Ms. Sharon Nordstrom
URS Diamond
Barley Mill Plaza, Bldg. 27
Rts. 141 and 48
Wilmington, DE 19805

Dear Ms. Nordstrom:

Enclosed is the data usability summary report for the solid samples collected on November 4, 5, 6, 7, 8, and 11, 2002, for the TCLP Sampling 11/02 event at the DuPont Rochester Driving Park facility in Rochester, New York. All analyses underwent a limited validation process.

The "not-detected" results for 2-butanone in several samples were qualified as unusable due to very low relative response factors in the associated continuing calibration verification standards. In addition, the "not-detected" results for TCLP silver in several samples were qualified as unusable due to very low matrix spike and matrix spike duplicate recoveries. Overall, the quality of the remaining data is acceptable; however, the following qualifications were made.

- The results for all volatile organic compounds in a few samples were qualified due to an elevated sample temperature upon laboratory receipt.
- The results for a few volatile organic compounds, semivolatile organic compounds, and polynuclear aromatic hydrocarbon compounds in several samples were qualified due to low matrix spike and/or matrix spike duplicate recoveries.
- The results for a few semivolatile organic compounds and 2,4-D in several samples were qualified due to low laboratory control sample recoveries.
- The results for 2-butanone, methoxychlor, and 2,4,5-TP in several samples were qualified due to high percent drifts in the associated continuing calibration verification standards.
- The positive results for several metals in several samples were qualified due to blank contamination.
- The results for mercury and TCLP mercury in several samples were qualified due to potential negative interference based on negative values observed in laboratory blanks.
- The results for several metals in several samples were qualified due to low and high low-level check standard recoveries.

1140 Valley Forge Road • P.O. Box 810 • Valley Forge, PA 19482-0810
T: 610-935-5577 • F: 610-935-5583 • www.envstd.com • solutions@envstd.com

- The results for several metals in several samples were qualified due to low and high matrix spike and/or matrix spike duplicate recoveries.
- The results for chromium and TCLP silver in several samples were qualified due to high relative percent differences in the matrix spike/matrix spike duplicate analyses.
- The positive results for cadmium in a few samples were qualified due to laboratory duplicate imprecision.
- The results for silver in several samples were qualified due to low laboratory control sample recoveries.
- The positive results for TCLP barium in several samples were qualified due to high serial dilution percent differences.
- The results for TCLP lead in two samples were qualified due to field duplicate imprecision.
- Based on standard project reporting requirements, all positive results reported with concentrations between the laboratory's associated method detection limits and practical quantitation limits have been flagged "J" by the laboratory. Environmental Standards concurs that these positive results should be considered quantitative estimates.

If you have any questions or comments, please do not hesitate to call.

Sincerely,

K Vlahogiani

TABLE OF CONTENTS

TABLE OF CONTENTS (Cont.)

Executive Summary

A data usability summary report was prepared based on review of the analytical data for 209 solid samples (including quality control samples) collected in association with the TCLP Sampling 11/02 event at the DuPont Rochester Driving Park facility in Rochester, New York.

All organic and inorganic analyses were performed by SW-846 Methods. Comprehensive Contract Laboratory Program (CLP)-like raw data packages were prepared by the laboratory and were reviewed by Environmental Standards, Inc.

The "not-detected" results for 2-butanone in several samples were qualified as unusable due to very low relative response factors in the associated continuing calibration verification standards. In addition, the "not-detected" results for TCLP silver in several samples were qualified as unusable due to very low matrix spike and matrix spike duplicate recoveries. Overall, the quality of the remaining data is acceptable; however, the following qualifications were made.

- The results for all volatile organic compounds in a few samples were qualified due to an elevated sample temperature upon laboratory receipt.
- The results for a few volatile organic compounds, semivolatile organic compounds, and polynuclear aromatic hydrocarbon compounds in several samples were qualified due to low matrix spike and/or matrix spike duplicate recoveries.
- The results for a few semivolatile organic compounds and 2,4-D in several samples were qualified due to low laboratory control sample recoveries.
- The results for 2-butanone, methoxychlor, and 2,4,5-TP in several samples were qualified due to high percent drifts in the associated continuing calibration verification standards.
- The positive results for several metals in several samples were qualified due to blank contamination.
- The results for mercury and TCLP mercury in several samples were qualified due to potential negative interference based on negative values observed in laboratory blanks.
- The results for several metals in several samples were qualified due to low and high low-level check standard recoveries.
- The results for several metals in several samples were qualified due to low and high matrix spike and/or matrix spike duplicate recoveries.
- The results for chromium and TCLP silver in several samples were qualified due to high relative percent differences in the matrix spike/matrix spike duplicate analyses.

- The positive results for cadmium in a few samples were qualified due to laboratory duplicate imprecision.

- The results for silver in several samples were qualified due to low laboratory control sample recoveries.

- The positive results for TCLP barium in several samples were qualified due to high serial dilution percent differences.

- The results for TCLP lead in two samples were qualified due to field duplicate imprecision.

- Based on standard project reporting requirements, all positive results reported with concentrations between the laboratory's associated method detection limits and practical quantitation limits have been flagged "J" by the laboratory. Environmental Standards concurs that these positive results should be considered quantitative estimates.

Introduction

This data usability summary report (DUSR) is based upon an examination of data generated from the analyses of 209 solid samples (including quality control [QC] samples) collected on November 4, 5, 6, 7, 8, and 11, 2002, for the TCLP Sampling 11/02 event at the DuPont Rochester Driving Park facility in Rochester, New York. The samples that have undergone a QA review are listed on Table 1. Table 1 also presents the field sample number, laboratory sample number, sample delivery group (SDG), matrix, collection date, and parameter(s) analyzed and reviewed for each sample.

This review has been performed with guidance from the "Guidance for the Development of Data Usability Summary Reports" (New York State Department of Environmental Conservation, June 1999), "National Functional Guidelines for Organic Data Review" (US EPA, October 1999), and the "National Functional Guidelines for Inorganic Data Review" (US EPA, July 2002).

The reported analytical results are presented on the data tables included in Section 2, "Target Analyte Summary." These data tables have been generated from the Corporate Environmental Database (CED) and include all final data validation qualifiers and results. Data were examined to determine the usability of the analytical results and compliance relative to requirements specified in the analytical methods and by "Test Methods for Evaluating Solid Waste" (SW-846; Third Revision, 1986 and updates as applicable). Qualifier codes have been placed in the "Review" field on the data tables where necessary to enable the data user to quickly assess the qualitative and/or quantitative reliability of any result based on the criteria evaluated. Details of this QA review are presented in Section 1 of this report.

This critical QA review identifies data quality issues for specific samples and specific evaluation criteria. The data qualifications allow the data end-user to best understand the usability of the analysis results. Data not qualified in this report should be considered valid based on the QC criteria that have been reviewed.

Section 1 Data Usability Summary Report

A. Organic Data

The organic analyses of 103 solid samples (including QC samples) collected as part of the TCLP Sampling 11/02 event at the DuPont Rochester Driving Park facility in Rochester, New York, on November 4, 5, 6, 7, 8, and 11, 2002, were performed by Lancaster Laboratories, Inc. (LLI) in Lancaster, Pennsylvania. The samples were collectively analyzed for Polynuclear Aromatic Hydrocarbons (PAHs) by SW-846 Method 8310; for Select Volatile Organic Compounds and select PAHs (STARS Petroleum Contaminants) by SW-846 Methods 8021B and 8270C, respectively; for Toxicity Characteristic Leaching Procedure (TCLP) Volatile Organic Compounds by SW-846 Methods 1311 and 8260B; for TCLP Semivolatile Organic Compounds by SW-846 Methods 1311 and 8270C; for TCLP Pesticides by SW-846 Method 8081A; and for TCLP Herbicides by SW-846 Method 8151A, as specified in "Test Methods for Evaluating Solid Waste" (SW-846, Third Edition, through Final Update III, December 1996). Specific analyses reviewed for all samples are identified on Table 1. The data were presented in 11 Contract Laboratory Program (CLP)-like data packages.

The findings offered in this report for all organic analyses are based upon a review of all tabulated QC summary forms for the following QC measures. Raw data were not examined.

- sample holding times
- blank analysis results
- initial calibrations and continuing calibration verification standards
- matrix spike (MS)/MS duplicate (MSD) recoveries and precision
- internal standard areas
- analytical sequence
- sample condition upon laboratory receipt
- surrogate recoveries
- gas chromatogram/mass spectral (GC/MS) tuning and system performance
- laboratory control sample (LCS)recoveries
- field duplicate precision

The analytical results for the organic compounds are provided as a summary of the data in Section 2 of this report.

Data Package Deliverables

Overall, the organic data quality is good. The following analytical criteria and/or reporting requirements were not met for the original data packages received. The following items may not necessarily affect data usability. Usability is addressed in the Organic Data Qualifiers section.

Noncorrectable Deficiency

- According to the Sample Administration Receipt Documentation Logs included in the data packages provided for SDGs RDP05, RDP06, and RDP07, a temperature of 7.5°C was recorded for several project sample coolers upon laboratory receipt. Samples collected for all organic analyses are required to be preserved at a temperature of 4°C (SW-846, Chapter 4 [Table 4-1]). In the data reviewer's opinion, data qualification of the extractable compounds is not warranted due to the stability of these compounds at this slightly elevated temperature. Qualification of the volatile compounds data due to this issue is addressed in the subsequent Organic Data Qualifiers section.

Comments

1. All samples were analyzed for TCLP volatile organic compounds at 20-fold dilutions due to the leachate matrix. The laboratory adjusted the method detection limits (MDLs) and practical quantitation limits (PQLs) for TCLP volatile organic compounds in these samples to reflect the dilutions performed.

2. Due to high concentrations of target compounds, several samples were analyzed for PAH (by Method 8310) at primary and/or secondary dilutions. The laboratory adjusted the MDLs and PQLs for PAH compounds in these samples to reflect the dilutions performed.

3. All samples were analyzed for volatile organic compounds (STARS petroleum contaminants) at primary dilutions due to the methanol preparation of the samples and secondary dilutions due to high concentrations of target compounds and/or matrix interference. The laboratory adjusted the MDLs and PQLs for volatile organic compounds (STARS petroleum contaminants) in these samples to reflect the dilutions performed.

4. According to the Sample Administration Receipt Documentation Logs included in the data packages provided, temperatures of 2°C, 3°C, 4.5°C, 5°C, and 6°C were recorded for several project sample coolers upon laboratory receipt. Samples collected for all organic analyses are required to be preserved at a temperature of 4°C (SW-846, Chapter 4 [Table 4-1]). The data reviewer does not consider the data to have been impacted because it is customary for the acceptable preservation temperature to be 4±2°C.

5. The run logs for PAH analyses (by Method 8310) were not included in the data packages provided for review.

6. In the TCLP herbicide fraction of SDG RDP15, the LCS recovery for 2,4-D was outside of QC limits. According to the Laboratory Case Narrative for SDG RDP15, the laboratory reextracted the associated sample, but the reextraction was performed outside of the required holding time; therefore, the laboratory reported the analytical results of the associated sample from the initial analysis.

Data Evaluation

With respect to data usability, the principal areas of concern include an elevated sample temperature upon laboratory receipt, poor instrument sensitivity, high continuing calibration verification (CCV) standard percent drifts, low MS/MSD recoveries, low LCS recoveries, and quantitation below the PQL. Based on a rigorous review of the data provided, the following organic data qualifiers are offered. The following data usability issues represent an interpretation of the QC results obtained for the project samples. Quite often, data qualifications address issues relating to sample matrix problems. Similarly, the data validation guidelines routinely specify areas of the data that require qualification, yet the methods used for analysis may not require corrective action by the laboratory. Accordingly, the following data usability issues should not be construed as an indication of laboratory performance.

Organic Data Qualifiers

- The analyses for 2-butanone in all samples in SDGs RDP08, RDP10, RDP11, and RDP14 should be considered unusable, and the "not-detected" results have been flagged "R" on the data tables. Very low average relative response factors (RRFs <0.05) were observed for these compounds in the associated CCV standards.

- The detection limits for all volatile organic compounds in samples RDP-S-F5-F6(1-9.7) and RDP-S-G1-G2(0.5-8) in SDG RDP06 and in samples RDP-S-F1-F2(1-9) and RDP-S-F3-F4(1-9.7) in SDG RDP07 may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. These samples were received at the laboratory at an elevated temperature (7.5°C).

- The detection limit for benzo(a)anthracene in sample RDP-S-G4(6.5-7.2) in SDG RDP09 may be higher than reported, and the "not-detected" result has been flagged "UJ" on the data tables. In addition, the reported positive results for benzo(a)anthracene in samples RDP-S-I5A(4.2-6) and RDP-S-E1(6.5-7.7) in SDG RDP09 and in sample RDP-S-B1(5-7.9) in SDG RDP12 should be considered estimated and have been flagged "J" on the data tables. Low recoveries (10%≤%R<50%) were observed for this compound in the associated MS and MSD analyses.

- The detection limit for 2-butanone in sample RDP-S-H3-H4(0.5-7.6) in SDG RDP10 may be higher than reported, and the "not-detected" result has been flagged "UJ" (unless previously flagged "R") on the data tables. A low recovery (<70%) was observed for this compound in the associated MSD analysis.

- The detection limits for vinyl chloride and 2-butanone in samples RDP-S-B1-A1(0.5-11.3) and RDP-S-B1-A1(0.5-11.3)-DUP in SDG RDP14 may be higher than reported, and the "not-detected" results have been flagged "UJ" (unless previously flagged "R") on the data tables. Low recoveries (<70%) were observed for these compounds in the associated MS and MSD analyses.

- The detection limit for hexachloroethane in sample RDP-S-E3(1-9) in SDG RDP07 may be higher than reported, and the "not-detected" result has been flagged "UJ" on the data tables. Low recoveries (10%≤%R<50%) were observed for this compound in the associated MS and MSD analyses.

- The detection limits for 1,4-dichlorobenzene, hexachloroethane, and hexachlorobutadiene in sample RDP-S-F2A-F3A(0.5-6) in SDG RDP11 may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. Low recoveries (10%≤%R<50%) were observed for these compounds in the associated MS analysis.

- The detection limits for hexachloroethane and hexachlorobutadiene in all samples in SDGs RDP06 and RDP07 may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. Low recoveries (10%≤%R<50%) were observed for these compounds in the associated LCS analysis.

- The detection limits for 1,4-dichlorobenzene and hexachloroethane in sample RDP-S-I5-I6(0.0-5) in SDG RDP10 and in all samples in SDG RDP11 may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. Low recoveries (10%≤%R<50%) were observed for these compounds in the associated LCS analyses.

- The detection limit for 2,4-D in sample RDP-S-A5(6-9.7) in SDG RDP15 may be higher than reported, and the "not-detected" result has been flagged "UJ" on the data tables. A low recovery (10%≤%R<50%) was observed for this compound in the associated LCS analysis.

- The detection limits for 2-butanone in all samples in SDGs RDP08, RDP10, RDP11, and RDP14 may be higher than reported, and the "not-detected" results have been flagged "UJ" (unless previously flagged "R") on the data tables. High percent drifts (%Ds>20%), coupled with decreases in instrument sensitivity, were observed for this compound in the associated CCV standards.

- The detection limits for methoxychlor in all samples in SDGs RDP06, RDP07, RDP08, and RDP15 may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. High percent drifts (%Ds>15%), coupled with decreases in instrument sensitivity, were observed for this compound in the associated CCV standards.

- The detection limits for 2,4,5-TP in all samples in SDGs RDP06 and RDP07 and for 2,4-D in all samples in SDG RDP06 [except sample RDP-S-G1-G2(0.5-8)] and in sample RDP-S-E3(1-9) in SDG RDP07 may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. High percent drifts (%Ds>15%), coupled with decreases in instrument sensitivity, were observed for these compounds in the associated CCV standards.

- The following field duplicate pairs were included in these data sets. Acceptable precision and sample representativeness (both results were >5× the PQL and the relative percent difference (%RPD) was <40% or at least one result was <5× the PQL and the difference between the results was <2× the PQL) were demonstrated by all organic compound results in the field duplicate pairs. Complete summaries of the positive results in these field duplicate pairs have been included in Section 3.

SDG	Sample	Field Duplicate
RDP05	RDP-S-E2(6-7)	RDP-S-E2(6-7)-DUP
RDP08	RDP-S-G5-G6(0.5-6)	RDP-S-G5-G6(0.5-6)-DUP
RDP09	RDP-S-H6(4.8-6)	RDP-S-H6(4.8-6)-DUP
	RDP-S-J4(4.6-6.1)	RDP-S-J4(4.6-6.1)-DUP
RDP12	RDP-S-C5(7.5-9)	RDP-S-C5(7.5-9)-DUP
RDP14	RDP-S-B1-A1(0.5-11.3)	RDP-S-B1-A1(0.5-11.3)-DUP

- Based on standard project reporting requirements, all positive results reported with concentrations between the laboratory's associated MDLs and PQLs have been flagged "J" on the data tables by the laboratory. Environmental Standards concurs that these positive results should be considered quantitative estimates and has also flagged these results "J" on the data tables.

A complete support documentation of this organic data usability summary review is provided in Section 3 of this report.

B. Inorganic Data

The inorganic analyses of 159 solid samples (including QC samples) collected as part of the TCLP Sampling 11/02 event at the DuPont Rochester Driving Park facility in Rochester, New York, on November 4, 5, 6, 7, 8, and 11, 2002, were performed by Lancaster Laboratories, Inc. (LLI) in Lancaster, Pennsylvania. The samples were collectively analyzed for Project-Specific Total Metals (Cadmium, Chromium, Lead, and Silver) by SW-846 Method 6010B; for Total Mercury by SW-846 Method 7471A; and for TCLP Metals (Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium, and Silver) by SW-846 Methods 1311, 6010B, and 7470A, as specified in "Test Methods for Evaluating Solid Waste" (SW-846, Third Edition, through final update III, December 1996). Specific analyses reviewed for all samples are identified on Table 1. The data were presented in 13 "CLP-like" data packages.

The findings offered in this report for all inorganic analyses are based upon a review of all tabulated QC summary forms for the following QC measures. Raw data were not examined.

- sample holding times
- blank analysis results
- low-level check standard recoveries
- post-digestion spike recoveries
- LCS recoveries
- field duplicate precision
- sample condition upon laboratory receipt
- calibrations
- pre-digestion MS/MSD recoveries and precision
- laboratory duplicate precision
- interference check samples recoveries
- serial dilution results

The analytical results for the inorganic analyses are provided as a summary of the data in Section 2 of this report.

Data Package Deliverables

Overall, the inorganic data quality is good. The analytical criteria and reporting requirements were met for the original data packages received. Usability is addressed in the Inorganic Data Qualifiers section.

Data Evaluation

With respect to data usability, the principal areas of concern are blank contamination, potential negative interference based on negative values observed in laboratory blanks, low and high low-level check standard recoveries, high and low MS and/or MSD recoveries, MS/MSD imprecision, laboratory duplicate imprecision, a high LCS recovery, field duplicate imprecision, high serial dilution percent differences, and quantitation below the PQL. Based on a rigorous review of the data provided, the following inorganic data qualifiers are offered. The following data usability issues represent an interpretation of the QC results obtained for the project samples. Quite often, data qualifications address issues relating to sample matrix problems. Similarly, the data validation guidelines routinely specify areas of the data that require qualification, yet the methods used for analysis may not require corrective action by the laboratory. Accordingly, the following data usability issues should not be construed as an indication of laboratory performance.

Inorganic Data Qualifiers

- Due to the presence of the following analytes in laboratory blanks, the reported positive results for these analytes in the samples listed below should be considered "not-detected" and have been flagged "U" on the data tables. Sample volume/weights, percent solids, and dilution factors were taken into consideration when evaluating blank contamination.

Analyte(s)	SDG	Sample(s)
mercury	RDP05	RDP-S-D1(6.5-7.5), RDP-S-D6(5-6.7), RDP-S-F6(7-10.1), RDP-S-E3(8-9), RDP-S-F3(7.5-9), and RDP-S-G1(8-8.2)
TCLP arsenic	RDP06	RDP-S-D1(1-6)
TCLP chromium		RDP-S-E2(1.5-5) and RDP-S-E2(1.5-5)-DUP
TCLP lead		RDP-S-D2(2-5)
TCLP selenium		RDP-S-C1(3-4), RDP-S-D1(1-6), RDP-S-D2(2-5), RDP-S-D4(1-2.5), RDP-S-D6(1-5), RDP-S-E2(1.5-5), and RDP-S-E2(1.5-5)-DUP
TCLP silver		RDP-S-C1(3-4), RDP-S-D1(1-6), RDP-S-D2(2-5), RDP-S-D3(1-2), RDP-S-D6(1-5), RDP-S-E2(1.5-5), and RDP-S-E2(1.5-5)-DUP
TCLP chromium	RDP07	RDP-S-G2(0.5-7) and RDP-S-F2(1-9)
silver	RDP09	RDP-S-I5A(4.2-6) and RDP-S-F2A(6.5-7.9)
mercury		RDP-S-I5A(4.2-6)
TCLP silver	RDP10	RDP-S-J3(0.5-5.1)
silver	RDP12	RDP-S-SB13(1-4), RDP-S-SB13(5-6), RDP-S-SB13(5-6)-DUP, RDP-S-B1(5-7.9), RDP-S-SB13(1-4)-DUP, RDP-S-I6(5.5-6.1), RDP-S-C5(7.5-9), RDP-S-C5(7.5-9)-DUP, RDP-S-B5(7-11.8), RDP-S-B6(5-9.7), and RDP-S-A5(6-9.7)
TCLP cadmium	RDP14	RDP-S-A1(0.5-11.3) and RDP-S-A1(0.5-11.3)-DUP
TCLP selenium, TCLP lead, and TCLP silver	RDP15	RDP-S-A5(6-9.7)
TCLP selenium	RDP16	RDP-S-2A(5-6)
TCLP silver	RDP17	RDP-S-D1(6.5-7.5)

- The analyses for TCLP silver in all samples in SDG RDP07 may be higher than reported, and the "not-detected" results have been flagged "R" on the data tables. In addition, all reported positive results for TCLP silver in samples in SDG RDP07 should be considered estimated and have been flagged "J" on the data tables. Very low recoveries (%R<30%) were observed for this analyte in the associated MS and MSD analyses.

- The detection limits for the following analytes in the samples listed below may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. In addition, any reported positive results for the following analytes in the samples listed below should be considered estimated and have been flagged "J" (unless flagged "U") on the data tables. These analytes were observed at negative concentrations with absolute values greater than two-times the instrument detection limit (IDL) in the associated laboratory blanks, and the aforementioned positive results and the MDLs for these analytes in the samples listed below were within five-times the absolute values observed in the laboratory blanks.

Analyte	SDG	Sample(s)
mercury	RDP05	All samples in SDG RDP05, except samples RDP-S-E5(1-8.5) and RDP-S-D1(1-6)
TCLP mercury	RDP06	All samples in SDG RDP06
TCLP mercury	RDP08	All samples in SDG RDP08
TCLP mercury	RDP10	All samples in SDG RDP10
TCLP mercury	RDP11	All samples in SDG RDP11, except sample RDP-S-I5B(0-7)
mercury	RDP12	All samples in SDG RDP12, except sample RDP-S-SB15(0.5-4)
TCLP mercury	RDP14	All samples in SDG RDP14
TCLP mercury	RDP15	RDP-S-A5(6-9.7)
TCLP mercury	RDP16	RDP-S-2A(5-6)
TCLP mercury	RDP17	RDP-S-D1(6.5-7.5)

- The detection limits for the following analytes in the samples listed below may be higher than reported, and the "not-detected" results have been flagged "UJ" (unless previously flagged "R") on the data tables. In addition, any reported positive results for the following analytes in the samples listed below should be considered estimated and have been flagged "J" (unless previously flagged "U") on the data tables. Low recoveries ($50\% \leq \%R < 85\%$ for ICP; $50\% \leq \%R < 75\%$ for mercury) were observed for these analytes in the associated low-level check standard analyses.

Analyte(s)	SDG	Sample(s)

TCLP selenium	RDP16	RDP-S-2A(5-6)
TCLP lead	RDP17	RDP-S-D1(6.5-7.5)

- Any reported positive results for the following analytes in the samples listed below should be considered estimated and have been flagged "J" (unless previously flagged "U") on the data tables. High recoveries (>125%) were observed for these analytes in the associated MS and/or MSD analyses.

Analyte(s)	SDG	Sample(s)
chromium	RDP05	All samples in SDG RDP05, except sample RDP-S-D1(1-6)
TCLP chromium	RDP07	All samples in SDG RDP07
chromium	RDP09	RDP-S-I1(6.2-7.5), RDP-S-I4(5.2-6.6), RDP-S-I5A(4.2-6), RDP-S-J4(4.6-6.1), RDP-S-J5(3-4.5), RDP-S-J4(4.6-6.1)-DUP, RDP-S-E1(6.5-7.7), RDP-S-F2A(6.5-7.9), RDP-S-F3A(6.5-7.8), and RDP-S-J1(5.5-6.5)
chromium and mercury	RDP12	All samples in SDG RDP12
chromium	RDP13	RDP-S-A6(6.5-9.6)

- The detection limits for the following analytes in the samples listed below may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. In addition, any reported positive results for the following analytes in the samples listed below should be considered estimated and have been flagged "J" (unless previously flagged "U") on the data tables. Low recoveries (30%≤%R<75%) were observed for these analytes in the associated MS and/or MSD analyses.

Analyte(s)	SDG	Sample(s)
lead	RDP05	RDP-S-D1(1-6)
TCLP silver	RDP06	All samples in SDG RDP06
TCLP silver	RDP08	All samples in SDG RDP08
TCLP lead and TCLP silver	RDP10	All samples in SDG RDP10
TCLP barium, TCLP cadmium, TCLP chromium, and TCLP mercury		All samples in SDG RDP10, except samples RDP-S-J2(0.5-5.5) and RDP-S-J3(0.5-5.1)
TCLP silver	RDP11	All samples in SDG RDP11
TCLP silver	RDP14	All samples in SDG RDP14
TCLP selenium and TCLP silver	RDP15	RDP-S-A5(6-9.7)
TCLP cadmium and TCLP silver	RDP16	RDP-S-2A(5-6)
TCLP barium	RDP17	RDP-S-D1(6.5-7.5)

- All reported positive results for chromium in samples in SDG RDP05, except sample RDP-S-D1(1-6), and for TCLP silver in samples in SDG RDP08 and in sample RDP-S-A5(6-9.7) in SDG RDP15 should be considered estimated and have been flagged "J" (unless previously flagged "U") on the data tables. High RPDs (>40%) were observed for chromium and TCLP silver in the associated MS and MSD analyses.

- The reported positive results for lead in samples RDP-S-G5(0.5-6), RDP-S-G4(6.5-7.2), RDP-S-G5(6.2-6.9), RDP-S-G6(5.2-6), RDP-S-G3(6.5-7), RDP-S-H5(0.5-5), RDP-S-H4(6.2-7.3), RDP-S-H5(5.2-6.2), RDP-S-H6(4.8-6), and RDP-S-H6(4.8-6)-DUP in SDG RDP09 should be considered estimated and have been flagged "J" on the data tables. A very low recovery (%R<30%) was observed for this analyte in the associated MSD analysis.

- The reported positive results for TCLP barium in samples RDP-S-J2(0.5-5.5) and RDP-S-J3(0.5-5.1) in SDG RDP10 should be considered estimated and have been flagged "J" on the data tables. Very low recoveries (%R<30%) were observed for this analyte in the associated MS and MSD analyses.

- The reported positive results for cadmium in sample RDP-S-D1(1-6) in SDG RDP05 and in samples RDP-S-G5(0.5-6) and RDP-S-H5(0.5-5) in SDG RDP09 should be considered estimated and have been flagged "J" on the data tables. Large discrepancies (RPD>40%) were observed for cadmium in the associated laboratory duplicate analyses.

- The reported positive result for silver in sample RDP-S-D1(1-6) in SDG RDP05 and all reported positive results for silver in samples in SDG RDP12 should be considered estimated and have been flagged "J" (unless previously flagged "U") on the data tables. High recoveries (>130%) were observed for silver in the associated LCS analyses.

- The reported positive results for the following analytes in the samples listed below should be considered estimated and have been flagged "J" on the data tables. High percent differences (>10%) were observed for these analytes in the associated serial dilution analyses.

Analyte	SDG	Sample(s)
TCLP barium	RDP07	All samples in SDG RDP07
TCLP barium	RDP08	All samples in SDG RDP08
TCLP barium	RDP10	All samples in SDG RDP10, except samples RDP-S-J2(0.5-5.5) and RDP-S-J3(0.5-5.1)
TCLP barium	RDP11	All samples in SDG RDP11
TCLP barium	RDP15	RDP-S-A5(6-9.7)
TCLP barium	RDP16	RDP-S-2A(5-6)
TCLP barium	RDP17	RDP-S-D1(6.5-7.5)

- The following field duplicate pairs were included in these data sets.

SDG	Sample	Field Duplicate
RDP05	RDP-S-E2(6-7)	RDP-S-E2(6-7)-DUP
RDP06	RDP-S-E2(1.5-5)	RDP-S-E2(1.5-5)-DUP
RDP08	RDP-S-G6(0.5-5)	RDP-S-G6(0.5-5)-DUP
RDP09	RDP-S-H6(4.8-6)	RDP-S-H6(4.8-6)-DUP
	RDP-S-J4(4.6-6.1)	RDP-S-J4(4.6-6.1)-DUP

SDG	Sample	Field Duplicate
RDP12	RDP-S-SB13(1-4)	RDP-S-SB13(1-4)-DUP
	RDP-S-SB13(5-6)	RDP-S-SB13(5-6)-DUP
	RDP-S-C5(7.5-9)	RDP-S-C5(7.5-9)-DUP
RDP14	RDP-S-A1(0.5-11.3)	RDP-S-A1(0.5-11.3)-DUP

Acceptable precision and sample representativeness (both results were >5× the PQL and the %RPD was <40%, or at least one result was <5× the PQL and the difference between the results was <2× the PQL) were demonstrated by all analyte results in the field duplicate pairs with the exception of TCLP lead in samples RDP-S-E2(1.5-5) and RDP-S-E2(1.5-5)-DUP in SDG RDP06. The positive result for TCLP lead in sample RDP-S-E2(1.5-5) should be considered estimated and has been flagged "J" on the data tables. In addition, the detection limit for TCLP lead in sample RDP-S-E2(1.5-5)-DUP may be higher than reported, and the "not-detected" result has been flagged "UJ" on the data tables. Complete summaries of the positive results in these field duplicate pairs have been included in Section 4.

- Based on standard project reporting requirements, all positive results reported with concentrations between the laboratory's associated MDLs and PQLs have been flagged "J" on the data tables by the laboratory. Environmental Standards concurs that these positive results should be considered quantitative estimates and has also flagged these results "J" (unless previously flagged "U") on the data tables.

A complete support documentation of this inorganic data usability summary review is presented in Section 4 of this report.

C. Conclusions

This DUSR has identified several aspects of the data that required qualification. Overall, the majority of the analytical data is acceptable for use as reported by the laboratory, with the following exceptions. Select organic results were qualified as unusable due to very low RRFs in the associated CCV standards. In addition, select organic results were qualified as estimated due to an elevated sample temperature upon laboratory receipt, high CCV standard percent drifts, low MS/MSD recoveries, low LCS recoveries, and quantitation below the PQL. Select inorganic results were qualified as unusable due to very low MS/MSD recoveries. In addition, select inorganic results were qualified due blank contamination, potential negative interference based on negative values observed in laboratory blanks, low and high low-level check standard recoveries, high and low MS and/or MSD recoveries, MS/MSD imprecision, laboratory duplicate imprecision, a high LCS recovery, field duplicate imprecision, high serial dilution percent differences, and quantitation below the PQL. In order to use any of the data, the data user should understand the qualifications and limitations as specified in this QA review. The Laboratory Case Narratives and Project Chain-of-Custody Records are presented in Section 5 of this report.

SECTION 2

TARGET ANALYTE SUMMARY

A. ORGANIC RESULTS

ORGANIC DATA QUALIFIERS

U	This compound should be considered "not detected" because it was detected in a blank at a similar level.
J	Quantitation is approximate due to limitations identified during the quality assurance review (data validation).
R	Unusable result; compound may or may not be present in this sample.
UJ	This compound was not detected, but the detection limit is probably higher due to a low bias identified during the quality assurance review.

B. INORGANIC RESULTS

INORGANIC DATA QUALIFIERS

U	This analyte should be considered "not detected" because it was detected in a blank at a similar level.
J	Quantitation is approximate due to limitations identified during the quality assurance review (data validation).
R	Unusable result; analyte may or may not be present in this sample.
UJ	This analyte was not detected, but the detection limit is probably higher due to a low bias identified during the quality assurance review.
