Cost estimate does not include estimated costs for restoration of backfilled areas to pre-excavation conditions.

(1) Assumes 1.9 tons per cubic yard of soil.
(2) Assumes combined rate for excavation and disposal based on past IRM costs.
(3) Assumes a 10% loss is factored in for when structural fill is placed and compacted.
(4) Assume demolition of the EHS building to allow for investigation and remediation beneath the building footprint.
(5) Assumes soil and groundwater investigation beneath the EHS building footprint following building demolition.
(6) Assumes treatability studies to select and design appropriate in-situ treatment technology.
(7) Assumes in-situ groundwater treatment using direct injection.
(8) Assumes in-situ soil stabilization using direct injection.
(9) Assumes abandonment of 40 on-Site monitoring wells.
(10) Final Engineering Report (FER) includes the updated Site Management Plan (SMP) and all sub-component documents.
(11) Assumes limited SMP for quarterly groundwater monitoring in Years 1-2, semiannual groundwater monitoring in Years 3-4 and annual groundwater monitoring in Year 5.
(12) Assumes annual Periodic Review Report to certify ICs and document SMP activities.

Comparison of Remedial Alternatives

Former Sperry Remington – North Portion #c808022
Elmira, New York

Comparison of Remedial Alternatives	Alternative 1: Unrestricted Use (Track 1) Cleanup	Alternative 2: Restricted-Use (Track 4) Cleanup
Description	Unrestricted use (Track 1) cleanup of soils, long-term ICs to restrict groundwater use, and ECs and ICs to mitigate potential VI.	Restricted use (Track 4) cleanup of soils, long-term ICs to restrict groundwater use, and ECs and ICs to mitigate potential VI.
Overall Protectiveness of Public Health and the Environment	Excavation and off-site disposal to unrestricted use SCOs would be protective of public health under any reuse scenario. However, it would also result in off-Site environmental issues due to the displacement of 626,000 cubic yards of valuable landfill airspace and the excavation and transportation of 688,000 cubic yards of clean import soil. Diesel fuel consumption necessary for the transport of soil would produce an estimated 26 million pounds of greenhouse gas.	This alternative meets NYSDEC requirements for a Track 4 cleanup under the BCP regulations and is protective of public health and the environment. Site RAOs would be satisfied through remedial activities, including: removal and off-site disposal of soil; ECs, including SSD systems beneath the school to mitigate potential on-site VOC VI concerns and cover systems (soil and impervious) across the Site; and the use of IC/ECs to prevent potential future exposure and limit the future Site use to restricted-residential.
Compliance with SCGs	Excavation and off-site disposal would be performed in accordance with applicable, relevant, and appropriate SCGs. Soil excavation activities would necessitate preparation of and adherence to a CAMP in accordance with Appendices 1A and 1B of DER-10.	The remedial activities completed under the IRMs were performed in accordance with applicable, relevant, and appropriate SCGs. Future intrusive work below the EC soil cover systems will be performed in accordance with applicable, relevant, and appropriate SCGs through implementation of the IC/EC Control Plan under the SMP.
Long-Term Effectiveness and Permanence	This alternative would remove all impacted soil and therefore provide long-term effectiveness and permanence.	Removal of soil under the IRMs as well as construction and maintenance of a cover system will prevent direct contact with soil exceeding the Restricted Residential SCOs. The SMP will include periodic inspection and maintenance of the soil and hardscape cover to assure long-term cover integrity. It will also include O&M of the SSD systems to mitigate potential VOC VI concerns. An Environmental Easement for the Site will be filed with Chemung County, which will limit the future use of the Site to restricted-residential use, restrict groundwater use, and reference the NYSDEC-approved SMP. As such, this alternative will provide long-term effectiveness and permanence.
Reduction of Toxicity, Mobility, or Volume of Contamination through Treatment	Removal of all technically practicable impacted soil would reduce the toxicity, mobility, and volume of contamination on the Site. However, since this alternative transfers Site soil from one environment to another, an overall reduction of toxicity and volume would not occur, although mobility of soluble constituents would be reduced in a commercial landfill.	Removal of soil and placement of cover systems will permanently and significantly reduce the toxicity, mobility, and volume of the soil that could potentially be contacted or produce localized areas of environmental impact at the Site.

Comparison of Remedial Alternatives

Comparison of Remedial Alternatives	Alternative 1: Unrestricted Use (Track 1) Cleanup	Alternative 2: Restricted-Use (Track 4) Cleanup
Short-Term Impacts and Effectiveness	Large-scale excavation would result in significant short-term adverse impacts and risks to the high school, community, workers, and environment. It would significantly disrupt operations at EHS due to active construction resulting in the-loss of the athletic facilities for at least three years and parking areas which were just recently excavated and renovated during implementation of IRMs.	Remedial activities were performed in accordance with the approved IRM Work Plans, including health and safety plan, CAMP, and soil erosion measures. This alternative achieves the RAOs for the Site.
Implementability	This alternative would present significant technical and administrative implementability issues. Technical implementability issues may include: geotechnical and safety issues relating to structural integrity of the EHS building foundation, excavation shoring/stabilization, and traffic coordination. Administrative implementability issues may include: coordination of disposal contracts with numerous permitted off-site landfills (no single location would be able to accept the volume of soil/fill generated under this alternative) and difficulty locating local borrow sources for required volume of backfill.	No significant technical or administrative implementability issues are associated with this alternative.
Cost-Effectiveness	This alternative would present a significant cost for implementation, estimated at $508 million (net present value).	The 30-year present worth of the remedial cost to implement Alternative 2 is estimated at $3.21 million (net present value).
Community Acceptance	This alternative is likely to face resistance from the community as it would cause significant disruptions and temporary loss of areas that were just remediated and renovated under an assumed Track 4 cleanup approach.	Community acceptance will be evaluated based on comments to be received from the public in response to the newsletter and other Citizen Participation activities.
Land Use	This alternative would significantly disrupt the reasonably anticipated future use of the Site as a high school with associated athletic facilities and parking areas.	Use of the Site in a restricted-residential capacity is consistent with past and current development and zoning on-Site and within the vicinity of the Site and does not pose additional environmental or public health risks.
