Receipt
The samples were received on 7/14/2017 9:30 AM and 7/15/2017 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 8 coolers at receipt time were 2.4º C, 2.6º C, 3.1º C, 3.1º C, 3.6º C, 3.6º C, 3.7º C and 4.8º C.

Receipt Exceptions

The other parameters associated with the enclosed VOA samples are in job 180-68140

The container label for the following samples did not match the information listed on the Chain-of-Custody (COC). W4, S4, A 71317 (180-68219-44[MS]) and W4, S4, A 71317 (180-68219-44[MSD]). The container labels list a collection time of 1545, while the parent sample says 1515. The COC lists a sample collection time of 1515 as well. Samples times for the MS/MDS were logged as 1515.

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC). W4, S4, A 71317 (180-68219-44), W4, S4, B 71317 (180-68219-45), W4, S5, A 71317 (180-68219-46), W4, S5, B 71317 (180-68219-47), W4, S3, A 71317 (180-68219-48) and W4, S3, B 71317 (180-68219-49). The sample IDs and the collection dates/times on the labels do not match what is on the COC. The containers were labeled based on sample collection date/time listed on the COC as the IDs were incorrect.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-217322 was outside the method criteria for the following analyte(s): Vinyl Chloride. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8260C: Internal standard (ISTD) response for TBA-d9 for the following samples was outside acceptance criteria: W4, S1, B 71317 (180-68219-41). This ISTD does not correspond to any of the requested target compounds; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID 180-68140-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of twenty solid samples, including one sample for matrix spike/matrix spike duplicate (MS/MSD) analyses, three field duplicate samples and two trip blanks, collected July 12, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Method 9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. The qualified data should be used within the limitations of the qualifications.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

The samples were received at the laboratory at 0.8-2.6^{o}C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following issues were noted with the chain of custody (COC):

- Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- No collection times were listed on the COC for the field duplicate samples; the laboratory assigned collection times of 00:00.

- Ten solid samples for VOC analysis were listed on the COC, but not reported in this laboratory report. Per the report narrative, the cooler containing these samples was delaying in shipping. The VOC samples for the ten samples were re-collected and reported in laboratory report 180-68219-2.

- There were no times of collection documented on the COC for the trip blanks; in addition, the collection dates were crossed off. The laboratory assigned collection dates and times of 7/12/17, 00:00.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for carbon tetrachloride was high, outside method specified acceptance criteria in analytical batch 217186. The %D was 22%D, with a high bias; the method limit is 20%D. Since the %D was within the validation guidance, no qualifications were applied to the data.

In addition, the narrative indicated that the internal standard response for 1,4-dichlorobenzene-d4 was low and outside the method specified acceptance criteria in sample W5, S1, A 71217.

Therefore, the nondetect results of the associated compounds in sample W5, S1, A 71217 were UJ qualified as estimated less than the method detection limits (MDLs).

1.2 Holding Times

The holding time for the VOC analysis of a preserved solid sample collected as a terracore is 48 hours until laboratory receipt and 14 days from sample collection to analysis. The holding time for the VOC analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported (batches 217186, 217209 and 217455). VOCs were not detected in the method blanks above the MDLs.

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCS duplicate (LCSD) pair were reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

Two trip blanks accompanied the samples, TRIP BLANK 1 and TRIP BLANK 2. VOCs were not detected in the trip blanks above the MDLs, with the following exceptions.

Acetone was detected at an estimated concentration greater than the MDL and less than the RL in both trip blanks. Since acetone was not detected in the associated samples, no qualifications were applied to the data.

1.8 Field Duplicate

Three field duplicates were collected with the sample set. Two field duplicates were analyzed for VOCs, DUP-7 and DUP-8. It was noted that the original sample associated with DUP-7 (collected on 7/12/17) was recollected on 7/13/17. Therefore, assessment of this field duplicate pair could not be performed. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between field duplicate DUP-8 and the original sample W5, S4, B71217. The RPDs between the results were 0%.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. 2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The narrative indicated that the CCV %D for pentachlorophenol was high, outside method specified acceptance criteria in analytical batch 217242, with a high bias; the %D was 51%D and the method limit is 20%D. Since the bias was high and pentachlorophenol was not detected in the associated samples, no qualifications were applied to the data. In addition, the CCV %D for benzo[g,h,i]perylene was high, outside method specified acceptance criteria in analytical batch 217242, with a low bias; the %D was 21%D and the method limit is 20%D. Since the %D for benzo[g,h,i]perylene was within the validation guidance, no qualifications were applied to the benzo[g,h,i]perylene data.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 217139). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Three field duplicates were collected with the sample set. One field duplicate was analyzed for SVOCs, DUP-6. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, W4, S2, C 71217, with the following exceptions.

The field duplicate acceptance criteria were not met for the following SVOCs: Acenaphthylene, benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[g,h,i]perylene, chrysene, fluoranthene, indeno[1,2,3-cd]pyrene, phenanthrene and pyrene. Therefore, based on professional and technical judgment, the concentrations of these SVOCs in the field duplicate pair were J qualified as estimated.

The qualifications due to the field duplicate results are summarized below.

3.1 Overall Assessment

The PCB data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of ten solid samples, including one sample for matrix spike/matrix spike duplicate (MS/MSD) analyses, collected July 13, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data are usable for meeting project objectives.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), the pertinent method referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-68219-40	W4, S1, A 71317

Laboratory ID	Client ID
180-68219-41	W4, S1, B 71317

Laboratory ID	Client ID
180-68219-42	W4, S2, A 71317
180-68219-43	W4, S2, B 71317
180-68219-44	W4, S4, A 71317
180-68219-45	W4, S4, B 71317

Laboratory ID	Client ID
180-68219-46	W4, S5, A 71317
180-68219-47	W4, S5, B 71317
180-68219-48	W4, S3, A 71317
180-68219-49	W4, S3, B 71317

The samples were received at the laboratory at 2.4-4.8ºC, within the criteria of 0-6ºC. No sample preservation issues were noted by the laboratory.

The following issues were noted with the chain of custody (COC):

- Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- There was no relinquishing documentation (no signature, date or time) on the six pages of COC.

- The collection times on the container labels for the MS/MSD aliquots of sample W4, S4, A 71317 did not match the information on the COC. The container labels listed a collection time of 15:45, while the parent sample has a collection times of 15:15. The MS/MSD aliquots were logged in with collection times of 15:15.

- The sample IDs and the collection dates and times on the container labels for the samples did not match the sample IDs and the collection dates and times on the COC. The samples were logged in with the information from the COC.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Holding Times

- ✓ Trip Blank

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for vinyl chloride in batch 217322 was high, outside method specified acceptance criteria. The %D was 23.8%, with a high bias; the method specified acceptance criteria is 20%D. Since vinyl chloride was not detected in the associated samples, no qualifications were applied to the data.

1.2 Holding Times

The holding time for the VOC analysis of a preserved solid sample collected as a terracore is 48 hours until laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 217322). VOCs were not detected in the method blank above the MDLs.

1.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported, using sample W4, S4, A 71317. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

Trip blanks accompanied the associated solid samples, but were not reported in this laboratory report. Since the VOCs were not detected in the solid samples, this did not have an impact on the data.

1.8 Field Duplicate

Field duplicates were not collected with the sample set.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J-	The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Receipt
The samples were received on 7/26/2017 7:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.7º C.

GC/MS VOA
Method(s) 8260C: The matrix spike/matrix spike duplicate (MS/MSD) of sample WB7-8, S5, A 72517 (180-68556-1) had several recoveries slightly above the control limits. The recoveries of the laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The matrix spike (MS) of sample WB7-8, S5, C 72517 (180-68556-3) had several recoveries slightly below the control limits. The RPD between the spikes was above the control limits for all analytes. The recoveries of the matrix spike duplicate (MSD) and laboratory control sample were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 7471B: The matrix spike duplicate (MSD) of sample WB7-8, S5, C 72517 (180-68556-3) was above the control limits for mercury. The recoveries of the matrix spike (MS) and laboratory control sample were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of fifteen solid samples, two field duplicate samples, and one trip blank, collected July 24, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 8260C and 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Methods 9010C/9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04,

July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

The samples were received at the laboratory at 2.6ºC, 4.1ºC and 4.4ºC within the criteria of 0-6ºC. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

- Sample collection times were not documented on the COC for field duplicate samples DUP 15 and DUP 14. The laboratory assigned collection times of 00:00. In addition, no sample collection dates or times were documented on the COC for the trip blank. The laboratory assigned collection date and time of 7/24/17, 00:00.

- Samples W9, S2, C 072417; W9, S3, C 072417; W9, S4, C 072417; W9, S2, A 072417; W9, S3, A 072417; W9, S4, A 072417 and DUP 16 were listed on the COC and reported in laboratory report 180-68509-2.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 8260C and 5035/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported (batches 218093, 218110 and 218236). VOCs were not detected in the method blank above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported with the sample set.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

One trip blank, TRIP BLANK, accompanied the samples. VOCs were not detected in the trip blank above the MDLs.

1.8 Field Duplicate

Two field duplicates were collected with the sample set. One field duplicate was analyzed for VOCs, DUP 15. Acceptable precision [relative percent difference (RPD) <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicate and the original sample, W9, S1, A 072417.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010.

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample date and time was added to the sample IDs in the EDD and was not add to the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260 and PCBs 1248 and 1254. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

180-68556-11	TRIP BLANK

The samples were received at the laboratory at 2.7°C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.
- Sample collection times were not documented on the COC for field duplicate samples DUP 17, 72517. The laboratory assigned collection times of 00:00.
- The sample ID listed on the COC for the trip blank was TRIP BLANK #1. The laboratory logged the sample in with the ID TRIP BLANK. In addition, no collection date or time were documented on the COC for the trip blank. The laboratory assigned collection date and time of 7/25/17, 00:00.
- There was rush sticker on the COC, obliterating part of the analysis request section of the COC.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 218214 and 218236). VOCs were not detected in the method blanks above the method detection limits (MDLs).

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WB7-8, S5, A 72517. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

One or both recoveries of carbon tetrachloride, n-propylbenzene, 1,1,1-trichloroethane and 1,2,4-trimethylbenzene were high, outside laboratory specified acceptance criteria. Since these compounds were not detected in sample WB7-8, S5, A 72517, no qualifications were applied to the data.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

One trip blank, TRIP BLANK, accompanied the samples. VOCs were not detected in the trip blank above the MDLs, with the following exception.

Acetone was detected in the trip blank at a concentration greater than the RL. Since acetone was not detected in the associated samples, no qualifications were applied to the data.

1.8 Field Duplicate

One field duplicate, DUP 17 72517 was collected with the sample set. Acceptable precision [RPD <40% for results greater than five times the reporting limit (RL) and ±2 times the RL for results less than five times the RL] was demonstrated between the field duplicate and the original sample, WB6-7, S1, B 72517.

1.9 Sensitivity

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 218278). SVOCs were not detected in the method blank above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). A sample set specific MS/MSD pair was reported, using sample WB7-8, S5, C 72517. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The MS recoveries of acenaphthylene, anthracene, benzo[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, phenanthrene, pyrene and pyridine were low, outside the laboratory specified acceptance criteria and the RPDs for these compounds were high outside the laboratory specified acceptance criteria. Therefore, based on the low recoveries, the non-detect result of pyridine in sample WB7-8, S5, C 72517 was UJ qualified as estimated less than the MDL and based on the low recoveries and high RPDs, the concentrations of acenaphthylene, anthracene, benzo[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, phenanthrene and pyrene in sample WB7-8, S5, C 72517 were J qualified as estimated.

In addition, the RPDs of the following compounds were high and outside laboratory specified acceptance criteria. Therefore, the concentrations of these compounds in sample WB7-8, S5, C 72517 were J qualified as estimated.

3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Receipt
The samples were received on 7/27/2017 8:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1° C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218353 was below method criteria for the following analyte: vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218548 was below method criteria for the following analyte: acetone. A CCV standard at or below the reporting limit (RL) was analyzed with the affected sample and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 180-218674/88) recovered above the control limit for selenium. As the CCVL was high and the associated samples had selenium either not detected or detected at a concentration below the reporting limit, the results were reported.

Method(s) 7471B: The matrix spike duplicate (MSD) recovery of sample WB6-7, S3, C 072617 (180-68622-3) was above the control limits for mercury. The recoveries of the matrix spike (MS) and laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subject:	**Stage 2A Data Validation - Level II Data Deliverable, TestAmerica Job ID # 180-68622-1**

SITE: Former Sperry Remington Site-North IRM

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of six solid samples and one trip blank, collected July 26, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 8260C and 5035/8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Methods 9010C/9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated based on the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043,

NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data set:

Laboratory ID	Client ID
180-68622-1	WB6-7, S3, A 072617
180-68622-2	WB6-7, S3, B 072617
180-68622-3	WB6-7, S3, C 072617
180-68622-4	WB6-7, S4, A 072617

Laboratory ID	Client ID
180-68622-5	WB6-7, S4, B 072617
180-68622-6	WB6-7, S4, C 072617
180-68622-9	TRIP BLANK#1

The samples were received at the laboratory at 2.1°C within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following sample receiving issues were noted:

- Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.
- There was no time documented on the COC for the sample relinquishing.
- There was rush sticker on the COC, obliterating part of the analysis request section of the COC.
- Samples WB5-6, S1, A 072617 and WB5-6, S1, C 072617 were listed on the COC and reported in laboratory report 180-68622-2.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 8260C and 5035/8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for vinyl chloride was high, outside method specified acceptance criteria in analytical batch 218353. The %D was 24%D, with a low bias; the method specified acceptance criteria is 20%D. Since the %D was within the validation guidance of 25%D, no qualifications were applied to the data.

The narrative indicated that the CCV %D for acetone was high, outside method specified acceptance criteria in analytical batch 218548. The %D was 26%D, with a low bias; the method limit is 20%D. Since the %D was within the validation guidance of 40%D, no qualifications were applied to the data.

1.2 Holding Times

The holding times for the VOC analysis of a solid sample collected using a Terracore are 48 hours from collection to laboratory receipt and 14 days from sample collection to analysis. The holding time for the VOC analysis of a preserved water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 218548 and 218356). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported with the sample set.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS and one LCS/LCS duplicate (LCSD) pair were reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.6 Surrogates

Acceptable surrogate recoveries were reported.

1.7 Trip Blank

One trip blank, TRIP BLANK#1, accompanied the samples. VOCs were not detected in the trip blank above the MDLs, with the following exception.

Acetone was detected at an estimated concentration, greater than the MDL and less than the RL in the trip blank. Therefore, the estimated concentrations of acetone in the associated samples were U qualified as not detected at the reporting limit (RL).

Sample	Compound	Laboratory Result (mg/kg)	Laboratory Flag	Validation Result (mg/kg)	Validation Qualifier*	Reason Code**
WB6-7, S4, A 072617	Acetone	0.0026	J	0.016	U	3
WB6-7, S4, B 072617	Acetone	0.0028	J	0.016	U	3

mg/kg-milligrams per kilogram
J- result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.8 Field Duplicate

A field duplicate was not collected with the sample set.

1.9 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

The MDLs were at or below the NYSDEC DER10 App 5 Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. The sample date and time were included in the sample IDs in the EDD and not included in the sample IDs in the laboratory report. No other discrepancies were identified between the level II report and the EDD.

2.0 SEMIVOLATILE ORGANIC COMPOUNDS

The samples were analyzed for SVOCs by EPA methods 3541/8270D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. 3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Comments
This is a revised report. At the request of the client, 2,4-dinitrotoluene, hexachlorobutadiene, hexachloroethane, nitrobenzene, pyridine, 2,4,5-trichlorophenol, and 2,4,6-trichlorophenol are now reported in the semivolatiles analysis.

Method(s) 8270D LL: The matrix spike duplicate (MSD) of sample W6, S4, C 071317 (180-68219-12) had the recovery of pyridine slightly below the control limits.

Receipt
The samples were received on 7/15/2017 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 8 coolers at receipt time were 2.4º C, 2.6º C, 3.1º C, 3.1º C, 3.6º C, 3.6º C, 3.7º C and 4.8º C.

Trip Blank 4 was received, but was not listed on the COCs.

The container labels for the MS/MSD of sample W4, S4, A 71317 (180-68219-44) had a time of 15:45, where as the COC listed 15:15 The container labels list a collection time of 1545, while the parent sample says 1515. The COC lists a sample collection time of 1515 as well.

The results of the volatiles samples, IDs beginning with “W4”, are reported in job 180-68219-2.

GC/MS VOA
Method(s) 8260C: Several RPDs between the matrix spike/matrix spike duplicate (MS/MSD) of sample W8, S3, B 71317 (180-68219-38) were above the control limits. The recoveries were within the control limits.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-217322 was above criteria for the following analyte: vinyl chloride. As the CCV was high and vinyl chloride was not detected in the associated samples, the results were reported.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217610 was below criteria for the following analyte: carbon tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated. Carbon tetrachloride was not detected in the associated samples.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-217455 was above criteria for the following analytes: n-butylbenzene and vinyl chloride. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-217455 was below criteria for the following analyte: carbon tetrachloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated. Carbon tetrachloride was not detected in the associated samples.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following samples were diluted to bring the concentration of target analytes within the calibration range: W7, S2, C 71317 (180-68219-27), W7, S1, C 71317 (180-68219-30), and W8, S3, C 71317 (180-68219-39). Elevated reporting limits (RLs) are provided. Sample W7, S2, C 71317 (180-68219-27) had the surrogates diluted out.

Method(s) 8270D LL: The following samples was diluted due to the nature of the sample matrix (viscous extracts and dark in color): W6, S1, C 071317 (180-68219-3) and its matrix spikes, W6, S2, C 071317 (180-68219-6), W6, S3, C 071317 (180-68219-9), W6, S4, C 071317 (180-68219-12), W6, S5, C 071317 (180-68219-15), W7, S4, C 71317 (180-68219-21), W8, S1, C 71317 (180-68219-33), W8, S2, C 71317 (180-68219-36), and DUP-10 (180-68219-54). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The matrix spike/matrix spike duplicate (MS/MSD) of sample W6, S1, C 071317 (180-68219-3) had several recoveries and RPDs between the spikes outside of the control limits. The recoveries of the laboratory control sample (LCS) were within the control limits.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was above criteria for the following analyte: pentachlorophenol. As the CCV was high and this analyte was not detected in the associated samples, the results were reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-217242 was below criteria for the following analyte: benzo[g,h,i]perylene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in 180-217155 was above criteria for the following analytes: 1,4-dioxane and pentachlorophenol. As the CCV was high and these analytes were not detected in the associated sample, the results were reported.

Receipt
The samples were received on 7/26/2017 7:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.7º C.

GC/MS VOA
Method(s) 8260C: The matrix spike/matrix spike duplicate (MS/MSD) of sample WB7-8, S5, A 72517 (180-68556-1) had several recoveries slightly above the control limits. The recoveries of the laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The matrix spike (MS) of sample WB7-8, S5, C 72517 (180-68556-3) had several recoveries slightly below the control limits. The RPD between the spikes was above the control limits for all analytes. The recoveries of the matrix spike duplicate (MSD) and laboratory control sample were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 7471B: The matrix spike duplicate (MSD) of sample WB7-8, S5, C 72517 (180-68556-3) was above the control limits for mercury. The recoveries of the matrix spike (MS) and laboratory control sample were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Receipt
The samples were received on 7/27/2017 8:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1° C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218353 was below method criteria for the following analyte: vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218548 was below method criteria for the following analyte: acetone. A CCV standard at or below the reporting limit (RL) was analyzed with the affected sample and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 180-218674/88) recovered above the control limit for selenium. As the CCVL was high and the associated samples had selenium either not detected or detected at a concentration below the reporting limit, the results were reported.

Method(s) 7471B: The matrix spike duplicate (MSD) recovery of sample WB6-7, S3, C 072617 (180-68622-3) was above the control limits for mercury. The recoveries of the matrix spike (MS) and laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 7/29/2017 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.6º C.

The following volatile sample was received with small air bubbles approximately 6 mm diameter in each of the vials: TRIP BLANK #1 (180-68716-12).

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218535 was below method criteria for the following analyte: vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218552 was above method criteria for the following analyte: vinyl chloride. As the CCV was high and vinyl chloride was not detected in the associated samples, the results were reported.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-218566 was above method criteria for the following analytes: 1,1,1-trichloroethane, 1,2-dichloroethane, and n-butylbenzene. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8260C: The following analytes recovered above the control limits for the laboratory control sample (LCS) associated with analytical batch 180-218535: 1,1,1-trichloroethane and carbon tetrachloride. The recoveries in the laboratory control sample duplicate (LCSD) were within the control limits. As the recoveries were high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8260C: The following analyte recovered above the control limits for the laboratory control sample (LCS) associated with analytical batch 180-218566: 1,2-dichloroethane. As the recovery was high and 1,2-dichloroethane was not detected in the associated samples, the results were reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following sample was diluted to bring the concentration of target analytes within the calibration range: WB3-4, S1, C 072817 (180-68716-3). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following sample was diluted due to the nature of the sample matrix: DUPE 18 (180-68716-11). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-218855 was above method criteria for the following analytes: 1,4-dioxane and pyridine. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-219005 was above method criteria for the following analytes: hexachlorobutadiene and pyridine. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in batch 180-219005 was below method criteria for the following analyte: benzo[g,h,i]perylene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected sample and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Job ID: 180-68716-1 (Continued)

Laboratory: TestAmerica Pittsburgh (Continued)

Method(s) 8270D LL: The matrix spike/matrix spike duplicate (MS/MSD) of sample WB3-4, S1, C 072817 (180-68716-3) had several recoveries and RPD between the spikes outside of the above the control limits. The recoveries of the laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8082A: The continuing calibration verifications (CCVs) analyzed in batch 180-218956 were above criteria for arcolors 1016, 1248, and 1254 (CCV 180-218956/4, CCV 180-218956/5, and CCV 180-218956/13) on column RTX-CLP2. All results in the associated samples were reported from column RTX-CLP1, which met criteria. The % difference between the sample results on both columns was <40%.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010C: The low level continuing calibration verification (CCVL 180-218816/64) recovered above the control limit for selenium (131%, with limits of 70%-130%). As the CCVL was high and the associated samples had selenium either not detected or detected at a concentration below the reporting limit, the results were reported.

Method(s) 6010C: The matrix spike duplicate (MSD) recovery of sample WB3-4, S1, C 072817 (180-68716-3) was outside of the control limits for copper and lead. The recoveries of the matrix spike (MS) and laboratory control sample (LCS) were within the control limits.

Method(s) 7471B: The matrix spike/matrix spike duplicate (MS/MSD) recoveries of sample WB3-4, S1, C 072817 (180-68716-3) were above the control limits for mercury. The RPD between the spikes and the recovery of the laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Narrative

Job Narrative

Receipt
The samples were received on 8/1/2017 8:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 3.1º C and 3.6º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218817 was above method criteria for the following analytes: 1,1,1-trichloroethane and 1,2-dichloroethane. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218817 was below method criteria for the following analyte: 2-butanone (MEK). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following samples were diluted to bring the concentration of target analytes within the calibration range: W1-b, S1, C 073117 (180-68756-3) and W1-b, S4, C 073117 (180-68756-12). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The following samples were diluted due to the nature of the sample matrix (viscous sample extracts): W1-b, S2, C 073117 (180-68756-6) and W1-b, S3, C 073117 (180-68756-9). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 7471B: The matrix spike/matrix spike duplicate (MS/MSD) recoveries of sample W1-b, S1, C 073117 (180-68756-3) were below the control limits for mercury. The recovery of the laboratory control sample (LCS) was within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 8/2/2017 8:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.7° C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-218968 was below criteria for the following analyte: 2-butanone (MEK). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The following sample was diluted due to the nature of the sample matrix: WB2-3, S2, C 08.01.17 (180-68814-16). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in 180-219126 was above criteria for the following analytes: 1,4-dioxane and pyridine. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8270D LL: The continuing calibration verification (CCV) analyzed in 180-219211 was above criteria for the following analytes: 1,4-dioxane, hexachlorobutadiene, and pyridine. As the CCV was high and these analytes were not detected in the associated samples, the results were reported.

Method(s) 8270D LL: The matrix spike/matrix spike duplicate (MS/MSD) of sample WB2-3, S1, C 08.01.17 (180-68814-13) had several recoveries and RPDs between the spikes outside of the above the control limits. The recoveries of the laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8082A: The continuing calibration verification (CCV) analyzed in batch 180-219079 was below criteria for arcolor 1016 (CCV 180-219079/26) on column RTX-CLP2. All results in the associated samples were reported from column RTX-CLP1, which met criteria. The % difference between the sample results on both columns was <40%.

Method(s) 8082A: Sample WB2-3, S1, C 08.01.17 (180-68814-13) exhibited a slight retention time shift for the internal standards, surrogates, and aroclor peaks. As the patterns for the aroclors were clearly present, the results were reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 180-219329/58) recovered above the control limit for selenium (149%, with limits of 70%-130%). As the CCVL was high and the associated samples did not have selenium detected, the results were reported.

Method(s) 7471B: The matrix spike (MS) recovery of sample WB2-3, S1, C 08.01.17 (180-68814-13) was above the control limits for mercury. The RPD between the spikes and the recoveries of the matrix spike duplicate (MSD) and laboratory control sample (LCS) were within the control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Receipt
The samples were received on 8/3/2017 8:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.8º C.

A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC) as a sample.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 180-219096 was below criteria for the following analyte: 2-butanone (MEK). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-219248 was above criteria for the following analyte: 1,1,1-trichloroethane. As the CCV was high and this analyte was not detected in the associated sample, the results were reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8082A: The continuing calibration verification (CCV) analyzed in batch 180-220002 was above criteria for arcolor 1254 (CCV 180-220002/1) on column RTX-CLP1. The aroclor 1254 result in the associated sample was reported from column RTX-CLP2, which met criteria. The % difference between the sample results on both columns was <40%.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 8/5/2017 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.0º C and 4.4º C.

The following volatile samples were received with small air bubbles approximately 6 mm diameter in each of the vials: TRIP BLANK #1 (180-68986-10) and TRIP BLANK #2 (180-68986-11).

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in 180-219248 was above criteria for the following analyte: 1,1,1-trichloroethane. As the CCV was high and this analyte was not detected in the associated samples, the results were reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) analyzed in 180-219660 was above criteria for the following analyte: pyridine. As the CCV was high and this analyte was not detected in the associated samples, the results were reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8082A: The following samples was diluted to bring the concentration of target analytes within the calibration range: W5-b, S5, C 08.04.17 (180-68986-9). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of thirty-nine solid samples, including six samples for matrix spike/matrix spike duplicate (MS/MSD) analyses, four trip blanks and five field duplicate samples, collected July 13, 2017, as part of the Former Sperry Remington Site-North IRM project. The analyses were performed at TestAmerica Laboratories, Inc., Pittsburgh, Pennsylvania. The samples were analyzed for the following tests:

- Volatile Organic Compounds (VOCs) by EPA Methods 5035/8260C and 8260C
- Semivolatile Organic Compounds (SVOCs) by EPA Methods 3541/8270D
- Polychlorinated Biphenyls (PCBs) by EPA Methods 3541/8082A
- Metals by EPA Methods 3050B/6010C
- Mercury by EPA Method 7471B
- Total Cyanide by EPA Method 9014
- Total Solids by Standard Method 2540G

EXECUTIVE SUMMARY

The samples were handled, prepared, and measured in the same manner under similar prescribed conditions.

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The data were validated the Quality Assurance Project Plan (QAPP) for Former Sperry Remington Facility Industrial Outfall Site, Elmira, New York, NYSDEC Site I.D. # 808043, NY09-2480-04, July 7, 2010, Revised November 11, 2010, USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, January 2017 (EPA 540-R-2017-002), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (EPA 540-R-2017-001), the pertinent methods referenced by the laboratory report and professional and technical judgment.

The following samples were analyzed and validated at Stage 2A level in the data sets:

The samples were received at the laboratory at 2.4-4.8^{o}C, within the criteria of 0-6°C. No sample preservation issues were noted by the laboratory.

The following issues were noted with the chain of custody (COC):

- Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.
- No collection times were listed on the COC for the field duplicate samples; the laboratory assigned collection times of 00:00.
- TRIP BLANK 4 was received, but not listed on the COC.
- The container labels for the MS/MSD aliquots of sample W4, S4, A 71317 had collection times of 15:45, whereas the COC listed 15:15, the same collection time as the parent sample.

The results for the other samples listed on the COC were reported in laboratory report 180-68219-2.

The solids data, used to report the samples on a dry weight basis, were not validated.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs by EPA methods 5035/8260C and 8260C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised over the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

The VOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The narrative indicated that the continuing calibration verification (CCV) percent difference (%D) for vinyl chloride was high, outside method specified acceptance criteria in batch 217322 with a high bias. The %D was 23.8%. Since the %D was within the validation guidance acceptance criteria of 25%D, no qualifications were applied to the data.

The CCV %D for carbon tetrachloride was high, outside method specified acceptance criteria in batch 217610 with a low bias. The %D was 21.4%. Since the %D was within the validation guidance acceptance criteria of 25%D, no qualifications were applied to the data.

The CCV %Ds for n-butylbenzene and vinyl chloride were high, outside method specified acceptance criteria in batch 217455 with high biases. The %Ds were 21.1%D and 36.7%, respectively. Since these two compounds were not detected in the associated samples, no qualifications were applied to the data. In addition, the CCV %D for carbon tetrachloride was high, outside method specified acceptance criteria in batch 217455 with a low bias. The %D was 25.8%. Therefore, since the %D was outside both the method and validation acceptance criteria, the nondetect carbon tetrachloride results in the associated samples were UJ qualified as estimated less than the method detection limits (MDLs).

The RPDs for the following compounds were high and outside the laboratory specified acceptance criteria in the MS/MSD pair using sample W8, S3, B 71317. Since these compounds were not detected in sample W8, S3, B 71317, no qualifications were applied to the data.

2.1 Overall Assessment

The SVOC data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this package is 100%.

The concentrations of fluoranthene and pyrene in the 1:2 dilution of sample W8, S3, C 71317 were flagged with E, indicating the results exceeded the calibration ranges. The sample was reanalyzed at a 1:10 dilution and the concentrations of fluoranthene and pyrene were within the calibration ranges for this dilution. Therefore, based on professional and technical judgment, the 1:10 dilution results for fluoranthene and pyrene sample W8, S3, C 71317 are the usable results. The 1:2 dilution results for the other SVOCs in this sample are the usable results. The usability of the data was indicated in the "reportable result" column of the EDD with qualifiers file.

2.2 Holding Times

The holding times for SVOC analysis of solid samples are 14 days from sample collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three method blanks were reported (batches 217139, 217195 and 217309). SVOCs were not detected in the method blanks above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

Two sample set specific MS/MSD pairs were reported, using samples W6, S1, C 071317 and W6, S4, C 071317. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

One or both of the recoveries of the following compounds were low and outside the laboratory specified acceptance criteria in the MS/MSD pair using sample W6, S1, C 071317: Benzo[b]fluoranthene, fluoranthene, pentachlorophenol, phenanthrene and pyrene. In addition, the MS recovery and RPD of benzo[g,h,i]perylene were high, as were the RPDs for anthracene, benzo[a]anthracene, benzo[a]pyrene, chrysene, benzo[b]fluoranthene, fluoranthene, phenanthrene and pyrene. Therefore, the concentrations of anthracene, benzo[a]anthracene, benzo[a]pyrene, benzo[g,h,i]perylene, chrysene, benzo[b]fluoranthene, fluoranthene, phenanthrene and pyrene in sample W6, S1, C 071317 were J qualified as estimated and the nondetect pentachlorophenol result was UJ qualified as estimated less than the MDL.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCSs and one LCS/LCSD pair were reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.6 Surrogates

Acceptable surrogate recoveries were reported.

2.7 Field Duplicate

Five field duplicates were collected with the sample set. One field duplicate was analyzed for SVOCs, DUP-10. Acceptable precision (RPD <40% for results greater than five times the RL and ±2 times the RL for results less than five times the RL) was demonstrated between the field duplicate and the original sample, W6, S3, C 071317, with the following exceptions.

The field duplicate acceptance criteria were not met for benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene and chrysene. Therefore, based on professional and technical judgment, the concentrations of benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene and chrysene in the field duplicate pair were J qualified as estimated. The qualifications due to the field duplicate results are summarized below.

3.1 Overall Assessment

The PCB data reported in this package are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this sample set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher that the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower that the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

3.1 Overall Assessment

The PCB data reported in this data set are considered usable for meeting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis, for this data set is 100%.

The samples contain mixtures of PCBs 1248, 1254 and 1260 and PCBs 1248 and 1254. There are peaks in 1248 and 1254 that are in both of these PCBs and peaks in 1254 and 1260 that are in both of these PCBs; therefore, there is contribution between PCBs when more than one PCB is detected in a sample. Therefore, based on professional and technical judgment, the concentrations of PCBs 1248, 1254 and 1260 in these samples were J qualified as estimated.
