1. INTRODUCTION

1.1 Purpose of the Community Liaison Plan for the Former Sperry Remington Site – North Portion, Former Sperry Remington Site and Former Scott Technologies Site

This Community Liaison Plan serves to describe the project, project team members, community, and stakeholders. It functions as a guide to project personnel and the community on the best ways to communicate project information; answer questions; and raise issues and concerns voiced by the public to the proper sources for resolution. In short, it is a roadmap to the sources for information regarding the Former Sperry Remington Site – North Portion, Former Sperry Remington Site, and Former Scott Technologies Site (referred to jointly as the Sperry Sites), as well as those project activities that may engender public interest and inquiries.

1.2 Project Overview

Investigation and Cleanup actions will address contamination at three sites in Elmira, New York. As illustrated below, the sites include the Former Sperry Remington Site – North Portion at 777 South Main Street, the Former Sperry Remington Site at 1051 South Main Street, and the Former Scott Technologies Site, also at 1051 South Main Street, as well as an offsite location associated with the Former Sperry Remington Site. Details on each site are included in this plan.

Former Sperry Remington Site – North Portion #c808022

This approximately 34-acre property is currently owned by the Elmira City School District (ECSD) and is the

location of the Elmira High School (EHS), which includes the main school building, parking lots, an athletic track and field, baseball/soccer fields, tennis courts, volleyball courts, a basketball court, and a playground. While soils at the property are known to be contaminated with metals, polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), and volatile organic compounds (VOCs), the potential pathways by which people could be exposed to subsurface soil, groundwater, and soil vapor contamination have been addressed. Specifically, contaminated soil is below the ground surface and covered by vegetated soil, wood chips, paving, and building foundations; groundwater is not used for potable water purposes, including as drinking water, the building has functional sub-slab depressurization (SSD) systems; and air quality at the school has been extensively tested and shown to be below any New York State Department of Health (NYSDOH) guideline values.

Unisys Corporation (Unisys), the corporate successor of the Remington Rand Corporation, which was one of several past owners/operators of the site, entered into an agreement with the New York State Department of Environmental Conservation (NYSDEC) under the state's Brownfield Cleanup Program (BCP) in 2017 to complete an environmental investigation and cleanup of the EHS property. Additional investigations were conducted to design Interim Remedial Measures (IRMs) to remove contaminated soil ahead of ECSD capital improvement projects at the school. Although exposure pathways are being managed, capital improvement projects provide an opportunity to access areas of contamination and remove contaminated material without future disturbance of improved areas. All investigations and cleanup are being conducted by Unisys with strict NYSDEC and NYSDOH oversight.

Former Sperry Remington Site #808043

This site is an approximately 0.28-acre portion of the former Remington Rand property currently owned and operated by the Southern Tier Commerce Center (STCC). This site is classified as a Class 2a State Superfund Site and includes a former oil skimmer and a covered concrete culvert (Site Culvert) that extends 275 feet east from a former holding pond (immediately to the west and adjacent of the site) under the railroad line owned by Norfolk Southern to a discharge point to

the east northeast and offsite. The former oil skimmer and Site Culvert formerly received industrial discharges. The Site Culvert currently receives stormwater discharges from the STCC and EHS properties and non-contact cooling water discharge from EHS. The Site Culvert discharges into a 580 feet long Drainage Swale, which subsequently drains into an approximate 3.5-acre Wetlands Area and Coldbrook Creek at two outfall locations (the Offsite Areas).

PCBs are the primary site-related contaminant potentially impacting Coldbrook Creek sediments. There are also low levels of additional constituents of potential concern (COPCs) including chromium, copper, lead, nickel, and zinc.

Additional remedial investigations are being conducted, which include characterizing the extent of potential risks to benthic invertebrates, which are the receptor group of greatest risk from the COPC metals and determining if remaining sources of COPCs still exist. Investigations are to occur in Summer 2020 and will identify both current and potential routes of human exposure, if any, to COPCs.

Pre-design investigations have been conducted for design of an IRM which will address potential sources for migration of COPCs from the former oil skimmer. An IRM to address the former oil skimmer is projected to be completed in Spring 2020.

Former Scott Technologies Site #p808049

The former Scott Technologies Site is also currently owned and operated by STCC. This site consists of commercial and light industrial buildings, a pond, and a large parking area. The site was subject to the NYSDEC Voluntary Cleanup Program (VCP). The Former Recreation Area at the southern end of the site is wooded. Portions of the site buildings are currently used for warehousing and light manufacturing. PCB, PAHs, metals, and other COPCs have been detected in isolated, shallow site soils and pond sediments. Additional delineation and characterization of the extent of COPCs in site soils was conducted in late 2019 to supplement work that was completed under the VCP. An IRM to address shallow soils on portions of the STCC property is projected to be completed in Spring 2020.

1.3 Project History

Former Sperry Remington Site – North Portion

The EHS property located at 777 South Main Street, Elmira, has a long history of industrial and manufacturing use. Originally part of a larger 83-acre parcel, the site was used from the late 1880s to the early 1970s as various industrial facilities:

- B.W. Payne & Sons, manufacturer of high-speed steam engines (1887-1909)
- Morrow Manufacturing, manufacturer of drill chucks, machine parts, and tools (1909-1935)
- Elmira Precision Tool Company, manufacturer of typewriter parts for Remington Rand (1935-1937)
- Remington Rand, manufacturer of typewriters and adding machines (1936-1972).

From 1974 to 1977, Westinghouse Electric Corporation (Westinghouse) occupied approximately 10 acres of the EHS property south of the City of Elmira – Town of Southport line. In April 1977, Chemung County Industrial Development Agency conveyed the property to Westinghouse, and Westinghouse conveyed the property to Elmira City School District. The high school was constructed in 1979.

Previous investigations and activities at the EHS property include:

- Soils and Foundation Study, Southside Recreation and Education Facility in 1977.
- In 1988, a Preliminary Site Assessment for the entire Sperry Remington Site including the Scott Technologies Site was completed on behalf of Unisys and submitted to NYSDEC.
- Investigation by NYSDEC between 1995 and 1998, which identified petroleum-related chemicals in groundwater between the EHS property and Miller Pond.
- Remedial Action completed by NYSDEC between 2000 and 2011, which installed and operated oxygen-injection systems between EHS and Millers Pond to stimulate aerobic biodegradation of petroleum in subsurface soil

and groundwater.

- Environmental investigation of soil, groundwater, surface water, and sediment at EHS in 2000, conducted by NYSDEC.
- NYSDOH cancer study based on concern of parents at EHS in 2003, which stated "levels of contaminants in surface soils do not exceed public health comparison values. Although a few samples exceed health comparison values, people are unlikely to be exposed frequently to soil at these locations and the associated health risks are unlikely to be significant."
- 2009 Environmental Management Plan (EMP) prepared by the Elmira City School District in response to a request from the New York State Education Department, with technical assistance from NYSDEC and NYSDOH. The EMP included management plans for soil, indoor air, groundwater, monitoring, and maintenance.
- NYSDOH issued a Health Consultation Report in 2010, which evaluated indoor and outdoor air quality, as well as sub-slab vapor samples.
- In 2013, NYSDEC first contacted Unisys with information developed under the 2009 EMP; in response, Unisys voluntarily conducted an initial assessment of the EHS heating, ventilation, and air conditioning operations.
- Unisys conducted a vapor intrusion assessment of EHS in 2014.
- Site Characterization inspections took place in 2014, which identified PCBs, PAHs, VOCs and metals as COPCs at the site.
- Unisys, in coordination with NYSDEC and NYSDOH, installed an SSD system in the F Wing of the school in August 2014.
- Unisys, in coordination with NYSDEC and NYSDOH, installed temporary cover in the form of mulch beds as a short-term response action in March 2015.
- In 2017 and 2018 Unisys conducted IRMs for impacted soil removal in coordination with EHS capital improvement projects at the EHS Tennis Courts and Main Parking Lot (IRM #1, 2017) and Rear Parking Lot (IRM #2, 2018). In addition, shallow soil in the southwest corner of the football field was addressed as a short term response action (STRA).
- In 2018, Unisys completed a Supplemental Vapor Intrusion Assessment Work Plan at the request of NYSDEC and conducted floor crack sealing within the school building.
- Unisys, in coordination with NYSDEC and NYSDOH, installed an SSD system in the music wing of EHS in August 2018.
- Unisys prepared an Interim Site Management Plan in April 2019 for management of institutional and engineering controls during the investigation and cleanup of the site. This ISMP was approved by NYSDEC and NYSDOH in December 2019, replacing the EHS EMP.
- In April and May of 2019, Pre-Design Investigations (PDIs) were conducted in the football field and areas to the southwest of the football field to support the design of IRMs #4 and #5.
- In 2019 Unisys conducted an IRM (IRM #3) at EHS to remove deeper impacted soils from portions of the Main Parking Lot and in area southwest of the football field.
- The Site-wide RI Work Plan (RIWP) was approved in July 2019 followed by the remedial investigation of AOC-18, site-wide RI soil sampling and a site-wide sewer investigation.
- The RIWP was updated and submitted in October 2019 and a revised RIWP Update was submitted in April 2020 and is pending NYSDEC approval. Also, the RIWP was amended (Amendment #1) in May 2020 to include additional soil and groundwater investigation activities. This amendment is currently pending NYSDEC approval.
- Additional RI activities as part of the RIWP Amendment #1 are planned for 2020.
- IRMs #4 and #5 are scheduled to be conducted in the latter half of 2020 pending work plan approval by NYSDEC.

Former Sperry Remington Site

This site is a small portion of STCC where former combined industrial and stormwater sewers drained to the offsite marsh and Coldbrook creek. Historical data indicates that industrial discharges, accidental releases, and spills of industrial chemicals occurred from this facility from the mid-1940s through the early 1970s. One incident, the investigation of an "oily sludge" release, documents poorly maintained oil separators at this facility as a probable cause. A

documented fish kill incident downstream was the result of one cyanide release in the 1950s. A PCB transformer oil spill was documented in the 1970s during the Westinghouse decommissioning of the plant. Site-related COPCs appear to have been released into an offsite tributary/marsh that drains into Coldbrook Creek.

Previous investigations and activities at the property include:

- Preliminary sampling of the offsite area by NYSDEC in 2000.
- 2006 sampling by NYSDEC, which detected elevated levels of PCBs and heavy metals along with low levels of semi-volatile organic compounds (SVOCs).
- In 2010, NYSDEC signed an Order of Consent with Unisys to conduct a Remedial Investigation
- Initial offsite soil and sediment sampling was completed in 2011.
- In 2015, sampling continued into Coldbrook Creek to the Chemung River.
- Investigations in 2012, 2015, and 2017 inspected storm sewer connections to the former oil skimmer and Site Culvert, sampled fine-grained material collected from catch basins and sampled soils adjacent to the former oil skimmer.
- PCB impacted fine-grained materials were documented in the former oil skimmer and upstream offsite pipe connections in 2015.
- The first phase of Overbank soil sampling within the flood zone along Coldbrook Creek occurred in late 2019 to investigate COPCs outside the normal banks of Coldbrook Creek.
- The second phase of Overbank soil sampling is to be completed in Summer 2020, pending NYSDEC work plan approval.
- Field work for a fish and wildlife impact assessment is planned to be completed in Summer 2020 pending NYSDEC work plan approval.
- An IRM is currently underway to remove the former oil skimmer and will be completed in Spring of 2020.

Former Scott Technologies Site

- The site was used between the late 1940s and 1972 to manufacture office products including typewriters and adding machines, which included metal finishing operations. From 1982 to 1985, it was used to manufacture fire engines, and no significant industrial use of the site has occurred since 1985. The site is currently used for commercial and industrial purposes.

Previous investigations and activities at the property include:

- In 1988, a Preliminary Site Assessment for the entire Sperry Remington Site including the Scott Technologies Site was completed on behalf of Unisys and submitted to NYSDEC.
- Four (4) registered underground storage tanks were removed in 1993, which occurred concurrently with voluntary investigations.
- Scott Technologies Inc. (STI), a former owner of the site, entered into a Voluntary Cleanup agreement with NYSDEC in January 1999 to conduct investigation and remedial activities.
- In 1999 and 2000, STI removed and disposed of low voltage PCB capacitors; cleaned or decommissioned tanks/vessels, concrete clarification chambers, and above-ground storage tanks. Additionally, PAHs in site soils were excavated.
- A supplemental investigation of the holding pond on the north side of the site was conducted in 2002.
- Remedial action of the former recreation area was conducted voluntarily by STI in 2004 and removed 86 tons of hazardous fill material and 104 tons of non-hazardous fill material.
- Deed restrictions were filed on portions of the site in 2005 limiting potential future use of the site to commercial or industrial use.
- A site characterization order was issued in July 2014 and site characterization investigations have been conducted under NYSDEC-approved work plans. A shallow soils IRM work plan has been approved by NYSDEC in May of 2020.
- In 2017, Unisys established an agreement with the Southern Tier Commerce Center, the current site occupant, to use a portion of the site as a

material staging area (MSA) to stockpile soils excavated as part of past interim remedial actions on the Former Sperry Remington Site – North Portion. The MSA will be decommissioned in Spring 2020 after the completion of a shallow soils IRM .

1.4 Project Stakeholders

- Residents of Elmira
- Elmira City School District
- Unisys Corporation
- Southern Tier Commerce Center LLC
- NYSDEC
- NYSDOH
- City of Elmira
- Chemung County
- B&B Engineers and Geologists of New York, P.C. & Geosyntec Consultants, Inc. (collectively "Geosyntec")
- Remedial Construction Services, L.P. (RECON).

It is not unusual for projects of this type to have several teams working together to tackle the various aspects of an environmental cleanup.

The teams involved here at the Sperry Sites include: NYSDEC, the lead state agency for state remediation sites; NYSDOH, which oversees issues of human health; and Unisys' contractors Geosyntec, the engineering firm that did the environmental investigation and design for the cleanup and will oversee construction management, and RECON, which will performing remedial construction. All of these team members coordinate with each other to ensure that the work is done properly, safely, and efficiently, and that the community is kept informed of project activities. All project personnel will easily be identified by high-visibility safety vests or coats.

1.5 NYSDEC's Mission

The mission of the NYSDEC Division of Environmental Remediation is to protect public health and the environment of the State of New York by preventing releases to the environment through the regulation of petroleum and chemical bulk storage facilities, hazardous waste facilities, and radiation facilities; and

responding to, investigating, and remediating releases of contaminants that have occurred.

The goal of the Brownfield Cleanup Program is to encourage private-sector cleanups of brownfields and promote their redevelopment. The state works with private-sector entities to identify and characterize suspected inactive hazardous waste disposal sites and ensure that those sites, which pose a threat to public health or the environment, are properly addressed.

New York State is committed to supervising a careful and thorough cleanup of the Sperry Sites and associated offsite locations. NYSDEC's foremost priority is ensuring the public (including residents, school-district staff, children, and visitors) does not come in contact with site-related contamination. This cleanup is being completed to address potential exposure to heavy metals, PCBs, PAHs, VOCs, and other COPCs.

NYSDEC will oversee the remedial work conducted by Unisys, in consultation with the NYSDOH. NYSDOH will provide oversight of the remedial work to ensure that remedial activities are conducted in a way that is protective of public health.

The following are primary NYSDEC staff on this project:

- Timothy Schneider, P.E., is NYSDEC's Project Manager who has over 30 years of experience designing and managing environmental and construction projects.
- David Pratt, P.E. is NYSDEC's Regional Hazardous Waste Remediation Engineer and has over 30 has years of experience managing environmental projects.
- NYSDEC has subcontracted the environmental firm Mactec, which is providing technical and field work oversight.

The following are primary NYSDOH staff on this project:

- Sara Bogardus is the NYSDOH Project Manager with over 4 with years of experience in the

evaluation of public health environmental exposures related to and remediation of contaminated sites.

- June Moore, is a Research Scientist with the NYSDOH with over 12 years of experience working with communities that have been exposed to environmental chemicals.
- Justin Deming, Professional Geologist, is NYSDOH's Regional Chief for projects within NYSDEC Region 8. Mr. Deming has over 15 years of experience in the evaluation of public health environmental exposures related to and remediation of contaminated sites.

1.6 Unisys and its Remedial Team Contractors on the Sperry Sites Cleanup

Unisys

Unisys is a global information technology company and is the corporate successor to Remington Rand. Unisys is working with NYSDEC and NYSDOH to ensure the foregoing sites are properly remediated.

Unisys retained the services of Geosyntec, an environmental consulting firm, to conduct site investigations, develop the remedial design, and to provide construction management and inspection services. Unisys has also retained RECON, which has been performing remedial construction services for over 30 years and has worked at the EHS for the past three construction seasons.

Geosyntec

Geosyntec is a consulting and engineering firm founded in 1983 that has top-tier practices in contaminated site assessments and cleanup; environmental planning and management; air quality management and air pollution control; water and natural resources assessment, management, and restoration; civil site engineering and design, building health evaluations and rehabilitation; and more.

Geosyntec currently supports clients through a well-integrated network of more than 80 offices that span the United States and the world. Geosyntec has

staff exceeding 1,200 engineers, scientists, and related technical and project support personnel.

In 2014, Geosyntec was awarded the environmental engineering and consulting contract to support Unisys and their remedial efforts at the Sperry Sites.

Geosyntec is providing staff and resources from several offices, including Columbia, Maryland; Pittsburgh, Pennsylvania; Minneapolis, Minnesota; and Albany, New York, which include approximately 100 environmental professionals. The following are the primary Geosyntec staff on this project:

- Paul Brookner is Geosyntec's Project Director who has over 30 years of experience providing environmental investigation and remediation services in New York and throughout the United States.
- Aron Krasnopoler, Ph.D., P.E., is B&B's Project Manager/Senior Engineer who has over 20 years of experience providing environmental investigation and remediation services in New York and throughout the United States. He is a Professional Engineer registered in New York State.
- Jeremy Anderson is Geosyntec's Construction Manager who has over 15 years of experience providing construction quality assurance and oversight for environmental remediation projects across the U.S. Jeremy will also serve as the on-Site CLP liaison, directing public inquiries to proper personnel for timely responses.

RECON

RECON is an environmental, geotechnical, industrial and decommissioning and demolition services contractor founded in 1989. They are a technology-based construction company and self-perform greater than 90% of their work. Safety and innovation drive team behaviors and a culture of providing value to customers and earning their repeat business.

RECON has completed over 6,500 environmental remediation, geotechnical construction, industrial service, and decommissioning and demolition projects. RECON's client base includes industrial, commercial, and government entities with projects located throughout North America. RECON has consistently

ranked among Engineering News Record's top contractors and top regional contractors.

Larry Endicott will serve as RECON's Project Manager for this project. He has over 30 years of experience managing environmental cleanup projects.

Scott Sutton will serve as RECON's Superintendent, leading the field construction crews. Mr. Sutton has over 35 years of construction experience in the environmental field.

1.7 Remediation Team Roles and Responsibilities

Team Roles and Responsibilities

Team Member	Role	Contact Information
NYSDEC	NYSDEC is the lead regulatory agency for the cleanup and is responsible for ensuring that the cleanup is conducted according to New York State Environmental Conservation Law. A NYSDEC Construction Manager or their subcontractor will be on site for the duration of the cleanup activities.	<p>Timothy Schneider, P.E. Project Manager (585) 226-5480 Timothy.schneider@dec.ny.gov</p> <p>David Pratt Regional Hazardous Waste Remediation Engineer (585) 226-5315 David.Pratt@dec.ny.gov</p>
NYSDOH	NYSDOH is responsible for identifying potential for public exposures to contamination related to the cleanup and the potential for health impacts	<p>Sara Bogardus Project Contact (518) 402-7880 bee@health.ny.gov</p>
Unisys Corporation	Unisys is a responsible party and is undertaking investigation and cleanup activities at the site. Unisys employs its contractors to conduct all site characterization, investigation, and cleanup on the properties.	<p>Kevin Krueger, P.E. Director, Global Environmental, Safety, Health, and Security Corporate Real Estate and General Services (651) 212-7273 Kevin.krueger@unisys.com</p>
Elmira City School District	ECSD owns the Former Sperry Remington Site – North Portion and operates EHS on the property. The district is responsible for providing Unisys and its contractor's access to the EHS site and ensuring student safety by coordinating with other team members to ensure cleanup happens safely and efficiently in accordance with the Site Management Plan.	<p>Joe Magliocca Director of Facilities (607) 684-1508 jmagliocca@elmiracityschools.com</p> <p>Dominic Insogna Health and Safety Compliance Specialist GST BOCES/Elmira City School District (607) 735-3992 dinsogna@gstboces.org</p>

Team Roles and Responsibilities

Team Member	Role	Contact Information
Southern Tier Commerce Center	As the current owner of the Former Scott Technologies Site and the Former Sperry Remington Site, the Southern Tier Commerce Center is responsible for cooperating with NYSDEC, NYSDOH, and Unisys as they work to clean up the site.	Adam Meinstein Equilibrium Equities, Inc. (215) 542-3900 apm@equilibriumequities.com
Remedial Construction Services, L.P. (RECON)	RECON is the remedial contractor tasked with performing the cleanup activities. RECON is responsible for the safe execution of the work, per the Remedial Design, and ensuring that site contaminants are contained within the work area boundaries.	Larry Endicott – Senior Project Manager (609) 357-8470 Scott Sutton – Superintendent (570) 499-8487

2. COMMUNITY PROFILE

The City of Elmira, Chemung County, New York, is located in the Southern Tier region of New York, not far from the Pennsylvania State Line. The city is bounded on three sides by the Town of Elmira.

The area was historically inhabited by the Cayuga Nation of the Iroquois Confederacy until the American Revolutionary War when the Iroquois and United States signed the 1791 Treaty at Elmira. The treaty settled territorial disputes in the region, and many native peoples dispersed from the area after the treaty was signed.

By the early 1800s, Elmira had become a central hub for railways with tracks leading to Williamsport, Canandaigua, Niagara, New York City, Cortland, and beyond. Because of its centrality, the United States chose it as a primary site for training grounds, and from 1864–1865, a prisoner of war camp for confederate soldiers at the end of the Civil War. Over the course of the war, over 11,000 Confederate soldiers were sent to Camp Elmira, and nearly 3,000 died.

By 1939, the Schweizer Aircraft Corporation was building sailplanes and other aircraft helping to mark the area as “The Soaring Capital of America”. During World War II, more than 10,000 local residents were in military service with countless others working in defense-related production and manufacturing. During this time, the Remington Rand Corporation was manufacturing the famous Norden bombsight that revolutionized the effectiveness of bombers.

In 1950, Elmira’s population peaked at approximately 50,000 people. Population decline began during the recession of the early 1970s during which several large employers (Ann Page, American Bridge, General Electric, American LaFrance, Westinghouse, and Remington Rand) either closed their factories or moved to other states. The decline was exacerbated

by the flood of 1972, during which many of the downtown businesses and single-family homes were destroyed or replaced by subsequent Urban Renewal projects in the Chemung River floodplain.

2.1 Community Demographics

According to the 2010 Census, there were 29,200 people in 10,991 households living in Elmira. Racial makeup is: 78.3% White; 14.6% Black; 0.4% Native American; 0.6% Asian; 1% from other races; and 5% are identified as being multi-racial. The population at that time indicated that approximately 23.7% were under the age of 18; 16.8% were 20 to 29; 18.8% from 30 to 44; 25% from 45 to 64; and 11% who were age 65 or older.

2.2 Sperry Sites and Coldbrook Creek Communities

The area surrounding the Sperry Sites primarily includes residential and commercial properties. The properties include commercial and manufacturing properties, homes, and Consolidated Rail Corporation properties. Miller Pond and Coldbrook Creek lie directly to the east of the sites.

2.3 Local Government

The City of Elmira is governed by a Council-Manager system in which the City Manager is the primary administrator of the City. There is one Mayor elected at large and six council members elected from each of six council districts, with a term of 4 years each. The Mayor and Council Members are all part time employees. The City Council appoints the City Manager, City Clerk, City Chamberlain, City Assessor, and Corporation Counsel.

The City Council meets in the Council Chambers on the second floor of City Hall, located at 317 E. Church Street, Elmira, New York, 14901, every other Monday. Residents may get information on the date and time of the City Council meetings by calling the City Manager’s Office at (607) 737-5644.

2.4 County Government

Elmira is located in Chemung County, where the County Government is headed by the County Executive and a 15-seat legislature. All 15 members are elected from single-member districts. The county

seat and courthouse are located in Elmira. The County Executive oversees a variety of County Departments, including the Chemung County Health Department.

3. HISTORY OF COMMUNITY INVOLVEMENT FROM 2015 TO PRESENT

The Sperry Remington Sites, which include offsite Coldbrook Creek, sit in an area of mixed business and residential properties, including EHS. Previous investigations and activities at the Sperry Remington Sites are set out in section 1.3 “Project History” above. Additional investigations and interim remedial measures are to be conducted in Summer 2020. Unisys and its contracting team have been working with EHS, NYSDEC, NYSDOH, affected residents, and businesses to keep the community informed, and respond to concerns and suggestions to mitigate negative impacts and the inconvenience to the neighborhood and property owners, whenever possible. Community involvement activities since 2015 have included:

- July 9, 2015—NYSDEC held a public meeting to discuss environmental studies at EHS, the Former Sperry Remington Site, and the Former Scott Technologies Site.
- May 22, 2017—NYSDEC held a public meeting to discuss ongoing environmental studies at EHS, the Former Sperry Remington Site, and the Former Scott Technologies Site.
- May 2, 2018— NYSDEC, NYSDOH and Unisys held a public meeting at the Holiday Inn Elmira-Riverview to provide an overview of anticipated investigation and cleanup activities.
- June 14, 2018— NYSDEC, NYSDOH, and Unisys hosted a public availability session at EHS to discuss the significant progress made over the summer months and the ongoing cleanup action.
- September 26, 2018—NYSDEC, NYSDOH, Unisys, and ECSD held a Public Information Session on the Elmira High School Cleanup.
- February 7, 2019—NYSDOH, at the request of EHS staff, held two meetings to discuss any health concerns and the possibility of conducting a health study of current and former staff. Current staff were invited to attend the afternoon session in the high school gymnasium. The evening meeting was targeted to former staff of the school and open to the public.
- June 19, 2019—NYSDEC, NYSDOH, Unisys,

and ECSD held a Public Information Session on the Elmira High School Cleanup and the Investigation commencing in the Summer of 2019.

- June 2020—NYSDEC will publish a Community Newsletter updating the public on the Elmira High School Cleanup and Investigations are scheduled to begin in the Summer of 2020.
- Fall 2020- A public availability session is planned prior to initiation of IRM #5. This session may be held virtually to address COVID-19 issues.

All project fact sheets, meeting presentations, and other informational materials are available to the public at the following website:

<https://www.dec.ny.gov/chemical/102390.html>

Frequently Asked Questions by the Public
Public questions are natural during the implementation of environmental cleanup activities in their community. Commonly posed questions include: Who is responsible for what?; Where will activities take place?; When will they happen, and why?; and How do they affect me? . Outlined below are some of the more likely inquiries and their responses.

3.1 Cleanup Schedules and Timing of Field Activities

Former Sperry Remington Site – North Portion

Ongoing sitewide inspections are scheduled quarterly, and vapor monitoring and vapor intrusion sampling are currently scheduled annually during the EHS winter recess in accordance with Interim Site Management Plan. The schedule for upcoming cleanup and investigation field activities is as follows:

- An IRM (#4) to remove contaminated soil between the EHS building, the grandstands and the student parking lot will be conducted during the 2020 summer recess.
- An IRM (#5) to remove contaminated soil within the football field complex area will be conducted during Fall 2020.
- An IRM (#6) to remove contaminated soil on the eastern perimeter of the EHS building and isolated areas identified in the North Athletic Fields is being planned for Summer 2021.

- Additional activities associated with a comprehensive remedial investigation will be conducted in 2020.

Former Sperry Remington Site

Sediment and fish tissue sampling in Coldbrook Creek are scheduled for collection during the Summer 2020, and recommendations for fish advisories will be submitted to NYSDEC/NYSDOH in the Fall 2020. Additional overbank soil sampling is scheduled to take place in 2020.

An IRM to address the former oil skimmer and remove adjacent soil is being conducted in the Spring of 2020.

Former Scott Technologies Site

An IRM Work Plan to remove contaminated surface and shallow soils was approved by NYSDEC in May of 2020 and IRM activities will be conducted in Spring 2020.

For more information contact: Timothy Schneider, NYSDEC Project Manager, at: 585-226-5480 or email at: timothy.schneider@dec.ny.gov.

3.2 Protecting Health

From the inception of this project, Unisys and NYSDEC have been working closely with NYSDOH to ensure that public health considerations are a top priority in every aspect of the cleanup. Adjacent properties are serviced by a public water supply that does not come from site groundwater. This supply is regularly tested and monitored and is a safe source of drinking water in Elmira.

There has been no evidence outside of the affected properties – and remedial investigation findings do not indicate – that contaminants are migrating toward residential communities to the west. Groundwater in the area flows toward the east/southeast.

The public may contact NYSDOH for information, questions and/or concerns about human health in relation to the cleanup of the Sperry Sites. In addition, NYSDEC and NYSDOH are also working with the Chemung County Health Department to ensure that all the agencies involved are informed and able to provide timely responses to community concerns about health issues.

For more information on human health issues, contact NYSDOH project contact Sara Bogardus at (518) 402-7880 or bee@health.ny.gov.

3.3 Minimizing dust during field work/cleanup activities

NYSDEC will have a Community Air Monitoring Plan in place to measure airborne particulate matter wherever contaminated soils may be disturbed during construction and excavation. Airborne PCBs from this process will also be monitored. Dust control measures (e.g., watering) will be taken to reduce dust on temporary dirt roadways and open excavations. Trucks will be covered to properly secure all material during transport. Trucks and equipment will be decontaminated prior to leaving the site. Truck traffic patterns have been designed to maintain safety on local roadways. No visible dust should leave the work areas and if air monitors detect dust above action levels, work is stopped until corrective measures are undertaken.

For more information on human health issues and exposure concerns, contact NYSDOH project contact Sara Bogardus at (518) 402-7880 or bee@health.ny.gov.

For more information about specific field concerns, contact: Timothy Schneider, NYSDEC Project Manager, at: 585-226-5480 or email at: timothy.schneider@dec.ny.gov.

3.4 Working safely at local schools and neighborhood

NYSDEC, NYSDOH, and Unisys have been working closely with the ECSD and EHS to keep them informed of project plans, and to minimize impacts to students and staff. They have held numerous meetings with the school district and stay in regular contact, so all concerns raised are dealt with quickly and diligently. The safety of students and school staff is tantamount to all involved with the project, and all will be working to ensure that there are not threats to either safety or health. Additional safety & security measures, and Community Air Monitoring Program data collection and reporting are being developed for work during normal school activities.

Work hours are expected to be from 7:00 a.m. through 5:00 p.m. The total number of personnel onsite will vary based on the work being performed and may

include representatives from NYSDEC, NYSDOH, Unisys, Geosyntec, RECON, subcontractors, and vendors. The number of onsite workers is expected to generally range from approximately 15 to 25 individuals. All project personnel will be easily identified by photo identifications and high-visibility safety vests and/or coats. Traffic controls including flagmen and traffic control devices such as cones, signs, and barriers will be in use to ensure safe access for students, and school personnel, to and from the project site. NYSDEC and Geosyntec will be working to coordinate the work with individual property owners affected by the remediation.

A site specific COVID-19 Health and Safety Plan has been developed and is in place. This plan addresses best work practices to be implemented on the job sites to prevent the spread of COVID-19. This plan also outlines procedures to follow should a site worker contract COVID-19 or if a site worker comes into contact with someone who has COVID-19. Finally, this plan will be updated as additional information and guidance becomes available.

If you would like more specific information such as construction and field work schedules, or site safety details, please contact: Timothy Schneider, NYSDEC Project Manager, at: 585-226-5480 or email at: timothy.schneider@dec.ny.gov.

Project related information can also be found on the project website located here: <https://www.dec.ny.gov/chemical/102390.html>

3.5 Limiting local street closures, traffic, parking issues related to construction

Contractors will be coordinating with local officials as needed, to ensure public safety during construction activities, and will keep residents, schools, and local businesses in affected areas informed throughout the life of the project. Any changes to traffic routes, closures to streets or roadways or impacts to parking and school routes will be communicated as soon as details are available. Truck routes will be clearly marked and areas in which heavy equipment is being used will be posted with signage and the presence of flag personnel. It is estimated that truck traffic should not exceed any more than 35 trucks per day. For information on this issue, you may contact: Timothy Schneider, NYSDEC Project Manager, at: 585-226-5480 or email at: timothy.schneider@dec.ny.gov.

3.6 Elected Officials

Elected officials with concerns regarding the site should direct their inquiries to NYSDEC legislative and intergovernmental staff or to Timothy Schneider, NYSDEC Project Manager, at: 585-226-5480 or email at: timothy.schneider@dec.ny.gov

3.7 Documenting Public Inquiries and Concerns

Because the project involves a variety of stakeholders, it is important that a process be in place that provides information to the public, but also allows them to submit their inquiries and comments. This process will allow NYSDEC and Unisys to track inquiries, resolutions to those inquiries, as well as those issues that remain outstanding. To accomplish this task, NYSDEC will provide an email address to the public where these issues may be raised. Questions and comments may be sent to Timothy Schneider, NYSDEC Project Manager, at: 585-226-5480 or email at: timothy.schneider@dec.ny.gov.

4. KEY MESSAGES

As work on the cleanup evolves, it is important that the community engage with NYSDEC in a dialogue that is open and enhances two-way understanding of both the community needs and concerns, and the requirements of the work to be conducted. Remediation work is by its nature, impactful, whether on private property, school property or on public streets. While NYSDEC, Unisys, and their team will do all they can to mitigate aspects such as noise, use of heavy equipment, changes to traffic patterns, impacts to schools, students and staff, and remediation work in yards and in proximity to homes, the public may still have questions and concerns.

NYSDEC and its consultants are committed to addressing the public's concerns. The community should also be mindful of the following:

- Remedial Investigation field work is scheduled for 2020, with associated reports will be submitted in Spring 2021. Recommendations for additional investigations and/or remedial alternatives will be evaluated at that time.
- Remedial construction is scheduled for 2020. IRMs at Former Scott Technologies Site #p808049 and Former Sperry Remington Site

#808043 are in progress. IRM #4 at Former Sperry Remington Site – North Portion #c808022 is scheduled for Summer 2020, with IRM #5 scheduled to begin in Fall of 2020.

- Because much of the work and staging of construction will take place on and near local schools (EHS), there is community concern about the safety of students and staff as well as impacts to school activities. NYSDEC and Unisys will continue to work with the school district, school staff, and parents of students to ensure that these concerns are heard, acted on, and resolved. Public health and safety are of primary concern to Unisys, NYSDEC, and NYSDOH, especially in proximity to schools, homes, and work areas.
- If it is determined that EHS will have a Summer 2020 open session, an updated Community Liaison Plan will be prepared to highlight contingency planning measures, if necessary. This updated plan will be completed two (2) weeks in advance of Summer 2020 open session and linked to the NYSDEC website.
- An Enhanced Community Liaison Plan will be prepared to highlight additional measures to be implemented prior to initiation of IRM #5 activities in Fall 2020. This updated plan will be completed at least two (2) weeks prior to the scheduled start of the 2020/21 school year.
- The second phase of the Overbank soil sampling along Coldbrook Creek is planned to take place in the summer of 2020
- Field work for the fish and wildlife impact assessment is planned to take place in the summer of 2020.
- The community has an open line to NYSDEC and NYSDOH, its staff, and are encouraged to reach out with any questions or concerns throughout the life of the project.

Questions and comments may be sent Timothy Schneider, NYSDEC Project Manager, at: 585-226-5480 or email at: timothy.schneider@dec.ny.gov
In addition, the following Community Relations and Outreach Staff may be contacted as follows:

- TJ Pignataro, NYSDEC Office of Communications, (716) 803-0193.
email at: todd.pignataro@dec.ny.gov
