl chloride was high, outside method specified acceptance criteria. The %D was 20.1%; the method specified acceptance criteria is 20%D. Therefore, no qualifications were applied to the data.

1.2 Holding Times

The holding time for the VOC analysis of a preserved solid sample collected as a terracore is 48 hours until laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216673). VOCs were not detected in the method blank above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/laboratory control sample duplicate (LCSD) pair was reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

A trip blank accompanied the samples, but was not reported in this laboratory report. Since the VOC results in the data set were non-detect, the trip blank results have no effect on the results.

1.8 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for VOCs, DUP1. Acceptable precision [RPD <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, A. The RPDs between the results were 0%.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
⊗ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216675). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample DUP2. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

One of both of the recoveries of the following compounds were high and outside the laboratory specified acceptance criteria: Anthracene, benzo[k]fluoranthene, dibenzofuran, fluoranthene, phenanthrene and pyrene. Since dibenzofuran was not detected in sample DUP2, no qualifications were applied to the data. However, based on professional and technical judgment, the concentrations of anthracene, benzo[k]fluoranthene, fluoranthene, phenanthrene and pyrene in both sample DUP2 and its associated original sample, WINDROW1, SEC 3, C, were J qualified as estimated.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier*	Reason Code**
DUP2	Anthracene	0.22	F1	0.22	J	4
DUP2	Benzo[k]fluoranthene	0.23	F1	0.23	J	4
DUP2	Fluoranthene	0.45	F1	0.45	J	4
DUP2	Phenanthrene	0.21	F1	0.21	J	4
DUP2	Pyrene	0.81	F1	0.81	J	4
WINDROW1, SEC 3, C	Anthracene	0.18	NA	0.18	J	4
WINDROW1, SEC 3, C	Benzo[k]fluoranthene	0.23	NA	0.23	J	4
WINDROW1, SEC 3, C	Fluoranthene	0.64	NA	0.64	J	4
WINDROW1, SEC 3, C	Phenanthrene	0.39	NA	0.39	J	4
WINDROW1, SEC 3, C	Pyrene	0.82	NA	0.82	J	4

mg/kg-milligrams per kilogram
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits
NA-not applicable
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for SVOCs, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C, with the following exceptions.

The field duplicate acceptance criteria were not met for acenaphthylene and phenanthrene. Therefore, the concentrations of acenaphthylene and phenanthrene in the field duplicate pair were J qualified as estimated. The qualifications due to the field duplicate results are summarized below.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD	Validation Result (mg/kg)	Validation Qualifier	Reason Code
DUP2	Acenaphthylene	0.46	NA	59	0.46	J	7
WINDROW1, SEC 3, C	Acenaphthylene	0.25	NA		0.25	J	7
DUP2	Phenanthrene	0.21	F1	60	0.21	J	7
WINDROW1, SEC 3, C	Phenanthrene	0.39	NA		0.39	J	7

mg/kg-milligrams per kilogram
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits
NA-not applicable

2.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II reports and the EDDs.

3.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times
✓ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

3.1 Overall Assessment

The PCB data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this sample set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
DUP2	PCB-1248	1.1	NA	1.1	J	13
DUP2	PCB-1254	0.70	NA	0.70	J	13
DUP2	PCB-1260	0.17	NA	0.17	J	13
WINDROW1, SEC 1, C	PCB-1248	1.3	NA	1.3	J	13
WINDROW1, SEC 1, C	PCB-1254	0.82	NA	0.82	J	13
WINDROW1, SEC 1, C	PCB-1260	0.22	NA	0.22	J	13
WINDROW1, SEC 2, C	PCB-1248	1.1	NA	1.1	J	13

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
WINDROW1, SEC 2, C	PCB-1254	0.68	NA	0.68	J	13
WINDROW1, SEC 2, C	PCB-1260	0.18	NA	0.18	J	13
WINDROW1, SEC 3, C	PCB-1248	1.0	NA	1.0	J	13
WINDROW1, SEC 3, C	PCB-1254	0.67	NA	0.67	J	13
WINDROW1, SEC 3, C	PCB-1260	0.17	NA	0.17	J	13
WINDROW1, SEC 4, C	PCB-1248	0.91	NA	0.91	J	13
WINDROW1, SEC 4, C	PCB-1254	0.60	NA	0.60	J	13
WINDROW1, SEC 4, C	PCB-1260	0.17	NA	0.17	J	13

mg/kg-milligrams per kilogram
NA-not applicable

3.2 Holding Times

The holding times for the PCB analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216674). PCBs were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported.

3.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for PCBs, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C.

3.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No other discrepancies were identified between the level II report and the EDD.

5.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010C (Mercury evaluated separately in Section 6.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

5.1 Overall Assessment

The metals data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

5.2 Holding Times

The holding time for metals analysis of solid samples is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216814). The metals were not detected in the method blank above the MDLs.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample DUP2. The recovery and RPD results were within the laboratory specified acceptance criteria.

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported with the sample set.

5.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for metals, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C.

5.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

5.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

6.0 MERCURY

The samples were analyzed for mercury by EPA methods 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment

✓ Electronic Data Deliverable Review

6.1 Overall Assessment

The mercury data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

6.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216844). Mercury was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery result was within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

A laboratory duplicate was not reported.

6.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for mercury, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was not demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C. The RPD was high and outside the field duplicate acceptance criteria. Therefore, the concentrations of mercury in the field duplicate pair were J qualified as estimated.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD	Validation Result (mg/kg)	Validation Qualifier	Reason Code
DUP2	Mercury	0.26	NA	53	0.26	J	7
WINDROW1, SEC 3, C	Mercury	0.45	NA		0.45	J	7

mg/kg-milligrams per kilogram
NA-not applicable

6.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

7.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

7.1 Overall Assessment

The cyanide data reported in this package are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

7.2 Holding Times

The holding time for the cyanide analysis of solid samples is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

7.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216711). Cyanide was not detected in the method blank above the MDL.

7.4 Matrix Spike

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WINDROW1, SEC 3, C. The recovery and RPD results were within the laboratory specified acceptance criteria.

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

7.6 Laboratory Duplicate

A laboratory duplicate was not reported.

7.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for cyanide, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C.

7.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

7.9 Electronic Data Deliverables Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Memorandum

Date:	18 July 2017
To:	Aron Krasnopoler
From:	Mary Tyler
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID 180-68096-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of thirty-three solid samples, including two samples for matrix spike/matrix spike duplicate (MS/MSD) analyses, three field duplicate samples and two trip blanks, collected July 11, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Method 9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exception. Since there were no recoveries (0%) of pentachlorophenol in the MS/MSD pair, the nondetect result of pentachlorophenol in sample W2, S1, C 71117 was R qualified as rejected.

The remaining qualified data should be used within the limitations of the qualifications.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-68096-1	W1, S5, A 71117
180-68096-2	W1, S5, B 71117
180-68096-3	W1, S5, C 71117
180-68096-4	W2, S1, A 71117

180-68096-27	W3, S3, A 71117
180-68096-28	W3, S3, B 71117
180-68096-29	W3, S3, C 71117
180-68096-30	W3, S4, A 71117
180-68096-31	W3, S4, B 71117
180-68096-32	W3, S4, C 71117
180-68096-33	DUP-5
180-68096-34	W3, S5, A 71117
180-68096-35	W3, S5, B 71117
180-68096-36	W3, S5, C 71117
180-68096-37	TRIP BLANK 1
180-68096-38	TRIP BLANK 2

The samples were received at the laboratory at 1.2-3.1^{o}C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following issues were noted with the chain of custody (COC):

- Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- No collection times were listed on the COC for the field duplicate samples; the laboratory assigned collection times of 00:00.

- Two trip blanks were listed on the COC for VOC analysis, both with IDs Trip Blank. The laboratory assigned them IDs of TRIP BLANK 1 and TRIP BLANK 2. In addition, there were no collection dates or times were listed on the COC for the trip blanks; the laboratory assigned collection dates and times of 7/11/17, 00:00.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times
✓ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Trip Blank
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The narrative indicated that there was “significant” headspace in two of the three VOA vials for TRIP BLANK 1 and TRIP BLANK 2. Significant headspace is defined by the laboratory as a

bubble greater than 6 millimeters (mm) in diameter. Since VOCs were not detected in the associated solid samples, no qualifications were applied to the data based on trip blank results.

The narrative also indicated that the continuing calibration verification (CCV) percent differences (%Ds) for carbon tetrachloride were high, outside method specified acceptance criteria in analytical batches 217186 and 217056, both with low biases; the %Ds were 22%D and 25%D, respectively, and the method limits are 20%D. Since the %Ds were within the validation guidance, no qualifications were applied to the data. In addition, the CCV %Ds for 2-butanone and acetone were high, outside method specified acceptance criteria in analytical batch 217200, both with low biases; the %Ds were 33%D and 41%D, respectively, and the method limits are 20%D. Since the %D for 2-butanone was within the validation guidance, no qualifications were applied to the 2-butanone data. However, since the %D for acetone was outside both the method and validation guidance and based on professional and technical judgment, the nondetect result of acetone in the associated sample was UJ qualified as estimated less than the method detection limit (MDL) and the concentration in the associated sample was J qualified as estimated.

Sample	Compound	Laboratory Result (µg/L)	Laboratory Flag	Validation Result (µg/L)	Validation Qualifier*	Reason Code**
TRIP BLANK 1	Acetone	3.5	J	3.5	J	9
TRIP BLANK 2	Acetone	3.1	U	3.1	UJ	9

µg/L-micrograms per liter
J- laboratory flag indicating the result is less than the reporting limit (RL) but greater than or equal to the MDL and the concentration is an approximate value
NA-not applicable
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.2 Holding Times

The holding time for the VOC analysis of a preserved solid sample collected as a terracore is 48 hours until laboratory receipt and 14 days from sample collection to analysis. The holding time for the VOC analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four method blanks were reported (batches 217200, 216893, 217056 and 217186). VOCs were not detected in the method blanks above the MDLs.

1.4 Matrix Spike/Matrix Spike Duplicate

A sample set specific MS/MSD pair was reported, using sample W2, S1, A 711172. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and two LCS/LCS duplicate (LCSD) pairs were reported. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exception.

The LCS recovery of n-butylbenzene was high and outside the laboratory specified acceptance criteria in batch 217200. Since n-butylbenzene was not detected in the associated samples, no qualifications were applied to the data.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

Two trip blanks accompanied the samples, TRIP BLANK 1 and TRIP BLANK 2. VOCs were not detected in the trip blanks above the MDLs, with the following exceptions.

Acetone was detected at an estimated concentration greater than the MDL and less than the RL in TRIP BLANK 1. Since acetone was not detected in the associated samples, no qualifications were applied to the data.

1.8 Field Duplicate

Three field duplicates were collected with the sample set. Two field duplicates were analyzed for VOCs, DUP-3 and DUP-5. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicates and the original samples, W2, S4, B71117 and W3, S2, A71117, respectively. The RPDs between the results were 0%.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives, with the following exception. Since there were no recoveries (0%) of pentachlorophenol in the MS/MSD pair, the nondetect result of pentachlorophenol in sample W2, S1, C 71117 was R qualified as rejected. Therefore, the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 99.6%.

The narrative indicated that the CCV %Ds for pentachlorophenol were high, outside method specified acceptance criteria in analytical batches 216940 and 217242, both with high biases; the %Ds were 54%D and 51%D, respectively, and the method limits are 20%D. Since the biases were high and pentachlorophenol was not detected in the associated samples, no qualifications were applied to the data. In addition, the CCV %D for benzo[g,h,i]perylene was high, outside method specified acceptance criteria in analytical batch 217242, with a low bias; the %D was 21%D and

the method limit is 20%D. Since the %D for benzo[g,h,i]perylene was within the validation guidance, no qualifications were applied to the benzo[g,h,i]perylene data.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216880). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample W2, S1, C 71117. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries and/or RPDs of the following compounds were high and outside the laboratory specified acceptance criteria. Since fluorene and 1,4-dioxane were not detected in sample W2, S1, C 71117, no qualifications were applied to the fluorene and 1,4-dioxane data. However, the concentrations of the other compounds listed below in sample W2, S1, C 71117 were J qualified as estimated

1,4-Dioxane	Benzo[a]pyrene	Fluorene
Acenaphthylene	Benzo[g,h,i]perylene	Indeno[1,2,3-cd]pyrene
Anthracene	Benzo[k]fluoranthene	Phenanthrene
Benzo[a]anthracene	Chrysene	Pyrene

The MSD recovery of benzo[b]fluoranthene was low and the RPD was high, outside the laboratory specified acceptance criteria. The MS recovery and RPD of fluoranthene were high and the MSD recovery was low, outside the laboratory specified acceptance criteria. Therefore, the concentrations of benzo[b]fluoranthene and fluoranthene in sample W2, S1, C 71117 were J qualified as estimated. There were no recoveries (0%) of pentachlorophenol in the MS/MSD pair.

Therefore, the nondetect result of pentachlorophenol in sample W2, S1, C 71117 was R qualified as rejected.

The qualifications due to the MS/MSD results are summarized below.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
W2, S1, C 71117	Acenaphthylene	0.12	J,F2	0.12	J	4
W2, S1, C 71117	Anthracene	0.15	F2	0.15	J	4
W2, S1, C 71117	Benzo[a]anthracene	0.59	F2,F1	0.59	J	4
W2, S1, C 71117	Benzo[a]pyrene	0.61	F2,F1	0.61	J	4
W2, S1, C 71117	Benzo[b]fluoranthene	0.78	F2,F1	0.78	J	4
W2, S1, C 71117	Benzo[g,h,i]perylene	0.55	F2,F1	0.55	J	4
W2, S1, C 71117	Benzo[k]fluoranthene	0.21	F2,F1	0.21	J	4
W2, S1, C 71117	Chrysene	0.62	F2	0.62	J	4
W2, S1, C 71117	Fluoranthene	0.93	F2,F1	0.93	J	4
W2, S1, C 71117	Indeno[1,2,3-cd]pyrene	0.50	F2,F1	0.50	J	4
W2, S1, C 71117	Pentachlorophenol	1.4	U,F1	1.4	R	4
W2, S1, C 71117	Phenanthrene	0.43	F2,F1	0.43	J	4
W2, S1, C 71117	Pyrene	0.92	F2,F1	0.92	J	4

mg/kg-milligrams per kilogram
J- laboratory flag indicating the Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits
F2- laboratory flag indicating the MS/MSD RPD exceeds control limits
U-not detected at the stated MDL

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for SVOCs, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, W2, S4, C71117.

2.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II reports and the EDDs.

3.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

3.1 Overall Assessment

The PCB data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
DUP-4	PCB-1248	0.56	NA	0.56	J	13
DUP-4	PCB-1254	0.38	NA	0.38	J	13
DUP-4	PCB-1260	0.14	NA	0.14	J	13
W1, S5, C 71117	PCB-1248	0.63	NA	0.63	J	13
W1, S5, C 71117	PCB-1254	0.45	NA	0.45	J	13

mg/kg-milligrams per kilogram
NA-not applicable

3.2 Holding Times

The holding times for the PCB analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216879). PCBs were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using

sample W2, S1, C 71117. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported.

3.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for PCBs, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, W2, S4, C71117.

3.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No other discrepancies were identified between the level II report and the EDD.

5.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010C (Mercury evaluated separately in Section 6.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment

- ⊗ Serial Dilution
- ⊗ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

5.1 Overall Assessment

The metals data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

5.2 Holding Times

The holding time for metals analysis of solid samples is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216920). The metals were not detected in the method blank above the MDLs.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample W2, S1, C 71117. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

One or both of the recoveries of copper and zinc were low and outside the laboratory specified acceptance criteria. Therefore, the concentrations of copper and zinc in sample W2, S1, C 71117 were J- qualified as estimated with low biases. In addition, the RPD for manganese was high and outside the laboratory specified acceptance criteria. Since the concentration of manganese in

sample W2, S1, C 71117 was greater than four times the spike concentration, no qualifications were applied to the manganese data.

The qualifications due to the MS/MSD results are summarized below.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
W2, S1, C 71117	Copper	26	F1	26	J-	4
W2, S1, C 71117	Zinc	76	F1	76	J-	4

mg/kg-milligrams per kilogram
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported with the sample set.

5.7 Serial Dilution

The narrative indicated that the serial dilution results for manganese and zinc using sample W2, S1, C 71117 were high and outside the method specified acceptance criteria. The %Ds were 13%D and 12%D, respectively, limits 10%D; the serial dilution results were in the level IV report. Therefore, the concentrations of manganese and zinc in sample W2, S1, C 71117 were J qualified as estimated.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
W2, S1, C 71117	Manganese	800	F2	800	J	8
W2, S1, C 71117	Zinc	76	F1	76	J	8

mg/kg-milligrams per kilogram
F2- laboratory flag indicating the MS/MSD RPD exceeds control limits
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits

5.8 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for metals, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicates and the original sample, W2, S4, C71117, with the following exceptions.

The field duplicate acceptance criteria were not met for arsenic and nickel. Therefore, based on professional and technical judgment, the concentrations of arsenic and nickel in the field duplicate pair were J qualified as estimated.

The qualifications due to the field duplicate results are summarized below.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD	Validation Result (mg/kg)	Validation Qualifier	Reason Code
DUP-4	Arsenic	8.4	NA	42	8.4	J	7
W2, S4, C 71117	Arsenic	5.5	NA		5.5	J	7
DUP-4	Nickel	21	NA	40	21	J	7
W2, S4, C 71117	Nickel	14	NA		14	J	7

mg/kg-milligrams per kilogram
NA-not applicable

5.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

5.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

6.0 MERCURY

The samples were analyzed for mercury by EPA methods 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ⊗ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Laboratory Duplicate
- ✓ Field Duplicate

- ✓ Electronic Data Deliverable Review

6.1 Overall Assessment

The mercury data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

6.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 217097). Mercury was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample W2, S1, C 71117. The recovery results were high and outside the laboratory specified acceptance criteria. Therefore, the concentration of mercury in sample W2, S1, C 71117 was J+ qualified as estimated with a high bias.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
W2, S1, C 71117	Mercury	0.41	F1	0.41	J+	4

mg/kg-milligrams per kilogram
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery result was within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

A laboratory duplicate was not reported.

6.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for mercury, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicates and the original sample, W2, S4, C71117.

6.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

7.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

7.1 Overall Assessment

The cyanide data reported in this package are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

7.2 Holding Times

The holding time for the cyanide analysis of solid samples is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

7.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216972). Cyanide was not detected in the method blank above the MDL.

7.4 Matrix Spike

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample W2, S1, C 71117. The recovery and RPD results were within the laboratory specified acceptance criteria.

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

7.6 Laboratory Duplicate

A laboratory duplicate was not reported.

7.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for cyanide, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C.

7.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

7.9 Electronic Data Deliverables Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Restricted Residential Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 800-1000

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Seven (7) Discrete Samples were collected and analyzed for VOCs. Two (2) Composite Samples were collected and analyzed for SVOCs, Inorganics, and PCBs/Pesticides. The chain of custody incorrectly shows the same Sample ID for the composite samples and the first two discrete VOC samples. The Analytical Results have been attached to this form.

Two (2) composite samples were collected and analyzed for grain size distribution and moisture-density.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Analytical results are compared to Restricted Residential SCO.

VOC analyses: acetone, benzene, toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and total xylenes were detected in 7 of 7 samples at levels below Restricted Residential SCOs.

There were no detections of SVOCs, PCBs, or pesticides in the two composite samples.

Metals analyses: arsenic, barium, beryllium, copper, lead manganese, nickel, zinc, and mercury were detected at levels below Restricted Residential SCOs.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Edger Enterprises

Location where fill was obtained:

Brewer's Pit located in Horseheads NY

Identification of any state or local approvals as a fill source:

NYSDEC Facility ID 8-0734-00150

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Geotechnical Data and the Chemical Analysis Reports

The information provided on this form is accurate and complete.

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

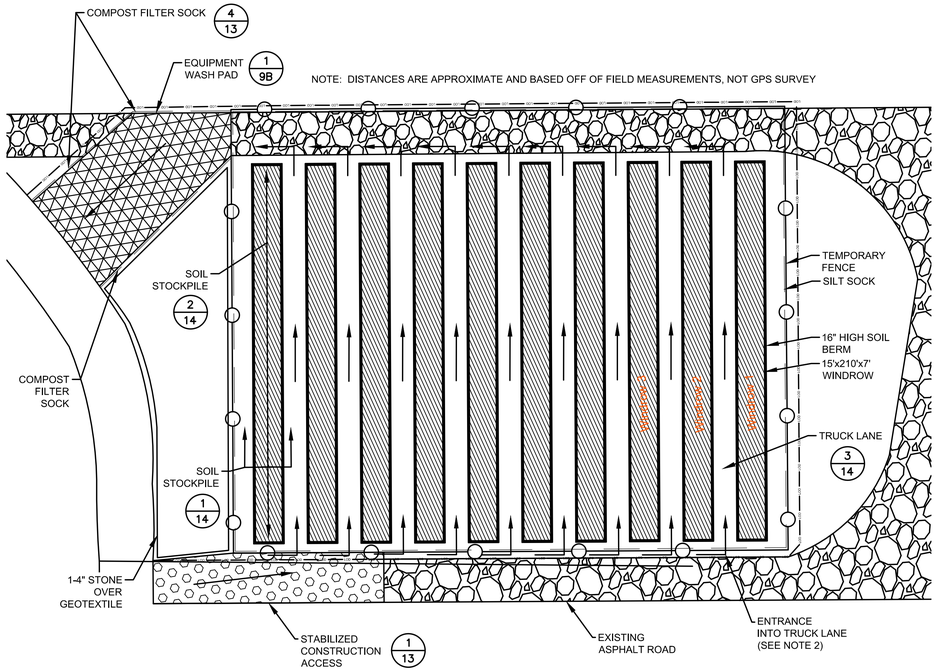
DATA QUALIFIER DEFINITIONS



U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

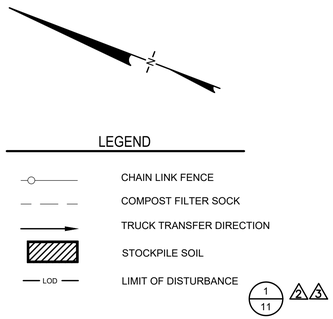
DATA QUALIFIER DEFINITIONS

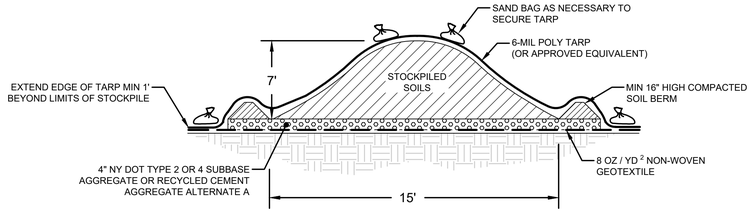
U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.



1/14 PLAN
STOCKPILE AREA
NTS

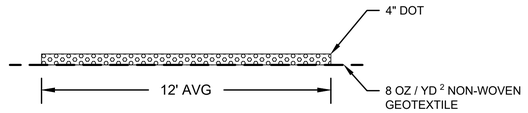
UNLOADING SEQUENCE:

1. TRUCK ENTERS TEMPORARY ENTRANCE INTO MSA.
2. TRUCK PULLS UP TO END OF ACTIVE WINDROW.
3. TRUCK BACKS ONTO ACTIVE WINDROW.
4. TRUCK UNLOADS AT END OF ACTIVE WINDROW.
5. TRUCK PULLS FORWARD INTO TRUCK LANE.
6. TRUCK EXITS ONTO ASPHALT ROAD
7. TRUCK ENTERS EQUIPMENT WASH PAD FOR WET DECON.
8. TRUCK EXITS EQUIPMENT WASH PAD AND RETURNS TO EXCAVATION AREA.

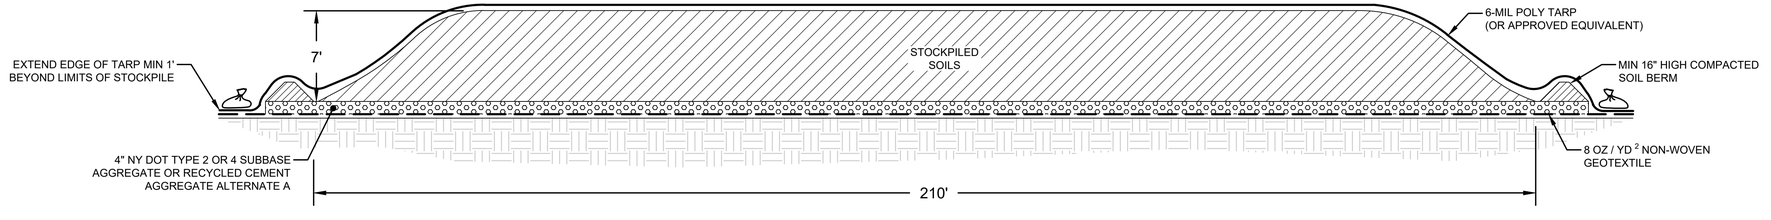


LOADING SEQUENCE:

1. TRUCK ENTERS TEMPORARY ENTRANCE INTO MSA.
2. TRUCK PULLS UP TO ACTIVE WINDROW TO BE LOADED, STAYING IN TRUCK LANE.
3. TRUCK IS LOADED BY EXCAVATOR.
4. TRUCK EXITS ONTO ASPHALT ROAD.
5. TRUCK ENTERS EQUIPMENT WASH PAD FOR WET DECON.
6. TRUCK EXITS EQUIPMENT WASH PAD AND RETURNS TO EXCAVATION AREA.



NOTES:



1. CONTRACTOR SHALL UTILIZE EARTH DIKE, COMPOST FILTER SOCK, AND DEWATERING SUMP PIT. 6
2. CONTRACTOR SHALL INSTALL TEMPORARY 6' TALL CHAIN LINK FENCING PARALLEL TO THE LIMITS OF CONSTRUCTION DISTURBANCE. FENCING SHALL INCLUDE VISUAL SCREENING.
3. SECTION(S) OF TEMPORARY FENCE WILL BE REMOVED TO CREATE AN ENTRANCE TO THE MSA AT THE BEGINNING OF EACH DAY OF UNLOADING OR LOADING OPERATIONS. SECTION LOCATION(S) MAY VARY. REMOVED SECTIONS SHALL BE RESTORED AND SECURED AT THE END OF EACH DAY OF MSA OPERATIONS.
4. STOCKPILING OF SOILS FOR POTENTIAL RE-USE SHALL BEGIN AT THE SOUTH END OF THE MSA.
5. STOCKPILING OF SOILS FOR POTENTIAL OFF-SITE TRANSPORT AND DISPOSAL AS NON-HAZARDOUS WASTE WILL BEGIN AT THE NORTH END OF THE MSA.
6. WINDROW LAYOUT ALLOWS FOR STOCKPILING OF APPROX. 4000 CUBIC YARDS (CY) OF SOIL. IF GREATER VOLUME IS REQUIRED, CONTRACTOR MAY REQUEST STOCKPILING OF SOILS WITH LIKE ANALYTICAL RESULTS APPROVED FOR RE-USE OR OFF-SITE DISPOSAL.
7. APPROX. 30 LINEAR FEET OF WINDROW IS EQUIVALENT TO 100 CY.
8. ALL TRUCKS WILL BE WET DECONNED BEFORE LEAVING THE MSA.

Comments
No additional comments.

Receipt
The samples were received on 7/11/2017 8:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.9º C, 2.0º C and 2.3º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-216640 was outside the method criteria for the following analyte(s): Vinyl Chloride recovered high. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 180-216675 and analytical batch 180-216666 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): DUP2 (180-68037-1), WINDROW1, SEC 3, C (180-68037-2), WINDROW1, SEC 4, C (180-68037-4), WINDROW1, SEC 2, C (180-68037-8), WINDROW1, SEC 1, C (180-68037-11), (180-68037-A-1-B MS) and (180-68037-A-1-C MSD). This was the lowest dilution possible on these samples. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The post digestion spike % recovery for manganese associated with prep batch 216814 was outside of the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Geosyntec Consultants, Inc. TestAmerica Job ID: 180-68037-1
Project/Site: Former Sperry Remington Site - North IRM

Laboratory: TestAmerica Pittsburgh

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11182	03-31-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids
8270D LL	3541	Solid	1,4-Dioxane

Method Summary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North IRM

TestAmerica Job ID: 180-68037-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL PIT
8270D LL	Semivolatile Organic Compounds by GC/MS - Low Level	SW846	TAL PIT
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	TAL PIT
6010C	Metals (ICP)	SW846	TAL PIT
7471B	Mercury (CVAA)	SW846	TAL PIT
2540G	SM 2540G	SM22	TAL PIT
9014	Cyanide	SW846	TAL PIT

Job Number: 180-68037-1

Login Number: 68037
List Number: 1
Creator: Dunlap, David A

List Source: TestAmerica Pittsburgh

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	COC not relinquished
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	see notation on COC
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 7/11/2017 8:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.9º C, 2.0º C and 2.3º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217200 was outside the method criteria for the following analyte: 2-Butanone (MEK) and Acetone. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The following analyte recovered outside control limits for the LCS associated with analytical batch 180-217200: n-Butylbenzene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Geosyntec Consultants, Inc.

TestAmerica Job ID: 180-68037-2

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	COC not relinquished
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	see notation on COC
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
180-68096-1

Comments
No additional comments.

Receipt
The samples were received on 7/12/2017 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.2º C, 2.1º C and 3.1º C.

Receipt Exceptions
The following volatile samples were analyzed with significant headspace in two out of two voa vials: TRIP BLANK 1 (180-68096-37) and TRIP BLANK 2 (180-68096-38). Significant headspace is defined as a bubble greater than 6 mm in diameter.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217186 was outside the method criteria for the following analyte: Carbon Tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217056 was outside the method criteria for the following analyte(s): Carbon Tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217200 was outside the method criteria for the following analyte: 2-Butanone (MEK) and Acetone. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The following analyte recovered outside control limits for the LCS associated with analytical batch 180-217200: n-Butylbenzene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following samples was diluted to bring the concentration of target analytes within the calibration range (extract viscous, dark in color): W2, S5 C 71117 (180-68096-18) and W3, S1, C 71117 (180-68096-23). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): W1, S5, C 71117 (180-68096-3), W2, S1, C 71117 (180-68096-6), W2, S2, C 71117 (180-68096-9), W2, S3, C 71117 (180-68096-12), W2, S4, C 71117 (180-68096-15) and DUP-4 (180-68096-22). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and RPD's for preparation batch 180-216880 and analytical batch 180-216940 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. They are at a 20x dilution due to matrix.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-216940 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Job ID: 180-68096-1 (Continued)

Laboratory: TestAmerica Pittsburgh (Continued)

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): W3, S2, C 71117 (180-68096-26), W3, S3, C 71117 (180-68096-29), W3, S4, C 71117 (180-68096-32) and W3, S5, C 71117 (180-68096-36). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-217242 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was outside the method criteria for the following analyte(s): Benzo[g,h,i]perylene was >20% low. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The serial dilution performed for the following sample associated with prep batch 216920 was outside the control limits for manganese and zinc: W2, S1, C 71117 (180-68096-6)

Method(s) 6010C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for prep batch 216920 were outside the control limits for copper and zinc. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010C: The matrix spike / matrix spike duplicate (MS/MSD) precision for prep batch 216920 was outside the control limits for manganese. Sample matrix interference and/or non-homogeneity are suspected.

Method(s) 7471B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 217097 were outside the control limits for mercury. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North IRM

TestAmerica Job ID: 180-68096-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits
F1	MS and/or MSD Recovery is outside acceptance limits.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Geosyntec Consultants, Inc. TestAmerica Job ID: 180-68096-1
Project/Site: Former Sperry Remington Site - North IRM

Laboratory: TestAmerica Pittsburgh

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11182	03-31-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids
8270D LL	3541	Solid	1,4-Dioxane

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	False	trip blank
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Memorandum

Date:	17 July 2017
To:	Aron Krasnopoler
From:	Mary Tyler
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID 180-68037-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of twelve solid samples and two field duplicate samples, collected July 10, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Method 9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04,

July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data sets:

Laboratory ID	Client ID
180-68037-1	DUP2
180-68037-2	WINDROW1, SEC 3, C
180-68037-3	WINDROW1, SEC 3, B
180-68037-4	WINDROW1, SEC 4, C
180-68037-5	DUP1
180-68037-6	WINDROW1, SEC 3, A
180-68037-7	WINDROW1, SEC 4, B

Laboratory ID	Client ID
180-68037-8	WINDROW1, SEC 2, C
180-68037-9	WINDROW1, SEC 2, A
180-68037-10	WINDROW1, SEC 1, A
180-68037-11	WINDROW1, SEC 1, C
180-68037-12	WINDROW1, SEC 4, A
180-68037-13	WINDROW1, SEC 2, B
180-68037-14	WINDROW1, SEC 1, B

The samples were received at the laboratory at 1.9-2.3^{o}C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following issues were noted with the chain of custody (COC):

- Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.
- No collection times were listed on the COC for the field duplicate samples; the laboratory assigned collection times of 00:00.
- There was no relinquishing signature on the first page of the COC and no relinquishing documentation (no signature, date or time) on the second page of the COC.
- The laboratory edited the analyses requested for field duplicate DUP1; the analyses were crossed off with the exception of the VOCs.
- A trip blank was listed on the COC for VOC analysis, but was not reported in this laboratory report.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Trip Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for vinyl chloride was high, outside method specified acceptance criteria. The %D was 20.1%; the method specified acceptance criteria is 20%D. Therefore, no qualifications were applied to the data.

1.2 Holding Times

The holding time for the VOC analysis of a preserved solid sample collected as a terracore is 48 hours until laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216673). VOCs were not detected in the method blank above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/laboratory control sample duplicate (LCSD) pair was reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

A trip blank accompanied the samples, but was not reported in this laboratory report. Since the VOC results in the data set were non-detect, the trip blank results have no effect on the results.

1.8 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for VOCs, DUP1. Acceptable precision [RPD <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, A. The RPDs between the results were 0%.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
⊗ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216675). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample DUP2. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

One of both of the recoveries of the following compounds were high and outside the laboratory specified acceptance criteria: Anthracene, benzo[k]fluoranthene, dibenzofuran, fluoranthene, phenanthrene and pyrene. Since dibenzofuran was not detected in sample DUP2, no qualifications were applied to the data. However, based on professional and technical judgment, the concentrations of anthracene, benzo[k]fluoranthene, fluoranthene, phenanthrene and pyrene in both sample DUP2 and its associated original sample, WINDROW1, SEC 3, C, were J qualified as estimated.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier*	Reason Code**
DUP2	Anthracene	0.22	F1	0.22	J	4
DUP2	Benzo[k]fluoranthene	0.23	F1	0.23	J	4
DUP2	Fluoranthene	0.45	F1	0.45	J	4
DUP2	Phenanthrene	0.21	F1	0.21	J	4
DUP2	Pyrene	0.81	F1	0.81	J	4
WINDROW1, SEC 3, C	Anthracene	0.18	NA	0.18	J	4
WINDROW1, SEC 3, C	Benzo[k]fluoranthene	0.23	NA	0.23	J	4
WINDROW1, SEC 3, C	Fluoranthene	0.64	NA	0.64	J	4
WINDROW1, SEC 3, C	Phenanthrene	0.39	NA	0.39	J	4
WINDROW1, SEC 3, C	Pyrene	0.82	NA	0.82	J	4

mg/kg-milligrams per kilogram
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits
NA-not applicable
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for SVOCs, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C, with the following exceptions.

The field duplicate acceptance criteria were not met for acenaphthylene and phenanthrene. Therefore, the concentrations of acenaphthylene and phenanthrene in the field duplicate pair were J qualified as estimated. The qualifications due to the field duplicate results are summarized below.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD	Validation Result (mg/kg)	Validation Qualifier	Reason Code
DUP2	Acenaphthylene	0.46	NA	59	0.46	J	7
WINDROW1, SEC 3, C	Acenaphthylene	0.25	NA		0.25	J	7
DUP2	Phenanthrene	0.21	F1	60	0.21	J	7
WINDROW1, SEC 3, C	Phenanthrene	0.39	NA		0.39	J	7

mg/kg-milligrams per kilogram
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits
NA-not applicable

2.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II reports and the EDDs.

3.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times
✓ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Surrogates
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

3.1 Overall Assessment

The PCB data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this sample set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
DUP2	PCB-1248	1.1	NA	1.1	J	13
DUP2	PCB-1254	0.70	NA	0.70	J	13
DUP2	PCB-1260	0.17	NA	0.17	J	13
WINDROW1, SEC 1, C	PCB-1248	1.3	NA	1.3	J	13
WINDROW1, SEC 1, C	PCB-1254	0.82	NA	0.82	J	13
WINDROW1, SEC 1, C	PCB-1260	0.22	NA	0.22	J	13
WINDROW1, SEC 2, C	PCB-1248	1.1	NA	1.1	J	13

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
WINDROW1, SEC 2, C	PCB-1254	0.68	NA	0.68	J	13
WINDROW1, SEC 2, C	PCB-1260	0.18	NA	0.18	J	13
WINDROW1, SEC 3, C	PCB-1248	1.0	NA	1.0	J	13
WINDROW1, SEC 3, C	PCB-1254	0.67	NA	0.67	J	13
WINDROW1, SEC 3, C	PCB-1260	0.17	NA	0.17	J	13
WINDROW1, SEC 4, C	PCB-1248	0.91	NA	0.91	J	13
WINDROW1, SEC 4, C	PCB-1254	0.60	NA	0.60	J	13
WINDROW1, SEC 4, C	PCB-1260	0.17	NA	0.17	J	13

mg/kg-milligrams per kilogram
NA-not applicable

3.2 Holding Times

The holding times for the PCB analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216674). PCBs were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported.

3.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for PCBs, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C.

3.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No other discrepancies were identified between the level II report and the EDD.

5.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010C (Mercury evaluated separately in Section 6.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

5.1 Overall Assessment

The metals data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

5.2 Holding Times

The holding time for metals analysis of solid samples is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216814). The metals were not detected in the method blank above the MDLs.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample DUP2. The recovery and RPD results were within the laboratory specified acceptance criteria.

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported with the sample set.

5.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for metals, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C.

5.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

5.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

6.0 MERCURY

The samples were analyzed for mercury by EPA methods 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

6.1 Overall Assessment

The mercury data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

6.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216844). Mercury was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery result was within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

A laboratory duplicate was not reported.

6.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for mercury, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was not demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C. The RPD was high and outside the field duplicate acceptance criteria. Therefore, the concentrations of mercury in the field duplicate pair were J qualified as estimated.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD	Validation Result (mg/kg)	Validation Qualifier	Reason Code

6.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

7.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

7.1 Overall Assessment

The cyanide data reported in this package are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

7.2 Holding Times

The holding time for the cyanide analysis of solid samples is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

7.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216711). Cyanide was not detected in the method blank above the MDL.

7.4 Matrix Spike

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WINDROW1, SEC 3, C. The recovery and RPD results were within the laboratory specified acceptance criteria.

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

7.6 Laboratory Duplicate

A laboratory duplicate was not reported.

7.7 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for cyanide, DUP2. Acceptable precision [RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C.

7.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

7.9 Electronic Data Deliverables Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

* * * * *

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Memorandum

Date:	18 July 2017
To:	Aron Krasnopoler
From:	Mary Tyler
CC:	J. Caprio
Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID 180-68096-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of thirty-three solid samples, including two samples for matrix spike/matrix spike duplicate (MS/MSD) analyses, three field duplicate samples and two trip blanks, collected July 11, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Method 9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exception. Since there were no recoveries (0%) of pentachlorophenol in the MS/MSD pair, the nondetect result of pentachlorophenol in sample W2, S1, C 71117 was R qualified as rejected.

The remaining qualified data should be used within the limitations of the qualifications.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-68096-1	W1, S5, A 71117
180-68096-2	W1, S5, B 71117
180-68096-3	W1, S5, C 71117
180-68096-4	W2, S1, A 71117

180-68096-28	W3, S3, B 71117
180-68096-29	W3, S3, C 71117
180-68096-30	W3, S4, A 71117
180-68096-31	W3, S4, B 71117
180-68096-32	W3, S4, C 71117
180-68096-33	DUP-5
180-68096-34	W3, S5, A 71117
180-68096-35	W3, S5, B 71117
180-68096-36	W3, S5, C 71117
180-68096-37	TRIP BLANK 1
180-68096-38	TRIP BLANK 2

The samples were received at the laboratory at 1.2-3.1^{o}C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following issues were noted with the chain of custody (COC):

- Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- No collection times were listed on the COC for the field duplicate samples; the laboratory assigned collection times of 00:00.

- Two trip blanks were listed on the COC for VOC analysis, both with IDs Trip Blank. The laboratory assigned them IDs of TRIP BLANK 1 and TRIP BLANK 2. In addition, there were no collection dates or times were listed on the COC for the trip blanks; the laboratory assigned collection dates and times of 7/11/17, 00:00.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times

✓ Laboratory Control Sample
✓ Surrogates
✓ Trip Blank
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The narrative indicated that there was “significant” headspace in two of the three VOA vials for TRIP BLANK 1 and TRIP BLANK 2. Significant headspace is defined by the laboratory as a

bubble greater than 6 millimeters (mm) in diameter. Since VOCs were not detected in the associated solid samples, no qualifications were applied to the data based on trip blank results.

The narrative also indicated that the continuing calibration verification (CCV) percent differences (%Ds) for carbon tetrachloride were high, outside method specified acceptance criteria in analytical batches 217186 and 217056, both with low biases; the %Ds were 22%D and 25%D, respectively, and the method limits are 20%D. Since the %Ds were within the validation guidance, no qualifications were applied to the data. In addition, the CCV %Ds for 2-butanone and acetone were high, outside method specified acceptance criteria in analytical batch 217200, both with low biases; the %Ds were 33%D and 41%D, respectively, and the method limits are 20%D. Since the %D for 2-butanone was within the validation guidance, no qualifications were applied to the 2-butanone data. However, since the %D for acetone was outside both the method and validation guidance and based on professional and technical judgment, the nondetect result of acetone in the associated sample was UJ qualified as estimated less than the method detection limit (MDL) and the concentration in the associated sample was J qualified as estimated.

Sample	Compound	Laboratory Result (µg/L)	Laboratory Flag	Validation Result (µg/L)	Validation Qualifier*	Reason Code**
TRIP BLANK 1	Acetone	3.5	J	3.5	J	9
TRIP BLANK 2	Acetone	3.1	U	3.1	UJ	9

µg/L-micrograms per liter
J- laboratory flag indicating the result is less than the reporting limit (RL) but greater than or equal to the MDL and the concentration is an approximate value
NA-not applicable
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.2 Holding Times

The holding time for the VOC analysis of a preserved solid sample collected as a terracore is 48 hours until laboratory receipt and 14 days from sample collection to analysis. The holding time for the VOC analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four method blanks were reported (batches 217200, 216893, 217056 and 217186). VOCs were not detected in the method blanks above the MDLs.

1.4 Matrix Spike/Matrix Spike Duplicate

A sample set specific MS/MSD pair was reported, using sample W2, S1, A 711172. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and two LCS/LCS duplicate (LCSD) pairs were reported. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exception.

The LCS recovery of n-butylbenzene was high and outside the laboratory specified acceptance criteria in batch 217200. Since n-butylbenzene was not detected in the associated samples, no qualifications were applied to the data.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

Two trip blanks accompanied the samples, TRIP BLANK 1 and TRIP BLANK 2. VOCs were not detected in the trip blanks above the MDLs, with the following exceptions.

Acetone was detected at an estimated concentration greater than the MDL and less than the RL in TRIP BLANK 1. Since acetone was not detected in the associated samples, no qualifications were applied to the data.

1.8 Field Duplicate

Three field duplicates were collected with the sample set. Two field duplicates were analyzed for VOCs, DUP-3 and DUP-5. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicates and the original samples, W2, S4, B71117 and W3, S2, A71117, respectively. The RPDs between the results were 0%.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times

✓ Laboratory Control Sample
✓ Surrogates
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives, with the following exception. Since there were no recoveries (0%) of pentachlorophenol in the MS/MSD pair, the nondetect result of pentachlorophenol in sample W2, S1, C 71117 was R qualified as rejected. Therefore, the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 99.6%.

The narrative indicated that the CCV %Ds for pentachlorophenol were high, outside method specified acceptance criteria in analytical batches 216940 and 217242, both with high biases; the %Ds were 54%D and 51%D, respectively, and the method limits are 20%D. Since the biases were high and pentachlorophenol was not detected in the associated samples, no qualifications were applied to the data. In addition, the CCV %D for benzo[g,h,i]perylene was high, outside method specified acceptance criteria in analytical batch 217242, with a low bias; the %D was 21%D and

the method limit is 20%D. Since the %D for benzo[g,h,i]perylene was within the validation guidance, no qualifications were applied to the benzo[g,h,i]perylene data.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216880). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample W2, S1, C 71117. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries and/or RPDs of the following compounds were high and outside the laboratory specified acceptance criteria. Since fluorene and 1,4-dioxane were not detected in sample W2, S1, C 71117, no qualifications were applied to the fluorene and 1,4-dioxane data. However, the concentrations of the other compounds listed below in sample W2, S1, C 71117 were J qualified as estimated

1,4-Dioxane	Benzo[a]pyrene	Fluorene
Acenaphthylene	Benzo[g,h,i]perylene	Indeno[1,2,3-cd]pyrene
Anthracene	Benzo[k]fluoranthene	Phenanthrene
Benzo[a]anthracene	Chrysene	Pyrene

The MSD recovery of benzo[b]fluoranthene was low and the RPD was high, outside the laboratory specified acceptance criteria. The MS recovery and RPD of fluoranthene were high and the MSD recovery was low, outside the laboratory specified acceptance criteria. Therefore, the concentrations of benzo[b]fluoranthene and fluoranthene in sample W2, S1, C 71117 were J qualified as estimated. There were no recoveries (0%) of pentachlorophenol in the MS/MSD pair.

Therefore, the nondetect result of pentachlorophenol in sample W2, S1, C 71117 was R qualified as rejected.

The qualifications due to the MS/MSD results are summarized below.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
W2, S1, C 71117	Acenaphthylene	0.12	J,F2	0.12	J	4
W2, S1, C 71117	Anthracene	0.15	F2	0.15	J	4
W2, S1, C 71117	Benzo[a]anthracene	0.59	F2,F1	0.59	J	4
W2, S1, C 71117	Benzo[a]pyrene	0.61	F2,F1	0.61	J	4
W2, S1, C 71117	Benzo[b]fluoranthene	0.78	F2,F1	0.78	J	4
W2, S1, C 71117	Benzo[g,h,i]perylene	0.55	F2,F1	0.55	J	4
W2, S1, C 71117	Benzo[k]fluoranthene	0.21	F2,F1	0.21	J	4
W2, S1, C 71117	Chrysene	0.62	F2	0.62	J	4
W2, S1, C 71117	Fluoranthene	0.93	F2,F1	0.93	J	4
W2, S1, C 71117	Indeno[1,2,3-cd]pyrene	0.50	F2,F1	0.50	J	4
W2, S1, C 71117	Pentachlorophenol	1.4	U,F1	1.4	R	4
W2, S1, C 71117	Phenanthrene	0.43	F2,F1	0.43	J	4
W2, S1, C 71117	Pyrene	0.92	F2,F1	0.92	J	4

mg/kg-milligrams per kilogram
J- laboratory flag indicating the Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits
F2- laboratory flag indicating the MS/MSD RPD exceeds control limits
U-not detected at the stated MDL

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for SVOCs, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, W2, S4, C71117.

2.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

2.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II reports and the EDDs.

3.0 POLYCHLORINATED BIPHENYLS

The samples were analyzed for PCBs by EPA Methods 3541/8082A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

3.1 Overall Assessment

The PCB data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

Sample ID	Compound	Laboratory Concentration (mg/kg)	Laboratory Flag	Validation Concentration (mg/kg)	Validation Qualifier	Reason Code
DUP-4	PCB-1248	0.56	NA	0.56	J	13
DUP-4	PCB-1254	0.38	NA	0.38	J	13
DUP-4	PCB-1260	0.14	NA	0.14	J	13
W1, S5, C 71117	PCB-1248	0.63	NA	0.63	J	13
W1, S5, C 71117	PCB-1254	0.45	NA	0.45	J	13
W1, S5, C 71117	PCB-1260	0.15	NA	0.15	J	13
W2, S1, C 71117	PCB-1248	0.84	NA	0.84	J	13
W2, S1, C 71117	PCB-1254	0.64	NA	0.64	J	13
W2, S1, C 71117	PCB-1260	0.19	NA	0.19	J	13
W2, S2, C 71117	PCB-1248	0.74	NA	0.74	J	13

NA-not applicable

3.2 Holding Times

The holding times for the PCB analysis of solids are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216879). PCBs were not detected in the method blank above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using

sample W2, S1, C 71117. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

3.6 Surrogates

Acceptable surrogate recoveries were reported.

3.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for PCBs, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, W2, S4, C71117.

3.8 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

3.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No other discrepancies were identified between the level II report and the EDD.

5.0 METALS

The samples were analyzed for metals by EPA methods 3050B/6010C (Mercury evaluated separately in Section 6.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Method Blank
- ⊗ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Laboratory Duplicate
- ⊗ Serial Dilution
- ⊗ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

5.1 Overall Assessment

The metals data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

5.2 Holding Times

The holding time for metals analysis of solid samples is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

5.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216920). The metals were not detected in the method blank above the MDLs.

5.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample W2, S1, C 71117. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

One or both of the recoveries of copper and zinc were low and outside the laboratory specified acceptance criteria. Therefore, the concentrations of copper and zinc in sample W2, S1, C 71117 were J- qualified as estimated with low biases. In addition, the RPD for manganese was high and outside the laboratory specified acceptance criteria. Since the concentration of manganese in

sample W2, S1, C 71117 was greater than four times the spike concentration, no qualifications were applied to the manganese data.

The qualifications due to the MS/MSD results are summarized below.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
W2, S1, C 71117	Copper	26	F1	26	J-	4
W2, S1, C 71117	Zinc	76	F1	76	J-	4

mg/kg-milligrams per kilogram
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits

5.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

5.6 Laboratory Duplicate

A laboratory duplicate was not reported with the sample set.

5.7 Serial Dilution

The narrative indicated that the serial dilution results for manganese and zinc using sample W2, S1, C 71117 were high and outside the method specified acceptance criteria. The %Ds were 13%D and 12%D, respectively, limits 10%D; the serial dilution results were in the level IV report. Therefore, the concentrations of manganese and zinc in sample W2, S1, C 71117 were J qualified as estimated.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
W2, S1, C 71117	Manganese	800	F2	800	J	8
W2, S1, C 71117	Zinc	76	F1	76	J	8

mg/kg-milligrams per kilogram
F2- laboratory flag indicating the MS/MSD RPD exceeds control limits
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits

5.8 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for metals, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicates and the original sample, W2, S4, C71117, with the following exceptions.

The field duplicate acceptance criteria were not met for arsenic and nickel. Therefore, based on professional and technical judgment, the concentrations of arsenic and nickel in the field duplicate pair were J qualified as estimated.

The qualifications due to the field duplicate results are summarized below.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	RPD	Validation Result (mg/kg)	Validation Qualifier	Reason Code
DUP-4	Arsenic	8.4	NA	42	8.4	J	7
W2, S4, C 71117	Arsenic	5.5	NA		5.5	J	7
DUP-4	Nickel	21	NA	40	21	J	7
W2, S4, C 71117	Nickel	14	NA		14	J	7

mg/kg-milligrams per kilogram
NA-not applicable

5.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

5.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

6.0 MERCURY

The samples were analyzed for mercury by EPA methods 7471B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ⊗ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample

- ✓ Electronic Data Deliverable Review

6.1 Overall Assessment

The mercury data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

6.2 Holding Times

The holding time for the mercury analysis of solid samples is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

6.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 217097). Mercury was not detected in the method blank above the MDL.

6.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample W2, S1, C 71117. The recovery results were high and outside the laboratory specified acceptance criteria. Therefore, the concentration of mercury in sample W2, S1, C 71117 was J+ qualified as estimated with a high bias.

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier	Reason Code
W2, S1, C 71117	Mercury	0.41	F1	0.41	J+	4

mg/kg-milligrams per kilogram
F1-laboratory flag indicating the MS and/or MSD recovery is outside acceptance limits

6.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery result was within the laboratory specified acceptance criteria.

6.6 Laboratory Duplicate

A laboratory duplicate was not reported.

6.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for mercury, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicates and the original sample, W2, S4, C71117.

6.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

6.9 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

7.0 TOTAL CYANIDE

The samples were analyzed for total cyanide by EPA Methods 9014.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Laboratory Duplicate

- ✓ Sensitivity
- ✓ Electronic Data Deliverables Review

7.1 Overall Assessment

The cyanide data reported in this package are considered usable for meeting project objectives. The analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

7.2 Holding Times

The holding time for the cyanide analysis of solid samples is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

7.3 Method Blanks

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 216972). Cyanide was not detected in the method blank above the MDL.

7.4 Matrix Spike

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample W2, S1, C 71117. The recovery and RPD results were within the laboratory specified acceptance criteria.

7.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

7.6 Laboratory Duplicate

A laboratory duplicate was not reported.

7.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for cyanide, DUP-4. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicates and the original sample, Windrow 1,Sec 3, C.

7.8 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

7.9 Electronic Data Deliverables Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec's Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

RPD-relative percent difference

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Restricted Residential Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 800-1000

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Seven (7) Discrete Samples were collected and analyzed for VOCs. Two (2) Composite Samples were collected and analyzed for SVOCs, Inorganics, and PCBs/Pesticides. The chain of custody incorrectly shows the same Sample ID for the composite samples and the first two discrete VOC samples. The Analytical Results have been attached to this form.

Two (2) composite samples were collected and analyzed for grain size distribution and moisture-density.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Analytical results are compared to Restricted Residential SCO.

VOC analyses: acetone, benzene, toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and total xylenes were detected in 7 of 7 samples at levels below Restricted Residential SCOs.

There were no detections of SVOCs, PCBs, or pesticides in the two composite samples.

Metals analyses: arsenic, barium, beryllium, copper, lead manganese, nickel, zinc, and mercury were detected at levels below Restricted Residential SCOs.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Edger Enterprises

Location where fill was obtained:

Brewer's Pit located in Horseheads NY

Identification of any state or local approvals as a fill source:

NYSDEC Facility ID 8-0734-00150

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Geotechnical Data and the Chemical Analysis Reports

The information provided on this form is accurate and complete.

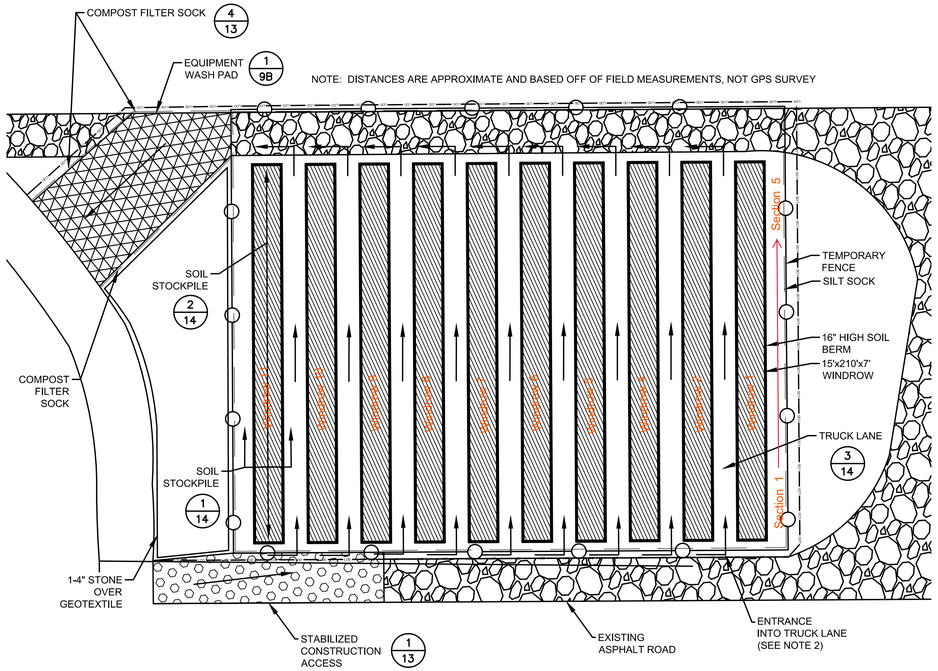
DATA QUALIFIER DEFINITIONS



U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

TABLE 1
Request to Import/Reuse Fill or Soil - Windrows 4 to 5
Former Sperry Remington Site - North Portion
Elmira, New York

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

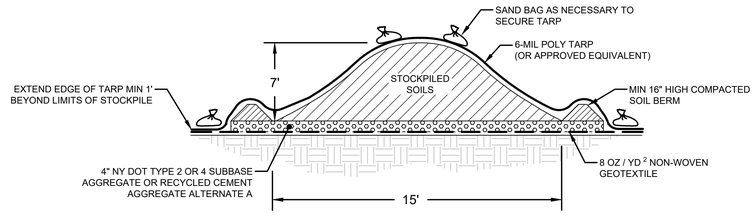
1/14 PLAN
STOCKPILE AREA
NTS

UNLOADING SEQUENCE:

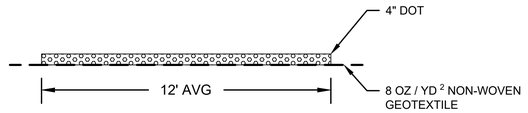
1. TRUCK ENTERS TEMPORARY ENTRANCE INTO MSA.
2. TRUCK PULLS UP TO END OF ACTIVE WINDROW.
3. TRUCK BACKS ONTO ACTIVE WINDROW.
4. TRUCK UNLOADS AT END OF ACTIVE WINDROW.
5. TRUCK PULLS FORWARD INTO TRUCK LANE.
6. TRUCK EXITS ONTO ASPHALT ROAD
7. TRUCK ENTERS EQUIPMENT WASH PAD FOR WET DECON.
8. TRUCK EXITS EQUIPMENT WASH PAD AND RETURNS TO EXCAVATION AREA.

LOADING SEQUENCE:

1. TRUCK ENTERS TEMPORARY ENTRANCE INTO MSA.
2. TRUCK PULLS UP TO ACTIVE WINDROW TO BE LOADED, STAYING IN TRUCK LANE.
3. TRUCK IS LOADED BY EXCAVATOR.
4. TRUCK EXITS ONTO ASPHALT ROAD.
5. TRUCK ENTERS EQUIPMENT WASH PAD FOR WET DECON.
6. TRUCK EXITS EQUIPMENT WASH PAD AND RETURNS TO EXCAVATION AREA.

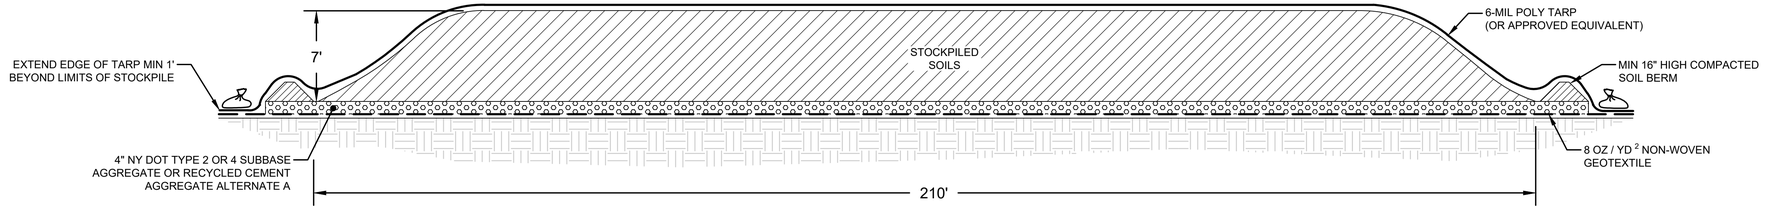


LEGEND



- CHAIN LINK FENCE
- COMPOST FILTER SOCK
- TRUCK TRANSFER DIRECTION
- STOCKPILE SOIL
- LOD — LIMIT OF DISTURBANCE 1/11 2 3

NOTES:



1. CONTRACTOR SHALL UTILIZE EARTH DIKE, COMPOST FILTER SOCK, AND DEWATERING SUMP PIT. 6
2. CONTRACTOR SHALL INSTALL TEMPORARY 6' TALL CHAIN LINK FENCING PARALLEL TO THE LIMITS OF CONSTRUCTION DISTURBANCE. FENCING SHALL INCLUDE VISUAL SCREENING.
3. SECTION(S) OF TEMPORARY FENCE WILL BE REMOVED TO CREATE AN ENTRANCE TO THE MSA AT THE BEGINNING OF EACH DAY OF UNLOADING OR LOADING OPERATIONS. SECTION LOCATION(S) MAY VARY. REMOVED SECTIONS SHALL BE RESTORED AND SECURED AT THE END OF EACH DAY OF MSA OPERATIONS.
4. STOCKPILING OF SOILS FOR POTENTIAL RE-USE SHALL BEGIN AT THE SOUTH END OF THE MSA.
5. STOCKPILING OF SOILS FOR POTENTIAL OFF-SITE TRANSPORT AND DISPOSAL AS NON-HAZARDOUS WASTE WILL BEGIN AT THE NORTH END OF THE MSA.
6. WINDROW LAYOUT ALLOWS FOR STOCKPILING OF APPROX. 4000 CUBIC YARDS (CY) OF SOIL. IF GREATER VOLUME IS REQUIRED, CONTRACTOR MAY REQUEST STOCKPILING OF SOILS WITH LIKE ANALYTICAL RESULTS APPROVED FOR RE-USE OR OFF-SITE DISPOSAL.
7. APPROX. 30 LINEAR FEET OF WINDROW IS EQUIVALENT TO 100 CY.
8. ALL TRUCKS WILL BE WET DECONNED BEFORE LEAVING THE MSA.

Narrative

Job Narrative
180-68140-1

Comments
No additional comments.

Receipt
The samples were received on 7/14/2017 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.8º C, 0.8º C and 2.6º C.

Receipt Exceptions

The 3 coolers with the samples did not arrive at the lab. The client was notified. The VOA terra cores were recollected to ensure that the 48 hr holding times would be met. The coolers were received the following day within temperature . With the exception of the expired VOA terra cores, all other terra cores were logged into this job . The recollected VOA terra cores were logged into job 180-68219-2

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217186 was outside the method criteria for the following analyte: Carbon Tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: Internal standard responses were outside of acceptance limits for the following sample: W5, S1, A 71217 (180-68140-28). The sample shows evidence of matrix interference. Internal Standard TBA-d9 was low but is not used to calculate results for any target analytes. Internal Standard 1,4-Dichlorobenzene-d4 recovered low by three percent. This will be reported and narrated because when the sample was re-analyzed all internal standard recoveries were very low.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (extract viscous, dark in color): W4, S2, C 71217 (180-68140-6), W5, S5, C 71217 (180-68140-18) and W5, S4, C 71217 (180-68140-21). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following samples was diluted to bring the concentration of target analytes within the calibration range: W4, S1, C 71217 (180-68140-3), W5, S3, C 71217 (180-68140-24), W5, S2, C 71217 (180-68140-27) and W5, S1, C 71217 (180-68140-30). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following sample was diluted due to the nature of the sample matrix (extract viscous, dark in color): DUP-6 (180-68140-31). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 180-217242 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was outside the method criteria for the following analyte(s): Benzo[g,h,i]perylene was >20% low. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8270D LL: The following samples was diluted to bring the concentration of target analytes within the calibration range (extract viscous, dark in color): W4, S3, C 71217 (180-68140-9), W4, S4, C 71217 (180-68140-12) and W4, S5, C 71217 (180-68140-15). This is the lowest dilution possible for these samples. Elevated reporting limits (RLs) are provided.

Job ID: 180-68140-1 (Continued)

Laboratory: TestAmerica Pittsburgh (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 7471B: The matrix spike (MS) recoveries for 217422 were outside the control limits for mercury. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 7471B: The matrix spike / matrix spike duplicate (MS/MSD) precision for 217422 was outside the control limits for mercury. Sample matrix interference is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

TestAmerica Job ID: 180-68140-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	ISTD response or retention time outside acceptable limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Geosyntec Consultants, Inc. TestAmerica Job ID: 180-68140-1
Project/Site: Former Sperry Remington Site - North IRM

Laboratory: TestAmerica Pittsburgh

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11182	03-31-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids
8270D LL	3541	Solid	1,4-Dioxane

Method Summary

Client: Geosyntec Consultants, Inc.
Project/Site: Former Sperry Remington Site - North IRM

TestAmerica Job ID: 180-68140-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL PIT
8260C	Volatile Organic Compounds (GC/MS)	SW846	TAL PIT
8270D LL	Semivolatile Organic Compounds by GC/MS - Low Level	SW846	TAL PIT
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	TAL PIT
6010C	Metals (ICP)	SW846	TAL PIT
7471B	Mercury (CVAA)	SW846	TAL PIT
2540G	SM 2540G	SM22	TAL PIT
9014	Cyanide	SW846	TAL PIT
