RE: Enhanced Reductive Dechlorination
Progress Report
Ward Street Site, BCA Site No.: C828117
8-28 Ward Street Site, BCA Site No.: C828136
Rochester, New York

Dear Todd:

On behalf of Germanow-Simon Corporation (Germanow-Simon), and pursuant to the Department-approved Enhanced Reductive Dechlorination Supplemental Injection Plan and associated correspondence, Stantec Consulting Services Inc. (Stantec) has prepared this progress report to summarize ongoing results of the enhanced reductive dechlorination (ERD) remedial program implemented at the Ward Street Site (BCA Site #C828117) and the 8-28 Ward Street Site (BCA Site #C828136) in the City of Rochester, Monroe County, New York (Figure 1). The activities described herein were performed in accordance with the *Remedial Program Supplement, Enhanced Reductive Dechlorination Work Plan* dated March 2011 and the *Proposed Supplemental Injection Program* dated October 2012, and the Department's approval of these documents.

1. Groundwater Monitoring Program Results

Three rounds of quarterly groundwater sampling have been completed at well locations within the ERD treatment area to evaluate the progress of chlorinated solvent degradation following the November 2012 supplemental injection event. The most recent sampling event took place from July 2-5, 2013. Groundwater samples have been collected from select monitoring well locations and analyzed for dissolved chlorinated volatile organic compound (VOC) concentrations, dissolved metals (arsenic, iron, manganese, and sodium), total organic carbon (TOC), conductivity, pH, oxidation reduction potential (ORP), dissolved oxygen (DO) and microbial populations during some or all of the three events (dissolved metals and microbial populations were not analyzed during the July sampling event). A discussion of the data is provided below. Monitoring well locations are identified on Figure 2. Data from the sampling events conducted from September 2011 through July 2013 are summarized in Tables 9-3 and 9-7. Laboratory analysis reports associated with the ERD groundwater monitoring program are provided in Appendix A. Appendix B contains the groundwater sampling records.

Dissolved-Phase Chlorinated VOCs

Time series plots of chlorinated VOC concentrations over time are presented in Appendix C. For graphical purposes, all J values were plotted at the reported value and all non-detect values were plotted at the reportable detection limit.

VOC reduction continues to proceed very well within the treatment area. During the most recent sampling event conducted in July 2013, tetrachloroethylene (PCE) was below laboratory reporting levels in all 13 wells sampled and trichloroethylene (TCE) was reported below laboratory reporting levels in 11 of the 13 wells. In addition, cis-1,2-dichloroethylene (cis-1,2-DCE) concentrations declined or remained constant in 11 of the 13 wells, and VC concentrations remained constant or decreased in nine of the 13 wells. Total VOC concentrations decreased or remained constant in the July 2013 analytical results in nine of the 13 wells.

Seven of the wells sampled in July 2013 (MW-16, MW-23R, MW-200, MW-200R, MW-208, MW-209, and MW-212R) were reported with total VOC concentrations below 200 ppb.

Minor exceptions to the downward trends were observed at MW-23 and MW-207R, which exhibited increases in total VOC concentrations to 1,498 and 2,043 ppb, respectively. Concentrations of the chlorinated compounds of interest for the site, however, continued to decrease at MW-23 and MW-207R, with no detectable concentrations of PCE or TCE, and only cis-1,2-DCE (862 ppb and 193 ppb, respectively) and VC (636 ppb and 1,850 ppb, respectively) detected above laboratory reporting levels during the July 2013 sampling event. The observed increases in these dissolved-phase concentrations at MW-23 and MW-207R, involving the daughter products (cis-1,2-DCE and VC) of the degradation process, indicates that the remedial application is proceeding as expected in the treatment area.

The next groundwater sampling event is proposed for late September 2013/early October and is proposed to involve the same 13 wells for TCL VOCs using ASP Category B deliverables. The sampling results will be reviewed to confirm contaminant degradation is continuing to progress, such that the final sampling event involving the collection of approximately 9-10 soil borings can be performed and the groundwater monitoring program can be discontinued at the conclusion of the next event.

As stated in the *Enhanced Reductive Dechlorination Semi-Annual Progress Report* dated June 25, 2013, based on the significant VOC reduction achieved by application of the ERD process, Germanow-Simon is moving forward with efforts to decommission the multi-phase vacuum extraction (MPVE) system at this time. The decommissioning of the MPVE system is expected to be completed during the fall of 2013.

Total Organic Carbon, Sodium, Conductivity and Groundwater Geochemistry

In July 2013, ORP levels decreased or remained constant in ten of the 13 wells while DO levels remained similar to or decreased from the levels measured in April 2013. Groundwater ORP and DO levels were generally observed to decrease after the November 2012 injection and have remained low since that time. These results indicate that the desired anaerobic and reducing conditions have been reinforced by the November 2012 injection program and have persisted through July 2013. Tables 9-3 and 9-7 summarize the monitoring results for TOC, sodium, conductivity, and geochemistry parameters recorded to date for the ERD application at the site.

2. Proposed Groundwater Monitoring Activities

In accordance with the Final Engineering Reports and Site Management Plans for the Ward Street and 8-28 Ward Street sites, the *Remedial Program Supplement, Enhanced Reductive Dechlorination Work Plan* dated March 2011, the *Proposed Supplemental Injection Program* dated October 2012, and the Department's approval of these documents, it is proposed to conduct one final round of quarterly groundwater monitoring in order to confirm the effectiveness of the remedial activities at the sites as outlined in the following table.

Reference: Enhanced Reductive Dechlorination Semi-Annual Progress Report
Ward Street Site, BCA Site No. C828117
8-28 Ward Street Site, BCA Site No. C282136
Rochester, New York

Dates	Wells to be sampled during each event	Field parameters to be collected	Laboratory analytical parameters for all wells and all events
Late Sept. 2013	• MW-16 • MW-16R • MW-22 • MW-22R • MW-23 • MW-23R • MW-105 • MW-200 • MW-200R • MW-207R • MW-208 • MW-209 • MW-212R	• Temperature • pH • Specific conductivity • Turbidity • Dissolved oxygen • ORP	• TCL VOCs (by ASP Category B) • TOC (by Standard Method 5310) • Total Na (by USEPA Method 3005/6010)

Quality Assurance/Quality Control procedures for VOCs will be in accordance with ASP Category B requirements including collection of a matrix spike, matrix spike duplicate, blind field duplicate and a trip blank. Groundwater samples will continue to be collected using low-flow/low-stress sampling procedures. Laboratory analysis will be conducted by Paradigm Environmental Services, Inc., of Rochester, NY.

Closing

On behalf of Germanow-Simon, Stantec looks forward to continuing to work with the Department to complete the quarterly groundwater monitoring phase of the remediation at the Ward Street Sites with the upcoming sampling event. Please do not hesitate to contact us should you have any questions regarding the information presented herein or the balance of the activities proposed for 2013.

Sincerely,

STANTEC CONSULTING SERVICES INC.

Notes:

TOGS	NYSDEC TOGS 1.1.1 (Reissued June 1998 with errata in January 1999 and addenda in April 2000 and June 2004)
[A]	TOGS 1.1.1 - Table 1 - Ambient Water Quality Standards and Guidance Values, Division of Water, Technical and Operational Guidance Series (TOGS 1.1.1); Guidance
[B]	TOGS 1.1.1 - Table 1 - Ambient Water Quality Standards and Guidance Values, Division of Water, Technical and Operational Guidance Series (TOGS 1.1.1); Standards
6.5[A]	Concentration exceeds the indicated standard.
15.2	Concentration was detected but did not exceed applicable standards.
0.50 U	Laboratory estimated quantitation limit exceeded standard.
0.03 U	The analyte was not detected above the laboratory estimated quantitation limit.
n/v	No standard/guideline value.
-	Parameter not analyzed / not available.
-	The standard for Iron and Manganese is 500 ug/L, which applies to the sum of these substances.
	As individual standards, the standard is 300 ug/L.
**	The principal organic contaminant standard for groundwater of 5 ug/L (described elsewhere in the TOGS table) applies to this substance.
[P]	Applies to the sum of cis- and trans-1,3-dichloropropene.
B	Indicates analyte was found in associated blank, as well as in the sample.
L	Laboratory Control Sample recovery outside accepted QC limits.
M	Denotes matrix spike recoveries outside QC limits. Matrix bias indicated.

Table 9-7
Summary of Field Parameters in Groundwater – September 2011 to July 2013

APPENDIX A

PARADIGM

ENVIRONMENTAL SERVICES, INC.

Analytical Report For

Stantec

For Lab Project ID

132471

Referencing

Ward St. Site, 190500014

Prepared

Monday, September 09, 2013

Any noncompliant QC parameters or other notes impacting data interpretation are flagged or documented on the final report or are noted below:

The 8260 VOA LCS had low recovery(s) for the analyte Bromomethane. This was a result of degradation caused by sulfur dioxide in the client site samples. Bromomethane was verified as not present in the client samples by the use of a low reporting limit verification standard.

Certifies that this report has been approved by the Technical Director or Designee

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"V" = Sample concentration is >10 times the spike. No meaningful Spike Recovery can be calculated.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"C" = Concentration differs by more than 40% between the primary and secondary analytical columns.

Analytical Report For

Stantec

For Lab Project ID

132490

Referencing

Ward St. Site

Prepared

Monday, September 09, 2013

Any noncompliant QC parameters or other notes impacting data interpretation are flagged or documented on the final report or are noted below:

The 8260 VOA LCS had low recovery(s) for the analyte Bromomethane. This was a result of degradation caused by sulfur dioxide in the client site samples. Bromomethane was verified as not present in the client samples by the use of a low reporting limit verification standard.

Certifies that this report has been approved by the Technical Director or Designee

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"V" = Sample concentration is >10 times the spike. No meaningful Spike Recovery can be calculated.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"C" = Concentration differs by more than 40% between the primary and secondary analytical columns.

Analytical Report For

Stantec

For Lab Project ID

132505

Referencing

Ward St.

Prepared

Monday, September 09, 2013

Any noncompliant QC parameters or other notes impacting data interpretation are flagged or documented on the final report or are noted below:

The 8260 VOA LCS had low recovery(s) for the analyte Bromomethane. This was a result of degradation caused by sulfur dioxide in the client site samples. Bromomethane was verified as not present in the client samples by the use of a low reporting limit verification standard.

Certifies that this report has been approved by the Technical Director or Designee

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"V" = Sample concentration is >10 times the spike. No meaningful Spike Recovery can be calculated.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"C" = Concentration differs by more than 40% between the primary and secondary analytical columns.
