Re: Revised Construction Completion Report Interim Remedial Measure #1
Former Sperry Remington Site – North Portion (NYSDEC #C808022)
777 South Main Street
City of Elmira, Chemung County, NY

Dear Terry:

The New York State Department of Environmental Conservation (NYSDEC), in consultation with New York State Department of Health (NYSDOH), has completed its review of the document entitled "Construction Completion Report Interim Remedial Measure #1," dated June 17, 2026 and **approve** in accordance with the following:

Section 3.7 Soils Remaining at the Site above SCOs. Future actions proposed within the document text, figures and drawings for COPCs that remain in-place require Agency concurrence and approval. Interim Remedial Measures do not constitute the final remedy for the Site and therefore, proposed future actions will be evaluated further under the Site Remedial Investigation Report and related Site reporting.

Within 15 days, please elect in writing your acceptance of the above Approval and provide a final compiled report, including this letter as cover to the Agency with electronic notification that the document has been placed within the repository.

Please contact me via email at kaleigh.zappia-carvin@dec.ny.gov or at 585-226-5351 if you have questions regarding this letter.

Sincerely,

Kaleigh Zappia-Carvin

CERTIFICATIONS

I, Aron Krasnopoler am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Interim Remedial Measures #1 Work Plan was implemented and that all construction activities were completed in substantial conformance with the Department-approved Interim Remedial Measures #1 Work Plan.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Aron Krasnopoler of Beech and Bonaparte Engineering, P.C., of 10211 Wincopin Circle, 4th floor, Columbia Maryland 21044 am certifying as the Remedial Party's Designated Site Representative for the site.

Aron Krasnopoler	6/17/2026	Aron Krasnopoler

1.0 BACKGROUND AND SITE DESCRIPTION

On behalf of Unisys Corporation (Unisys), Geosyntec Consultants, Inc. and its New York affiliate B&B Engineers and Geologists of New York, P.C. (collectively Geosyntec) are submitting this Interim Remedial Measure (IRM) #1 Construction Completion Report (CCR) for the Former Sperry Remington Site – North Portion (Site #c808022) (Site) in Elmira, New York.

On 26 April 2016, Unisys applied to enter the Site into the New York State Department of Environmental Conservation (NYSDEC) Brownfields Cleanup Program (BCP) with the consent of Elmira City School District (ECSD). NYSDEC gave an initial determination that the BCP application was complete on 10 June 2016 and received public comments until 22 July 2016. Unisys entered into a Brownfield Cleanup Agreement (BCA) with the NYSDEC on 23 March 2017, to investigate and remediate the Site located in Elmira, Chemung County, New York. The property will be remediated to restricted residential use and will be used as a high school.

The Site is located at the Elmira High School (EHS) property (formerly known as Southside High School), 777 South Main Street in Elmira, Chemung County, New York **Figure 1**. The Site is identified as Section 99 Block [20-1] and Lot [74.2] and Section 99 Block 16 Lot 1.16 on Chemung County Tax Maps. The Site is situated on an approximately 34-acre area bounded by South Main Street to the west, the Southern Tier Commerce Center (STCC) to the south, the Consolidated Rail Corp. property to the east and vacant land to the north. Miller Pond is located approximately one thousand (1,000) feet to the east (see **Figure 1**). The boundaries of the site are fully described in **Appendix A**: Survey Map, Metes and Bounds.

2.0 SUMMARY OF IRM #1

2.1 IRM OBJECTIVES

Unisys was notified in December 2016 of ECSD plans to construct capital improvements at the EHS tennis courts and main parking lot (**Figure 2**) in late Spring 2017. Unisys identified Site soils with concentrations of total polychlorinated biphenyls (PCBs) above screening levels within or adjacent to the planned capital improvements as part of Site Characterization (SC) activities. Surface and shallow subsurface soils, i.e. at depths less than two (2) ft below ground surface (bgs) had detections of total PCBs greater than the Restricted Residential Soil Cleanup Objective (SCO) for total PCBs of one (1) mg/kg. Total PCB concentrations exceeded Toxic Substances Control Act (TSCA) limits of fifty (50) milligrams per kilogram (mg/kg) at some locations and would be considered PCB remediation waste as defined in 40 CFR §761.3 and New York State hazardous waste. A non-emergency IRM for soil removal was proposed to mitigate environmental or human exposures prior to capital improvement construction and is described in the IRM Work Plan submitted to NYSDEC on 5 April 2017 and subsequent revisions on 26 April 2017, 2 June 2017, 27 June 2017 and 11 July 2017. The Revised Final IRM Work Plan dated 11 July 2017 was approved by NYSDEC on 10 August 2017. The IRM Work Plan presented the remedial design for soil removal to meet the following IRM objectives:

- Total PCB concentrations less than or equal to one (1) mg/kg in soils at depths less than two (2) ft bgs;
- Total PCB concentrations less than or equal to ten (10) mg/kg at depths between two (2) ft bgs and the water table; and
- Total PCB concentrations less than or equal to 3.2 mg/kg at the water table where PCB have been detected above groundwater standards.

Excavations were designed for soil removal at the tennis courts (North Excavation) and in and adjacent to the main parking lot (South Excavation). Amendment #1 to the IRM Work Plan dated 11 August 2017 proposed a Short-Term Response Action (STRA) to remove surface soil (0 to 0.5 ft bgs) in the southwest portion of the football field and high jump pit area with detections of total PCBs above the Restricted Residential (SCO) of one (1) mg/kg.

2.2 DESCRIPTION OF IRM #1

The North Excavation and the South Excavation areas of the Site were remediated in accordance with the Revised Final IRM Work Plan dated 11 July 2017 and incorporated Amendment #1 dated 11 August 2017 and Amendment #2 dated 12 September 2017.

The components of the IRM were as follows:

1. Excavation of soil in North Excavation and South Excavation with detections exceeding the IRM objectives presented in section 2.1;

2. Management of excavated soils for transport and off-Site disposal as hazardous or non-hazardous waste or reuse as fill below the soil cover system:
    - Soils with total PCB concentrations less than or equal to ten (10) mg/kg were considered for potential reuse as backfill below two (2) ft bgs;
    - Soils with total PCB concentrations greater than ten (10) mg/kg and less than fifty (50) mg/kg were considered non-hazardous waste; and
    - Soils with total PCB concentrations greater than or equal to fifty (50) mg/kg were considered PCB remediation wastes as defined in TSCA and as hazardous waste containing PCBs as defined in 6 New York Codes, Rules and Regulations (NYCRR) Part 371.4 (e);
3. Backfilling of excavations below a soil cover system with excavated soils approved for reuse or approved imported fill;
4. Construction and maintenance of a soil cover system to prevent human exposure to constituents of potential concern (COPCs) in soil/fill remaining at the Site. The soil cover system consists of a demarcation layer and at least two (2) feet of approved imported fill with asphalt in paved areas and vegetated areas in accordance with ECSD capital improvement plans; and
5. Off-Site transport and disposal of hazardous and non-hazardous soils.

3.0 DESCRIPTION OF REMEDIAL ACTIONS PERFORMED

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved Revised Final Interim Remedial Measures #1 Work Plan for the Former Sperry Remington Site - North Portion between June and September 2017. All deviations from the Revised Final Interim Remedial Measures #1 Work Plan and subsequent amendments are noted below. (Section 5.0)

3.1 GOVERNING DOCUMENTS

3.1.1 Site Specific Health & Safety Plan (HASP)

All remedial work performed under this Remedial Action was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal Occupational Safety and Health Administration (OSHA).

The HASP was complied with for all remedial and invasive work performed at the Site.

3.1.2 Quality Assurance Project Plan (QAPP)

The QAPP was included as Appendix C of the SC Work Plan approved by the NYSDEC. The QAPP describes the specific policies, objectives, organization, functional activities and quality assurance/ quality control activities designed to achieve the project data quality objectives.

3.1.3 Construction Specifications

Construction specifications were included as Appendix B of the Revised Final IRM #1 Work Plan and describe the scope of work and responsibilities of the IRM Contractor and the Engineer of Record during IRM construction. Specifications sections addressed construction quality assurance, construction quality control, temporary facilities and controls, soils, removal and handling of contaminated soils, excavation support, equipment decontamination, and transportation and off-Site disposal.

3.1.4 Storm-Water Pollution Prevention Plan (SWPPP)

The erosion and sediment controls for all remedial construction were performed in conformance with requirements presented in the New York State Guidelines for Urban Erosion and Sediment Control and the site-specific Storm Water Pollution Prevention Plan submitted on 27 April 2017.

3.1.5 Community Air Monitoring Plan (CAMP)

The Soil/Dust Control and Monitoring Plan (SDCMP) was included as Appendix C of the Revised Final IRM #1 Work Plan and incorporated the New York State Department of Health (NYSDOH) Generic CAMP. The SDCMP described requirements for dust control and the CAMP monitoring approach. Ambient air monitoring was conducted on-Site during IRM activities to monitor potential impacts to the downwind community (potential receptors include the school community, residences, businesses, and workers not directly

involved with IRM activities). The air monitoring program involved real-time monitoring using direct reading instruments. Photoionization Detector (PID) data was also collected to detect for volatile organic compounds. Real-time air monitoring using direct reading instruments was conducted during soil remediation activities whenever Site soils were disturbed or imported soils were handled on Site.

3.1.5.1 CAMP Monitoring Locations

Air monitoring was conducted around the working areas and at designated upwind and downwind locations that varied as a result of daily prevailing wind patterns. One (1) upwind and four (4) downwind locations were used for real-time monitoring. The four (4) downwind locations were equally distributed along the perimeter of the work area. Working areas included the North Excavation, the South Excavation and stockpile areas. During work activities within twenty (20) feet of potentially exposed populations or occupied structures, continuous monitoring locations were selected based on the nearest potentially exposed individual and the location of ventilation system intakes for nearby structures. In those cases, permanent air monitoring locations were installed near ventilation system intakes. If action levels were exceeded at those locations, then the source of the exceedance was evaluated, and the positioning of upwind and downwind monitoring stations were reassessed.

3.1.5.2 CAMP Methods

CAMP monitoring included real-time monitoring for particulate matter less than ten (10) micrometers in size (PM-10) using an aerosol monitor (Thermo Andersen DataRAM 4 or equivalent). The equipment was equipped with an audible alarm to indicate action level exceedance. In addition, fugitive dust migration was visually assessed during all work activities. Particulate concentrations were monitored continuously at upwind and downwind perimeters of the work area at temporary particulate monitoring locations. Monitoring equipment can integrate over a period of fifteen (15) minutes (or less) for comparison to airborne particulate action levels. All readings were recorded, and air monitoring records were maintained electronically. Real-time monitoring data were downloaded at the end of the day.

3.1.5.3 CAMP Action Levels and Response Measures

Downwind PM-10 particulate levels were compared to the background (upwind perimeter) PM-10 particulate level. If the difference between any downwind level and the background level exceeded one hundred (100) micrograms per cubic meter ($\mu g/m^3$) for the fifteen (15) minute averaging period or if airborne dust was visually observed leaving the work area, dust control measures, including increased water spraying, or stopping work were employed. Monitor alarms were set to alert Site personnel if readings reached one hundred (100) $\mu g/m^3$ and dust control measures were implemented. If, after implementing dust suppression techniques, particulate levels above background (upwind) exceed one hundred

fifty (150) µg/m^3, work was suspended, and controls were re-evaluated. Work would resume once dust suppression measures and other controls were successful in reducing downwind particulate levels above background and below one hundred fifty (150) µg/m3 and visible dust migration was not observed. Also, if extreme wind conditions or other weather conditions made dust control ineffective, remedial actions were suspended.

3.1.6 Contractors Site Operations Plans (SOPs)

The Remediation Engineer reviewed all plans and submittals for this remedial project (i.e. those listed above plus contractor and subcontractor submittals) and confirmed that they followed the Revised Final IRM #1 Work Plan.

3.1.7 Community Participation Plan (CPP)

A CPP was included in the SC Work Plan dated October 2014 and has been updated for BCP Remedial Investigation (RI) Work Plan. The following community participation activities were undertaken for IRM#1 and related remedial activities at the Site:

- NYSDEC held a public meeting on 22 May 2017 at the Riverview Holiday Inn in Elmira, New York. NYSDEC, NYSDOH and Unisys presented a review of Site history and previous investigations and plans for construction of IRM #1;
- Copies of the NYSDEC fact sheet were kept on the site and provided to site visitors or people seeking information during the construction activities.

3.2 REMEDIAL PROGRAM ELEMENTS

3.2.1 Contractors and Consultants

Construction activities for IRM #1 were performed by Remedial Construction Services, L.P. (RECON) as the primary IRM contractor with responsibility for all construction activities in accordance with the Revised Final Interim Remedial Measures #1 Work Plan, the Construction Drawings and the Construction Specifications. Surveying services were provided by Hunt Engineers, Architects and Surveyors.

Geosyntec provided Construction Quality Assurance (CQA) services and collected chemical samples in accordance with the QAPP. Aron Krasnopoler of B&B Engineers and Geologists of New York, P.C., a New York Professional Engineer, served as certifying Engineer of Record responsible for inspection of the work. On-Site geotechnical soil testing was carried out by Geosyntec. Geotechnical laboratory soil testing was carried out by Geotechnics. Soil sampling analysis and soil chemical characterization data was provided by Test America Laboratories Inc.

3.2.2 Site Preparation

Prior to mobilization to site it was determined that there was asbestos in the tennis court surface materials and ECSD carried out asbestos abatement and demolition between 1 and 12 May 2017.

The Contractor mobilized to site on 12 June 2017 and began setting up privacy fence and installing silt fencing in the area around the tennis courts. Between 12 and 19 June 2017, the Contractor conducted utility mark outs, installed storm water inlet protection and installation of the base material for the Material Storage Area (MSA). The MSA was located on the STCC property to the south.

NYSDEC gave conditional notice to proceed in a letter dated 16 June 2017. A preconstruction meeting with NYSDEC was held on 20 June 2017 where several issues were identified by NYSDEC that needed to be addressed prior to initiation of excavation activities. Unisys submitted a response letter on 28 June 2017 to address comments presented in the 16 June 2017 Conditional Notice to Proceed and items noted during 19 NYSDEC on-site inspection. NYSDEC provided responses to the 26 June 2017 response to comments letter on 28 June 2017. A Revised Final IRM Work Plan was submitted on 30 June 2017. NYSDEC gave conditional approval on 3 July 2017. Subsequent actions included submittal of (1) revised construction drawings for equipment wash pad and revised specifications for excavation and abandonment of utilities on 7 July 2017; and (2) a Revised Final IRM Work Plan to NYSEC on 11 July 2017. NYSDEC gave conditional approval on 10 August 2017. Documentation of agency approvals required by the IRM #1 Work Plan is included in **Appendix B**.

3.2.3 General Site Controls

3.2.3.1 Site Security

Site security was maintained by perimeter controls in the form of fences with privacy screens and locks. Equipment was kept behind locked security gates and storage areas for contaminated materials and the work areas had physical barriers to restrict access. Visitors were required to check at the project office upon arrival.

3.2.3.2 Job Site Record Keeping

The following records were maintained on site:

- Daily field reports
- Daily truck logs
- Waste manifests
- Storm water inspection reports
- Tailgate safety meetings
- Instrument calibration records

Copies of the daily field reports are provided in **Appendix C**.

3.2.3.3 Erosion and Sedimentation Controls

Erosion and sediment controls were installed and inspected according to the SWPPP and construction drawings. They included, inlet protection, silt fences, silt socks, truck washes

with sump pits and constructed vehicle entrances and exits. Soil stockpiles were covered when not being accessed. Additional details on reducing erosion and sedimentation from soil stockpiles are included in the soil stockpile methods section below (Section 3.2.3.6)

3.2.3.4 Equipment Decontamination and Residual Waste Management

All vehicles and equipment potentially exposed to contaminated material were decontaminated prior to leaving either the Limits of Disturbance (LOD) or MSA. Equipment wash pads were installed and used at each location. Each equipment wash pad was lined with a geotextile and liner to capture solids. Visible debris on the equipment was brushed off manually onto the equipment wash pad and plastic liners were used on the edges of the trucks during loading to reduce contact with impacted material. High pressure water was used to clean the wheels and base of the equipment leaving site. Each equipment wash pad included a lined sump pit with a sump pump. Water from the wash pad was collected in the sump pit and subsequently pumped into a frac tank for storage pending off-Site transport and disposal on a periodic basis during IRM #1 activities.

Dedicated equipment was used for separate excavation and handling of TSCA and non-TSCA soils. Temporary transit roads were constructed over non-TSCA areas for TSCA equipment to move between TSCA excavation areas and the TSCA accumulation area and vice versa. Temporary transit roads were constructed using geotextile fabric. Composite mats were used during wet conditions and for uneven surfaces.

3.2.3.5 Soil Screening

Results of pre-delineation presented in the Revised Final IRM Work Plan were used to determine the limits of excavation and management of soils as hazardous waste, non-hazardous waste, or potential reuse as backfill. Additional confirmation samples were collected during IRM#1 construction. End-point sampling results are discussed in Section 3.4.

Excavations and soil stockpiles were inspected for visual or olfactory impacts, solid waste, bricks or debris. Soil with visible staining or presence of foreign material or soils which had an odor were segregated and sampled. Disposition of the material was based on the results of soil characterization.

3.2.3.6 Stockpile Methods

All stockpiles were maintained to avoid having steep sides or faces. During periods of extended inactivity or prevailing high wind conditions, stockpiles were covered, and the covers were weighted down with sandbags. Stockpiles were not placed within 25 yards of occupied buildings.

Direct loading of non-hazardous soils for off-Site disposal was not feasible because of the acceptance requirements of the receiving facility, including waste characterization and daily volume limits. Stockpiling allowed excavation activities to proceed uninterrupted and avoid schedule delays. Stockpiling on EHS property was not feasible because of i) potential impacts to ECSD construction schedule and activities in the main parking lot ii)

reopening of EHS on 5 September 2017; iii) potential impacts to EHS infrastructure (e.g. football field and athletic fields); iv) planned use of the rear parking lot for staging ECSD construction equipment; and v) a lack of secure areas without the addition of temporary fencing. An MSA was constructed on STCC property to the south of the Site as a secure area for management of soils stockpiled for potential reuse or transport off-Site as non-hazardous waste. This secure area consisted of a fenced in area of approximately 69,000 square feet with gated access.

3.2.3.7 Nuisance controls

All vehicles exiting the LOD or MSA had to pass through the truck wash prior to leaving site. Any dirt or dust tracking on roads leading out of site was cleaned up by brushing down and spraying down the roads. Truck logs were maintained to document when trucks left the EHS property and a corresponding log for trucks arriving at the MSA.

When working on weekends no heavy equipment was operated prior to 0830 to avoid creating noise nuisances

Dust control was carried out by restricting vehicle speeds, and spraying water using fine atomized sprays. A direct spray was also used in order to clean off trucks and equipment or wet down materials depending on wind and soil conditions. Construction excavators were slowly unloaded and drop heights from the loader buckets were minimized. Trucks were staged within the LOD as far as possible. Trucks were not allowed to idle more than five (5) minutes. Vehicle speeds were restricted to no more than ten (10) miles per hour (mph) while onsite. Vehicle staging areas were restricted to immediately adjacent to the construction areas and not on public roads. All haul trucks were covered with tarps prior to transporting soil to or from site.

During excavation of the North Excavation, haul trucks were used to transport material to the MSA using South Main street. Trucks were diapered during loading, cleaned of any loose material after loading and excavated material was wetted and tarped prior to the trucks leaving site. A flagging system was established to regulate movement of trucks into and out of site. Trucks were routed out of EHS property onto South Main Street via a truck wash constructed as per design specifications submitted on 7 July 2017.

During excavation of the South Excavation and the STRA, haul trucks were used to transport material to the MSA via a temporary haul road constructed to avoid accessing South Main Street.

3.2.4 CAMP Results

Air monitoring was implemented in accordance with the SDCMP. Dust monitors were installed on site around areas of activity and sampling was carried out throughout the day. Meters were set to trigger alarms if instantaneous point values of readings exceeded action levels. This would allow adequate response time to bring about necessary dust suppression activities. **Table 1** summarizes the observed exceedances above the dust monitoring action levels of one hundred (100) $\mu g/m^3$ for dust control measures and one hundred fifty (150)

µg/m^3 for work suspension. The dust monitoring action level of 150 µg/m^{3}was exceeded on four (4) occasions and exceedances were addressed as follows:

- A high reading of 742.69 µg/m^3 at the northeast corner of the North Excavation on 8 July 2017 was associated with cutting asphalt in area by others. Work was stopped, water sprayed, and continuous water was sprayed during remaining cutting. Subsequent readings were below 100 µg/m^3;
- A high reading of 325.95 µg/m^3 at the northeast downwind corner of the South Excavation at 1:35 PM on 9 August 2017 was associated with truck movement on the temporary haul near the dust monitor. Water was sprayed and readings went down. Subsequent readings were below 100 µg/m^3;
- A high reading of 151.17 µg/m^3 at the northeast downwind corner of the South Excavation at 3:50 PM on 9 August 2017 was associated with truck movement on the temporary haul road near the dust monitor. Work was stopped and water was sprayed. The dust monitor was recalibrated, and subsequent readings were below 100 µg/m3; and
- A high reading of 205.34 µg/m^3 at the northwest corner of the South Excavation on 9 August 2017 was associated with dumping topsoil next to monitor. The monitor was calibrated and unloading activities were shifted away from perimeter of fence and subsequent readings were below 100 µg/m^3.

Copies of all field data sheets relating to the CAMP are provided in electronic format in **Appendix D**.

3.2.5 Reporting

Daily field reports were generated by the Engineer's representative on site for review by the Engineer. Reports included summaries of work progress, inspections carried out, material movement and site visitors. Construction photographs were also included with reports. Copies of daily field reports are included in electronic format in **Appendix C**.

3.3 SOIL REMOVAL

3.3.1 Monitoring Well Decommissioning

In preparation for excavation, monitoring wells MW-15S and MW-15D, located west of the EHS A-Wing as depicted on **Figure 4**, were abandoned in accordance with NYSDEC Policy CP-43. Well abandonment forms are included in **Appendix E**. Monitoring well MW-15S will be replaced following IRM completion. Unisys will submit plans to update the Site groundwater monitoring network as part of continuing Site investigations under the BCP after completion of the IRM. The need for replacement of monitoring well MW-15D will be evaluated at that time. Monitoring well locations are shown on the as-built drawings included as **Appendix F**.

3.3.2 Excavation Details

Soils were excavated from the North Excavation (tennis courts), South Excavation (main parking lot) and the STRA area in the southwest portion of the football field in accordance with the Revised Final Interim Remedial Measures #1 Work Plan, Amendment #1 and design changes noted in Section 3.9 of this report. Approximately 2,280 cubic yards of soil was removed from the North Excavation to a minimum depth of two (2) feet bgs between 19 June and 11 July 2017 following tennis court demolition and asbestos abatement by ECSD.

Approximately 4,340 cubic yards of soil was removed from the South Excavation between 10 July and 3 August 2017. As communicated to NYSDEC on 13 July 2017, IRM construction in the South Excavation (i.e., main parking lot) was limited to excavation to four (4) feet below ground surface (ft bgs) in the main parking lot and to two (2) ft bgs in areas to the east due to accommodate the schedule for ECSD capital improvements.

Approximately 185 cubic yards of soil was removed from the STRA area inside the track to a minimum depth of approximately six (6) inches bgs between 15 and 23 August 2017. To avoid damaging the track surface encircling the football field, material within the football field was excavated using a mini-excavator and a pick-up size dump truck was used to move material to the MSA. Crane mats underlain by geotextile were placed across the track surface to allow vehicular movement across the track. As-built drawings of the excavations are included in **Appendix F**. As excavation did not reach level of subsurface utilities no utilities were abandoned during the remedial activity.

Cut and fill thicknesses based on as-built surveys are included on the As-Built Drawings presented in **Appendix F**.

3.3.3 Disposal Details

Table 2 provides the total quantities of each category of material removed from the Site and subsequent disposal locations.

Correspondence from Applicants to disposal facility owners and acceptance letters from disposal facility owners are provided in **Appendix G**.

Manifests and bills of lading are included in electronic format in **Appendix H.**

3.3.3.1 Hazardous Waste

Soils with total PCB concentrations greater than or equal to fifty (50) mg/kg are classified as PCB remediation waste under TSCA and as hazardous waste containing PCBs as defined in 6 NYCRR Part 371.4 (e). Soils classified as hazardous waste were staged within the LOD on poly sheeting for no more than one (1) day and loaded for off-Site disposal at an appropriate treatment storage and/or disposal facility. Loading occurred between 19 July 2017 and 27 July 2017. A total of sixty-one (61) truckloads, (approximately 1350 tons) of material were direct loaded and sent to Wayne Disposal, Inc. Site #2 landfill located at 49350 N I 94 Service Drive, Belleville MI 48111. Each shipment had the required

manifest, labeling and placarding in accordance with Federal and State regulations. Manifests are provided in electronic format in **Appendix H**.

3.3.3.2 Non-hazardous Waste

Soils with total PCB concentrations greater than ten (10) mg/kg and less than fifty (50) mg/kg were stockpiled in the MSA and staged for disposal as non-hazardous waste. Stockpiled soils were sampled for waste characterization in accordance with the requirements of the receiving facility, Ontario Landfill in Stanley, New York. Analyses included PCBs and toxicity characteristic leaching procedure (TCLP) analyses for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals. Analytical data packages were submitted to the facility operator, Casella Waste Systems to develop waste profiles. **Table 3** presents a summary of PCB and TCLP analytical results for waste characterization, respectively.

A total of eighty-six (86) truckloads (approximately 2580 tons) of non-hazardous material was sent offsite to the Ontario Landfill in Stanley New York. Each shipment had the required manifest, labeling and placarding in accordance with Federal and State regulations. Manifests are provided in electronic format in **Appendix H**.

3.3.3.3 Contact Water

Contact water generated from the collection of wash water from the equipment wash pads and stormwater that accumulated in excavations was stored in frac tanks maintained for this purpose. Some contact water was generated when an existing pipe was damaged within the southern excavation and had to be repaired. The water generated was pumped into a storage tote pending disposal. Samples to characterize these waters for disposal were collected and analyzed pursuant to receiving facility frequency and parameter requirements prior to shipping off-Site. A summary of analytical results is included in **Table 4**.

Based on the results of the characterization the material was transported offsite for disposal at the Spring Grover Resource Recovery, Inc. facility in Cincinnati, Ohio.

3.4 ON-SITE REUSE

Excavated soils with total PCB concentrations less than or equal to ten (10) mg/kg were stockpiled in the MSA for potential reuse as backfill below two (2) ft bgs in accordance with Section 5.4 of DER-10. Soils were stockpiled in windrows and sampled with a frequency of approximately one composite sample for every one hundred (100) cubic yards in volume. Soils were analyzed for PCBs, metals, SVOCs, and VOCs at the frequency presented in Table 5.4 (e) 10 of DER-10. Each windrow to be tested for potential reuse was inspected by the Qualified Environmental Professional (QEP) for visual or olfactory impacts, solid waste, bricks or debris and screened with a PID for elevated VOC vapor levels. PID screening was used to select locations within the windrow to sample for VOC analyses. Analytical data packages were validated in accordance with the QAPP/Field Sampling Plan (FSP) for usability. **Table 5** presents a summary of total constituent analytical results for potential reuse. Analytical results were compared to allowable constituent levels presented in Appendix 5 of DER-10. Request to Import Forms were

submitted to NYSDEC for approval to reuse these soils as backfill below soil cover, i.e. two (2) feet bgs and approved. The average total PCB concentration for soils approved for reuse was 1.83 mg/kg. PAHs in soils approved for reuse are benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, indeno(1,2,3-c,d)pyrene, and dibenz-(a,h)anthracene with average concentrations of 0.77, 0.72, 0.86, 0.61, and 0.17 mg/kg, respectively. The average mercury concentration is soils approved for reuse was 0.21 mg/kg. NYSDEC Request to Import Forms and NYSDEC approvals are included in **Appendix I**.

Approximately five hundred (500) cubic yards of reuse material was used to backfill the 2-4 ft bgs interval of the South Excavation in the Main Parking Lot. Soils used for backfilling met the requirements of Section 5.4 of DER-10 for use below a soil cover system over a demarcation layer. Stockpiled soils approved for reuse were not used for backfilling above two (2) ft bgs. The extent of reuse material and the elevation of the reuse surface are shown on the As-Built Drawings (**Appendix F**). Prior to backfilling, a demarcation layer, consisting of orange snow fencing material and geotextile fabric, was placed in the excavation to provide a visual reference of the limit of fill material for future excavations. Backfill material was compacted in accordance with construction specifications and compaction testing was conducted by the QEP to document achievement of compaction density. Compaction test results are presented in **Appendix J**. Orange netting and geotextile fabric was placed as a demarcation layer on top of the reuse material. The extent of the demarcation layer is shown on the As-Built Drawings (**Appendix F**).

3.5 REMEDIAL PERFORMANCE/DOCUMENTATION SAMPLING

End-point sampling to demonstrate that IRM#1 cleanup objectives were achieved and document constituents of potential concern (COPCs) remaining was carried out by combining results from soil characterization activities (pre-delineation) and collecting post-excavation side wall and bottom samples. Pre-delineation sampling of excavation side walls and bottoms was conducted in accordance with Section 5.4 (b) of DER-10 and the approved IRM Work Plan:

- one sample from the bottom of each sidewall for every thirty (30) linear feet of sidewall; and
- one sample from the excavation bottom for every nine hundred (900) square feet of bottom area.

IRM construction in 2017 removed soils to a depth of two (2) ft bgs in the North Excavation and South Excavation as shown on **Figures 3** and **4**, respectively. Soils were removed to a depth of four (4) ft bgs in a portion of the main parking lot as part of the South Excavation as shown in **Figure 5**. Surface soils were removed to a depth of six (6) inches bgs from the football field as part of the STRA as shown in **Figure 6**. Backfilling occurred after as-built surveys verified that excavations had achieved target depths. Confirmatory samples were collected in areas where pre-delineation was incomplete.

SC data were used to document the limits of excavation and the limits of PCB remediation waste within the excavations as shown on **Figures 3**, **4**, **5**, and **6**. Excavation side walls were documented by samples collected with a maximum spacing of thirty (30) ft where not constrained by EHS infrastructure that was not scheduled for capital improvements in 2017 (e.g., building foundation, running track) and presented in the Revised Final IRM Work Plan approved by NYSDEC. **Table 6** presents the total PCB concentration and sample recovery of documentation and confirmation samples for achievement of cleanup goals. Bottom areas for the excavations are shown on **Figures 3**, **4**, **5**, and **6** and are presented on **Table 7**. The number of bottom samples was discussed with NYSDEC and presented in the revised Final IRM Work Plan approved by NYSDEC.

In areas where documentation sampling was incomplete, post-excavation sidewall and bottom wall samples were collected in accordance with Section 5.4 (b) of DER-10 or as requested by NYSDEC. Confirmation samples were analyzed for PCBs in accordance with the SC Work Plan QAPP.

- One post-excavation sample (SSHS-NE SIDEWALL S1) was collected at 0-2 ft bgs on the north side of the North Excavation and analyzed for PCBs to address the gap between pre-delineation samples SSHS-B400 and SSHS-B779.

- One post-excavation sample (SSHS-SE SIDEWALL 1) was collected at 0-2 ft bgs in the South Excavation along the edge of the track to address the gap between pre-delineation samples SSHS-B619 and SSHS-B620. Additional samples were collected based on visual or olfactory observations or field screening during excavation.

- Three post-excavation bottom samples (SE BTM WALL 1, SE BTM WALL 2 and SE BTM WALL 3) at 2 ft bgs due to the observation of discolored soils and analyzed for PCBs.

Documentation and confirmation sample locations are shown on the as-built drawings provided in **Appendix F**. Pre-delineation samples SSHS-B464, SSHS-B253, and SSHS-B249 were used to define the proposed western limit of the 0-2 ft interval of the South Excavation; however, the as-built limit of excavation extended further to the west in order to connect to the 2-4 ft excavation (**Figure 4**); therefore, SSHS-B464, SSHS-B253, and SSHS-B249 were removed by the excavation. The western limit of the 0-2 ft interval was bounded by pre-delineation samples SSHS-B634, SSHS-B827 and SSHS-B632C. Those samples were located within the footprint of the 4-ft excavation and were also removed by excavation.

Analytical and data validation reports for pre-delineation samples were presented in the Revised Final IRM #1 Work Plan. Analytical reports and data validation reports for post-excavation confirmation samples are presented in **Appendix K** and **Appendix L**, respectively.

3.6 IMPORTED BACKFILL

Imported fill included soils used for excavation backfill and as a base layer for temporary haul roads, equipment wash pads, the MSA as well as aggregate materials for temporary hauls roads and equipment wash pads. The source of imported fill was Brewer's Pit (NYSDEC Facility ID 8-0734-00150), located in Horseheads, New York. Imported topsoil was used to establish vegetative cover. The source of imported topsoil was Breesport Pit (NYSDEC Mine ID 80024), located in Breesport, New York.

Imported fill was tested in accordance with the requirements of Section 5.4 of DER-10. Imported topsoil was sampled and analyzed for VOCs, SVOCs, PCBs, pesticides, metals, hexavalent chromium, trivalent chromium and cyanide. Analytical data packages were validated in accordance with the QAPP/FSP for usability. Analytical results were compared to allowable constituent levels presented in Appendix 5 of DER-10 and Request to Import Forms were submitted to NYSDEC for approval. Copies of NYSDEC Request to Import forms and approvals are provided in **Appendix I**. Imported fill used for backfilling included:

- Approximately 5,683 tons of imported soil used to backfill the North Excavation;
- Approximately 5,896 tons of imported soil used to backfill the South Excavation;
- Approximately 845 tons of imported topsoil to backfill the South Excavation; and
- Approximately 320 tons of imported topsoil to backfill the STRA area.

Tables summarizing chemical analytical results for backfill and topsoil, in comparison to allowable levels, are provided in **Tables 8A** and **8B,** respectively. Locations where backfill was used at the site are shown on the As-Built Drawing provided as **Appendix F**.

Backfill material was compacted in accordance with construction specifications and compaction testing was conducted by the QEP to document achievement of compaction density. Compaction test results are presented in **Appendix J**. Reuse material was also separated from overlying imported fill by geotextile fabric. Excavations were backfilled to final grades as shown on the As-Built Drawings (**Appendix F**).

3.7 SOILS REMAINING AT THE SITE ABOVE SCOS

IRM construction in the South Excavation (i.e., main parking lot) was limited to excavation to four (4) ft bgs in the main parking lot and to two (2) ft bgs in areas to the east due to accommodate the schedule for ECSD capital improvements. The balance of the South Excavation will be completed in accordance with the IRM Work Plan at a later date.

PCBs and other COPCs remain in soil below two (2) ft bgs (i.e. below the soil cover system) above SCOs as shown on **Figures 3 to 14**. **Tables 9A** through **9D** summarize analytical data for PCBs and other COPCs that remain in soils within the design footprint of IRM #1 after completion of IRM #1 activities.

Figures 6 to **12** show the sample locations and results for total PCBs not excavated during IRM #1 by 2-ft interval. These areas include:

North Excavation (Tennis Courts)

- 0 - 2 ft bgs: Sidewall sample NE-Sidewall S1 (NS-6) with total PCB concentration of 6.27 mg/kg along the northern sidewall of the excavation. The sample location is beneath the north service road and currently covered by asphalt. A final remedy for the area north of the tennis courts will be determined after completion of the BCP RI.

Southern Excavation (Main Parking lot)

- 0 - 2 ft bgs: Soils with detections of total PCBs greater than one (1) mg/kg remain in place at the limit of IRM #1 construction to the east and adjacent to the running track. As approved, IRM #1 addressed ECSD capital improvement areas in the main parking lot and adjacent sidewalks. Disturbance of other EHS infrastructure (e.g. the running track, sidewalks) was limited to the extent possible. Three (3) bottom samples were collected based on field observations (**Figure 4**). Total PCB concentrations detected in samples SE BTM WALL 1, SE BTM WALL 2, and SE BTM WALL 3 ranged from 5.19 to 56.5 mg/kg (see **Table 9B**). These results are consistent with historic data for the 4 to 6 ft bgs interval (**Figure 7**). As shown in **Figure 7**, areas that could not be excavated during IRM #1 due to ECSD capital improvement scheduling constraints will be addressed by future IRMs at the Site.

- 2 - 4 ft bgs: To accommodate ECSD's capital improvement schedule, excavation at this depth was limited to areas within the main parking lot (**Figure 5**). As a result, total PCBs in soil greater than ten (10) mg/kg remain in place east of the main parking lot. Total PCBs remain in place at the bottom of the excavation as indicated by pre-delineation bottom samples collected at 4 to 6 ft bgs (SSHS-B633, SSHS-B679, SSHS-B696 and SSHS-B697) with total PCB concentrations ranging from 0.0021 to 4.6 mg/kg (a field duplicate sample was collected at SSHS-B633 with a detection of total PCBs of 10.47 mg/kg). As shown in **Figure 7**, areas that could not excavated during IRM #1 due to ECSD capital improvement scheduling constraints will be addressed by future IRMs at the Site.

- 4 -16 ft bgs: IRM construction in the South Excavation (i.e., main parking lot) was limited to excavation to four (4) feet below ground surface (ft bgs) in the main parking lot and to two (2) ft bgs in areas to the east due to accommodate the schedule for ECSD capital improvements. As shown in **Figures 7** to **13**, areas that could not excavated during IRM #1 due to ECSD capital improvement scheduling constraints will be addressed by future IRMs at the Site.

Additional COPCs were detected during SC activities and previous investigations in soils remaining below the soil cover system after IRM #1 as presented in **Table 9D.** These data are also presented on **Figure 14** and summarized below:

- SSHS-B70 located south of the athletic stand:
    - Detections of PAHs, benz(a)anthracene, benzo(a) pyrene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-c,d)pyrene above Restricted Residential SCOs at 2 to 6 ft bgs; and
    - Detections of PAHs, benz(a)anthracene, benzo(a) pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene above Restricted Residential SCOs at 6 to 10 ft bgs;
- SSHS-B15 located west of A-Wing:
    - Detections of PAHs, benzo(a) pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene, above Restricted Residential SCOs at 4 to 5 ft bgs; and
- SSHS-B8 located south of the football field:
    - Detection of barium of 426 mg/kg at 4 to 5 ft bgs, above the Restricted Residential SCO of 350 mg/kg.; and

Engineering and Institutional Controls (ECs/ICs) are required to recognize remaining in-place soil conditions to protect human health and the environment. These ECs/ICs are described in the following sections. Long-term management of these EC/ICs and residual COPCs will be performed under an interim Site Management Plan (SMP), subject to approval by NYSDEC.

3.8 ENGINEERING CONTROLS

3.8.1 Soil Cover System

Exposure to COPCs in soil/fill at the site is prevented by a protective soil cover system placed over the site. This cover system is comprised of a minimum of twenty-four (24) inches of imported material overlain by asphalt, concrete pavement/ slab for tennis courts, or vegetative cover. Unpaved areas were restored with a minimum of four (4) inches of topsoil and reseeded based on original conditions. A demarcation layer in the form of an orange netting and geotextile fabric was placed prior to backfilling with clean fill material used for the cover system. **Figure 15** provides an as-built cross section of the IRM #1 soil cover system. The interim SMP will include an Excavation Work Plan which outlines required procedures in the event the cover system and/or underlying residual contamination are disturbed. This Excavation Work Plan will be provided in the interim SMP, subject to approval by NYSDEC.

3.8.2 Other Engineering Controls

IRM #1 did not require the construction of any new engineering control systems. Other engineering controls at the Site are described in the interim SMP.

3.9 INSTITUTIONAL CONTROLS

A series of ICs have been developed to: (1) implement, maintain and monitor EC systems; and (2) prevent future exposure to COPCs present in media at the Site. Adherence to these ICs will be implemented under the interim SMP. ECSD has agreed to accept an Environmental Easement on the property as part of the Site remedy since the IRM includes a cover system (**Appendix M**).

3.10 DEVIATIONS FROM IRM WORK PLAN

3.10.1 Modification of Proposed Limits of Excavation – Low-Recovery Re-Sampling

Amendment #1 to the SC Work Plan was submitted to NYSDEC on 7 July 2017 to provide a plan to address pre-delineation sample recovery in boring intervals characterized by recoveries of less than 50% of potentially available lithology. Geosyntec mobilized on 10 July 2017 to re-collect soil samples for PCB analyses from identified sample intervals using Direct Push Technology (DPT) in accordance with the SC Work Plan's QAPP/FSP. For sample intervals where sample recovery was less than 50% an off-set DPT boring was advanced. Analytical results and sample recoveries were presented to NYSDEC on 18 July 2017 with design modifications to the proposed limits of excavation. With NYSDEC approval, survey control points were provided to the IRM contractor.

3.10.2 Modification Of Proposed Limits Of Excavation/Long-Term MSA Stabilization

As communicated to NYSDEC on 13 July 2017, IRM construction in the South Excavation (i.e., main parking lot) was limited to excavation to four (4) feet below ground surface (ft bgs) in the main parking lot and to two (2) ft bgs in areas to the east to accommodate the schedule for ECSD capital improvements. The balance of the South Excavation will be completed in accordance with the IRM Work Plan at a later date. As a result, the volume of stockpiled soils that are suitable for reuse as backfill below two (2) feet bgs was expected to exceed the volume of backfill required. Amendment #1 to the Revised Final IRM Work Plan was submitted on 11 August to modify the MSA at the STCC property to the south of the Site for long-term management prior to reuse.

3.10.3 Modification of North Excavation Confirmation Sampling

The northern sidewall of the North Excavation extended to the north of pre-delineation samples with total PCB concentrations greater than 1 mg/kg into the service road. The as-built sidewall length between pre-delineation sidewall samples SSHS-B400 (NS-5) and SSHS-B779 (NS-7) was 197.4 feet. One post-excavation sidewall sample SSHS-NE SIDEWALL S1 (NS-6) between those samples was collected in consultation with NYSDEC. In addition, the as-built distance between pre-delineation sidewall samples

SSHS-B596 (NS-25) and SSHS-B767 (NS-26) was 81.8 feet. No post-excavation sidewall sample was collected between those samples. These are noted as deviations of the requirement to collect samples at a maximum spacing of 30 feet. The IRM was focused on soil removal in coordination with ECSD capital improvements at the tennis courts. The area north of the tennis courts will be characterized during the BCP RI.

As shown on **Figure 3**, the as-built extent of the North Excavation was greater than the design extent by 4,790 square feet. Thirty-seven (37) pre-delineation are used as bottom samples for a sampling frequency of one per 1,068 square feet. This is noted as a deviation of the requirement to collect one sample per 900 square feet of bottom area. Total PCB concentrations of all bottom samples are below the subsurface cleanup goal of ten (10) mg/kg. The number of bottom samples were discussed with NYSDEC and presented in the revised Final IRM Work Plan approved by NYSDEC.

3.11 PROBLEMS ENCOUNTERED

The following problems were encountered during IRM #1 construction:

- On 23 July 2017, an undocumented one (1) inch diameter PVC water pipe was encountered in the South Excavation. The pipe was repaired, and water released into the excavation was containerized for off-Site disposal; and
- On 22 August 2017, a break in an electrical line that provides electrical power to the athletic field was traced to the Northern Excavation. The break was located and repaired the same day.

Notes:

NYSDEC DER-10 App 5 - Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010
Concentrations detected above restricted residentual use for Imported fill or soil are bolded and highlighted in grey
U non detect
J estimated value
J+ estimated value; however value is likely to higher due to higher concentration of the analyte in sample due to positive bias
J- estimated value; however value is likely to lower due to lower concentration of the analyte in sample due to negative bias
UJ non detect; however the reported quantation limit is estimated

Notes:

NYSDEC DER-10 App 5 - Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010
Concentrations detected above restricted residentual use for Imported fill or soil are bolded and highlighted in grey
U non detect
J estimated value
J+ estimated value; however value is likely to higher due to higher concentration of the analyte in sample due to positive bias
J- estimated value; however value is likely to lower due to lower concentration of the analyte in sample due to negative bias
UJ non detect; however the reported quantation limit is estimated

Notes:

NYSDEC DER-10 App 5 - Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010
Concentrations detected above restricted residentual use for Imported fill or soil are bolded and highlighted in grey
U non detect
J estimated value
J+ estimated value; however value is likely to higher due to higher concentration of the analyte in sample due to positive bias
J- estimated value; however value is likely to lower due to lower concentration of the analyte in sample due to negative bias
UJ non detect; however the reported quantation limit is estimated

Notes:

NYSDEC DER-10 App 5 - Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010
Concentrations detected above restricted residentual use for Imported fill or soil are bolded and highlighted in grey
U non detect
J estimated value
J+ estimated value; however value is likely to higher due to higher concentration of the analyte in sample due to positive bias
J- estimated value; however value is likely to lower due to lower concentration of the analyte in sample due to negative bias
UJ non detect; however the reported quantation limit is estimated

Notes:

NYSDEC DER-10 App 5 - Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010
Concentrations detected above restricted residentual use for Imported fill or soil are bolded and highlighted in grey
U non detect
J estimated value
J+ estimated value; however value is likely to higher due to higher concentration of the analyte in sample due to positive bias
J- estimated value; however value is likely to lower due to lower concentration of the analyte in sample due to negative bias
UJ non detect; however the reported quantation limit is estimated

Notes

ft bgs	feet below ground surface
PCB	polychlorinated biphenyl
N/A	Not Available
ND	Not Detected
*	Post-Excavation Confirmation Sample
X	Sidewall samples used to delineate 0-2 ft excavation but removed during completion of the 2-4 ft excavation.

TABLE 7
Summary of Excavation Bottom Areas

Former Sperry Remington Site - North Portion
Elmira, New York

IRM Area	Figure Reference	Bottom Depth (ft)	Bottom of Excavation Area[1] (SF)	Perimeter (ft)	Bottom Samples		
					Number of Samples Collected[2]	Range of Total PCB Concentration (mg/kg)	Sampling Basis
North Excavation	3	2	39,537	1,130	37	Non-Detect - 2.74 mg/kg	1 per 1,068 square feet; no sample in 2-4 ft bgs interval exceeds cleanup goal of 10 mg/kg
South Excavation	4	2	7,395	435.7	12	0.61 -56.5 mg/kg	1 per 900 square feet
	5	4	5,858	386	9	0.17 - 4.6 mg/kg	1 per 900 square feet
STRA	6	0.5	9,657	464	18	0.068 - 43.6 mg/kg	1 per 900 square feet

Notes:
1 Bottom of excavation is area below which soil was or will not be removed for remedial purposes.
2 The number of bottom samples to be collected were discussed with NYSDEC and presented in the revised Final IRM Work Plan approved by NYSDEC.
ft feet
SF square feet
mg/kg milligrams per kilogram
ft bgs feet below ground surface
PCB polychlorinated biphenyl
STRA Short-Term Response Action (Football Field)

NYSDEC DER-10 App 5 - Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010

VALIDATION QUALIFIER DEFINITIONS

U non detect

J estimated value

J+ estimated value; however value is likely to higher due to higher concentration of the analyte in sample due to positive bias

J- estimated value; however value is likely to lower due to lower concentration of the analyte in sample due to negative bias

UJ non detect; however the reported quantation limit is estimated

Notes: **Lab Qualifiers:J: The identification of the analyte is acceptable; the reported value is an estimate.J0: J0: Calibration verification outside of acceptance limits. Result is estimated.J3: The associated batch QC was outside the established quality control range for precision.J4: The associated batch QC was outside the established quality control range for accuracyJ5: The sample matrix interfered with the ability to make any accurate determination; spike value is highJ6: The sample matrix interfered with the ability to make any accurate determination; spike value is low**

NYSDEC DER-10 App 5 - Constituent Levels for Imported Fill or Soil Restricted Residential Use May 2010

VALIDATION QUALIFIER DEFINITIONS

U non detect

J estimated value

J+ estimated value; however value is likely to higher due to higher concentration of the analyte in sample due to positive bias

J- estimated value; however value is likely to lower due to lower concentration of the analyte in sample due to negative bias

UJ non detect; however the reported quantation limit is estimated

Notes
PCBs - Polychlorinated Biphenyls
mg/kg - milligrams per kilogram
ft bgs - Feet Below Ground Surface
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U - non-detect at the value indicated
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives (SCOs) are presented in dark gray.
SCOs are derived from 6 NYCRR Part 375 (effective 14 December 2006) that was in effect during the performanace of the IRM.
Analyte concentrations detected above New York State Hazardous Waste Criteria are presented in black with white text

Notes
PCBs - Polychlorinated Biphenyls
mg/kg - milligrams per kilogram
ft bgs - Feet Below Ground Surface
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U - non-detect at the value indicated
Analyte concentrations detected above Subsurface Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above New York State Hazardous Waste Criteria are presented in dark gray

Table 9C
PCB results for Subsurface Soils near Water Table Remaining in Place
Former Sperry Remington Site - North Portion
Elmira, NY

				PCBs

Notes
PCBs - Polychlorinated Biphenyls
mg/kg - milligrams per kilogram
ft bgs - Feet Below Ground Surface
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an
U - non-detect at the value indicated
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives (SCOs) are presented in light gray.
SCOs are derived from 6 NYCRR Part 375 (effective 14 December 2006) that was in effect during the performanace of the IRM.
Analyte concentrations detected above New York State Hazardous Waste Criteria are presented in dark gray

Dear Mr. Krueger:

Re: Interim Remedial Measures Work Plan
Former Sperry Remington Site #c808022
Elmira, Chemung County

The New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health have completed the review of "Interim Remedial Measures Work Plan" for the Former Sperry Remington – North Portion Site #c808022, last revised June 2, 2017 and request the following modifications:

1. IRM Work Plan – Section 4 – Health and Safety - please add: "A contingency for chemical specific PCB monitoring should developed in the event the State determines that it is necessary."

2. IRM Work Plan – Figures modifications – 6-9-17 DEC Markup
    a. Boring locations labeled consistent with the data tables
    b. Modified excavation limits
    c. Additional confirmation sampling

3. IRM Work Plan - Please add all supporting documentation/approvals requested in Bernette Schilling's 5-26-17 email as an appendix.

4. Appendix C - Construction Drawings – 6-12-17 DEC Markup
    a. Note – Utilities "Removed" not "Demolished" and segregated for off-site disposal characterization.
    b. Modified excavation limits
    c. Additional confirmatory samples
        i. Where identifiable impacted soil continues beyond excavation / delineation limits
        ii. Boring logs demonstrate insufficient interval recovery
            1. Submit remaining boring logs

d. Note - All trucks hauling impacted soils on the public roadway will have a valid NYS Part 364 Waste Transporter Permit.
e. Truck wash traffic flow for tennis court area
f. Identify water source, storage and management for truck wash
g. Note – Time restrictions and flag person requirements for truck traffic related to tennis court area (not satisfied in 6-14-17 revision)
h. Note – record keeping requirements for trucks leaving excavation and stockpile areas (not satisfied in 6-14-17 revision)
i. A truck wash will be require for the stockpile area.
j. Note – Drop inlet protection and stormwater management by-pass plan
k. Note – special segregation of 0-2' soils for reuse that overlie PCB soil > 50 ppm (not satisfied in 6-14-17 revision)
l. Note – excavation to 18' bgs if water table is not restrictive
m. Demarcation layer below 2' soil cover system
n. Detailed Stockpile Area Plan including (not satisfied in 6-14-17 revision)
    i. Truck wash
    ii. Ground stabilized traffic patterns
    iii. Stabilized access road to east gate
    iv. Stockpile organization plan
    v. Loading zones
    vi. Stormwater management

5. Appendix D – Contract Specifications - Section 02100 – 3.04A – Table 02210-1 referenced in this section does not provide a frequency of sampling, identifies waste disposal characterization sampling methods and indicates individual stockpile volume of 200 cubic yards. These specifications will not generate data necessary to evaluate soils for reuse on-site. Soils anticipated for reuse will be segregated in 100 cubic yard stockpiles, testing requirements for reuse will be in accordance with table 02055-2, validated data will be compared to DER-10 Appendix 5 for Restricted Residential Use and a Request to Import or Reuse Soil Form will be submitted to the NYSDEC for approval at least 7 days in advance of intended reuse. Under no circumstance will soil be reused without NYSDEC approval.

6. Appendix D – Contract Specifications - Provide certification that all required Contractor submittals have been received, reviewed and are in strict compliance with IRM Work Plan and these requested modifications. Any deviations will require review and approval from the NYSDEC before proceeding.

7. Appendix E - Soil/Dust Control and Monitoring Plan - Please add the NYSDOH CAMP as an appendix.

8. Appendix F – Health and Safety Plan - Please identify on-site personnel designated "competent person(s)" for 29 CFR 1926 Subpart P - Excavations.

Provided that the above changes are accepted, Notice to Proceed with field activities is granted. Please revise the work plan, addressing all comments, modifications and additions and resubmit within 5 days for official Department approval.

Please contact me at (585) 226-5480 if you have any questions regarding this letter.

Eagan, NY 55121

Dear Mr. Krueger:

Re: Interim Remedial Measures Work Plan
Former Sperry Remington Site #c808022
Elmira, Chemung County

The New York State Department of Environmental Conservation (NYSDEC) has completed the review of Response to 28 June 2017 Letter and Revised Final Interim Remedial Measures Work Plan for the Former Sperry Remington – North Portion Site #c808022 dated 30 June 2017. The aforementioned work plan is approved contingent upon the following conditions and drawing revisions:

1. Excavation / PCB delineation limits shown on the IRM figures and construction drawings for the southern excavation area may be revised due to low pre-delineation sample recovery or may require confirmatory sampling in accordance with the work plan. Final excavation / PCB delineation limits will be approved by NYSDEC prior to excavation.
2. Modified Soil Management Logs will be utilized by the Engineer / Geosyntec in accordance with Contract Specification Section 02057-1.05 – Quality Assurance.
3. Construction Drawings Sheet 9 of 14 – The Equipment Wash Pad detail should be appropriately labeled 6/9 not 6/6.
4. Construction Drawings Sheet 9 of 14 – The Temporary Access Road detail should be appropriately labeled 3/9 not 3/6.
5. Construction Drawings Sheet 11 of 14 – The Limits of Disturbance detail should be appropriately labeled 1/11 not 1/3.
6. Construction Drawings Sheet 13 of 14 – Note #1 – remove – "if necessary" regarding the dewatering sump pit.
7. Construction Drawings Sheet 13 of 14 – The Silt Fence detail should be appropriately labeled 3/13 not 3/11.
8. Construction Drawings Sheet 13 of 14 – The Stabilized Construction Access detail should be appropriately labeled 1/13 not 1/6.
9. Construction Drawings Sheet 13 of 14 – The Compost Filter Sock detail should be appropriately labeled 4/13 not 4/-.

10. Construction Drawings Sheet 14 of 14 – Note #1 – remove – “if necessary” regarding the dewatering sump pit.
11. Construction Drawings Sheet 14 of 14 – The Soil Stockpile (side view) detail should be appropriately labeled 2/13 not 1/-.

Provided that the above conditions are accepted, and IRM Work Plan revisions are made within 5 days, Notice to Proceed with field activities is granted.

As a BCP participant, you are required to notify this office within 20 days after receipt of this letter and identify whether you will modify the document and re-submit a revised document within 30 days. It may be to your benefit to schedule a meeting with the Department to discuss the course of action being considered prior to the end of this 20 day period. The Department seeks to resolve outstanding differences in a mutually agreeable manner which addresses the requirements of the Brownfield Cleanup Agreement and associated remedial work plan requirements.

Please contact me at (585) 226-5480 if you have any questions regarding this letter.

Sincerely,

Timothy Schneider, P.E.

Dear Mr. Krueger:

Re: Interim Remedial Measures Work Plan
Former Sperry Remington Site #c808022
Elmira, Chemung County

The New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health have completed the review of "Interim Remedial Measures Work Plan" for the Former Sperry Remington – North Portion Site #c808022, last revised July 11, 2017 and approve the work plan contingent upon the following:

1. Low recovery pre-excavation delineation samples will be recollected in-situ or confirmatory excavation samples will be required.

This letter shall be attached to the revised IRM Work Plan and a hard copy is required to be kept in the document repository and one sent to NYSDEC.

As a reminder, all final documents and reports are to be in electronic format on compact computer discs (CDs). The disk should contain an Adobe® Acrobat® Portable Document Format (PDF) file and must be searchable. In addition, all data submitted to the DER must be in the DEC-approved Electronic Data Deliverable (EDD). Moreover, new data must be submitted on a continuous basis immediately after data validation occurs but in no event more than 90 days after the data has been submitted to the remedial party or its consultant(s). In other words, data is not to be held and submitted with the related reports.

Please contact me at (585) 226-5480 if you have any questions regarding this letter.

Sincerely,

Timothy Schneider, P.E.
Professional Engineer 1

Dear Mr. Krueger:

Re: Interim Remedial Measures Work Plan - Amendment
Former Sperry Remington Site #c808022
Elmira, Chemung County

The New York State Department of Environmental Conservation (NYSDEC) has completed the review of "Interim Remedial Measures Work Plan – Amendment #2" for the Former Sperry Remington – North Portion Site #c808022, last revised August 9, 2017 and approve the work plan amendment contingent upon the following:

1. The Amendment is appropriately renamed Amendment #1.
2. Approval of work plan modifications to Material Storage Area (MSA) management techniques and time duration are contingent upon Southern Tier Commerce Center approval.
3. Written NYSDEC approval to consolidate windrows will be required.
4. Community air monitoring will continue during amendment activities.

This letter shall be attached to the revised IRM Work Plan Amendment #1 and a hard copy is required to be kept in the document repository and one sent to NYSDEC.

Additional NYS Department of Health comments, if any, will be transmitted directly.

As a reminder, all final documents and reports are to be in electronic format on compact computer discs (CDs). The disk should contain an Adobe® Acrobat® Portable Document Format (PDF) file and must be searchable. In addition, all data submitted to the DER must be in the DEC-approved Electronic Data Deliverable (EDD). Moreover, new data must be submitted on a continuous basis immediately after data validation occurs but in no event more than 90 days after the data has been submitted to the remedial party or its consultant(s). In other words, data is not to be held and submitted with the related reports.

Please contact me at (585) 226-5480 if you have any questions regarding this letter.

Sincerely,

Timothy Schneider, P.E.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived on site at 0715. Met with John Geary and Michael Furlong of Recon.
2. Rain was predicted for the entirety of the day. MF of Recon explained that he was still waiting on results for structural fill and had cancelled trucks for the day as the stockpile area was currently under construction. He provided access to the trailer and indicated the area to be used by Geosyntec. He explained that power was provided to the trailer by generator and was only available during work hours.
3. Geosyntec held a Tailgate safety meeting at 0730 and prepared to collect confirmatory samples at additional boring locations. During mobilization MF explained that the existing SF and Chain link fence would be moved to accommodate complete extent of excavation.
4. Heavy rain began at 0800. MF said that Recon would begin by preparing soil for loading within the limits of excavation. Dust monitors were not deployed on account of rain.
5. Dominic Insogna from EHS was on site and talked to Recon at 0830. He explained that Mike Dunn (EHS) was currently tied up and would be on site later in the day
6. Between 0830 at 1500 Geosyntec collected soil samples (0'-2' BGS) at locations SSHS-B822, SSHS-B823 and SSHS-B824.
7. 1000 MD and DI from EHS onsite. AK and EHS carried out a site walk to identify ventilators near the southern Excavation. MD explained that it might be possible to turn off some of the ventilators to the gym during the day.
8. 1200 Rain continues. AR carries out daily ES&C inspection.
9. 1225 Lightning observed on site. Work stopped.
10. Between 1230 and 1330 Geosyntec left site for lunch.
11. 1345 Excavation resumes. Light rain in progress. Geosyntec talked to MF about inlet protection for Dry wells within the LOD. Construction of entry, exit and washouts for Stockpile area continues.
12. 1450 Collected equipment blank from auger for samples and began packing samples.
13. 1530 Representative (Mr. Roche?) from Town of Southport code enforcement on site in regards to complaint about stockpile proximity to Oakdale Street. Talked to MF of Recon. Basis conversation with Geosyntec he did not have any issues with stockpile location if it was part of an approved plan.
14. 1630 Completed packing samples. Emptied extra sample material and decon water into barrels on site. Took photos of Oakland Street and stockpile area.
15. Between 1630 and 1700 Contractor began demobing and covering stockpile with plastic tarp within the LOD.
16. 1715 Geosyntec demobed , signed out of site and headed to FEdex to ship samples
17. 1745 Samples shipped

PROBLEMS/DELAYS ENCOUNTERED

Refusal between 16"-20" for all borings

MODIFICATIONS TO PLANNED SCOPE OF WORK

A nuclear gauge cannot be used on site due to issues with licensing and equipment availability. Drive cylinders are to be used for density testing and an oven is to be purchased to carry out moisture content calculations. Equipment will be sent to site later this week.

Trucks (Recon)	2	

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived on site at 0700. Attended Site safety meeting with Recon
2. 0715 AR conducts E&S inspection with Recon. Identified locations requiring Inlet protection, issues with Silt fence depths, overlap at some locations. Recon begins carrying out repairs.
3. Recon installs dust monitors (2 each) at upwind and downwind locations in excavation area and stockpile area.) . Stockpiling within LOD for loading and work on construction entry, exit and truck wash for stockpile area underway.
4. 0745 Geotextile material placed down near excavation area to allow trucks to enter without contact with soils. 2 trucks on site to load and unload material.
5. 0815 Inspected stockpile area and silt socks chainlink fence and poly. Recon laid down poly sheet for stockpile near North Western corner of stockpile area.
6. 0845 loading trucks begins. Excavation and stockpiling continues within LOD during truck trips.
7. 0945 AR heads over to stockpile area to observe unloading of trucks and inspect stockpile arrangement. Checked recordkeeping of trucks leaving from excavation area and arriving at stockpile area.
8. 1000 DEC on site. Observed multiple issues with regards to loading, unloading and movement of trucks; storage of material on poly in stockpile area; demarcation of 100 CY volumes of stockpiled material within stockpile area; Silt fence location around tennis courts; inlet protection within LOD; Construction entrances and exits and vehicle wash pads at both tennis court excavation area and stockpile area. DEC advised Geosyntec to rectify discrepancies on a high priority.
9. DEC advised Geosyntec and Recon that full suite testing (barring pesticide) would be required on material that would be reused as backfill. JG of Recon requested that data validation be carried out by Geosyntec. DEC reminded Geosyntec and recon that approval was required to be obtained before bringing fill material to site.
10. 1100 DEC continues inspection. Recon stopped loading soil into trucks. Excavation and stockpiling within limits of disturbance continues.
11. 1200 DEC leaves site for lunch. Returns at 1330 to meet with Geosyntec. Advises that a full list of items observed differing from submitted plans would be provided by end of day. Recommended that observed issues be rectified as per submitted drawings and proposals immediately.
12. 1345 DEC left site.
13. 1345-1430 Geosyntec met with Recon JG, MF and discussed path forward. Recon indicated willingness to resolve discrepancies observed as per final approved plans.
14. 1430 -1600 Covered stockpiles in stockpile area with plastic. Geotextile placed on ground as required for next stage of stockpiles.
15. 1530 AK left site. Recon collected and downloaded dust monitor data. AR reviewed data downloaded.
16. 1600 -1730 AR talked to Recon and reviewed plans. Recon closed site and shut down for the day at 1700. Recon indicated that structural fill analysis had just been received and would be forwarded to Geosyntec for approval.

Delay in receiving results on structural fill analysis.

MODIFICATIONS TO PLANNED SCOPE OF WORK

Additional air monitors to arrive on site Thursday

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived on site at 0650. AR attended the site safety meeting with Recon. Reviewed Poison Ivy Poison Oak and Poison Sumac identification. No earthwork or moving activities were to be carried out today and Dust monitors were not deployed.
2. Recon conducted a site walk along the southern extent and identified sections of fence to be taken down and extents of excavation.
3. MW-15S MW-15D, wells to be abandoned were identified and mulch on top of wells was removed.
4. Edger (Capital Projects was on site and began installing a perimeter fence.
5. 0900-1230 Recon began taking down the fence along the football field in preparation for installing Chain link fence.
6. 1130 Scott Williams from DEC on site. Indicates that the privacy cover on the CLF surrounding the stockpile was loose and that the edges of the tarp on the stockpiles had blown over. Advised Recon to rectify immediately.
7. Between 1230 and 1330 Summit (Recon subcontractor) abandoned MW-15s, between 1330 and 1445 MW-15D was abandoned in place using a bentonite cement slurry mixture.
8. Between 1200 and 1230 Recon broke for lunch.
9. At 1500 AR drove over to stockpile area to record repairs. STCC appears to be carrying out mowing activities in area adjacent to stockpile.
10. Between 1230 -1700 Recon installed a chain link fence along LOD of southern excavation.
11. Additional sand bags were brought to site to install perimeter fence
12. 1700 AR discussed tomorrow's plans with Mike Furlong.
13. AR left site at 1715 to return equipment via Fedex.

PROBLEMS ENCOUNTERED/ DELAYS

Require approval from DEC on structural fill material. Analysis submitted for approval.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived on site at 0650 and inspected tarp and fence at stockpile area. AR attended the site safety meeting with Recon. Reviewed Situational awareness and slips trips and falls. Dust monitors were not installed on account of predicted thunderstorms through the day and no earthwork activity on site.
2. Between 0730 and 1200 Recon installed perimeter fence and Silt fence along the south section. Work resumed on the fence between after lunch between1230 until 1530.
3. JG of Recon indicated that the next critical steps for the completion of the project on schedule was approval from DEC to import structural fill, and approvals for disposal of hazardous and non-hazardous material.
4. Between 1245 and 1445 AR assisted KS of Recon in collecting samples from the quarry stockpile for fill material approval.
5. Matthew Schallinger arrived at site at 1510. Handed over Nuclear density gauge and SPT equipment. Recon began tree removal in mulch area south of gymnasium.
6. AR and MS installed warning signs on conex box and reviewed operating procedure for gauge between 1510 and 1545.
7. 1530 Scott Williams arrived on site. He said he would be back on site Thursday.
8. 1545 MS left site.
9. 1600 SW left site. AR headed back to Recon trailer to discuss plan for next day with MF. AR also reviewed Recon COCs for sample analysis.
10. 1630 AR left site.

PROBLEMS ENCOUNTERED/ DELAYS

Require approval from DEC for structural fill.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived on site at 0650 and inspected tarp and fence at stockpile area. AR attended the site safety meeting with Recon. Reviewed Slips trips and falls and vehicle entry and exit and locking vehicles when not in use.
2. 5 Dust monitors were installed along the perimeter and upwind of the Northern excavation area (tennis court area). Some temporary high readings were observed at the upwind location. These values were ascribed to vehicle movement (Capital projects contractor Edger began milling asphalt and shifting milled material near the upwind monitor.). Values recorded did not reach action levels.
3. Recon requested advice on how to treat non delineated material above delineated sections. For example the 0-2 section does not extend into the parking lot but the 2-4 section does. JG of Recon said that there was a lack of space within the stockpile area to handle the additional material that would need to come out during the excavation. Recon is currently preparing an estimate of the total material to be moved based on the drawings and is preparing an excavation plan.
4. 0830-0915 all contractors and the school authorities met to discuss planned progress on the school grounds. The school requested that Recon install clear demarcation of proposed truck routes along back parking lot to reduce hazards to groundskeepers who will be working on site.
5. Between 0830 and 1510 Recon had carried out utility locates on the south mulch area.
6. Recon indicated that the property owner (STCC?) indicated displeasure that the stockpile area had been expanded to include the eastern road around the stockpile and was adamant that the western road not be included into the stockpile area. The property owner indicated that the road was necessary for access for property maintenance.
7. Edger stockpiled the milled asphalt material ~5 from the silt fence around the tennis court excavation on top of Poly.
8. At 1400 Ally Debicki of WENY news was on site. AR handed over the DEC fact sheet and directed all queries to Tim Schneider. AD took some video of Edger stockpiling material and left site.
9. Between 0800 and 1700 Recon constructed access roads and began construction of Truck wash near the eastern end of site.
10. MF from Recon indicated that Tom Tanner and Brad Lockheart from Recon were expected on site on Wednessday and Thursday.
11. 1600 Scott Williams arrived on site and inspected stockpile area. Scott said that he was advised to come down to observe Edger's milling and stockpiling of the asphalt in the school parking lot.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived on site at 0650 and inspected tarp and fence at stockpile area. AR attended the site safety meeting with Recon. Reviewed the HASP, using the right tool for the job and Contaminants of concern.
2. 5 Dust monitors were installed along the perimeter and upwind of the Northern excavation area (tennis court area). Some high readings were observed at the upwind location. These values were observed to coincide with vehicle movement (Capital projects contractor Edger was milling asphalt in the parking lot and shifting milled material near the upwind monitor.).
3. 5 Dust monitors were installed in the stockpile area. No exceedances were observed at this location.
4. Between 0800 and 0850 AR attended the teleconference call with Recon and Unisys. Recon was receiving material to place as a base for the stockpile area and spreading it out over the geotextile.
5. Between 0730 and 1200 Recon corrected the Truck wash out for the Tennis court and began construction of the truck wash out at the stockpile area.
6. Recon Broke for lunch between 1200 and 1230.
7. Scott Williams was on site at 1330.
8. Between 1330 and 1715 Recon carried out levelling operations in stockpile area.
9. AR conducted an E&S walk along site and identified some sections of stockpile area where silt socks needed to be repaired. Talked to MF about repairs and queried about plans for working on the weekend. MF responded that Recon planned to not work on Saturday this week or Monday next week and would only resume work on Wednesday next week.
10. Geosyntec left site at 1730.

1. Geosyntec arrived on site at 0650 and inspected tarp and fence at stockpile area. AR attended the site safety meeting with Recon. Reviewed action levels.
2. 5 Dust monitors were installed in the stockpile area. Some high readings associated with vehicular movement were observed. Additional dust control measures were implemented and readings stabilized below action levels.
3. Between 0730 and 1500 Recon received material for the stockpile area and spread it out over geotextile.
4. Between 1500 and 1700 Recon compacted the base material.
5. MF conveyed to AR that site would be inactive between Saturday and Tuesday. Recon would be monitoring site on a daily basis to inspect poly cover and perimeter fence status during this time period.
6. 1200 Scott Williams from DEC was on site. He said that Tim would be reviewing all submittals on Monday.
7. Recon Broke for lunch between 1200 and 1230.
8. Recon replaced silt sox around the stockpile area.
9. PDRs were taken down at 1630. AR reviewed data with Recon.
10. Geosyntec left site at 1730.

DESCRIPTION OF WORK

Field Activities

1. AR arrived on site at 0650.Inspected stockpile area poly and fence. Attended site safety meeting. Reviewed active shooter incident on road adjacent to site that occurred on Sunday. Discussed site activities for the day; MF designated personnel to inspect trucks as they entered and left the stockpile areas and excavation area and to oversee flagging of vehicles leaving the north Tennis excavation area.
2. 0745 2 trucks arrived from Edger on site. Stockpile area truck wash being completed. Installed perforated bucket at lowest point to place pump for water added gravel along the berms. AR talked to MF about additional gravel and finishing requirements and was told that Recon would carry out the adjustments later in the day.
3. Recon carried out installing fence supports and transported 54 truckloads (~ 900 Cu yds.) to the stockpile area between 0805 and 1730.
4. An excavator was delivered to the stockpile area and used to compile the unloaded material and create berms in the stockpile.
5. AR checked the PDRs in the stockpile area multiple times. Although point high readings were observed during unloading, STEL levels did not reach action levels. Recon carried out frequent watering on site.
6. TR arrived on site at 1130. A site walk with Recon was done and a meeting held in the trailer.
   a) JG mentioned that Edger was replacing the storm drains on site with new materials and Geosyntec should identify if Recon need to match the newly placed material or the existing materials during work in the southern section.(for the utility tie ins)
   b) Recon pointed out that it may be viable to install permanent fencing for the stockpile area.
   c) TR confirmed that Geosyntec would be carrying out all the sampling in the stockpile area and reviewed the requirements for backfill of material that passed the chemical analyses. Bottleware has been ordered and should be on site tomorrow.
   d) Recon confirmed that August 8 would need to be the last day for excavation and that backfilling would need to begin post August 8th to allow for school to reopen as per schedule.
   e) It was identified that the base for the monument in the south excavation extended into the TSCA material. If the monument is not being replaced the base would need to be deconned during excavation.
7. Scott Williams was on site at 1215. He inspected the stockpile area and went into some detail of the work in the truck wash and the stockpile subbase. We reviewed the detail drawings and he indicated that he was satisfied with the execution on site. He also asked about additional personnel on site for sampling and about further delineation within the southern excavation area. He took notes on the truck logging and decon procedures.
8. Dom Insogna from EHS visited site around 1245.
9. TR left site at 1500. AR inspected PDR activity, truck loading and unloading, and checked on signs for Nuclear gauge in conex box.
10. Between1730 and 1950 Recon carried out repairs to the stockpile truck washout , covered the stockpile with poly and closed site.
11. 1955 AR left site.

PROBLEMS ENCOUNTERED/ DELAYS

MODIFICATIONS TO PLANNED SCOPE OF WORK

It might be more efficient to provide a replacement monument and dispose of current stone.
Recon is currently reviewing the excavation plan to identify how to end work so as to avoid impacting the parking lot during next phase of work.

Skid steer (Recon)	1	
Trucks (Edger for Recon)	3	
Vacuum Truck (Badger for Recon)	1	

DESCRIPTION OF WORK

Field Activities

1. AR arrived on site at 0650.Inspected stockpile area poly and fence. Attended site safety meeting. Topics discussed included Foot protection and walking on uneven surfaces. MF reviewed site activities for the day (Excavating in tennis court area and placing stockpile material in windrows.); MF designated personnel to inspect trucks as they entered and left the stockpile area and excavation area and to oversee flagging of vehicles leaving the north Tennis excavation area.
2. 3 trucks arrived from Edger on site. Fresh fill was placed in stockpile area on top of geotextile. AR calibrated PID and reviewed placement of PDRs.
3. 0750 Recon began loading trucks. The tennis court excavation area was demarcated and the asphalt along the road was saw cut. Saws cutting caused increased readings along one DW PDR. Water was sprayed to reduce dust levels. The orange security fence and silt fence along the asphalt was taken down to allow excavation within the road. Between 0750 and 1600 Recon transported 39 truckloads of material (~670 Cu yds.) from the northern excavation area to the stockpile area. An excavator at the stockpile area was used to compile the unloaded material into windrows and create berms in the stockpile.
4. At 1030 Stirling requested AR to remind Recon that any movement of vehicles between the north and south areas should avoid going across the parking lot. If movement had to go through the parking lot, the equipment would need to be deconned. AR conveyed the same to MF. (Skid steer had driven between North and south sites across parking lot)
5. Contractor broke for lunch between 1200 and 1230. Scott Williams arrived on site at 1230. He was initially down at the stockpile area and later met AR at the tennis court excavation area. He asked questions about the remaining space available within the stockpile area. He also had questions about the schedule for sampling and additional personnel on site. He reiterated that Tim was planning to be on site on Monday. He also wanted to know about an STCC semi parked adjacent to the stockpile area.
6. Between 1200 and 1500 multiple sudden showers occurred on site. Excavating and loading continued after lunch. Excavating under the truck wash in the north area underway. Approximately 85% of the northern excavation is complete.
7. Stockpiles were tarped at end of day. A security fence was installed along the edge of the open excavation. Reviewed PDR data. One point with elevated readings, associated with saw cutting asphalt road.
8. 1715 AR left site. MF confirmed that he would be inspecting the site in case of weather tomorrow.

Trucks (Edger for Recon)	2	
Sampling Coolers	10	For stockpile and delineation sampling

DESCRIPTION OF WORK

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety moment conducted by Recon. Recon reviewed the day's plans including: Completing excavation in the northern area and stockpiling material, preparing the southern area for excavation.. Once excavation was complete Recon planned to complete a survey to confirm excavation limits were reached. The topics discussed in the safety meet included Heat stress and working around heavy equipment.
2. Between 0710 and 0730 Geosyntec carried out a safety tailgate reviewing hazards of working on site, and routes to nearby hospitals. Geosyntec then began a site walkthrough to review borings to be carried out in the south excavation area.
3. At 0730 Aron K called and reviewed sampling procedures for the stockpile.
4. 2 trucks arrived from Edger on site. Truck loading began at 0750 and continued till 1400. All excavation in the north area was completed. Surveyor began verifying that requisite depth had been excavated at all locations.
5. Between 0730 and 1230 Recon marked out divisions in windrows to identify 100 Cuyds and also marked out utilities in the southern excavation area.
6. At 0830 a resident across the street yelled at the flagman that she was unable to breathe. On reviewing the PDR readings levels were seen to be well below action levels. However Recon took extra efforts to reduce dust movement during loading trucks. No PID readings were observed.
7. Cascade arrived on site at 0930. Boring began around 1230 after site walk utility markout and setup.
8. DEC arrived on site at 1100. They headed to the stockpile area and performed a site walk.
9. DEC met AR around 1200. Tim walked around in the excavation area and identified locations where he wanted additional sidewall or bottom sampling carried out. After talking with AK, 3 samples (see PDF in email for locations) were collected and have been sent to lab for analysis. Tim also asked the surveyor as to how they planned to ensure that the excavation was properly carried out, he seemed satisfied with the surveyors response that the excavation would be carried out using GPRS enabled machine control.
10. DEC headed out for lunch and returned to the stockpile area at 1300 to review stockpile sampling procedures. They requested that the VOC grab samples be collected at least a foot below the surface. AA and JT began collecting samples from the stockpile area. AR relieved JT at 1430 and JT headed over to assist EB with borings. AR and AA collected 4 sets of samples from the first windrow between 1430 and 1730.
11. During the walkthrough in the south excavation Tim expressed concern that the privacy fence had fallen down and that the silt fence had not yet been completely installed.
12. At 1500 DEC left site and confirmed that they would be returning tomorrow to continue overseeing sampling.
13. PDR's were pulled at 1630. Geosyntec began preparing samples for shipping. Recon shut down and left site at 1700. Stockpiles were tarped and security fence was installed along edge of open excavation.
14. Between 1630 and 1800 Geosyntec packed coolers. AR and EB stayed behind to close down site, while JT and AA headed to fedex to ship samples.
15. 1815 AR and EB left site.

SAMPLES COLLECTED

Trucks (Edger for Recon)	1	
Sampling Coolers	10	For stockpile and delineation sampling

DESCRIPTION OF WORK

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Completing excavation in the northern area and stockpiling material, Installing silt fence and privacy fencing along the southern excavation area. The topics discussed in the safety meet included storm warnings, and awareness while working on site.
2. PDRs were installed and truck loading of remaining excavation material began. The last 6 truckloads of material were shifted to the stockpile area. The excavator was cleaned of all dirt and tracked across the parking lot towards the south excavation area after receiving permission from Edger and Stirling.
3. DEC arrived onsite at 0930. They reviewed the boring being done in the south area and granted permission to begin sampling today. They reviewed the sampling process and said that they would be back on site early tomorrow. Scott also gave permission to begin sampling prior to his arrival on site to speed up stockpile sampling.
4. Scott mentioned that he was concerned that the access road between EHS and STCC had a Dip in it that might cause issues during hauling of material. MF of Recon said that the trucks would be able to handle the slope.
5. Recon carried out Privacy fence, silt fence and silt sock installation as preparation for the southern excavation. In the stockpile area Recon was completed preparing the base layer of the entire stockpile area and shaped all material in the stockpile into windrows. Currently there is space for about 700 Cu yds within the stockpile.
6. Recon Broke for lunch between 1200 and 1230.
7. PDR's were taken down at 1400. No elevated readings were observed. No further equipment based soil movement was carried out after 1400.
8. Geosyntec collected 11 sets (2 VOC, 1 Composite= 1 set) of samples from the stockpile area completing sampling of the first three windrows within the stockpile area. Sampling continued till 1600 after which samples were packed and shipped.
9. AA and JT left site to ship samples at 1815. Samples were shipped at Fedex around 1845.
10. AR and EB completed closing down the site and left site at 1845.

MATERIALS DELIVERED

DESCRIPTION	QTY	CONDITIONS / COMMENTS
Sampling Coolers	3	For stockpile and delineation sampling

DESCRIPTION OF WORK

1. Geosyntec arrived at site at 0645 and set up for boring sin the southern excavation area. AR attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Installing silt fence and privacy fencing along the southern excavation area and shifting the timbers requested by the school. The topics discussed in the safety meet included storm warnings, foot protection while working on site.
2. PDRs were not installed on account of several storm fronts predicted to reach site and because no soil movement was planned.
3. AR and AA sampled stockpiles from 0800 to 1400. 10 sets of samples (1000 cu yds) were collected along with 3 duplicates and 1 MS/MSD.EB and JT carried out boring sampling within the south excavation area.
4. DEC arrived onsite at 0830. Scott reviewed the boring being done in the south area and granted permission to begin sampling early tomorrow. Scott also observed that the excavator was being used to load the timbers around the mulch bed and passed on a comment from Tim indicating that the DEC was worried that the tread of the excavator would tear up the mulch and geofabric and potentially spread TSCA material. This concern was passed on to Recon following which the excavator dismounted off the mulch bed and removed the remaining timber from outside the mulch bed area. The mulch surface did not appear to have been compromised
5. Jason Plumley of Welliver wanted to know if it was possible to complete excavation outside of the sidewalk on a priority basis. This would allow reinstallation of the parking lot for school to restart.
6. Between 1400 and 1815 Geosyntec labelled, and packed and carried out Decon for the compositing bowls. AR carried out an E&S inspection and identified locations around the north excavation where the silt fence needed to be repaired.
7. AA and JT shipped samples at 1815. EB and AR demobed and left site at 1845.

Sampling Coolers	3	For stockpile and delineation sampling

DESCRIPTION OF WORK

1. Geosyntec arrived at site at 0645 and set up for boring sin the southern excavation area. AR attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Installing silt fence and privacy fencing along the southern excavation area, Constructing Decon stations and installing the access roads. The topics discussed in the safety meet included storm warnings, and preparing for a job and job site awareness.
2. PDRs were not installed on account of several storm fronts predicted to reach site and because no soil movement was planned.
3. AR and AA sampled stockpiles from 0800 to 1400. 10 sets of samples (1000 cu yds) were collected along with 5 duplicates and 3 MS/MSDs.EB and JT carried out boring sampling within the south excavation area.
4. DEC arrived onsite at 0900 Scott reviewed the boring being done in the south area and granted permission to begin sampling early tomorrow. Scott identified some pieces of geofabric in the stockpiled material (From the dismantled truck wash in the north excavation area) and requested that such pieces be removed prior to backfilling.
5. Between 0930 and 1500 Ar followed up multiple times with Fedex to locate the coolers of stockpile samples. Although the coolers were located in Memphis later in the day the samples will not arrive to the lab till after 10 tomorrow. The VOC samples collected in the first half of yesterday would be beyond their hold time. As such the VOC samples collected in the first half of yesterday were resampled and shipped today.
6. At 1500 to 1530 there was a joint meeting via teleconference, and details related to the south excavation area were reviewed. Minutes of meeting were summarized in Paul's email sent out to all participants copied below:

   Due to schedule requirements of the ECSD contractor, the scope of excavation will be scaled back to include only the 0 – 2 ft and 2 – 4 ft excavations shown on Drawing 8 of the IRM plan. A demarcation layer will be installed at the base of the excavation prior to requesting NYSDEC approval to backfill. As a result, it is recognized that in the future, the parking lot repaving will have to be cut and repaired in the future in order to excavate soils as shown at lower depths on Drawing 8.
   RECON intends to begin the excavation by removing the 0 – 2 ft and 2 – 4 ft layers within the parking lot first, then moving to areas outside the parking lot. RECON will lay out the limits of the TSCA excavation with a surveyor and will incorporate this data into GPS-enabled equipment prior to starting the excavation.
   In order to address areas of the 0-2' layer that overly TSCA materials in the 2-4' layer, Geosyntec has collected additional soil samples for laboratory analysis from the 0 – 2 ft interval excavation as identified in Tim Schneider's comments to the IRM investigation plan provided on July 13 (see attached sketch). This data is expected to be in-hand on Monday, July 17 in order to identify if soils >50 ppm PCBs (TSCA materials) in the 0 – 2 ft excavation interval. For areas in the 0-2' interval above TSCA materials where analytical data is not available, those soils will be excavated, and stored on a plastic liner until analytical data is available for proper disposition.
   Marking of the 0-2' areas will begin tomorrow.
7. Recon Labor left site at around 1530. Silt fences had been repaired and decon stations were installed at the perimeter of the excavation area by Recon.
8. Between 1600 and 1830 Geosyntec labelled, and packed samples for shipping.
9. JT and AR shipped samples at 1830.geosyntec returned to site to shut down and demobed from site at 1950.

PROBLEMS ENCOUNTERED/ DELAYS

Fedex misplaced the coolers sent yesterday requiring resampling of all VOCs collected in the first half of the 7.12.2017. All samples have now been collected.
6 inorganic analysis sample jars were overlooked during the packing and shipping of samples. The lab has been notified and the samples are currently kept on ice and will be shipped tomorrow.

DESCRIPTION OF WORK

FIELD ACTIVITIES

1. AR arrived at site at 0650 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Installing the truck wash for the haul road and backfilling the northern excavation area. The safety meet reviewed biohazards seen on site and steps to identify and avoid the same.
2. PDRs were installed around the north excavation where backfilling was to take place.
3. AA arrived at site at 0830.
4. Lab conveyed that samples had arrived at 1000.
5. DEC arrived onsite at 1200 Scott reviewed the construction of the truck wash and inspected the north excavation backfill. DEC said they will be back on Monday.
6. Recon carried out construction and backfilling of north excavation from 0730 to 1730. Orange snow fence was laid down on the ground to act as a demarcation layer prior to placing backfill. Recon broke for lunch between 1200 and 1230.
7. JT and EB completed Decon and demobed from site at 1330. Samples were shipped at 1600.
8. AR carried out an E&S inspection at 1430.
9. Recon backfilled 2 lifts along the northern edge of the northern excavation along the asphalt road to improve vehicle safety.
10. Recon surveyor marked out the extent of TSCA material in the southern excavation area.
11. Recon Labor left site at around 1730.
12. At end of day MF conveyed that Recon would not be working on Saturday this week. Recon personnel would be on site over the weekend to inspect the fence and tarp on the stockpile areas.
13. AR left site at 1800.

DESCRIPTION OF WORK

Field Activities

1. AR arrived at site at 0645 and inspected the stockpile area. AR attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Backfilling north excavation area and constructing truck wash for TSCA load out and movement of the 0-2' soil above 2-4 area within the southern excavation. The topics discussed in the safety meet included hazard awareness and a review of spill kit locations on site.
2. PDRs were installed around the south excavation area. Trucks arrived to place material for backfill in north excavation area.
3. Recon completed the Haul road truck wash and installed silt socks along the access roads. Recon also removed the bollards along the concrete footpath along the south excavation, to allow movement of trucks to western part of excavation. Recon laid down geotextile to allow trucks to move without coming into contact with soil. AR told recon to stockpile bollards within LOD.
4. Call with AK, reviewed plan for the day. Preparation to load trucks halted. Backfill spreading along northern excavation to prevent demarcation layer from moving.
5. 1115. DEC onsite. Reviewed truck wash construction and requested that final survey data be certified by Surveyor. Reviewed location of TSCA stakeout. Scott conveyed that Tim had an issue with the location of the TSCA demarcation on the drawing 8 and on the aerial images.
6. MF and KS layout extent of truck wash for TSCA delineation. No soil to be moved in south excavation area. Backfill and construction of truck wash underway.
7. 12-1230 Recon broke for lunch. DEC left site at 1400.
8. 1430 lightning on site. Work stopped and restarted at 1600 (30 minutes after last thunder.)
9. Heavy rain on site. Surveyor demarcates TSCA material within parking lot.
10. Backfilling continues till 1730. Between 1600 and 1715 Recon replaces stockpile tarps.
11. Recon demobs from site at 1700. AR left site at 1730.

DESCRIPTION OF WORK

Field Activities

1. AR arrived at site at 0645 and inspected the stockpile area. AR attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Excavating material from the parking lot and stockpiling within the LOD, Construction of the truckwash for TSCA loadout and backfilling north excavation area and constructing truck wash for TSCA load out and movement of the 0-2' soil above 2-4 area within the southern excavation. The topics discussed in the safety meet included Head safety with details reviewed for helmet usage and requirements.
2. PDRs were installed around the south excavation area. Trucks arrived to place material for backfill in north excavation area.
3. Recon moved material from the Parking lot area into 2 separate stockpiles near the monument. Material was segregated based on whether it overlay TSCA or non TSCA material. Asphalt and concrete materials were stockpiled separately. Manual excavation was carried out to locate the Optic fiber line.
4. DEC was on site at 1115. They reviewed the boring locations and held a conference call with the surveyor on site. Scott took physical distance measurements between stakes on site and left site at 1400.
5. Between 1300 and 1500 AA collected soil samples for TS sampling. Samples were labelled and packed on ice. Recon shipped samples at end of day.
6. Excavation of 0-2 material continued till 1430. AR took compaction tests for the first lift of material in the tennis courts. Material met moisture and density requirements. Second layer of backfilling underway.(Approximately 75% of excavation has first lift of backfill)
7. From 1430-1830 Recon prepared TSCA material for loadout in the morning. Truckwash construction continued and soil stockpiles were covered with poly. AR carried out an E&SC inspection and advised Recon to provide inlet protection for 2 drop inlets adjacent to excavation.
8. At 1830 Recon shut down site.
9. AR left site at 1830.

DESCRIPTION OF WORK

Field Activities

1. AR arrived at site at 0645 and inspected the stockpile area. AR attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Excavating TSCA material within 0-2 area off of the parking lot area, Loading TSCA material, and backfilling northern excavation. The topics discussed in the safety meet included heat stress, staying hydrated and a review of site regulations.
2. PDRs were installed around the south excavation area. Surveyor marked out extent of TSCA material within the 0-2 area under the mulch beds. Trucks arrived to place material for backfill in north excavation area. Trailer trucks arrived to take TSCA material offsite. AR observed loading of trailer trucks and signed manifests. A total of 9 truckloads of TSCA material (~198 tons) were shipped today.
3. AA collected geotechnical samples and shipped samples for analysis. AR carried out the final sets of density testing and gave okay for the second lift within the northern excavation. Soil density and moisture percentages were within required standards. AA left site at 1115.
4. DEC arrived on site at 1415. Scott said he was in a rush and requested photos to be forwarded to him of excavation and stockpiling of TSCA material.
5. Between 1430 and 1600 AR carried out compaction tests for the second lift of material in the south excavation. Results were within required specifications. Recon is currently completing final lift of backfill before level surveying northern backfill area.
6. 12-1230 Recon broke for lunch.
7. Backfilling continued till 1700. Recon completed tarping stockpiles and shut down site at 1730. Recon provided filters for the storm drains within the LOD. AR carried out an E&SC inspection at end of day.
8. AR left site at 1730

DESCRIPTION OF WORK

Field Activities

1. AR arrived at site at 0645 and inspected the stockpile area. AR attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Excavating TSCA material within 0-2 area off of the parking lot area, Loading TSCA material, and backfilling northern excavation, Shifting overlay material to the stockpile area. The topics discussed in the safety meet included safety around excavation and placing barricades and markings around open excavations.
2. PDRs were installed around the south excavation area and the stockpile area. Surveyor marked out extent of TSCA material within the 0-2 area off the parking lots. Trucks arrived to place material for backfill in north excavation area. Trailer trucks arrived to take TSCA material offsite. AR observed loading of trailer trucks from 0755 to 1410 and signed manifests. A total of 8 truckloads of TSCA material (~176 tons) were shipped today.
3. DEC arrived on site at 1100. Tim reviewed the excavation of TSCA material and identified a location to collect a bottom sample for analysis. Slag and ash material was identified in that location. Tim also requested for details regarding the analysis of the sidewall sample from the northern excavation.
4. Recon labor broke for lunch between 12 and 1230.
5. Tim also requested that we wait till we receive all data for the stockpile before beginning consolidation, and that if possible the stockpiles be consolidated towards the Northern end of the stockpile area, away from the residences.
   DEC inspected the stockpile area and were pleased to see that concrete and construction debris were being stored independently from the excavated material. Tim left site at 1300. Scott and Mike remained on site and inspected the northern backfill.
6. Recon moved overlay material from 1015-1510. Asphalt concrete detritus was moved initially followed by TSCA overlay soil. Material from TSCA overlay was kept separately from other material on site. PDRs were pulled at 1430 on account of incoming storm
7. At 1500 the weekly teleconference was held. Work progress, staffing and work over the weekend was discussed. Recon explained plans to stockpile material in between windrows going forward.
8. 1505 Lightning was seen on site. Site was shut down Poly was placed on stockpiled materials and Recon labor left site.
9. 1530 AR left site.

DESCRIPTION OF WORK

Field Activities

1. AR arrived at site at 0645 and inspected the stockpile area. AR attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Excavating TSCA material within 0-2 area off of the parking lot area, Loading TSCA material, levelling and final testing of backfill material in northern excavation area. The topics discussed in the safety meet included working around heavy equipment and working near the road.
2. PDRs were installed around the south excavation area and the stockpile area. Trucks arrived to place material for backfill in north excavation area. Trailer trucks arrived to take TSCA material offsite. AR observed loading of trailer trucks from 0755 to 1400 and signed manifests. A total of 10 truckloads of TSCA material (~220 tons) were shipped today.
3. DEC arrived on site at 1100. Scott reviewed the excavation of TSCA material observed the stockpile area. On being queried AR verified that the concrete on top of the TSCA material was being loaded out with the TSCA material. Scott advised that the road near the north excavation should be kept clean (some track out was being observed from the backfill trucks after the rain yesterday) .AR verified that Recon was excavating manually around utilities located within the excavation. Scott gave permission to sample on Sunday without DEC supervision and also gave permission to begin sampling the stockpile before DEC arrived on site on Monday.
4. Recon labor broke for lunch between 12 and 1230.
5. AR carried out compaction and moisture tests on the Northern excavation between 1400 and 1530.
6. Recon surveyor was on site around 1300 he verified the extent of TSCA material in the 0-2 region off the parking lot. Recon moved TSCA material from 0930-1730. TSCA material was stored on Poly on top of 2-4 TSCA material in the parking lot area.
7. JG conveyed that Recon had arranged for additional trucks for TSCA material loadout on Saturday. Recon shut down site, covered stockpiles with poly and left site at 1730.
8. AR left site at 1730.

DESCRIPTION OF WORK

Field Activities

1. AR arrived at site at 0700 and inspected the stockpile area. AR attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Excavating TSCA material within 0-2 area off of the parking lot area, Loading TSCA material, preparing to move non TSCA material to the stockpile area and locating and repairing the 4" pipeline near the school building. The topics discussed in the safety meet included a review of the gather points and working with fire extinguishers.
2. Recon prepared a map of material to be excavated from the south excavation area indicating different types of material based on delineation and corresponding locations in the stockpile area where the material is to be stored. These maps were provided to the haul truck drivers.
3. PDRs were installed around the south excavation area and the stockpile area. Trailer trucks arrived to take TSCA material offsite. AR observed loading of trailer trucks from 0755 to 1310 and signed manifests. A total of 6 truckloads of TSCA material (~132 tons) were shipped today.
4. JG identified some foundry bricks collected during the excavation of the 0-2 TSCA material. AR collected the sample and will be sending it to the lab for asbestos analysis on Monday.
5. Recon began manual excavation to locate the 4" line at 0900. Between 0900 and 1100 Recon excavated to 7' without locating the pipe. In expanding the excavation Recon hit a previously unknown 1" PVC pipeline carrying water. Recon temporarily plugged the pipe and prepared to repair the pipe. AR contacted Paul Brookner and Mike Dunn.
6. DEC arrived on site at 1130. Scott reviewed the excavation areas and observed the repair of the broken pipe. He identified 2 areas within the 0-2 TSCA excavation showing discoloration and requested that samples be collected from those areas. Recon arranged to repair the broken pipe and containerized approximately 200 gallons of water that had collected. Water has been stored in a poly tote on site. Samples have been collected and are currently stored on ice.
7. Recon labor broke for lunch between 1200 and 1230. Manual excavation labor broke for lunch between 1330 and 1400.
8. After water was containerized, Recon attempted to locate the 4" pipe again. Further attempts were paused at 1400 and Mike decided to begin preparation to move Overlay material to the stockpile area. Recon will coordinate with Edger and the school on Monday to identify alternate routes to provide water
9. Recon placed down Poly sheets over the TSCA material and placed Non-TSCA overlay on top to allow movement of trucks in the Southern excavation area. Trucks were wet deconned and wetted down at time of leaving the excavation area and were wet deconned again after leaving the stockpile area. 10 truckloads of material were shifted to the stockpile area.
10. Between 1645 and 1730 Recon shut down site and covered stockpiles of material.
11. AR left site at 1745

SAMPLES COLLECTED

SEBW-1;SE,BW-2

PROBLEMS ENCOUNTERED/ DELAYS

Hit 1" previously unmarked PVC pipe while excavating to locate previously hit unmarked PVC 4" pipe.

MODIFICATIONS TO PLANNED SCOPE OF WORK

We will be discussing methods to provide an alternate water supply to connect the 4" water line.

DESCRIPTION OF WORK

Field Activities

1. AR arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Shifting material from the south excavation area to the stockpile area. The topics discussed in the safety meet included Lifting heavy loads and a review of incidents occurring around the site on previous Sundays.
2. PDRs were installed around the south excavation area and the stockpile area. 41 truckloads of material were shifted from the excavation area to the stockpile area. (~ 300 CUyds of >10 ppm <50 ppm Material and approximately 500 Cu yds of <10 ppm material.) Material was placed in windrows based on PCB delineation (>10 ppm, <50 ppm material was placed in windrow 9; <10 ppm material in between windrows 7 and 8.). Recon shaped the stockpile and placed poly tarps through the day.
3. Recon labor broke for lunch between 1200 and 1230.
4. AR deconned mixing bowls and prepped for soil sampling tomorrow.
5. Light showers were observed on site around 1400. AR carried out an E&SC survey and checked PDRs during rounds. Bottom wall samples at locations indicated by DEC were collected and placed on ice.
6. Recon shut down site at 1530 and completed covering stockpiles.
7. AR left site at 1530.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Shifting material from the south excavation area to the stockpile area and Loading of 7 TSCA trucks. The topics discussed in the safety meet included working in wet conditions, working around heavy equipment, and slips trips and falls.
2. PDRs were not installed on account of heavy rain and predicted rain throughout the day. EB began preparation to sample stockpile material and AR oversaw loading of 1st TSCA truck before site was shutdown on account of lightning at 0810 AM. Work resumed at 0850 and trucks were loaded throughout the day as they arrived.
3. Recon attempted to move soil between the excavation area and the stockpile, however work was stopped on account of heavy rain and only 1 truck of material was moved to the stockpile area. Recon spent the majority of the day reinforcing the barrier roads across the TSCA excavations and preparing for the excavation work tomorrow when the ground was a little drier.
4. Recon labor broke for lunch between 1200 and 1230.
5. Site was shut down for lightning between 1400 and 1430.
6. Scott arrived on site at 1400. He reviewed the stockpile area and took notes on the excavation carried out on Sunday. He asked queries about the material placed down on top of poly within the TSCA excavations to allow haul truck movement within the South excavation area and requested that the material be specifically tracked within the stockpile area.
7. EB completed sampling of the material stockpiled within the stockpile area
8. Short heavy showers occurred on site throughout the day. AR carried out an E&SC survey at end of day. An additional side wall sample was collected along the western edge of the excavated area and a sample of foundry brick was collected to test for asbestos.
9. An Adler tank to store water was delivered to site and installed along the Haul road truck wash. A single load of clean fill was brought to site and was spread to complete levelling within the northern excavation area.
10. Last TSCA truck was filled and left site at 1730. AR and EB packed samples from 1745 to 1830. AR headed to Fedex to ship samples and EB remained behind to shut down the site. Samples were shipped at 1900.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Shifting material from the south excavation area to the stockpile area and Loading of 10 TSCA trucks. The topics discussed in the safety meet included working evacuation plans and gather points in times of emergencies.
2. PDRs were installed around the south excavation area and stockpile area. EB began preparation to sample stockpile material and AR oversaw loading of 10 TSCA trucks between 0800and 1500.
3. AR advised Recon to clean out track out caused by Delivery truck for Adler tank in school back parking lot. Recon assigned labor to clean the road.
4. Recon moved 22 truckloads of <10ppm material from the south excavation to the stockpile area. Material was shaped sampled and covered with plastic as it came in. Material was placed in WB7-8 and WB 6-7.
5. NYSDEC arrived on site at 1030 and reviewed stockpile sampling. Scott also reviewed the loading of TSCA material being shipped and asked about the additional samples collected.
6. Recon labor broke for lunch between 1200 and 1230.
7. Work on site was stopped at 1530 when the truck wash on the haul road was observed to be filled up with water. Recon collected the water in the Adler tank and carried out repairs to the Haul road that had developed ruts due to vehicle movement.
8. AR reviewed tomorrow's plans with Mike at 1730. Recon has scheduled 13 TSCA trucks and hopes to complete the TSCA loadout tomorrow. Additional material will be sent to the stockpile.
9. AR and EB packed samples and shipped at 1800. Samples were shipped at 1830.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Shifting material from the south excavation area to the stockpile area and Loading of 13 TSCA trucks. The topics discussed in the safety meet included working evacuation plans and gather points in times of emergencies.
2. PDRs were installed around the south excavation area and stockpile area. EB began preparation to sample stockpile material and AR oversaw loading of 13 TSCA trucks between 0730and 1430.
3. EB attended the coordination meeting with the school board from 0800-0900. Recon reiterated that they were pushing to get out of the parking area this week and out of site by August 15th.
4. Recon began loading excavation material and TSCA trucks. Excavation in the mulch area exposed a catch basin with a grate in the western part of the mulch bed that appears to be connected to the storm sewer system
5. NYSDEC arrived on site at 0950. He inspected the stockpile area and expressed concern that the windrows between existing stockpiles were overlapping with material from earlier windrows. Recon was advised to reduce the size of the windrows. Going forward in this manner the amount of material that can still be stored in the stockpile is about 800 Cu. yds.
6. Scott also took notes on the catch basin observed in the mulch area and the materials observed in the base of the TSCA 2-4 excavation.
7. Recon took a break for lunch between 1200 and 1230.JP reached site at 1230.
8. Recon came across several large pieces of concrete blocks during loading the TSCA material. The concrete blocks were broken and will be loaded out tomorrow on what is anticipated to be the last 5 TSCA trucks.
9. Recon loaded 15 trucks of <10 ppm material to the stockpile area. Recon began excavating the area in the parking lot and a new windrow for material >10 ppm was started in windrow between windrows 5-6. AR and JP reviewed the site work and went over responsibilities on site.
10. Recon stopped shipping material and began closing site at 1430. Stockpiles were covered.
11. AR reviewed tomorrow's plans with Mike at 1730. Recon has scheduled 5 TSCA trucks and plans to complete the TSCA loadout tomorrow. Additional material will be sent to the stockpile. AR advised MF to carry out repairs to the haul road as the ruts caused by vehicle movement had damaged the geotextile at some locations.
12. AR and JP left site at 1800.
13. EB packed and shipped samples till 1830. Samples were shipped at 1850.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: loading of up to 5 TSCA trucks (remaining TSCA material in Area A), shifting remaining material from the south excavation area to the stockpile area, and beginning to backfill Area A 2-4 feet below ground surface (ft BGS) with soil approved for reuse. The topics discussed in the safety meet included reiterating that food/drink cannot be consumed in the excavation area, and that smoking can only take place offsite.
2. PDRs were installed around the south excavation area and stockpile area.
3. At 0730, HUNT representative Seth Lovell (SL) came onsite to survey excavation extent. SL confirmed the Area A stakes demarcating the corners of excavation in Area A (2-4 ft BGS), and the 0-2 ft BGS excavation boundaries in Area B.
4. Julianne Payne (JP) oversaw loading of 4 TSCA trucks between 0815 and 1400. 5 TSCA trucks were ordered, however only 4 trucks were needed to haul the remaining TSCA material in Area A (westernmost part of Area A). Broken concrete pieces (removed from the excavation on 7/26/17) were loaded into the TSCA trucks along with the decon liner from the TSCA loading area.
5. NYSDEC arrived on site at 1100. He inspected the stockpile area and expressed concern about keeping track of reuse material (windrow and section) and where it is placed in Area A in the 2-4 ft BGS interval. Scott also asked about plan for today, approach for Part B excavation, and any PID hits in the excavation area.
6. Recon took a break for lunch between 1200 and 1230. Ashwin Ranna (AR) left site at approximately 1200.
7. Recon began deploying construction fence followed by a 30-mil geotextile layer at 4 ft BGS and up the excavation walls in Area A of south excavation at 1300. Reuse material (<10 ppm PCBs) from sections I through IV of windrow 1 was used to backfill Area A. Reuse material was dumped in southwestern corner of Area A and spread to the west using a bulldozer. Once the western area was compacted with a vibrating roller, reuse material was spread to the east. Ellen Buelow (EB) documented the sections of windrow 1, truck number, and times of departure for trucks transporting reuse material for backfill. JP documented the excavation area and lift where reuse material was dumped, as well as truck number and time of arrival. A total of 22 trucks dumped reuse material as backfill. Reuse material from sections I, II, and III of windrow 1 were placed in the western portion of the first lift (3-4 ft BGS) and reuse material from sections III and IV of windrow 1 were placed in the eastern portion of the first lift (3-4 ft BGS). Backfill continued from 1445 to 1730. The western approximately 2/3 of the first lift has been backfilled and compacted, however, the easternmost portion of the first lift has not be completed.
8. At 1500, EB collected a geotechnical sample ("Reuse Fill 1") from windrow 1 composited from sections I through IV to be analyzed by: sieve analysis, hydrometer, and standard proctor. Caleb Kyper (Geotechnics) indicated that he will rush analysis, as this sample will be used as proctor for compaction tests in 2-4 ft BGS layer of Area A. Aron Krasnopoler (AK) and Tom Ramsey (TR) indicated that the proctor from imported fill will be used for tomorrow's compaction testing and updated once reuse material standard proctor results are received.
9. Recon began loading excavation material remaining from 0-4 ft BGS in northern portion of Area A (<10 ppm) using 14 trucks. This material was staged in windrow 3-4. Excavation occurred between 1530 and 1730, and was completed for Area A.
10. Recon spray painted the location of the catch basin to be installed by EDGER tomorrow in the northeastern portion of Area A.
11. JP reviewed tomorrow's plans with Mike at 1730. Recon will continue to backfill Area A with reuse material at 2-4 ft BGS. Five compaction tests will be performed for each lift. Excavation of Area B will begin tomorrow, starting at the northern edge and working southward. Once sections I through IV of windrow 1 have been backfilled, AK requested that sections IV and V of windrow 5 be used for backfill, as the analytical results are similar.
12. EB and JP left site at 1800. EB and JP shipped geotechnical sample priority overnight at 1850.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: continue backfilling Area A and start excavating Area B. Sections IV and V of windrow 5 will be used for remaining reuse material, per direction by Aron Krasnopoler (AK). The topics discussed in the safety meet included avoiding complacency and being aware of the zone of control.
2. PDRs were installed around the south excavation area and stockpile area.
3. At 0730, Recon removed remaining material in Area A south of fiber optic line 0-4 feet below ground surface (ft BGS). Approximately 4-5 buckets of material (>10 ppm) were shifted to the stockpile in windrow 4-5.
4. 0900-1030, 5 trucks of reuse material (<10 ppm) from sections IV and V of windrow 5 were backfilled/compacted in the eastern portion of Area A in 2-4 ft BGS layer.
5. At 1000 Recon begins excavating <10 ppm material in southern portion of Area B at 0-2 ft BGS, material is stored in windrow 1B. Note: windrow 1B is in the same location as windrow 1, however, this is the newly placed material (as sections I through IV of windrow 1 have already been removed for reuse material). A layer of orange construction fence followed by 30-mil geotextile is place at 2 ft BGS in Area B. At 1430 Recon begins excavating <10 ppm material from the northern portion of Area B at 0-2 ft BGS, material is stored in windrow 1B. A total of 10 trucks of material from 0-2 ft BGS in Area B are staged in windrow 1B
6. At 1100, a layer of orange construction fence followed by 30-mil geotextile is place at 2 ft BGS in Area A and up the side walls at approximately. Imported fill is brought in by EDGER and backfilled in 0-2 ft BGS layer in Area A, approximately 35 trucks in total. By 1730, the western portion of Area A is backfilled, the eastern portion of Area A has been backfilled to lift 3 (1-2 ft BGS), and the utility area along the eastern portion of Area A is left excavated to 4 ft BGS (EDGER will perform utilities work in this area tomorrow).
7. Julianne Payne (JP) performed compaction testing at lifts 1 (3-4 ft, reuse material), 2 (2-3 ft, reuse material), 3 (1-2 ft, imported fill), and 4 (0-1 ft, imported fill) of Area A. After first test in lift one, Kyle runs vibrating roller along material at 1000. In lifts 1 and 2, compaction ranges from 92.0-96.0% (when using backfill 3 as proctor). JP calls Tom Ramsey, who talks to Mike Furlong (Recon). Mike mentions the rain this morning and lack of proctor data for reuse material. Once reuse material proctor results (Reuse Fill 1) are received, compaction will need to be recalculated. The geotechnical sample was received by Geotechnics this morning and has been requested with a rush turnaround time. Compaction results for lifts 3 and 4 in area A had compaction greater than 95%. Five tests were performed at lifts 1 and 2, and two tests were performed at lifts 3 and 4 in Area A. Additionally, one test was performed at lift 1 in Area B (1-2 ft, contains imported fill). Compaction testing was performed between 0900 and 1500.
8. NYSDEC arrived on site at 11:30. He inspected the Area A excavation, and asked about backfill material for layers and liner locations. Scott then walked JP to tennis court area to see soil staining uncovered by EDGER/Sterling at approximate 6 ft BGS near tennis court excavation, slightly west of the stadium. Note that Geosyntec's excavation in this area only extended to 2 ft BGS. Scott indicated that Tim may want analytical testing performed, the consultant performing the testing has not been determined. He then walked over to the stockpile area, and asked Ellen Buelow (EB) where reuse material came from and where excavated material from Area B was being placed.
9. 1215-1615 EB collects soil samples from sections I, II, and II of windrow 3-4, which contains <10 ppm material.
10. 1300-1330 Geosyntec and Recon break for lunch.
11. At 1600, JP surveys erosion and sediment controls, and reminds Mike to address ruts in the haul road southeast of Area B that continues towards decon area. There are deep ruts that have cut through the geotextile and soil can be seen between patches of gravel. Mike indicates that he has ordered a truck of gravel and will spread it on the road tomorrow. JP also indicates that there's a catch basin northeast of Area B that hasn't been covered. Mike says he will wrap geotextile around it tomorrow morning.
12. JP reviews tomorrow's plans with Mike at 1730. Recon will continue to backfill Area A with imported fill and EDGER will install the new catch basin and piping in the eastern portion of Area A. Recon may continue to excavate Area B (depending on staffing availability) but the focus will remain on backfilling Area A.
13. EB and JP left site at 1800. EB shipped samples at 1830.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: finish backfilling/compacting Area A, continue excavating Area B (northern side), and storing imported fill material in Area B (southern side). The topics discussed in the safety meet included power tool safety and the importance of inspecting tools after dropped (especially before passing off to another employee).
2. PDRs installed around the south excavation area and stockpile area.
3. At 0730, EDGER trucks begin hauling imported fill to the southwestern corner of Area B. The material is spread/compacted in the eastern portion of Area A and the southern portion of Area B. The utility area in the eastern portion of Area A is backfilled and compacted. In this area, the construction fence and 30-mil geotextile were deployed at 4 feet below ground surface (ft BGS) and backfilled with imported fill (no reuse material) due to utility work associated with capital improvements project. EDGER is scheduled to install the catch basin and tie in on Monday. A total of 42 trucks transported imported fill to the Site between 0730 and 1430.
4. 0800, Recon continues excavation along western extent of Area B. Recon places 30-mil geotextile over the catch basin in the northeastern corner of the Site, and the grate is placed on top of the liner. 0845-1130, Recon switches over to excavate the northeastern corner of Area B. This material is from 0-2 ft BGS and <10ppm. A total of 11 trucks transported this material to windrow 1-B in the stockpile area. Recon excavated to within 1 ft of the memorial statue located in the northeastern portion of Area B. Mike (Recon) indicated that they'd previously dug around the base of this memorial statue and found that the foundation is approximately 2-3 ft BGS. The remaining portion will be hand cleared next week (using a shovel).
5. 1230-1310, Geosyntec and Recon break for lunch.
6. 1400 NYDEC arrived on site. Scott inspected the completed Area A excavation and northeastern portion of Area B. He indicated that Area A "looked good" and was appreciative that we were able to complete the backfill/compaction on schedule to hand this portion to EDGER for their capital improvement project needs (scheduled to begin on Monday). Scott also mentioned that the haul road looked to be in good shape, due to the mud mats Mike (Recon) applied for structural support.
7. 1430, Mike (Recon) rolls excavator that was previously in contact with TSCA material across poly liner, when mobilizing the excavator out of Area A. Rodney takes down PDR's.
8. 1500, Recon moves construction fence eastward, bisecting Area A, to hand off area to EDGER for upcoming capital improvements work.
9. EB and JP left site at 1530.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: excavating Area B (northern side). The topics discussed in the safety meet included working alone, stop work authority, and keeping safety as a core value.
2. PDRs installed around the south excavation area and stockpile area.
3. At 0730, Recon continues excavation of Area B along the northern side. <10 ppm material is excavated from the northeastern corner until 1030 using 12 trucks. >10 ppm material is excavated from the northernmost polygon until 1324 using 7 trucks. <10 ppm material is excavated from the east-west small rectangle (between the two >10 ppm polygons) until 1450 using 7 trucks. >10 ppm material is excavated from the second northernmost polygon until 1655 using 11 truck. This second polygon (>10 ppm material) was not completed, but we will resume here tomorrow. A total of 19 trucks transported material <10 ppm to windrows 1-B and 2-3, and 18 trucks transported material >10 ppm to windrow 4-5.
4. 0845, NYSDEC on site. Scott (with Mike) ask about process, happy with the excavation. He indicated we might receive info on soil sampling near the tennis courts from EDGER now that Tim is back in the office, but wasn't sure; EDGER has left this stained portion of the excavation open and continued with other projects. Scott indicated that EDGER has been happy with the transition (ie passing western portion of Area A to them for their capital improvement project needs). Scott (with Mike) left site at 1115.
5. 0930, a concrete electrical vault is discovered. This was not picked up by GPR previously. It is approximately 3' x 3'. Recon hand clears (with a shovel) around the concrete vault, which sticks up approximately 4" above the base of the excavation. Recon replaces the concrete lid and continues excavating around it.
6. 1215-1245, Geosyntec and Recon break for lunch.
7. 1500, Kyle backfills haul road with imported gravel. Prioritizes placing gravel in the areas in contact with the truck tires.
8. 1730, Recon puts poly sheeting over excavated >10ppm material from second northernmost polygon in Area B (which did not get placed into trucks yet).
9. 1815, JP recaps day with AK. Indicated that windrow 1-2 is still open for backfill, and portions of windrows 2-3 and 5 (<10 ppm) and windrows 4-5 and 5-6 (>10 ppm) still remain open for backfill.
10. EB and JP left site at 1800.
11. EB ships samples at 1830.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: excavating Area B (northern side) moving south from 0-2 ft. The topics discussed in the safety meeting included no smoking on site, reminder that the trailer is the muster point, and 30/30 rule for lightning and thunder.
2. PDRs installed around the south excavation area and stockpile area.
3. At 0730, Recon continues excavation of Area B along the northern side. >10 ppm material is excavated from the second northernmost polygon until 1052 using 16 trucks. One truck of concrete debris, not in a TSCA area/discovered during Ashwin's time on site, is staged with other debris in the stockpile area at 0845. <10ppm material is excavated just south of the second northernmost polygon until 1526 using 18 trucks. Some staining in the floor of the excavation was observed in the western portion of this area, see below discussion with NYSDEC. >10 ppm material is excavated from the central polygon until 1631 using 6 trucks. This central polygon (>10 ppm material) was not completed, but we will resume here tomorrow. A total of 22 trucks transported material >10 ppm to windrows 4-5, 9, 5-6, and 8, and 18 trucks transported material <10 ppm to windrow 2-3.
4. 0900, Recon maps out remaining polygon corners with a tape wheel and spray paint (HUNT will confirm locations later today).
5. 0930, NYSDEC on site. Scott (with Mike) head to stockpile area to talk to Ellen about which windrows are currently being filled. Asked Ellen if he could get copies of her field sketches of the windrows, but she indicated she would have to run that by AK first. Scott arrives at excavation area at approximately 1145. Discusses the staining in the floor of the excavation. The two areas are both approximately 10'x20' and located in the <10 ppm area between the second northernmost polygon and central polygon along the western extent of the excavation. Scott takes pictures and sketches the areas on a map. There are no PID detections, although soil does appear stained and there's a faint petroleum-like odor. Mike and JP remind Scott that this area will be excavated in a future phase of the project. No staining is observed in the sidewalls in this area. NYSDEC offsite at 1310.
6. 0955 to 1655, EB collects samples from windrows 4-5, 9, 5-6, and 2-3.
7. 1000, EDGER alerts Recon that they need access to the western extent of Area B so that they can install their curb. Mike and JP talk, and determine that lining/backfill/compaction of this area will happen tomorrow (8/2/17), concurrently with the excavation in Area B. Recon will use EDGER's truck wash station and bring in the fill through EDGER's side of the site (parking lot).
8. 1400, JP and EB discuss remaining windrow space. Windrow 1-2 is the only open windrow for >10 ppm material. Mike said he could get creative by adding in another windrow running north-south (perpendicular to the other windrows) on the east side of the stockpile (if needed).
9. 1430, JP recalculates the compaction results from 7/28/17 for lifts 1 and 2, which used reuse material, using the new proctor results for sample "Reuse Fill 1". All ten results now exceed 100% compaction and moisture content is also within passing range.
10. 1610, Recon uncovers another concrete electrical vault, approximately 2' x 3' that is in the center portion of Area B, approximately 30 feet west of the end of the straight part of the track. Recon uses voltage meter and the wires are live. Replaced the lid of the electrical vault and hand cleared around it.
11. 1630, Seth Lovell (HUNT) on site to confirm Area B excavation limits. Seth also shot the center point of the two stained areas (described above) along the western side of Area B, per AK's request. Offsite at 1710.
12. EB and JP left site at 1800.
13. EB ships samples (to lab) and PID case (to Field Environmental) at 1830.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: excavating Area B (central portion) moving east from 0-2 ft. Additionally, HUNT (surveyor) shot a few areas late yesterday that weren't 2 feet deep, so we'll excavate approximately 4 inches deeper in the western portion of Area B. The topics discussed in the safety meeting included daily equipment inspections to avoid injury to employees, suggested taking pictures of the equipment when it arrives on site and check for damage, and not to stand in front of the front tires when decontaminating trucks (difficult for truck driver to see you).
2. PDRs installed around the south excavation area and stockpile area.
3. At 0730, JP and EB discuss EDGER sidewall sample with AK. We have been authorized to collect one sidewall sample. Decision is to wait until NYSDEC is on site, and have them direct us on sampling plan.
4. Recon continues excavation of Area B in the central portion. >10 ppm material is excavated from the northeastern polygon until 1637 using 37 trucks. This material is staged in windrows 8 and b1-2. One truck of <10 ppm material is excavated from western side of Area B after bulldozer scrapes off the approximately 4 inches needed to extend the depth to 2 feet at 1440. This material is staged in windrow 2-3.
5. 0830, Recon uncovers a buried catch basin. There was a geotextile layer followed by approximately 1 foot of mulch on top of the catch basin when it was uncovered. Recon opened the catch basin, placed a layer of 30-mil geotextile over it, and placed the grate on top to keep soil from the excavation from entering the catch basin.
6. 1030, NYSDEC on site. Scott and JP walk to the EDGER trench in the tennis courts next to the stadium. JP indicates that we have been authorized to collect one sample, and would like direction from NYSDEC on exactly where to collect the sample and which analyses to run. Scott describes a tentative plan (as follows) but indicates he would like to consult with Tim first. Scott identifies three areas he would like composite sample from three areas (see photograph below): area 1 is a dark stained area of the south end of the trench at approximately 2 ft BGS (note, our excavation didn't extend this far south), area 2 is a stained area at 4 ft BGS that is further north (note, our excavation didn't extend this far south), and area 3 is a stained area at 2 ft BGS just below our demarcation layer. Additionally, Scott envisions a terracore sample being collected from area 2. He said he will run this idea by Tim and confirm with JP tomorrow while on site; he would like to observe collection of this sample. JP also discussed the southern electrical vault uncovered yesterday as well as the catch basin uncovered today. Scott requested that we fill in the bend of the haul road with gravel. JP said she'd speak to Mike about this, as there is extra gravel on the sides that could be raked into the ruts. JP told Scott that the two stained areas in the western portion of Area B were surveyed (center points) yesterday by HUNT. Scott inspects stockpile area and leaves site at 1200.
7. 1150, AK and JP discuss the catch basin that was uncovered this morning. There was some soil/mulch visible inside, however, it was wrapped with geotextile (see above) once uncovered to avoid soil from this excavation entering the catch basin. AK would like this surveyed tomorrow when HUNT is on site.
8. 1200-1230, Recon, JP, and EB break for lunch.
9. 1600, JP and EB discuss PB's request for boring sample 2-6 inches BGS. JP confirms with Recon that HUNT will be able to map us to the boring location, as they'll be onsite tomorrow morning. JP will also request that HUNT shoot the two electrical vaults and catch basins that were recently uncovered, per AK's request.
10. 1035 to 1620, EB collects samples from windrows 8, 1-2, and 2-3.
11. EB and JP left site at 1800.
12. EB ships samples (to lab) and PID case (to Field Environmental) at 1830.

DESCRIPTION	QTY	CONDITIONS / COMMENTS

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: excavating Area B built up road material (>10 ppm) and small section of <10 ppm material slightly east of the easternmost TSCA area. We will backfill northwestern portion of Area B (so that EDGER can install their curb) and bring trucks through EDGER's site/use EDGER's truck wash. The topics discussed in the safety meeting included stored energy, the importance of carefully walking around equipment, and letting the operator know when you want to approach so that they can lower the excavator bucket.
2. PDRs installed around the south excavation area and stockpile area.
3. At 0740, Recon begins rolling out orange demarcation layer (construction fence) and then 30-mil geotextile in northwestern corner of Area B, alone area where EDGER plans to construct the curb. A total of 29 trucks of imported fill were trucked to this area between 0752 and 1715, spreading the backfill southeastwards. Truck tires were decontaminated at EDGER's truck wash prior to exiting the Site.
4. 0830-0900, conversations between Test America (Dave Dunlap), AK, and PB to determine analyses to run for B169 sample. 0900, HUNT (Seth Lovell) located B169 boring location using coordinates provided by PB. Geosyntec obtains sample (B169-B) from 2 to 6 inches, and steps north approximately 6 inches to obtain more material at the same depth. Sample will be analyzed for PCBs on a 1-day TAT, and based on those results, three additional 4-oz jars of soil have been sent to the lab on hold for TCLP analysis of VOCs, SVOCs, and metals. On the chain of custody, Geosyntec wrote in that Test America should consult with Geosyntec once PCB results are received to determine whether or not held soil will need to be analyzed. Boring was backfilled with remaining soil from 2 – 6 inches and top soil plug was returned for both holes.
5. 0900, Recon continues excavation slightly north of the school building to remove material used to build up the road. >10 ppm material is excavated from this area until 1310 using 8 trucks. Material is stored in windrow 1-2, a perpendicular section has been added to this windrow, making it look like a "T". <10 ppm material at the easternmost edge of the Area B excavation is excavated until 1545 using 7 trucks. Material is stored in section 5b of windrow 5. The Area B excavation is complete at 1545.
6. 1100, Tim and Scott (NYDEC) on site. Tim asked about staining observed during the excavation. JP explained that there were no PID hits, faint odor only in western stained areas, but that most of the staining has corresponded to the >10 ppm areas. Tim also asked if the football field sample (B169) had been collected yet. We indicated that it had been collected this morning with a 1-day TAT for PCBs, and told him the stake was still there marking the sample location. Tim asked Mike if the top foot of the excavation looked fairly uniform, as if it might be fill. Mike indicated that this appeared to be the case, and that this was a fairly consistent observation. Lastly, Tim asked that during 4-inch water pipe repair (which was damaged during drilling approximately nine months ago, Tim wants this referred to as "emergency repair") that a mini excavator be used and the delineation drawings from 0 to 6 feet be reviewed, and each 2 foot layer be treated accordingly.
7. 1200-1230, Recon, JP, and EB break for lunch.
8. 1415, JP performs compaction testing of lift 1 (1-2 ft BGS) of Area B, in the northwestern portion of the site (where EDGER's curb will be placed). Both tests passed (103.5% and 104.2% compaction, moisture was also within range).
9. 1440, JP, EB, AK, and NYDEC (Tim and Scott) discuss sampling approach. Tim wants one sample collected from material within an east-west running pipe adjacent to EDGER's northernmost catch basin. The pipe is approximately 4 feet BGS and 6 inches in diameter. Geosyntec probes the pipe with a tape measure, it is greater than 25 feet and seemingly empty. There is some material within the first four inches of the pipe, but the soil was not stained and is likely just fill material that was pushed into the pipe during EDGER's excavation. Note that some flakes from the pipe were collected in the sample, as the pipe was deteriorating. Geosyntec collects sample "NE EDGER Trench Pipe" for analysis of PCBs and metals. The pipe was located next to a series of limestone blocks approximately 29" from the bottom of the trench and approximately 4 feet long. Tim also requested that a sidewall composite sample be collected from three locations in the western wall of the trench (see 8/2/17 DFR for location description/photograph) in stained areas approximately 2.5 ft BGS. Sample was collected and called "EDGER sidewall" and will be analyzed for PCBs, SVOCs, and metals. The soil sample was black and dry. Scott observed collection of both samples, as Tim had to left the site at approximately 1455. Both samples were placed on a separate chain and will be analyzed with a standard TAT, per AK's request.
10. EB and JP left site at 1800.
11. EB ships samples at 1830.

SAMPLES COLLECTED

EQB 1; B169-B; EDGER Sidewall; NE EDGER Trench Pipe.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Backfilling and compacting along the western section of area A, Repairing the 4" pipe in southern excavation area and deconning excavators and haul trucks. The topics discussed in the safety meeting included gather points and stop work authority.
2. PDRs installed around the south excavation area and stockpile area. Recon requested that Geosyntec collect additional fill samples for the next 1000 cu yds of material to be brought to site.
3. JP walked the site with AR and EB began sampling and collecting equipment blanks. Trucks arrived for backfill material.
4. 0815 DI and MD visit site, inspected the uncovered concrete structures and identified them as electrical vaults. MD indicated that the drawings in EHS possession indicated that the valve well was exposed on site near where the 4" line was hit was associated with the 4" line and could be used to identify the location of the pipe. He also mentioned that a pencil addition to the drawing indicated that the 1" PVC line encountered during the previous attempt to repair the 4" line was used to substitute the copper irrigation line in that area. MD wanted to know when power would be restored to the athletic field stands. AR reconfirmed that the handover date from Recon to Edger was the 15th. Recon begins decon of Haul trucks and excavators.
5. Seth carries out a survey along the western edge of area A to identify the level of backfill. Additional ~4-6 inches of material to be placed and compacted. JP left site at ~0900.
6. Recon located the 4" pipe at 1045, Pipe was approximately 6' below original ground surface. Recon began chasing the pipe to locate the break. EKB completed sampling and began packing samples to ship.
7. 1130 DEC arrived on site. Scott inspected the stockpile area and met AR at the Southern excavation. He looked at the excavation for the pipe repair and reviewed the planned emergency repair process. Scott asked about the concrete material excavated at the northern excavation and queried what was the plan to dispose of the same. He mentioned that Tim was concerned that Edger was placing uncharacterized material on top of the clean backfill in the Tennis court area. Edger began placing a geotextile and collecting additional samples from the stockpiled material
8. Scott left site at 1245. EB left site at 1245.
9. AR left site to pick up backfill samples from quarry. Recon took a break for lunch from 1200- 1230.
10. AR returned to site at 1400. Recon continued backfilling and spreading material in southern excavation. Total of 36 truckloads of backfill material brought to site. Pipe repair continued and was completed at 1630. Recon placed one excavator bucket load of clean fill immediately around the pipe. Recon then backfilled the excavated material on top of the excavation after placing a plastic demarcation layer. Pipe will be tested on Monday as Recon was not capable of restarting the water supply. MF wanted to avoid leaving an open excavation over the weekend on account of predicted heavy thunderstorms.
11. Recon stopped working at 1715. AR packed samples and refreshed ice. Heavy winds caused Edger's privacy fence near laydown area to blow over as AR left site.
12. Samples were shipped at 1845.

SAMPLES COLLECTED

BP-5000-6000 grab and composite samples for backfill material.
Windrow 5-b Section 5 sample set (<10ppm)
Windrow 1-2 Section 3 and section 4 sets (>10 ppm)
Equipment blanks 1,2

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Backfilling and compacting along the western section of area A. Edger let Recon know that they could not allow access from the western side of site on account of heavy rain. Recon decided to fix the haul road and compact with backfill to allow access via the Eastern haul road for backfill material.
2. PDRs were placed along the southern excavation area.
3. AR carried out compaction tests along the last lift of the western side of area A. Edger began excavating for placing the sidewalk along the western edge of area A. Some amount of black color is seen in the soil along that area. See photo below.
4. Between 800 and 1300 Recon repaired the haul road and compacted to make to accessible to the quarry trucks.
5. Recon placed demarcating layer and geotextile along the east west running wall of the school building and created a path allowing the backfill trucks to enter and turn around on site coming in through the haul road.
6. Recon broke for lunch from 1215-1245.
7. AR carried out an E&S inspection on site and inspected PDRs. No unusual readings were observed.
8. A total of 25 trucks of material was brought to site. Recon stopped work at 1545. Site was shut down and closed by 1600.

SAMPLES COLLECTED

PROBLEMS ENCOUNTERED/ DELAYS

Access from the western access road was stopped by Edger to allow sidewalk construction and on account of heavy rain on site.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Backfilling and compacting the southern excavation area, Moving mulch to the stockpile area. Cleanup of site and preparation to loadout material from stockpile area.
2. On account of predicted rain throughout the day PDRs were not installed.
3. Recon began backfilling material for Southern excavation area. Geosyntec took down the damaged tent and disposed of it. AR advised Recon to recover the stockpiles as the poly had been blown around by the wind.
4. Between 0800 and 0900 AR carried out compaction tests along the 0-1 backfilled area.. EB deconned sampling bowls and oversaw backfilling.
5. Between 0900 and 1300 Recon shifted mulch to the stockpile area. Backfilling began at 0830 and continued till 1730. Recon broke for lunch at 1200 -1230.
6. NYSDEC was on site at 1145 and stayed till 1300. He reviewed the backfilling of material on site and asked queries about the planned football field work. He observed Recon beginning to recover the stockpile area and left site at 1300.
7. AR called Mike Dunn at 1300 and left a message that the 4" pipe was repaired and water needed to be turned on to test the repair. On calling back at 1400,MD said that he would be able to turn on the water in the morning tomorrow. AR contacted Edger and confirmed that turning on the water would not affect their activities.
8. Recon sprayed water along the haul road and at the entrance of the haul road as a dust suppressant measure.
9. A total of 37 truckloads of backfill material were brought to site. EB left site at 1700. AR left site at 1730.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Backfilling and compacting the southern excavation area, organizing the timbers removed from around the mulch area, and deconning and shifting an excavator to the stockpile area. The safety meeting reviewed human habits like complacency overconfidence inexperience and drowsiness,
2. PDR's were installed along the southern excavation edges.
3. Recon moved the excavator and crane mats from the previously dismantled truck wash to the stockpile area.
4. AR called Mike Dunn of EHS and confirmed that the 4" line had been reactivated. and no problems had been observed in operation.
5. Scott was on site at 1130. He inspected the site and observed the stockpile area. He requested that the privacy fence be repaired at some locations and observed the backfilling at the southern excavation area. He observed the tree trucks from the south excavation area had been shifted to the stockpile area and said he was pleased with the poly being reinstalled on the stockpiles. DEC then headed over to talk to Stirling about material being stored on the northern excavation area.
6. Recon carried out backfilling and compacting from 0730 to 1730. 26 trucks of backfill material were unloaded on site. Recon broke for lunch from 1200-1230.
7. Scott inspected the stockpile area and verified that the silt sock was ensuring that no material was leaving the stockpile area along the perimeter of the stockpile. Scott left site at 1500.
8. At 1500 the biweekly progress meeting was held.
9. AR carried out an E&S inspection on site.
10. 1530 water was sprayed to control dust, backfilling and compaction continued. Samples were collected for geotechnical analysis. EB talked to MF and confirmed that Recon was still planning to ship material from the stockpile on Thursday. Recon also confirmed that they would be able to complete backfill of the structural fill by tomorrow and start backfilling topsoil by Thursday.
11. PDRs were taken down at 1600. Recon began shutting down site.
12. EB left site at 1645. Recon stopped backfilling and closed site at 1730. AR left site.

SAMPLES COLLECTED

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Completing backfilling and compacting the southern excavation area. The safety meeting reviewed working around heavy equipment and working on a site with multiple contractors
2. PDR's were installed along the southern excavation perimeter.
3. Geosyntec inspected the site and reviewed movement of materials on site.
4. Between 0800 and 0830 Recon attended the site coordination meeting. Geosyntec collected samples for field moisture content tests and structural fill analysis.
5. AR contacted Mike Dunn and asked about school plan for the catch basins in the mulch area. MD confirmed that it was okay to cover the 3 catch basins found under the mulch beds if they were located below grade.
6. Between 0715 and 1600 Recon received 39 trucks of backfill on site. Recon has completed spreading the backfill along the southern excavation however final grading and levelling is to be done. The surveyor is expected to be on site early in the morning tomorrow.
7. From 1600 -1645 4 trucks of topsoil material were brought to site.
8. AR contacted Stirling and confirmed details on material being stored on top of tennis court backfill. Material was being stored on liner and under poly, but was currently uncharacterized. Material is to be sampled for reuse and currently consists of scrapings generated during grading of the parking lot. No visibly impacted material is currently being stored on the tennis court area.
9. EB left site from 1235-1435.
10. AR carried out an E&S inspection on site.
11. Recon sprayed water multiple times on site to prevent dust movement.
12. PDRs were taken down at 1600. No unusual readings were observed. Recon shut down site for the day at 1730.
13. Geosyntec left site at 1740. Structural fill samples were shipped at 1815.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Surveying and compacting structural fill, spreading and compacting topsoil. The safety meeting reviewed dangers of distracted driving.
2. PDR's were installed along the stockpile area perimeter. Recon began to prepare to load out> 10 ppm material. Between 0800 and 0930 Recon loaded out 5 trucks of material (~ 150 cu yds) from Windrow 9 section 2-4.
3. Recon surveyed the structural fill in the southern excavation area and compacted cut and graded as necessary. Topsoil was spread graded and compacted on top of levelled structural fill. Between 0730 and 1700 23 trucks of topsoil were brought to site.
4. Between 0930 and 1030 Geosyntec reviewed Edgers stockpiled material on site. Geosyntec calculated estimated quantities of materials and identified different stockpiled material on site. Stirling confirmed that samples taken within the stockpile A (on the tennis court) had been invalidated as additional material had been added to the stockpile and that additional sampling would be done to characterize that material.
5. Recon moved the construction debris within the stockpile area into section 1 of the windrow (Asphalt cuttings) in order to open the southern privacy fence of the stockpile area and allow trucks to enter the stockpile without backing up.
6. NYSDEC was on site at 1100 and reviewed the loadout of material. Scott asked about the moved material and was concerned that construction debris material was mixed into characterized material. Mike said that it was not possible to move the material out at present on account of lack of space within the stockpile. EB confirmed that the material was all construction debris and Recon and DEC agreed that it was possible and acceptable to segregate the larger concrete from where they had been placed.
7. Recon confirmed that the trucks were delayed at the landfill and would not return till tomorrow. Stockpiles were re-covered, the privacy fence reinstalled and PDRs were taken down from the stockpile area.
8. Backfilling and spreading of topsoil continued till 1700 .
9. Recon requested that Geosyntec arrange for sampling of Truck wash water for disposal.
10. .EB left site at 1530 to return equipment and repair a puncture in the rental car. Equipment was shipped at 1730. Site was closed and AR left site at 1730.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0600 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Loading out >10 ppm Material from the stockpile area and excavating >10 ppm material from the football field and shifting it to the stockpile area. The safety meeting reviewed OSHA regulation revisions and storage and dimensional requirements for stockpile and excavation work.
2. PDR's were installed along the stockpile area perimeter and also along the perimeter for the football field. Recon began to prepare to load out> 10 ppm material.
3. The surveyor was on site at 0630 and laid out the extent of the football field excavation as well as the extent of the >10 ppm material and <10 ppm material. Between 0730 and 1700 Recon loaded material from the football field and stored it in the stockpile area between windrows 4 and 5 along section 1 and 2.
4. Between 0650 and 1230 Recon also loaded out 7 Dump trailers worth of material from windrow 5-6 Section 3 and 4 to the landfill.
5. DEC arrived on site at 0900 and reviewed the loadout of material from the stockpile area as well as the excavation work in the football field. Scott and Mike remained on site till 1300.
6. Recon shifted the breaker to the MSA at 0930. It will be used to break the large concrete pieces prior to shipping them off site. Recon also broke up the wooden trunks stored in the MSA area in preparation to ship them offsite.
7. Geosyntec contacted Clean Harbors and verified the tests required for shipping truck wash water to the facility. The bottle order has been placed and will arrive tomorrow.
8. Edger moved 32 dump truck loads of material from the H and I stockpiles (~450 Cu yds) to the Steuben county landfill. Loading will resume at 0830 tomorrow and should be completed by end of day.
9. EHS requested that the mulch beds at the back of the school be cleaned out Geosyntec Reached out to McDonald Contracting and requested a quote to weed and refill the mulch beds at the back of the school.
10. Between 1500 and 1530 the biweekly meet was held.
11. Stirling confirmed to Geosyntec that the material stored on the northern tennis court area was separated from the asphalt by at least 2" of subgrade material.
12. AK left site at 1620.
13. Recon stopped excavation at 1730. Stockpiles were covered with Poly. High winds at end of day knocked down the fence along the stockpile area. Recon repaired the fence and closed site at 1745.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0600 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Loading out >10 ppm Material from the stockpile area and excavating delineated soil from the football field and shifting it to the stockpile area. The safety meeting reviewed driving safety.
2. PDR's were installed along the stockpile area perimeter and also along the perimeter for the football field. Recon began to load out > 10 ppm material. 15 truckloads (11 dump trailers and 4 Dump trucks) of material arrived on site. ~300 Cu yds of material was sent to the landfill. (Windrow B4-5 Section 3,4; Windrow 9 Section 5; Windrow 1b Section 1.
3. Between 0730 and 1430 Recon loaded >10 ppm material from the football field and stored it in the stockpile area between windrows 4 and 5 along section 1 and 2. After filling those 2 sections additional >10 ppm material was stored in Windrow 5-6b section 1. ~90 % of the >10 ppm material was shifted to the stockpile area. The remaining area has been left to allow access of haul vehicles in the excavation.
4. Recon confirmed to Geosyntec that all the material from the football field will be sent to the landfill. Material cannot be reused on account of high organic content (sod).Characterization samples will be collected accordingly.
5. Between 1500 and 1730 Recon loaded <10ppm material which was shifted to the stockpile windrow 9 section 1.
6. DEC arrived on site at 1200 and reviewed the loadout of material from the stockpile area as well as the excavation work in the football field. Scott left site at 1300.
7. Recon completed breaking the large concrete blocks and segregated the construction debris. Recon plans to remove the concrete material along with the material from windrow B 1-2.
8. AR collected characterization samples for the >10 ppm material and stored them on ice. Samples will be shipped tomorrow.
9. The bottle order for Water sampling arrived today. Samples will be collected and shipped tomorrow.
10. Edger moved 24 dump truck loads of material from the H stockpile (~300 Cu yds) to the Steuben county landfill. Loading will resume at 0830 tomorrow and will be completed by end of day
11. Recon confirmed that they have received approval from Casella to move additional material. They plan to utilize additional trucks to speed up the football field excavation. They plan to complete excavation by end of day tomorrow.
12. PDRs were collected at 1645.
13. Recon stopped excavation at 1715. Stockpiles were covered with Poly. Recon shut down site and AR left at 1730.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0600 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Loading out >10 ppm Material from the stockpile area and excavating delineated soil from the football field and shifting it to the stockpile area. The safety meeting reviewed proper storage and handling of PPE.
2. PDR's were installed along the stockpile area perimeter and also along the perimeter for the football field. Recon began to load out > 10 ppm material. 4 trailer trucks of material were sent to the landfill (~120 Cu yds of material) . (Material was removed from Windrow 8 Sections 5 and 6).
3. AR met with the groundskeeper from EHS and was informed that the sprinkler system could not be turned on because the 4" pipe was broken in another location at the baseball field. The groundskeeper (Jim) said that the pipe was likely broken during test borings made by a different contractor while working on the light poles in the baseball field. AR inspected the location and verified that we have not made any borings in that region.
4. Between 0730 and 1730 Recon loaded the top 6" of soil and grass from the football field and stored it in the stockpile area.> 10 ppm material was stored in between windrows 5 and 6 and < 10ppm material was stored at windrow 9.
5. AR collected wash water samples for analysis. Samples were stored on ice in preparation to ship out.
6. DEC arrived on site at 1130 and inspected the stockpile and excavation. They also reviewed the broken pipe location in the baseball field and observed pieces of PVC brought to the surface by the flow of water. Scott said he recollected seeing the contractor install the borings sometime in March.
7. Edger removed majority of remaining material on site ~ 200 cu yds. Last few truckloads of material from stockpile H will be shipped tomorrow.
8. AR collected characterization samples for the soil material from the football field. Samples were stored on ice.
9. The surveyor arrived at 1730 and checked that the grade had been achieved. Locations requiring further grading were finished and all material was shifted to the stockpile area.
10. Recon deconned the excavator at the stockpile and plans to move it to the southern excavation area to assist with spreading topsoil. Mike confirmed that they do not plan to load out soil tomorrow and that work will begin at 0700.
11. PDRs were collected at 1730. No exceedances were observed.
12. Stockpiles were covered with Poly. AR left at 1800 to Fedex to ship samples. Samples were shipped at 1845.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Loading out Haul road material to the stockpile and installing demarcation layer and placing topsoil in football field. . The safety meeting reviewed importance of proper preparation before starting any work and gather points on site..
2. PDR's were not installed on account of continuous rain expected on site. Topsoil could not be brought to site in the morning on account of rain.
3. Recon began to load Haul road material from the eastern end of the sidewalk to the east of the southern excavation limit. The concrete of the sidewalk was broken and sent separately to the stockpile area. Material from the haul road was stored in Windrow b 4-5 Section 3 onwards.
4. Recon also manually cut the edge of the sod along the excavation of the football field in preparation for replacing sod after placing topsoil. Recon also manually completed removing large pebbles from the excavation area and repaired one broken sprinkler head as preparation for placing topsoil.
5. Edger completed haul out of all material from stockpile H at around 1000. A total of 110 truckloads of material ~ 1500 Cu yds was sent to the landfill.
6. Welliver's Jason Plumley identified that the power supply to shed at the end of the baseball field was not working, Mike Furlong reviewed the problem and determined that it was likely that the boring that cut the water pipe in the baseball field also damaged the electrical connection. Welliver will be excavating in the baseball field tomorrow to repair the water line, they plan to locate and repair the power line as well.
7. 2 piezometers were identified in the football field excavation. (originally the PVC pipe was identified as part of the sprinkler system) The 1" PVC pipes will be recapped and GPS'd to be able to identify them for later work.
8. Recon broke for lunch between 12 and 1230
9. NYSDEC was on site at 1330. Scott inspected the stockpile area and the football field excavation. Scott asked about the plans to repair the sprinkler system lines
10. Recon stopped work at 1630. AR was offsite at 1645. Rain in the morning prevented topsoil being brought to site. Recon plans to work tomorrow to spread topsoil and allow replacing sod in the football field on Tuesday. Work Will start at 0700

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: installing demarcation layer and placing topsoil in football field. . The safety meeting reviewed Allergic reactions and identifying insect bites.
2. Recon spread out demarcation fabric and brought topsoil to site. Topsoil was unloaded onto the area of the haul road excavated yesterday and then taken to the football field by loading onto a small truck. Material was spread evenly and raked manually as required.
3. Welliver completed excavation to locate the broken pipe in the baseball field. The broken cable was adjacent to the pipe location.
4. Recon broke for lunch between 1200 and 1230.
5. All sprinkler heads and piezometers identified in the excavation were staked to be able to GPS locate them later.
6. Between 0730 and 1530 Recon brought 7 truckloads of topsoil to the site. Additional topsoil stored in piles in the southeast excavation area was also sent to the football field. ~ 90 % of the football field has topsoil on it. Final grading and leveling still to be completed. Mike plans to be completed on Monday and be ready for placing sod on Tuesday.
7. Recon shut down site at 1530 and AR left site.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: Grading topsoil in the football field and in the southern excavation area. The safety meeting reviewed working around heavy equipment and site awareness.
2. EHS contacted Geosyntec and requested that we dispose some material (~0.4 cu yds) excavated by Verizon during work in the back parking lot area. Material was excavated adjacent to the southern wall of the gymnasium building.
3. Dom arrived on site around 0930 and showed that the excavated material is currently stored on Poly and under poly near the access road between EHS and STCC. He also showed the origin of the material and said it came from between 0-3' below ground surface. Material was generated during the installation of fence posts around an external staircase. Material has not yet been characterized. AR tried to contact Dom repeatedly to request that the material be characterized by Stirling, and will try again tomorrow.
4. Recon completed spreading topsoil on the football field by 1330.
5. Welliver contacted Recon and said that the cables encountered in the baseball field were not providing power to the shed. They requested that Recon examine the eastern part of the northern excavation and determine if the power cable was broken there. Mike plans to locate the cable (outside the excavation) and then follow it to identify if there were any breaks within the excavation area.
6. McDonald contracting (mulch bed restoration) reached out today and said that they will be mobilizing to site tomorrow.
7. Between 1330 and 1630 Recon spread topsoil along the southern and western edges of the southern excavation area.
8. Recon shut down site at 1630 and AR left site.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans involving Laying sod in the football field area. Heavy overnight rains meant that spreading topsoil in the southern excavation area could not be carried out as the site was extremely wet. The safety meeting reviewed distracted driving and the importance of being aware of surroundings while moving around on site.
2. Sod delivery to the site was delayed. Recon began taking down the privacy fence as part of the site restoration activity. Fence was shifted to the stockpile area. Recon will be replacing the removed fence as part of the site restoration.
3. EHS completed repairs to the broken pipeline and the zone lighting power cables in the baseball field. The pipe was pressurized and the sprinklers in the baseball field were tested. Recon requested that the sprinklers in the football field not be turned on till the sod was placed.
4. Recon located the break in the cable and excavated a trench to reconnect the power cable to the baseball shed.
5. DEC was on site from 1030 to 1200. Scott took measurements of the sidewall dug by Edger for the storm drain and reviewed the work progress at the football field and the baseball pipe repair. He said that he expected to be back on site tomorrow and recommended that Recon place additional zip ties to the privacy fence in the stockpile area.
6. Sod arrived at 1400. Between 1400 and 1630 Recon placed sod in 85% of the football field.
7. The biweekly meeting was held at 1500. Site progress was reviewed and plans for next steps were discussed.
8. Mike from McDonald contracting contacted Geosyntec and confirmed that they would be on site in the morning tomorrow.
9. Mike Furlong confirmed that they would be starting the loadout of the remaining >10 ppm material from the stockpile area tomorrow. Loadout will begin at 0600. Recon is coordinating an electrician to complete repairs.
10. Work was stopped at 1630. AR left site.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0600 and attended the daily site meeting and safety meeting conducted by Recon. Recon reviewed the day's plans including: removing >10 ppm material from stockpile area; completing sod placement in football field; sending haul road material to stockpile area. Heavy overnight rains prevented spreading topsoil in the southern excavation area as the site was still extremely wet. The safety meeting reviewed biological hazards associated with the site.
2. Recon loaded material from Windrow b 1-2 Sections 3 and 4. Material was loaded between 0630 and 1400. A total amounting to about 175 cu yds was taken offsite.
3. PDRs were installed in the stockpile area.
4. McDonald landscapers arrived on site at 0900. They completed removal of all weeds on all 3 mulch beds and began placing fresh mulch along the mulch bed adjacent to the gym building. They anticipate being completed by end of day tomorrow.
5. Recon completed placing the sod in the football field at 1030. Recon then demobilized from the football field and dismantled the temporary haul road made to allow access to the football field excavation.
6. Recon dismantled the main haul road and placed the material generated in the stockpile in windrow B4-5 Section 3 onwards and in windrow B5-6 section 3 onwards. The truck wash was drained of all standing water prior to being dismantled.
7. AR contacted Dom Insogna and requested an inspection of the mulch beds on Friday. Dom said that he would be off on Friday and said he would try to make it down sometime tomorrow and would definitely come to see the work on Monday.
8. Between 1600 and 1720 Recon arranged to re-cover the piles and fix the privacy cover along the fence.
9. Work was stopped at 1730 and AR left site.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and attended the daily site meeting conducted by Recon. Recon reviewed the day's plans including: Loading out of >10 ppm material from the stockpile; Cleanup of site in preparation to demobilize and reinstalling fences along the track and southern excavation area. The safety meeting reviewed cold working and dehydration.
2. PDR's were installed along the edge of the fence of the stockpile area.
3. Between 0730 and 1330 Recon sent 4 truckloads of material from the windrow b1-2 section 4. Concrete debris was also sent out with the last truck.
4. Edger began placing sidewalk along the east west wall of the building.
5. Recon labor to install fence arrived on site at 0900. They reviewed the locations where the fence was to be installed and were advised that fence posts would have to be driven in as material could not be excavated to install the posts. (Plan depth of posts ~4').Labor left site to organize equipment after marking out the fence lines and will be back to begin working tomorrow
6. NYSDEC was on site at 1300. Scott reviewed the stockpile loadout and sod placement.
7. Recon arranged material for loadout tomorrow at 0600. Labor closed up site and site was shut down at 1500.
8. The biweekly meeting was held at 1500. Site progress and plans were reviewed and plans to consolidate the stockpile were discussed.
9. AR left site at 1530.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700 and headed to the stockpile area.
2. Recon labor had arrived at 0600 and begun preparing for consolidation of the stockpile.
3. PDR's were installed along the edge of the fence of the stockpile area.
4. Between 0730 and 1730 Recon consolidated the stockpile material. Haul road material was segregated during consolidation and was placed along the north eastern side of the stockpile. Material was separated from the remaining stockpile material by a demarcation layer.
5. Heavy rain was experienced on site between 0800 and 0930. PDR's were collected during the shower and reinstalled at 1200.
6. Fence installation began at 1000. Fence posts were driven along the edge of the sidewalk and the track area.
7. Recon broke for lunch between 12 and 1230.
8. Edger continued placing sidewalk along the east west wall of the building.
9. PDR's were collected at 1730.
10. Recon began to close the site and cover the stockpile at 1530. The lining was spread and weighed down with sandbags. Liner was spread by 1900.
11. Recon shut down site and headed out at 1900.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700. Recon held the daily meeting and reviewed the planned activities: Continuation of stockpile consolidation, spreading topsoil for hydroseeding, fence installation and cleanup of site in preparation for demobilization. Recon held the safety meeting to review heat and cold stress.
2. Recon labor spread the topsoil and prepared for hydro seeding on Tuesday.
3. Recon continued work on long term storage for the stockpiled material. Work was focused on placing of crane mats on top of stockpile and covering the truck wash heading out of the stockpile area. Work continued from 0700 to 1630.
4. Recon completed fencepost installation along the east section of the track and began preparation to install the netting. Work should be completed Tuesday.
5. Recon completed placing material on the top of berm around the stockpile.
6. Recon broke for lunch between 12 and 1230.
7. MF reviewed the remaining activities on site and confirmed the planned schedule to AR: All dates are for the week starting 9/3/2017.
   A) Hydroseeding: Will be completed Tuesday
   B) Fence work within school grounds: Tuesday
   C) Disposal of wash water: Clean harbors expected on site on Tuesday morning.
   D) Removing the Adler tanks from the School property: Will be completed Tuesday
   E) Adjusting the stockpile fence and reinforcing the MSA fence. : Expected to be completed Wednesday.
8. Recon began to close the site at 1630.AR left site at 1630.MF will not be on site next week. Recon's Kyle Snyder will be in charge of completing demobilization from site. MF mentioned that he had placed ~ 200 tons of material on top of the berm around the stockpile.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700. Recon held the daily meeting and reviewed the planned activities: Getting all of the school area ready for start of school, Preparation of stockpile area for long term storage. Recon held the safety meeting to review working in the rain and slips trips and falls.
2. Edger labor got the formwork off the last piece of sidewalk. Recon spread topsoil to prepare for hydroseeding.
3. AR observed that high wind had caused the stockpile area fence to blow over, and contacted STCC Kevin Knapp to let him know that we would be resolving it later today.
4. AR called Dom Insogna and requested a site inspection tomorrow morning. DI said he would be available after 0930.
5. Recon began repairs to the fence at 1100 and shifted the eastern fence of the MSA to provide access to the STCC. Recon completed fence repairs at 1700.
6. Between 0900 and 1400 clean harbor's containerized the MSA frac (adler)tank water and cleaned it out.
7. Hydrosseding contractor arrived on site at 1000 and completed Hydroseeding site by 1500. Recon removed inlet protection from catch basins at end of day.
8. Fence contractor arrived on site at 1100 and continued working till 1730. All fences have been installed barring one gate at the eastern end. Special equipment to install that gate will be required and work is expected to be completed early in the morning tomorrow.
9. Recon got the frac tank on school property offsite at 1300. Recon spread hydroseed under the frac tank location
10. Recon broke for lunch from 1200 to 1230.
11. Recon cleaned up the site from 1730 to 1930. All material in the trailer was shifted to the conex and Recon demobed from site at 1930. Ar left site at 1930.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700. Recon held the daily meeting and reviewed the planned activities: Completing reinforcing the MSA fence and prep to demobilize from the site. Recon covered housekeeping and preparation for work prior to starting work
2. Recons trailer was sent offsite at 0800.
3. Recon started installing the reinforcement to the fence along the MSA at 0900. Stakes were hammered in and will be fixed to the fence tomorrow.
4. Recon installed the gate at the far end of the track at 0930.
5. Dom Insogna from EHS and Kyle Snyder from Recon performed a site walk along the school work area. He mentioned that Stirling had sampled the small pile of material at the back of the school parking lot. He requested that we look into replacing the manhole cover along the back road of the school. Dom said he would advise the school kids to stay off the hydroseeded areas.
6. Recons excavator and dozer were taken offsite.
7. Recon continued installing posts for reinforcing the fence till 0630. KS expects to complete fence reinforcement, attaching the rods to the fence, reattaching the privacy screen to the fence and staking the silt socks tomorrow.

DESCRIPTION OF WORK

Field Activities

1. Geosyntec arrived at site at 0700. Recon held the daily meeting and reviewed the planned activities: Cleaning site, sitewalk and punch point resolution. . Recon covered slips trips and falls as part of the safety meeting.
2. Between 0800 and 1200 Recon labor cleaned up around the site, staked down the silt sock and repaired holes in the privacy covers.
3. Kevin Knapp was on site at 0930. He was happy with the work completed on site and said he was going to be inspecting the area on Mondays and Thursdays. Kevin also inspected the access road between STCC and EHS.
4. MD and DI of EHS were on site. They said that it looked like the installation of the fence had damaged the hydroseeded area. Recon agreed to resolve the issue and EHS agreed that the site was too wet to repair at present.
5. The Frac tank at the MSA was taken offsite at 1100.
6. Recon closed the stockpile and installed a combination lock on the gate (access code 3925.)
7. Recon continued cleanup on site and installed wire clamps on the fence sections across the access road between STCC and EHS.
8. NYSDEC was on site at 1230. They inspected the repairs to the potholes and the additional sandbags on the stockpile liner.
9. AR collected the nuclear gauge took down the notices and headed offsite at 1330.

SITE NAME:

SITE ID.: MW-155
INSPECTOR: AR
DATE/TIME: 6-26-2014
WELL ID.: MW-155

MONITORING WELL FIELD INSPECTION LOG
NYSDEC WELL DECOMMISSIONING PROGRAM

	YES	NO
WELL VISIBLE? (If not, provide directions below)	✓	
WELL I.D. VISIBLE?	✓	
WELL LOCATION MATCH SITE MAP? (if not, sketch actual location on back)	✓	

WELL I.D. AS IT APPEARS ON PROTECTIVE CASING OR WELL: MW-155

	YES	NO
SURFACE SEAL PRESENT?	✓	
SURFACE SEAL COMPETENT? (If cracked, heaved etc., describe below)	✓	
PROTECTIVE CASING IN GOOD CONDITION? (If damaged, describe below)	✓	

HEADSPACE READING (ppm) AND INSTRUMENT USED: 0 0
TYPE OF PROTECTIVE CASING AND HEIGHT OF STICKUP IN FEET (If applicable): NA
PROTECTIVE CASING MATERIAL TYPE: NA
MEASURE PROTECTIVE CASING INSIDE DIAMETER (Inches): 5"

	YES	NO
LOCK PRESENT?		✓
LOCK FUNCTIONAL? Not applicable		✓
DID YOU REPLACE THE LOCK? No		
IS THERE EVIDENCE THAT THE WELL IS DOUBLE CASED? (If yes,describe below)		✓
WELL MEASURING POINT VISIBLE?		✓

MEASURE WELL DEPTH FROM MEASURING POINT (Feet): ~19'
MEASURE DEPTH TO WATER FROM MEASURING POINT (Feet): ~10'
MEASURE WELL DIAMETER (Inches): 2"
WELL CASING MATERIAL: PVC
PHYSICAL CONDITION OF VISIBLE WELL CASING: Good
ATTACH ID MARKER (if well ID is confirmed) and IDENTIFY MARKER TYPE No label will id
PROXIMITY TO UNDERGROUND OR OVERHEAD UTILITIES: NA

DESCRIBE ACCESS TO WELL: (Include accessibility to truck mounted rig, natural obstructions, overhead power lines, proximity to permanent structures, etc.); ADD SKETCH OF LOCATION ON BACK, IF NECESSARY.
NA

DESCRIBE WELL SETTING (For example, located in a field, in a playground, on pavement, in a garden, etc.) AND ASSESS THE TYPE OF RESTORATION REQUIRED.
In mulch bed

IDENTIFY ANY NEARBY POTENTIAL SOURCES OF CONTAMINATION, IF PRESENT (e.g. Gas station, salt pile, etc.):
NA

REMARKS:
Hand mix grout mixture, bentonite slurry

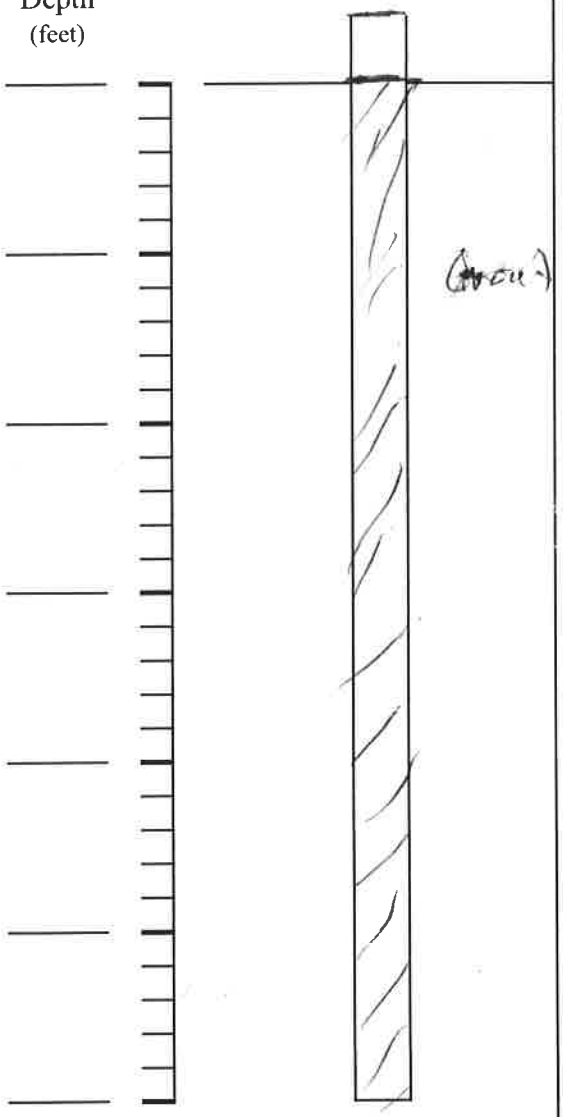
	Date: 6.26.2017 / 1230

DECOMMISSIONING DATA
(Fill in all that apply)



OVERDRILLING NA
Interval Drilled
Drilling Method(s)
Borehole Dia. (in.)
Temporary Casing Installed? (y/n)
Depth temporary casing installed
Casing type/dia. (in.)
Method of installing

CASING PULLING NA
Method employed
Casing retrieved (feet)
Casing type/dia. (in)

CASING PERFORATING NA
Equipment used
Number of perforations/foot
Size of perforations
Interval perforated

GROUTING
Interval grouted (FBLS) 0-19'
of batches prepared 1
For each batch record:
Quantity of water used (gal.) 9
Quantity of cement used (lbs.) 47
Cement type Portland type I
Quantity of bentonite used (lbs.) Bentonite slurry
Quantity of calcium chloride used (lbs.) —
Volume of grout prepared (gal.) 39
Volume of grout used (gal.) ~~39~~ 9.5

WELL SCHEMATIC*

COMMENTS: Grouted in place

* Sketch in all relevant decommissioning data, including: interval overdrilled, interval grouted, casing left in hole, well stickup, etc.

MONITORING WELL FIELD INSPECTION LOG — DATE/TIME: 6/26/2017 1330

NYSDEC WELL DECOMMISSIONING PROGRAM — WELL ID.: MW-15D

	YES	NO
WELL VISIBLE? (If not, provide directions below)	✓	
WELL I.D. VISIBLE?	✓	
WELL LOCATION MATCH SITE MAP? (if not, sketch actual location on back)	✓	

WELL I.D. AS IT APPEARS ON PROTECTIVE CASING OR WELL:

	YES	NO
SURFACE SEAL PRESENT?	✓	
SURFACE SEAL COMPETENT? (If cracked, heaved etc., describe below)	✓	
PROTECTIVE CASING IN GOOD CONDITION? (If damaged, describe below)	✓	

HEADSPACE READING (ppm) AND INSTRUMENT USED: MiniRAE3000 0.0ppm

TYPE OF PROTECTIVE CASING AND HEIGHT OF STICKUP IN FEET (If applicable): PVC NA

PROTECTIVE CASING MATERIAL TYPE: PVC

MEASURE PROTECTIVE CASING INSIDE DIAMETER (Inches): 2"

	YES	NO
LOCK PRESENT?		✓
LOCK FUNCTIONAL?		✓
DID YOU REPLACE THE LOCK?		✓
IS THERE EVIDENCE THAT THE WELL IS DOUBLE CASED? (If yes,describe below)		✓
WELL MEASURING POINT VISIBLE?		✓

MEASURE WELL DEPTH FROM MEASURING POINT (Feet): No ~76.5

MEASURE DEPTH TO WATER FROM MEASURING POINT (Feet):

MEASURE WELL DIAMETER (Inches): 2"

WELL CASING MATERIAL: PVC

PHYSICAL CONDITION OF VISIBLE WELL CASING: Good

ATTACH ID MARKER (if well ID is confirmed) and IDENTIFY MARKER TYPE: Written on well lid

PROXIMITY TO UNDERGROUND OR OVERHEAD UTILITIES: Not applicable ~10' to electrical

DESCRIBE ACCESS TO WELL: (Include accessibility to truck mounted rig, natural obstructions, overhead power lines, proximity to permanent structures, etc.); ADD SKETCH OF LOCATION ON BACK, IF NECESSARY.

Cleared out Mulch bed

DESCRIBE WELL SETTING (For example, located in a field, in a playground, on pavement, in a garden, etc.) AND ASSESS THE TYPE OF RESTORATION REQUIRED.

Mulch bed S of School building

IDENTIFY ANY NEARBY POTENTIAL SOURCES OF CONTAMINATION, IF PRESENT (e.g. Gas station, salt pile, etc.):

NA

REMARKS:

Hand Mixed grout mixture

WELL DECOMMISSIONING RECORD

FIGURE 3

WELL DECOMMISSIONING RECORD

Site Name: Former Sperry Remington Site NY	Well I.D.: MW-15D
Site Location: EHS NY	Driller: Summit (Ronald)
Drilling Co.: Summit	Inspector: AR
	Date: 6.26.2017

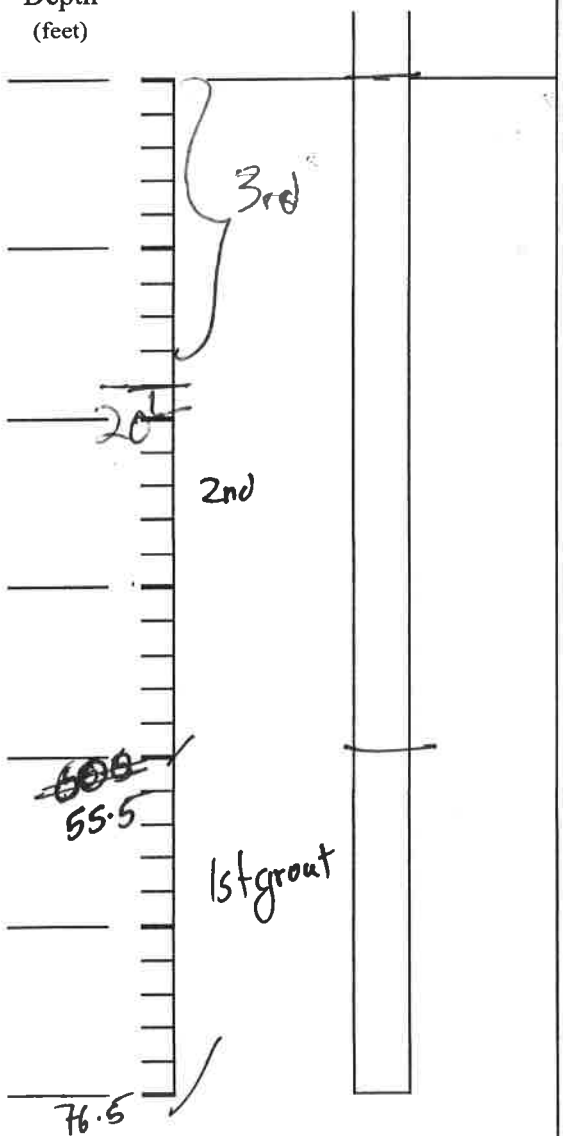
DECOMMISSIONING DATA
(Fill in all that apply)

OVERDRILLING NA

Interval Drilled	
Drilling Method(s)	
Borehole Dia. (in.)	
Temporary Casing Installed? (y/n)	
Depth temporary casing installed	
Casing type/dia. (in.)	
Method of installing	

CASING PULLING NA

Method employed	
Casing retrieved (feet)	
Casing type/dia. (in)	



CASING PERFORATING NA

Equipment used	
Number of perforations/foot	
Size of perforations	
Interval perforated	

GROUTING

Interval grouted (FBLS)	0-76.5		
# of batches prepared	1		
For each batch record:			
Quantity of water used (gal.)	3.5	3.5	3.5
Quantity of cement used (lbs.)	40	40	40
Cement type	Portland Type I		
Quantity of bentonite used (lbs.)	#2	#2	#2
Quantity of calcium chloride used (lbs.)	—	—	—
Volume of grout prepared (gal.)	4.5gal	4.5	4.5
Volume of grout used (gal.)	4.5gal	4.5	3-4 gal

WELL SCHEMATIC*

* Sketch in all relevant decommissioning data, including: interval overdrilled, interval grouted, casing left in hole, well stickup, etc.

Subject: #7682-Ontario; Unisys (former Sperry Remington), 777 South Main St., Elmira, NY - PCB Contaminated Soil for Disposal

Note to Customer: The following Windrow Stockpile Sections are included in this approval for disposal (see attached map). Please include the Windrow and Section # on each Manifest. Please contact Ontario County Landfill at 585-526-4420 to notify the site for delivery.

100 CY or 300 tons Windrow #1 – Section 5 ONLY	500-600 CY, or 900 tons Windrow #4 – Section(s) 1 – 5	500-600 CY, or 900 tons Windrow #7 – Section(s) 1 – 5
500-600 CY, or 900 tons Windrow #2 – Section(s) 1 – 5	500-600 CY, or 900 tons Windrow #5 – Section(s) 1 – 5	300 CY or 500 tons Windrow #8 – Section(s) 1, 2, 3 ONLY
500-600 CY, or 900 tons Windrow #3 – Section(s) 1 – 5	500-600 CY, or 900 tons Windrow #6 – Section(s) 1 - 5	300 CY or 500 tons Windrow #9 – Section(s) 2, 3, 4 ONLY

**Laboratory Reports are on file at Special Waste Dept.

Profile #7682 – Approval for DISPOSAL (One Time Event)

Ontario

Generator: Unisys (former Sperry Remington)
777 South Main St.
Elmira, NY 14904

Hauler/Carrier: Riccelli Enterprises

Customer:	Remedial Construction Services, Inc
Material/Description:	PCB Contaminated Soil from former Sperry Remington site
Classification:	Industrial/Disposal
Quantity:	6,800 Tons
County:	**Chemung** (NY)
Approval:	Karen Flanders, 08/08/2017
Expires:	11/08/2017
Term:	Place Inactive Upon Expiration

- **Pricing to be confirmed by Ray Duerr/Scott Sampson – Customer/Hauler is Copied**
- **NYSDEC Approval Not Required**
- **A NYS Part 364 Hauling Permit is required for the collection, transport, and delivery of regulated waste, originating or terminating at a location within NY State**
- **Manifest is required for delivery; must include generator information, Casella Waste Profile Number**

Section 2 – Shipping & Packaging Information

2.1) Shipping Volume & Frequency:

a) Volume of Waste to be Shipped: 3000 tons

b) Frequency: ❑ One time ❑ Month X❑ Year ❑ Other:

2.2) DOT Information

a) Is this a U.S. Department of Transportation (USDOT) Hazardous Material? X❑ Yes ❑ No

b) If "Yes", indicate the proper shipping name per 49CFR 172.101 Hazardous Materials Table:

UN 3432,Waste Polychlorinated biphenyls, solid, 9, PGIII

Section 3 – Special Properties

3.1) Color Brown

3.2) Odor X❑ None ❑ Ammonia ❑ Amines ❑ Mercaptans ❑ Sulfur ❑ Organic Acid ❑ Amines/Ammonia ❑ Other:

3.3) Consistency at 70^{0}F: X❑ Solid ❑ Dust/Powder ❑ Debris ❑ Sludge ❑ Liquid ❑ Gas/Aerosol ❑ Varies

3.4) What is the pH? ❑ ≤2 ❑ 2.1-4.9 X❑ 5 – 10 ❑ 10.1 – 12.4 ❑ ≥12.5 ❑ N/A

3.5) What is the flash point? ❑ <90^{0}F ❑ 90-139^{0}F ❑ 140-199^{0}F ❑ >200^{0}F X❑ N/A

3.6) Does this waste exhibit any of the following properties? **(check all that apply)**

✠❑ **None**	❑ Free Liquids	❑ Metal Fines	❑ Water Reactive	❑ Biohazard
❑ Shock Sensitive	❑ Oily Residue	❑ Dioxins	❑ Furans	❑ Aluminum
❑ Asbestos – non-friable	❑ Asbestos – friable	❑ Other Radioactive	❑ Air Reactive	❑ Isocyanates
❑ Biodegradable Sorbents	❑ Pyrophoric	❑ Reactive Sulfide	❑ Reactive Cyanide	❑ Explosives
❑ Temperature Controlled Organic Peroxide		❑ NORM	❑ TENORM	

Section 4 – Composition and Generating Process

4.1) Provide a physical and chemical composition of the waste (e.g. soil, water, PPE, debris, etc.). List the percent ranges of the material, either estimated or known.

Soil	85 to 90 %	Debris (rock, wood, plastic, PPE)	5 to 15 %
Moisture	5 to 10 %	_____	_____ to _____ %

4.2) Provide a description of the generating process. *Remediation & IDW Sites: please provide a site history.*

Remediation waste generated for the former Sperry Remington site in Elmira, NY. Sperry Remington operated a typewriter manufacturing plant at the Elmira site from 1937 to 1972
Manufacturing Operations included:

- Coal Fired Power Plant
- Foundry
- Oil Water Separators
- Cyanide Heat Treating
- Machining of Parts
- Plating
- Degreasing

4.3) Are there any known previous handling or treatment issues involving this waste? ❑ Yes* X❑ No
*If yes, describe: _____

Section 5 – Hazardous Wastes

As determined by 40 CFR, Part 261 and State Rules: **Please list applicable waste code(s):**

5.1) Is this waste exempted from RCRA? ❑ Yes, please provide exemption: _____ X❑ No

5.2) Is this an EPA RCRA listed hazardous waste (F, K, P or U)? ❑ Yes: _____ X❑ No
a) For F006–F009, F012, does this come from a generator that conducts a cyanide plating process? ❑ Yes ❑ No

5.3) Is this an EPA RCRA characteristic hazardous waste (D001-D043)? ❑ Yes: _____ X❑ No

5.4) Do any State Specific Hazardous Waste Codes apply? X❑ Yes: PCB1 ❑ No

If you answered 'no' to 5.2, 5.3 and 5.4, please proceed to Section 6.

5.5) EPA Source Code: G49 (Other remediation) EPA Form Code: W301 (Contaminated Soil)

5.6) Waste Code Determination Is Based On: X❑ Generator Knowledge X❑ Analysis ❑ MSDS
Analysis and/or MSDS may be required for review and approval for hazardous and non-hazardous waste streams.

5.7) Does this waste exceed Land Disposal Restriction levels? ❑ Yes X❑ No

a) Is this stream a wastewater (WW) or non-wastewater (NWW)? ❑ WW X❑ NWW
b) If this waste stream is greater than 50% soil, does it meet the alternative soil treatment standards of 40CFR 268.49? X❑ Yes ❑ No
c) Does this waste contain greater than 50% debris, by volume? ❑ Yes X❑ No
(Debris is greater than 2.5 inches in size.)
d) If the debris is larger than 3 ft x 3 ft x 3 ft, please provide the approximate dimensions and weight:

_____

5.8) If this is a characteristic hazardous waste, does it contain Underlying Hazardous Constituents? ❑ Yes* X❑ No

*If Yes, please list: _____

Section 6 – Non-Hazardous Wastes

Please list applicable waste code(s):

6.1) Do any State Specific Non-Hazardous Waste Codes apply? ❑ Yes X❑ No _____

6.2) Is this a Universal (UNIV) waste or a Recyclable Good (RG)? ❑ UNIV ❑ RG X❑ N/A

6.3) Is this waste used oil as defined by 40 CFR Part 279? ❑ Yes X❑ No

a) If yes, is the total halogen content of the used oil waste stream greater than 1,000 ppm? ❑ Yes ❑ No

b) If yes, what is the source of the halogen content?

- ❑ This is a metalworking oil/fluid containing chlorinated paraffins.
- ❑ This is used oil contaminated with chlorofluorocarbons from refrigeration units.
- ❑ This oil contains halogenated solvents. List specific solvents: _____
- ❑ Other, describe: _____

Section 7 – TSCA Information

7.1) What is the concentration of PCBs in the waste? ❑ None ❑ 0-49 ppm **X** ❑ 50-499 ppm ❑ 500+ ppm

7.2) Does the waste contain PCB contamination from a source with a concentration ≥ 50 ppm? **X** ❑ Yes ❑ No ❑ Unknown

If you answered "none" or "0-49 ppm"' to 7.1 and "no" to 7.2, please proceed to Section 8.

7.3) Has this waste been processed into a non-liquid form? ❑ Yes* **X**❑ No

*If yes, what was the concentration of PCBs prior to processing? ❑ 0-499 ppm ❑ 500+ ppm

7.4) Is this non-liquid PCB waste in the form of soil, rags, debris, or other contaminated media? **X**❑ Yes ❑ No

7.5) Are you a PCB capacitor manufacturer or a PCB equipment manufacturer? ❑ Yes **X**❑ No

7.6) Has the PCB Article (e.g., transformer, hydraulic machine, PCB-contaminated electrical equipment) been drained/flushed of all PCBs and decontaminated in accordance with 40 CFR 761.60(b)? **X**❑ N/A ❑ Yes ❑ No

Section 8 – Clean Air Act Information

8.1) Is this waste subject to regulation under 40 CFR, Part 264, Subpart CC (VOC > 500 ppmw)? ❑ Yes X❑ No

8.2) Is this waste subject to regulation under 40 CFR, Part 63, Subpart DD (VOHAP > 500 ppmw)? ❑ Yes X❑ No

8.3) Is the site, or waste, subject to any other NESHAP/MACT standard(s)? ❑ Yes* X❑ No

*If Yes this document serves as notification that this waste contains chemicals _____ , _____ required to be managed in accordance with Part ❑ 61 ❑ 62 ❑ 63 Subpart _____ of NESHAP/MACT standards.

8.4) Does this waste stream contain Benzene? ❑ Yes X❑ No

If you answered "no" to 8.4, please proceed to Section 9.

8.5) Does the waste stream come from a facility subject to 40 CFR 61, Subpart FF (Benzene NESHAP)?

❑ Yes, please provide the SIC/NAICS code: _____ ❑ No

If you answered "no" to questions 8.5, please proceed to Section 9.

8.6) Does your facility manage the waste subject to Benzene NESHAP in a manner other than shipping off-site?

❑ Yes, please specify: _____ ❑ No

8.7) Is the generating source of this waste a facility with Total Annual Benzene (TAB) ≥10 Mg/year? ❑ Yes ❑ No

8.8) Does the waste contain >10% water? ❑ Yes ❑ No

8.9) What is the TAB quantity for your facility? _____ Mg/Year

8.10) What is the total Benzene concentration in your waste? _____ Percent or _____ ppmw.

Supporting analysis must be attached. Do not use TCLP analytical results. Acceptable laboratory methods include 8020, 8240, 8260, 602 and 624.

Section 9 – Certification

I certify that all information (including attachments) is complete and factual and is an accurate representation of the known and suspected hazards, pertaining to the waste described herein. I authorize EQ's personnel to add supplemental information to the waste approval file, provided I am contacted and give verbal permission. I authorize EQ's personnel to obtain a sample from any waste shipment for purposes of verification and confirmation. I agree that, if EQ approves the waste described herein, all such wastes that are transported, delivered, or tendered to EQ by Generator or on Generator's behalf shall be subject to, and Generator shall be bound by, the attached Standard Terms and Conditions.

If I am an agent acting on behalf of the generator, I also certify that I have permission to sign any and all waste characterization paperwork on the generator's behalf and that I can produce such certification in writing upon request.

Generator Signature Kevin Krueger Printed Name KEVIN KRUEGER

Appendix I

Request to Import Forms

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Restricted Residential Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 800-1000

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Seven (7) Discrete Samples were collected and analyzed for VOCs. Two (2) Composite Samples were collected and analyzed for SVOCs, Inorganics, and PCBs/Pesticides. The chain of custody incorrectly shows the same Sample ID for the composite samples and the first two discrete VOC samples. The Analytical Results have been attached to this form.

Two (2) composite samples were collected and analyzed for grain size distribution and moisture-density.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Analytical results are compared to Restricted Residential SCO.

VOC analyses: acetone, benzene, toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and total xylenes were detected in 7 of 7 samples at levels below Restricted Residential SCOs.

There were no detections of SVOCs, PCBs, or pesticides in the two composite samples.

Metals analyses: arsenic, barium, beryllium, copper, lead manganese, nickel, zinc, and mercury were detected at levels below Restricted Residential SCOs.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Edger Enterprises

Location where fill was obtained:

Brewer's Pit located in Horseheads NY

Identification of any state or local approvals as a fill source:

NYSDEC Facility ID 8-0734-00150

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Geotechnical Data and the Chemical Analysis Reports

The information provided on this form is accurate and complete.

Qualifiers:J: The identification of the analyte is acceptable; the reported value is an estimate.J0: J0: Calibration verification outside of acceptance limits. Result is estimated.J3: The associated batch QC was outside the established precisely measure the analyte in the sample.

Reason	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip,
4	Matrix spike/matrix spike duplicate
5	LCS recovery outside limits
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other

~Preliminary Report~

LABORATORY TEST REPORT

CLIENT: Edger Enterprises **PROJECT:** 2016 Laboratory Testing
REPORT NO.: 29729L-01-0716 **SAMPLE NO.:** EL – 2951 **DATE DELIVERED:** 07/22/2016
SAMPLE LOCATION: By Client. **SAMPLE SOURCE:** Brewer pit.
SOIL CLASSIFICATION: Brown cmf GRAVEL and cmf SAND, trace SILT

% Passing by Weight	
Sieve Size	Sample
1 1/2"	100
3/4"	85
1/2"	77
1/4"	58
#4	51
#20	23
#40	12
#200	6.4

No grain size requirements were provided for this material.

Total Solids by Method 2540 G-2011	WG990406	1	06/19/17 10:09	06/19/17 10:23	KDW
Volatile Organic Compounds (GC/MS) by Method 8260C	WG990989	1	06/14/17 00:00	06/20/17 15:23	JAH
Semi Volatile Organic Compounds (GC/MS) by Method 8270D	WG990189	1	06/16/17 23:24	06/20/17 13:11	ADF

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

T. Alan Harvill
Technical Service Representative
