AOC ID	AOC Description	Sub-AOCs	Sub-AOC Description	AOC Location	Conceptual Site Model			Media of Concern	COPC	Investigations Completed	Investigation Summary	Nature and Extent Defined	Approximate Excavation Depth	Summary of environmental media samples supporting AOC delineation			Co-located SSDS	Depth of Soil Impact (RR SCO exceedances)			
					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
1A	Contaminated Sub-Slab Vapors	-	-	EHS Building	AOCs that encompass the EHS building (AOC-1) include indoor air (AOC-1A) and sub-slab vapor (AOC-1B). The source of COPCs is related to historical industrial operations (former building locations shown on Figure 1-3), specifically a TCE-impacted soil area identified to the north of Room 127 (Figure 2-1). While the presence of the EHS building slab reduces the potential for stormwater infiltration, the COPCs reported present a potential source area for vertical migration through the soil column to the water table. Historical geotechnical borings beneath the EHS showed the underlying silty clay aquitard sloping toward the west/southwest (Figure 4-3 and 4-4). Therefore, historical releases may have migrated along the top of the aquitard toward AOC-18.	Remnant VOCs in subsurface soil can volatilize and migrate vertically through vadose zone soil toward the EHS building slab, or dissolved and migrate toward and then downgradient in groundwater.	1. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants. 2. Off-site surface water users/ecological communities: VOC-impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors.	Soil Vapor	V, P	1952 DOH Sampling Report 1967 Lancy Report and Figures 1977-79 SHS Construction and Demolition Plans 1977 Empire Soils Report 2003 DOH Health Consultation 2009 EMP 2010 DOH Health Consultation 2011 2013 EMP Annual Reports 2013 IA Sampling 2014 VI Assessment 2018 Supplemental VI Assessment 2019 ISMP 2023 Annual Heating Season Sampling 2024-2025 PRRs	1. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). 2. Extent of TCE source in soil has been further investigated outside of the EHS building footprint as described for AOC-13 / AOC-16 and AOC-18. 3. Potential pathway for VOC migration along stormwater drain backfill north of Room 127 investigated by soil and groundwater sampling and groundwater investigation for VOCs downgradient of the EHS building (Figure 6-1D and 6-2D). 4. TCE soil vapor impacts in areas outside of mitigated SSDS installation areas are limited to the Pool Filter Room and Sub-Slab Boiler Room (Figure 5V-2A-F). These rooms are used for chemical storage and are not occupied regularly. Conclusion: SSDS have been installed in the Gymnasium, K-Wing Science Addition, Cafeteria and Cafeteria Addition, F-Wing, and Music Wing of EHS to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. Sampling of indoor air for PCBs was conducted in 2021. Results have been reported in ISMP PRRs for 2019–2025 and 2023 Heating Season Soil Vapor Intrusion Monitoring and Sampling Report. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring. Indoor air PCB analytical results are compared to the USEPA PCB Exposure Levels in Table 6-1E. PCBs in indoor air were all at least two orders of magnitude below the USEPA PCB Exposure Level of 0.1 µg/m3. Based on these findings, the potential VI to indoor air has been mitigated. Additional sampling of indoor air for VOCs will continue under the SMP for Site #c808022. Groundwater monitoring will continue under the SMP for Site #c808022. 2	Pre-1979 Combined Industrial/ Storm Sewer	-	-	Site-Wide	AOC-2 (Pre-1979 Combined Industrial/Storm Sewer, or "former industrial sewer") remains in place at the Site. The orientation, construction and depth of the sewer is known based on depictions of industrial waste facilities and operations (Lancy, 1967) and numerous rounds of site investigation using geophysical methods, test pit excavations and robotic CCTV camera inspection (March 2019 Site Characterization Report). The water table is at approximately 14 to 16 ft bgs (greater on the western part of the Site; shallower on the east) and groundwater flow direction is toward the east-northeast. The sewer flow direction was toward the south and it is present near the water table in the south/southeast portion of the site (near CB-15). While no specific potential release has been identified, the sewer contains fine-grained material from historical site operations and from the ingress of surrounding soil through breaches in the sewer wall. COPCs including PCBs and metals have been detected in fine-grained material in the former industrial sewer at CB-24 (Figure 5-16) based on the findings of the March 2019 Site Characterization Report, and the location of breaches and obstructions along the former industrial sewer are indicated on Figure 5-16. The COPCs reported in fine grained material in the sewer and the presence of breaches in the sewer line present a potential source area to surrounding soil and there is unknown potential for vertical migration through the soil column to the water table.	Fine grained material can migrate downstream within the sewer via infiltrating stormwater, or migrate from the sewer into adjacent soil through breaches in the sewer pipe. PCBs and metals in the fine grained material that leaves the sewer can dissolve and migrate vertically toward the water table then downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in fine grained material within the sewer, or adjacent soil. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the sewer toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewer) toward off-site surface water receptors.	Fine Grained Material Soil Groundwater	P, M, S, V	2013 IRM PDI 2019 March Site Characterization Report 2019 May FFC PDI Activities Work Plan - Amendment #3 2019 August FFC PDI Activities Work Plan - Amendment #4 2020 Interim Remedial Measure #5 Work Plan 2021 May Soil and Groundwater Investigation Work Plan EHS Building Area 2024 Groundwater Monitoring Network Update - Addendum #3	1. The FIS located along the eastern property, identified as part of AOC-2 (Pre-1979 Combined Industrial/Storm Sewer), was evaluated through inline camera surveys, test pitting, sewer content (fine-grained material) sampling, and soil investigation as part of the RI and the FFC PDI (Figure 5-16). 2a. Fine-grained materials were collected from inside catch basins as part of the FIS investigation in 2019 including CB-24 and CB-28. Concentrations were detected above Class C SGVs for various metals including arsenic, barium, cadmium, chromium, copper, lead, mercury, nickel, silver, and zinc. PCB concentrations were reported at 2,452 mg/kg and 28.86 mg/kg (Figure 5-17 and Table 5-14). 2b.Fine-grained materials were collected from inside the FIS in December 2019 from Segment 3 (sample ID "Test Pit 3" from Test Pit 3b) and from Segment 4 (sample ID "Test Pit 2"). Concentrations were detected above Class C SGVs for metals (copper, lead, nickel, and zinc). PCB concentrations were reported at 45.29 mg/kg and 95.75 mg/kg (Figure 5-16 and Table 5-13). 3. Soil samples collected adjacent to Segments 2 and 3 had no detections of total PCBs above Restricted Residential SCOs or Protection of Groundwater SCOs. Arsenic was detected in sample SSHS-B2773-SUB-6-8 and SSHS-B2774-SUB-8-10 at concentrations of 17 and 21 mg/kg, respectively—above the Restricted Residential SCO and Protection of Groundwater SCO of 16 mg/kg. The source of arsenic is unknown. Arsenic detections were lower in the adjacent samples of fine-grained material in CB-24, Test Pit 2, and Test Pit 3b. Soil results do not indicate a release from the FIS to surrounding soils. 4. PCB TOGS groundwater standard exceedances in the East of Gym area (MW-30, MW-34, MW-41, MW-67S, MW-68S, and MW-89S (Table 5-8) are outside the Revised BCP Site Boundary but adjacent to the FIS (Figure 6-1A and Figure 6-2A). 5. TCE was detected at greater than TOGS groundwater standard at 22-32 ft bgs in temporary well B2978A (10 ug/L) adjacent to CB-28 (Table 5-11). Groundwater results do not indicate a release from the storm sewer, rather, it is likely related to AOC-11. 6. FIS removal was conducted during IRM #5, including removal of Segments 2 and 3 along the FFC boundary, Segments 4 and 5, Segment 7 within the FFC, and Segment 8 to the IRM haul road, to remove potential sources of hazardous waste. Confirmation sampling following FIS removal detected total PCBs at or above TSCA levels at FIS-S347 from 14-16 ft bgs. Conclusion: Vertical and lateral extent of AOC-2 has been defined in fine grained material, soil, and groundwater as part of the RI for #c808022. The source of AOC-2 was identified as the Former Industrial Sewer and has been removed as part of IRM #5 and IRM #5A2. Off-Site delineation will be completed and discussed in the #c808054 RIR/AA. Groundwater monitoring will continue under the SMP for Site #c808022. Areas of Concern
Former Sperry Remington Site - North Portion #c808022
Elmira, NY

AOC ID	AOC Description	Sub-AOCs	Sub-AOC Description	AOC Location	Conceptual Site Model			Media of Concern	COPC	Investigations Completed	Investigation Summary	Nature and Extent Defined	Approximate Excavation Depth	Summary of environmental media samples supporting AOC delineation			Co-located SSDS	Depth of Soil Impact (RR SCO exceedances)			
					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
2A	18" Clay Pipe at SE Property Corner	-	-	#c808054	AOC-2A/2B (18-in clay pipe, drywell near CB-15 and 5-ft box culvert) remain in place at the southeastern corner of the Site located on Site #c808054. The orientation, construction and depth of these features are known based on historical depictions (Lancy, 1967) and site investigation using geophysical methods, test pit excavations and robotic CCTV camera inspection (March 2019 Site Characterization Report). These features are near the water table at approximately 14 ft bgs. While no specific potential release has been identified, COPCs (P, S, M) were reported in fine-grained material sampled from catch basins. The COPCs reported in fine grained material in these features present a potential source area to surrounding soil and the underlying water table.	Fine grained material can migrate downstream within the sewer and culvert via infiltrating stormwater, or migrate from the sewer into adjacent soil. PCBs, SVOCs and metals in the fine grained material that leaves the sewer or culvert can dissolve and migrate vertically toward the water table then downgradient through groundwater. Stormwater containing fine grained materials discharging from these features could migrate to off site surface water.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in fine grained material within the sewer, or adjacent soil. 2. Off-site surface water users/ecological communities: Impacted groundwater or storm water (if present) may migrate downgradient/ downstream of the sewer toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewer) toward off-site surface water receptors.	Soil Groundwater	P, M, S, V	Investigations Completed as part of this AOC are documented under #c808054	Investigations completed as part of this AOC are documented under #c808054	To be investigated as part of #c808054							
2B	Drywell at SE Property Corner	-	-	#c808054																	
2C	Drywell Near Building 49	-	-	NAF	AOC-2C (Drywell near former Building 49) is located at the southeastern corner of the Northern Athletic Fields (Figure 1-4). It is located along an alignment parallel to the Site boundary but not visible by way of surface reconnaissance. The location and construction of this feature is known based on historical site drawings. The depth of this former drywell relative to the water table (present approximately 14 to 16 ft bgs) is unknown. While no specific potential release has been identified, COPCs have been reported in soil near this feature above protection of groundwater screening criteria. The COPCs reported present a potential source area for vertical migration through the soil column to the water table at the feature.	Fine grained material within the former dry well can migrate downstream within the sewer via infiltrating stormwater, or migrate from the dry well sewer into adjacent soil.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in fine grained material within the dry well, or adjacent soil. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the dry well toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewer) toward off-site surface water receptors.	Soil Groundwater	P, M, S, V	2001 Sampling Report 2003 Health Consultation 2009 EMP 2018 FFC RI/PDI Work Plan 2019 Revised Remedial Investigation Work Plan 2023 July Groundwater Monitoring Network Update - Addendum #3 2026 NAF CCR	1. AOC-2C was evaluated by soil and groundwater investigations in 2021, TPH diesel range organics were detected above the nuisance criteria of 1,000 mg/kg at B3343, B3668, B3669, and B3670 in the southeastern corner of the NAF between 10 and 16 ft bgs (Figures 5-4F to 5-4H). Metals, SVOCs, and VOCs were not detected above Restricted Residential SCOs or Protection of Groundwater SCOs at those locations or in surrounding soils. PCBs exceeded Protection of Groundwater SCOs in this area at B572A from 16-18 ft bgs but is vertically delineated below 18 ft bgs. 2.TOGS groundwater standards exceedances at the adjacent monitoring well, MW-58, were for iron and manganese only and are attributed to groundwater redox fluctuations and are not Site-related (Figure 6-1B and Figure 6-2B). This sampling was completed under the Groundwater Monitoring Network Update - Addendum #3. 3. Excavation as part of IRM #5A2 (Area 3) in the southeast corner of the NAF did not identify a historical drywell associated with AOC-2C. Conclusion: Comprehensive excavations were completed as part of IRM #5A2; however, the drywell associated with AOC-2C was not located. COPCs in soil and groundwater investigations completed under the #c808022 RI have been laterally and vertically defined based on the information above.	Soil - Yes Groundwater - Yes	4	MW-58	MW-98S MW-98I MW-99S MW-99I	-	-	18 ft	Not detected above RR SCOs		
2D	Manhole SW-73 Near Building 28A	-	-	FFC	AOC-2D (Manhole SW-73) was located near Former Building 28A (Figure 1-3 and 1-4); this area was previously addressed by sampling and remedial actions for IRM #1 and the FFC PDI. COPCs including PCBs and metals have been detected in fine-grained material in the former industrial sewer at CB-01 and CB-24 (Figure 5-16) based on the findings of the March 2019 Site Characterization Report. The depth of this former manhole relative to the water table (present approximately 14 to 16 ft bgs) is unknown. Like other features associated with the former industrial sewer, the presence of COPCs in fine grained material in the manhole presents a potential source area to surrounding soil and the underlying water table.	Fine grained material (if present) within the former manhole can migrate downstream within the sewer via infiltrating stormwater, or migrate from the manhole into adjacent soil.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in fine grained material within the manhole, or adjacent soil. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the manhole toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewer) toward off-site surface water receptors.	Soil Groundwater	P	1952 DOH Waste Sampling 2001 Sampling Report 2003 Health Consultation 2009 EMP 2015 May Site Characterization Work Plan - Addendum #1 2016 January Site Characterization Work Plan - Addendum #2 2016 August Site Characterization Work Plan - Addendum #3 2017 February Site Characterization Work Plan - Addendum #4 2017 March Site Characterization Work Plan - Addendum #5 2017 IRM #1 Work Plan 2019 March Site Characterization Report 2021 May Soil and Groundwater Investigation Work Plan - EHS Building Area 2024 IRM #3 CCR	1. PCBs above PoG, RRSCOs, and hazardous waste criteria were identified within and surrounding AOC-2D from 0-16 ft bgs between 2015 and 2017 under the Site Characterization Work Plan and subsequent addenda. 2. Remediation for IRM #3, completed in 2019, occurred within the AOC-2D footprint from 14-16 ft bgs. IRM confirmation samples collected at the base of the excavation and AOC footprint above SCOs for PCBs included IRM3-B016 (2.68 mg/kg), IRM3-S201 (5.79 mg/kg), and IRM4-S163BOT2 (12.09 mg/kg) as depicted on Figure 6-4H. IRM confirmation samples above SCOs are laterally delineated by B2812, B800, B792, and B803/B803A and vertically delineated by B800, B792, and B803A. 3. Temporary monitoring well (B2752) and monitoring wells (MW-15S and MW-84S) were installed to measure PCB concentrations in groundwater below AOC-2D. Total and dissolved PCBs were reported above TOGS groundwater standards for MW-15S in 2016 at 0.48 and 0.594 µg/L. Temporary monitoring well B2752 was sampled in 2019 and was ND. MW-15S was decommissioned in preparation for excavation of IRM #1. MW-84S was installed to replace MW-15S in 2021. Results for PCBs at MW-84S were ND. Conclusion: Vertical and lateral extent of AOC-2D has been defined in soil and groundwater as part of the RI for #c808022. Comprehensive excavations were completed as part of IRM #3; however, the manhole associated with AOC-2D was not located. PCBs in soil and groundwater investigations completed under the #c808022 RI have been laterally and vertically defined based on the information above. 2E	Waste Pit near Building 44	-	-	EHS Building	AOC-2E (Former waste pit) underlies the EHS building (Figure 1-4). The depth of this feature relative to the water table (present approximately 14 to 16 ft bgs) or the presence of COPCs in its immediate vicinity are unknown. While no specific potential release has been identified, COPCs have been reported in soil near this feature above protection of groundwater screening criteria. While the presence of the EHS building slab reduces the potential for stormwater infiltration, the COPCs reported present a potential source area for vertical migration through the soil column to the water table at the feature. The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers. The potential for VOCs to migrate into indoor air has been assessed through soil vapor investigation and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B).	COPCs in subsurface soil (if present) can migrate toward the water table and then downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	1967 Lancy Report &Figures 1958 DOH Industrial Outfall Report 1977-79 SHS Construction and Demolition Plans Sanborns Fire Insurance Maps Oil House 1994 Miller Pond Spill #94-166682001 Sampling Report 2003 Health Consultation 2009 EMP 2010 ACR 2013 IRM PDI 2014 VI Assessment 2018 Supplemental VI Assessment 2021 May Soil and Groundwater Investigation Work Plan - EHS Building Area 2023 Annual Heating Season Sampling 2024-2025 PRRs	1. Monitoring wells installed downgradient and/or cross gradient of AOC-2E include MW-13 and MW-85I located within Site #c808022 and MW-88S and MW-88I located within Site #c808054. 1a. MW-13 was sampled for total and/or dissolved PCBs in February and July 2021 and April 2024. For each event, results were below TOGS. SVOCs and VOCs were sampled in August 2014, February and July 2021, and April 2024. For each event, results were below TOGS. Metals and PFAS were sampled in February and July 2021. PFAS was reported below TOGS; however, metals, specifically for iron (1,000-3,300 µg/L) and manganese (420-760 µg/L) were reported above TOGS for each sampling event. 1b. MW-85I was sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in July and September 2021 and April 2024. For each event, PCBs and VOCs were below TOGS. In 2024, iron exceeded TOGS at 310 µg/L. SVOCs were reported above TOGS in July 2021 for DEHP at 13 µg/L but were below TOGS in September 2021 and in 2024. 1c. MW-88I was sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in July and September 2021 and April 2024. For each event, results for PCBs, SVOCs, and VOCs were below TOGS. Metals exceeded TOGS in 2024, specifically for iron (890 µg/L). 1d. MW-88S was sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in July and September 2021 and April 2024. For each event, results for PCBs, SVOCs, and VOCs were below TOGS. Metals exceeded TOGS for each sampling event, specifically for iron (800-7,300 µg/L) and manganese (1,600-2,300 µg/L). 2. Concentrations reported above TOGS for iron and manganese only are attributed to groundwater redox fluctuations and are not Site-related. DEHP is a common lab contaminant and is not a Site COPC. 3. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor sample SSHS-23-SS was collected in the vicinity of AOC-2E, within Room 156. VOCs were reported below NYSDOH Matrix Guidelines at SSHS-23-SS. 4. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). Conclusion: Nature and extent of potential groundwater contamination associated with AOC-2E beneath the EHS building was investigated through sampling of downgradient monitoring wells. COPCs in groundwater samples collected on Site #c808022 and #c808054 have been defined based on the information above. SSDS have been installed in to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring.	Groundwater - Yes	NA	-	MW-88S MW-88I	SSHS-23-SS	Gymnasium	As additional soil investigation beneath the EHS building was not feasible the presence of COPCs in soil within the portions of AOC-2E underlying the school building is unknown			
3	1979 Storm Sewer	-	-	Site-Wide	AOC 3 (1979 storm sewer) is currently used as the high school's storm water drainage system, and the location is shown on Figure 1-4. Pre-RI work, including FFC RI/PDI, has assessed the location, orientation and depth of sewer. Fine grained material from catch basins within the FFC have been assessed and sampled where material was present as part of the FFC RI/ IRM#3 PDI. Given the depth of the catch basins (up to 12 feet bgs) relative to the water table (present approximately 14 to 16 ft bgs) these COPCs present a potential source area for vertical migration through the soil column to the water table.	Fine grained material (if present) within the storm sewer can migrate downstream within the sewer via stormwater transport, or migrate from the storm sewer or catch basins into adjacent soil.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in fine grained material within the storm sewer, catch basins, or adjacent soil. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the storm sewer toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewer) toward off-site surface water receptors.	Fine-Grained Material Soil Groundwater	S,M,P	2013 IRM PDI Data Report 2019 FFC PDI Activities Work Plan - Amendment #3 2019 FFC PDI Activities Work Plan - Amendment #4 2020 FFC PDI Data Report 2026 FFC CCR	1. The active EHS storm sewer water line (post-1979) located on the south side of the FFC (flowing W-E) with laterals extending north along the east and west sides of the FFC, identified as AOC-3, was evaluated through inline camera surveys, geophysical investigation, inspection of catch basins (dimensions, depths, integrity of structure), catch basin content (fine-grained material) sampling, soil investigation, and groundwater investigation as part of the RI and FFC PDI. 2. Twenty (20) catch basins were inspected along the current storm sewer line in the FFC as part of the investigation in 2019 (Table 2-7). All catch basins were observed to have solid bottoms. Fine-grained materials were collected from inside (13) catch basins (Table 5-14). For two catch basins (CB-05, CB-09), fine grained materials were not observed during 2019 field inspection, so data from a sampling event in 2015 were included for evaluation. Concentrations were detected above NYSDEC Class C SGVs for total PAHs (CB-05) and chromium (CB-09). Given that no spatial trends were observed, and the most downstream catch basin (CB-05) had exceedances for total PAHs only, this indicated that these exceedances were localized. Exceedances remain in place in catch basins due to active EHS use of the storm sewer line. 3. Soil samples were collected adjacent to the down-gradient side of CB-05 and CB-09 where exceedances were detected in catch basin fine-grained material (Table 5-14). There were no detections in samples collected by CB-05. PCBs were detected above the subsurface screening criteria in sample B2977-SUB-10-12 (13.48 mg/kg) collected adjacent to CB-09, but there were no exceedances in sample B2977-12-14. This exceedance is laterally delineated by B653, B3567, B621, and B646 and vertically delineated by B2877, B2724, B653, and B3567. Soil results do not indicate a release from the storm sewer to surrounding soils. The soil exceedance at B2977-SUB-10-12 remains in place (Table 5-6A). 4a. Monitoring wells installed directly downgradient of the exceedance at CB-09 on Site #c808022 include temporary wells B3557, B3558, B3559, B3560, B3561, B3562, B3563, B3563I, B3564, B3565, B3566, and MW-103S and MW-103I. The temporary wells were sampled in January 2021 for total and/or dissolved PCBs, metals, and VOCs. During this event, results for PCBs were above TOGS in nine of the temporary wells, ranging from 0.097 ug/L (B3571) to 32.85 ug/L (B3563I). PCBs were detected below TOGS in well B3559 and non-detect in wells B3557 and B3560. Metals were detected in all 12 wells, but none exceeded TOGS. VOCs were detected in wells B3563 and B3563I but did not exceed TOGS. MW-103S and MW-103I were sampled for total and/or dissolved PCBs, metals, SVOCs, VOCs, and 1,4-dioxane in September 2023 and April 2024. For each event, results for total PCBs exceeded TOGS. MW-103I had concentrations of 6 ug/L and 7.99 ug/L, and MW-103S had concentrations of 2 ug/L and 1.6 ug/L, respectively. Metals and SVOCs were detected but did not exceed TOGS for both wells on both sampling dates. VOCs and 1,4-dioxane were non-detect for both wells on both sampling dates. Groundwater results do not indicate a release from the storm sewer. 4b. Monitoring wells installed directly downgradient of the exceedance at CB-05 on Site #c808022 include MW-33, MW-34, and MW-10. MW-33 was sampled in March 2016 for PCBs (detected below TOGS); in February 2021 for metals, PCBs, emerging contaminants, VOCs, and SVOCs; and in July 2021 for PCBs, metals, VOCs, SVOCs, and emerging contaminants. The February 2021 sample had metals exceedances of TOGS for iron (3,000 ug/L) and manganese (1,500 ug/L), emerging contaminants detected below TOGS, and no detection for PCBs, VOCs, or SVOCs. The July 2021 sample had a metals exceedance of TOGS for iron (1,700 ug/L) and manganese (990 ug/L), a SVOCs exceedance of TOGS for bis(2-ethylhexyl) phthalate (DEHP, 8 ug/L), emerging contaminants detected below TOGS, and no detection for PCBs or VOCs. MW-34 was sampled in August 2018 and March 2016 for PCBs and in February, March, and April 2021 for PCBs, metals, emerging contaminants, VOCs, and SVOCs. PCBs exceeded TOGS in samples taken in 2014 (1.9 ug/L) and 2016 (1.1 ug/L). In 2021, PCBs exceeded TOGS in February and April (0.59 ug/L and 0.29 ug/L, respectively), and metals exceeded TOGS in February and April for iron (6,400 ug/L and 1,100 ug/L, respectively) and manganese (1,700 and 1,100, respectively), and SVOCs exceeded TOGS in March and April for bis(2-ethylhexyl)phthalate (DEHP, 9.8 ug/L). Emerging contaminants were detected below TOGS, and VOCs were not detected in 2021. MW-10 was sampled in August 2014 for PCBs (non-detect); February 2021 for PCBs (non-detect), metals, and VOCs (non-detect); March 2021 for SVOCs (non-detect), and July 2021 for PCBs, metals, VOCs, and SVOCs. Metals exceeded TOGS in February 2021 for iron (4,300 ug/L) and manganese (1,500 ug/L). In July 2021, metals exceeded TOGS for iron (1,800 ug/L) and manganese (1,100 ug/L), SVOCs exceeded TOGS for bis(2-ethylhexyl) phthalate (DEHP, 44 ug/L), and PCBs and VOCs were not detected. 5. Concentrations reported above TOGS for iron and manganese only are attributed to groundwater redox fluctuations and are not Site-related. DEHP is a common lab contaminant and is not a Site COPC. Conclusion: Vertical and lateral extent of AOC-3 has been defined in fine grained material, soil, and groundwater as part of the RI for #c808022 based on the supporting information above. 					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
3A	1979 Drywell Field	AOC-3A-1	-	NAF	AOC 3A (Drywell Fields) includes eight (8) discrete areas characterized by NYSDEC as drywell fields located in the Northern Athletic Fields and near the tennis courts (Figure 1-4). One (1) small area near the tennis courts was characterized by sampling associated with IRM #1. The location and construction of these dry wells are known based on historical site drawings. Their depth relative to the water table (present approximately 14 to 16 ft bgs) is unknown. While no specific potential release has been identified, historical operation of these structures have the potential to have resulted in release of COPCs to underlying soil, and there is unknown potential for vertical migration through the soil column to the water table.	Fine grained material (if present) within the former dry wells can migrate downstream within the sewer via infiltrating stormwater, or migrate from the dry well structures into adjacent soil.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in fine grained material within the dry well, or adjacent soil. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the dry well toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewer) toward off-site surface water receptors.	Soil Groundwater	P, M, S, V	1977-79 SHS Construction and Demolition Plans 2001 Sampling Report 2003 Health Consultation 2009 EMP 2022 Dry Well Closure Plan 2022 Revised NAF Dry Well Soil Quality Verification WP 2023 Revised NAF Dry Well Soil Quality Verification Report 2023 Dry Well DW-3B Soil Quality Verification Update 2024 Dry Well Closure Plan, Amendment #1 2024 Dry Well Closure Report 2026 NAF CCR	1. AOC-3A is comprised of eight discrete areas characterized as drywell fields, including DW-1, DW-2, DW-3, DW-3A, DW-3B, DW-20, DW-21, DW-N and one unnamed drywell in the NAF, and one unnamed drywell west of the tennis courts. As these wells were encountered during IRM activities, the surrounding soil and groundwater was evaluated, as well as fine-grained material encountered inside the dry wells, before wells were abandoned in place or removed. 2. DW-1, DW-2, and DW-3 were identified northwest of the softball field during IRM #5A2 excavations, and removed between 8 November 2021 and 10 November 2021. Confirmation samples were taken, and there were no exceedances of screening criteria at DW-1 or DW-2. A DW-3 sidewall confirmation sample had a restricted residential exceedance (1300 mg/kg) of copper at 4-6 ft bgs (IRM5A2-DW3-S1) and a PoG exceedance (50 mg/kg; 270 mg/kg) of chromium(III+IV) and nickel at 8-10 ft bgs (IRM5A2-DW3-4). These exceedances remain in place and are laterally delineated by B3254, B418-S2, S448, and AreaC-B3-S1 and B3069, B3921, DW-16, B2056, and B3055, respectively. They are both vertically delineated by DW3-BOT1, B3069, and B3921. No groundwater TOG exceedances have been detected in MW-54, located adjacent to AOC-3A, indicating no groundwater impacts from DW-3. 3. Drywell DW-20 was encountered during excavations on 20 April 2022 at 2 feet bgs. A soil sample was collected from the interior of DW-20 (IRM5A2-A5-DW1) and did not show exceedances of IRM #5A2 screening criteria or action levels. An 8-in diameter steel pipe connection to the south was observed, and on 3 May 2022, DW-21 was observed approximately 90-inches south of the pipe opening at 2.5 feet bgs. DW-21 was not sampled. Removal of DW-21 was not feasible due to its proximity to the EHS maintenance shed, therefore a Dry Well Closure Plan was submitted and approved as modified. The dry wells were abandoned in place using flowable fill. MW-63I and MW-63S are in this AOC-3A area and have been sampled for PCBs, metals, SVOCs, and VOCs in February 2021, April 2021, and September 2023. MW-63I had one TOGS exceedances of PCBs (0.53 ug/L) in February 2021. There were no other exceedances of any constituents in either well. This PCB exceedance is unlikely to be associated with AOC-3A as there were no exceedances from the drywell sample. 4. Dry wells DW-3A and DW-3B were exposed during soil removal excavations for IRM #5A2 in the EHS shotput and discs area. DW-3A was removed due to an exceedance of the PoG SCO for PCBs in a sidewall sample at 4-6 feet bgs (FL-FISN-S41), and soil was excavated to a depth of 6 feet bgs. Due to an exceedance of the PoG SCO for arsenic in a sidewall sample from an IRM #5A2 excavation approximately 28 feet northwest of DW-3B, Geosyntec evaluated anticipated groundwater mounding at DW-3B. It was concluded that stormwater infiltration from DW-3B would not result in groundwater contact with the area of the PoG SCO exceedance, so modification was not needed, and the dry well remains in place. 5. Exceedances of PCB PoG down to 18 ft beneath the softball fields and near AOC-19 (SSHS-B3884-SUB-14-16, 121 mg/kg, and SSHS-B3884-16-18, 32.1 mg/kg) were sampled in 2021. Additional groundwater data at MW-50 indicated PCB exceedances in this area in 2021 (2.3 ug/L). Between 8 February 2022 and 9 February 2022, an unnamed historical dry well located beneath the softball fields was encountered and removed to facilitate excavations to 16 ft. The exceedance at 18 feet remains in place, and is laterally delineated by B3923, B3454, S311, and S725 and vertically delineated by B3884, B3924, and B3926. Data above SCOs for soil and GW above TOGS are not indicative of a release from AOC-3A, but rather, likely related to AOC-19 (see AOC-19). 6. During excavation along the northern Site boundary under IRM #5A2 Addendum #8 Phase 7, a dry well (DW-N) was observed at the northern entrance to the VFW property at approximately 1.5 feet bgs. On 9 April 2024, a sample of fine-grained materials was collected from the interior where no detections above PoG SCOs were reported. MW-53 is located adjacent to DW-N, and has been sampled in February 2021, April 2021, and September 2023. No exceedances of TOGS were detected for PCBs, metals, VOCs, or SVOCs. DW-N was filled with flowable fill and abandoned in place. Historical plans indicate two additional dry wells on the northern property line, but no other dry wells were identified by IRM activities. It is presumed that these two wells no longer exist and/or were removed when the gas line was installed. 7. Significant excavations were conducted up to 12 feet bgs along the eastern property line where historical plans indicate additional dry wells, but no dry wells were encountered. It is presumed that they may have been removed during the gas line installation. 8. Historical plans indicate one dry well located west of the tennis courts, however, its footprint is outside of #c808022. This well was not encountered during excavations or RI investigation borings, investigations completed for this location are documented under #c808054. Conclusion: Vertical and lateral extent of AOC-3A has been defined in soil, groundwater, and fine-grained material as part of the RI for #c808022 as discussed above. Comprehensive excavations were completed as part of IRM #5A2. Drywells associated with AOC-3A were either not located, or were identified and removed during the IRM. 		AOC-3A-2		#c808054									To be investigated as part of #c808054								
4	Earthen Waste Pits near EHS Gym and Pool	-	-	EHS Building	AOC 4 (Earthen waste pits) is located below the EHS gymnasium on Site #c808022 and an adjoining portion on #c808054 (Figure 1-4). The location and depth of the former waste pits are known from historical documentation. The former elevations of the waste pits were from approximately 852 to 857 feet msl. While the presence of the EHS building slab reduces the potential for stormwater infiltration through this AOC, the feature has the potential to have resulted in release of COPCs to underlying soil, and there is unknown potential for vertical migration through the soil column to the water table (present approximately 14 feet bgs). The potential for VOCs to migrate into indoor air has been assessed through soil vapor investigation and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers.	COPCs in impacted soil within or beneath the former waste pits (if present) can dissolved and migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	2001 Sampling Report 2003 Health Consultation 2004 IIWA GW Investigation 2006 Guidance for Evaluating Vapor Intrusion in The State of New York 2009 EMP 2010 Health Consultation 2010 ACR 2014 VI Assessment 2017 Soil Vapor Intrusion Updates, May 2017: Updates to Soil Vapor/Indoor Air Decision Matrix 2018 Supplemental VI Assessment 2019 ISMP 2021 May Soil and Groundwater Investigation Work Plan EHS Building Area 2023 Annual Heating Season Sampling 2024-2025 PRRs	1. AOCs within the footprint of the EHS building (see Figure 1-4) including AOC-4, were evaluated using conventional indoor air, outdoor air, and sub-slab vapor sampling data and HVS data, as well as data from previous soil and groundwater investigations and the RI groundwater investigation. 2. Sub-Slab Vapor: 1,1,1-trichloroethane (TCA) and Trichloroethene (TCE) were detected below the east side of the Gymnasium in 2009 at concentrations of 23,000 µg/m3 and 28 µg/m3, respectively. ECSD installed a sub-slab vapor mitigation system in the Gymnasium in 2010. Sub-slab vapor below the Gymnasium was not sampled by Unisys in 2014 and 2018 due to the presence of the vapor mitigation system. Sampling of the Gymnasium SSD effluent by Unisys detected 19 µg/m3 of TCE in June 2018 and 3.4 µg/m3 of TCE in November 2023. TCA was not detected above the laboratory reporting limit. This suggests that TCE may be present in sub-slab vapor below the Gymnasium at decreasing concentrations, but the continued presence of TCA is unknown. 3. Indoor Air: ECSD collected indoor air samples at eight locations in December 2009 as part of the Indoor Air Quality Action Plan included in the EMP. 1,1,1-trichloroethane (TCA) was detected at a concentration of 2.4 µg/m3 in the Gymnasium, below the Soil Vapor/Indoor Air Decision Matrix 2 value for mitigation of 3 µg/m3 issued in 2006 and maintained in the Soil Vapor/Indoor Air Decision Matrix B value for mitigation issued in 2017. 4. Vapor Mitigation: A sub-slab vapor mitigation system was installed in the EHS gymnasium as part of a remodeling project conducted in 2010 (Sterling, 2011). The vapor mitigation system consists of a vapor barrier and a SSD system. 5. Monitoring wells installed directly downgradient and/or crossgradient of AOC-4 on Site #c808054 include MW-12, MW-87I, MW-88I, and MW-88S. 5a. MW-12 was sampled for total and/or dissolved PCBs in July and September 2021. For each event, results for PCBs were below TOGS. Metals exceeded TOGS in February 2021 for aluminum (4,200 µg/L), iron (7,000 µg/L) and manganese (1,300 µg/L). Dissolved manganese exceeded TOGS at 360 µg/L. Iron was also detected above TOGS in July 2021 at 560 µg/L. SVOCs exceeded TOGS in 2000 for Benzo(a)anthracene (1. 2 µg/L) and chrysene (2.8 µg/L) but were below TOGS in 2021. DEHP exceeded TOGS in July 2021 at 6.1 µg/L. MW-12 was sampled 17 times between 1997 and 2021. During these sample events, cis-1,2-dochloroethene (9 µg/L) and freon (30-160 µg/L) were reported above TOGS. Results in 2021 did not report VOCs above TOGS. 5b. MW-87I was sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in July and September 2021 and April 2024. For each event, results for PCBs and VOCs were below TOGS. Metals exceeded for iron (400 µg/L) in July 2021 and July and September 2021 for manganese (340-630 µg/L). SVOCs exceeded TOGS for DEHP in July (13 µg/L) and September (21 µg/L) 2021. 5c. MW-88I was sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in July and September 2021 and April 2024. For each event, results for PCBs, SVOCs, and VOCs were below TOGS. Metals exceeded TOGS in 2024, specifically for iron (890 µg/L). 5d. MW-88S was sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in July and September 2021 and April 2024. For each event, results for PCBs, SVOCs, and VOCs were below TOGS. Metals exceeded TOGS for each sampling event, specifically for iron (800-7,300 µg/L) and manganese (1,600-2,300 µg/L). 5e. Concentrations reported above TOGS for iron and manganese only are attributed to groundwater redox fluctuations and are not Site-related. Conclusion: Soil Vapor and indoor air have been assessed and investigated as part of AOC-1. Nature and extent of potential groundwater contamination associated with AOC-4 beneath the EHS building was investigated through sampling of downgradient monitoring wells. Additional soil investigation downgradient of AOC-4 is being addressed under #c808054. COPCs in groundwater samples collected on Site #c808022 and #c808054 have been defined based on the information above for this AOC.	Groundwater - Yes	NA	-	MW-12 MW-87I MW-88S MW-88I SB1 B26-A B29-A	SV-GYM EAST	Gymnasium	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-4 underlying the school building is unknown

5	Sludge Tanks/ Beds/Brick Pits near Building 64	AOC-5-1	-	EHS Building	AOC 5 (sludge tanks/beds/brick pits near Building 64) underlies the EHS building (Figure 1-4). Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil. While the presence of the EHS building slab reduces the potential for stormwater infiltration through this AOC, the feature has the potential to have resulted in release of COPCs to underlying soil, and there is unknown potential for vertical migration through the soil column to the water table (present approximately 14 to 16 feet bgs). The potential for VOCs to migrate into indoor air has been assessed through soil vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers.	COPCs in impacted soil within or beneath the former pits (if present) can dissolved and migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	2003 DOH Health Consultation 2009 EMP 2009 Indoor Air/Sub-slab Vapor Investigation 2010 DOH Health Consultation 2013 IA Sampling 2014 VI Assessment 2018 Supplemental VI Assessment 2019 ISMP 2020 April Remedial Investigation Workplan Amendment 2021 April Soil and Groundwater Investigation Workplan - EHS Building Area (EoG) 2022 June Groundwater Monitoring Network Update 2023 August Groundwater Monitoring Network Update - Addendum #3 2023 Annual Heating Season Sampling 2024-2025 PRRs	1. Monitoring wells installed downgradient of AOC-5 includes MW-91S and MW-91I location on Site #c808054. 1a: MW-911 was sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in September and November 2021 and April 2024. PFAS was only sampled in September and November 2021. PCBs, metals, SVOCs, VOCs, and PFAS were reported below TOGS for each sampling event. 1b: MW-91S was sampled for total and/or dissolved PCBs, metals, SVOCs, VOCs in September and November 2021 and April 2024. PFAS was only sampled in September and November 2021. PCBs, SVOCs, and VOCs were reported below TOGS for each sampling event. Total and dissolved manganese was reported above TOGS (720-740 µg/L) in September 2021, but below in November 2021 and April 2024. Perfluorooctanesulfonic acid (PFOS) was reported above TOGS (5.7 ng/L) in September 2021, but below in November 2021. 1c. Concentrations reported above TOGS for iron and manganese only are attributed to groundwater redox fluctuations and are not Site-related. Concentrations for PFOS above TOGS is believed to be attributed to an off-site upgradient source. 2. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor samples were collected within AOC-5-4 (SSHS-10-SS), AOC-5-2 (SSHS-09-SS), in the vicinity of AOC-5V-2A-F (SSHS-08-SS and SSHS-03-SS), and in the vicinity of AOC-5-1 (SS-133). Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. VOCs were detected below NYSDOH Matrix Guidelines for these sample locations with the exception of SSHS-03-SS. Sub-slab samples collected near AOC-5 in Room 127 (SSHS-03-SS) had TCE (39,000 µg/m3) and cis-1,2-DCE (2,000 µg/m3) observed above NYSDOH Matrix guidelines for sub-slab vapor (Figure 5V-2A-F). Based on the detections of TCE and cis-1,2-DCE, Unisys installed a sub-slab vapor mitigation system in the F-Wing in 2014 as discussed in Section 3.2.4. TCE and cis-1,2-DCE were detected in the SSD system effluent in November 2023 with concentrations of 339 µg/m3 and 66.6 µg/m3, respectively. TCE effluent concentrations decreased between June 2018 and July 2021, increased in December 2021, then slightly decreased in November 2023 as shown on Figure 6V-2. This indicates that TCE and cis-1,2-DCE are still present in sub-slab vapor below F-Wing and may potentially be associated with AOC-5. 3. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). Conclusion: Soil Vapor and indoor air have been assessed and investigated as part of AOC-1. Nature and extent of potential groundwater contamination associated with AOC-5 beneath the EHS building was investigated through sampling of downgradient monitoring wells located on Site #c808054. COPCs in groundwater samples collected on Site #c808054 have been defined as part of #c808022 based on the information above.	Groundwater - Yes	NA	-	MW-71S MW-71I MW-90S MW-90I MW-91S MW-91I	SS-133	-	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-5 underlying the school building is unknown

6	Concrete Vaults	AOC-6-3	-	EHS Building	AOC 6 (concrete vaults) are discrete areas characterized by NYSDEC as former concrete vaults located north of the EHS building and one discrete area straddling the southwestern Site boundary (Figure 1-4). Two other discrete areas identified as part of AOC 6 lie off Site to the south and as such are not included in the RI for this Site. The former concrete vault area north of the EHS building has been characterized by the RI of the FFC and PDI activities for IRM #3. Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil, and there is unknown potential for vertical migration through the soil column to the water table (located approximately 14 to 16 ft bgs).	COPCs in impacted soil within or beneath the former vaults (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	1967 Lancy Report and Figures 1977-79 SHS Construction and Demolition Plans 1977 Empire Soils Report 1994 Miller Pond Spill #94-16668 2003 DOH Health Consultation 2009 EMP 2010 DOH Health Consultation 2011 2013 EMP Annual Reports 2014 VI Assessment 2015 May Site Characterization Work Plan - Addendum #1 2016 January Site Characterization Work Plan - Addendum #2 2016 August Site Characterization Work Plan - Addendum #3 2017 February Site Characterization Work Plan - Addendum #4 2017 March Site Characterization Work Plan - Addendum #5 2018 Supplemental VI Assessment 2019 ISMP 2019 March Site Characterization Report 2020 September Football Field Complex Pre-Design Investigation Report 2023 Annual Heating Season Sampling 2024-2025 PRRs 2026 FFC CCR	1. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor sample SSHS-164 was collected within AOC-6-3. VOCs were reported below NYSDOH guidelines at SSHS-164. 2. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). 3. Potential impacts of AOC-6-3 on groundwater quality were evaluated using samples collected from monitoring wells located downgradient of the AOC. Monitoring wells installed downgradient of AOC-6-3 include MW-85I and MW-13. Groundwater samples collected as part of the RI investigation of AOC-6 were analyzed for PCBs, metals, SVOCs, and VOCs. Groundwater samples are shown compared to TOGS groundwater standards on Figures 5-2A-1 through 5-2D-2. Groundwater analytical results are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. PCBs, metals, VOCs, and SVOCs were not observed above TOGS groundwater standards at MW-85I and MW-13 downgradient of AOC-6-3. Conclusion: SSDS have been installed in the Gymnasium, K-Wing Science Addition, Cafeteria and Cafeteria Addition, F-Wing, and Music Wing of EHS to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. Results have been reported in ISMP PRRs for 2019–2025 and 2023 Heating Season Soil Vapor Intrusion Monitoring and Sampling Report. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring. Based on these findings, the potential VI to indoor air has been mitigated. Additional sampling of indoor air for VOCs will continue under the SMP for Site #c808022. Groundwater monitoring will continue under the SMP for Site #c808022.	Soil - Yes Groundwater - Yes	NA	-	MW-85I MW-13	SSHS-164	-	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-6-3 underlying the school building is unknown			
		AOC-6-1		NAF			1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater			1. One soil boring, B3103, was installed within AOC-6-1 to a maximum depth of 16 ft bgs. COPCs, including PCBs, metals, and VOCs, were not identified above Restricted Residential SCOs. As per the 2019 RI Work Plan, SVOCs were previously collected within 30 ft of AOC-6-1 including B38 and B404 where concentrations were not identified above Restricted Residential SCOs. Historical vaults associated with AOC-6 were not identified during IRM excavations. 2. Monitoring well MW-65 was installed within AOC-6-1. MW-65R was installed downgradient of AOC-6-1. PCBs, Metals, SVOCS, and VOCs were reported below TOGS groundwater standards. Metals were not consistently reported at concentrations above TOGS groundwater standards in monitoring wells with the exception of thallium, iron, and manganese. For these three metals, further evaluation found that thallium exceedances are due to false positive bias due to the analytical method, and iron and manganese concentrations are not Site-related. Conclusion: Comprehensive excavations were completed as part of IRM #4, IRM #4A, IRM #5 where a specific source of AOC-6-1 was not identified. Vertical and lateral extent of AOC-6-1 has been defined in soil and groundwater as part of the RI for #c808022 as discussed above		16	MW-65	MW-65R	-	-	Not detected above RR SCOs			
		AOC-6-2		FFC			1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater		1. Soil borings completed within AOC 6-2, 6-7, 6-8, 6-9, and 6-10 were completed between 2016 to 2019 from 0 to 16 ft bgs for PCBs, metals, SVOCs, and VOCs. Concentrations above SCOs were identified for PCBs ranging between 1.03-37.2 mg/kg. PCBs exceeding SCOs were subsequently removed during excavations completed on the FFC during IRM #4, IRM #4A, and IRM #5. Historical vaults associated with AOC-6 were not identified during IRM excavations. 1a. PCBs remain in place above RRSCOs and/or PoG in confirmation samples collected following slide rail excavations to 16ft bgs as well as borings completed within the AOC footprint or immediately up-gradient to depths of 42 ft bgs, but are laterally and vertically delineated in soil. 2. Monitoring wells installed downgradient of AOC-6 and of areas where concentrations above SCOs remain at or below the water table include MW-13, MW-36, MW-40, and MW-85I. 2a. MW-13 was sampled for total and/or dissolved PCBs in February and July 2021 and April 2024. For each event, results were below TOGS. SVOCs and VOCs were sampled in August 2014, February and July 2021, and April 2024. For each event, results were below TOGS. Metals and PFAS were sampled in February and July 2021. PFAS was reported below TOGS; however, metals, specifically for iron (1,000-3,300 µg/L) and manganese (420-760 µg/L) were reported above TOGS for each sampling event. Metals were not detected above SCOs during soil investigations completed within AOC-6. 2b. MW-36 was sampled for total and/or dissolved PCBs in March 2016, August 2018, and March and April 2021. For each sampling event, PCB results were below TOGS. Total and/or dissolved metals and VOCs were sampled in August 2018 and March and April 2021. For each sampling event, VOCs were below TOGS. Total and dissolved Metals concentrations exceeded TOGS for each sampling event for iron (2,000-8,300 µg/L) and manganese (1,000-3,700 µg/L), with the exception of totals concentrations for arsenic (41 µg/L) and lead (31 µg/L) which exceeded TOGS in March 2021. Additional sampling completed in April 2021 for total and dissolved arsenic and lead did not exceed TOGS. SVOCs were sampled in August 2018 and March and April 2021 where DEHP exceeded TOGS at 5.3 and 9.9 µg/L. 2c. MW-40 was sampled for total PCBs, metals, SVOCs, and VOCs in May 2019 and February 2021. For each sampling event, PCB, SVOC, and VOCs results were below TOGS. Metals concentration exceeded TOGS for each sampling event, specifically iron (4,000-4,500 µg/L) and manganese (660-930 µg/L). 2d. MW-85I was sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in July and September 2021 and April 2024. For each event, PCBs and VOCs were below TOGS. In 2024, iron exceeded TOGS at 310 µg/L. SVOCs were reported above TOGS in July 2021 for DEHP at 13 µg/L but were below TOGS in September 2021 and in 2024. 2e. Concentrations reported above TOGS for iron and manganese only are attributed to groundwater redox fluctuations and are not Site-related. DEHP is a common lab contaminant and is not a Site COPC. Conclusion: Comprehensive excavations were completed as part of IRM #4, IRM #4A, IRM #5 where a specific source of AOC 6-2, 6-7, 6-8, 6-9, and 6-10 was not identified. Vertical and lateral extent of AOC-6 has been defined in soil and groundwater as part of the RI for #c808022 as discussed above		16	-	MW-44 MW-38 MW-36 B3864S B3864I B3859S B3859I B3869S B3860I B3557 B3881I B3556 B2629 B3558 B3559	-	-	14 ft	6 ft	2 ft	Not detected above RR SCO

7	Drywell Structures	AOC-7-1	-	EHS Building	AOC 7 (drywell structures) underlies the EHS building and the southwest portion of the NAF (Figure 1-4). While the presence of the EHS building slab reduces the potential for stormwater infiltration through this AOC, the feature has the potential to have resulted in release of COPCs to underlying soil, and there is unknown potential for vertical migration through the soil column to the water table (present approximately 14 to 16 feet bgs). The potential for VOCs to migrate into indoor air has been assessed through previous vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers.	COPCs in impacted soil within or beneath the former drywells structures (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	1977-79 SHS Construction and Demolition Plans 2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011 2013 EMP Annual Reports 2014 VI Assessment 2018 Supplemental VI Assessment 2019 ISMP 2020 April Remedial Investigation Workplan Amendment 2021 April Soil and Groundwater Investigation Workplan - EHS Building Area (EoG) 2022 June Groundwater Monitoring Network Update 2023 August Groundwater Monitoring Network Update - Addendum #3 2023 Annual Heating Season Sampling 2024-2025 PRRs	1. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor samples were collected near AOC-7-1 in Room 103 (SS-103) and Room 106 (SSHS-14-SS) and were observed below NYSDOH Matrix Guidelines for sub-slab vapor. 2. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). 3. Potential impacts of AOC-7-1 on groundwater quality were evaluated using samples collected from monitoring wells located downgradient of the AOC. Monitoring wells installed downgradient of AOC-7-1 include MW-90S, MW-90I, MW-91S, and MW-91I. Groundwater samples collected as part of the RI investigation of AOC-7-1 were analyzed for PCBs, metals, SVOCs, and VOCs. Groundwater samples are shown compared to TOGS groundwater standards on Figures 5-2A-1 through 5-2D-2. Groundwater analytical results are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. PCBs, metals, SVOCs, and VOCs were not observed above TOGS groundwater standards downgradient of AOC-7-1. Conclusion: SSDS have been installed in the Gymnasium, K-Wing Science Addition, Cafeteria and Cafeteria Addition, F-Wing, and Music Wing of EHS to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. Results have been reported in ISMP PRRs for 2019–2025 and 2023 Heating Season Soil Vapor Intrusion Monitoring and Sampling Report. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring. Based on these findings, the potential VI to indoor air has been mitigated. Additional sampling of indoor air for VOCs will continue under the SMP for Site #c808022. Groundwater monitoring will continue under the SMP for Site #c808022.	Soil - Yes Groundwater - Yes	NA	-	MW-90S MW-90I MW-91S MW-91I	SS-103, SSHS-14-SS	-	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-7-1 underlying the school building is unknown		
		AOC-7-2		NAF			1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater			1. Monitoring wells installed adjacent to AOC-7 located on the western portion of the NAF/tennis courts include MW-66I and MW-66S located on Site #c808022, and MW-78I, and MW-78S located on Site #c808054. 1a. MW-66I and MW-66S were sampled in February and April 2021 and September 2023 for total and/or dissolved PCBs, metals, SVOC, and VOCs. For each sampling event, PCBs, metals, and VOCs were below TOGS. SVOC concentrations were detected above TOGS at MW-66I in April 2021 for DEHP (7.8 µg/L) 1b. MW-78I and MW-78S were sampled in September and November 2021 and April 2024 for total and/or dissolved PCBs, metals, SVOCs, and VOCs. For each sampling event, PCBs and VOCs were below TOGS. Metals concentrations were detected above TOGS in April 2024 at MW-78I for thallium (3.2 µg/L). SVOCs concentrations were detected above TOGS at MW-78I in September 2021 for benz(b)fluoranthene (0.084 µg/L), benzo(k)fluoranthene (0.082 µg/L), chrysene (0.093 µg/L), and indeno(1,2,3-cd)pyrene (0.073 µg/L). SVOCs concentrations were detected above TOGS at MW-78S in September 2021 for benz(a)anthracene (0.095 µg/L) benz(b)fluoranthene (0.15 µg/L), benzo(k)fluoranthene (0.17 µg/L), chrysene (0.16 µg/L), and indeno(1,2,3-cd)pyrene (0.15 µg/L). Samples collected in November 2021 and September 2023 for SVOCs were below TOGS for both MW-78I and MW-78S. 2. Monitoring wells installed adjacent to AOC-7 located beneath the High school building include MW-74I, MW-74S, MW-90I, and MW-90S located on Site #c808054. 2a. MW-74I and MW-74S were sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in September and October 2021 and April 2024. For each sampling event, PCBs, SVOCs, and VOCs were below TOGS. Total metals for iron was reported above TOGS in April 2024 at MW-74I only (390 µg/L). 2b. MW-91S and MW-91I were sampled for total and/or dissolved PCBs, metals, SVOCs, and VOCs in September and November 2021 and April 2024. PFAS was only sampled in September and November 2021. PCBs, SVOCs, VOCs, and PFAS were reported below TOGS for each sampling event. Metals were reported below TOGS for MW-91I. Total and dissolved metals for manganese was reported above TOGS (720-740 µg/L) in September 2021 for MW-91S, but below in November 2021 and April 2024. Perfluorooctanesulfonic acid (PFOS) was reported above TOGS for MW-91S (5.7 ng/L) in September 2021, but below in November 2021. 2c. Concentrations reported above TOGS for iron and manganese only are attributed to groundwater redox fluctuations and are not Site-related. DEHP is a common lab contaminant and is not a Site COPC. 3. Excavations for IRM #5A2 and ISMP were completed within a portion AOC-7 located on the western portion of the NAF; however, drywell structures were not identified. Conclusion: Nature and extent of potential groundwater contamination associated with AOC-7 on the western portion of the NAF and beneath the EHS building was investigated through sampling of downgradient monitoring wells located on Site #c808022 and #c808054. COPCs in groundwater samples collected on Site #c808022 and #c808054 have been defined based on the information above.		0	MW-66S, MW-66I	MW-65 MW-65R	-	-	4 ft	32 ft	Not detected above RR SCO	
8	Westinghouse Transformer Spill near Building 28A	-	-	FFC	AOC 8 (Former Westinghouse PCB release) is located within the southwestern portion of the FFC (Figure 1-4). Transformer oil was released to a storm drain, and then flowed into an oil water separator that discharged into a site culvert that drained into various tributaries in a wetland, and then into Coldbrook Creek. Investigation of the oil water separator and site culvert are being addressed under NYSDEC Site #808043. This suspected release area associated with this AOC has been characterized by the RI of the FFC and PDI activities for IRM #3 and through sampling and remedial actions for IRM #3. The former release has the potential to have resulted in COPCs to be present in underlying soil, and there is unknown potential for vertical COPC migration through the soil column to the water table (present approximately 14 to 16 feet bgs).	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater	P, M, S, V	1975 DEC Spill Report 1975 Chemung Co. HD Spill Report 2001 Sampling Report 2009 EMP 2018 FFC RI/PDI Work Plan 2019 Revised Remedial Investigation Work Plan 2019 IRM #1 CCR 2024 IRM #3 CCR 2026 FFC CCR	1. AOC-8 was evaluated through soil and groundwater sampling during IRM #1, IRM #3, and IRM #4, and FFC RI and PDI activities. 2. Soil samples were collected adjacent to AOC-8 during IRM #1, and PCB exceedances were detected above NYS hazardous material in several samples (IRM3-B333 between 6-10 ft bgs and B276 between 4-8 ft bgs). IRM #1 excavations were conducted down to 4 ft bgs, and these areas were to be addressed in future IRMs. IRM #3 excavated this area down to 16 ft bgs, removing the aforementioned PCB exceedances. One confirmation sample, SSHS-IRM3-PIPE10-C collected from 14-16 ft bgs had SVOC concentrations above PoG SCOs (Figure 6-4H). Pipe 10 was left in place due to technical impracticability for removal, and is likely unrelated to AOC-8. 3. Monitoring wells installed directly downgradient and/or cross gradient of AOC-8 on Site #c808022 include temporary wells B3557, B3558, B3559, B3560, B3561, B3562, B3563, B3563I, B3564, B3565, B3566, B3571, and MW-103S, MW-103I, and MW-39. 3a. The temporary wells were sampled in January 2021 for total and/or dissolved PCBs, metals, and VOCs. During this event, results for PCBs were above TOGS in nine of the temporary wells, ranging from 0.097 ug/L (B3571) to 32.85 ug/L (B3563I). PCBs were detected below TOGS in well B3559 and non-detect in wells B3557 and B3560. Metals were detected in all 12 wells, but none exceeded TOGS. VOCs were detected in wells B3563 and B3563I but did not exceed TOGS. 3b. MW-103S and MW-103I were sampled for total and/or dissolved PCBs, metals, SVOCs, VOCs, and 1,4-dioxane in September 2023 and April 2024. For each event, results for total PCBs exceeded TOGS. MW-103I had concentrations of 6 ug/L and 7.99 ug/L, and MW-103S had concentrations of 2 ug/L and 1.6 ug/L, respectively. Metals and SVOCs were detected but did not exceed TOGS for both wells on both sampling dates. VOCs and 1,4-dioxane were non-detect for both wells on both sampling dates. 3c. MW-39 was sampled for total and/or dissolved PCBs in March 2016 and sampled again for total and/or dissolved PCBs, metals, SVOCs, VOCs, and 1,4-dioxane in August 2018. Results for total and dissolved PCBs were detected below TOGS in 2016 and were non-detect in 2018. Metals exceeded TOGS in August 2018 for iron (620 mg/L). SVOCs were detected but did not exceed TOGS, and VOCs and 1,4-dioxane were not detected in 2018. 3d. Concentrations reported above TOGS for iron only are attributed to groundwater redox fluctuations and are not Site-related. Conclusion: Vertical and lateral extent of AOC-8 has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Comprehensive excavations were completed as part of IRM #3 on the FFC with AOC-8 down to 16ft.	Soil - Yes Groundwater - Yes	16	-	MW-39 B3855S B3855I	-	-	8 ft	6 ft	10 ft	Not detected above RR SCO

9	Oil Storage and Handling, Oil House, Waste Oil Storage, and Quench Oil Reservoir	AOC-9-2	-	EHS Building	AOC 9 (former oil houses) are two discrete areas characterized as former oil houses, the larger of which is located on the eastern edge of the Site, the smaller in the southwest part of the Site (Figure 1-4). The area on the eastern edge of the Site has been characterized by the RI of the FFC and PDI activities for IRM #3. The smaller area in the southwest part of the Site entirely underlies the EHS building. Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil. While the presence of the EHS building slab reduces the potential for stormwater infiltration through the former oil house which lies beneath the building footprint, both features have the potential to have resulted in release of COPCs to underlying soil, and there is unknown potential for vertical migration through the soil column to the water table (present approximately 14 to 16 feet bgs). The potential for VOCs to migrate into indoor air has been assessed through vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers in the former oil house beneath the building.	COPCs in impacted soil beneath the former structures (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	Sanborn Fire Insurance Maps 1967 Lancy Report and Figures 1977 Empire Soils Report 1994 Miller Pond Spill #94-16668 2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 DOH Health Consultation 2011 2013 EMP Annual Reports 2014 VI Assessment 2018 Supplemental VI Assessment 2018 FFC RI/PDI Work Plan 2018 FFC PDI Work Plan, Amendment #1 2019 FFC PDI Work Plan, Amendment #3 2019 ISMP 2023 Annual Heating Season Sampling 2024-2025 PRRs	1. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor samples were collected in the vicinity of AOC-9-2 at SS-07-SS and SS-120 and were observed below NYSDOH Matrix Guidelines. 2. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). 3. Potential impacts of AOC-9-2 on groundwater quality were evaluated using samples collected from monitoring wells located downgradient of the AOC. Monitoring wells installed downgradient of AOC-9-2 include MW-90S, MW-90I, MW-91S, and MW-91I. Groundwater samples collected as part of the RI investigation of AOC-9-2 were analyzed for PCBs, metals, SVOCs, and VOCs. Groundwater samples are shown compared to TOGS groundwater standards on Figures 5-2A-1 through 5-2D-2. Groundwater analytical results are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. PCBs, metals, SVOCs, and VOCs were not observed above TOGS groundwater standards downgradient of AOC-9-2. Conclusion: SSDS have been installed in the Gymnasium, K-Wing Science Addition, Cafeteria and Cafeteria Addition, F-Wing, and Music Wing of EHS to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. Results have been reported in ISMP PRRs for 2019–2025 and 2023 Heating Season Soil Vapor Intrusion Monitoring and Sampling Report. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring. Based on these findings, the potential VI to indoor air has been mitigated. Additional sampling of indoor air for VOCs will continue under the SMP for Site #c808022. Groundwater monitoring will continue under the SMP for Site #c808022.	Soil - Yes Groundwater - Yes	NA	-	MW-90S MW-90I MW-91S MW-91I	SS-07-SS, SS-120	-	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-9-2 underlying the school building is unknown			
		AOC-9-1		FFC				Soil Groundwater			1. The portion of AOC-9 location on the eastern side of the FFC was evaluated through soil and groundwater sampling during implementation of IRM #5 and FFC RI and PDI activities. The smaller portion of AOC-9 located under the west side of the high school was evaluated through groundwater monitoring downgradient to determine any groundwater impacts. 2. FFC RI and PDI activities completed in the FFC in 2019 detected PCBs, metals, and SVOCs above PoG and RRSCOs within and surrounding AOC-9. Samples above SCOs for PCBs included B2053-4-6 (2.499 mg/kg). This exceedance is laterally delineated by B2028, B2192, B2015, and B2027 and vertically delineated by B2053, B2028, B2052, and B2192. Samples above SCOs for SVOCs included B2808-2-4 for indeno (1,2,3-cd)pyrene (1.1 mg/kg) and benzo(b)fluoranthene (1.2 mg/kg), and B2246-2-4 for total PAHs (409.3 mg/kg), benz(a)anthracene (29 mg/kg), benzo(a)pyrene (13 mg/kg), benzo(a)fluoranthene (35 mg/kg), benzo(k)fluoranthene (16 mg/kg), and chrysene (28 mg/kg). These exceedances were delineated laterally with B2952, B2810, and B2026 and delineated vertically with B2809 and B2027. Finally, samples above SCOs for metals included B2053-4-6 for chromium (III + IV) (41 mg/kg) and copper (340 mg/kg). This exceedance was delineated laterally with B2052, B2027, and B2245 and vertically with B2028 and B2053. All of these exceedances were excavated during excavations. 3. Monitoring wells installed cross- and down-gradient from AOC-9 in the FFC include MW-11S and MW-11D. MW-11D exceeded TOGS for benzo(k)fluoranthene (0.14 ug/L) and chrysene (0.12 ug/L) during April 2021 sampling. No other exceedances of TOGS have been detected. 3a. Monitoring wells installed down-gradient from the portion of AOC-9 under the west side of EHS include MW-90I, MW-90S, MW-74I, and MW-74S located on Site #c808054. There were no TOGS exceedances at either location for metals, SVOCs, VOCs, or PCBs. There were exceedances of TOGS for PFOS at MW-90I when sampled in October 2021 (5.6 ng/L) and April 2024 (4.1 ng/L). There were exceedances of TOGS for PFOS at MW-90S in September 2021 (10 ng/L), October 2021 (6.7 ng/L), and April 2024 (13 ng/L) as well as an exceedance of TOGS for PFOA in April 2024 (7.8 ng/L). Conclusion: Vertical and lateral extent of AOC-9 located on the FFC has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Comprehensive excavations were completed as part of IRM #3 on the FFC with AOC-9 down to 16ft. Lateral extent of AOC-9 beneath the EHS building was investigated through sampling of downgradient monitoring wells located on Site #c808054		16	-	MW-20 B3876	-	F-Wing	6 ft	Not detected above RR SCOs		
10A	Contaminated Subsurface Soils	AOC-10A-1	Metals at location B24	#c808054	AOC 10A (Subsurface Soils Exceeding SCOs) includes areas where Pre-RI results indicated metals in soil at B43, B42, B52, B24, B35, and SS-14. The former Site activities have resulted in the potential for COPCs to be present in underlying soil, and there is unknown potential for vertical COPC migration through the soil column to the water table (present approximately 14 to 16 feet bgs).	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to these areas. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of these areas toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater	M	1977 Empire Soils Report 2001 Sampling Report 2003 Health Consultation 2009 EMP 2015 Site Characterization Work Plan Addendum #1 2016 Site Characterization Work Plan Addendum #2 2016 Site Characterization Work Plan Addendum #3 2019 IRM #3 Work Plan 2019 Revised Remedial Investigation Work Plan 2020 IRM #5 Work Plan 2021 Soil and Groundwater Investigation Work Plan EHS Building Area 2023 Groundwater Mon. Pre-RI results identified at B43 detected metals concentrations above 20x TCLP criteria for lead from at 0.5-2.5 ft bgs 2,210 mg/kg located on the northern portion of the NAF. B43 was removed during excavation of IRM #5A2. Metals are delineated at this sample location by B3079 from 2.5-16 ft bgs (Figure 6-3A through Figure 6-3J) 1b. Pre-RI results identified at B42 detected metals concentrations above RRSCOs for arsenic, (32.1 mg/kg), copper (4,080 mg/kg) lead (783 mg/kg), and nickel (517 mg/kg) at 0.5-2.5 ft bgs located on the western central portion of the NAF. B42 was removed during excavation of IRM #5A2 to 4 ft bgs. Although RI and IRM samples were not collected within the exact location of B42, numerous samples were collected laterally to the north, south, east, and west delineating the nature and extent of B42 (Figure 6-3A through Figure 6-3J). 1c. Pre-RI results identified at B52 detected metals concentrations above RRSCOs for barium (1,449 mg/kg) at 0.5-2.5 ft bgs located in the central portion of the NAF, within the northern portion of AOC-12. B52 was removed during excavation of IRM #5A2 to 4 ft bgs Figure 6-3B. Although RI and IRM samples were not collected within the exact location of B52, numerous samples were collected laterally to the north (B5005, A-6-B277A, NAF-UT-S10), south (A5-B404), east (FIS-LAT1-S3, FIS-LAT1-S4, A6-B274A), and west (A6-B275, NAF-UT-S13, NAF-UT-S15, B5007, and A6-B271A) delineating the nature and extent of B52. 1d. Pre-RI results identified at B35 detected metals concentrations above RRSCOs for arsenic (16.2 mg/kg) from 2-4 ft bgs. This sample is being investigated under Site #c808054. 1e. Pre-RI results identified at B24 detected metals concentrations above RRSCOs for arsenic (56.2 mg/kg), barium (434 mg/kg), copper (2,300 mg/kg), lead (3,940 mg/kg), and nickel (761 mg/kg) from 1-4 ft bgs. This sample is being investigated under Site #c808054. 2a. Monitoring wells installed downgradient of B43 (MW-54 and MW-54R) did not have lead concentration detected above TOGS during the seasonal high and low monitoring period (Figure 5-5B-1 and Figure 5-5B-2). 2b. Monitoring well MW-55, installed within AOC-10 at B42 did not have detections above TOGS for arsenic, copper, lead, or nickel during the seasonal high and low monitoring period (Figure 5-5B-1 and Figure 5-5B-2). 2c. Monitoring wells installed adjacent (MW-56) or downgradient (MW-106 and MW-57R) of B52 did not have barium concentrations above TOGS during the seasonal high and low monitoring period (Figure 5-5B-1 and Figure 5-5B-2). 2d. Temporary monitoring wells (B4153S, B4153I, B4152S, B4152I) and permanent monitoring well (MW-82) installed downgradient and/or crossgradient of B35 did not have concentrations reported above TOGS for arsenic during the seasonal high and/or low monitoring period (Figure 5-5B-1 and Figure 5-5B-2). 2e. Temporary monitoring wells (B4150S and B4150I) and permanent monitoring well (MW-43) installed adjacent to B24 did not have concentrations reported above TOGS for arsenic, barium, copper, lead, or nickel during the seasonal high and/or low monitoring period (Figure 5-5B-1 and Figure 5-5B-2). Conclusion: Vertical and lateral extent of AOC-10A (B43, B42, and B52) located in the NAF has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Based on these observations, no further assessment is warranted to further define the nature and extent of impacts in soil and groundwater on Site #c808022. The investigation of soil and groundwater associated with B24 and B35 will be completed and discussed in the #c808054 RIR/AA. Groundwater monitoring will continue under the SMP for Site #c808022	Soil - Yes Groundwater - Yes	To be investigated as part of #c808054

10B	Contaminated Subsurface Soils	AOC-10B -1	PCBs at location B3	FFC	AOC 10B (Subsurface Soils Exceeding SCOs) includes areas where Pre-RI results indicated PCBs in soil at B3, FB7 and B15; VOCs in soil at FB5; and SVOCs in soil at FB6. The former Site activities have resulted in the potential for COPCs to be present in underlying soil, and there is unknown potential for vertical COPC migration through the soil column to the water table (present approximately 14 to 16 feet bgs). The locations lie outside of the EHS building footprint, therefore, the potential for VOCs to migrate into indoor air is considered to be an incomplete pathway.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to these areas. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of these areas toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater	P,V,S	1977 Empire Soils Report 2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011 2013 EMP Annual Reports 2014 VI Assessment 2015 Site Characterization Work Plan Addendum #1 2016 Site Characterization Work Plan Addendum #2 2016 Site Characterization Work Plan Addendum #3 2018 Supplemental VI Assessment 2019 ISMP 2019 IRM #3 Work Plan 2019 Revised Remedial Investigation Work Plan 2020 IRM #5 Work Plan 2021 Soil and Groundwater Investigation Work Plan EHS Building Area 2023 Annual Heating Season Sampling 2023 Groundwater Mon. Network Update Add #1 2023 Groundwater Mon. Network Update Add. #2 2023 Groundwater Mon. Network Update Add. #3 2024 Groundwater Mon. Network Update Add. #4 2024-2025 PRRs 2026 NAF CCR	1. MW-58 is used as downgradient monitoring point for AOC-10B. There have been no detections above TOGS SCOs for PCBs, SVOCs or VOCs at MW-58. Iron and Manganese have been detected above TOGS SCOs in MW-58 but Iron and Manganese have not been associated with Site-related contamination (Tables 5-8 - 5-11). 2. Pre-RI results identified at B3, FB-7 and B15 have PCB detections above screening SCOs. FB-5 has VOC detections above RR SCOs and FB-6 has SVOC detections above RR SCOs. All samples have since been excavated during IRM #5 and IRM #5A2. 3. The nature and extent of possible COPC exceedances within AOC-10B has been investigated during RI sampling events and further investigated during IRM #5. No SVOC or VOC exceedances have been detected within AOC-10B locations (Figure 1-4). PCBs were detected above POG SCOs at B2194 (4-6 ft bgs). This boring was vertically delineated by following boring samples and laterally delineated by other borings and IRM #5 confirmation samples (Figures 6-4A-H). - FISR-S4 has a Metals Restricted Residential exceedance at 6-8 ft bgs remaining in place but is vertically delineated by FISR-S5 at 8-10 ft bgs and laterally delineated by FISR-S3 (Figure 6-4D and Figure 6-4E). Conclusion: Vertical and lateral extent of soil and groundwater in AOC-10B on Site #c808022 has been defined as discussed above. Metals exceedances found in groundwater have not been determined to be site related and soils have been lateral/vertically delineated by IRM #5A2 confirmation samples.	Soil - Yes Groundwater - Yes	12	B3874	MW-20	-	-	2 ft	-	-	-
		AOC-10B -2	PCBs at location FB7										10	-	MW-38 MW-102I MW-102S	-	-	6 ft	-	-	-

10C	Contaminated Subsurface Soils	AOC-10C -1	Petroleum Impacts	FFC	AOC 10C (Subsurface Soils Exceeding SCOs) includes an area where Pre-RI results indicated petroleum impacts in soil at the FFC. The former Site activities have resulted in the potential for COPCs to be present in underlying soil, and there is unknown potential for vertical COPC migration through the soil column to the water table (present approximately 14 to 16 feet bgs). A sheen was observed at the water table during groundwater sampling in previous investigations (Geosyntec, 2017). A review of groundwater data indicates the absence of COPCs above TOGS at locations where a sheen was observed (MW-10, MW-13, MW-33, MW-11S). However, the sheen indicates potential VOC, SVOC or DRO impacts to groundwater. The locations lie outside of the EHS building footprint, therefore, the potential for VOCs to migrate into indoor air is considered to be an incomplete pathway.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to these areas. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of these areas toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater	V,S,DRO		1. The following monitoring wells were used as downgradient monitoring points for AOC-10C but have been decommissioned: MW-39, MW-36, MW-40, MW-38, and MW-44. 2. MW-102I/S is used as a downgradient monitoring point for AOC-10C. - MW-102S has detections above TOGS SCOs during the most recent sampling event of Benz(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene, and Indeno (1,2,3-cd)pyrene but the distribution of SVOC exceedances has been spatially and temporally inconsistent across the Site and the SVOCs only sporadically exceeded TOGS standards at the listed monitoring wells. 3. The nature and extent of possible COPC exceedances within AOC-10C has been investigated during RI sampling events and further investigated during IRM #5. No VOC or TPH exceedances have been detected within any AOC-10C locations (Figure 1-4). SVOC Restricted Residential exceedances were detected in boring B2226 at depths of 6-8 and 8-10 ft bgs. - The 6-8 exceedance was excavated during IRM #5. - The 8-10 exceedance still remains in place but is vertically delineated by samples at 10-12 and 12-14. This sample is also laterally delineated by multiple other borings and IRM #5 confirmation samples (Figures 6-4A-H). - Elevated levels of PCBs and Metals have been detected within AOC-10C but all samples have been vertically and laterally delineated by borings or IRM #5 confirmation samples (Figures 6-4A-H). Conclusion: Vertical and lateral extent of AOC-10C located on Site #c808022 has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. SVOCs and VOCs have been laterally and vertically defined in both the groundwater and soil with any detections above SCOs determined to be sporadic and inconsistent.	Soil - Yes Groundwater - Yes	7	B2542, B2542A	MW-44 MW-38 MW-102S MW-102I B2541 B3865A B3865I B3860I B3093 B3094	-	-	-	-	Not detected above RR SCOs

		AOC-10C -5											11	-		-	-	-	-	Not detected above RR SCOs
10D	Contaminated Subsurface Soils	AOC-10D -1	Oil in shallow soils	EHS Building	AOC 10D (Subsurface Soils Exceeding SCOs) includes areas where previous investigation of the EHS building footprint (Empire, 1977) encountered oil-impacted soil. Two areas were characterized by NYSDEC as oil in shallow soils underlying the EHS Building and three areas were characterized as oil in deep soils, mostly underlying the EHS building. Previously collected SVOC data for B26 and B29-A characterize shallow soil east of the EHS Building. Historical operations have the potential to have resulted in release of COPCs to underlying soil. While the presence of the EHS building slab reduces the potential for stormwater infiltration through the areas that lie beneath the building footprint, there is unknown potential for vertical migration of COPCs through the soil column to the water table (present approximately 14 to 16 feet bgs). The potential for VOCs to migrate into indoor air has been assessed through soil vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers in the former oil house beneath the building.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature (areas outside of the EHS Building footprint only). 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors. 3. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	S, V, DRO		1. According to the Soil and Groundwater Investigation Work Plan EHS Building Area MW-10, MW-12, MW-32 and MW-33 are downgradient monitoring points for AOC-10D. - MW-10, MW-12, MW-32 and MW-33 had Bis(2-ethylhexyl) phthalate (DEHP) detected above TOGS SCOs but DEHP is a common cross-contaminant and is not a Site COPC. (Table 5-10) The Wisconsin Department of Natural Resources (WDNR) recognizes DEHP as a common contaminant due to its widespread use in plastics such as polyvinyl chloride (WDNR, 2002). At the Site, monitoring well casings are constructed of polyvinyl chloride and low-density polyethylene tubing is used for low-flow sample collection, both of which are potential sources of DEHP contamination. Historically, detections of DEHP at the Site have been infrequent and sporadic, with no discernible pattern across specific monitoring wells. - MW-12 had historic Freon-113 detections above TOGS SCOs but no detections during the more recent sampling events. No other detections above TOGS SCOs were detected in MW-10, MW-12, MW-32 and MW-33. (Table 5-11) 2. Other monitoring wells used to monitor AOC-10D are MW-87I, MW-88I/S, MW-103I/S, MW-104S/I, and MW-86I (Figure 2-3). - MW-104S had detections of Benz(a)anthracene and Chrysene above TOGS SCOs during the 2023 sampling event but did not have detections above TOGS SCOs during the 2024 sampling event. (Table 5-10) - MW-87I had Bis(2-ethylhexyl) phthalate (DEHP) detected above TOGS SCOs but DEHP is a common cross-contaminant and is not a Site COPC. (Table 5-10). DEHP is frequently detected as a cross-contaminant in groundwater sampling programs, originating from materials used in well construction, sample collection, and laboratory analysis. 3. Soil data for B26 and B29-A within AOC-10D is located east of the EHS building outside of the BCP Site Boundary. The nature and extent of soils within AOC-10D will be investigated as part of Site #c808054 4. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor samples SSHS-16-SS and SSHS-17-SS were collected within AOC-10D-1. Sub-slab soil vapor samples SSHS-01-SS, SSHS-02-SS, SSHS-03-SS, SSHS-08-SS and SS-133 were collected within AOC-10D-6. AOC-10D-5 overlaps AOC-10D-6. SSHS-01-SS was also collected within AOC-10D-5. VOCs were detected below NYSDOH Matrix Guidelines for the sample locations collected within AOC-10D-1 (SSHS-16-SS and SSHS-17-SS). TCE and cis-1,2-DCE were detected above the NYSDOH Matrix Guidelines at SSHS-02-SS, SSHS-03-SS, and SSHS-08-SS collected within AOC-10D-6. Based on the detections of TCE and cis-1,2-DCE, Unisys installed a sub-slab vapor mitigation system in the F-Wing in 2014 as discussed in Section 3.2.4. TCE and cis-1,2-DCE were detected in the SSD system effluent in November 2023 with concentrations of 339 µg/m3 and 66.6 µg/m3, respectively. TCE effluent concentrations decreased between June 2018 and July 2021, increased in December 2021, then slightly decreased in November 2023 as shown on Figure 6V-2. This indicates that TCE and cis-1,2-DCE are still present in sub-slab vapor below F-Wing and may potentially be associated with AOC-10D. 5. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). Conclusion: Soil Vapor and indoor air have been assessed and investigated as part of AOC-1. Vertical and lateral extent of AOC-10D located underneath the EHS building and east of the EHS building has been defined in groundwater as part of the RI for #c808022 as discussed above. Based on these observations, no further assessment is warranted to further define the nature and extent of impacts in groundwater on Site #c808022. The investigation of the soil will be completed and discussed in the #c808054 RIR/AA. Groundwater monitoring will continue under the SMP for Site #c808022	Soil - Yes Groundwater - Yes	NA	-	MW-90S MW-90I MW-91S MW-91I MW-71S MW-71I	SSHS-16-SS, SSHS-17-SS	-	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-10D underlying the school building is unknown

11	VOC- and Petroleum Impacted Groundwater	-	-	Site-Wide	AOC 11 (Groundwater with measurable oil product or concentrations above TOGS) includes areas where pre-RI results indicated groundwater was impacted. A sheen, which may be an indication of petroleum impact, had been observed at MW-11S (FFC). Pre-RI results indicated VOC-impacted groundwater at MW-8 and MW-30 (East of Gym; downgradient of the Revised BCP Site); petroleum-impacted groundwater at MW-8, MW-10, MW-32, MW-34 and MW-41 (East of Gym; downgradient of the Revised BCP Site); and PCB impacts at MW-15S (FFC) and MW-8 and MW-41 (East of Gym; downgradient of the Revised BCP Site). The nature and extent of the impacts listed above have been fully characterized. The potential for VOCs in groundwater to migrate into indoor air has been assessed through soil vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). Shallow groundwater is not known to be used at the Site or immediately downgradient, therefore, exposure to impacted groundwater by ingestion or other use is considered an incomplete pathway.	COPCs in impacted groundwater can migrate toward downgradient receptors.	1. On-Site Subsurface Construction Workers: People can come into contact, in the highly unlikely event given the 14 to 16-ft depth to groundwater, if they complete ground-intrusive work at the Site that extends below the depth of the water table. 2. There are no domestic water supply wells at or immediately downgradient of the Site; people can come into contact if private wells are installed on the property in the future. 3. Soil vapor: VOCs in groundwater can volatize to soil vapor.	Groundwater Soil Vapor Indoor Air	P, M, S, V	1994 Miller Pond Spill #94-16668 1998 Spills EA Report 2001 Sampling Report 2003 Health Consultation 2004 IIWA GW Investigation 2008 Spills GW Sampling 2010 DOH Health Consultation 2011 2013 EMP Annual Reports 2014 VI Assessment 2018 Supplemental VI Assessment 2018 July FFC RI/PDI Activities Work Plan 2018 August - FFC RI/PDI Work Plan - Am #1 2018 October - FFC RI/PDI Work Plan - Am #2 2019 ISMP 2019 Revised Remedial Investigation Workplan 2020 Soil and Groundwater Investigation Workplan 2021 Soil and Groundwater Investigation Workplan, FFC - Slide Rail 2021 Soil and Groundwater Investigation Workplan EHS Building Area 2021 Soil and Groundwater Investigation Workplan Add., NAF 2022 Groundwater Monitoring Network Update 2023 Annual Heating Season Sampling 2023 Pre-Construction Monitoring Program Work Plan for Proposed Infiltration Gallery 2023 Add. #2 to Soil and Groundwater Investigation WP - EHS Building Area 2023 Groundwater Mon. Network Update Add #1 2023 Groundwater Mon. Network Update Add. #2 2023 Groundwater Mon. Network Update Add. #3 2024 Groundwater Mon. Network Update Add. #4 2024-2025 PRRs	1. The potential for VI has been assessed beneath the EHS building, and currently not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). See AOC-1 for additional information on soil vapor and indoor air investigations. 2. In the FFC, Potential impacts of AOC-11 on groundwater quality were evaluated using samples collected from monitoring wells located within and downgradient of the AOC. Monitoring wells installed within AOC-11 on the FFC area include MW-11S, MW-11I, MW-15S, MW-15D, MW-102I, MW-102S. Monitoring wells installed downgradient of AOC-11 on the FFC area include MW-44, MW-38, MW-13, MW-85I, and MW-84S. Temporary monitoring wells installed within AOC-11 on the FFC include B2544 (analyzed for PCBs, metals, SVOCs, and VOCs), B2544A (analyzed for VOCs), B3857 (analyzed for PCBs, metals, SVOCs, and VOCs), B2090A (analyzed for metals, and VOCs), B3092A (analyzed for VOCs), and B2819 (analyzed for VOCs). Temporary monitoring wells B3859S (analyzed for PCBs), B3859I (analyzed for PCBs), B3861S (analyzed for PCBs), B3861I (analyzed for PCBs), B2752 (analyzed for PCBs, metals, SVOCs, and VOCs), B4007 (analyzed for PCBs) were installed downgradient of the FFC. PCBs and metals were not observed above TOGS groundwater standards at any of these locations. VOCs were detected above the TOGS groundwater standard for TCE within AOC-11 at MW-11I and temporary monitoring wells B2544, B2544A, B2819, B2090A, and B2978b. The maximum concentration of TCE was observed at B2819 at 25 µg/L in May 2019. The downgradient extent of this TOGS groundwater exceedance for TCE is defined off-Site at MW-107S and MW-107I. TCE impacted soils were encountered during the FFC IRM and ISMP excavations within the vicinity of AOC-10B-4 and were the source for the TCE concentrations in groundwater at this area. These TCE-impacted soils were excavated as part of the FFC IRM. SVOCS were detected above the TOGS groundwater at MW-11D and MW-102S. MW-11D is screened below the silty clay aquitard. SVOCs were detected above TOGS groundwater standards at MW-102S in April 2024 but were not previously detected above TOGS groundwater standards in September 2023. As further discussed in Section 6.2.3, the distribution of SVOC exceedances across the Site has been sporadic, non-repeatable, and spatially inconsistent; therefore, additional investigation is not warranted. A sheen, which may be an indication of petroleum impact, had previously been observed at MW-11S FFC. No measured layer of NAPL was observed at MW-11S during gauging events. Total Petroleum Hydrocarbons – Diesel range organics (TPH-DRO) was detected at a concentration of 13 mg/L at MW-11S in May 2019. 3.Potential impacts to groundwater at AOC-11 within the EHS Building area have been assessed through groundwater data collected downgradient of the AOC, outside of the EHS building footprint. Groundwater samples are shown compared to TOGS groundwater standards on Figures 5-2A-1 through 5-2D-2. Monitoring wells downgradient outside of the EHS building footprint used to assess potential groundwater impacts from AOC-11 include MW-47, MW-47I, MW-12, MW-71S, MW-71I and temporary monitoring wells B93 (analyzed for VOCs), B94 (analyzed for VOCs), B95 (analyzed for VOCs), B96 (analyzed for VOCs), and B29-A (analyzed for PCBs, SVOCs, and VOCs). PCBs and metals were reported below TOGS groundwater standards at these monitoring wells. VOCs were reported above TOGS groundwater standards at MW-47I. This portion of AOC-11 overlaps with AOC-13 (former metal cleaning, vapor degreaser and solvent still areas). MW-47I exceeded the TOGS groundwater standard for benzene (1.5 µg/L compared to TOGS of 1 µg/L) in September 2021. Benzene was observed as non-detect at MW-47I in samples collected in October 2021 and April 2024. TCE was observed above the TOGS groundwater standard (5 µg/L) at B92 (5.6 µg/L) and B94 (8.9 µg/L) in August 2014. TCE was detected below TOGS groundwater standards at MW-47 in September 2016 (3.9 µg/L) and non-detect in February 2021 and July 2021. TCE was non-detect at MW-47I in September 2021, October 2021, and April 2024. Therefore, further assessment is not warranted. VOCS were reported downgradient of AOC-11 at MW-12. MW-12 exceeded the TOGS groundwater standard for cis-1,2 DCE (one exceedance, 9 µg/L), Freon 113 (maximum result 160 µg/L), and TCE (two exceedances, 9J and 6.8 µg/L) in samples collected between May 2000 and July 2007. These VOC compounds all were observed as non-detect in more recent samplings in February 2021 and July 2021. Therefore, further assessment is not warranted. 4. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor samples SSHS-23-SS, SSHS-04-SS, and SSHS-05-SS were collected within proximity to AOC-11 underneath F-wing. VOCs were reported below NYSDOH Matrix Guidelines at SSHS-23-SS. VOCs were reported above NYSDOH Matrix Guidelines at SSHS-04-SS, and SSHS-05-SS. This portion of AOC-11 overlaps with AOC-13 (former metal cleaning, vapor degreaser and solvent still areas). TCE was reported above NYSDOH Matrix Guidelines at SSHS-04-SS (390 µg/m3) and SSHS-05-SS (2,100 µg/m3). Based on the detections of TCE and cis-1,2-DCE, Unisys installed a sub-slab vapor mitigation system in the F-Wing in 2014 as discussed in Section 3.2.4. TCE detected in the SSD system effluent in November 2023 with concentrations of 339 µg/m3. TCE effluent concentrations decreased between June 2018 and July 2021, increased in December 2021, then slightly decreased in November 2023 as shown on Figure 6V-2. This indicates that TCE is still present in sub-slab vapor below F-Wing and may potentially be associated with AOC-11. TCA and TCE were detected in sub-slab below the east side of the Gymnasium (SV-GM EAST) in 2009 near AOC-11 at concentrations of 23,000 µg/m3 and 28 µg/m3, respectively (Appendix B). ECSD installed a sub-slab vapor mitigation system in the Gymnasium in 2010. Sub-slab vapor below the Gymnasium was not sampled in 2014 and 2018 due to the presence of the vapor mitigation system. Sampling of the Gymnasium SSD effluent detected 19 µg/m3 of TCE in June 2018 and 3.4 µg/m3 of TCE in November 2023. TCA was not detected above the laboratory reporting limit. This indicates that TCE is still present in sub-slab vapor below the Gymnasium at decreasing concentrations and may potentially be associated with AOC-11. 5. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). Conclusion: Nature and extent of PCBs, metals, SVOCs, and VOCs in groundwater have been defined at and downgradient of AOC-11 using a comprehensive data collection and evaluation effort including COPC concentration and water level data collected under low and high water table conditions from the groundwater monitoring well network installed for the Revised BCP Site and further supported by monitoring wells installed for the adjoining site #c808054. Areas of Concern
Former Sperry Remington Site - North Portion #c808022
Elmira, NY

AOC ID	AOC Description	Sub-AOCs	Sub-AOC Description	AOC Location	Conceptual Site Model			Media of Concern	COPC	Investigations Completed	Investigation Summary	Nature and Extent Defined	Approximate Excavation Depth	Summary of environmental media samples supporting AOC delineation			Co-located SSDS	Depth of Soil Impact (RR SCO exceedances)			
					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
12	Plating, Heat Treatment and Tumbling Areas	AOC-12-3	Plating, Heat Treatment, Tumbling Area	EHS Building	AOC 12 (Former plating, heat treatment and tumbling areas) is located on the southwestern side of the Site and at former Buildings 49 (NAF) and 67E (FFC) on the eastern side of the Site (Figure 1-3 and Figure 1-4). The portion of the AOC in the southwestern side of the Site partly underlies the EHS building on Site #c808054 and is overlapped by AOC 16 and AOC 17 (Figure 1-4). While the presence of the EHS building slab reduces the potential for stormwater infiltration through the area which lie beneath the building footprint, there is unknown potential for vertical migration of COPCs through the soil column to the water table (present approximately 14 to 16 feet bgs). The potential for VOCs to migrate into indoor air has been assessed through soil vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers in the portion of the AOC beneath the building.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs 2014 VI Assessment 2018 Supplemental VI Assessment 2018 July FFC RI/PDI Activities Work Plan 2018 August - FFC RI/PDI Work Plan - Amendment #1 2018 October - FFC RI/PDI Work Plan - Amendment #2 2019 March Site Characterization Report 2019 May FFC PDI Activities Work Plan - Amendment #3 2019 August FFC PDI Activities Work Plan - Amendment #4 2020 Interim Remedial Measure #5 Work Plan 2023 Annual Heating Season Sampling 2024-2025 PRRs 2026 NAF CCR 2026 FFC CCR	1. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 and screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor samples were collected within AOC-12-3 at SS-122, SS-06-SS, SS-120 and SS-07-SS and were observed below NYSDOH Matrix Guidelines. See AOC-1 (Section 5.2.1 and 5.2.2) for additional information on indoor air and soil vapor investigations. The current nature and extent of VOCs in sub-slab vapor and indoor air is discussed in Section 6.1. 2. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). 3. Potential impacts of AOC-12-3 on groundwater quality were evaluated using samples collected from monitoring wells located downgradient of the AOC. Monitoring wells MW-90S, MW-90I, MW-91S, and MW-91I were installed downgradient of AOC-12-3 and analyzed for PCBs, metals, SVOCs, and VOCs. Temporary monitoring well B3203A was installed within AOC-12-3 and was analyzed for PCBs, metals, SVOCs and VOCs. Temporary monitoring wells B97 and B3203B were installed within AOC-12-3 and analyzed for VOCs. Groundwater samples are shown compared to TOGS groundwater standards on Figures 5-2A-1 through 5-2D-2. Groundwater analytical results are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. PCBs, metals, SVOCs, and VOCs were not observed above TOGS groundwater standards within or downgradient of AOC-12-3. Conclusion: SSDS have been installed in the Gymnasium, K-Wing Science Addition, Cafeteria and Cafeteria Addition, F-Wing, and Music Wing of EHS to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. Results have been reported in ISMP PRRs for 2019–2020 and the 2023 Heating Season Soil Vapor Intrusion Monitoring and Sampling Report. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring. Based on these findings, the potential VI to indoor air has been mitigated. Additional sampling of indoor air for VOCs will continue under the SMP for Site #c808022. Groundwater monitoring will continue under the SMP for Site #c808022.	Soil - Yes Groundwater - Yes	NA	SSHS-B3203A, SSHS-B3203B, SSHS-B97	MW-90I MW-90S MW-91I MW-91S	SS-122, SSHS-06-SS, SSHS-07-SS, SS-12	F-Wing	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-12-3 underlying the school building is unknown			
		AOC-12-1	Building 49	NAF			1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature (areas outside of the EHS Building footprint only). 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater			1. Two soil borings, B3109 and B3336, were installed within AOC-12-1 to a maximum depth of 14 ft bgs. COPCs, including PCBs, metals, SVOCs, and VOCs, were not identified within AOC-12-1 above Restricted Residential SCOs. 2. Potential impacts of AOC-12-1 on groundwater quality were evaluated using samples collected from monitoring wells located downgradient of the AOC. Monitoring wells MW-100S and MW-100I are located downgradient of AOC-12-1. Groundwater samples collected as part of the RI investigation of AOC-12-1 were analyzed for PCBs, metals, SVOCs, and VOCs. Results are shown compared to TOGS groundwater standards on Figures 5-5A-1 through 5-5D-2. Groundwater analytical results including those from previous investigations are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. PCBs, metals, SVOCs, and VOCs were not reported above TOGS groundwater standards downgradient of AOC-12-1. Conclusion: Vertical and lateral extent of AOC-12-1 located on the NAF has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Based on these observations, no further assessment is warranted to further define the nature and extent of impacts in groundwater and soil on Site #c808022. Off-Site delineation will be completed and discussed in the #c808054 RIR/AA. Groundwater monitoring will continue under the SMP for Site #c808022		8	-	MW-100S MW-100I	-	-	Not detected above RR SCO			
		AOC-12-2	Building 67 E	FFC			1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature (areas outside of the EHS Building footprint only). 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater			1. A total of 11 soil borings were installed within AOC-12-2 to a maximum depth of 14 ft bgs across multiple soil sampling events (Section 2.2). Within the FFC, soil borings were collected on a 60x60 ft grid to the water table and subsequent step out samples collected on approximately 30 ft spacing to further define the nature and extent of COPCs observed above Restricted Residential SCOs. COPCs, including PCBs, metals, and SVOCs, were identified within AOC-12-2 above Restricted Residential SCOs. VOCs were not identified within AOC-12-2 above Restricted Residential SCOs. PCBs above the Restricted Residential SCO were observed up to a depth of 6 ft bgs. Metals above the Restricted Residential SCOs, including barium, chromium, and copper, were observed up to a depth of 12 ft bgs. SVOCs above the Restricted Residential SCOs, including benzo(b)fluoranthene and indeno (1,2,3-cd)pyrene, were observed up to a depth of 2 ft bgs. 2. Potential impacts of AOC-12-2 on groundwater quality were evaluated using samples collected from monitoring wells located within and downgradient of the AOC. Temporary monitoring well B2221 was installed within AOC-12-2 and analyzed for metals. Temporary monitoring wells B3877S and B3877I were installed downgradient of AOC-12-2 and analyzed for PCBs, metals, and SVOCs. Monitoring well MW-44 is located downgradient of AOC-12-2 and was analyzed for PCBs, SVOCs, and VOCs. Results are shown compared to TOGS groundwater standards on Figures 5-8A-1 through 5-8D-2. Groundwater analytical results including those from previous investigations are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. PCBs and SVOCs were not reported above TOGS groundwater standards within or downgradient of AOC-12-2. Metals were reported above the TOGS groundwater standard for chromium (210 µg/L) at B2221 in May 2019. Chromium was not reported above TOGS groundwater standards downgradient of temporary monitoring well B2221 at B3877I, B3877S, and MW-44. TCE was reported above the TOGS groundwater standard for (8.1 µg/L) at B3877S sample in April 2021. TCE was reported below the TOGS groundwater standard downgradient of B3877S at MW-20 in July 2021, located off-Site. As temporary monitoring wells are installed for short-term investigation purposes and are typically sampled shortly after installation, the resulting data may reflect localized disturbance, incomplete equilibration, and short-term turbidity-related influences that can bias reported groundwater concentrations. In contrast, permanent monitoring wells provide a more reliable measure of ambient groundwater quality and dissolved-phase conditions within the aquifer as they are designed, developed, and sampled to better represent stable formation water over time. Accordingly, the absence of TCE exceedances in the downgradient permanent monitoring well is considered more representative of actual aquifer conditions than the isolated exceedances reported in temporary monitoring well samples. Therefore, additional investigation is not warranted. Conclusion: Vertical and lateral extent of AOC-12-2 located on the FFC has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Based on these observations, no further assessment is warranted to further define the nature and extent of impacts in groundwater and soil on Site #c808022. Off-Site delineation will be completed and discussed in the #c808054 RIR/AA. Groundwater monitoring will continue under the SMP for Site #c808022		13	SSHS-B2221	MW-44 B3877I B3877S	-	-	6 ft	12 ft	2 ft	Not detected above RR SCO

Areas of Concern
Former Sperry Remington Site - North Portion #c808022
Elmira, NY

AOC ID	AOC Description	Sub-AOCs	Sub-AOC Description	AOC Location	Conceptual Site Model			Media of Concern	COPC	Investigations Completed	Investigation Summary	Nature and Extent Defined	Approximate Excavation Depth	Summary of environmental media samples supporting AOC delineation			Co-located SSDS	Depth of Soil Impact (RR SCO exceedances)			
					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
13	Metals Cleaning, Vapor Degreaser and Solvent Still	-	-	EHS Building	AOC 13 (Former location of metal cleaning, vapor degreaser and solvent still areas) partly underlies the EHS building but mostly lies outside to the north of the building (Figure 1-4), and is overlapped by AOC 11, AOC 16 and AOC 17. Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil. While the presence of the EHS building slab reduces the potential for stormwater infiltration through the area which lie beneath the building footprint, there is unknown potential for vertical migration of COPCs through the soil column to the water table (present approximately 14 to 16 feet bgs). The potential for VOCs to migrate into indoor air has been assessed through soil vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers in the portion of the AOC beneath the building.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature (areas outside of the EHS Building footprint only). 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors. 3. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs 2014 VI Assessment 2018 Supplemental VI Assessment 2016 Site Characterization Work Plan Addendum #3 2019 ISMP 2019 Revised Remedial Investigation Work Plan 2019 Remedial Investigation Work Plan update 2022 RIWP Groundwater Monitoring Network Update Plan 2023 Annual Heating Season Sampling 2024 Groundwater Monitoring Network - Addendum #4 2024-2025 PRRs	1. AOC 13 is overlapped by AOCs 16 and 17, and the extent of COPCs is addressed by sampling of those AOCs. 2. B574 was proposed within AOC-13 and sampled as part of the Site Characterization Work Plan Addendum #3. - No exceedances detected. 3. MW-47 was proposed and installed as a downgradient monitoring point for AOC-13 as part of Site Characterization Work Plan Addendum #3. Iron (500 ug/L) was detected above TOGS SCOs during the February 2021 sampling event, but was not detected above TOGS SCOs before or since. 4. MW-47I was installed in August of 2021 and sampled in September 2021. Multiple exceedances have been detected over the course of sampling events taking place between 2021 - 2024. This includes Metals, SVOCs and VOC exceedances according to the Groundwater Monitoring Network - Addendum #4. 5.Samples B3158 and B3159 were sampled in Jan 2020 as part of the Remedial Investigation Work Plan update within AOC-13 (Figure 1-4) while numerous samples were taken within AOCs 16 and 17 laterally delineating AOC-13. - Both samples are vertically delineated. 6. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor sample SSHS-04-SS and SSHS-05-SS were within AOC-13. TCE was reported above NYSDOH Matrix Guidelines at SSHS-04-SS (390 µg/m3) and SSHS-05-SS (2,100 µg/m3). Based on the detections of TCE, Unisys installed a sub-slab vapor mitigation system in the F-Wing in 2014 as discussed in Section 3.2.4. TCE was detected in the SSD system effluent for the F-Wing in November 2023 with concentrations of 339 µg/m3 (Table 6-1C). TCE effluent concentrations decreased between June 2018 and July 2021, increased in December 2021, then slightly decreased in November 2023 as shown on Figure 6V-2. This indicates that TCE is still present in sub-slab vapor below F-Wing and may potentially be associated with AOC-13. 7. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). Conclusion: Soil Vapor and indoor air have been assessed and investigated as part of AOC-1. Vertical and lateral extent of AOC-13 located in the Teachers Parking lot has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Possible AOC-13 contamination in soil and groundwater is laterally delineated by sampling completed for AOC-16 and AOC-17 discussed below due to the AOCs overlapping. All borings taken within the AOC-13 area (B3158 and B3159) are vertically delineated by samples reported below Restricted Residential SCOs. Groundwater has been investigated though sampling at MW-47/MW-47I downgradient of AOC-13.	Soil - Yes Groundwater - Yes	NA	B93, B95	MW-47 MW-47I B92 B94	SSHS-04-SS, SSHS-05-SS	F-Wing	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-13 underlying the school building is unknown			
14	Power Washer, Rust Prevention Dip Operation	AOC-14-2	Sludge Settling Pond	#c808054	AOC-14 is former power washer, rust prevention and dip operations areas and includes four discrete areas. AOC-14-3 is located in the Tennis Courts and Main Parking Lot area (Figure 1-4). AOC-14-3 spatially overlaps with AOC-16-3. AOC-14-2 and AOC-14-4 are located within the New BCP Site and will be discussed in the #c808054 RI/AA. AOC-14-1 is located to the south of the Site and will be addressed in the SC of the Former Scott Technologies Site (NYSDEC #p808049). Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil, and there is unknown potential for vertical migration through the soil column to the water table.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in groundwater within or adjacent to these areas. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of these areas toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Groundwater	S,M	2001 Sampling Report 2003 Health Consultation 2009 EMP 2017 Site Characterization Report 2019 Site Characterization Report 2023 Groundwater Mon. Network Update Add #1 2023 Groundwater Mon. Network Update Add. #2 2023 Groundwater Mon. Network Update Add. #3 2024 Groundwater Mon. Network Update Add. #4 2024 IRM #3 CCR 2026 FFC CCR	1. Based on the findings presented in the Site Characterization report, investigations completed in the main parking lot associated with AOC-14 were fully addressed and additional investigation was not required. AOC-14 in the main teacher parking lot was sampled for PCBs, metals, SVOCs and VOCs at B90 from 0-16 ft bgs. No detections above RRSCOs were reported. Boring locations completed adjacent to AOC-14 in the student parking lot include B81, B84, B87 for PCBs, metals, SVCOs, and VOCs from 0-14 ft bgs. Detections above RRSCOs for PCBs, metals, and VOCs were not identified. PAHs were detected above RRSCOs from 0-2 ft bgs at B81 for benz(a)anthracene (1.4 mg/kg), benzo(a)pyrene (1.9 mg/kg) benzo(b)fluoranthene (2.3 mg/kg), dibenz(a,h)anthracene (0.45 mg/kg), and indeno(1,2,3-cd)pyrene (0.45 mg/kg). B84 also exceeded indeno(1,2,3-cd)pyrene (0.64 mg/kg) from 0-2 ft bgs. PAHs in shallow soil samples are likely attributable to asphalt pavement rather than historical operations associated with AOC-14 in the student parking lot. 2. Excavations associated with IRM #3 were completed within the majority of AOC-14 (with the exception of the very northwest corner) located in the student parking lot from 0-6 ft bgs. IRM3-Pipe20 was a sidewall collected within AOC-14 from 0-2 ft bgs which exceeded PAHs for benz(a)anthracene (5.7 mg/kg), benzo(a)pyrene (4.7 mg/kg), benzo(b)fluoranthene (6.6 mg/kg), chrysene (6.5 mg/kg), dibenz(a,h)anthracene (1 mg/kg), and indeno(1,2,3-cd)pyrene (3.1 mg/kg) and RRSCOs or 20x TCLP for metals including arsenic (47 mg/kg), chromium (170 mg/kg), copper (840 mg/kg), and lead (630 mg/kg). Pipe20 was left in place due to technical impracticability for removal as reported in the IRM #3 CCR. As stated above, PAHs in shallow soil samples are likely attributable to asphalt pavement rather than historical operations associated with AOC-14 in the student parking lot. Pipe 20 is laterally delineated from 0-2 ft bgs for metals by IRM3-S010, IRM3-S008, IRM3-S009, IRM3-S059, and B84. Pipe20 is vertically delineated by IRM3-S032B, IRM3-S031, IRM3-S067F, and IRM3-S032A (Figure 6-5A and Figure 6-5B) 3. SVOCs were not reported above TOGS for low and seasonal highs (Figure 5-11C-1 and Figure 5-11C-2) in any monitoring wells surrounding the AOC-14 areas located in the student parking lot (MW-92I, MW-92S, MW-103I, and MW-103S) and the teacher parking lot (MW-75I, MW-75S, MW-93I, and MW-93S). Metals were not reported above TOGS for COPCs identified in Soil (discussed above) in low and high season sampling (Figure 5-11B-1 and Figure 5-11B-2) in the student parking lot (MW-92I, MW-92S, MW-103I, and MW-103S) and the teacher parking lot (MW-75I, MW-75S, MW-93I, and MW-93S). Conclusion: Vertical and lateral extent of metals and SVOCs associated with AOC-14 located in the student and teacher parking lot has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. PAHs that remain in shallow soil samples are attributable to asphalt pavement rather than historical operations associated with AOC-14 in the student parking lot.	To be investigated as part of #c808054

Table 1-1
Areas of Concern
Former Sperry Remington Site - North Portion #c808022
Elmira, NY

AOC ID	AOC Description	Sub-AOCs	Sub-AOC Description	AOC Location	Conceptual Site Model			Media of Concern	COPC	Investigations Completed	Investigation Summary	Nature and Extent Defined	Approximate Excavation Depth	Summary of environmental media samples supporting AOC delineation			Co-located SSDS	Depth of Soil Impact (RR SCO exceedances)			
					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
15	Wire Pickling Area	AOC-15-2	-	FFC/EHS Building	AOC 15 (Wire Pickling Area) includes two discrete former wire pickling areas, one of which is off Site to the south, and not part of the RI (Figure 1-4). The on-Site part of AOC 15 partly underlies the EHS building but extends outside of the EHS building to the east and west. The area to the west of EHS is located off-site in Site #c808054. Soil has been sampled at seven (7) locations in the eastern area previously for PCBs and no further sampling for PCBs is needed. Groundwater has been sampled at MW-13 located at this AOC, and there have been no COPC impacts at this well. Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil. While the presence of the EHS building slab reduces the potential for stormwater infiltration through the area which lie beneath the building footprint, there is unknown potential for vertical migration of COPCs through the soil column to the water table (present approximately 14 to 16 feet bgs). The potential for VOCs to migrate into indoor air has been assessed through soil vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers in the portion of the AOC beneath the building.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	S,M	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs 2014 VI Assessment 2018 Supplemental VI Assessment 2019 ISMP 2021 Soil and Groundwater Investigation WP, FFC - Slide Rail 2021 Soil and Groundwater Investigation WP - EHS Building Area 2023 Annual Heating Season Sampling 2024-2025 PRRs	1. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab soil vapor sample SSHS-23-SS and SS-164 were within AOC-15-2. There were no exceedances at either sampling location. 2. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). 3. Potential impacts of AOC-15-2 on groundwater quality were evaluated using samples collected from monitoring wells located within and downgradient of the AOC. Monitoring wells MW-13 and MW-85I were installed within AOC-15-2 within the portion of the AOC that extends to the east of the EHS Building onto the New BCP Site. MW-104I and MW-104S were installed adjacent to AOC-15-2 to the west of the EHS Building. MW-33 was installed off-Site and downgradient of the AOC. Groundwater samples are shown compared to TOGS groundwater standards on Figures 5-2A-1 through 5-2D-2. Groundwater analytical results are presented in Tables 5-9 and 5-10 for metals and SVOCs, respectively, and are compared to TOGS groundwater standards. Metals were not detected above TOGS groundwater standards at these locations. SVOCs, including benz(a)anthracene and chrysene, were detected above TOGS groundwater standards at MW-104S in September 2023. SVOCs were detected below TOGS groundwater standards at MW-104S in April 2024. As further discussed in Section 6.2.3, the distribution of SVOC exceedances across the Site has been sporadic, non-repeatable, and spatially inconsistent; therefore, additional investigation is not warranted. Conclusion: SSDS have been installed in the Gymnasium, K-Wing Science Addition, Cafeteria and Cafeteria Addition, F-Wing, and Music Wing of EHS to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. Results have been reported in ISMP PRRs for 2019–2020 and the 2023 Heating Season Soil Vapor Intrusion Monitoring and Sampling Report. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring. Based on these findings, the potential VI to indoor air has been mitigated. Additional sampling of indoor air for VOCs will continue under the SMP for Site #c808022. Groundwater monitoring will continue under the SMP for Site #c808022.	Soil - Yes Groundwater - Yes	12	MW-13, MW-85I, MW-104I, MW-104S	MW-33	SS-164, SSHS-23-SS	-	-	4 ft	Not detected above RR SCO	-
		AOC-15-1	-	#p808049			1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature (areas outside of the EHS Building footprint only). 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater			1. AOC-15 was evaluated through soil and groundwater investigations in the East of Gym area (offsite, discussed in #c808054) and the West of A-Wing area. AOC-15 was not investigated below the EHS building. It was determined that the physical constraints of the EHS building made drilling operations necessary to conduct additional soil investigations beneath the building impractical and unsafe. The ceiling height did not provide the vertical clearance required for drill rig masts. Additionally, indoor air flow posed ventilation challenges with the drill rig exhaust, and the confined space amplified the sound level beyond the acceptable occupational safety threshold. 2. Soil exceedances in AOC-15 in the West of A-wing area include exceedances of SCOs for PCBs at 2-4 ft bgs for B339 (9.17 mg/kg) and B467 (3765 mg/kg), which were excavated during FFC activities (IRM #3, IRM #4), PCB exceedances at 4-6 ft bgs for B467 (308.3 mg/kg), B477 (94.1 mg/kg), and B622 (22.78 mg/kg) which were delineated laterally by B744, B2764, B246, and B255, and delineated vertically by B467, B622, and B743. Finally, there were exceedances of TSCA at B477-6-8 (135.7 mg/kg, excavated) and RRSCO at B622-8-10 (6.92 mg/kg, left in place). These exceedances were delineated laterally by B654, B337, and B623 and vertically by B623, B622, and B743. There were no soil exceedances for metals, SVOCs, or VOCs in soil in the west of A-Wing area of AOC-15. 3. Groundwater monitoring wells located within or downgradient to AOC-15 include MW-13, MW-104I, MW-104S, MW-85I (on site #c808022), MW-88I and MW-88S (on site #808054). Exceedances for SVOCs were detected at MW-104S during September 2023 sampling event (benz(a)anthracene, 0.076 ug/L and chrysene, 0.097 ug/L). The distribution of SVOC exceedances has been spatially and temporally inconsistent across the Site. Additionally, MW-13 had an exceedance for PFOS (3.5 ng/L) during the February 2021 sampling event. PFAS exceedances are present on the upgradient western side of the Revised BCP Site and indicate an off-site source of PFAS impacts. No other groundwater exceedances were detected for any COPCs. 3a. There were several exceedances for temporary wells installed adjacent (cross gradient to the north) of AOC-15 in the west of A-wing area. The temporary wells were sampled in January 2021 for total and/or dissolved PCBs, metals, and VOCs. During this event, results for PCBs were above TOGS in nine of the temporary wells, ranging from 0.097 ug/L (B3571) to 32.85 ug/L (B3563I). PCBs were detected below TOGS in well B3559 and non-detect in wells B3557 and B3560. Metals were detected in all 12 wells, but none exceeded TOGS. VOCs were detected in wells B3563 and B3563I but did not exceed TOGS. Conclusion: Vertical and lateral extent of AOC-15 located on Site #c808022 has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Lateral extent of AOC-15 located beneath the EHS building was investigated through sampling of downgradient monitoring wells located on Site #c808054. The remaining section of AOC-15 located in the East of Gym area is being investigated under Site #c808054.	To be investigated as part of #p808049

16, South	Machine Shop Area	AOC-16-1	-	EHS Building	AOC 16 (Former machine shop areas) includes four discrete areas on Site. The northern portion of AOC 16 is coincident with and slightly larger than a possible plating area portion of AOC 17. While the location of former machine shop and plating areas is known based on historic records, there are no records regarding the decommissioning and demolition of the former buildings at this location. Two discrete areas of AOC 16 are at the FFC. Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil. While no specific potential release has been identified, there may be a potential for a past release to surface soil due to former industrial land use, and there is unknown potential for vertical migration through the soil column to the water table. Figure 1-4.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air	P, M, S, V	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs 2014 VI Assessment 2015 Site Characterization Work Plan Addendum #1 2016 Site Characterization Work Plan Addendum #2 2018 Supplemental VI Assessment 2016 Site Characterization Work Plan Addendum #3 2019 Revised Remedial Investigation Workplan 2019 ISMP 2020 Site Wide RI Work Plan Amendment #1 2020 IRM #5 Revised Workplan Final 2021 Soil and Groundwater Investigation Workplan - EHS Building Area (EOG) 2023 NAF Well Decommissioning Plan 2023 Annual Heating Season Sampling 2024-2025 PRRs 2024 Groundwater Monitoring Network - Addendum #4 2026 FFC CCR	1. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab vapor samples were collected within AOC-16-1 at SSHS-04-SS, SSHS-05-SS, SSHS-06-SS, SSHS-07-SS, SSHS-12-SS, SSHS-13-SS, SS-122, and SS-120. TCE was detected above NYSDOH Matrix Guidelines for sub-slab vapor at SSHS-04-SS (390 µg/m3) and SSHS-05-SS (2,100 µg/m3) within AOC-16-1. VOCs detected in sub-slab vapor above NYSDOH guidelines have been mitigated by the installation of sub-slab vapor mitigation systems described in Section 3.2. TCE effluent concentrations for the F-Wing area (portion of EHS building located above AOC-16-1) decreased between June 2018 and July 2021, increased in December 2021, then slightly decreased in November 2023 as shown on Figure 6V-2. This indicates that TCE is still present in sub-slab vapor beneath the EHS Building and may potentially be associated with AOC-16-1. 2. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). 3. Potential impacts of AOC-16-1 on groundwater quality were evaluated using samples collected from monitoring wells located within and downgradient of the AOC. Monitoring wells MW-83S, MW-83I, and MW-94S were installed within AOC-16-1. Monitoring wells MW-94I, MW-47, MW-47I, MW-90S, MW-90I, MW-74I and MW-74S are located downgradient of AOC-16-1. Temporary monitoring well B3203A was installed within AOC-16-1 and analyzed for PCBs, metals, SVOCs. Other temporary monitoring wells were installed within AOC-16-1 for analysis of VOCs, including B3205A, B3025B, B93, B96, B97, B3202A, B3202B, B3203A, B3203B, B3204A, and B3204B. PCBs, metals, and SVOCs were not detected above TOGS groundwater standards within and downgradient of AOC-16-1. VOCs were detected above TOGS groundwater standards downgradient of AOC-16-1 at MW-47I and temporary monitoring wells B92 and B94. MW-47I exceeded the TOGS groundwater standard for benzene (1.5 µg/L compared to TOGS of 1 µg/L) in September 2021. Benzene was non-detect at MW-47I in samples collected in October 2021 and April 2024. TCE was detected above the TOGS groundwater standard (5 µg/L) at temporary monitoring wells B92 (5.6 µg/L) and B94 (8.9 µg/L) in August 2014. TCE was not detected above TOGS groundwater standards at MW-47 in September 2016 (3.9 µg/L) and was non-detect in February 2021 and July 2021. TCE was non-detect at MW-47I in September 2021, October 2021, and April 2024. As temporary monitoring wells are installed for short-term investigation purposes and are typically sampled shortly after installation, the resulting data may reflect localized disturbance, incomplete equilibration, and short-term turbidity-related influences that can bias reported groundwater concentrations. In contrast, permanent monitoring wells provide a more reliable measure of ambient groundwater quality and dissolved-phase conditions within the aquifer as they are designed, developed, and sampled to better represent stable formation water over time. Accordingly, the absence of TCE exceedances in the downgradient permanent monitoring wells is considered more representative of actual aquifer conditions than the isolated exceedances reported in temporary monitoring well samples. Therefore, additional investigation is not warranted. Conclusion: SSDS have been installed in the Gymnasium, K-Wing Science Addition, Cafeteria and Cafeteria Addition, F-Wing, and Music Wing of EHS to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. Results have been reported in ISMP PRRs for 2019–2020 and the 2023 Heating Season Soil Vapor Intrusion Monitoring and Sampling Report. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring. Based on these findings, the potential VI to indoor air has been mitigated. Additional sampling of indoor air for VOCs will continue under the SMP for Site #c808022. Groundwater monitoring will continue under the SMP for Site #c808022.	Soil - Yes Groundwater - Yes	NA	MW-83I, MW-83S, B3202A, B3202B, B3203A, B3203B, B3204A, B3204B, B3205A, B3205B, B93, B95, B96, B97	MW-94S MW-94I MW-47 MW-47I MW-90S MW-90I	SS-120, SS-122, SSHS-04-SS, SSHS-05-SS, SSHS-06-SS, SSHS-07-SS, SSHS-12-SS, SSHS-13-SS	-	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-16-1 underlying the school building is unknown			
		AOC-16-3		NAF/FFC			1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater			1. MW-83S/I was installed and sampled as a monitoring point for AOC-16 as part of the Soil and Groundwater Investigation Workplan - EHS Building Area (EOG) (Figure 2-3). Other monitoring wells associated with AOC-16 include MW-47 and MW-61S according to the Site Wide RI Work Plan Amendment #1. 2. According to the 2023 NAF Well Decommissioning Plan, MW-44, MW-38 and MW-40 were decommissioned and were all downgradient monitoring points for AOC-16. MW-102I/S are now the primary downgradient monitoring point for AOC-16 south (Figure 2-3). - MW-102 has had Thallium, and SVOCs detected above TOGS SCOs between sampling events in 2023 and 2024. The distribution of Metals, and SVOC exceedances has been spatially and temporally inconsistent across the Site and the SVOCs only sporadically exceeded TOGS standards at the listed monitoring wells. Further evaluation found that thallium exceedances are due to false positive bias due to the analytical method. Based on these results no further assessment is warranted to further define the nature and extent of Metals and SVOCs impacts to groundwater at the Revised BCP Site. 3. AOC-16 has had the extent of possible soil contamination investigated across many different soil sampling events as shown in SCWP Addendum #1. PCB, Metal, SVOC and VOC exceedances were detected in soil borings within AOC-16 according to the Revised Remedial Investigation workplan. These exceedances were then addressed during IRM #5 and were vertically and laterally delineated. Soil exceedances found within AOC-16 that were excavated during IRM #5 are discussed below: - The following samples had PCBs detected above NYS Hazardous Waste SCOs (>= 50 mg/kg)and were excavated during IRM #5: B233 and B242 (0-2 ft bgs); B239A, FB7-D, B229, B230, B314, B242 and B2691 (2-4 ft bgs); B227, B229, B2675 and B234A (4-6 ft bgs). (Figure 5-7A - Figure 5-7E) - The following samples had PCBs detected above IRM Subsurface SCOs (> 10 mg/kg) and were excavated during IRM #5: FB7-A, FB7-C, B227, B239 and B314 (0-2 ft bgs); B2326, B2602, B240, B228, B412, B2357, B2305, and B2508 (2-4 ft bgs); FB7-DA, B233, B228, and B230 (4-6 ft bgs); B227 (6-8 ft bgs) (Figure 5-7A - Figure 5-7E) - The following samples had PCBs detected above POG SCOs (> 3.2 mg/kg) and were excavated during IRM #5: FB7-D, B229, B320, B408, and B2903 (0-2 ft bgs); B2334, B2320, B218, B227, B2331, B408 and B2193 (2-4 ft bgs); B218, B2651, B222, B223, B320, B314, B313, B319, B239A, and B2526 (4-6 ft bgs); B323, and B2675 (8-10 ft bgs) (Figure 5-7A - Figure 5-7E) - The following samples had PCBs detected above RR SCOs (> 1 mg/kg) and were excavated during IRM #5: B218, B223, B230, B237, B308, , B2693, B2501, and B2306 (0-2 ft bgs); FB7-A, FB7-C, B2333, B222, B237, B2321, B2510, B2693, B2692, B2919, B2507, and B2509 (2-4 ft bgs); B2333, B412, B312, B2664, and B2663 (4-6 ft bgs) (Figure 5-7A - Figure 5-7E) - The following samples had Metals detected above RR SCOs and were excavated during IRM #5: B2226, and B2193 (2-4 ft bgs); B2223, B2226, and B2225 (4-6 ft bgs); B2781, and B2935 (8-10 ft bgs) (Figure 5-7A - Figure 5-7E) 4. During IRM #5 the majority of borings with detected exceedances of comparison SCOs were excavated. The following borings with exceedances still remaining in place are B2227 (PCBs exceeding POGs SCOs) at 6-12 ft bgs, B2226 (PCBs exceeding POG SCOs) at 8-12 ft bgs, B2110 (Metals exceeding RR SCOs) at 6-16 ft bgs, B234A (PCBs exceeding NYS Hazardous SCOs) at 6-8 ft bgs, B233 (PCBs exceeding POG SCOs) at 6-10 ft bgs, B319 (PCBs exceeding POG SCOs) 6-10 ft bgs, B322 (PCBs exceeding RR SCOs) 6-10 ft bgs, B2700 (PCBs exceeding POG SCOs) at 8-10 ft bgs, and B227A (PCBs exceeding POG SCOs) at 8-10 ft bgs. (Figure 6-4A - Figure 6-4H) - The above samples are all laterally delineated by further IRM #5 sampling. Conclusion: Vertical and lateral extent of AOC-16 located on Site #c808022 has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Lateral and vertical extent of AOC-16 South was investigated as part of historical RI sampling events as well as IRM #5.		16	MW-106, MW-16, MW-52, MW-56, MW-57, MW-59I, MW-59IR, MW-59S, MW-59SR, MW-60, MW-60IR, MW-60SR, MW-63S, MW-63I, MW-65, MW-65R, MW-76I, MW-76S, MW-79I, MW-79S, MW-92I, MW-92S, B2722, B3090, B572A, B3856I, B3856S, B3867, B3868I, B3868S, B3869I, B3869S, B3874, B3883, B3885, B3886, B3893I, B3893S, B3909I, B3909S	MW-106 MW-57R MW-100S MW-100I MW-58 MW-36	-	-	32 ft	14 ft	20 ft	26 ft

16, West		AOC-16-4		FFC			1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater	P, M	2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs 2019 Revised Remedial Investigation Workplan 2020 Site Wide RI Work Plan Amendment #1 2021 Soil and Groundwater Investigation Workplan - EHS Building Area (EOG) 2023 NAF Well Decommissioning Plan 2024 Groundwater Monitoring Network - Addendum #4 2026 FFC CCR	1. Monitoring wells associated with AOC-16 are MW-11S, MW-11D, MW-28, MW-29, MW-44, MW-52, MW-53, MW-54, and MW-56 (Figure 2-3) according to the Site Wide RI Work Plan Amendment #1. 2. Further monitoring wells installed downgradient of AOC-16 are MW-59IR/SR, MW-100I/S, MW-57R, MW-106, MW-79I/S, MW-76I/S, MW-92I/S, and MW-58. The following monitoring wells have had PCB or Metals detections above TOGS. - MW-56 had a PCB detections above TOGS (0.59 ug/L) during 2021 sampling but no PCB detections in following sampling events (Table 5-8). - MW-106 has consistent low level TOGS exceedances (0.32 - 0.57 ug/L) but there have no PCB detections in MW-97 further downgradient as well as MW-57R directly adjacent to MW-106 (Figure 2-3). - Metals were not consistently reported at concentrations above TOGS groundwater standards in monitoring wells with the exception of thallium, iron, and manganese. For these three metals, further evaluation found that thallium exceedances are due to false positive bias due to the analytical method, and iron and manganese concentrations are not Site-related. Based on these results no further assessment is warranted to further define the nature and extent of metals impacts to groundwater at the Revised BCP Site. 3. A total of 95 soil borings were advanced within AOC-16-4 and AOC-16-5 to a maximum depth of 38 ft bgs. Within the FFC, soil borings were collected on a 60x60 ft grid to the water table and subsequent step out samples collected on approximately 30 ft spacing to further define the nature and extent of COPCs observed above Restricted Residential SCOs. COPCs including PCBs, metals, and SVOCs were detected above Restricted Residential SCOs. VOCs were not detected above Restricted Residential SCOs. PCBs were detected above the Restricted Residential SCO up to 12 ft bgs, metals up to 14 ft bgs, and SVOCs up to 10 ft bgs. VOCs were not detected above Restricted Residential SCOs within AOC-16-4 or AOC-16-5. Excavations within AOC-16-4 were completed up to 7 ft bgs and excavations within AOC-16-5 completed to 9 ft bgs as part of the FFC IRM, as discussed in Section 3.2.4. COPCs identified in soil within AOC-16 may be related to these historic features but have been removed by FFC IRM excavations except at locations noted in Section 5. Groundwater quality data demonstrates that COPC concentrations remaining in place do not indicate an ongoing source contributing to groundwater exceedances above TOGS standards. Conclusion: Nature and extent of potential soil and groundwater contamination associated with AOC-16-4 and AOC-16-5 on the north and western portion of the NAF has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Based on these observations, no further assessment is warranted to further define the nature and extent of impacts in groundwater and soil potentially associated with AOC-16-4 or AOC-16-5 on Site #c808022. AOC ID	AOC Description	Sub-AOCs	Sub-AOC Description	AOC Location	Conceptual Site Model			Media of Concern	COPC	Investigations Completed	Investigation Summary	Nature and Extent Defined	Approximate Excavation Depth	Summary of environmental media samples supporting AOC delineation			Co-located SSDS	Depth of Soil Impact (RR SCO exceedances)			
					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
17	Possible Disposal Areas	AOC-17-4	Possible Plating Area	EHS Building	AOC 17 (Possible Disposal Areas) includes a possible former plating area in the northern part of the Site; coincident with AOC16; four (4) former potential disposal areas, three (3) on the southwestern part of the Site and one (1) on the southeastern part of the Site; two of these areas underlie the EHS Building. A former acid drainage pit in the southeastern part of the Site underlies the EHS Building and a former coal pile located in the southeastern corner of the Site was excavated during IRM #2. Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil. While the presence of the EHS building slab reduces the potential for stormwater infiltration through the areas that lie beneath the building footprint, there is unknown potential for vertical migration of COPCs through the soil column to the water table (present approximately 14 to 16 feet bgs). While no specific potential release has been identified in the former disposal area east of the gymnasium, there may be a potential for past release to surface soil due to former industrial land use, and there is unknown potential for vertical migration through the soil column to the water table. The potential for VOCs to migrate into indoor air has been assessed through soil vapor investigation, and considered to be an incomplete pathway (Figures 6V-1A and 6V-1B). The presence of the EHS building slab precludes the potential for direct contact with COPCs in soil by subsurface construction workers in the portion of the AOC beneath the building. Figure 1-4.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient of the EHS building toward off-site surface water receptors, or along preferential pathways (e.g., backfill around stormwater drains north of the EHS building) toward off-site surface water receptors. 2. EHS Building occupants: VOC-impacted sub-slab vapor underlies portions of the EHS building, posing a potential vapor intrusion (VI) risk in indoor air to occupants.	Soil Groundwater Soil Vapor Indoor Air		Sanborn Fire Insurance Maps 1967 Lancy Report and Figures 1988 PSA 2001 Sampling Report 2003 Health Consultation 2009 EMP 2010 Health Consultation 2011-2013 ACRs 2014 VI Assessment 2015 Site Characterization Work Plan Addendum #1 2016 Site Characterization Work Plan Addendum #2 2016 Site Characterization Work Plan Addendum #3 2018 Supplemental VI Assessment 2018 IRM #2 PDI Workplan 2018 Amendment #1 to the IRM#2 PDI Workplan 2018 FFC RI/PDI Activities Workplan 2018 Amendment #1 - FFC RI/PDI Workplan 2018 SVIA Report 2019 ISMP 2019 IRM #2 CCR 2019 Revised Remedial Investigation Workplan 2020 Site Wide RI Work Plan Amendment #1 2021 Soil and Groundwater Investigation Workplan - EHS Building Area (EOG) 2023 Addendum #2 to the Soil and Groundwater Investigation Workplan - EHS Building Area 2023 Annual Heating Season Sampling 2024 Groundwater Monitoring Network - Addendum #4 2024-2025 PRRs	1. The potential for VOCs to migrate into indoor air has been assessed through previous sub-slab soil vapor investigation. Sub-slab vapor analytical results are presented in Table 5-2 screened against NYSDOH Matrix Guidelines for sub-slab vapor. Sample locations are shown on Figure 5V-2A-F. Sub-slab vapor samples were collected within AOC-17-4 (SSHS-04-SS, SSHS-05-SS, SSHS-06-SS, SSHS-07-SS, SSHS-12-SS, SS-122, and SS-120), AOC-17-5 (SS-133, SSHS-08-SS, SSHS-09-SS, and SSHS-10-SS), AOC-17-8 (SSHS-22-SS) and adjacent to AOC-17-6 (SSHS-01-SS). TCE was detected above NYSDOH Matrix Guidelines for sub-slab vapor at SSHS-04-SS (390 µg/m3) and SSHS-05-SS (2,100 µg/m3) within AOC-17-4. TCE was detected below NYSDOH Matrix Guidelines for sub-slab vapor collected within AOC-17-5 and AOC-17-8 and adjacent to AOC-17-6. VOCs detected in sub-slab vapor above NYSDOH guidelines have been mitigated by the installation of sub-slab vapor mitigation systems described in Section 3.2. TCE effluent concentrations for the F-Wing area (portion of EHS building located above AOC-17-4 and AOC-17-5) decreased between June 2018 and July 2021, increased in December 2021, then slightly decreased in November 2023 as shown on Figure 6V-2. This indicates that TCE is still present in sub-slab vapor beneath the EHS Building and may potentially be associated with AOC-17-4. 2. The potential for VI has been assessed throughout the EHS building. The nature and extent of sub-slab vapor impacts has been defined (Figure 5V-2A-F). SSDS systems have been installed in areas requiring mitigation (Figures 3-2 and 5V-2A-F). Therefore, VI is not considered a complete exposure pathway (Soil Vapor Intrusion Assessment). 3. Potential impacts of AOC-17-4, AOC-17-5, and AOC-17-6 on groundwater quality were evaluated using samples collected from monitoring wells located within and downgradient of these AOCs, outside of the EHS Building. Monitoring well MW-83I and temporary monitoring wells B93 (analyzed for VOCs), B94 (analyzed for VOCs), B95 (analyzed for VOCs), B96 (analyzed for VOCs), B97 (analyzed for VOCs), B3202A (analyzed for VOCs), B3202B (analyzed for VOCs), B3203A (analyzed for PCBs, metals, SVOCs, and VOCs), B3203B (analyzed for VOCs), B3204A (analyzed for VOCs), and B3204B (analyzed for VOCs), were installed within AOC-17-4. Monitoring wells located downgradient of AOC-17-4, AOC-17-5, and AOC-17-6 include MW-47, MW-47I, MW-90S, MW-90I, MW-91S and MW-91I. Results are shown compared to TOGS groundwater standards on Figures 5-2A-1 through 5-2D-2. Groundwater analytical results including those from previous investigations are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. PCBs, metals, and SVOCs were not detected above TOGS groundwater standards within or downgradient of AOC-17-4, AOC-17-5, and AOC-17-6. MW-47I located downgradient of AOC-17-4 exceeded the TOGS groundwater standard for benzene (1.5 µg/L compared to TOGS of 1 µg/L) in September 2021. Benzene was non-detect at MW-47I in samples collected in October 2021 and April 2024. Therefore, further investigation is not warranted. TCE was detected above the TOGS groundwater standard (5 µg/L) at B92 (5.6 µg/L) and B94 (8.9 µg/L) in August 2014. TCE was detected below TOGS groundwater standards at adjacent monitoring well MW-47 in September 2016 (3.9 µg/L) and non-detect in February 2021 and July 2021. TCE was non-detect at MW-47I in September 2021, October 2021, and April 2024. As temporary monitoring wells are installed for short-term investigation purposes and are typically sampled shortly after installation, the resulting data may reflect localized disturbance, incomplete equilibration, and short-term turbidity-related influences that can bias reported groundwater concentrations. In contrast, permanent monitoring wells provide a more reliable measure of ambient groundwater quality and dissolved-phase conditions within the aquifer as they are designed, developed, and sampled to better represent stable formation water over time. Accordingly, the absence of TCE exceedances in the adjacent permanent monitoring wells is considered more representative of actual aquifer conditions than the isolated exceedances reported in temporary monitoring well samples. Therefore, additional investigation is not warranted. 4. Potential impacts of AOC-17-8 on groundwater quality was evaluated using samples collected from monitoring wells located downgradient of this AOC, outside of the EHS Building. Monitoring wells MW-85I, MW-13, MW-88S, and MW-88I and temporary monitoring well B29-A (analyzed for PCBs, SVOCs, and VOCs) were installed downgradient of AOC-17-8. PCBs, metals, SVOCs, and VOCs were not detected above TOGS groundwater standards at these monitoring wells. Conclusion: SSDS have been installed in the Gymnasium, K-Wing Science Addition, Cafeteria and Cafeteria Addition, F-Wing, and Music Wing of EHS to mitigate potential VI to indoor air. Sampling of indoor air for VOCs has been conducted as part of post-remediation monitoring under the ISMP and ISMP Amendment #1 between December 2019 through present day. Results have been reported in ISMP PRRs for 2019–2020 and the 2023 Heating Season Soil Vapor Intrusion Monitoring and Sampling Report. VOCs included on NYSDOH Soil Vapor/Indoor Air Decision Matrices have not been detected above the indoor air guideline values for mitigation under ISMP post-remediation monitoring. Based on these findings, the potential VI to indoor air has been mitigated. Additional sampling of indoor air for VOCs will continue under the SMP for Site #c808022. Groundwater monitoring will continue under the SMP for Site #c808022.	Soil - Yes Groundwater - Yes	NA	MW-83I, B3202A, B3202B, B3203A, B3203B, B3204A, B3204B, B93, B94, B95, B96, B97	MW-47 MW-47I MW-90S MW-90I MW91S MW-91I	SSHS-04-SS, SSHS-05-SS, SSHS-06-SS, SSHS-07-SS, SSHS-12-SS, SS-122, SS-120	-	As additional soil investigation beneath the EHS building was not feasible, the presence of COPCs in soil within the portions of AOC-17 underlying the school building is unknown

		AOC-17-3	Former Coal Pile	Rear Parking Lot			1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature (areas outside of the EHS Building footprint only). 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater			1. A total of 86 soil borings were installed within AOC-17-3 to a maximum depth of 18.07 ft bgs across multiple soil sample events (Section 2.2). Soil borings collected within AOC-17-3 include samples collected as part of the IRM #2 PDI, IRM #2 PDI Amendments #1-5, Addendum 4 to the Soil and Groundwater Investigation Work Plan EHS Building Area, and Addendum 6 to the Soil and Groundwater Investigation Work Plan. COPCs including PCBs, metals, and SVOCs were identified within AOC-17-3 above Restricted Residential SCOs. VOCs were not identified within AOC-17-3 above Restricted Residential SCOs. PCBs above the Restricted Residential SCO were detected up to a depth of 14 ft bgs. Metals above the Restricted Residential SCO, including arsenic, chromium, copper, mercury, lead, nickel, and selenium, were detected up to a depth of 14 ft bgs. SVOCs above the Restricted Residential SCO, including benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene, were detected up to a depth of 6 ft bgs. 2. Exceedances remaining in place within AOC-17 in the Rear Parking Lot area are laterally delineated by the following areas: - To the East/West exceedances remaining in place within AOC-17 in the Rear Parking Lot area are laterally delineated by Site #808054. - To the North exceedances remaining in place within AOC-17 in the Rear Parking Lot area are laterally delineated by the EHS building and associated sampling events. - To the South exceedances remaining in place within AOC-17 in the Rear Parking Lot area are laterally delineated by Site #808043 3. Of the sample locations with exceedances remaining in place, 10 of the sample locations are vertically delineated by additional samples. (Figures 6-6A - 6-6J). Additional vertical delineation of 65 sample locations that exceed RRSCOs in precluded by subsurface building structures or utilities. 4. Soils that remain in place within IRM #2 are either below concrete obstructions and utilities or the result of construction modifications (i.e., additional sloping and benching) due to the obstructions. 3. Potential impacts of AOC-17-3 on groundwater quality were evaluated using samples collected from monitoring wells located within and downgradient of the AOC. Monitoring wells installed within AOC-17-3 include MW-46, MW-70S, MW-70I, MW-73S, and MW-73I. Temporary monitoring wells installed within AOC-17-3 include B23 which was analyzed for metals, SVOCs, and VOCs. Monitoring wells downgradient of AOC-17-3 include MW-42 and MW-82S. Temporary monitoring wells downgradient of AOC-17-3 include B4154I and B4154S which were both analyzed for PCBs, metals, SVOCs, and VOCs. Groundwater samples collected as part of the RI investigation of AOC-17-3 were analyzed for PCBs, metals, SVOCs, and VOCs. Results are shown compared to TOGS groundwater standards on Figures 5-14A-1 through 5-14D-2. Groundwater analytical results including those from previous investigations are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. PCBs and VOCs were not detected above TOGS groundwater standards within or downgradient of AOC-17-3. Conclusion: Lateral extent of AOC-17-3 has been defined in soil and groundwater on Site #808054. Vertical extent of soil contamination in the rear parking lot area is vertically delineated by soil borings and grab samples that are either below concrete obstructions and utilities or the result of construction modifications (i.e., additional sloping and benching) due to the obstructions.		14	MW-46, MW-70I, MW-70S, MW-73I, MW-73S, SSHS-B23	MW-42 MW-82S B4151I B4154S	-	-	14 ft	14 ft	6 ft	-

Elmira, NY

AOC ID	AOC Description	Sub-AOCs	Sub-AOC Description	AOC Location	Conceptual Site Model			Media of Concern	COPC	Investigations Completed	Investigation Summary	Nature and Extent Defined	Approximate Excavation Depth	Summary of environmental media samples supporting AOC delineation			Co-located SSDS	Depth of Soil Impact (RR SCO exceedances)			
					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
		AOC-17-9	Possible Plating Area	NAF							1. A total of 145 soil borings were installed within AOC-17-9 to a maximum depth of 34 ft bgs across multiple soil sampling events (Section 2.2). Within the NAF, soil borings were collected on a 60x60 ft grid to the water table and subsequent step out samples collected on approximately 30 ft spacing to further define the nature and extent of COPCs observed above Restricted Residential SCOs. COPCs including PCBs, metals, and SVOCs were detected within AOC-17-9 above Restricted Residential SCOs. VOCs were not detected within AOC-17-9 above Restricted Residential SCOs. PCBs above the Restricted Residential SCO were detected up to a depth of 18 ft bgs, below the water table (approximately 16 ft bgs). Metals above Restricted Residential SCOs, including barium, cadmium, chromium, copper, lead, mercury, and zinc, were detected up to a depth of 14 ft bgs. SVOCs above the Restricted Residential SCOs, including benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, and indeno(1,2,3-cd)pyrene, were detected up to a depth of 10 ft bgs. 2. Potential impacts of AOC-17-9 on groundwater quality were evaluated using samples collected from monitoring wells located within and downgradient of the AOC. Monitoring wells installed within AOC-17-9 include MW-56, MW-57, MW-59S, MW-59I, MW-60, MW-60SR, MW-60IR, and MW-65R. Temporary monitoring wells installed within AOC-17-9 include B3883 (analyzed for PCBs), B3885 (analyzed for PCBs), B3886 (analyzed for PCBs, metals, SVOCs, and VOCs), B3903S (analyzed for PCBs), B3903I (analyzed for PCBs), B3909S (analyzed for PCBs), B3909I (analyzed for PCBs), B3893I (analyzed for PCBs), and B3893S (analyzed for PCBs). Monitoring wells downgradient of AOC-17-9 include MW-57R, MW-100S, and MW-100I. Groundwater samples collected as part of the RI investigation of AOC-17-9 were analyzed for PCBs, metals, SVOCs, and VOCs. Results are shown compared to TOGS groundwater standards on Figures 5-5A-1 through 5-5D-2. Groundwater analytical results including those from previous investigations are presented in Tables 5-8, 5-9, 5-10, and 5-11, for PCBs, metals, SVOCs, and VOCs, respectively, and are compared to TOGS groundwater standards. Metals and VOCs were not detected above TOGS groundwater standards. PCBs and SVOCs were detected above TOGS groundwater standards and are discussed further below. Conclusion: Lateral extent of AOC-17-9 has been defined in soil and groundwater as part of the RI for #c808022 as discussed above. Based on these observations, no further assessment is warranted to further define the nature and extent of impacts in groundwater and soil potentially associated with AOC-17-3 on Site #c808022.		16	MW-56, MW-57, MW-59I, MW-59S, MW-60, MW-60IR, MW-60SR, MW-65R, B3883, B3885, B3886, B3893I, B3893S, B3903I, B3903S, B3909I, B3909S	MW-57R MW-100S MW-100I	-	-	18 ft	14 ft	10 ft	-
		AOC-17-1	Possible Disposal Area	#p808049						-	-	To be investigated as part of #c808054									
		AOC-17-2	Possible Disposal Area	#p808049						-	-										
18	2017 Storm Drain Installation and TCE-Impacted Soils	AOC-18-1	2017 TCE Impacted Soil Area	#c808054	AOC-18 (TCE Investigation Area) is defined as the area where TCE was detected by ECSD contractors in grab soil samples at concentrations of up to 10,000 µg/kg during the EHS stormwater sewer installation, and the sanitary ejector northwest of this area. Historical operations near these structures have the potential to have resulted in release of COPCs to underlying soil and there is an unknown potential for vertical migration through the soil column to the water table (located approximately 16 ft bgs). Because of the suspected presence of TCE or other VOCs in this AOC, soil and groundwater samples will also be collected to assess for the presence of emerging contaminants (1,4-dioxane and PFAS).	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	1. On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature. 2. Off-site surface water users/ecological communities: Impacted groundwater (if present) may migrate downgradient toward off-site surface water receptors, or along preferential pathways (e.g., backfill around sewers) toward off-site surface water receptors.	Soil Groundwater	P,M,S,V	Investigations Completed as part of this AOC are documented under #c808054	Investigations completed as part of this AOC are documented under #c808054	To be investigated as part of #c808054

19	Former Drum Nest Area	-	-	NAF	AOC-19 was identified when a former drum nest area was encountered during implementation of IRM activities in the Northern Athletic Fields (NAF) on 5 January 2022.There may be a potential for past release to surface soil due to former industrial land use, and there is unknown potential for vertical migration through the soil column to the water table.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature.	Soil Groundwater	P, V	2019 Revised Remedial Investigation Workplan 2020 Revised RI Work Plan - Amendment #1 2023 Groundwater Mon. Network Update Add #1 2023 Groundwater Mon. Network Update Add. #2 2023 Groundwater Mon. Network Update Add. #3 2023 Addendum #2 to the Soil and Groundwater Investigation Workplan - EHS Building Area 2024 Groundwater Monitoring Network - Addendum # 2026 NAF CCR	1a. PCBs were observed to exceed Restricted Residential SCOs below the water table (Table 6-4A). These PCB exceedances were observed between 14 and 34 ft bgs as shown on Figure 6-3l-Q. PCB exceedances in the NAF are not vertically defined at B3920 from 31.85V-2A-F3.85 ft bgs, but is vertically defined by the clay layer at 35 ft bgs. PCBs are horizontally defined for BCP Site c808022 by the Restricted Residential SCO Limits depicted on Figures 6-3l-Q. PCB exceedances below the water table are inferred to the Revised BCP Site Boundary based on off-Site Restricted Residential SCO exceedances which will be addressed as part of the RI of #c808054. Total PCB concentrations at or above TSCA levels of 50 mg/kg are present from 16-30 ft bgs. These concentrations range from 65.1 to 13,000 mg/kg. These TSCA level PCB concentrations are primarily located in the vicinity of AOC-19 and are defined within Site #c808022. Residual PCBs may affect groundwater quality; a groundwater monitoring program will be included in the SMP. VOCs observed to exceed Restricted Residential SCOs below the water table include PCE and TCE (Table 6-4D). These VOC exceedances were observed between 24 and 30 ft bgs as shown on Figures 6-3M-O. PCE above the Restricted Residential SCO below the water table was observed at 40 mg/kg at B3454. TCE above the Restricted Residential SCO below the water table ranged from 25 - 170 mg/kg, with the maximum value observed at B3920. VOC exceedances in the NAF are vertically defined at 30 ft bgs. VOCs are horizontally defined for BCP Site c808022 by the Restricted Residential SCO Limits depicted on Figures 6-3M-O 1b. On 5 January 2022, drums were encountered in the IRM #5A2 2- to 4-foot excavation in AOC-19. An odor was detected, and a black liquid was observed. PID measurements greater than 100 ppm were observed within the odorous and stained area. Samples of the drum contents and surrounding soils were collected and submitted for laboratory analyses, and the area was secured during the period of the investigation by covering it with a tarp. Detections in the drum contents included PCBs (22 mg/kg), benzene (25 mg/kg), ethylbenzene (45 mg/kg), toluene (270 mg/kg), total xylenes (330 mg/kg), naphthalene (38 mg/kg), and lead (190 mg/kg). PCBs were detected in surrounding soils at 22,000 mg/kg. VOCs detected in the surrounding soils included benzene (0.60 mg/L) and trichloroethene (1.2 mg/L). The drums and surrounding soils were managed in accordance with IRM #5A2 Addendum #1, relocated and staged for transport and disposal in accordance with IRM #5A2 Addendum #3, and transported for disposal in accordance with IRM #5A2 Addendum #5. Soil impacts associated with AOC-19 were removed with excavation to the water table during IRM #5A2 2a. PCB concentrations downgradient of AOC-19 at MW-50S, MW-50I, MW-52, MW-51, MW-96, MW-106 have been observed above TOGS groundwater standards. Relative to the area of PCB exceedances of TOGS groundwater standards, MW-50S, MW-50I, and MW-52 are located hydraulically upgradient, with MW-51 and MW-106 downgradient, and MW-96 downgradient of MW-51 and MW-106. • Former monitoring wells MW-50S, MW-50I, and MW-52 characterize the upgradient extent of PCBs in this area. These monitoring wells were sampled in February and April 2021. These locations exceeded TOGS for PCBs in April 2021 (concentrations of 2.3 µg/L, 0.14 µg/L and 7.6 µg/L, respectively). The maximum concentration of PCBs at MW-50S, MW-50I, and MW-52 was 2.3 µg/L in April 2021, 0.14 µg/L in April 2021, and 12.5 µg/L in February 2021, respectively. These monitoring well locations were decommissioned as part of IRM #5A2 in December 2021. • MW-51 is located approximately 100 ft east (downgradient) of MW-50S, MW-50I, and MW-52. PCBs have been sampled at MW-51 as part of seven sampling events in February 2021, April 2021, May 2023, September 2023, November 2023, January 2024, and April 2024. The maximum concentration of PCBs observed at MW-51 was 0.75 µg/L in February 2021. PCBs at MW-51 have been reported above TOGS in February 2021, April 2021 and September 2021, but reported below TOGS for samples collected in May 2023 and the three most recent sampling events in November 2023, January 2024, and April 2024, which also were reported as non-detections. PCBs concentrations at MW-51 have generally decreased from the initial sampling event in February 2021 to April 2024 (0.74 µg/L to non-detect). • MW-106 is located approximately 100 ft east (downgradient) of MW-52 and 80 ft south (cross gradient) of MW-51. PCBs have been sampled at MW-106 as part of five sampling events in May 2023, September 2023, November 2023, January 2024, and April 2024. The maximum concentration of PCBs at MW-106 observed was 0.57 µg/L in November 2023. PCBs at MW-106 have been reported above TOGS in May, September, and November 2023, but reported below TOGS for the sample collected in January 2024 (0.044 µg/L). PCB concentrations at MW-106 have generally decreased from the initial sampling event in May 2023 to April 2024 (0.48 µg/L to 0.35 µg/L). • MW-96 is located approximately 135 ft east (downgradient) of MW-51 and MW-106. MW-96 is located off-Site, outside the Revised BCP Site Boundary. MW-96 is located outside the Revised BCP Site Boundary but discussed below to inform evaluation of groundwater nature and extent downgradient of AOC-19. PCBs have been sampled at MW-96 as part of five sampling events in May 2023, September 2023, November 2023, January 2024, and April 2024. The maximum concentration of PCBs observed at MW-96 was 0.69 µg/L in February 2024. PCBs at MW-96 were reported above TOGS in May 2023, November 2023, and January 2024, but reported below TOGS for samples collected in September 2023 and April 2024, which were reported as non-detections. PCBs concentrations have generally decreased from the initial sampling event in May 2023 to April 2024 (0.35 µg/L to non-detect). 2b. Downgradient of AOC-19, VOC concentrations at MW-50S, MW-50I, MW-51, and MW-96 have been observed above TOGS groundwater standards. • MW-50S and MW-50I are located cross gradient from AOC-19 to the north. MW-50S and MW-50I were sampled twice for VOCs in February 2021 and April 2021. In February 2021 TCE was observed above TOGS groundwater standards (5 µg/L) at MW-50I (6.5 µg/L) and below TOGS groundwater standards at MW-50S (4.4 µg/L). In April 2021 TCE was observed above TOGS groundwater standards at MW-50S (6.4 µg/L) and below TOGS groundwater standards at MW-50I (4.3 µg/L). MW-50S and MW-50I were decommissioned as part of IRM #5A2 in December 2021. • MW-51 is located downgradient of AOC-19 and approximately 100 feet downgradient of MW-50S and MW50I. VOCs have been sampled at MW-51 as part of seven sampling events in February 2021, April 2021, May 2023, September 2023, November 2023, January 2024, and April 2024. Acetone, Freon 113, PCE, and TCE were observed above TOGS groundwater standards at MW-51. The maximum concentration of Freon 113 observed above the TOGS groundwater standard (5 µg/L) at MW-51 was 34 µg/L in November 2023. Freon 113 was reported above TOGS at MW-51 in samples collected in February 2021, April 2021, May 2023, September 2023, and November 2023, but has been reported below TOGS in the two most recent samples collected in January 2023, and April 2024 (3.4 µg/L and 1.1 µg/L, respectively). Freon 113 concentrations at MW-51 have been observed to generally decrease over time with the two most recent results being below TOGS. The maximum concentration of PCE observed above the TOGS groundwater standard (5 µg/L) at MW-51 was 14 µg/L in February 2021. TCE was reported above TOGS at MW-51 in samples collected in February 2021, April 2021, May 2023, November 2023 and April 2024 but has been reported below TOGS in September 2023, and January 2024 (3.9 µg/L and 4.9 µg/L, respectively). PCE concentrations at MW-51 have been observed to generally decrease over time. The maximum concentration of TCE observed above the TOGS groundwater standard (5 µg/L) at MW-51 was 94 µg/L in November 2023. TCE was reported above TOGS at MW-51 in samples collected in February 2021, April 2021, May 2023, September 2023, November 2023, January 2024 and April 2024. TCE concentrations at MW-51 have been observed to generally decrease over time. • MW-96 is under investigation as part of Site #c808054. Conclusions: Vertical and lateral extent of AOC-19 has been defined in soil and groundwater as part of the RI for #c808022. The source of AOC-19 was identified as a drum nest and has been removed as part of IRM #5A2. PCB concentrations downgradient of AOC-19 have generally been observed to decrease over time. The decrease in PCB concentrations generally coincides with the removal of impacts soiled in January 2022. PCBs at MW-51 were previously detected above TOGS in February and April 2021 (0.75 µg/L and 0.1 µg/L, respectively). Sampling of MW-51 in May 2023, following removal of the impacted soils, was reported below TOGS (0.1 µg/L). MW-51 was sampled for PCBs in February 2024 and April 2024, with results reported as non-detect. Based on these observations, no further assessment is warranted to further define the nature and extent of PCB impacts in groundwater on Site #c808022. Off-Site delineation will be completed and discussed in the #c808054 RIR/AA. Groundwater monitoring will continue under the SMP for Site #c808022. Areas of Concern
Former Sperry Remington Site - North Portion #c808022
Elmira, NY

AOC ID	AOC Description	Sub-AOCs	Sub-AOC Description	AOC Location	Conceptual Site Model			Media of Concern	COPC	Investigations Completed	Investigation Summary	Nature and Extent Defined	Approximate Excavation Depth	Summary of environmental media samples supporting AOC delineation			Co-located SSDS	Depth of Soil Impact (RR SCO exceedances)			
					Potential Source	Potential Transport Mechanism	Potential Exposure Pathway/Receptor							Monitoring Wells within or adjacent to AOC	Downgradient Monitoring Wells	Sub-Slab Soil Vapor		PCBs	Metals	SVOCs	VOCs
20	Historical Water Line	-	-	NAF	AOC 20 (historical water line) is defined as the area where confirmation samples during IRM #5A2 detected concentrations of mercury up to 200 mg/kg and lead up to 6,100 mg/kg during excavation along the eastern property line of the NAF (Figure 1-4). There may be a potential for past release to surface soil due to former industrial land use, and there is unknown potential for vertical migration through the soil column to the water table.	COPCs in impacted soil within or beneath the release area (if present) can migrate vertically toward the water table, and then migrate downgradient in groundwater.	On-Site Subsurface Construction Workers: Subsurface excavation workers at the Site could come into direct contact with COPCs in soil within or adjacent to this feature.	Soil Groundwater	M	2023 Continued NAF Soil Cover Verification Interim Sampling #2 2023 IRM #5A2 - Addendum #8 Phase 3 2023 IRM #5A2 - Addendum #8 Phase 3 Amendment #1 2023 Groundwater Mon. Network Update Add #1 2023 Groundwater Mon. Network Update Add. #2 2023 Groundwater Mon. Network Update Add. #3 2024 Groundwater Mon. Network Update Add. #4 2026 NAF CCR	1.Soil Cover verification samples were collected along the eastern property line of the NAF in order to leave native material in place. This was in part to keep the structural integrity of the permanent fence in place. Results from this sampling within AOC-20 indicated concentrations above RRSCOs for mercury where the highest concentrations were reported at SCV44-0.17-0.75 (10 mg/kg), SCV49-0.17-0.75 (9.3 mg/kg), SCV49-0.75-1.75 (22 mg/kg, corresponding duplicate 63 mg/kg), SCV50-0-0.58 (120 mg/kg), and SCV50-0.58-1.58 (200 mg/kg). Lead concentrations above RRSCOs were reported as high as 4,800 mg/kg at SCV54-0.17-0.75. 2. Additional samples were collected in three separate locations (two valves and one pipe sample) in July 2023 where a historical waterline and associated pipe valves were observed during IRM #5A2 believed to be associated with the elevated metals concentrations identified along the eastern property line (WLV1, WLV2, and WLP). Metals concentrations for the two waterline valve samples were detected above RRSCOs for arsenic (150-160 mg/kg), cadmium (27 mg/kg), chromium (190-220 mg/kg), copper (530 mg/kg), manganese (4,000-4,900 mg/kg), and nickel (750 mg/kg). The water line pipe (WLP) sample was collected from the physical pipe, co-located with the highest concentrations mercury concentrations identified in soil at SCV50 listed above. Mercury concentrations for this sample were detected at 5.2 mg/kg. 3. Addendum #8 Phase #3 (A8PH3) was completed in September 2023 to address exceedances of RRSCO and IRM #5A2 subsurface action levels in native soils along the eastern NAF property boundary, including the samples listed above. Analytical data received for A8PH3 identified lead concentrations above 20x TCLP hazardous waste criteria for lead. TCLP analysis for metals were requested for sample A8PH3-B28 due to the detection of 6,100 mg/kg of lead. Lead was detected at 12 mg/L in the TCLP analysis, above the RCRA toxicity characteristic for lead of 5 mg/L. Mercury was detected above RRSCO and 20x TCLP hazardous waste criteria within AOC-20 at sample locations A8PH3-B31, A8PH3-B2, A8PH3-B33 (DUP318) and A8PH3-B34 with concentrations ranging between 5.2 and 13 mg/kg. Mercury was detected in the same area to a depth of 8 ft bgs at IRM #5A2 confirmation sample locations S120-S3, S120-S4, and B1158-S6 at concentrations ranging from 5.7 to 24 mg/kg. The mercury and lead exceedances are delineated laterally by other A8PH3 samples as well as IRM #5A2 confirmation samples. 4. Addendum #8 Phase 3 - Amendment #1 (A8PH3A1) was completed in December 2023 through January 2024 to remove exceedances above 20x TCLP and/or RCRA toxicity characteristics discussed above in native soils remaining along the eastern property boundary to the #c808022 BCP limit associated with a historical water line. Exceedances above RRSCOs and 20x TCLP hazardous waste criteria remain in place along the sidewall of the eastern property line, located on Site #c808054. These exceedances are laterally delineated on Site #c808022 by imported fill placed as backfill or confirmation samples collected during the Addendum #8 phases (Figure 6-3A through Figure 6-3F) 5. Monitoring wells within the footprint of AOC-20 or downgradient include MW-57R and MW-97. MW-57R did not have reported detections for metals above TOGS. MW-97 did not have metals detections above TOGS for the above aforementioned metal analytes. Iron was detected above TOGS in November 2023 (390) and January 2024 (530). In addition, thallium was also reported above TOGS in January 2024 (4.2) and April 2024 (4.6). Iron TOGS groundwater standards exceedances are related to groundwater redox fluctuations that are consistent with background, unimpacted regional groundwater characteristics and are not Site-related. Thallium exceedances are attributed to false positive and biased-high results of USEPA Method 6010 for the metals analyses. The false positives and biased-high results are likely due to spectral interferences (Chapnick et al., 2010). Detections of these metals in groundwater do not indicate a metals source in the vicinity of AOC-20. Conclusion: Vertical and lateral extent of AOC-20 in soil and groundwater as part of the RI for #c808022 as discussed above. The source was identified as an historical water line and remediated through excavations completed under IRM #5A2 - Addendum #8 Phase 3 and Addendum #8 Phase 3 Amendment #1. Mercury exceedances remain in place at the Site boundary and will be investigated as part of the RI of Site #c808054.	Soil - Yes Groundwater - Yes	8	MW-57R, MW-100S, MW-100I, B3915, B3914	MW-97	-	-	-	8 ft	-	-

Notes:
-Media of Concern and COPCs are provided from 2019 RI Work Plan
-Approximate depth of excavation represented the maximum depth an IRM excavation occurred within that AOC. Depth of excavation does not indicate the AOC was excavated down to that depth. A range of excavation depths were used to meet IRM objectives. Exact excavation depths are provided in above referenced CCRs.
-NA: Not Applicable
-Depth of Soil Impacts are provided based on COPCs identified at the time of sampling during the Remedial Investigation. Depths do not define the nature and extent of contamination which are presented in Section 6.
-Lateral and vertical delineation of impacts observed are provided by Site Areas, which encompass the above AOCs, on Appendix S
-Co-located SSDS indicates that the AOC is located within or overlaps the footprint of an SSDS. This designation does not imply that the SSDS provides complete coverage of the AOC
"-" Not Applicable

TABLE 2-1
2018 SVIA Sampling Locations and Rationale

Former Sperry Remington – North Portion #c808022
Elmira, New York

Location	Sample Types	Rationale
Room 127 Gym Cafeteria K-Wing	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr) 1 liter SSDS Stack Sample (2 grabs/stack corresponding to IA sampling periods)	Evaluate SSDS impact on indoor air at representative locations. Evaluate role of HVAC operation on indoor air concentrations.
Room 100	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr)	Evaluate role of HVAC operation on indoor air concentrations in Unmitigated Areas where TCE was previously detected.
Room 104 Room 138 A	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr)	Elevated Freon in Sub-slab. Evaluate role of HVAC operation on indoor air concentrations.
Room 139 Near SV-WS Room 145 Near SV NR	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr)	Evaluate role of HVAC operation on indoor air concentrations at locations with ~neutral cross-slab differential pressure.
Room 103 Room 168	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr) SS with HVAC in Unoccupied mode (grab)	Evaluate role of HVAC operation on indoor air concentrations at locations with open cracks (Room 103) and sealed cracks (Room 168).
Room 133 Room 109	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr) SS with HVAC in Unoccupied mode (grab)	Confirm extent of F Wing TCE impacts.
Room 120 Room 122	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr) SS with HVAC in Unoccupied mode (grab)	Reevaluate locations with elevated TCE reporting limit in sub-slab samples collected by Geosyntec in July 2014.
Room 151A (Subslab) Room 149 Indoor Air	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr) SS with HVAC in Unoccupied mode (grab) Two Summas – HVS Grab	Evaluate VI potential in area with elevated TCE in sub-slab concentrations collected by NYSDEC & NYSDOH in August 2000. Because Room 151A is not frequently occupied, IA sampling will take place in classroom 149 which is next door.
Room 148 Room 135	IA with HVAC in Occupied Mode (8 hr) and IA with HVAC in Unoccupied mode (8 hr) SS with HVAC in Unoccupied mode (grab) Two Summas – HVS Grab	Evaluate VI potential in area not previously evaluated.
F Wing Rooftop K Wing Rooftop	OA with HVAC in Occupied Mode (8 hr) OA with HVAC in Unoccupied mode (8 hr)	Characterize the potential influence of background ambient air sources.

DRAFT

Notes:

hr = hour; HVAC = heating, ventilation, and air conditioning; HVS = high volume sampling; IA = indoor air; NYSDEC = New York State Department of Environmental Conservation; NYSDOH = New York State Department of Health; OA = outdoor air; SS = sub-slab; SSDS = sub-slab depressurization system. TCE = trichloroethene; VI = vapor intrusion.

Parameters Sampled: Volatile organic compounds were analyzed by U.S. EPA Method TO-15

Air samples were collected in 6-liter Summa® canisters equipped with calibrated flow controllers at an approximate flow rate of 12.5 mL/min over an 8- to 10-hour sampling period.

Sub-slab vapor samples were collected from temporary points. The sub-slab sampling points were installed by Geosyntec as 5/8-inch diameter holes and advanced to a point approximately six (6) inches below the slab. Sub-slab vapor samples were collected in 1-liter Summa® canisters equipped with calibrated flow controllers at an approximate flow rate of 200 mL/min for a nominal duration of 5 minutes.

Notes

- - Excavated samples do not have "Final Grade", "Sample depth from Final Grade" or "Change in Surface Elevation Data"

ft bfg - Feet Below Final Grade

ft bgs - Feet Below Ground Surface

Samples collected by NYSDEC in "May-October 2000 NYSDEC Sampling Report" included sample depths as "surface". These samples are assumed to have been collected from 0-0.5 ft bgs.

[1] - Ground surface elevation at the time of sampling is only provided for soil boring locations

[2] - Final grade elevation provided for samples remaining in place. Final grade elevations were not collected for samples outside of the BCP Boundary and are denoted as "--"

[3] - Change in surface elevation calculates for soil boring locations that have not been excavated. Positive values indicate net increase in ground surface elevation, negative values indicate net decrease in ground surface elevation.

[5] - Sample depth at time of sampling provided for grab samples and soil boring. For IRM/ISMP samples, sample depth at time of sampling represents the depth interval in which the associated grad sample was collected within. For soil borings, sample depth at time of sampling represents the depth interval from which a composite sample was collected.

[6] - Sample depth from final grade calculated for both IRM/ISMP and soil boring sample locations left in place (not excavated). Sample depth from final grade calculated for IRM/ISMP sample locations by comparing sample elevation to final grade elevation (i.e., final grade elevation of 857.18 ft amsl minus sample elevation of 847.44 ft amsl equals sample depth below final grade of 9.74 ft below final grade). Sample depth from final grade calculated for boring locations by comparing surface elevation at the time of sampling to the final grade elevation and correcting sample depths based on alterations to ground surface elevation (i.e., Surface elevation at time of sampling of 853.54 ft amsl and final grade elevation of 855.13 ft amsl indicates surface elevation increased 1.59 ft after sample collection. A sample previously collected at this location from 12-14 ft below ground surface [at the time of sampling] is now located 13.59-15.59 ft below final grade.)

Lab method used: 8082A/ SW8082A - PCBs

Lab method used: 6010C/SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7470A/SW7471B - Mercury

Lab method used: 8270D/SW8270D/8270D_LL/SW8270E/8270E-LL - SVOCs

Lab method used: 8260C/SW8260C/8260C_LL/SW8260D - VOCs

Lab method used: E537(M)/PFC_IDA - PFAS

Notes:
-ft amsl: feet above mean sea level
-ft bgs: feet below ground surface
-ft bTOC: feet below top of casing
"-": No existing data/proposed data collection
-X and Y coordinates in NY State Plane Central NAD 1983
-Vertical datum is North American Vertical Datum of 1988
-Surveys completed by New York State Licensed Surveyor
-Inactive refers to monitoring wells that are referenced in historical reports and documents, but which were unable to be located in the field and are presumed to have been removed or lost. No known decommissioning records exist for these wells.
-Monitoring wells without known construction details are assumed to have 10 ft screen. Top and bottom of well screen are estimated based on field depth to bottom measurements.
-Damaged monitoring wells have been made unusable
-Ground Elevation is surveyed ground surface elevation at time of well construction. Due to regrading activities at the Site, ground elevation has been modified at certain locations.

TABLE 2-6
Camera Survey Observations

Former Sperry Remington – North Portion #c808022
Elmira, New York

Segment	Active?	Construction	Extent and Orientation Investigation Complete	Condition / Existence of Laterals	Surface Access Points	Fine-Grained Material Characterized	Notes
1 (Storm, west-east along northern side of FFC)	Yes	12-in diameter concrete, 8 feet depth to base at MH-1	Yes. West to east, confirmed via camera survey (2014 and 2019), geophysical survey (2019) and construction drawings provided by Chemung County Sewer District (CCSD) (2019).	Approximately 377 feet of the sewer was camera surveyed to the west where it terminated at a manhole located in South Main Street (ST-6). Approximately 251 feet of the sewer was camera surveyed to the east (2019) and laterals were identified as depicted on **Figure 2-4**. No breaches of the line were observed.	One identified (MH-1) through field assessment, construction drawings, and geophysical survey. Outside of the FFC two additional downstream access points (MH-2 and MH-3) were identified and sampled (2019).	Yes. Observed and sampled at MH-1. Samples were also collected from the off-site manhole locations.	MH-2 removed during IRM excavations.
2 (Former Industrial, from CB-24 to CB-01)	No	24-in diameter concrete, 7 feet depth to base at CB-24	Yes. Extends south from CB-24 exiting the FFC and Site to the south, re-entering the Site and continuing to CB-1 south of the FFC, confirmed to FFC southern fence line by 2019 geophysical survey and camera survey from a test pit located near the southern fence line.	Approximately 75 feet of the sewer was camera surveyed (2014), and the survey was terminated at an obstruction caused by a breach in the top of the sewer pipe. A camera survey was completed in 2019 to confirm the pipe location from the breach past the southern fence line. One 10-in diameter lateral enters at CB-24 from the west (**Figure 2-4**); no other laterals were identified during the camera survey.	One identified (CB-24) through field assessment and geophysical survey. Access from south (CB-1) blocked by breach.	Yes. Observed and sampled at CB-24 (2016).	The lateral entering CB-24 from the west is listed as Segment 5, below. Segment 2 was removed during IRM #5 from CB-24 to southern end of the FFC.

DRAFT

TABLE 2-6
Camera Survey Observations

Former Sperry Remington – North Portion #c808022
Elmira, New York

Segment	Active?	Construction	Extent and Orientation Investigation Complete	Condition / Existence of Laterals	Surface Access Points	Fine-Grained Material Characterized	Notes
3 (Former Industrial, north from CB-24)	No	24-in diameter concrete, 7 feet depth to base at CB-24, top of pipe observed in test pit installed north of the visitor's grandstand was approximately 3 feet.	Yes (FFC portion); northern extent confirmed via camera survey (2014, 2019,2021), test pitting (2019, 2021) and geophysical survey (2019). Observed to run roughly parallel with the FFC east fence line. Suspected to connect with CB-39 (AOC 2C) in the southeast corner of the Northern Athletic Fields based on geophysical survey (2019). Observed to terminate at a vault with opening to the west (2021).	Approximately 22 feet of the sewer was camera surveyed (2019) north from CB-24, and the survey was terminated at an obstruction caused by tree roots. One 10-in concrete lateral enters from the west approximately six feet north of CB-24 (listed as Segment 4, below). A test pit was installed in December 2019 approximately 85 feet to the north of CB-24 to access Segment 3. A robotic CCTV camera survey was performed an additional 40 feet north, where it was terminated on tree roots.	One identified (CB-24) through field assessment and geophysical survey.	Yes. Observed and sampled at CB-24 (2016).	The lateral entering Segment 3 from the west is listed as Segment 4, below. Segment 3 was removed during IRM #5.

DRAFT

TABLE 2-6
Camera Survey Observations

Former Sperry Remington – North Portion #c808022
Elmira, New York

Segment	Active?	Construction	Extent and Orientation Investigation Complete	Condition / Existence of Laterals	Surface Access Points	Fine-Grained Material Characterized	Notes
4 (Former Industrial, enters Segment 3 from west)	No	10-in diameter concrete, 6 feet depth to base of pipe based on depth of Segment 3.	No. This lateral was observed to enter Segment 3 at a point approximately seven feet north of CB-24, from the west, via camera survey (2019).	None identified through geophysical survey (electromagnetic, GPR) (2019).	CB-24 is seven feet to the south.	Sampling was impracticable given lack of access point.	The diameter of this lateral and orientation relative to nearest access point CB-24 precludes access by robotic CCTV camera survey. Based on the extent and orientation of Segment 5 (described below) it is presumed that Segment 4 continued toward the northwest beneath the football field. The presence of the visitor's grandstand precluded the ability to install a test pit to confirm orientation. Segment 4 was identified as Pipe 18 during IRM #5 and was removed.

DRAFT

TABLE 2-6
Camera Survey Observations

Former Sperry Remington – North Portion #c808022
Elmira, New York

Segment	Active?	Construction	Extent and Orientation Investigation Complete	Condition / Existence of Laterals	Surface Access Points	Fine-Grained Material Characterized	Notes
5 (Former Industrial, enters CB-24 from west)	No	10-in diameter concrete, 6 feet depth to base based on CB-24 observations	Yes. This segment was identified through test pitting and was observed to run toward the northwest. Geophysics were used to continue mapping the sewer beneath the football field (2019).	None identified through geophysical survey (electromagnetic, GPR) (2019).	One identified (CB-24) through field assessment and geophysical survey.	Yes. Sample collected from test pit (2019).	The diameter of this lateral and orientation relative to nearest access point CB-24 precludes access by robotic CCTV camera survey. The orientation of Segment 5 was determined based on observations at Test Pit 2 and by locating a rodder placed into Segment 5 at CB-24 and extending to Test Pit 2. Segment 5 was thus shown to extend from CB-24 to the northwest through Test Pit 2. Segment 5 was identified as Pipe 32 during IRM #5 and was removed.

DRAFT

TABLE 2-6
Camera Survey Observations

Former Sperry Remington – North Portion #c808022
Elmira, New York

Segment	Active?	Construction	Extent and Orientation Investigation Complete	Condition / Existence of Laterals	Surface Access Points	Fine-Grained Material Characterized	Notes
7 (Former Industrial west of CB-39)	No	50-inch clay tile	Yes. This segment was identified during IRM #5 excavation. Camera survey was completed to the west (2021). A vault was encountered approximately 25 feet to the west. Camera survey was completed to the north.	Approximately 25 feet of the sewer was camera surveyed to west terminating at vault. From the vault, approximately 21 feet was camera surveyed to the north. Survey was terminated due to fine-grained material and observations of bentonite.	Manhole CB-39 east of SE corner of FFC.	No. Camera survey was conducted as part of IRM #5 FIS removal. Segment 7 was removed within the FFC boundary.	Sewer line extends north onto the Northern Athletic Fields and was exposed and removed during IRM #5A2.
8 (Former Industrial south of CB-39)	No	50-inch clay tile	Yes. This segment was identified during IRM #5 excavation. Camera survey was completed to the south and to the west (2021). A vault was encountered approximately 25 feet to the west. Camera survey was completed to the north.	Approximately 346 feet of the sewer was camera surveyed to the south to a manhole (CB-40).	Manhole MH-40 east of SE corner of FFC. Manhole MH-40 located under the IRM #5 haul road and not accessible.	No. Camera survey was conducted as part of IRM #5 FIS removal.	Segment 8 remains in place.

TABLE 3-2
Summary of IRM Action Levels

Former Sperry Remington – North Portion #c808022
Elmira, New York

IRM	Depth (ft bgs)	Interim Remedial Measure (IRM) Action Level[1]					Groundwater
		PCBs	Metals	SVOCs	VOCs	TPHs	All COPCs (excluding TPHs)
IRM #1	0-2	>1 m/kg	N/A				N/A
	2-14	>10 mg/kg[6]					
	>14[9]	>3.2 mg/kg					
IRM #2	0-2	>1 m/kg	N/A				N/A
	2-14	>10 mg/kg[6]					
	>14[9]	N/A					
IRM #3	0-2	Restricted Residential[2]				N/A	N/A
	2-14	>10 mg/kg[6]	>20 x TCLP (>200 x TCLP for Lead)[7]	N/A			
	>14[9]	>3.2 mg/kg					
IRM #4 / IRM #4A	0-2	Restricted Residential[2]				N/A	N/A
	2-14	>10 mg/kg[6]	>20 x TCLP (>200 x TCLP for Lead)[7]	N/A			
	>14[9]	>3.2 mg/kg					
IRM #5 / IRM #5A1 / IRM #5A3	0-2	Restricted Residential[2]				> 100 mg/kg[4]	NYSDEC TOGs[5]
	2-14	>10 mg/kg[6]	>20 x TCLP (>200 x TCLP for Lead)[7]	Total PAHs > 100 mg/kg[8]	Restricted Residential[2]	N/A	
	>14[9]	Protection of Groundwater [3]					
IRM #5A2	0-2	Restricted Residential[2]				> 100 mg/kg[4]	NYSDEC TOGs[5]
	2-14	>10 mg/kg[6]	>20 x TCLP (>200 x TCLP for Lead)[7]	Total PAHs > 100 mg/kg[8]	Restricted Residential[2]	N/A	
	>14[9]	Protection of Groundwater [3]					

Notes:
ft bgs - feet below ground surface
VOCs - volatile organic compounds
SVOCs - semivolatile organic compounds
PCBs - polychlorinated biphenyls
TCLP - toxicity characteristic leaching procedure
TPHs - total petroleum hydrocarbons-diesel range organics
PAHs - total polyaromatic hydrocarbons
N/A - no standard applied for this depth and/or constituent

(1) Per CP-51/Soil Cleanup Guidance, Section V.F.2. "The exceedance of one or more applicable SCOs or SSCOs, (which is the lower of protection of public health, protection of groundwater, or protection of ecological resources soil cleanup objectives as described in Section III below), alone does not trigger the need for remedial action, define "unacceptable" levels of contaminant in soil, or indicates that a stie qualifies for any DEC remedial program (e.g., BCP, SSF). As noted in the definition of SCO above, SCOs and SSCOs are applicable statewide and do not account for many site-specific considerations which could potentially results in higher levels. Therefore, soil concentrations that are higher than the applicable SCOs or SSCOs are not necessarily health or environmental concerns."
(2) Restricted Residential - per 6 NYCRR Part 375 Table 375-6.8(b): Restricted Use Soil Cleanup Objectives
(3) Protection of Groundwater - per 6 NYCRR Part 375 Table 375-6.8(b): Protection of Groundwater Cleanup Objectives
(4) Nuisance criteria established for the project
(5) NYSDEC TOGS - New York State Groundwater Effluent Limitations Class (GA) (per Section 6 CRR-NY 703.6)
(6) CP-51/Soil Cleanup Guidance, Section V.I.2
(7) Remedial Action Objective to remove potential sources, i.e. concentrations that are indicative of potential hazardous waste
(8) An action level for total PAHs is proposed in lieu of individual PAH SCOs. Per 6 NYCRR Part 375 Table 375-6.8(b), SCOs for restricted residential use are capped at 100 mg/kg
(9) Depth to water was measured at 16.1 ft bgs at monitoring well MW-15S in September 2016

Notes:
ft TOC = feet below top of casing; ft msl = feet above mean sea level; NM = not measured;
* = well observed to be dry; ** = well observed to be damaged; *** = well unable to be located;
-- = well abandoned.
Elevations in North American Vertical Datum of 1988.
TOC elevations at some wells varies between September 2023 and April 2024 due to well modifications and subsequent resurveying completed between the two monitoring events.
September 2023 gauging event completed on 11 September 2023
April 2024 gauging event completed on 1 April 2024

DRAFT

Notes
VOCs - Volatile Organic Compounds
ug/m3 - micrograms per meter cubed
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U - non-detect at the value indicated
"--" Analyte not reported
IAQAP - Indoor Air Quality Action Plan
1997 Lab method used: US EPA Method TO-2
2000 Lab method used: NYSDOH VOLA-CAN 3 and VOLA-CAN 4
2009-2018 Lab method used: TO-15/TO-15_SIM - VOCs
NA: Not available
Shaded cells identify indoor air samples collected subsequent to SSDS installation and located within the area of influence
NYSDOH Matrix Outcome - Mitigate
NYSDOH Matrix Outcome - Mitigate (classification is driven by the sub-slab vapor concentration)

Indoor air concentrations are shaded in accordance with the outcomes presented on NYSDOH Soil Vapor/Indoor Air Matrix Guidelines. Sample locations with an indoor air concentration equal to or greater than the applicable Matrix indoor-air concentration value are categorized as "Mitigate" and are shown in blue. Sample locations with an indoor air concentration below the maximum matrix concentration threshold may have a matrix outcome of "Mitigate" when the corresponding sub-slab vapor concentration meets or exceeds sub-slab vapor criteria and are shaded in dark grey. At these grey-shaded locations, the "Mitigate" classification is driven by the sub-slab vapor concentration rather than by the indoor air result itself, which reflects a detection below the Matrix indoor air threshold. Accordingly, the "Mitigate" designation at these locations should not be interpreted as indicating an indoor air quality concern, but rather reflects the conservative, protective design of the Matrix framework, which recommends mitigation based on sub-slab vapor concentrations.

Notes
VOCs - Volatile Organic Compounds
ug/m3 - micrograms per meter cubed
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U - non-detect at the value indicated
NA: Not Available
Lab method used: TO-15/TO-15_SIM - VOCs

DRAFT

Notes
VOCs - Volatile Organic Compounds
ug/m3 - micrograms per meter cubed
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U - non-detect at the value indicated
"--" Analyte not reported
2000 Lab method used: NYSDOH VOLA-CAN 3 and VOLA-CAN 4
2009-2018 Lab method used: TO-15/TO-15_SIM - VOCs
NA: Not available
Shaded cells identify indoor air samples collected subsequent to SSDS installation and located within the area of influence
NYSDOH Matrix Outcome - Mitigate
NFA: No Further Action

Sub-slab vapor concentrations are shaded in accordance with the outcomes presented on NYSDOH Soil Vapor/Indoor Air Matrix Guidelines. Sample locations with a sub-slab vapor concentration equal to or greater than the applicable Matrix indoor-air concentration value are categorized as "Mitigate" and are shown in blue.

Samples with detection limits exceeding applicable monitor guidance concentrations are shown in **orange.**

Notes
VOCs - Volatile Organic Compounds
ug/m3 - micrograms per meter cubed
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U - non-detect at the value indicated
"--" Analyte not reported
Lab method used: TO-15/TO-15_SIM - VOCs
NA: Not available
Shaded cells identify indoor air samples collected subsequent to SSDS installation and located within the area of influence
NYSDOH Matrix Outcome - Mitigate
NFA: No Further Action

Sub-slab vapor concentrations are shaded in accordance with the outcomes presented on NYSDOH Soil Vapor/Indoor Air Matrix Guidelines. Sample locations with a sub-slab vapor concentration equal to or greater than the applicable Matrix indoor-air concentration value are categorized as "Mitigate" and are shown in blue.

Samples with detection limits exceeding applicable monitor guidance concentrations are shown in **orange.**

DRAFT

Notes

PCBs - Polychlorinated Biphenyls
SVOCs - Semivolatile Organic Compounds
VOCs - Volatile Organic Compounds
PAH - Polycyclic Aromatic Hydrocarbons
PFAS - Per- and Polyfluoroalkyl Substances
µg/kg - micrograms per kilogram
mg/kg - milligrams per kilogram
ft bgs - Feet Below Ground Surface
ft bfg - Feet Below Final Grade
-- Sample was not within Final Grade limits or located beneath field house and unable to be surveyed or verified
^ - ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
^+ - Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
* - LCS or LCSD is outside acceptance limits
*+ - LCS and/or LCSD is outside acceptance limits, high biased
*1 - LCS/LCSD RPD exceeds control limits
*3 - ISTD response or retention time outside acceptable limits
B - Compound detected in method blank
E - Exceeds instrument calibration range.
F1 - MS and/or MSD Recovery is outside acceptance limits.
F2 - MS/MSD RPD exceeds control limits
H - Sample was received and analyzed past holding time.
I - Value is EMPC (estimated maximum possible concentration)
EMPC - Estimated maximum possible concentration
p - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
J- - The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference
J+ - The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
J - Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
R - The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence
T - Indicates that a quality control parameter has exceeded laboratory limits
U - non-detect at the value indicated
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Samples collected by NYSDEC in "May-October 2000 NYSDEC Sampling Report" included sample depths as "surface". These samples are assumed to have been collected from 0-0.5 ft bgs.

[1] - Ground surface elevation at the time of sampling is only provided for soil boring locations

[2] - Final grade elevation provided for samples remaining in place. Final grade elevations were not collected for samples outside of the BCP Boundary and are denoted as "--"

[3] - Change in surface elevation calculates for soil boring locations that have not been excavated. Positive values indicate net increase in ground surface elevation, negative values indicate net decrease in ground surface elevation.

[4] - Grab sample elevation provided for IRM and ISMP sample locations. Elevation represents point at which grab sample was collected.

[5] - Sample depth at time of sampling provided for grab samples and soil boring. For IRM/ISMP samples, sample depth at time of sampling represents the depth interval in which the associated grab sample was collected within. For soil borings, sample depth at time of sampling represents the depth interval from which a composite sample was collected.

[6] - Sample depth from final grade calculated for both IRM/ISMP and soil boring sample locations left in place (not excavated). Sample depth from final grade calculated for IRM/ISMP sample locations by comparing sample elevation to final grade elevation (i.e., final grade elevation of 857.18 ft amsl minus sample elevation of 847.44 ft amsl equals sample depth below final grade of 9.74 ft below final grade). Sample depth from final grade calculated for boring locations by comparing surface elevation at the time of sampling to the final grade elevation and correcting sample depths based on alterations to ground surface elevation (i.e., Surface elevation at time of sampling of 853.54 ft amsl and final grade elevation of 855.13 ft amsl indicates surface elevation increased 1.59 ft after sample collection. A sample previously collected at this location from 12-14 ft below ground surface [at the time of sampling] is now located 13.59-15.59 ft below final grade.)

[7] - For excavation status, soil boring samples that did not have their entire composite depth excavated are denoted as "Not Excavated" (i.e., sample depths only partially excavated are shown as left in place)
Lab method used: 8082A/ SW8082A - PCBs
Lab method used: 6010C/SW6010C/SW6010D - Metals, SW6020B - Manganese, SW7470A/SW7471B - Mercury
Lab method used: 8270D/SW8270D/8270D_LL/SW8270E/8270E-LL - SVOCs
Lab method used: 8260C/SW8260C/8260C_LL/SW8260D - VOCs
Lab Method used: E537(M)/PFC_IDA - PFAS
Soil Cleanup Objectives presented derived from 6 NYCRR PART 375 Table 375-6-8(b) (May 2023)
Analyte concentrations detected above Unrestricted Soil Cleanup Objectives are presented in light gray
Analyte concentrations detected above Restricted Residential Soil Cleanup Objectives are presented in dark gray
Analyte concentrations detected above Protection of Groundwater Soil Cleanup Objectives are presented in blue font
Analyte concentrations with potential to exhibit the characteristic of toxicity for metals are presented in black
Analyte concentrations detected above New York State Hazardous Waste Criteria are presented in black with red text
