Re: February 2015 Progress Report
3750 Monroe Avenue, Pittsford, New York
NYSDEC BCP Site #C828187
LaBella Project No. 213131

Dear Mr. Sowers:

LaBella Associates, D.P.C. ("LaBella") is pleased to submit this Monthly Progress Report (MPR) associated with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site (BCP ID No. C828187) located at 3750 Monroe Avenue, Pittsford, New York, hereinafter referred to as the "Site." Below is a summary of activities completed in the past month (February 2015) and planned for this month (March 2015).

Activities in Previous Month

The following tasks were completed for the project during the month of February 2015:

- Continued implementation of the Interim Remedial Measures (IRM) Work Plan associated with the sub-slab depressurization system (SSDS) installation and soil and groundwater sampling within the Site building. This work began on December 23, 2014. As of the date of this report, all of the planned soil and groundwater sampling work has been completed and all planned depressurization points (i.e., work involving floor coring) have been installed. Additional SSDS components are currently being installed.
- Continued internal coordination between building tenants, 3750 Monroe Avenue Associates, LLC, LaBella and Mitigation Tech regarding the installation of the SSDS.

Activities Planned for This Month

The following work is planned for March 2015:

- The remaining installation of the SSDS including the connection of depressurization points, fan and alarm installation, etc. This work is being completed overnight and on the weekends.
- Continued coordination between building tenants, 3750 Monroe Avenue Associates, LLC, LaBella and Mitigation Tech regarding the installation of the SSDS.
- The sub-slab and indoor air sampling described in the IRM Work Plan is planned to be completed following the full startup of the SSDS. The sampling is tentatively planned for the end of March or beginning of April.

Approved Activity Modifications (changes of work scope and/or schedule)

No activity modifications were made in the month of February 2015.

Sampling/Testing Results

Preliminary soil and groundwater data was obtained from the laboratory in February 2015 and is attached to this letter. Subsequent to the receipt of the full ASP Category B data package from the laboratory, this report will be validated and submitted to the NYSDEC and NYSDOH.

Unresolved Delays Encountered or Anticipated

There are currently no unresolved delays associated with the project. Discussions with building tenants are ongoing to coordinate SSDS installation and subsurface sampling.

Percentage of Completion

Implementation of an IRM associated with the SSDS installation and soil and groundwater sampling within the building footprint began in December 2014 and will continue in March 2015. The Remedial Investigation Work Plan (RIWP) is under development.

Activities Undertaken in Support of the Citizen Participation Plan

There were no activities undertaken in support of the Citizen Participation Plan in February 2015.

If you have any questions, or require additional information, please do not hesitate to contact me at (585) 295-6611.

Sincerely,

LABELLA ASSOCIATES, D.P.C.

A handwritten signature in blue ink, appearing to read 'D. P. Noll', is shown on a yellow rectangular background.

Attachment B
Explanation of QC Qualifier Codes

Qualifier	Meaning
J	(EPA) - Estimated value below the lowest calibration point. Confidence correlates with concentration.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low
01	(ESC) The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V	(ESC) - Additional QC Info: The sample concentration is too high to evaluate accurate spike recoveries.
V3	(ESC) - Additional QC Info: The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

- Accuracy** - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.
- Precision** - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.
- Surrogate** - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.
- TIC** - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

Non-Conformance Form

Login #: L747998	Client: LABRNY	Date: 2/10/15	Evaluated by: Nikki Sloan
------------------	----------------	---------------	---------------------------

Non-Conformance (check applicable items)

Sample Integrity	Chain of Custody Clarification	If Broken Container:
Parameter(s) past holding time	X Login Clarification Needed	Insufficient packing material around container
Improper temperature	Chain of custody is incomplete	Insufficient packing material inside cooler
Improper container type	Please specify Metals requested.	
Improper preservation	Please specify TCLP requested.	Improper handling by carrier (FedEx / UPS / Courier)
Insufficient sample volume.	Received additional samples not listed on coc.	Sample was frozen
Sample is biphasic.	Sample ids on containers do not match ids on coc	Container lid not intact
Vials received with headspace.	Trip Blank not received.	If no Chain of Custody:
Broken container	Client did not "X" analysis.	Received by:
Broken container:	Chain of Custody is missing	Date/Time:
Sufficient sample remains		Temp./Cont. Rec./pH:
		Carrier:
		Tracking#

Login Comments: Received one 4oz for GP 33 Rock (20-20.5ft) not listed on the COC.

SEMI-VOLATILES ANALYSIS DATA SHEET TENTATIVELY IDENTIFIED COMPOUNDS

Client Name:	<u>LaBella Associates, P.C.</u>	Client ID:	GP-31 3-4FT
Project Desc.	<u>3750 Monroe Avenue</u>		
Matrix:	<u>SOIL</u>	ESC Sample No:	<u>L747998-01</u>
Date Collected:	<u>2/4/2015</u>	Lab File ID:	<u>0211_33</u>
Date Analyzed:	<u>2/12/2015</u>	Dilution Factor:	<u>1.00</u>

Tentatively Identified compounds (TIC) refers to substances not present in the list of target compounds. Therefore, not all TIC's are identified and quantitated using individual standards. TIC listings are prepared utilizing a computerized library search routine of electron impact mass spectral data and evaluation of the relevant data by a mass spectral data specialist. Quantitation is accomplished by relative peak area of the TIC compared to that of the nearest internal standard from the total ion chromatogram. TIC's are identified and quantitated only if the peak area is 10% or more of that of the nearest internal standard.

Number of TICs Found: 3

Concentration units: mg/kg

VOLATILES ANALYSIS DATA SHEET TENTATIVELY IDENTIFIED COMPOUNDS

Client Name:	<u>LaBella Associates, P.C.</u>	Client ID:	DUP 020515
Project Desc.	<u>3750 Monroe Avenue</u>		
Matrix:	<u>WATER</u>	ESC Sample No:	<u>L747998-04</u>
Date Collected:	<u>2/5/2015</u>	Lab File ID:	<u>0218_44</u>
Date Analyzed:	<u>2/19/2015</u>	Dilution Factor:	<u>1.00</u>

Tentatively Identified compounds (TIC) refers to substances not present in the list of target compounds. Therefore, not all TIC's are identified and quantitated using individual standards. TIC listings are prepared utilizing a computerized library search routine of electron impact mass spectral data and evaluation of the relevant data by a mass spectral data specialist. Quantitation is accomplished by relative peak area of the TIC compared to that of the nearest internal standard from the total ion chromatogram. TIC's are identified and quantitated only if the peak area is 10% or more of that of the nearest internal standard.

Number of TICs Found: 0

VOLATILES ANALYSIS DATA SHEET TENTATIVELY IDENTIFIED COMPOUNDS

Client Name:	<u>LaBella Associates, P.C.</u>	Client ID:	GP-34 15-16FT
Project Desc.	<u>3750 Monroe Avenue</u>		
Matrix:	<u>SOIL</u>	ESC Sample No:	<u>L747998-14</u>
Date Collected:	<u>2/7/2015</u>	Lab File ID:	<u>0215_36A</u>
Date Analyzed:	<u>2/16/2015</u>	Dilution Factor:	<u>1.00</u>

Tentatively Identified compounds (TIC) refers to substances not present in the list of target compounds. Therefore, not all TIC's are identified and quantitated using individual standards. TIC listings are prepared utilizing a computerized library search routine of electron impact mass spectral data and evaluation of the relevant data by a mass spectral data specialist. Quantitation is accomplished by relative peak area of the TIC compared to that of the nearest internal standard from the total ion chromatogram. TIC's are identified and quantitated only if the peak area is 10% or more of that of the nearest internal standard.

Number of TICs Found: 0

Hi Frank,

I had thought we had previously sent this soil/groundwater data but I couldn't find any evidence of that in my email- sorry for the delay in getting it to you. The preliminary data is attached (the ASP Cat. B data packages are too large to email).

As always, feel free to give me a call with any questions or if you need anything else.

Best,
Jen

Jennifer Gillen, MS

Subject: 3750 Monroe Missing Data?

Dan/Jen;

I was looking at the data in the Progress Report for February 2015 and noticed that the earliest samples in the data package were collected on Feb 4. I know there were samples collected prior to that, but I don't see those preliminary results anywhere.

Can you please send me the data for samples collected in December and January or explain why you still don't have them.

Thanks

Frank Sowers, P.E.

Attachment A
List of Analytes with QC Qualifiers

Sample Number	Work Group	Sample Type	Analyte	Run ID	Qualifier
L741389-01	WG763038	SAMP	Calcium	R3013314	V01
	WG763038	SAMP	Sodium	R3013314	V01
L741389-03	WG763919	SAMP	Cyanide	R3014013	J6
	WG763946	SAMP	Benzaldehyde	R3014178	J3
	WG763946	SAMP	Isophorone	R3014178	J4J3

Attachment B
Explanation of QC Qualifier Codes

Qualifier	Meaning
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low
01	(ESC) The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V	(ESC) - Additional QC Info: The sample concentration is too high to evaluate accurate spike recoveries.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

- Accuracy** - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.
- Precision** - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.
- Surrogate** - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.
- TIC** - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

List of Analytes with QC Qualifiers

Sample Number	Work Group	Sample Type	Analyte	Run ID	Qualifier
L743037-01	WG764463	SAMP	Aluminum	R3014894	V
	WG764463	SAMP	Antimony	R3014894	J6
	WG764463	SAMP	Calcium	R3014954	V
	WG764463	SAMP	Iron	R3014894	V
	WG764463	SAMP	Magnesium	R3014894	V
	WG764463	SAMP	Manganese	R3014894	V
	WG764463	SAMP	Potassium	R3014894	J6

Attachment B
Explanation of QC Qualifier Codes

Qualifier	Meaning
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low
V	(ESC) - Additional QC Info: The sample concentration is too high to evaluate accurate spike recoveries.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

- Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.
- Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.
- Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.
- TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

Date Analyzed:	1/6/2015	Dilution Factor:	1.00

Tentatively Identified compounds (TIC) refers to substances not present in the list of target compounds. Therefore, not all TIC's are identified and quantitated using individual standards. TIC listings are prepared utilizing a computerized library search routine of electron impact mass spectral data and evaluation of the relevant data by a mass spectral data specialist. Quantitation is accomplished by relative peak area of the TIC compared to that of the nearest internal standard from the total ion chromatogram. TIC's are identified and quantitated only if the peak area is 10% or more of that of the nearest internal standard.

Number of TICs Found: 0

Matrix:	<u>SOIL</u>	ESC Sample No:	<u>L743037-03</u>
Date Collected:	<u>1/9/2015</u>	Lab File ID:	<u>0119_13</u>
Date Analyzed:	<u>1/19/2015</u>	Dilution Factor:	<u>1.00</u>

Tentatively Identified compounds (TIC) refers to substances not present in the list of target compounds. Therefore, not all TIC's are identified and quantitated using individual standards. TIC listings are prepared utilizing a computerized library search routine of electron impact mass spectral data and evaluation of the relevant data by a mass spectral data specialist. Quantitation is accomplished by relative peak area of the TIC compared to that of the nearest internal standard from the total ion chromatogram. TIC's are identified and quantitated only if the peak area is 10% or more of that of the nearest internal standard.

Number of TICs Found: 0

Concentration units: _____

CAS NO.	COMPOUND	RT	EST. CONC.	QF	QA
---------	----------	----	------------	----	----
