### **ENVIRONMENTAL PROFESSIONAL STATEMENT**

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. Under my direction and supervision, O'Brien & Gere has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Kevin D. Ignaszak, PE

Senior Project Manager

O'Brien & Gere Engineers, Inc.

#### **EXECUTIVE SUMMARY**

In accordance with our June 23, 2011 proposal, our June 14, 2012 Change Order #1, and our October 4, 2012 proposal, O'Brien & Gere Engineers, Inc. (O'Brien & Gere) was retained by the City of Rochester (City) to conduct a Phase I Environmental Site Assessment (ESA) for a portion of the Former Vacuum Oil Refinery property located at 1, 13, 31, 69, and 75 Cottage Street; 100 Riverview Place; 102 Violetta Street; and 1315 S. Plymouth Avenue, Rochester, New York ("subject property" or "Site"). The subject property comprises approximately 15.5 acres, is owned by the City, and is currently vacant. The Site contains public trails which are situated in the southwest-northeast direction parallel with the Genesee River. It is O'Brien & Gere's understanding that the anticipated future use of the subject property may include green space, parkland, limited mixed-use development, and potential infrastructure and utilities.

The Phase I ESA was performed to evaluate the potential existence of recognized environmental conditions (RECs) associated with the subject property as a result of past and/or present Site activities and current Site conditions. As such, O'Brien & Gere's work in performing this Phase I ESA has been conducted in accordance with the American Society for Testing and Materials (ASTM) "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, designation E-1527-05" (ASTM E-1527-05).

The purpose of this assessment was to identify and provide information on RECs as defined in ASTM E1527-05. A Site inspection was conducted by O'Brien & Gere personnel on July 18, 2011 and August 8, 2012. We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-05 for the property. Any exceptions to, or deletions from, this practice are described in this report. This assessment has revealed the following RECs in connection with the subject property (Note, the below numbered RECs are depicted on Figure 3):

- REC #1. An undated document titled *The Vacuum Oil Company of Rochester* was reviewed (as described in Section 2.2.7). The document stated that the refinery built and used tank cars for the transport of products. Historic documentation indicated that tank cars "in which crude was received after that had been cleaned with naphtha from the distillation" and indicated that railroad cars could be brought in and loaded with oil shipments, and that tank cars were built by the Former Vacuum Oil Refinery. O'Brien & Gere also reviewed documentation from the Monroe County Department of Health (MCDOH) (as described in Section 2.2.7) which indicated that cleaning of tank cars with naphtha occurred. Although the specific location(s) of these historic activities were not referenced there is the potential for impacts to soil and/or groundwater at the Site from releases that may have occurred during tank car loading/unloading; tank car cleaning; and transport of products via railroad. As such the tank car use and their associate cleaning with naphtha is a recognized environmental condition.
- REC #2. Based on O'Brien & Gere's review of the aerial photographs, historic drawings, and Sanborn® maps (as described in 2.2.7); historical use of portions of the Site, northwestern adjoining property, northern adjoining property, and adjacent properties to the southwest and north across Flint Street as part of Former Vacuum Oil Refinery operations was depicted. The aerials, drawings, and/or maps depicted former refinery structures, rail sidings, rail spurs (connecting from the Site parcel identified as 1315 S. Plymouth Avenue to a structure located on the northwestern adjoining 15 Flint Street parcel), railroads (on the Site parcels identified as 1315 S. Plymouth Avenue and 102 Violetta Street and the adjoining 5 Flint Street and 15 Flint Street parcels and adjacent properties both north and south of the Site), tank cars, disturbed areas (potentially from historic railroad spurs, depicted adjacent to the southern side of the structure depicted on the Site parcel identified as 13 Cottage Street), and potential sludge pits, which were part of various former refinery operations. The maps also depicted a metal scrap yard and automotive junkyard on the northwestern adjoining 15 Flint Street parcel. As such, these historical use areas are a recognized environmental condition.
- **REC #3.** The City Department of Environmental Quality (DEQ) provided a copy of three pages of a report titled *Expanded Phase I Investigation Genesee River Gorge (Lower Falls)* prepared by Recra Environmental, Inc. dated January 1988 (as described in Section 2.2.7). The document stated that

the former Vacuum Oil Refinery used naphtha. The document stated that naphtha was stored "at the facility," "supposedly entered the Genesee Valley Canal via a sewer line," and was released into the Genesee River. The document indicated that "waste oil from tank cars were disposed in various excavations or discharged directly into the river." The document stated "a pit was made at the works to burn refuse from the production of gas and naphtha" however, the specific location of the pit was not referenced. The document indicated that a pipe (conveying naphtha or oil) which crossed the canal and railroad was broken by a passing boat, and this pipe was documented as leading to the river and "Municipal Gas Works." The document stated that a tank vent allowed oil to "run into the canal," "twelve thousand gallons of naphtha are unaccounted for," and surplus boiler water also was discharged into the river. There is reference to a fire on the river that was from naphtha and a statement that indicates the Vacuum Oil Company was responsible for several deaths from the presence of naphtha within the public sewer system. Although there is not a specific location, or locations, referenced, the 1926 aerial photograph depicts potential on Site and off Site disposal areas and historical mapping suggests that piping was located in proximity to the Site. As such, this historic information indicate widespread, multiple releases including discharge of naphtha and waste oil to the Genesee River, public sewer system, disposal in excavations on Site, burning in pits on Site, and broken pipelines are identified as a recognized environmental condition.

- REC #4. Although there are permits for the demolition of the service station and removal of storage tanks, and a review of historical documentation and discussions with the City DEQ indicate that the Building Information System (BIS) is most likely incorrect and not attributed to the Site parcel identified as 102 Violetta Street, the potential that portions of the station and or continued presence of storage tanks still exist due to non-removal is a recognized environmental condition.
- REC #5. The detection of contaminants (one or more of the following: volatile organic compounds [VOCs], semi-volatile organic compounds [SVOCs], metals, and/or polychlorinated biphenyls [PCBs]) in both soil and groundwater on several Site parcels (including PCBs on the Site parcel identified as 1315 S. Plymouth Avenue, just south of the former grease manufacturing building located on the adjoining 15 Flint Street parcel), the northern adjoining 5 Flint Street parcel (which is hydraulically upgradient from the northern portion of the Site), and the northwestern adjoining 15 Flint Street parcel (which is both topographically and hydraulically upgradient) in exceedance of New York State Department of Environmental Conservation's (NYSDEC) Technical Administrative Guidance Memorandum (TAGM) #4046 Soil Cleanup Objectives (SCOs) or Title 6 of the New York Code Rules and Regulations, Part 703, NYSDEC Technical & Operational Guidance Series 1.1.1 criteria (6 NYCRR Part 703/TOGS1.1.1) (groundwater) is a recognized environmental condition.
- **REC #6.** O'Brien & Gere evaluated the NYSDEC's Site Investigation Report Former Vacuum Oil Company Site #828089P, Rochester, Monroe County dated March 2001 (as described in Section 2.2.7), and based on the information that one or more SVOCs; benzene, toluene, ethylbenzene, and xylenes (BTEX); and/or metals were present in surface soil both on Site (one location on the southern property boundary of the Site parcel identified as 13 Cottage Street and one location on the property boundary between the adjoining off Site 5 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue) and off Site (one location on an adjoining parcel west of the Site parcel identified as 1315 S. Plymouth Avenue and two locations on the adjoining off Site 5 Flint Street parcel), subsurface soil both on Site (two locations near the middle of the Site parcel identified as 1315 S. Plymouth Avenue, one location near the southeastern side of the Site parcel identified as 13 Cottage Street, and one location near the north-central area of the Site parcel identified as 102 Violetta Street) and off Site (five locations on the adjoining off Site 5 Flint Street parcel), and groundwater both on Site (one location near the middle of the Site parcel identified as 1315 S. Plymouth Avenue) and off Site (two locations on the adjoining off Site 5 Flint Street parcel) above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), with the adjoining 5 Flint Street parcel being located hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being located both topographically and hydraulically upgradient of the Site, these constituent detections represent a recognized environmental condition.

- O'Brien & Gere evaluated AMEC Earth & Environmental, Inc.'s (AMEC's) *Historic and Current Site Conditions Report, Former Vacuum Oil Refinery Site* dated June 2005 (as described in Section 2.2.7). Note, this report was a summary of historical and current site conditions, and no sampling was conducted as part of AMEC's report. Based on the presence of high concentrations of soil gas and TPH in many locations on both on Site and off Site parcels, and the presence of SVOCs and BTEX in surface soil, subsurface soil, groundwater on both on Site and off Site parcels above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), with the adjoining off Site 5 Flint Street parcel being situated hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being situated both topographically and hydraulically upgradient of the Site, and a pit formerly associated with industrial processes on the adjoining 5 Flint Street parcel, these constituent detections and pit are considered recognized environmental conditions.
- **REC #8.** O'Brien & Gere evaluated Stantec, Inc.'s (Stantec's) Phase I Environmental Site Assessment, 15 Flint Street, Rochester, New York, dated April 2008 (as described in Section 2.2.7). Based on the information presented within indicating several potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial operations including: the former grease manufacturing building and railroad sidings situated on the property boundary of the 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue; former oil storage tanks, former kerosene or naphtha storage tanks; potential former gasoline storage tanks; the former presence of an overhead trestle that potentially conveyed crude oil running across the adjoining off Site 5 Flint Street and 15 Flint Street parcels and the Site parcel identified as 1315 S. Plymouth Avenue; the former presence of an automobile junkyard which was situated along the property boundary with the Site parcel identified as 1315 S. Plymouth Avenue, the indication that petroleum-impacted soil is on Site; the potential for buried wastes associated with historic operations; soil and groundwater analytical results exceeding TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (as detailed herein) in the area related to the former Vacuum Oil Refinery and other industrial operations; and the fact that the adjoining off Site 15 Flint Street parcel is both topographically and hydraulically upgradient, these potential sources of contamination and constituent detections are considered recognized environmental conditions.
- REC #9. Stantec's April 2008 Phase I ESA report states that sampling conducted by the NYSDEC in 1999-2000 on City-owned land to the east and south (*i.e.*, the Site) indicated "widespread" petroleum contamination in surface soil, subsurface soil, and groundwater. The report also states that two groundwater monitoring wells located on this parcel detected significant petroleum contamination, and as such, represents a recognized environmental condition.
- REC #10. Stantec's April 2008 Phase I ESA report provides information on a nearby parcel, 31 Riverview Place, formerly used as a dry cleaner. The drycleaning operations are dated as approximately 1929 through 1941. The report states that this parcel may be hydraulically upgradient, and could potentially affect groundwater which may migrate to 15 Flint Street. The EDR report also indicates another location, addressed as 37 Riverview Place (located both topographically and hydraulically upgradient from the Site) as a former drycleaners (1940). Upon research, the address of 37 Riverview Place appears to be residential, indicating the likelihood that the address listed in the EDR report is incorrect. Most likely the address of 37 Riverview Place is attributed to the drycleaning operations identified as 27-31 Riverview Place. The potential presence of historic drycleaning operations including the potential use of solvents, and the potential for groundwater migration onto the Site represents a recognized environmental condition.
- **REC #11.** Based on O'Brien & Gere's review of Stantec's *Phase I Environmental Site Assessment, 5 Flint Street, Rochester, New York,* dated August 2008 (as described in Section 2.2.7) the potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial operations (*i.e.,* former oil storage tanks situated on the adjoining off Site 5 Flint Street parcel, petroleum-contaminated soil on this adjacent property at 5 Flint Street, potential for on Site buried wastes associated with previous Site operations on the adjoining off Site 5 Flint Street parcel, former buildings [paint shop drum wash houses, engine room, railroad yards/sidings] on the adjoining off

Site 5 Flint Street parcel), the former storage of hazardous materials on the adjoining off Site 5 Flint Street parcel, and the fact that the adjoining off Site 5 Flint Street parcel is hydraulically upgradient from the northern portion of the Site, are considered recognized environmental conditions.

- REC #12. Based on O'Brien & Gere's review of LaBella Associates, PC's (LaBella's) *Data Summary Package, Phase II ESA Subsurface Investigation, Former Vacuum Oil Refinery Site, 15 Flint Street, Rochester, New York*, dated October 2008 (as described in Section 2.2.7) the potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial operations including the former grease manufacturing and railroad sidings situated near the property boundary between the 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue, the forensic analysis results indicating that the "fingerprint" is indicative of the process of refining crude oil for the production of kerosene which was historically conducted as part of refinery operations, the presence of PCBs in subsurface soil; VOCs and SVOCs in subsurface soil and groundwater; and metals in subsurface soil above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (with the adjoining 15 Flint Street parcel being located both topographically and hydraulically upgradient) are considered recognized environmental conditions.
- **REC #13.** O'Brien & Gere prepared a Project Oversight Management Plan Services Report, Former Vacuum Oil Refinery Site Rochester, New York NYSDEC Spill No. 0370583, DEQ PSA Agreement No. 031534, dated October 10, 2008 (as described in Section 2.2.7). O'Brien & Gere provided part time, third party, oversight to field investigation activities of Groundwater & Environmental Services, Inc. (GES) (working on behalf of Roux Associates, Inc. [Roux] and ExxonMobil) and oversight of LaBella on behalf of the City, involving a subsurface investigation in which 18 temporary groundwater monitoring wells were installed. Soil samples and groundwater samples were collected. Analytical results indicate the presence of subsurface soil (one or more metals, VOC, and/or SVOC exceedances at one location on the 15 Flint Street parcel, at one location within the former grease manufacturing building footprint on the 15 Flint Street parcel, at one location on the southern adjacent parcel south of 13 Cottage Street in the vicinity of the former sludge pit, at one location on the northern side of the Site parcel identified as 1315 S. Plymouth Avenue, at two locations on the Site parcel identified as 1315 S. Plymouth Avenue, near the property boundary with the 15 Flint Street parcel [one located south of the former grease manufacturing building and one located in the vicinity of the former "Barrel Run"], at one location near the center of the Site parcel identified as 1315 S. Plymouth Avenue, at one location near the south-central side of the Site parcel identified as 1315 S. Plymouth Avenue, and at one location on the Site parcel identified as 1315 S. Plymouth Avenue near the southern corner of the adjoining 15 Flint Street parcel where historic bulk storage tanks were situated) and groundwater contamination (one or more pesticide, PCB, VOC, and/or SVOC exceedances at one location within the former grease manufacturing building footprint on the 15 Flint Street parcel, at one location near the eastern property boundary between the 5 Flint Street parcel and the Site parcel identified as 100 Riverview Place, at one location on the southern side of the Site parcel identified as 1315 S. Plymouth Avenue, and at one location on the Site parcel identified as 13 Cottage Street) above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (with the adjoining 15 Flint Street parcel being topographically and hydraulically upgradient). Through forensic analysis, the soil boring sample was found to contain medium to high boiling compounds indicative of a middle distillate such as kerosene as well as a high boiling material such as mineral oil. In addition, the kerosene material in the sample was found to have undergone advanced biological degradation consistent with the historic release. Analytical detections of metals, VOCs, and SVOCs above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) represent a recognized environmental condition.
- **REC #14.** O'Brien & Gere evaluated Roux Associates, Inc. (Roux's) *Subsurface Investigation Summary Report, Former Vacuum Oil Company Refinery Area*, dated January 12, 2009 (as described in Section 2.2.7). Results of the investigation found that based on a comparison of the soil analytical results to the NYS Recommended Soil Cleanup Objectives (RSCOs), VOC exceedances were observed at three locations on Site (two locations on the Site parcel identified as 13 Cottage Street and one location on the Site parcel identified as 102 Violetta Street) and eight off Site locations (six locations on the

northwestern adjoining 15 Flint Street parcel and two locations on the 5 Flint Street parcel); SVOC exceedances were observed at 12 locations on Site (three locations on the Site parcel identified as 13 Cottage Street, four locations on the Site Parcel identified as 102 Violetta Street, one location on the Site parcel identified as 1 Cottage Street, three locations on the Site parcel identified as 1315 S. Plymouth Avenue, and one location on the property boundary between the 5 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue), seven locations off Site (two locations on the adjoining 5 Flint Street parcel and five locations on the adjoining 15 Flint Street parcel), and other locations across the former refinery footprint; pesticide/PCB exceedances were observed at two locations on Site (two locations on the Site parcel identified as 13 Cottage Street) and two locations off Site (one location on the adjoining 5 Flint Street parcel and one location on the adjoining 15 Flint Street parcel); and several Priority Pollutant (PP)-13 total metals (at locations across the Site and adjoining properties) were detected at concentrations at or above TAGM #4046 SCOs (soil). Based on a comparison of the groundwater analytical results to 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), VOC exceedances were observed at three locations on Site (one location each on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, and 102 Violetta Street) and 12 locations off Site (four locations on the adjoining 5 Flint Street parcel, six locations on the adjoining 15 Flint Street parcel, and two locations on the southern adjoining parcel south of 13 Cottage Street in the area of the former sludge pit); SVOC exceedances were observed at two locations on Site (one location on the Site parcel identified as 13 Cottage Street and one location on the property boundary between the Site parcel identified as 1315 S. Plymouth Avenue and the adjoining 5 Flint Street parcel) and six locations off Site (three locations on the adjoining 5 Flint Street parcel and three locations on the adjoining 15 Flint Street parcel); pesticide/PCB exceedances at two locations on the adjoining 15 Flint Street parcel; and metals exceedances were observed at six on Site locations (two locations on the Site parcel identified as 13 Cottage Street, one location on the Site parcel identified as 102 Violetta Street, two locations on the Site parcel identified as 1315 S. Plymouth Avenue, and one location on the property boundary between 1315 S. Plymouth Avenue and the adjoining 5 Flint Street parcel) and three off Site locations (two locations on the adjoining 5 Flint Street parcel and one location on the adjoining 15 Flint Street parcel) at concentrations at or above 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater). The soil and groundwater exceedances indicating contamination above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (with the adjoining 15 Flint Street parcel being topographically and hydraulically upgradient) represent a recognized environmental condition.

- REC #15. Based on historical documentation container storage areas were noted and potentially mismanaged. Containers (*e.g.*, wooden barrels, tin cans, and drums) for kerosene, naphtha, and finished lubricants were stored and manufactured by the former oil refinery. A mismanaged approximate 1,500 gallon empty UST observed near the northwest corner of the Site parcel identified as 13 Cottage Street as described in Section 2.7 is an example of container mismanagement. Historical descriptions of mismanaged containers is a considered a recognized environmental condition.
- REC #16. As noted in Roux's January 12, 2009 report, in June 2008 LaBella encountered (and subsequently disposed of) approximately 100 pounds of asbestos material during test pit activities on the northwestern adjoining 15 Flint Street parcel. Based on the age of the historic features on site, the depiction of a building "covered with asbestos" on the 1892 Sanborn® Map on the Site parcel identified as 1315 S. Plymouth Avenue, the historic presence of asbestos-containing materials (ACMs) indentified in the Roux report, and the potential for fill and buried demolition debris to contain ACM, recognized environmental conditions were noted with respect to ACM.
- REC #17. Documented disposal of "waste oil" and the "burn pit;" the depiction of disturbed areas on southwestern adjoining parcels and the Site parcels identified as 1315 S. Plymouth Avenue, 69 Cottage Street, and 75 Cottage Street; MCDOH documentation indicating the presence of a petroleum sludge pit located on the southern adjacent parcel south of 13 Cottage Street, the identification of the Site as a confirmed waste site, and the potential for several additional sludge pit locations on the southern portion of the Site and/or southern adjoining parcel are considered recognized environmental conditions with respect to on Site waste disposal or landfilling.

- REC #18. Recognized environmental conditions were noted with respect to solid waste at the Site, specifically the observation of several areas of ash/black foundry sand on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, and 102 Violetta Street and the northern 5 Flint Street parcel.
- **REC #19.** Based on the lack of documentation regarding the appropriate removal and disposal of hazardous materials, recognized environmental conditions were noted with respect to former oil refinery hazardous waste generation.
- **REC #20.** Documentation reviewed in Section 2.2.7 mentions high concentrations of soil gas, with TPH in many locations throughout the Site and chlorinated VOCs in a small area of the Site parcel identified as 102 Violetta Street. As such, this is considered a recognized environmental condition.
- REC #21. Former Vacuum Oil, stated as being located near Flint Street and Exchange Street, was listed on the NY Spills database, Spill Number 0370583. The detail indicates that address as 5 Flint Street, the northern adjoining parcel. A spill was reported on January 26, 2004 as having occurred on April 13, 2001. The NYSDEC discussed status of the property and the need for subsurface investigation with ExxonMobil. ExxonMobil was issued a Stipulation Agreement (STIP) for performing the investigation, and subsequently various investigation work plans were submitted by ExxonMobil to the NYSDEC. The detail also states that a Phase II data summary package was submitted to the NYSDEC by LaBella. The "Remarks" section indicates that SVOCs and BTEX were detected in surface soil, subsurface soil, and groundwater above NYSDEC standards on a 24 acre portion of the Former Vacuum Oil Refinery, as performed by the NYSDEC Hazardous Waste Remediation Section. Due to the location of this listing (being situated hydraulically upgradient from the northern portion of the Site), and the history of the former Vacuum Oil Refinery site, this listing may have an impact on the subject property. As such, this is a recognized environmental condition.
- REC #22. An unaddressed location identified as "Former Vacuum Oil, Cottage Street." is listed as a Hazardous Substance Waste Disposal Site (HSWDS) from 1866 to 1936. The database states that metals, VOCs, and SVOCs, were disposed of at this location. The site code is listed as "leaking tanks, drums, lagoons, or other containers." The potential presence and on Site disposal of hazardous substances without documentation of remediation and/or removal is a recognized environmental condition.
- **REC #23.** 5 Flint Street and 15 Flint Street, located on the northern adjoining parcel and northwestern adjoining parcel, respectively, were listed on the US Brownfields database and NY Spills databases. A note in the EDR report indicates that ExxonMobil and the City are investigating the Site in relation to the former Vacuum Oil Refinery. The EDR report stated the City submitted a Brownfield Cleanup Program (BCP) Application for both 5 Flint Street and 15 Flint Street covering approximately 7.2 acres; however, the City indicated this has not occurred as of the date of this report. The EDR report states that the location is occupied by Flint Auto Wrecking and improved with a building. 15 Flint Street is part of the former Vacuum Oil Refinery site, and, according to the EDR report, this address has been used in the past as a paper company, tool & die companies, a printing company, a university, a scrap bailing company, a junkyard, and government agencies. Spill Number 0750738 was assigned on August 21, 2007 and subsequently closed on November 3, 2008. According to the EDR report, the spill pertains to the excavation of soil by Marks Auto Parts at this location while removing old tires, scrap vehicles, and other miscellaneous debris. The EDR report indicates that this location is vacant with an intended residential and commercial use. The EDR report states that petroleum, chlorinated solvents, SVOCs, VOCs, metals, and pesticides are known and/or suspected contaminants at this location. Due to the location and history of these parcel locations (the adjoining 5 Flint Street parcel being situated hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being situated both topographically and hydraulically upgradient from a portion of the Site), and subsurface investigations mentioned herein indicating contamination above, this listing may have an impact on the subject property. As such, this is a recognized environmental condition.
- **REC #24.** 22 Flint Street, located on the northern adjacent property across Flint Street, was listed on the NY Spills and NY Historical Spills databases. Spill Number 8706537 was opened on November 2, 1987

and subsequently closed on November 4, 1987. This spill was related to soil contamination that was found at this location while excavation was being performed by the City Water Bureau. While excavating, #2 fuel oil was observed, and the junkyard, located immediately southwest of 22 Flint Street across Flint Street, is listed in the EDR report as the "suspect." Due to its upgradient location, this listing may have an impact on the subject property. As such, this is a recognized environmental condition.

One location, addressed as 950-984 Exchange Street (located both topographically and hydraulically **REC #25.** upgradient from the Site), was listed in the NY SPILLS database as having an area of soil contamination in exceedance of TAGM #4046 SCOs where former Vacuum Oil Refinery petroleum storage tanks were situated (i.e., on the southern side of the 950-984 Exchange Street parcel near the northwest corner of 15 Flint Street). The EDR report also indicated that groundwater monitoring wells were not installed at this location. This location was also listed in the US BROWNFIELDS database. The EDR report indicates that this location was used as a machine shop during the 1960's. The EDR report also indicates this location has been occupied by the Vacuum Oil Company, Ontario Machine, and XL Total Machine Corp. The EDR report indicates that soil was contaminated with petroleum aromatic hydrocarbons (PAHs), petroleum products, and VOCs and each of these are listed as "cleaned up." However, dates of "clean up" and documentation of appropriate disposal are not listed within the EDR report. The City DEQ stated that remediation did occur at this location, was completed to the satisfaction of the NYSDEC, and subsequently the spill was closed with no further action required. However, the potential for migration of past contamination onto the subject property is considered a recognized environmental condition.

**REC #26.** Several former buildings associated with refinery operations were situated on Site parcels (as depicted on one or more years of Sanborn Maps, Plat Maps, and/or Aerial Photographs as detailed within this Phase I ESA report) including two structures labeled as "Pump Ho." on the Site parcel identified as 1315 S. Plymouth Avenue, one situated near the northern side of the parcel near the northeastern corner of 15 Flint Street, and one situated in the approximate middle of the parcel near the southern corner of 15 Flint Street and two railroads that provided service to the former refinery were situated on the Site parcels identified as 1315 S. Plymouth Avenue and 102 Violetta Street. Several former buildings associated with refinery operations were situated on off Site parcels, including a "Barrel Preparation Bldg" depicted on the 5 Flint Street parcel along with a "Cooper Shop," "Paint Shop," "Drum Store Ho.," "Barrel Drying," "Drum Wash Ho.," and several unidentifiable structures. An "Iron Clad Barrel Run on Trestle 20' to 30' High" is depicted as running from the 5 Flint Street parcel, across the northwest side of the Site, through the adjacent 15 Flint Street parcel and northward across Flint Street to the adjacent parcel. The northwestern adjoining parcel identified as 15 Flint Street is depicted as containing a wide variety of structures, and is labeled "Vacuum Oil Company Oil Refining Plant." The previously mentioned barrel run is depicted as running through the 15 Flint Street parcel. A "Grease Mfg Bldg," "Tank Bldg," "C.B.," "Settling Tanks," approximately 16 cylindrical and 14 horizontal "Oil Tanks," a "Wagon Shed," an "Engine Room," a "Still Ho.," a "Gasoline Ho.," "Condensing Tanks," and several additional unidentifiable structures are depicted on the adjacent 15 Flint Street parcel. A "Stave Shed," "Heading & Iron Storage" building, and the Pennsylvania and Erie Railroads are depicted on the Site. The "Paint Shop" referenced above is also depicted as being partially located on the Site parcel identified as 1315 S. Plymouth Avenue. Former aboveground storage tanks (ASTs) were depicted on the immediate adjoining and adjacent parcels as part of the former oil refinery for the storage of large quantities (i.e., historical information indicates storage volumes between 2,000 gallons and 300,000 gallons per storage tank) of petroleum products. The potential presence of contamination from the historic use of the former oil refinery for the storage and manufacture of kerosene, naphtha, finished lubricants, and crude oil; the transportation of these products: the associated disposal excavations and burn pit which have the potential to be located near the structures identified herein; and the constituent detections in both soil and groundwater above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) in the vicinity of former oil refinery structures are considered a recognized environmental conditions.

# **ENVIRONMENTAL SITE ASSESSMENT | REPORT**

In addition, an article from August 1901 presented within the 2005 AMEC report states that a "coat of oil" was present on the Genesee River from the "works and extending out, across, and down to the Court St. dam." Other information related to the "coat of oil" was not available The potential for off Site impacts may represent a future business risk with respect to the Genesee River and river sediments off Site.

#### 1. INTRODUCTION

#### 1.1. PURPOSE

In accordance with our June 23, 2011 proposal, our June 14, 2012 Change Order #1, and our October 4, 2012 proposal, O'Brien & Gere was retained by the City to conduct a Phase I Environmental Site Assessment (ESA) for the eight parcels located at 1, 13, 31, 69, and 75 Cottage Street; 100 Riverview Place; 102 Violetta Street; and portions of 1315 S. Plymouth Avenue, Rochester, New York. The subject property is owned by the City of Rochester and comprises approximately 15.5 acres. The Site was historically operated as a part of a refinery operation from approximately 1866 to 1930. Kerosene, naphtha, finished lubricants, and containers for these products (*e.g.*, wooden barrels, tin cans, and drums) were stored and manufactured on Site. Operations and facilities that formerly occupied the Site include former canal beds, rail yard including tank car use and cleaning, barrel manufacturing plant, numerous storage areas, and underground facilities that previously serviced Site operations (*e.g.*, utilities, sewers, and piping). While most of the abovegrade structures have been demolished and removed, some remnants of former structures remain, as detailed within this report. It is unknown as to what subsurface structures remain. The latitude and longitude of the subject property are approximately 43°8'6.291" North and 77°37' 19.7868" West, respectively. A Site Location Map is presented as Figure 1, which includes the parcel numbers and the former Vacuum Oil Refinery Site Area.

The Phase I ESA was performed to evaluate the existence of recognized environmental conditions associated with the subject property as a result of past or present Site activities. As such, the Phase I ESA has been conducted at the subject property in conformance with the American Society for Testing and Materials (ASTM) "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, designation E-1527-05" (ASTM E-1527-05).

In defining a standard of good commercial and customary practice for conducting an ESA of a property, the goal of ASTM E-1527-05 is to identify recognized environmental conditions. The term "recognized environmental conditions" means the presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or a material threat of a release of hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions of compliance with applicable laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to the public health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

#### 1.2. SCOPE OF SERVICES

O'Brien & Gere's activities for the Phase I ESA for the subject property included: a Site reconnaissance of the subject property and surrounding areas and a review of historic documents to identify current and historical environmental status. A knowledgeable Site owner or Site operator, and surrounding neighbors were not available to interview.

In addition, O'Brien & Gere reviewed regulatory agency documents and contacted regulatory personnel for an indication of recognized environmental conditions as defined in ASTM Standard Practice E1527-05; and evaluated other information obtained from governmental agencies and sources during the assessment process.

### 1.3. REPORT FORMAT

This Phase I ESA has been subdivided into the following sections:

- Section 1 identifies the purpose of the Phase I ESA and outlines the scope of services provided.
- Section 2 provides the Site description and reconnaissance information for the subject property for the Phase I ESA. The following types of information are included in this section:
  - » The location and description of the subject property
  - » The current and past uses of the subject property

# **ENVIRONMENTAL SITE ASSESSMENT | REPORT**

- » The current and past uses of the surrounding properties
- » Site topography and surficial drainage
- » Site improvements
- » A geologic and hydrogeologic description
- » The results of the Site reconnaissance
- » A records review for the subject property.

The records review included:

- » State and federal environmental record sources
- » Additional environmental sources on the state and local levels
- » Physical setting sources
- » Historical use information.
- Section 3 provides the findings and conclusions for the Phase I ESA.

#### 2. SITE DESCRIPTION AND RECONNAISSANCE INFORMATION

#### 2.1. LOCATION AND DESCRIPTION

Information concerning the Site description for the Phase I ESA was obtained from file reviews, and two Site reconnaissance visits performed on July 18, 2011 and August 8, 2012, by Anthony DiNardo and Amanda Young of O'Brien & Gere. Mr. DiNardo prepared the Phase I ESA report and meets the definition of an Environmental Professional, as defined in ASTM E 1527-05. Mr. Kevin Ignaszak and Ms. Tina Bickerstaff performed a quality review of the Phase I ESA report prepared by Mr. DiNardo. Mr. DiNardo's, Ms. Young's, Mr. Ignaszak's, and Ms. Bickerstaff's resumes are included in **Attachment 1**. The Site reconnaissance included a walkover of the grounds including wooded, grass-covered, and paved trail areas.

Photographs taken during the Site reconnaissance are presented in **Attachment 2**.

The subject property is located at 1, 13, 31, 69, and 75 Cottage Street; 100 Riverview Place; 102 Violetta Street; and portions of 1315 S. Plymouth Avenue, Rochester, New York. According to City tax parcel maps, the Site encompasses approximately 15.5 acres.

The subject property is bordered by the Genesee River to the east/southeast/south, residential property to the west, vacant land (formerly a junkyard addressed as 15 Flint Street) to the northwest, and commercial land to the north across Flint Street. Vacant land addressed as 5 Flint Street and containing a single, three-story building is also located near the north end of the Site. Although 5 Flint Street is located on the northern side of the Site, the Site also wraps around 5 Flint Street in a "U" shape (see Figure 2).

### 2.2. PRESENT AND PAST USES OF THE FACILITY AND THE SURROUNDING PROPERTIES

### 2.2.1. Information Sources

Information concerning the present and past uses of the facility and the surrounding properties was obtained from a review of historical topographic maps, city directories, aerial photographs, state and federal databases, and information provided by the University of Rochester, City, and NYSDEC.

### 2.2.2. Interviews with the Site Owner and Facility Personnel

A knowledgeable Site owner or Site operator was not available; however, the City (specific agencies noted below) did provide a significant amount of information pertaining to the Site and surrounding area and is described within this report. Surrounding neighbors were not available for interview at the time of the two Site visits.

### 2.2.3. Review of Historical Aerial Photographs

Aerial photographs for the years 1958, 1966, 1971, 1980, 1985, 1991, 1994, 2006, and 2008 were obtained from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. Aerial photographs for the years 1926, 1958, 1961, 1967, 1968, 1970, 1972, 1973, and 1974 were obtained from the City Division of Environmental Quality (DEQ). Aerial photographs for the years 2005 and 2009 were reviewed on the New York State Geographic Information System (NYSGIS) Clearinghouse website. Copies of these historical aerial photographs (with the exception of 2005 and 2009) are provided in **Attachment 3**. Descriptions of the historical aerial photographs are provided below:

The Site is depicted as being partially developed. The eastern portion of the Site is depicted as being mostly vacant land with a few sparse trees located on the southern portion of the Site parcel identified as 102 Violetta Street. A railroad line is depicted on the Site parcel identified as 1315 S. Plymouth Avenue. Several railcars are also depicted on the railroad line on the southern side of the Site. A railroad is depicted as running the entire length of the eastern Site parcel identified as 102 Violetta Street. Several structures are depicted on the Site parcel identified as 13 Cottage Street, near the center of the Site. Two disturbed areas, potentially from historic railroad spurs, are depicted adjacent to the southern side of the structure depicted on the Site parcel identified as 13 Cottage Street. A structure is depicted on the western portion of the Site on the Site parcel identified as 1 Cottage Street. Several other structures, including buildings, railroad lines, a boat loading dock, and a barrel run (an overhead

trestle structure that allowed barrels to be rolled from one end to the other and allowed for overhead piping to connect buildings), are depicted on the northern/northwestern adjoining parcels. The barrel run also crosses the northwestern side of the Site and connects to a building depicted on the adjoining 5 Flint Street parcel. The Site appears to be bounded by the Genesee River on the southern and eastern sides. At least 20 aboveground storage tanks (ASTs) are depicted on the northwestern adjoining 15 Flint Street parcel. Residential property is depicted to the west and southwest of the Site. Two disturbed areas, potentially associated with landfilling activities, are depicted on a portion of the southern end of the Site parcel identified as 1315 S. Plymouth Avenue (footprint of approximately 5,000 square feet on the parcel) and a footprint of approximately 10,000 square feet in on the Site parcels identified as 69 and 75 Cottage Street. Approximately 20 objects are visible on the southern end of the Site parcel identified as 1315 S. Plymouth Avenue that appear to be railroad cars. Several potential sludge pits are depicted on the 1926 aerial photograph within the southern adjoining property located south of 13 Cottage Street. A structure, potentially a greenhouse, was depicted on the Site parcel identified as 1 Cottage Street.

- 1958 The resolution of the 1958 aerial photograph is poor; however, there appears to be a railroad bed running through the entire length of the Site parcel identified as 102 Violetta Street, then exiting the south end of the Site via a railroad bridge over the Genesee River. A building is depicted on the northern adjoining 5 Flint Street parcel. A structure is depicted on the northwestern adjoining 15 Flint Street parcel, which according to Sanborn® Maps described in Section 2.2.7, is a metal scrap yard during this timeframe. The railroad and building appear to be consistent with the location of the railroad and building in more recent aerial photographs. The surrounding properties (within a 0.5 mile radius). immediately to the north and west, consist primarily of what appear to be wooded land leading into residential properties. The Genesee River borders the Site's eastern and southern boundaries. The remainder of the Site appears to consist of wooded and grass-covered land. An apparent railroad is depicted as running along the entire length of the Site parcel identified as 1315 S. Plymouth Avenue. Other structures are not depicted on the Site. The two disturbed areas depicted on the 1926 aerial photograph are not depicted on this aerial photograph. Note, the former oil refinery was closed in approximately 1930. Historical documentation described in Section 2.2.7 indicates that many of the former oil refinery structures were demolished in place; however, evidence of this demolition was not observed on the aerial photographs reviewed herein. The storage tanks depicted in the 1926 aerial photograph are not depicted in this aerial photograph.
- The resolution of the 1961 aerial photograph is poor; however, similar to the 1958 aerial, there appears to be a railroad bed running through the Site then exiting the south end of the Site via a railroad bridge over the Genesee River. The 1961 aerial photograph is generally consistent with the 1958 aerial photograph.
- The Site and surrounding properties visible in the 1966 aerial photograph can be described as mostly consistent with the 1958 and 1961 aerial photographs, with the exception of a slight increase in vegetation of the wooded land to the west of the Site. Photograph quality is poor; however, there appears to be debris present on the northwestern adjoining 15 Flint Street parcel (*i.e.*, junkyard).
- The 1967 aerial photograph can be described as mostly consistent with the 1966 aerial photograph. The photograph quality is poor; however, the debris present on the northwestern adjoining 15 Flint Street parcel in the 1966 aerial photograph appears to be automobiles scattered across much of the parcel (*i.e.*, junkyard).
- The 1968 aerial photograph can be described as mostly consistent with the 1967 aerial photograph. The photograph quality is poor and grainy.
- The 1970 aerial photograph depicts the buildings as well as the railroad bed consistent with the previous aerial photographs. There appears to be less vegetation on the Site as well as the surrounding properties. The automobiles are depicted on the northwestern 15 Flint Street parcel (*i.e.*, junkyard).

- The Site and surrounding properties in the 1971 aerial photograph are consistent with the 1970 aerial photograph with the exception of less wooded land on the Site. The eastern side of the Site is depicted as grass-covered along the Genesee River. The northern adjacent building and two railroads appear consistent with the 1966 aerial photograph. Scattered automobiles are depicted on the northwestern adjoining 15 Flint Street parcel (*i.e.*, junkyard). There appears to be an increase in residential development to the southwest of the Site.
- The 1972 aerial photograph is generally consistent with the 1971 aerial photograph; however, there appears to be more vegetation covering the Site and surrounding properties. The buildings and railroad bed are still depicted in the 1972 aerial photograph.
- The 1973 aerial photograph is generally consistent with the 1972 aerial photograph; however, there appears to be less vegetation covering the Site and surrounding properties, potentially due to the time of year. The building and railroad bed are still depicted in the 1973 aerial photograph.
- 1974 The 1974 aerial photograph is generally consistent with the 1973 aerial photograph. The buildings and railroad bed are still depicted in the 1972 aerial photograph.
- The resolution of the 1980 aerial photograph is poor; however, the subject property can be described as consistent with the 1974 aerial photograph. There appears to be more wooded land on the Site.
- The resolution of the 1985 aerial photograph is poor; however, the subject property can be described as generally consistent with the 1980 aerial photograph.
- The 1991 aerial photograph depicts the buildings and railroad bed which have been consistently depicted in previous aerial photographs. There appears to be less vegetation on the Site as well as the surrounding properties. Scattered automobiles are still depicted on the northwestern adjoining 15 Flint Street parcel (*i.e.*, junkyard).
- The 1994 aerial photograph appears consistent with the 1991 aerial photograph; however, there appears to be an increase in residential property to the southwest of the Site. A paved trail is depicted on at least the eastern portion of the Site; however, wooded land blocks the trail view to evaluate where else it may be present on Site.
- 2005 The 2005 aerial photograph is generally consistent with the 1994 aerial photograph. Additional areas of the paved trail are depicted than what was depicted in the 1994 aerial photograph.
- The 2006 aerial photograph is generally consistent with the 2005 aerial photograph, with the exception of increased wooded land throughout the Site and western adjoining properties. The northwestern adjoining 15 Flint Street parcel still depicts debris; however, there appears to be much less area covered with debris and more overgrown vegetation than previous aerial photographs.
- The 2008 aerial photograph is generally consistent with the 2006 aerial photograph. The northwestern adjoining 15 Flint Street parcel depicts some debris and overgrown vegetation; however, the property is much less tree-covered than the 2006 aerial photograph. Note, the junkyard associated with the northwestern adjoining 15 Flint Street parcel closed in 2007. The remainder of the Site appears to be overgrown with wooded land.
- 2009 The 2009 aerial photograph can be described as generally consistent with the 2008 aerial photograph. The northwestern adjoining 15 Flint Street parcel is generally clear of vegetation, and some scattered debris from former junkyard operations is still depicted.

Based on O'Brien & Gere's review of the above mentioned aerial photographs; historical use of portions of the Site, northwestern adjoining property, northern adjoining property, and adjacent properties to southwest and north across Flint Street as part of Former Vacuum Oil Refinery operations was depicted. The aerial photographs depicted former refinery structures, rail sidings, rail spurs, railroads, tank cars, disturbed areas, and potential sludge pits, which were part of various former oil refinery operations.

### 2.2.4. Historical U.S.G.S. Topographic Maps

Copies of historical topographic maps were also obtained from EDR and are included in **Attachment 4**. The maps are from 1898, 1912, 1920, 1935, 1952, 1952 Rochester Vicinity (referred to herein as "1952a"), 1969, 1971, and 1978. The subject property is generally located on the western/southwestern border of several of these topographic maps so EDR also provided maps from 1935, 1952, 1969, 1971, 1978, and 1994 for the adjacent topographic quadrangles. These maps are discussed below:

- A railroad is depicted as running in a southwest-northeast direction across the length of the Site and is labeled "Rochester Div." An additional label is depicted; however, the text is not readable due to being cut off at the bottom of the map. No structures are depicted on the subject property. One structure is depicted to the northwest of the Site, and two structures are depicted north of the Site across Flint Street. An intersecting railroad line is also depicted near the northern portion of the Site. This intersecting line runs southwest along the western boundary of the subject property.
- This map appears similar to the 1898 map with the exception of an increased number of structures to the north of the subject property across Flint Street.
- 1920 This map appears similar to the 1912 map.
- This map appears similar to the 1920 map with the exception that no structures are depicted to the north of the Site across Flint Street. One structure is depicted on or near the northwestern side of the subject property; however, it is unknown if it is on the subject property or not. A small railyard is depicted along the northwestern property line. The railroad is labeled as "Erie."
- 1952 This map appears similar to the 1935 map.
- 1952a This map appears similar to the 1935 and 1952 map.
- This map appears similar to the 1952 map. The railroad is labeled as "*Erie Lackawanna*". The southern portion of the subject property is cut off from the map. The railroad running along the northwestern property line is labeled as "*P.C.*" and is most likely the "*Penn Central*" railroad.
- This map appears similar the 1969 map. No structures are depicted on the subject property or on/near the northwestern property line. One structure is depicted on the northern adjacent property across Flint Street. The southern portion of the subject property is cut off from the map. The railroad running along the northwestern property is labeled as "Penn Central." A "WT" (potentially related to the depicted railroad) is depicted on what appears to be the northwest adjoining 15 Flint Street parcel. The U.S.G.S. symbol refers to a "tank;" however, no other information is provided on the map.
- This map appears similar to the 1971 map. Both railroads are depicted; however, there are no labels or names depicted on the map.

### 2.2.5. City Directory Abstract

A City Directory Abstract was obtained from EDR, and is included in **Attachment 5**. The Site, consisting of eight parcels addressed as 1 Cottage Street, 13 Cottage Street, 31 Cottage Street, 69 Cottage Street, 75 Cottage Street, 100 Riverview Place, 102 Violetta Street, and 1315 S. Plymouth Avenue, included the following historical entities:

### 1 Cottage Street:

- » 1960 Health Foods/Dietary Specialties
- » 1965 Dietary Specialties Health Foods
- » 1970 Dietary Specialties Health Foods
- » 1975 Niblack Foods, Inc.

- 13 Cottage Street:
  - » 1955 Giles Hiarold JL Eleanor lh.
- 31 Cottage Street:
  - » No information available from EDR.
- 69 Cottage Street:
  - » No information available from EDR.
- 75 Cottage Street:
  - » No information available from EDR.
- 100 Riverview Place:
  - » No information available from EDR.
- 102 Violetta Street:
  - » No information available from EDR.
- 1315 South Plymouth Avenue:
  - » No information available from EDR.

These directories also listed several residential, commercial, and industrial entities located on adjacent properties throughout the various years listed above. Western and northwestern adjacent properties identified in the EDR report included the following:

- 1048 Exchange Street, 1050 Exchange Street, 1052 Exchange Street, 24 Riverview Place, 55 Riverview Place, 56 Riverview Place, 9 Cottage Street, 17 Cottage Street, 29 Cottage Street, 37 Cottage Street, 39 Cottage Street, 63 Cottage Street, 79 Cottage Street, and 97 Cottage Street:
  - » Residential.
- 20 Magnolia Street:
  - » 1945 Health Wheat Co Food
  - » 1950 Niblack Foods
  - » 1955 Niblack Foods Everett J. Niblack
  - » 1960 Niblack Foods
  - » 1965 Niblack Foods Health Foods
  - » 1970 Niblack Foods Health Foods
  - » 1975 Niblack Foods Health Foods
  - » 1982 Cheney Patric/Jefferson Center of Alternatives
  - » 1985 Vacant
  - » 1992 Processors/Phillips Process Co Inc Food
  - » 2000 Phillips Process Co Chem prprtns
  - » 2008 Phillips Process Co Inks Manufacturers
  - » 2009 Phillips Process Co Inks Manufacturers.

It should be noted that Flint Street was not researched by EDR. According to EDR, searches are performed for a maximum of seven addresses input into the system (or in the case of this Site, eight addresses), and nearby addresses are not necessarily included in the search.

O'Brien & Gere also reviewed historical City directories at the Monroe County Library located in Rochester, New York. The following adjacent properties were listed in the following searched years within the City directories:

#### 5 Flint Street:

» No information available from Polk's City Directory.

#### ■ 15 Flint Street:

- » 1955 Rochester Scrap Bailing Corp.
- » 1964 Vacant
- » 1969 Vacant
- » 1974-75 Flint Auto Wreckers
- » 1985 Flint Auto Wreckers
- » 1994 Flint Auto Wreckers
- » 2004 Flint Auto Wreckers
- » 2007 Flint Auto Wreckers
- » 2008 Flint Auto Wreckers
- » 2009 Flint Auto Wreckers.

#### 22 Flint Street:

- » 1955 Walz & Krenzer, Inc. and Flint Equip. Corp Machinery & Truck Rental
- » 1969 Specialized Warehouse Enterprises Corp. Whse Mdse
- » 1974-75 Specialized Warehouse Enterprises Corp. Whse Mdse
- » 1979 Niblack Foods Inc.
- » 1985 Niblack Foods Inc.
- » 1991 Niblack Foods Inc., Tadco Bakery Sup. Ret., Corn Hill Exchange Security Food Prod.
- » 1994 Niblack Foods Corp Whse & Stge
- » 2007 AMCHAR Wholesale non classified establishments
- » 2008 AMCHAR Wholesale non classified establishments
- » 2009 Not Listed.

The following nearby properties were listed in the following searched years within Polk's City Directories:

### 936 Exchange Street:

- » 1950 Rochester Gas & Electric Corp Whse, The Bacum Corp, Chamberlin Co. of America (Weather Stripping, Genesee Tile & Marble Co., Stromberg-Carlson Co. Whse., Rochester Conveyor Co. (Machine Mfrs.), Rochester Distilling Co.
- » 1955 Rochester Gas & Electric Corp Whse, The Bacum Corp, Chamberlin Co. of America (Weather Stripping, Genesee Tile & Marble Co., Cerist Waterproofing Corp., Harold Cox (Waterproofing), Marin-Mercier Co., Rochester Conveyor Co., Rochester Distilling Co., Sibley Lindsay & Curr Co.

- » 1959 General Color Printing Inc. Colored Printing, Weather Master Co. Inc. Mfg. Aluminum Storm Windows
- » 1969 Kolko Paper Co. Inc.
- » 1974-75 Kolko Paper Co. Inc.
- » 1979 Kolko Paper Co. Inc.
- » 1985 Kolko Paper Co. Inc.
- » 1991 Vacant
- » 1994 Vacant
- » 2000 Food Link
- » 2004 Food Link
- » 2007 Food Link
- » 2008 Food Link, Freshlink, LLC
- » 2009 Food Link, Freshlink, LLC.

# 950 Exchange Street:

- » 1950 Lucas Screw Products, Inc.
- » 1955 Kraus Design, Inc., Lucas Metal Products, Co., Upstate Plastic Top Co, Inc.
- » 1959 KOI Corp.
- » 1969 Ontario Machine Co. Inc.
- » 1974-75 Niblack Food Mfg. Plant, X-L Tool & Machine Co.
- » 1979 Vacant/ X-L Tool & Machine Co.
- » 1985 X-L Tool & Machine Co.
- » 1991 X-L Tool & Machine Co.
- » 1994 X-L Tool & Machine Co.
- » 2000 XLI Corporation
- » 2004 XLI Corporation
- » 2008 XLI Corporation
- » 2009 Turn Key Operations.

Based on the City directory information reviewed (and presented above), the area surrounding the Site has been a mix of commercial and light industrial properties.

## 2.2.6. Environmental Liens

On behalf of O'Brien & Gere, an environmental liens search was obtained from EDR for the Site and is included in **Attachment 6**. This document indicates that neither environmental liens nor activity and use limitations were identified for the eight parcels comprising the subject property.

#### 2.2.7 Additional Historic Records Review

In addition to the information provided by EDR, O'Brien & Gere obtained historic records pertaining to the subject property from several state and local agencies, along with information provided by the City DEQ. The following documents were reviewed:

- An historical document pertaining to the Former Vacuum Oil refinery was reviewed at the University of Rochester Library. This undated document was titled *The Vacuum Oil Company of Rochester*, prepared by Florus R. Baxter. A copy of this document is presented in **Attachment 8**. The following pertinent information was documented:
  - » The refinery initially used flat tank cars with two wooden cisterns situated on top. However, as stated under the heading "1869" the company "built and used in this service six tank cars of the customary type, each holding about eighty barrels."
  - » It is stated under the heading "1872" that surplus kerosene was shipped out via tank car "in which the crude was received after that had been cleaned with naphtha from the distillation." It is stated under the heading "1878" that a stone warehouse was constructed which connected to a trestle built over the Genesee Valley Canal. This was constructed so that railroad cars could be brought in and loaded with oil shipments.
- A request for information pertaining to the subject property was requested from the Monroe County Department of Health (MCDOH) under the Freedom of Information Law (FOIL). A response was received on September 8, 2011. Specific Site information was not included in the response; rather the response contained items pertaining to the "Former Vacuum Oil" site and was not specific regarding parcels or addresses. Information provided by MCDOH (presented in Attachment 8) included the following:
  - » MCDOH Interoffice Memorandum dated July 24, 1989. The memorandum was prepared regarding information related to the tar sludge encountered on an adjoining parcel located south of the Site. The memorandum states the material was a tar/asphalt sludge mixed with leaves and covered with peat. The memorandum states the sludge "may have been tank bottoms from the old Vacuum Oil Company operations that occupied the property."
  - » Letter from MCDOH to Rochester City School District dated August 1, 1989. The MCDOH stated that further investigation should not be performed at the Flint/Exchange site for future use as a school due to the "extensive industrial and manufacturing processes including petroleum distillation, scrap and salvage operations, electrical equipment manufacturing, warehousing of hazardous chemicals, metal finishing, and tool and die operations."
  - » Letter from MCDOH to City dated August 10, 1989. The MCDOH provided a brief statement regarding the limited information provided by H&A New York (H&A) for the "Flint-Exchange" site and made mention of the fact that the area may be developed in the future for use as a school.
  - » Letter from City to NYSDEC dated August 21, 1989. The letter was prepared regarding information related to the tar sludge encountered on an adjacent parcel located south of the Site.
  - » Letter from MCDOH to NYSDEC dated November 1, 1989. The MCDOH provided statements regarding the tar sludge encountered on an adjacent parcel located south of the Site. The MCDOH stated that further investigation should be performed in the area of the tar sludge.
  - » Letter from MCDOH to NYSDEC dated December 21, 1998. The MCDOH provided comments and recommendations to the NYSDEC Work Plan for the Former Vacuum Oil site; however, specific location information was not provided.
  - » Letter from MCDOH to NYSDEC dated March 13, 2001. The MCDOH stated that it reviewed a March 2001 report and provided comments, most notably that the NYSDEC needs to "further characterize the nature and extent of contamination," and that "the levels of contaminants detected raise serious concerns about acceptable future uses of the site."
  - » MCDOH Waste Site Map. The map is undated and provides locations of "confirmed waste sites," "inactive hazardous waste sites," and "suspected fill sites" in the vicinity of the Site. Portions of adjoining parcels to the north, northwest, west, and southwest are identified as confirmed waste sites. It does not appear that the Site is identified by MCDOH as a waste or fill site.

Based on O'Brien & Gere's review of the MCDOH documentation, the indication of tar sludge on an adjacent parcel to the south of the Site, the identification of the site as a confirmed waste site, documentation of the cleaning of tank cars with naphtha, and the need for further characterization and delineation of contamination, represent recognized environmental conditions.

- EDR provided a property tax map report that stated map coverage was not available for the subject property in its database. Sanborn® maps were provided by EDR for the years 1892, 1912, 1938, 1950, and 1971. The City DEQ provided Sanborn® maps for the years 1892, 1911/1912, 1950, 1960, and 1971. The Sanborn® maps were reviewed and the following observations were made:
  - » 1892 The Western New York & Pennsylvania Railroad is depicted along the western side of the Site. Residential properties and structures are depicted to the west and southwest of the southern portion of the Site, and also to the northwest of the Site. The "N.Y.L.E. & W.R.R" is depicted on the eastern side of the Site. Adjacent parcels (most recently addressed as 5 Flint Street and 15 Flint Street) are depicted as containing eight "oil" storage tanks, a building labeled as "covered with asbestos," four fire hydrants, and an "embankment." The building labeled as "covered with asbestos" is depicted as being partially located on the Site parcel identified as 1315 S. Plymouth Avenue. The 5 Flint Street and 15 Flint Street parcels are labeled "Vacuum Oil Works." A structure labeled as "Oil Tank (empty)" is depicted on the southeastern side of 5 Flint Street and situated along the property boundary with the Site parcel identified as 1315 S. Plymouth Avenue. The Genesee River is depicted as bounding the eastern side of the Site.
  - 1912 The Sanborn® map is generally consistent with the 1892 Sanborn® map. The Pennsylvania and Erie Railroads are depicted. A "Barrel Preparation Bldg" is depicted on the 5 Flint Street parcel along with a "Cooper Shop," "Paint Shop," "Drum Store Ho.," "Barrel Drying," "Drum Wash Ho.," And several unidentifiable structures. There are three fire hydrants depicted on the 5 Flint Street parcel. An "Iron Clad Barrel Run on Trestle 20' to 30' High" is depicted as running from the 5 Flint Street parcel, across the northwest side of the Site, through the adjacent 15 Flint Street parcel and northward across Flint Street to the adjacent parcel. The northwestern adjoining parcel identified as 15 Flint Street is depicted as containing a wide variety of structures, and is labeled "Vacuum Oil Company Oil Refining Plant." The previously mentioned barrel run is depicted as running through the 15 Flint Street parcel. A "Grease Mfg Bldg," "Tank Bldg," "C.B.," "Settling Tanks," approximately 16 cylindrical and 14 horizontal "Oil Tanks," a "Wagon Shed," an "Engine Room," a "Still Ho.," a "Gasoline Ho.," "Condensing Tanks," and several additional unidentifiable structures are depicted on the adjacent 15 Flint Street parcel. A "Stave Shed," "Heading & Iron Storage" building, a fire hydrant, a "Shipping..." building and the Pennsylvania and Erie Railroads are depicted on the Site. Two structures labeled as "Pump Ho." are depicted on the Site parcel identified as 1315 S. Plymouth Avenue, one situated near the northern side of the parcel near the northeastern corner of 15 Flint Street, and one situated in the approximate middle of the parcel near the southern corner of 15 Flint Street. The "Paint Shop" referenced above is also depicted as being partially located on the Site parcel identified as 1315 S. Plymouth Avenue. The railroads are depicted on the eastern and western sides of the Site, respectively. The structures and hydrant are mostly located near the north-central side of the Site immediately south of the adjoining 5 Flint Street parcel. The Genesee River is depicted along the eastern boundary of the Site. Residential properties are depicted to the west of the Site.
  - » 1938 The Western New York & Pennsylvania Railroad is depicted near the extremely southern side of the Site. A "Conc. Retaining Wall" is depicted along the eastern side of the Site along the Genesee River. Residential parcels and structures are depicted to the west and southwest of the Site. A "junk yard" is depicted to the southwest of the Site; however, no other information is depicted regarding this junkyard. On the Vacuum Oil Property (not part of this report's Site) the structures present are consistent with the 1912 Sanborn®; however, the structures have different designations such as "Wood Posts and Beams, Steel Posts and Trusses, Steel Posts and Beams." There is a new structure present on the west side of the adjoining property designated as "Steel Wood Posts Vac.". There are four fire hydrants shown on the Sanborn® map in the vicinity of the 5 Flint Street parcel. Piping (labeled as one 16 inch pipe and one 36 inch pipe) is depicted as running out into the Genesee River from the end of Flint Street near the northeastern corner of the Site (Note these two pipes are depicted on Figure 2).

- » 1950 The 1950 Sanborn® map appears consistent with the 1938 Sanborn® map. The "junk yard" depicted on the 1938 Sanborn® map has now been relabeled as a "Contractor's Storage Yard." Many fewer structures are depicted on the adjoining 5 Flint Street and 15 Flint Street parcels. Due to poor image quality, only "Scales" and "Rochester Scrap Bailing Corpn, Metal Scrap Yard" could be interpreted on the 15 Flint Street parcel.
- » 1960 The 1960 Sanborn® map is generally consistent with the 1950 Sanborn® map. The northwestern adjoining parcel identified as 15 Flint Street is noted to be labeled "Ontario Machine Co. Inc. Metal Scrap Yard." The southwestern part of the Site is shown to have a concrete retaining wall.
- » 1971 The 1971 Sanborn® map appears to be generally consistent with the 1960 Sanborn® map. The northwestern adjoining parcel identified as 15 Flint Street is noted to be an "Auto Junk Yard." The southwestern part of the Site is shown to have a concrete retaining wall consistent with the 1960 Sanborn® map. Another retaining wall is observed on the northeastern wall along the Genesee River.

Based on O'Brien & Gere's review of the Sanborn® maps; historical use of portions of the Site, northwestern adjoining property, northern adjoining property, and adjacent properties to southwest and north across Flint Street as part of Former Vacuum Oil Refinery operations was depicted. The maps depicted former structures, rail sidings, rail spurs, and railroads associated with the former refinery operations. The maps also depicted a metal scrap yard and automotive junkyard on the northwestern adjoining 15 Flint Street parcel.

Copies of these reports are presented as **Attachment 7**.

- EDR provided a building permit report that stated EDR did not have access to City building permits. A copy of this report is presented as **Attachment 7**. However, the City DEQ provided building permit information which is also presented within this Section.
- As of September 2, 2012, the City GIS website indicates that the subject property is zoned as "Low Density Residential."
- Several historical photographs were obtained from the internet website <a href="http://www.cyclo-pedia.org/wp-content/uploads/Vacuum-Oil-series-11.2010.pdf">http://www.cyclo-pedia.org/wp-content/uploads/Vacuum-Oil-series-11.2010.pdf</a>. It should be noted that the PDF reviewed consisted of 10 pages; however, only the relevant materials are described herein.
  - » An image dated 1877 depicts several structures; however, street names are not depicted, so it cannot be said for certain if the structures/tanks shown are on the Site or on adjoining parcels. The former Genesee Valley Canal is depicted on the eastern side of the Site near the Genesee River.
  - » An image dated "1880s" depicts the "Erie RR" along the eastern side of the Site adjacent to the Genesee River. The "WNY & Penn RR" is depicted as running through the Site in a north-south direction. Several structures including buildings and large diameter ASTs are depicted on both the Site and adjoining parcels.
  - » An image dated 1918 depicts "57,000 oil barrels" stacked along the Genesee River, presumably on the eastern boundary of the Site near the Erie Railroad and Pennsylvania Railroad lines near Flint Street.
- A historical depiction of the Site and surrounding area titled "Former Vacuum Oil Refinery Site circa 1920s" and "Vacuum Oil Company map of Rochester Works" was obtained from the internet website <a href="http://www.cyclo-pedia.org/wp-content/uploads/VacuumOil-footprint-1920s2.pdf">http://www.cyclo-pedia.org/wp-content/uploads/VacuumOil-footprint-1920s2.pdf</a> and provided the following observations:
  - » The Genesee River is depicted as bounding the eastern side of the Site. The "Erie Railroad" is depicted as running along the eastern side of the Site in a north-south direction. The "Pennsylvania Railroad (WNY & P) (former Genesee Valley Canal)" is depicted on the western side of the Site running in a north-south direction.
  - » While parcel boundaries are not depicted, several areas are potentially located on the Site including "stave storage," "cooperage," and "Barrel manufacturing and run (chute)." Several "Vacuum Oil Co's hydrants" are depicted along the eastern side of the Site. Other structures are depicted; however, the labeling cannot be read due to poor image quality.

- » Several storage and settling tanks are depicted on the western/northwestern adjoining parcels along with a building identified as "grease mfg." A barrel run is depicted near the Site running across Flint Street to northern parcels.
- » Several large diameter storage tanks, several buildings, a portion of the barrel run, and a rail spur from the "Erie Railroad" are depicted on the northern adjacent parcel across Flint Street. This parcel also depicts a "filter house", "kiln", "box factory", "can manufacturing", "office", "loading", "J.C. Lighthouse Tannery in 1880's", and "filling".
- A request for information pertaining to the subject property was requested from the City under the FOIL. A listing of documents reviewed at City Hall and copies of these documents are presented in Attachment 8. A review of the City documents provided the following information:
  - » The City DEQ provided a copy of fire department records for the Site parcel addressed as 102 Violetta Street which included the following information; however, it should be noted that these appear to reference residential parcels, which have not been present at the Site:
    - > April 27, 1981: 100 Violetta Street anonymous complaint regarding vacant house not boarded up; broken windows; drugs/alcohol activity; arson.
    - > December 31, 1985: 100 and 102 Violetta Street complaints of open windows; vagrants; rat infestation.
    - > January 9, 1986: 100 and 102 Violetta Street two vacant houses infested with rats; two garage doors wide open.
  - » The City DEQ provided a copy of a historic pipeline drawing associated with the Former Vacuum Oil refinery dated 1888. This pipeline is depicted as being located on the northern adjacent property across Flint Street and running in a northern direction. The size, use(s), and end point(s) of this pipeline are not referenced.
  - » The City DEQ provided a copy of a document dated October 13, 1989. This document stated that the local geology near Flint Street and Exchange Street is "very permeable". The document stated that if low density solvents were "floating on the groundwater table" they may have migrated toward the Genesee River. The document also indicated that unknown areas of less permeable material may have retained wastes that could have potentially have been disposed in the area.
  - » The City DEQ provided a copy of three pages of a report titled *Expanded Phase I Investigation Genesee River Gorge (Lower Falls)* prepared by Recra Environmental, Inc. dated January 1988 (as described in Section 2.2.7). The document stated that the former Vacuum Oil Refinery used naphtha. The document stated that naphtha was stored "at the facility," "supposedly entered the Genesee Valley Canal via a sewer line," and was released into the Genesee River. The document indicated that "waste oil from tank cars were disposed of in various excavations or discharged directly into the river." The document stated "a pit was made at the works to burn refuse from the production of gas and naphtha;" however, the specific location of the pit was not referenced. The document indicated a pipe (conveying naphtha or oil) which crossed the canal and railroad was broken by a passing boat, and this pipe was documented as leading to the river and "Municipal Gas Works." The document stated that a tank vent allowed oil to "run into the canal," "twelve thousand gallons of naphtha are unaccounted for," and surplus boiler water also runs into the river." There is reference to a fire on the river that was from naphtha and a statement that states the Vacuum Oil Company was responsible for several deaths from the presence of naphtha within the public sewer system.
  - » The City DEQ provided copies of historic Platt maps for the vicinity of the Site for the years 1875, 1888, 1900, 1910, 1926, and 1935. These are summarized as follows:
    - > 1875 The 1875 Platt map depicts Cottage Street, Magnolia Street, and Mansion Street (now Exchange Street) as residential tracts. The Genesee Valley Canal runs through the property parallel to the Genesee River. Flint Street is depicted along the northern property line with residential and other unidentifiable structures north across Flint Street.

- > 1888 The 1888 Platt map is generally consistent with the 1875 Platt map with the exception of two Mansion Street tracts labeled as "Vacuum Oil Co." The Site and parcels north of Flint Street are also labeled "Vacuum Oil Co." The Genesee Valley Canal is no longer depicted. The "W.N.Y. & P.R.R. and N.Y.L.E. & W.R.R." railroads are depicted as running along the northwestern and southeastern sides of the Site. The extreme southwestern portion of the Site depicts the railroad as "B.N.Y. & P.R.R." Several unidentifiable structures are depicted generally within the footprint of the northern adjoining 5 Flint Street parcel and northwestern adjoining 15 Flint Street parcel.
- > 1900 The 1900 Platt map is generally consistent with the 1888 Platt map with the exception of an increase in the number of buildings, specifically several unlabeled buildings depicted on 5 Flint Street that were not depicted on the 1888 Platt map. The 1900 Platt map also depicts Cottage Street, Magnolia Street and Exchange Street (formerly Mansion Street) as residential tracts with the exception of the eastern portion of the Exchange Street tract belonging to Vacuum Oil. The "Western New York & Pennsylvania Railroad" and "N.Y.L.E. & W.R.R." Railroads are present. "Jas. L. Hotchkiss" is listed as the owner of the parcel directly east of the "N.Y.L.E. & W.R.R." bordering the Genesee River.
- > 1910 The 1910 Platt map is generally consistent with the 1900 Platt map, the 1910 Platt map depicts Cottage Street, Magnolia Street and Exchange Street (formerly Mansion Street) as residential tracts with the exception of the eastern portion of the Exchange Street tract belonging to Vacuum Oil. The Western New York & Pennsylvania Railroad and Erie railroads are present. "Jas. L. Hotchkiss" is listed as the owner of the parcel directly east of the Erie railroad bordering the Genesee River.
- 1926 The 1926 Platt map is generally consistent with the 1910 Platt map. The Site is labeled as "Vacuum Oil Company" and several buildings are depicted including a "Stave Storage Bldg," "Shop," "Barrell Prep Bldg." James Hotchkiss is listed as the owner of the parcel directly east of the Erie railroad bordering the Genesee River. Piping (labeled as one 16 inch pipe and one 36 inch pipe) is depicted as running out into the Genesee River from the end of Flint Street near the northeastern corner of the Site (Note these two pipes are depicted on Figure 2).
- > 1935 On the 1935 Platt, the Vacuum Oil Company is no longer depicted. The former Vacuum Oil parcel is now shown to be owned by Herman H. Schwartz. The remaining areas of the 1935 Platt map are consistent with the 1926 Platt map.
- » The City DEQ provided a copy of deeds for the eight Site parcels. However, due to poor image quality, information presented on the deeds was not legible enough to provide a description.
- » The City DEQ provided copies of documentation pertaining to the Building Information System (BIS) for each of the eight parcels as follows:
  - > 1 Cottage Street This approximate 0.1 acre parcel is shown as being owned by the City. The current use is listed as vacant residential land.
  - > 13 Cottage Street Permit information was not available from the City for this parcel.
  - > 31 Cottage Street Permit information was not available from the City for this parcel.
  - > 69 Cottage Street Permit information was not available from the City for this parcel.
  - > 75 Cottage Street Permit information was not available from the City for this parcel.
  - > 100 Riverview Place This approximate 2.1 acre parcel is shown as being owned by the City. The current use is listed as vacant commercial land.
  - > 102 Violetta Street This approximate 7.3 acre parcel is shown as being owned by the City. The current use is listed as vacant commercial land. Permits issued between 1908 and 1966 cover a wide range of activities including construction of brick warehouse (1908), kitchen addition (1909), concrete block machine shop addition (1911), concrete block storage shop (1913), dairy boiler engine house (1914), concrete block kitchen wall (1916), galvanized iron storage (1918), iron frame cable storage (1920), three car garage (1920), frame building (1920), sheds and other block buildings (1924), "DEMO" (1931 through 1937), remodeling (1942), stoker installation (1944), "DEMO" (1944 through

1945), steel storage building and warehouse (1946 and 1947), masonry addition to dairy building and cement block addition to storage building (1948 and 1953, respectively), cement block storage building (1957), change residential use to light manufacturing (1957), brick boiler room addition (1957), installation of one 3,000 gallon gasoline tank along with one pump (1959), "DEMO" (1959 through 1961), cement block addition to garage (1961), installation of vault (1961), installation of one 3,000 gallon, one 2,000 gallon, and one 1,000 gallon gasoline storage tank along with two pumps (1961), addition to dairy plant (1962), "DEMO" (1963 and 1964), building additions (1963 and 1964), replacement of one 1,000 gallon gasoline tank (1965), and building addition (1966). A permit was issued on November 5, 1975 to demolish a masonry service station, along with previous "DEMO" permits between the years 1971 through 1974. A permit was issued on November 24, 1975 for the removal of two 1,000 gallon gasoline tanks; one, 550 gallon waste oil tank; and one 550 gallon fuel oil tank. Based on the review of historic aerial photographs, Plat Maps, Sanborn® Maps, and discussions with the City DEQ, the information provided by the BIS for this parcel is most likely for another parcel and not the Site parcel identified as 102 Violetta Street.

- > 1315 S. Plymouth Avenue This parcel is listed as approximately 11.49 acres and owned by the City. The current use is listed as vacant commercial land.
- Although there are permits for the demolition of the service station and removal of storage tanks, and a review of historical documentation and discussions with the City DEQ indicate that the BIS is most likely incorrect and not attributed to the Site parcel identified as 102 Violetta Street, the potential that portions of the station and or continued presence of storage tanks still exist due to non-removal is a recognized environmental condition.
- » The City DEQ provided several drawings depicting portions of the Site with details as follows:
  - A drawing titled "Figure 7, A Plan Showing Water Services to the Vacuum Oil Works, 1906" depicts the northern portion of the Site near Flint Street, the northwestern adjoining property, and property north across Flint Street. Several buildings are depicted on the northwestern and northern adjacent properties. Property lines are not depicted; however, it appears that a "Leather Grease Bldg" is located on the northern adjoining parcel identified as 5 Flint Street. A "Barrell Bldg" is depicted as being located on the Site to the south of the 5 Flint Street parcel. No other identifiable information is depicted on the buildings. Apparent water hydrants are depicted as running along the western side of the Site from a water line along Flint Street. The northern adjacent parcels across Flint Street depict a "Brick Bldg," "Engine Boiler House," "Stock Bldg," a "Storage Bldg," several tanks of unidentifiable size/content, a "Carpenter Shop," an "Office," "Stables," several other buildings with illegible labeling, and several water lines and hydrants.
  - A drawing titled "Figure 9, Current Water Services to...Exchange Street site" depicts the northern portion of the Site near Flint Street, the northwestern adjoining property, and several parcels to the north and west of Flint Street. The northwestern corner of the Site is labeled "former Pennsylvania Railroad" and the northwestern adjoining and northern adjacent properties are labeled "former Vacuum Works." An unlabeled building is depicted on the northern adjoining 5 Flint Street parcel. A water hydrant is depicted on the northern side of the Site near Flint Street.
  - A drawing titled "Figure 3, An undated map of the Vacuum Oil Works at Exchange Street" depicts the central and northern portions of the Site, some western parcels, the northwestern adjoining parcel, and northern adjacent parcels across Flint Street. The Genesee River is depicted as bounding the eastern side of the Site. A railroad and railyard are depicted on the Site parcel identified as 1315 S. Plymouth Avenue. Several Vacuum Oil water hydrants are depicted as running along the railroad. The "Erie R. R." and several Vacuum Oil water hydrants are depicted as running along the eastern side of the Site. Several Vacuum Oil water hydrants and buildings are depicted near the center of the Site; however, the building labels could not be identified. The northern adjoining parcel depicts many buildings, several circular objects that appear to be storage tanks, and what appears to be a barrel run (as identified in several other photographs described within this Phase I ESA report) runs from the northern adjoining parcel to the northwest across the northwestern corner of the Site, and runs to the northern adjacent

parcels across Flint Street to the northern portion of the former Vacuum Oil Refinery property. The northwestern adjoining parcels depict many circular objects that appear to be large diameter storage tanks, several buildings, and a portion of the barrel run previously described above. The labels could not be identified except for a "Leather Grease Dept." The northern adjacent parcels across Flint Street that are part of the former Vacuum Oil Refinery depict many large diameter circular objects that appear to be storage tanks and several buildings. Labels could not be identified in this area. The barrel run previously described is depicted on this parcel along with what appears to be a rail spur from the "Erie R.R." Two potential storage tanks are depicted near the center of the northern adjoining 5 Flint Street parcel.

- » Several drawings prepared by O'Brien & Gere in 2009 on behalf of the City were reviewed. These drawings provided a depiction of exceedances of several contaminants on Site and on the adjoining 5 Flint Street and 15 Flint Street parcels for samples collected by LaBella Associates, PC. The following summarizes the information presented on the drawings:
  - PCBs were detected in groundwater at the Site in some sample locations on various Site parcels; however, based on the analytical results, concentrations did not exceed NYSDEC 6 NYCRR Part 703/TOGS 1.1.1 criteria. One groundwater PCB exceedance was detected on the off Site northwestern adjoining 15 Flint Street parcel within the footprint of the former grease manufacturing building. PCBs were detected, in exceedance of TAGM #4046 SCOs at one sample location, in soil samples collected on the Site parcel identified as 1315 S. Plymouth Avenue, just south of the former grease manufacturing building located on the off Site northwestern adjoining 15 Flint Street parcel. Several detections and exceedances of PCBs in soil with respect to TAGM #4046 SCOs were observed at locations on the off Site northwestern adjoining 15 Flint Street parcel. PCBs were not detected in soil samples collected on the off Site northern adjoining 5 Flint Street parcel.
  - Dissolved metals were detected in groundwater at the Site and two locations were in exceedance of 6 NYCRR Part 703/TOGS 1.1.1 criteria (one location on the Site parcel identified as 13 Cottage Street and one location on the Site parcel identified as 1315 S. Plymouth Avenue). Several dissolved metals exceedances in groundwater also occurred on the adjoining, off Site 5 Flint Street and 15 Flint Street parcels. Several metals exceedances of TAGM #4046 SCOs also occurred in soil samples on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, 100 Riverview Place, 102 Violetta Street, 1315 S. Plymouth Avenue, and the adjoining, off Site 5 Flint Street and 15 Flint Street parcels for shallow (0-1ft. bgs) soil samples. To a lesser degree, metals exceedances of TAGM #4046 SCOs occurred in soil samples on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, 100 Riverview Place, 102 Violetta Street, 1315 S. Plymouth Avenue, and the adjoining, off Site 5 Flint Street and 15 Flint Street parcels for (>1ft below grade) soil samples.
  - > SVOCs were detected in groundwater at the Site with one of the locations in exceedance of 6 NYCRR Part 703/TOGS 1.1.1 criteria (on the Site parcel identified as 13 Cottage Street). Several SVOC exceedances in groundwater also occurred on the adjoining, off Site 5 Flint Street and 15 Flint Street parcels. SVOC exceedances were more widespread across the Site and adjoining, off Site parcels in soil sample locations with several exceedances on each Site parcel except 69 and 75 Cottage Street, which are situated on the western side of the Site.
  - > VOCs were detected in groundwater at the Site and some locations were in exceedance of 6 NYCRR Part 703/TOGS 1.1.1 criteria, including one location on the western Site parcel identified as 1 Cottage Street, one location on the Site parcel identified as 13 Cottage Street, and one location on the Site parcel identified as 102 Violetta Street. Several VOC detections and exceedances in groundwater also occurred on the adjoining, off Site 5 Flint Street and 15 Flint Street parcels. A similar distribution of VOC exceedances (TAGM #4046 SCOs) was present within soil samples collected on Site (two locations on the 13 Cottage Street parcel and one location of the 102 Violetta Street parcel) and on the adjoining, off Site parcels.
  - > The detection of contaminants (one or more of the following: VOCs, SVOCs, metals, and/or PCBs) in both soil and groundwater on several Site parcels, the northern adjoining 5 Flint Street parcel, and the

northwestern adjoining 15 Flint Street parcel in exceedance of TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) is a recognized environmental condition.

- A request for information pertaining to the subject property was requested from the NYSDEC under the FOIL. The following information was reviewed by O'Brien & Gere personnel at the Avon, New York NYSDEC Region 8 office:
  - » Site Investigation Report Former Vacuum Oil Company Site #828089P, Rochester, Monroe County, prepared by Frank Sowers, P.E., NYSDEC, dated March 2001.
    - > This report states that the site for this investigation consisted of a 24 acre portion of the former Vacuum Oil Company facility. The Vacuum Oil Company operated an oil refinery at this location from approximately 1866 to 1935.
    - > The processing operations at the site involved distilling crude petroleum under pressure to produce a variety of petroleum products. Reports from 1887 stated the facility refined over 4 million gallons of crude oil per year. Many of the refinery structures were demolished in place, though remnants of the structures were observed during the 1999-2000 Site investigation. These demolished in place structures were not observed on the aerial photographs reviewed in Section 2.2.3.
    - > In September 1992, the NYSDEC removed approximately 400-500 tons of petroleum sludge located on the southeastern portion of the Vacuum Oil facility. The sludge was tested and found to be non-hazardous. Note, per Mark Gregor of the City DEQ who observed its removal, the sludge pit was located at the southeastern corner of the southern adjacent property near the southwestern corner of the Site parcel identified as 102 Violetta Street. Analytical results indicated the presence of petroleum hydrocarbon and metals in the sludge. The report does not indicate whether "clean" boundaries around the excavation were reached. The report does not state whether appropriate closure was obtained for this area.
    - > The NYSDEC's 1999-2000 investigation also found one or more of petroleum-related contamination (SVOCs; benzene, toluene, ethylbenzene, and xylenes (BTEX); and/or metals) in the surface soil (two surface soil locations on the adjacent off Site 5 Flint Street parcel, one location on an adjoining parcel west of the Site parcel identified as 1315 S. Plymouth Avenue, one location on the property boundary between the adjoining off Site 5 Flint Street parcel and 1315 S. Plymouth Avenue, and one location on the southern property boundary of the Site parcel identified as 13 Cottage Street), subsurface soil (two locations near the center of the Site parcel identified as 1315 S. Plymouth Avenue, five locations on the adjoining off Site 5 Flint Street parcel, one location near the southeastern side of the Site parcel identified as 102 Violetta Street), and groundwater (two locations on the adjoining off Site 5 Flint Street parcel and one location near the middle of the Site parcel identified as 1315 S. Plymouth Avenue) above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater). The NYSDEC did not include the site in the New York State Listing of Inactive Hazardous Waste Disposal Sites at the time of the investigation.
    - O'Brien & Gere evaluated the NYSDEC's report and based on the information that one or more of SVOCs, BTEX, and/or metals were present in surface soil both on Site (one location on the southern property boundary of the Site parcel identified as 13 Cottage Street and one location on the property boundary between the adjoining off Site 5 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue) and off Site (one location on an adjoining parcel west of the Site parcel identified as 1315 S. Plymouth Avenue and two locations on the adjoining off Site 5 Flint Street parcel), subsurface soil both on Site (two locations near the middle of the Site parcel identified as 1315 S. Plymouth Avenue, one location near the southeastern side of the Site parcel identified as 13 Cottage Street, and one location near the north-central area of the Site parcel identified as 102 Violetta Street) and off Site (five locations on the adjoining off Site 5 Flint Street parcel), and groundwater both on Site (one location near the middle of the Site parcel identified as 1315 S. Plymouth Avenue) and off Site (two locations on the adjoining off Site 5 Flint Street parcel) above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), with the adjoining 5 Flint Street parcel being located

hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being located both topographically and hydraulically upgradient of the Site, these constituent detections represent a recognized environmental condition.

- » Historic and Current Site Conditions Report, Former Vacuum Oil Refinery Site, prepared by AMEC Earth & Environmental, Inc. (AMEC) dated June 13, 2005. (Note, although this report is described under NYSDEC, this report was also provided to O'Brien & Gere from the City DEQ). Note, this report was a summary of existing analytical results, and no sampling was conducted as part of AMEC's report.
  - > This report states that the Vacuum Oil Company, the predecessor of Mobil Oil Corporation, operated within the study area from approximately 1866 to approximately 1935. The report further divides the study area into five subdivisions as follows: "Former Storage/Operations Area," "Former Barrel Preparations/Storage Area," "Former Canal/Rail Line Area," "Bicycle Path Area," and "Undeveloped Area." The report was prepared for ExxonMobil in order to gain a thorough understanding of the study area.
  - > The report states that approximately 400 to 500 tons of petroleum sludge was removed from the southern portion of the study area in 1992 by the NYSDEC. A figure within the report depicts the sludge pit area along the Genesee River on the southern adjacent property to the Site. Note, as mentioned above, per Mark Gregor of the City DEQ who observed its removal, the excavated sludge pit area was actually located at the southeastern corner of the southern adjoining property near the southwestern corner of the Site parcel identified as 102 Violetta Street.
  - According to the report, the NYSDEC conducted an assessment of the Site in 1999 and 2000. The assessment indicated the presence of contamination in surface soil, subsurface soil, and groundwater consisting of petroleum products, chlorinated VOCs, metals, and pesticides.
  - > The report provides as attachments several historical reports including a *Detailed Historical Site*Assessment of the Vacuum Oil Company's Facilities and Locations dated September 1990 prepared by
    C.M. Wagner and an Oil & Hazardous Material Site Evaluation Flint-Exchange Site, Rochester, New York
    prepared by H&A of New York dated August 1989. These attached reports provide a detailed history of
    the Former Vacuum Oil Refinery and its processes in the vicinity of the Site. The August 1989 H&A
    report provided information related to a cursory investigation on a portion of the Former Vacuum Oil
    Refinery and concluded that there is the "potential for hazardous materials to be present in areas not
    explored...based on past and present site land use."
  - > The AMEC report states that a significant portion of the study area is covered with fill material. Previous investigations within the study area indicated fill consisting of bricks, slag, cinders, gravels, wood, and miscellaneous debris; and native soils consisting of sand, silts, and some clay.
  - > The report indicates that the Site was historically used as "Undeveloped Area," "Former Barrel Prep and Storage Area," "Former Canal and Rail Area." The report depicts the eastern/southern portions as currently used as a bicycle path area. The northwestern adjoining parcel known as 15 Flint Street is depicted as "Former Storage/Operations Area."
  - A historic photograph in the report dated 1879 depicts several structures, a smokestack, the Genesee River, a rail trestle, the "Erie Canal Railroad", vacuum stills, and several large diameter aboveground storage tanks; however, the photograph does not define property boundaries, and as such, it cannot be said for certain which Site parcels the depicted structures are located. However, it appears that the structures depicted are mostly located on the northern adjoining parcel across Flint Street, and the western/northwestern adjoining parcels.
  - > The report concludes that the majority of refinery operations were conducted on the northern adjoining parcels across Flint Street; however, it is noted that "south of Flint Street," grease manufacturing occurred along with the presence of storage tanks and support operations which included barrel/drum preparation and storage.
  - > The report states that an active junkyard is located on the western/northwestern adjoining parcel identified as 15 Flint Street; however, the junkyard has since been closed, and was not operational at

- the time of the Site reconnaissance. The report also indicates that potential junkyard wastes may make it difficult to assess impacts that may have originated from historic refinery operations.
- > The report stated that there was no visual evidence of landfills, waste pits, or significant amounts of debris. The report also mentions high concentrations of soil gas, with TPH in many locations throughout the Site and chlorinated VOCs in a small area of the Site parcels identified as 1315 S. Plymouth Avenue and 102 Violetta Street, and both TPH and chlorinated solvents on the off Site 5 Flint Street parcel. It is also mentioned that SVOCs and metals were detected in surface soil, subsurface soil, and groundwater.
- > A floor pit ("used in industrial processes") is mentioned as being located near the southern end of the adjoining off Site 5 Flint Street parcel.
- O'Brien & Gere evaluated AMEC's report, and the presence of high concentrations of soil gas and TPH in many locations on both on Site and off Site parcels, the presence of SVOCs and BTEX in surface soil, subsurface soil, and groundwater on both on Site and off Site parcels above TAGM #4046 SCOs (soil) and 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), with the adjoining off Site 5 Flint Street parcel being situated hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being situated both topographically and hydraulically upgradient of the Site, these constituent detections are considered a recognized environmental condition.
- » Phase I Environmental Site Assessment, 15 Flint Street, Rochester, New York, prepared by Stantec dated April 2008.
  - > This report prepared for the City summarizes the results of a Phase I ESA conducted on the northwestern adjoining off Site parcel identified as 15 Flint Street. The report indicated that the parcel was an inactive automobile salvage yard (commercial activities were halted in 2007), and three buildings (consisting of an office building, metal storage shed, and an abandoned concrete block building associated with metal salvage operations) were present at the time the 2008 Phase I ESA was generated. The following recognized environmental conditions were identified:
    - Approximately 36 cylindrical vertical oil storage tanks and 26 horizontal oil storage tanks (and to a lesser extent both vertical and horizontal tanks may have contained kerosene or naphtha, and possibly gasoline) were identified between 1875 and approximately 1918 on the northwestern adjoining off Site parcel identified as 15 Flint Street. The report states that vertical tank capacities ranged from approximately 15,000 gallons to 300,000 gallons, and horizontal tank capacities ranged from 2,000 gallons to 20,000 gallons. Several of these former tanks were located near the property boundary between the northwestern adjoining 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue. The concrete foundations and retaining walls of some of these vertical tanks are still present as detailed in Roux Associates, Inc.'s (Roux's) 2009 report described below.
    - Several former buildings (still building, condenser building, settling tanks building, grease manufacturing building, acid storage house, and railroad sidings) located on the 15 Flint Street parcel used and/or stored a variety of petroleum products in their refinery operations. While there were not historic reports of spills or releases from these buildings, the potential presence of contamination in the subsurface in the vicinity of these buildings from potential historic spills or releases may pose an environmental risk to the Site. Note, the former grease manufacturing building and railroad sidings are near the property boundary between the 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue.
    - Stormwater drainage and underground sewers are mentioned to have been present near the rail sidings in the vicinity of the northwestern corner of the Site. While there were no historic reports of spills or releases from these structures, the potential presence of contamination from the use of the rail sidings for the transportation of crude oil and associated products, and the cleaning of tank cars with naphtha, represents a recognized environmental condition.
    - An overhead trestle (also known as the "Barrel Run"), running across several parcels near the northern side of the Site parcel identified as 1315 S. Plymouth Avenue reportedly carried piping for

the transfer of crude oil from the former Erie Railroad to the refinery area. The report states that underground and/or overhead piping could have been used in refinery operations, although there is no historic information pertaining to transfer piping. While there were no historic reports of spills or releases from these structures, the potential presence of contamination from the use of the trestle to transport crude oil represents a recognized environmental condition.

- Refinery wastes are mentioned as stated below in the 5 Flint Street Phase I ESA report. Refinery disposal practices may have resulted in potential contamination on Site and off Site, and represents a recognized environmental condition.
- Potential releases due to past fires There is historical evidence of fires on Vacuum Oil property. The information provided in the report indicates that the locations of the fires are not known, however, pipeline and/or equipment damage could have occurred resulting in the release of petroleum products.
- > The report states that sampling conducted by the NYSDEC in 1999-2000 on City-owned land to the east and south (*i.e.*, the Site) indicated "widespread" petroleum contamination in surface soil, subsurface soil, and groundwater. The report also states that two groundwater monitoring wells located on this parcel detected significant petroleum contamination, and as such, represents a recognized environmental condition.
- > The report provides information on a nearby parcel, 31 Riverview Place, formerly used as a dry cleaner. The drycleaning operations are dated as approximately 1929 through 1941. The report states that this parcel may be hydraulically upgradient, and could potentially affect groundwater which may migrate to 15 Flint Street. O'Brien & Gere notes that the groundwater could then migrate onto the Site which represents a recognized environmental condition.
- Based on O'Brien & Gere's review of Stantec's report, the potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial operations including: the former grease manufacturing building and railroad sidings situated on the property boundary of the 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue; former oil storage tanks, former kerosene or naphtha storage tanks; potential former gasoline storage tanks; the former presence of an overhead trestle that potentially conveyed crude oil running across the adjoining off Site 5 Flint Street and 15 Flint Street parcels and the Site parcel identified as 1315 S. Plymouth Avenue; the former presence of an automobile junkyard which was situated along the property boundary with the Site parcel identified as 1315 S. Plymouth Avenue, the indication that petroleum-impacted soil is on Site; the potential for buried wastes associated with historic operations; soil and groundwater analytical results exceeding TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater (as detailed herein) in the area related to the former Vacuum Oil Refinery and other industrial operations; and the fact that the adjoining off Site 15 Flint Street parcel is both topographically and hydraulically upgradient, these potential sources of contamination and constituent detections are considered recognized environmental conditions.
- » *Phase I Environmental Site Assessment, 5 Flint Street, Rochester, New York*, prepared by Stantec dated August 2008.
  - > This report prepared for the City summarizes the results of a Phase I ESA conducted on the northern adjoining off Site parcel identified as 5 Flint Street. It should be noted, and as depicted on **Figure 2**, although 5 Flint Street is located on the northern side of the Site, the Site also wraps around 5 Flint Street in a "U" shape (see **Figure 2**). The report indicated that the parcel is zoned residential and contains a three-story building constructed in 1930. The report also states that the parcel land use is identified as manufacturing.
  - > The report states that the Genesee Valley Bike Trail is located along the Genesee River on City-owned land. O'Brien & Gere notes that the bike trail is located on several of the Site parcels as depicted on Figure 2.

- > The report indicates that 15 Flint Street, a former junkyard, is located to the northwest of 5 Flint Street across the former canal bed and former Pennsylvania Railroad corridor (late 1800s). 15 Flint Street is located on the northwestern adjoining parcel to the Site parcel identified as 1315 S. Plymouth Avenue.
- > The report considers the 15 Flint Street parcel as a recognized environmental condition due to the potential for groundwater impacts. This is related to historic use as an automobile wrecking and scrap salvage yard from approximately 1940 to 2007. Information reviewed indicates potential contamination sources including scrap metal, tires, past releases of automotive fuels/oils/fluids, unlabeled drums/containers, potential past releases from scrap industrial/utility equipment, potential past releases of hydraulic oil from former scrap baling operations, and former USTs.
- > The report also lists potential contamination sources on 15 Flint Street including: oil storage tank areas, refining areas, a former grease manufacturing building, a former acid storage house, stormwater drainage and underground sewers, underground/overhead transfer and process piping, and potential releases from fires. These sources have the potential to have contaminated the Site, along with historical accounts of spills and discharges of petroleum products to the former Genesee River Canal.
- > The report states that there are several potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial activities including, but not limited to: storage of petroleum products and hazardous substances, whiskey distillery operations, utility company warehousing, machine shops, "machine" companies, print shops, a photocopier manufacturer, a weatherproofing company, a surface materials company, a truck/equipment rental company, and a solvent and/or production company ("General Solvents"). There is also evidence of a nearby former dry cleaner, suggesting historical use of drycleaning solvents in the area. However, there is no evidence of spills at the former drycleaning facility.
- > The report indicates that the 5 Flint Street parcel was used to store hazardous materials from approximately 1980 to an unknown date as part of operations involving R&K Services and/or Kneppar Resource Recovery. Materials are stated to have included: ten 55 gallon drums containing a variety of chemicals and metals, spent photographic fixer solution in 55 gallon drums, approximately fifteen 5 gallon pails of waste, and possible spent solvent in 55 gallon drums.
- > The report states that the 5 Flint Street parcel (located on the northern adjoining parcel to the Site) has several recognized environmental conditions associated with it including:
  - Petroleum storage and handling An 1892 Sanborn® map and an artist drawing depict several storage tanks on the 5 Flint Street parcel and adjoining parcels along with potential drum storage. Historical information indicates that significant quantities of oil/petroleum products could have been handled on or piped across 5 Flint Street. However, there was no evidence of spills or releases from this location. The 1999-2000 NYSDEC investigation did find subsurface petroleum/hazardous substance contamination on this property, but the source of the contamination was not known and the report alludes to the fact that contamination may be from historic Vacuum Oil operations.
  - Former drum wash houses A drum store house and a barrel wash house were located on the 5 Flint Street parcel. According to documentation, these buildings were removed and replaced in 1918 by the existing three-story building. Historical use of the drum store and barrel wash houses was not available; however, Stantec's report states that petroleum residue cleaning of drums and barrels with solvents may have occurred and that there may be contamination present from oil, distilled petroleum products, solvents, and resultant wastes. There was no evidence of spills or releases from this location.
  - Former paint shop This 1,100 square ft. facility was formerly located near the northwestern side of the Site on the 5 Flint Street parcel. Historical investigations by the NYSDEC in 1999-2000 found metals and petroleum aromatic hydrocarbons (PAHs) contamination in soil at this location; however, there was no evidence of spills or releases from this location.
  - Former engine room This room was located on the 5 Flint Street near a former cooperage (barrel factory) building. There is no information related to the purpose of this room; however, historical

- use of fuel/engine oil and storage of solvents may have occurred in relation to engine maintenance activities. There was no evidence of spills or releases from this location.
- Adjacent former railroad yards and sidings Historical information indicates that crude oil, partially refined petroleum stocks, and refined products (e.g., naphtha, kerosene, lubricating oils, grease) could potentially have been loaded and unloaded from rail cars along the former railroad yards and sidings. This may have occurred along the northwest side of 5 Flint Street, which is located near the northwestern side of the Site. However, there was no evidence of spills or releases at this location, but the report states that the loading/unloading of the aforementioned products could have resulted in spills during product transfer, cleaning of tank cars, or leakage from tank cars. The report mentions that an oil/water separator was used in a storm drain in the former Genesee Valley Canal bed, suggesting that spills or releases may have occurred at that location.
- Potential disposal of refinery wastes on 5 Flint Street and adjacent properties The report states that petroleum sludge was disposed of on refinery property approximately 800 ft. south-southwest of the 5 Flint Street parcel. This suggests then that the petroleum sludge was disposed of on the Site. The report mentions that a burn pit was historically used to dispose of refinery trash before 1887; however, the exact location of the burn pit was not documented. The report also states that a historic newspaper article provided the following statement: "...waste oil from tank cars disposed of in various excavations or discharged directly into the river." The report states that refinery wastes may have included heavy petroleum residuals (e.g., tars and waxes from distillation processes), bottoms of oil storage tanks, sludges from settling and condensing tanks, coke/ash/cinders from still furnaces, lubricating oil and grease manufacturing process waste additives, general trash, and laboratory/machine shop wastes. These wastes may have been disposed of on former Vacuum Oil property, which includes the Site.
- Potential releases due to past fires There is historical evidence of fires on Vacuum Oil property. The information provided in the report indicates that the locations of the fires are not known, however, pipeline and/or equipment damage could have occurred resulting in the release of petroleum products.
- Based on O'Brien & Gere's review of Stantec's report the potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial operations (*i.e.*, former oil storage tanks situated on the adjoining off Site 5 Flint Street parcel, petroleum-contaminated soil on adjacent property, potential for on Site buried wastes associated with previous Site operations on the adjoining off Site 5 Flint Street parcel, former buildings [paint shop drum wash houses, engine room, railroad yards/sidings] on the adjoining off Site 5 Flint Street parcel), the former storage of hazardous materials on the adjoining off Site 5 Flint Street parcel, and the fact that the adjoining off Site 5 Flint Street parcel is hydraulically upgradient from the northern portion of the Site, are considered recognized environmental conditions.
- » Data Summary Package, Phase II ESA Subsurface Investigation, Former Vacuum Oil Refinery Site, 15 Flint Street, Rochester, New York, prepared by LaBella Associates, P.C., dated October 2008. Note, this report is specific to the adjoining off Site 15 Flint Street parcel.
  - > This report states that the site, located at 15 Flint Street, encompassing approximately 5.23 acres historically operated as an oil refinery by Vacuum Oil and others from approximately 1875 to 1935. From 1940 to the time of the investigation, the site operated as an automobile wrecking and salvage yard, and automotive junkyard. Those activities were temporarily suspended by the City in 2007. This report depicts several former structures on the adjoining off Site 15 Flint Street parcel including the former grease manufacturing building and railroad sidings along the property boundary between the 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue.
  - > LaBella established its areas for concern through review of the following documents:

- Historic and Current Site Conditions Report, Former Vacuum Oil Refinery Site, June 13, 2005, AMEC Earth & Environmental, Inc.
- Phase I Environmental Site Assessment, 15 Flint Street, City of Rochester, Monroe County, New York, April 2008, Stantec Consulting Services, Inc.
- Subsurface Investigation Work Plan, Former Vacuum Oil Company Refinery Area, Flint and Exchange Street Area, Rochester, New York, NYSDEC Spill No.0370583, Revised June 4, 2008, Roux Associates.
- LaBella's Phase II ESA Subsurface Investigation field activities were conducted from July 23 to 30, 2008. Analytical results indicate the presence of VOCs and SVOCs in subsurface soil and groundwater contamination across the majority of the adjoining off Site 15 Flint Street parcel above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater). Metals were detected in subsurface soil above NYSDEC cleanup criteria at one location. PCBs were also detected in subsurface soil on the 15 Flint Street parcel; however, concentrations were not above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater).
- > The report indicates a general groundwater flow direction of southeast toward the Genesee River and the Site.
- > A forensic analysis of soil collected near the northern side of the adjoining 15 Flint Street parcel was performed and found naphtha, gasoline, crude oil, fuel oil, or similar material which is indicative of refining crude oil for the production of kerosene, which is the process conducted as part of historic refinery operations.
- > Based on O'Brien & Gere's review of LaBella's report, the potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial operations including the former grease manufacturing and railroad sidings situated near the property boundary between the 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue, the forensic analysis results indicating that the "fingerprint" is indicative of the process of refining crude oil for the production of kerosene which was historically conducted as part of refinery operations, the presence of PCBs in subsurface soil; VOCs and SVOCs in subsurface soil and groundwater; and metals in subsurface soil above their TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (with the adjoining 15 Flint Street parcel being located both topographically and hydraulically upgradient) are considered recognized environmental conditions.
- » Project Oversight Management Plan Services Report Former Vacuum Oil Refinery Site Rochester, New York NYSDEC Spill No. 0370583, DEQ PSA Agreement No. 031534, prepared by O'Brien & Gere, dated October 10, 2008.
  - > This report states that the Vacuum Oil Refinery encompassed approximately 27 acres and was historically operated as a refinery from approximately 1866 to 1930. Kerosene, naphtha, finished lubricants, and containers for these products were stored and manufactured at the refinery. Operations formerly occupying the 27 acres included bulk storage tanks, former canal bed, rail yard, barrel manufacturing plant, numerous storage areas and underground facilities that previously serviced facility operations (e.g., utilities, sewers, piping).
  - O'Brien & Gere provided part time, third party, oversight to field investigation activities of Groundwater & Environmental Services Inc. (GES) (working on behalf of Roux and ExxonMobil) and oversight of LaBella on behalf of the City, involving a subsurface investigation in which 18 temporary groundwater monitoring wells were installed. Soil samples and groundwater samples were collected. Analytical results indicate the presence of subsurface soil (one or more metals, VOC, and/or SVOC exceedances at one location on the 15 Flint Street parcel, at one location within the former grease manufacturing building footprint on the 15 Flint Street parcel, at one location on the southern adjacent parcel south of 13 Cottage Street in the vicinity of the former sludge pit, at one location on the northern side of the Site parcel identified as 1315 S. Plymouth Avenue, at two locations on the Site parcel identified as 1315 S. Plymouth Avenue, near the property boundary with the 15 Flint Street parcel [one

located south of the former grease manufacturing building and one located in the vicinity of the former "Barrel Run"], at one location near the center of the Site parcel identified as 1315 S. Plymouth Avenue, at one location near the south-central side of the Site parcel identified as 1315 S. Plymouth Avenue, and at one location on the Site parcel identified as 1315 S. Plymouth Avenue near the southern corner of the adjoining 15 Flint Street parcel where historic bulk storage tanks were situated) and groundwater contamination (one or more pesticide, PCB, VOC, and/or SVOC exceedances at one location within the former grease manufacturing building footprint on the 15 Flint Street parcel, at one location near the eastern property boundary between the 5 Flint Street parcel and the Site parcel identified as 100 Riverview Place, at one location on the southern side of the Site parcel identified as 1315 S. Plymouth Avenue, and at one location on the Site parcel identified as 13 Cottage Street) above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (with the adjoining 15 Flint Street parcel being topographically and hydraulically upgradient). Through forensic analysis, the soil boring sample was found to contain medium to high boiling compounds indicative of a middle distillate such as kerosene as well as a high boiling material such as mineral oil. In addition, the kerosene material in the sample was found to have undergone advanced biological degradation consistent with the historic release. Analytical detections of metals, VOCs, and SVOCs above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) represent a recognized environmental condition.

- » Subsurface Investigation Summary Report, Former Vacuum Oil Company Refinery Area, prepared by Roux dated January 12, 2009.
  - This report states that the Vacuum Oil Company, the predecessor of Mobil Oil Corporation operated at portions of the Site from approximately 1866 to around the early 1890s. From the early 1890s until its closure in 1935, it operated as a petroleum blending facility. The report also divides the study area into five Site areas for subsurface and groundwater investigation activities: "Former Storage/Operations Area", "Former Canal and Rail Area," "Former Barrel Preparation and Storage Area," "Bicycle Path Area," and "Undeveloped Area." The facility consisted of several process and storage buildings and structures, tank farms, pipelines, and rail lines.
  - During the investigation at the "Former Storage/Operations Area," Roux observed an oil "puddle" and black stained soil surrounding the "puddle" which Roux believed to be related to the junkyard operations.
  - During the investigation, the majority of the Site contained dense vegetative cover and was overgrown primarily with trees, bushes, and grasses/weeds. According to Roux, the area of vegetative cover was primarily early to mid-stage woods characterized by a mix of deciduous species that varied based on the areas of the site such as wetland or "slighter higher moist woods." A large three-story building which was likely part of the facility operations was located on the site at the boundary of Flint Street. Lastly, a junkyard existed on a portion of the site on Flint Street (15 Flint Street). This junkyard, which contained numerous junked vehicles, piles of tires and scrap parts, was in operation at the time of the investigation. Concrete retaining walls were noted in some locations where former oil refinery ASTs were situated.
  - \*\*Results of the investigation found that based on a comparison of the soil analytical results to TAGM #4046 SCOs, VOC exceedances were observed at three locations on Site (two locations on the Site parcel identified as 13 Cottage Street and one location on the Site parcel identified as 102 Violetta Street) and eight off Site locations (six locations on the northwestern adjoining 15 Flint Street parcel and two locations on the 5 Flint Street parcel); SVOC exceedances were observed at 12 locations on Site (three locations on the Site parcel identified as 13 Cottage Street, four locations on the Site Parcel identified as 102 Violetta Street, one location on the Site parcel identified as 1 Cottage Street, three locations on the Site parcel identified as 1315 S. Plymouth Avenue, and one location on the property boundary between the 5 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue), seven locations off Site (two locations on the adjoining 5 Flint Street parcel), and other locations across the former refinery footprint; pesticide/PCB exceedances were observed at two locations on Site (two locations on the Site parcel identified as 13 Cottage Street) and two locations off Site (one location on the adjoining 5 Flint Street

parcel and one location on the adjoining 15 Flint Street parcel); and several Priority Pollutant (PP)-13 total metals (at locations across the Site and adjoining properties) were detected at concentrations at or above TAGM #4046 SCOs. Based on a comparison of the groundwater analytical results to 6 NYCRR Part 703/TOGS 1.1.1 criteria, VOC exceedances were observed at three locations on Site (one location each on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, and 102 Violetta Street) and 12 locations off Site (four locations on the adjoining 5 Flint Street parcel, six locations on the adjoining 15 Flint Street parcel, and two locations on the southern adjoining parcel south of 13 Cottage Street in the area of the former sludge pit); SVOC exceedances were observed at two locations on Site (one location on the Site parcel identified as 13 Cottage Street and one location on the property boundary between the Site parcel identified as 1315 S. Plymouth Avenue and the adjoining 5 Flint Street parcel) and six locations off Site (three locations on the adjoining 5 Flint Street parcel and three locations on the adjoining 15 Flint Street parcel); pesticide/PCB exceedances at two locations on the adjoining 15 Flint Street parcel; and metals exceedances were observed at six on Site locations (two locations on the Site parcel identified as 13 Cottage Street, one location on the Site parcel identified as 102 Violetta Street, two locations on the Site parcel identified as 1315 S. Plymouth Avenue, and one location on the property boundary between 1315 S. Plymouth Avenue and the adjoining 5 Flint Street parcel) and three off Site locations (two locations on the adjoining 5 Flint Street parcel and one location on the adjoining 15 Flint Street parcel) at concentrations at or above the applicable NYS AWOS. The soil and groundwater exceedances indicating contamination above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (with the adjoining 15 Flint Street parcel being topographically and hydraulically upgradient) represent a recognized environmental condition.

- » Remedial Investigation Work Plan, NYSDEC Site #C828162, Former Vacuum Oil Refinery, 5 & 15 Flint Street, Rochester, New York, prepared by LaBella dated January, 2012.
  - > The Remedial Investigation Work Plan (RIWP) provides a summary of previous environmental work at both 5 Flint Street and 15 Flint Street. The RIWP provides a list of objectives and goals which include the following:
    - The collection of soil gas samples along the northwestern property line of the 15 Flint Street parcel
    - Collection of confirmatory samples from previous investigation areas
    - Collection of groundwater samples
    - Soil and groundwater sampling below the buildings located on the 5 Flint Street parcel and soil sampling on the southwestern portion of the 15 Flint Street parcel
    - Delineate the vertical and horizontal extent of contamination
    - Surface and subsurface characterization
    - Identification of the source(s) of contamination, migration pathways, and potential/actual contaminant receptors
    - Qualitative exposure assessment to evaluate actual and potential threats to public health and environment
    - Produce data in sufficient quantity and quality to support evaluation of proposed remediation alternatives.
- » March 2012 Progress Report, 5 & 15 Flint Street, Rochester, New York, NYSDEC BCP Site # C828162, prepared by LaBella dated April 12, 2012.
  - The progress report indicated that five test pits were excavated (two on the northern adjoining 5 Flint Street and three test pits on the northwestern adjoining 15 Flint Street parcel). The report indicated that test pits have been excavated, Geoprobe® soil borings have been advanced, and sampling and analysis has been partially completed. The progress report does not summarize analytical results or compare results against 6 NYCRR Part 375 criteria; however, there were detections of VOCs, SVOCs, pesticides, PCBs, and metals.

### 2.3. SITE TOPOGRAPHY AND SURFACE DRAINAGE FEATURES

Commercial properties are located to the north (across Flint Street) and northwest of the subject property. Residential property is located to the west and northwest of the subject property. An abandoned three-story building is located on an adjoining parcel identified as 5 Flint Street near the northern side of the Site. The topography of the Site is predominantly flat at approximately 515 ft to 520 ft above mean sea level (AMSL); however, the western/northwestern side of the Site slopes steeply upward in the vicinity of the southern/southwestern side of the Site to approximately 540 ft AMSL. The adjoining off Site 15 Flint Street parcel is topographically and hydraulically upgradient of the Site.

### 2.4. SITE IMPROVEMENTS

### 2.4.1. Structures and Roads

While most of the abovegrade structures have been demolished and removed, some remnants of former structures remain, as detailed within this report. It is unknown as to what subsurface structures remain. Based on historic aerial photographs, the structures were removed sometime between 1926 and 1958. An asphalt-paved bicycle/walking path runs through the entire eastern side of the Site from the north end of the property to the south of the property and beyond in both directions. An approximate 1.2 acre grass-covered area is located on the eastern boundary of the subject property along the Genesee River. The rest of the Site is undeveloped (with the exception of the historic items mentioned above) and consists of wooded and vegetative areas.

Observations made during the Site visits include the following locations (Note, all locations may not be represented in the Site photographs), which are also depicted on **Figure 2**:

Location ID	Site Observations		
Location 1	Westernmost point of the Site along river bank. Miscellaneous trash. Overgrown vegetation.		
Location 2	Northwest portion of Site (backyards of Cottage Street properties visible).		
Location 3	Railroad timbers.		
Location 4	Gas tank from car, crushed metal garbage can, 55 gallon drum		
Location 5	Foundation walls. Former railroad bed foundation walls.		
Location 6	Railroad ties. Start of railroad bed. Foundation wall. Brick piles – approximately 50' L x 5' W.		
Location 7	Large foundation wall. Residential fuel oil tank. Tank is empty, no odors present, no signs of staining.  Miscellaneous trash on top of property line.		
Location 8	Crushed metal drums. Scrap metal pile. Dark grey/black foundry sand or ash.		
Location 9	Ravine facing river.		
Location 10	Railroad timbers from old railroad bridge currently under construction (no longer present during 2012 Site visit)		
Location 11	Culvert/drainage opening in ravine along river.		
Location 12	Two manholes, vent.		
Location 13	Former refinery building.		
Location 14	Crushed metal drums, debris in marsh area. Overgrown vegetation. Tires, concrete block.		
Location 15	Concrete rubble. Flagstone. Large culvert or pipe.		
Location 16	Metal piping. Fire hydrant #1.		

Location 17	Vehicle gasoline tank. Large crushed metal fuel oil tank.
Location 18	Tires. Fire hydrant #2. Crushed metal Coca-Cola container. Concrete rubble/debris. Approximate 10'x10' area of cinder blocks (CMU). Rubble pile approx 5' x 5'.
Location 19	Scattered bricks throughout area. Metal tank approximately 5' diameter and 10' long. No odors or staining present. Metal piping (not observed during 2012 Site visit). Few pieces of scrap metal.
Location 20	Foundation wall. Concrete former sewage manhole (filled in). Rubble pile. Tires. Concrete. Concrete pile. Second foundation wall. Approximately 2 dozen tires. Fire hydrant #3. Concrete rubble.
Location 21	Concrete Wall.
Location 22	Fire hydrant #4. Concrete wall.
Location 23	Concrete wall. Secondary concrete wall parallel to first wall.
Location 24	Tree and brush debris.
Location 25	MCWA sanitary manhole.
Location 26	Concrete cylindrical platform. Approximately 1' thick, 2' diameter. Did not observe during 2012 Site visit.
Location 27	Fire hydrant #5.
Location 28	Metal well piping. Guard rail/scrap metal pile (not observed during 2012 Site visit). Blue basin.
Location 29	Stickup monitoring well. Concrete crescent shaped manhole. Concrete foundation.
Location 30	Foundry sand pile.
Location 31	Short fence.

The former Erie-Lackawanna Railroad Bridge is located on the southern adjoining parcel. The railroad does not exist anymore on the Site. Several old railroad ties were observed to be staged on the Site parcel identified as 100 Riverview Place during the July 2011 Site visit; however, these railroad ties were not present during the August 8, 2012 Site visit. It is presumed that these railroad ties were temporarily staged on this parcel for use in the City of Rochester project related to upgrading the former bridge for pedestrian use sometime between the July 2011 and August 2012 Site visits.

### 2.4.2. Water Supply Systems

Although the Site is not connected to water, municipally-supplied water is available by the Monroe County Water Authority (MCWA) on Flint Street. Drinking water wells were not observed on the subject property.

Recognized environmental conditions were not noted with respect to the subject property's water system.

### 2.4.3. Sanitary Sewage Systems

Although the Site is not connected to a sanitary sewer system, municipal sewer is available by Monroe County Pure Waters (MCPW).

Recognized environmental conditions were not noted with respect to the subject property's sanitary sewage system.

### 2.4.4. Storm Water System

A storm water system was not observed on the subject property. An article from August 1901 presented within the 2005 AMEC report states that a "coat of oil" was present on the Genesee River from the "works and

extending out, across, and down to the Court St. dam." Other information related to the "coat of oil" was not available. The potential for off Site impacts may represent a future business risk with respect to the Genesee River and river sediments off Site.

Recognized environmental conditions were not noted with respect to the subject property's storm water system.

### 2.4.5. Wells

Water supply wells were not observed on the subject property; however, one groundwater monitoring well was observed as depicted on **Figure 2**. According to information obtained from the City, one groundwater monitoring well was present at the Site in 2008. The observed groundwater monitoring well is depicted on **Figure 2**. The status of the two adjacent groundwater monitoring wells is unknown.

As stated in Section 2.2.7, one or more of VOCs, SVOCs, metals, pesticides, and/or PCBs were detected in groundwater in exceedance of 6 NYCRR/TOGS 1.1.1 criteria on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, 102 Violetta Street, 1315 S. Plymouth Avenue, along the property boundary between the off Site northern adjoining 5 Flint Street parcel and 100 Riverview Place, and the property boundary between the off Site northern adjoining 5 Flint Street parcel and 1315 S. Plymouth Avenue. One or more of VOCs, SVOCs, metals, pesticides, and/or PCBs were detected in groundwater above TOGS 1.1.1 criteria on both the northern adjoining 5 Flint Street parcel and the northwestern adjoining 15 Flint Street parcel.

The EDR Report indicated that no wells were identified on the subject property; however, one well was depicted in the EDR report the southwest within one-half to three-quarters of a mile of the subject property (July 2011 version of EDR report; it is not depicted in the August 2012 EDR report). The use of this well was not described in the EDR report.

### 2.4.6. Utilities

As previously noted, potable water and sanitary sewage disposal is available to the subject property; however the subject property is not connected. Natural gas and electric is also available by Rochester Gas & Electric (RG&E); however the Site is not connected.

Pipelines were historically present as part of oil refinery operations, as referenced in AMEC's June 13, 2005 Historic and Current Site Conditions Report. A figure within the 2005 AMEC report depicts a pipeline running from the approximate Site location northward into the City of Rochester.

### 2.5. GEOLOGIC AND HYDROGEOLOGIC DESCRIPTION

The EDR Report in **Attachment 9** indicates that the underlying geology consists of Paleozoic Era, Middle Silurian (Niagoaran) Series bedrock. Site soil is reported as urban land and water. No other soil description is provided by EDR. Depth to the water table is reported as being more than zero inches and depth to bedrock is reported as more than zero inches.

A detailed description of the Site geologic conditions was presented within the June 13, 2005 AMEC report. According to the report, both native and fill materials are present at the Site. Native soils are described as consisting of sands, silts, and clays. Fill is described as consisting of bricks, slag, cinders, gravels, wood, and miscellaneous debris. Groundwater is described as being present at approximately 3 ft. to 8 ft. below ground surface (bgs). The report also stated that bedrock (while not encountered) most likely consists of the approximate 180 ft. thick Silurian Lockport Formation.

### 2.6. CONTAINER STORAGE AREAS

Container storage areas were not observed at the Site. However, based on historical documentation container storage areas were noted and potentially mismanaged. Containers (e.g., wooden barrels, tin cans, and drums) for kerosene, naphtha, and finished lubricants were stored and manufactured by the former oil refinery. An approximate 1,500 gallon empty UST observed on 13 Cottage Street as described in Section 2.7 is an example of container mismanagement.

Recognized environmental conditions were noted with respect to former container storage areas (*i.e.*, an approximately 1,500 gallon empty UST was observed on the Site parcel identified as 13 Cottage Street). Historical descriptions of mismanaged containers is a considered a recognized environmental condition.

### 2.7. UNDERGROUND STORAGE TANKS

One approximate 1,500 gallon empty UST was observed situated aboveground near the northwest corner of the Site parcel identified as 13 Cottage Street. No odors or staining were noted with the former UST. No information indicating the presence of USTs was noted in the environmental database report. Historical documentation does, however, indicate the potential presence of former USTs on the adjoining off Site 15 Flint Street parcel in the August 2008 Stantec *Phase I Environmental Site Assessment, 5 Flint Street, Rochester, New York* referenced above.

Recognized environmental conditions were noted with respect to USTs. The observation of a mismanaged UST is considered a recognized environmental condition.

### 2.8. ABOVEGROUND STORAGE TANKS

No aboveground storage tanks (ASTs) were observed during the Site walkthrough with the exception of a former residential fuel oil AST (empty, no odor or staining noted) and one large, crushed metal fuel oil AST (size could not be determined, no odors or staining noted). The former residential AST is located on the Site parcel identified as 7 Cottage Street, and the large AST is located near the center of the Site parcel identified as 1315 S. Plymouth Avenue. Historical operations at the Site related to the former Vacuum Oil Refinery indicate the former presence of a few ASTs at the Site and many large diameter bulk storage ASTs on adjoining and adjacent parcels to the west, northwest, and north. Some of the tanks are labeled in historical documentation as "oil" storage, and some of the tanks are unlabeled. The presence of ASTs was not noted in the environmental database report. "Settling Tanks" of unknown size are depicted on the 1926 Plat Map on the northwestern adjoining 15 Flint Street parcel which is both topographically and hydraulically upgradient. Several structures that may potentially be storage tanks were depicted on an undated map of the former refinery.

Recognized environmental conditions were noted with respect to former ASTs due to the historical use of the immediate adjoining and adjacent parcels as a former oil refinery and the storage of large quantities (*i.e.*, historical information indicates storage volumes between 2,000 gallons and 300,000 gallons per storage tank) of petroleum products and several subsurface investigations indicating contaminant concentrations above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) on Site parcels and adjoining parcels (the northern adjoining off Site 5 Flint Street parcel which is hydraulically upgradient from the northern portion of the Site and the northwestern adjoining off Site 15 Flint Street parcel which is both topographically and hydraulically upgradient from a portion of the Site) as described within this report.

### 2.9. PITS, DIP TANKS, SUMPS, PONDS, LAGOONS, OR DRAINS

Pits, dip tanks, ponds, and lagoons were not observed during the Site walkthrough. However, a photograph presented within the June 13, 2005 AMEC report depicts a floor pit located near the southern end of the adjoining off Site parcel identified as 5 Flint Street. The report states the floor pit ("used in industrial processes") is a remnant of a concrete structure. The report does not provide other information regarding the pit.

A burn pit for the burning of refuse was also referenced in Stantec's August 13, 2008 Phase I ESA report. The location(s) of the burn pit were not available in historical documentation.

A sludge pit was formerly located on the southern adjoining parcel, and in 1992 the NYSDEC removed approximately 400-500 tons of non-hazardous petroleum sludge. Several potential sludge pits are depicted on the 1926 aerial photograph within the southern adjoining property located south of 13 Cottage Street. As mentioned above, per Mark Gregor of the City DEQ who observed its removal, the excavated sludge pit area was actually located at the southeastern corner of the southern adjoining property near the southwestern corner of the Site parcel identified as 102 Violetta Street.

Recognized environmental conditions were not noted with respect to on Site dip tanks, sumps, ponds, lagoons, or drains. Recognized environmental conditions were noted with respect to the pit associated with former industrial processes on 5 Flint Street, the "burn pit," and the sludge pit area(s).

### 2.10. INDICATIONS OF POTENTIAL POLYCHLORINATED BIPHENYLS

Potential PCB-containing equipment was not identified at the subject property during the Site visit.

LaBella collected soil and groundwater samples on several Site parcels as part of a subsurface investigation conducted in 2008. As stated above in Section 2.2.7, PCBs were detected in Site groundwater, but concentrations did not exceed 6 NYCRR Part 703/TOGS 1.1.1 criteria. PCBs were also detected in soil above TAGM #4046 SCOs, specifically at one sample location located on the Site parcel identified as 1315 S. Plymouth Avenue, just south of the former grease manufacturing building located on the northwestern adjoining 15 Flint Street parcel. PCB concentrations were also detected in exceedance of TAGM #4046 SCOs on the northwestern adjoining 15 Flint Street parcel.

PCB concentrations in soil exceeding TAGM #4046 SCOs on the Site parcel identified as 1315 S. Plymouth Avenue, just south of the former grease manufacturing building located on the adjoining 15 Flint Street parcel, and on the adjoining 15 Flint Street parcel itself, which is both topographically and hydraulically upgradient, is considered a recognized environmental condition.

### 2.11. POTENTIAL ASBESTOS-CONTAINING MATERIALS

U.S. Environmental Protection Agency (USEPA) regulations for asbestos-containing materials (ACM) date from 1973. A presumption is established under the federal regulations that asbestos had ceased to be used in construction by 1980 (see 29 CFR Part1910.1001 (j)(1)).

No potential ACMs were observed at the Site during the Site reconnaissance visit; however, this ESA is not intended to constitute or substitute for a comprehensive, quantitative asbestos survey, and no samples were collected for analysis. Remnants of historic features are present at the Site; however, it is unknown if these features contained ACM. A Sanborn® Map dated 1892 (as described in Section 2.2.7) depicts a building labeled as "covered with asbestos" as being partially located on the Site parcel identified as 1315 S. Plymouth Avenue. As noted in Roux's January 12, 2009 report, in June 2008 LaBella encountered (and subsequently disposed of) approximately 100 pounds of asbestos material during test pit activities on the northwestern adjoining 15 Flint Street parcel.

Based on the age of the historic features on Site, the depiction of a building "covered with asbestos" on the 1892 Sanborn® Map on the Site parcel identified as 1315 S. Plymouth Avenue, the historic presence of ACMs identified in the Roux report, and the potential for fill and buried demolition debris to contain ACM, recognized environmental conditions were noted with respect to ACM.

### 2.12. INDICATIONS OF ON SITE WASTE DISPOSAL OR LANDFILLING

Areas of on Site waste disposal or landfilling were observed during the Site walkthrough on several Site parcels consisting of several piles of a concrete rubble, bricks, automobile tires, ash/black foundry sand, miscellaneous trash, several automobile gasoline tanks, scrap metal, and crushed metal drums. The historical aerial photographs showed no indication of on Site waste disposal or landfilling in the past on the subject property with the exception of the 1926 aerial photograph. The 1926 aerial photograph depicts two disturbed areas, potentially associated with landfilling activities, on a portion of the southern end of the Site parcel identified as 1315 S. Plymouth Avenue (footprint of approximately 5,000 square feet on the parcel) and a footprint of approximately 10,000 square feet in on the Site parcels identified as 69 and 75 Cottage Street.

Historical documentation referenced in Stantec's August 13, 2008 Phase I ESA report states that "...waste oil from tank cars were disposed of in various excavations or discharged directly into the river." A burn pit for the burning of refuse was also referenced in the report. Locations of the waste oil disposed and burn pit were not available in historical documentation.

A sludge pit was formerly located on the southern adjoining parcel, and in 1992 the NYSDEC removed approximately 400-500 tons of non-hazardous petroleum sludge. Several potential sludge pits are depicted on

the 1926 aerial photograph within the southern adjoining property located south of 13 Cottage Street. As mentioned above, per Mark Gregor of the City DEQ who observed its removal, the excavated sludge pit area was actually located at the southeastern corner of the southern adjoining property near the southwestern corner of the Site parcel identified as 102 Violetta Street.

Documented disposal of "waste oil" and the "burn pit"; the depiction of disturbed areas on southwestern adjoining parcels and the Site parcels identified as 1315 S. Plymouth Avenue, 69 Cottage Street, and 75 Cottage Street; and the potential for several additional sludge pit locations on the southern portion of the Site and/or southern adjoining parcel are considered recognized environmental conditions with respect to on Site waste disposal or landfilling.

### 2.13. SOLID AND HAZARDOUS WASTE DISPOSAL

### 2.13.1. Solid Waste

Solid wastes in the form of scrap metal, old 55 gallon steel drums, municipal trash, and dozens of old automobile tires were observed throughout much of the Site. Several piles of concrete rubble and bricks were also observed on various Site parcels. An approximate 3 ft. by 3 ft. area ash/black foundry sand was observed near the northeast corner of the Site parcel identified as 1 Cottage Street. Ash/black foundry sand was also observed along an embankment on the eastern side of the Site parcel identified as 13 Cottage Street and within a ravine area located on the Site parcel identified as 102 Violetta Street. Historical documentation also indicates the presence of "ash and coal ash" and "coal" on the Site parcel identified as 13 Cottage Street and the northern adjoining 5 Flint Street parcel.

Recognized environmental conditions were noted with respect to solid waste at the Site, specifically the observation of several areas of ash/black foundry sand on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, and 102 Violetta Street and the northern adjoining 5 Flint Street parcel.

#### 2.13.2. Hazardous Waste

Visual evidence of hazardous waste was not observed during the Site walkthrough. The subject property is vacant and currently does not generate hazardous wastes. The EDR report lists the "Former Vacuum Oil" site located on "Cottage Street" as being active between 1866 and 1936. The EDR report provides a Site code of "leaking tanks, drums, lagoons, other containers" and states that this location is not listed on the New York State Registry of Inactive Hazardous Waste Disposal Sites. Various compounds are listed as having been disposed of at the former refinery including VOCs, SVOCs, and metals; however, specific materials/disposal locations are not provided.

Based on the lack of documentation regarding the appropriate removal and disposal of hazardous materials, recognized environmental conditions were noted with respect to former oil refinery hazardous waste generation.

### 2.14. ON-GOING REMEDIATION PROGRAMS

No on-going remediation programs were reported or observed at the subject property. However, several investigations have been undertaken, as previously described in this report.

Recognized environmental conditions were not noted with respect to remediation programs.

### 2.15. SPILL HISTORY AND PAST REMEDIATION ACTIONS

No historic spills or remediation programs (actions) were identified in the EDR report on the subject property. Visual evidence of potential spills/leaks was not observed during the Site walkthrough.

As noted by Day Environmental, Inc. in a May 2, 2005 document (presented within the August 2008 Stantec Phase I ESA report), a petroleum contaminated soil layer at least 25 ft. by 180 ft. by 7 ft. in thickness was identified off Site, on a northwestern parcel (*i.e.*, on the southern side of the 950-984 Exchange Street parcel near the northwest corner of 15 Flint Street) approximately 250 ft. to 300 ft. from the Site. It is understood by O'Brien & Gere that this area was petroleum fingerprinted by ExxonMobil and subsequently remediated. A report regarding this remedial action was not available at the time of this Phase I ESA report.

As stated above, approximately 400-500 tons of non-hazardous petroleum sludge in a pit located on the southern adjoining parcel was excavated and disposed of in 1992 by the NYSDEC. Note, as mentioned above, per Mark Gregor of the City DEQ who observed its removal, the excavated sludge pit was actually located at the southeastern corner of the southern adjacent property near the southwestern corner of the Site parcel identified as 102 Violetta Street.

Historical reports reviewed for this Phase I ESA provided details regarding potential spills on Site including, a broken pipe (conveying naphtha or oil) across the canal and railroad leading to the Genesee River and "Municipal Gas Works;" a tank vent that allowed oil to run into the Genesee River; approximately 12,000 gallons of missing naphtha; a fire on the Genesee River from naphtha; and the presence of contamination in soil, groundwater, and soil gas. The potential presence of on Site contamination associated with the petroleum sludge pit located on the southern adjoining parcel south of 13 Cottage Street and the spills mentioned herein are considered a recognized environmental condition.

### 2.16. AIR EMISSIONS

There were no structures observed; therefore, air emissions are not considered present at the Site. Historical documentation reviewed in Section 2.2.7 mentions high concentrations of soil gas, with TPH in many locations throughout the Site and chlorinated VOCs in a small area of the Site parcels identified as 1315 S. Plymouth Avenue and 102 Violetta Street and both TPH and chlorinated solvents on the off Site 5 Flint Street parcel.

Recognized environmental conditions were noted with respect to air emissions.

### 2.17. USAGE OF HERBICIDES, PESTICIDES, FUNGICIDES, AND RODENTICIDES

The use of herbicides, pesticides, fungicides, or rodenticides was not observed at the Site. Evidence of their usage or storage was not observed during the Site walkthrough.

As stated in Roux's 2009 report, pesticides were detected in several soil samples collected at the Site as part of a 2008 subsurface investigation. Pesticide concentrations exceeded TAGM #4046 SCOs in one soil sample located on the Site parcel identified as 13 Cottage Street. Pesticide concentrations in soil samples in exceedance of TAGM #4046 SCOs were also noted on the adjoining off Site 5 Flint Street and 15 Flint Street parcels. Groundwater samples were not collected from on Site parcels as part of this 2008 investigation; however, pesticides were detected in concentrations exceeding 6 NYCRR Part 703/TOGS 1.1.1 criteria in groundwater samples collected on the northwestern adjoining off Site 15 Flint Street parcel.

Recognized environmental conditions were noted with respect to pesticides based on subsurface investigations indicating that concentrations were detected in exceedance of TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) on the Site parcel identified as 13 Cottage Street and on the adjoining 5 Flint Street (situated hydraulically upgradient from the northern portion of the Site) and 15 Flint Street (situated both topographically and hydraulically upgradient of the Site) parcels.

### 2.18. FEDERAL, STATE, AND LOCAL RECORDS REVIEW

### 2.18.1. General

A review of federal and state environmental files was conducted as part of this Phase I ESA. The purpose of this review was to obtain and review records that assist in identifying recognized environmental conditions in connection with the subject property.

An environmental database search, prepared by EDR, was performed to identify the presence of properties within the ASTM search radii of the Site with potential environmental issues. A review of the database search report is presented below and a copy of the report is presented as **Attachment 9**.

### 2.18.2. Federal Environmental Database File Review

The following federal environmental databases were searched as part of the database report:

 National Priority List (NPL) Database; The NPL is a listing of uncontrolled hazardous waste sites eligible for remedial action under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA); most recent government version May 8, 2012;

- Proposed NPL Database; Proposed National Priority List Sites database, most recent government version March 30, 2012;
- Federal Superfund Liens (NPL LIENS); The NPL LIENS is a listing of Superfund sites with liens against them; most recent government version is October 15, 1991;
- *Federal Facility*; This list is for NPL and CERCLIS lists where the USEPA is involved in cleanup activities; most recent government version is December 10, 2010;
- *Engineering Controls Sites List* (US ENG CONTROLS); This list is for sites with engineering controls in place; most recent government version is December 30, 2011;
- *Sites with Institutional Controls* (US INST CONTROL); This list is for sites with institutional controls in place; most recent government version is December 30, 2011;
- Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) Database; The CERCLIS list is a compilation of known and/or suspected uncontrolled or abandoned hazardous waste sites. These sites have been investigated or are currently under investigation by the USEPA for the release or threatened release of hazardous substances. Once a site is placed on the CERCLIS report, it may be subjected to several levels of review and evaluation and may ultimately be placed on the NPL; most recent government version is December 27, 2011;
- Resource Conservation and Recovery Act (RCRA) Database; Under the Resource Conservation and Recovery Act, the USEPA identifies and tracks hazardous waste from the point of generation to the point of disposal. Sites listed in the RCRA database are those sites which treat, store, or dispose of hazardous waste (TSD facilities); generate large quantities of hazardous waste (LQG facilities); and/or generate small quantities of hazardous waste (SQG facilities), and also non-generators; most recent government version March 15, 2012;
- Emergency Response Notification System (ERNS) Database; The Emergency Response Notification System database is a listing of sites that have reported releases of oil and hazardous substances to the USEPA and the National Response Center of the US Coast Guard; most recent government version April 2, 2012;
- CERCLA Lien Information (LIENS 2); most recent government version, February 16, 2012;
- Land Use Control Information System (LUCIS); most recent government version, December 9, 2005;
- No Further Remedial Action Planned (CERCLIS-NFRAP) Database; The NFRAP database identifies sites, which have been removed from the USEPA CERCLIS database. Following an initial investigation, it may be identified that these sites were not impacted, that the impact could be remediated quickly, or that the impact was not serious enough to require federal action; most recent government version December 28, 2011;
- *Corrective Action Report* (CORRACTS) *Database*; The Corrective Action Report database identifies hazardous waste handlers with RCRA corrective action activity; most recent government version August 19, 2011;
- Facility Index System/Facility Registry System (FINDS) Database; The FINDS database contains facility
  information and ties to other databases, including RCRIS and CERCLIS; most recent government version
  October 23, 2011;
- RCRA Administrative Action Tracking System (RAATS) Database; This database contains records of
  enforcement actions (target property); most recent government version April 17, 1995;
- Hazardous Materials Information Reporting System (HMIRS) Database; This database contains information reported to DOT on hazardous material spill incidents; most recent government version December 31, 2010;
- PCB Activity Database System (PADS) Database; This database contains information on PCB generators, transporters, commercial storers, and/or brokers and disposers that are required to notify USEPA of their activities; most recent government version November 1, 2010;
- Toxic Chemical Release Inventory System (TRIS) Database; This database identifies facilities reporting under Superfund Amendments and Reauthorization Act (SARA) Section 313 for releases of toxic chemicals to the air, water, and land; most recent government version December 31, 2009;

- Toxic Substances Control Act (TSCA) Database; This database identifies manufacturers and importers of TSCA listed substances; most recent government version December 31, 2006;
- Material Licensing Tracking System (MLTS) Database; This database identifies facilities licensed by the Nuclear Regulatory Commission for use of radioactive materials; most recent government version June 21, 2011;
- Record of Decision (ROD) Database; This database contains information on documented mandated remedies for Superfund sites; most recent government version February 27, 2012;
- Department of Transportation Incident and Accident Data (DOT OPS); most recent government version July 29, 2011;
- Formerly Used Defense Sites (FUDS); most recent government version December 31, 2009;
- Uranium Mill Tailings Sites (UMTRA); most recent government version September 14, 2010;
- Superfund [CERCLA] Consent Decrees (CONSENT) Database; This database identifies major legal settlements
  establishing responsibility and standards for cleanup at Superfund sites; most recent government version
  December 1, 2011;
- Biennial Reporting System (BRS) Database; This database collects data on the generation and management of hazardous waste from two groups, Large Quantity Generators and Treatment, Storage and Disposal Facilities; most recent government version December 31, 2009;
- Delisted NPL Database; This database identifies sites where no further response is appropriate; most recent version March 30, 2012;
- Section 7 Tracking Systems (SSTS) Database; This database identifies pesticide producing facilities reporting under FIFRA on the types and amounts of pesticides being produced and sold or distributed; most recent government version December 31, 2009;
- FIFRA [Federal Insecticide, Fungicide, & Rodenticide Act]/TSCA Tracking System (FTTS) Database; This database tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA, and Emergency Planning and Community Right-to-Know Act (EPCRA); most recent version April 9, 2009;
- FTTS INSP (FIFRA/TSCA Tracking System Inspections and Enforcements) database; this database tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA, and Emergency Planning and Community Right-to-Know Act (EPCRA); most recent version government April 9, 2009;
- Historical FTTS (HIST FTTS) database; this database tracks historical FTTS; most recent version government October 19, 2006;
- Historical FTTS Inspection (HIST FTTS INSP) database; this database tracks historical FTTS inspections; most recent version government October 19, 2006;
- Integrated Compliance Information System (ICIS) database; most recent government version July 20, 2011;
- Radiation Information (RADINFO) database; most recent government version January 10, 2012; Coal
   Combustion Residues Surface Impoundments List (COAL ASH EPA); most recent government version, August
   17, 2010;
- Steam-Electric Plan Operation Data (power plants storing ash in surface ponds) (COAL ASH DOE); most recent government version, December 31, 2005;
- 2020 Corrective Action Program List (2020 COR ACTION); most recent government version, November 11, 2011;
- Potential Responsible Parties (PRP); most recent government version, February 27, 2012;
- Federal and Indian Lands (FEDLAND); most recent government version, December 31, 2005;

- Financial Assurance Information (US FIN ASSUR); most recent government version, May 24, 2012;
- EPA WATCH LIST (EPA WATCH LIST); most recent government version, March 31, 2012;
- State Coalition for Remediation of Drycleaners Listing (SCRD DRYCLEANERS); most recent government version, March 7, 2011.
- Mines Master Index File (MINES) Database; This database contains information on permitted mines; most recent version August 18, 2011; and
- Department of Defense (DOD) Database; This database lists federally owned or administered lands administered by the Department of Defense, most recent version December 31, 2005.

The information generated by the database search does not document whether the sites listed have adversely impacted the subject property. The list is provided for informational purposes and to identify the presence of those sites where operations may potentially impact the subject property.

As part of a database search, "orphan" sites are listed which are within the same municipality as a given property, but because of insufficient or conflicting geographic information, cannot be located relative to the subject property.

The subject property was not listed in federal databases. EDR flagged locations with "Vacuum Oil" in the name/description as being the "Target Property" and on several federal databases. However, the locations identified as "Target Property" are for adjacent and/or nearby parcels that were also once within the footprint of the Former Vacuum Oil Refinery and not part of the subject property.

Adjacent/adjoining properties were also listed in the following federal databases:

- 15 Flint Street identified as "Flint Auto Wreckers" was listed in the RCRA-NonGen database as not being a generator in both 2006 and 2007. This location is listed as a Conditionally Exempt Small Quantity Generator (CESQG) on July 13, 2004.
- An unaddressed location identified as 'Former Vacuum Oil" was listed in the FINDS database; however, no additional information was provided in the EDR report. "Former Vacuum Oil" was also listed in the FINDS and US Brownfields databases for the address 72 Plymouth Avenue; however, no additional information was provided in the EDR report, and Plymouth Avenue is not located adjoining, or adjacent to the Site. This address may have been a mailing address or office location for the former refinery.

Several off Site properties were noted in the EDR report within the ASTM search radii; however, their use and distances and from the subject property do not appear to pose an environmental concern to the subject property and are not described herein. Additionally, the following were identified:

- One location, addressed as 950 Exchange Street (located both topographically and hydraulically upgradient from the Site), was listed within the RCRA-NonGen (non-generator in 2007 and 2006 and a CESQG in 2003) and FINDS databases.
- One location, addressed as 37 Riverview Place (located both topographically and hydraulically upgradient from the Site), was indicated within the EDR report as a former drycleaners (1940). Although the EDR report does not state additional information regarding this location, the potential presence of historic drycleaning operations including the potential use of solvents, is considered a recognized environmental condition.

### 2.18.3. State Environmental Database File Review

The environmental database report included the following state environmental databases for the subject property:

- Solid Waste Facilities/Landfill Sites (SWF/LF); most recent government version April 11, 2012;
- Leaking Petroleum Storage Tank Sites (LTANKS); Includes releases of petroleum from underground and aboveground storage tanks; most recent government version, May 22, 2012;
- *Listing of Leaking Storage Tanks* (HIST LTANKS); most recent government version January 1, 2002;

- *Listing of Storage Tanks* (TANKS); most recent government version May 9, 2012;
- Petroleum Bulk Storage (PBS) Database; most recent government version, April 5, 2011;
- Aboveground Storage Tanks (ASTs); most recent government version, April 5, 2011;
- Chemical Bulk Storage Database (CBS AST); most recent government version January 1, 2002;
- Major Oil Storage Facilities Database (MOSF AST); most recent government version January 1, 2002;
- Chemical Bulk Storage (CBS) Database; most recent government version May 9, 2012;
- Petroleum Bulk Storage (PBS) Database (UST); most recent government version May 9, 2012;
- Chemical Bulk Storage Database (CBS UST); most recent government version January 1, 2002;
- Major Oil Storage Facility Site Listing (MOSF); most recent government version May 9, 2012;
- Major Oil Storage Facilities Database (MOSF UST); most recent government version January 1, 2002;
- Inactive Hazardous Waste Disposal Sites in New York State (SHWS); most recent government version, May 21, 2012;
- Vapor Intrusion Legacy Site List (VAPOR REOPENED); most recent government version, May 1, 2012;
- Registry of Engineering Controls (ENG CONTROLS) is a listing of sites with Engineering Controls in place; most recent government version, May 21, 2012;
- Registry of Institutional Controls (INST CONTROL); most recent version May 21, 2012;
- *Underground Storage Tank Listing* (FEMA UST); most recent government version January 1, 2010;
- *Restrictive Declarations Listing* (RES DECL); most recent government version November 18, 2010;
- Brownfields Site Specific Assessments (BROWNFIELDS); most recent government version, May 21, 2012;
- Listing of Brownfields Sites (US BROWNFIELDS); most recent government version June 27, 2011;
- Environmental Restoration Program Listing (ERP); most recent government version, May 21, 2012;
- Voluntary Cleanup Agreements (VCP); most recent government version May 21, 2012;
- Open Dump Inventory (ODI); most recent government version June 30, 1985;
- Registered Recycling Facility List (SWRCY); most recent government version April 11, 2012;
- Registered Waste Tire Storage & Facility List (SWTIRE); most recent government version August 1, 2006;
- Clandestine Drug Labs (US CDL); most recent government version March 16, 2012;
- Delisted Registry Sites (DEL SHWS); most recent government version May 21, 2012;
- National Clandestine Laboratory Register (US HIST CDL); most recent government version, September 1, 2007;
- Historical Petroleum Bulk Storage Database (HIST UST); most recent government version January 1, 2002;
- Historical Petroleum Bulk Storage Database (HIST AST); most recent government version January 1, 2002;
- Hazardous Materials Information Reporting System (HMIRS); most recent government version April 1, 2012;
- Spills Information Database (SPILLS); most recent government version May 22, 2012;
- *Lien Information* (LIENS); most recent government version May 15, 2012;
- Underground Injection Control Wells (UIC); most recent government version, March 12, 2012;
- Drycleaner Facilities (DRYCLEANERS); most recent government version, December 20, 2011;

- Air Pollution Control Division Permitted Facility & Emissions Listing (AIRS); most recent government version, December 31, 2010;
- E DESIGNATION SITE LISTING (E DESIGNATION); most recent government version, October 5, 2011;
- Coal Ash Disposal Site Listing (COAL ASH); most recent government version, April 11, 2012;
- Financial Assurance Information Listing (FINANCIAL ASSURANCE 2); most recent government version, October 31, 2008;
- Financial Assurance Information Listing (FINANCIAL ASSURANCE 1); most recent government version, April 10, 2012;
- PCB Transformer Registration Database (PCB TRANSFORMER); most recent government version, February 1, 2011;
- Spills Database (HIST SPILLS); most recent government version January 1, 2002;
- Hazardous Substance Waste Disposal Site Inventory (HSWDS); most recent government version January 1, 2003;
- Facility and Manifest Data (NY MANIFEST); most recent government version May 1, 2012;
- State Pollutant Discharge Elimination System (SPDES); most recent government version March 26, 2012;
- Manufactured Gas Plants (Proprietary EDR database);
- EDR Historical Auto Stations (Proprietary EDR database); and
- EDR Historical Cleaners (Proprietary EDR database).

The subject property was not reported in the State and local databases.

Seven listings from adjacent parcels were noted, as follows:

- Former Vacuum Oil, stated as being located near Flint Street and Exchange Street, was listed on the NY Spills database, Spill Number 0370583. The detail indicates that address as 5 Flint Street, the northern adjoining parcel. A spill was reported on January 26, 2004 as having occurred on April 13, 2001. The NYSDEC discussed status of the property and the need for subsurface investigation with ExxonMobil. ExxonMobil was issued a Stipulation Agreement (STIP) for performing the investigation, and subsequently various investigation work plans were submitted by ExxonMobil to the NYSDEC. The detail also states that a Phase II data summary package was submitted to the NYSDEC by LaBella. The "Remarks" section indicates that SVOCs and BTEX were detected in surface soil, subsurface soil, and groundwater above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) on a 24 acre portion of the Former Vacuum Oil Refinery, as performed by the NYSDEC Hazardous Waste Remediation Section. Due to the location of this listing (being situated hydraulically upgradient from the northern portion of the Site), and the history of the former Vacuum Oil Refinery site, this listing may have an impact on the subject property. As such, this is a recognized environmental condition.
- An unaddressed location identified as "Former Vacuum Oil, Cottage Street." This unidentified location is listed as a Hazardous Substance Waste Disposal Site (HSWDS) from 1866 to 1936. The database states that metals, VOCs, and SVOCs, were disposed of at this location. The site code is listed as "leaking tanks, drums, lagoons, or other containers." The potential presence and on Site disposal of hazardous substances without documentation of remediation and/or removal is a recognized environmental condition.
- An unaddressed location identified as "*Vacuum Oil*" was listed in the HSWDS database; however, no additional information was provided in the EDR report.
- 5 Flint Street and 15 Flint Street, located on the northern adjoining parcel and northwestern adjoining parcel, respectively, were listed on the US Brownfields database and NY Spills databases. A note in the EDR report indicates that ExxonMobil and the City are investigating the Site in relation to the former Vacuum Oil Refinery. The EDR report stated the City submitted a Brownfield Cleanup Program (BCP) Application for

both 5 Flint Street and 15 Flint Street covering approximately 7.2 acres; however, the City indicated this has not occurred as of the date of this report. The EDR report states that the location is occupied by Flint Auto Wrecking and improved with a building. 15 Flint Street is part of the former Vacuum Oil Refinery site, and, according to the EDR report, this address has been used in the past as a paper company, tool & die companies, a printing company, a university, a scrap bailing company, a junkyard, and government agencies. Spill Number 0750738 was assigned on August 21, 2007 and subsequently closed on November 3, 2008. According to the EDR report, the spill pertains to the excavation of soil by Marks Auto Parts at this location while removing old tires, scrap vehicles, and other miscellaneous debris. The EDR report indicates that this location is vacant with an intended residential and commercial use. The EDR report states that petroleum, chlorinated solvents, SVOCs, VOCs, metals, and pesticides are known and/or suspected contaminants at this location. Due to the location and history of these parcel locations (the adjoining 5 Flint Street parcel being situated hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being situated both topographically and hydraulically upgradient from a portion of the Site), and subsurface investigations mentioned herein indicating contamination above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), this listing may have an impact on the subject property. As such, this is a recognized environmental condition.

- 22 Flint Street, located on the northern adjacent property across Flint Street, was listed on the NY Spills and NY Historical Spills databases. Spill Number 8706537 was opened on November 2, 1987 and subsequently closed on November 4, 1987. This spill was related to soil contamination that was found at this location while excavation was being performed by the City Water Bureau. While excavating, #2 fuel oil was observed, and the junkyard, located immediately southwest of 22 Flint Street across Flint Street, is listed in the EDR report as the "suspect." Due to its upgradient location, this listing may have an impact on the subject property. As such, this is a recognized environmental condition.
- Kneppar Resource Recovery, Inc., located on the northern adjoining property, was listed in the RCRA-Non Generators and FINDS databases. This location was listed as not currently generating hazardous waste. There is no information presented in the EDR report related to this location's listing in the FINDS database.
- A location is listed as "Behind Flint St Warehouse" on 1 Flint Street and was listed in the NY Spills, NY Historical Spills, and MANIFEST databases. However, this location is apparently the building located at 5 Flint Street, on the northern adjoining property. Spill Number 9602282 was opened on May 16, 1996 and subsequently closed on the same date. The spill was related to the dumping of construction and demolition debris at this location from a Schwab Coal & Oil facility located elsewhere in Rochester, New York. The EDR report states that headspace readings on a photoionization detector (PID) were below detection limits and that no further action was required by the NYSDEC.

Several off Site properties were noted in the EDR report within the ASTM search radii; however, their use and distances and from the subject property do not appear to pose an environmental concern to the subject property and are not described herein. Additionally, the following were identified:

• One location, addressed as 950-984 Exchange Street (located both topographically and hydraulically upgradient from the Site), was listed in the NY SPILLS database as having an area of soil contamination in exceedance of TAGM #4046 SCOs where former Vacuum Oil Refinery petroleum storage tanks were situated (i.e., on the southern side of the 950-984 Exchange Street parcel near the northwest corner of 15 Flint Street). The EDR report also indicated that groundwater monitoring wells were not installed at this location. This location was also listed in the US BROWNFIELDS database. The EDR report indicates that this location was used as a machine shop during the 1960's. The EDR report also indicates this location has been occupied by the Vacuum Oil Company, Ontario Machine, and XL Total Machine Corp. The EDR report indicates that soil was contaminated with petroleum aromatic hydrocarbons (PAHs), petroleum products, and VOCs and each of these are listed as "cleaned up." However, dates of "clean up" and documentation of appropriate disposal are not listed within the EDR report. The City DEQ stated that remediation did occur at this location, was completed to the satisfaction of the NYSDEC, and subsequently the spill was closed with no further action required. However, the potential for migration of past contamination onto the subject property is considered a recognized environmental condition.

### 3. PHASE I ESA FINDINGS AND CONCLUSIONS

### 3.1. SIGNIFICANCE OF DATA GAPS

For the completion of this Phase I ESA, some areas of heavy vegetation were present at the Site during the Site visit preventing a complete walkthrough. Also, a knowledgeable Site owner or Site operator, and surrounding neighbors were not available for interview. However, these data gaps are not considered significant in being able to reach a conclusion for this assessment.

### 3.2. FINDINGS AND CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-05 for the property. Any exceptions to, or deletions from, this practice are described in this report. This assessment has revealed the following RECs in connection with the subject property (Note, the below numbered RECs are depicted on Figure 3):

- REC #1. An undated document titled *The Vacuum Oil Company of Rochester* was reviewed (as described in Section 2.2.7). The document stated that the refinery built and used tank cars for the transport of products. Historic documentation indicated that tank cars "in which crude was received after that had been cleaned with naphtha from the distillation" and indicated that railroad cars could be brought in and loaded with oil shipments, and that tank cars were built by the Former Vacuum Oil Refinery. O'Brien & Gere also reviewed documentation from the MCDOH (as described in Section 2.2.7) which indicated that cleaning of tank cars with naphtha occurred. Although the specific location(s) of these historic activities were not referenced there is the potential for impacts to soil and/or groundwater at the Site from releases that may have occurred during tank car loading/unloading; tank car cleaning; and transport of products via railroad. As such the tank car use and their associate cleaning with naphtha is a recognized environmental condition.
- REC #2. Based on O'Brien & Gere's review of the aerial photographs, historic drawings, and Sanborn® maps (as described in 2.2.7); historical use of portions of the Site, northwestern adjoining property, northern adjoining property, and adjacent properties to the southwest and north across Flint Street as part of Former Vacuum Oil Refinery operations was depicted. The aerials, drawings, and/or maps depicted former refinery structures, rail sidings, rail spurs (connecting from the Site parcel identified as 1315 S. Plymouth Avenue to a structure located on the northwestern adjoining 15 Flint Street parcel), railroads (on the Site parcels identified as 1315 S. Plymouth Avenue and 102 Violetta Street and the adjoining 5 Flint Street and 15 Flint Street parcels and adjacent properties both north and south of the Site), tank cars, disturbed areas (potentially from historic railroad spurs, depicted adjacent to the southern side of the structure depicted on the Site parcel identified as 13 Cottage Street), and potential sludge pits, which were part of various former refinery operations. The maps also depicted a metal scrap yard and automotive junkyard on the northwestern adjoining 15 Flint Street parcel. As such, these historical use areas are a recognized environmental condition.
- The City DEQ provided a copy of three pages of a report titled *Expanded Phase I Investigation Genesee River Gorge (Lower Falls)* prepared by Recra Environmental, Inc. dated January 1988 (as described in Section 2.2.7). The document stated that the former Vacuum Oil Refinery used naphtha. The document stated that naphtha was stored "at the facility," "supposedly entered the Genesee Valley Canal via a sewer line," and was released into the Genesee River. The document indicated that "waste oil from tank cars were disposed in various excavations or discharged directly into the river." The document stated "a pit was made at the works to burn refuse from the production of gas and naphtha" however, the specific location of the pit was not referenced. The document indicated that a pipe (conveying naphtha or oil) which crossed the canal and railroad was broken by a passing boat, and this pipe was documented as leading to the river and "Municipal Gas Works." The document stated that a tank vent allowed oil to "run into the canal," "twelve thousand gallons of naphtha are unaccounted for," and surplus boiler water also was discharged into the river. There is reference to a fire on the river that was from naphtha and a statement that indicates the Vacuum Oil Company was responsible for several deaths from the presence of naphtha within the public sewer

system. Although there is not a specific location, or locations, referenced, the 1926 aerial photograph depicts potential on Site and off Site disposal areas and historical mapping suggests that piping was located in proximity to the Site. As such, this historic information indicate widespread, multiple releases including discharge of naphtha and waste oil to the Genesee River, public sewer system, disposal in excavations on Site, burning in pits on Site, and broken pipelines are identified as a recognized environmental condition.

- REC #4. Although there are permits for the demolition of the service station and removal of storage tanks, and a review of historical documentation and discussions with the City DEQ indicate that the BIS is most likely incorrect and not attributed to the Site parcel identified as 102 Violetta Street, the potential that portions of the station and or continued presence of storage tanks still exist due to non-removal is a recognized environmental condition.
- REC #5. The detection of contaminants (one or more of the following: VOCs, SVOCs, metals, and/or PCBs) in both soil and groundwater on several Site parcels (including PCBs on the Site parcel identified as 1315 S. Plymouth Avenue, just south of the former grease manufacturing building located on the adjoining 15 Flint Street parcel), the northern adjoining 5 Flint Street parcel (which is hydraulically upgradient from the northern portion of the Site), and the northwestern adjoining 15 Flint Street parcel (which is both topographically and hydraulically upgradient) in exceedance of NYSDEC TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS1.1.1 criteria (groundwater) is a recognized environmental condition.
- **REC #6.** O'Brien & Gere evaluated the NYSDEC's Site Investigation Report Former Vacuum Oil Company Site #828089P, Rochester, Monroe County dated March 2001 (as described in Section 2.2.7), and based on the information that one or more SVOCs, BTEX, and/or metals were present in surface soil both on Site (one location on the southern property boundary of the Site parcel identified as 13 Cottage Street and one location on the property boundary between the adjoining off Site 5 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue) and off Site (one location on an adjoining parcel west of the Site parcel identified as 1315 S. Plymouth Avenue and two locations on the adjoining off Site 5 Flint Street parcel), subsurface soil both on Site (two locations near the middle of the Site parcel identified as 1315 S. Plymouth Avenue, one location near the southeastern side of the Site parcel identified as 13 Cottage Street, and one location near the north-central area of the Site parcel identified as 102 Violetta Street) and off Site (five locations on the adjoining off Site 5 Flint Street parcel), and groundwater both on Site (one location near the middle of the Site parcel identified as 1315 S. Plymouth Avenue) and off Site (two locations on the adjoining off Site 5 Flint Street parcel) above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), with the adjoining 5 Flint Street parcel being located hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being located both topographically and hydraulically upgradient of the Site, these constituent detections represent a recognized environmental condition.
- REC #7. O'Brien & Gere evaluated AMEC's *Historic and Current Site Conditions Report, Former Vacuum Oil Refinery Site* dated June 2005 (as described in Section 2.2.7). Note, this report was a summary of historical and current site conditions, and no sampling was conducted as part of AMEC's report. Based on the presence of high concentrations of soil gas and TPH in many locations on both on Site and off Site parcels, and the presence of SVOCs and BTEX in surface soil, subsurface soil, groundwater on both on Site and off Site parcels above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), with the adjoining off Site 5 Flint Street parcel being situated hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being situated both topographically and hydraulically upgradient of the Site, and a pit formerly associated with industrial processes on the adjoining 5 Flint Street parcel, these constituent detections and pit are considered recognized environmental conditions.
- **REC #8.** O'Brien & Gere evaluated Stantec, Inc.'s (Stantec's) *Phase I Environmental Site Assessment, 15 Flint Street, Rochester, New York,* dated April 2008 (as described in Section 2.2.7). Based on the information presented within indicating several potential sources of contamination in the area

related to the former Vacuum Oil Refinery and other industrial operations including: the former grease manufacturing building and railroad sidings situated on the property boundary of the 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue; former oil storage tanks, former kerosene or naphtha storage tanks; potential former gasoline storage tanks; the former presence of an overhead trestle that potentially conveyed crude oil running across the adjoining off Site 5 Flint Street and 15 Flint Street parcels and the Site parcel identified as 1315 S. Plymouth Avenue; the former presence of an automobile junkyard which was situated along the property boundary with the Site parcel identified as 1315 S. Plymouth Avenue, the indication that petroleum-impacted soil is on Site; the potential for buried wastes associated with historic operations; soil and groundwater analytical results exceeding TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (as detailed herein) in the area related to the former Vacuum Oil Refinery and other industrial operations; and the fact that the adjoining off Site 15 Flint Street parcel is both topographically and hydraulically upgradient, these potential sources of contamination and constituent detections are considered recognized environmental conditions.

- REC #9. Stantec's April 2008 Phase I ESA report states that sampling conducted by the NYSDEC in 1999-2000 on City-owned land to the east and south (*i.e.*, the Site) indicated "widespread" petroleum contamination in surface soil, subsurface soil, and groundwater. The report also states that two groundwater monitoring wells located on this parcel detected significant petroleum contamination, and as such, represents a recognized environmental condition.
- REC #10. Stantec's April 2008 Phase I ESA report provides information on a nearby parcel, 31 Riverview Place, formerly used as a dry cleaner. The drycleaning operations are dated as approximately 1929 through 1941. The report states that this parcel may be hydraulically upgradient, and could potentially affect groundwater which may migrate to 15 Flint Street. The EDR report also indicates another location, addressed as 37 Riverview Place (located both topographically and hydraulically upgradient from the Site) as a former drycleaners (1940). Upon research, the address of 37 Riverview Place appears to be residential; indicating the likelihood that the address listed in the EDR report is incorrect. Most likely the address of 37 Riverview Place is attributed to the drycleaning operations identified as 27-31 Riverview Place. The potential presence of historic drycleaning operations including the potential use of solvents, and the potential for groundwater migration onto the Site represents a recognized environmental condition.
- REC #11. Based on O'Brien & Gere's review of Stantec's *Phase I Environmental Site Assessment, 5 Flint Street, Rochester, New York,* dated August 2008 (as described in Section 2.2.7) the potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial operations (*i.e.,* former oil storage tanks situated on the adjoining off Site 5 Flint Street parcel, petroleum-contaminated soil on this adjacent property at 5 Flint Street, potential for on Site buried wastes associated with previous Site operations on the adjoining off Site 5 Flint Street parcel, former buildings [paint shop drum wash houses, engine room, railroad yards/sidings] on the adjoining off Site 5 Flint Street parcel), the former storage of hazardous materials on the adjoining off Site 5 Flint Street parcel, and the fact that the adjoining off Site 5 Flint Street parcel is hydraulically upgradient from the northern portion of the Site, are considered recognized environmental conditions.
- REC #12. Based on O'Brien & Gere's review of LaBella Associates, PC's (LaBella's) *Data Summary Package, Phase II ESA Subsurface Investigation, Former Vacuum Oil Refinery Site, 15 Flint Street, Rochester, New York,* dated October 2008 (as described in Section 2.2.7) the potential sources of contamination in the area related to the former Vacuum Oil Refinery and other industrial operations including the former grease manufacturing and railroad sidings situated near the property boundary between the 15 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue, the forensic analysis results indicating that the "fingerprint" is indicative of the process of refining crude oil for the production of kerosene which was historically conducted as part of refinery operations, the presence of PCBs in subsurface soil; VOCs and SVOCs in subsurface soil and groundwater; and metals in subsurface soil above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria

(groundwater) (with the adjoining 15 Flint Street parcel being located both topographically and hydraulically upgradient) are considered recognized environmental conditions.

O'Brien & Gere prepared a Project Oversight Management Plan Services Report, Former Vacuum Oil **REC #13.** Refinery Site Rochester, New York NYSDEC Spill No. 0370583, DEO PSA Agreement No. 031534, dated October 10, 2008 (as described in Section 2.2.7). O'Brien & Gere provided part time, third party, oversight to field investigation activities of GES (working on behalf of Roux and ExxonMobil) and oversight of LaBella on behalf of the City, involving a subsurface investigation in which 18 temporary groundwater monitoring wells were installed. Soil samples and groundwater samples were collected. Analytical results indicate the presence of subsurface soil (one or more metals, VOC, and/or SVOC exceedances at one location on the 15 Flint Street parcel, at one location within the former grease manufacturing building footprint on the 15 Flint Street parcel, at one location on the southern adjacent parcel south of 13 Cottage Street in the vicinity of the former sludge pit, at one location on the northern side of the Site parcel identified as 1315 S. Plymouth Avenue, at two locations on the Site parcel identified as 1315 S. Plymouth Avenue, near the property boundary with the 15 Flint Street parcel [one located south of the former grease manufacturing building and one located in the vicinity of the former "Barrel Run"], at one location near the center of the Site parcel identified as 1315 S. Plymouth Avenue, at one location near the south-central side of the Site parcel identified as 1315 S. Plymouth Avenue, and at one location on the Site parcel identified as 1315 S. Plymouth Avenue near the southern corner of the adjoining 15 Flint Street parcel where historic bulk storage tanks were situated) and groundwater contamination (one or more pesticide, PCB, VOC, and/or SVOC exceedances at one location within the former grease manufacturing building footprint on the 15 Flint Street parcel, at one location near the eastern property boundary between the 5 Flint Street parcel and the Site parcel identified as 100 Riverview Place, at one location on the southern side of the Site parcel identified as 1315 S. Plymouth Avenue, and at one location on the Site parcel identified as 13 Cottage Street) above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (with the adjoining 15 Flint Street parcel being topographically and hydraulically upgradient). Through forensic analysis, the soil boring sample was found to contain medium to high boiling compounds indicative of a middle distillate such as kerosene as well as a high boiling material such as mineral oil. In addition, the kerosene material in the sample was found to have undergone advanced biological degradation consistent with the historic release. Analytical detections of metals, VOCs, and SVOCs above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) represent a recognized environmental condition.

**REC #14.** O'Brien & Gere evaluated Roux Associates, Inc. (Roux's) Subsurface Investigation Summary Report, Former Vacuum Oil Company Refinery Area, dated January 12, 2009 (as described in Section 2.2.7). Results of the investigation found that based on a comparison of the soil analytical results to the NYS RSCOs, VOC exceedances were observed at three locations on Site (two locations on the Site parcel identified as 13 Cottage Street and one location on the Site parcel identified as 102 Violetta Street) and eight off Site locations (six locations on the northwestern adjoining 15 Flint Street parcel and two locations on the 5 Flint Street parcel); SVOC exceedances were observed at 12 locations on Site (three locations on the Site parcel identified as 13 Cottage Street, four locations on the Site Parcel identified as 102 Violetta Street, one location on the Site parcel identified as 1 Cottage Street, three locations on the Site parcel identified as 1315 S. Plymouth Avenue, and one location on the property boundary between the 5 Flint Street parcel and the Site parcel identified as 1315 S. Plymouth Avenue), seven locations off Site (two locations on the adjoining 5 Flint Street parcel and five locations on the adjoining 15 Flint Street parcel), and other locations across the former refinery footprint; pesticide/PCB exceedances were observed at two locations on Site (two locations on the Site parcel identified as 13 Cottage Street) and two locations off Site (one location on the adjoining 5 Flint Street parcel and one location on the adjoining 15 Flint Street parcel); and several PP-13 total metals (at locations across the Site and adjoining properties) were detected at concentrations at or above TAGM #4046 SCOs (soil). Based on a comparison of the groundwater analytical results to 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater), VOC exceedances were observed at three

locations on Site (one location each on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, and 102 Violetta Street) and 12 locations off Site (four locations on the adjoining 5 Flint Street parcel, six locations on the adjoining 15 Flint Street parcel, and two locations on the southern adjoining parcel south of 13 Cottage Street in the area of the former sludge pit); SVOC exceedances were observed at two locations on Site (one location on the Site parcel identified as 13 Cottage Street and one location on the property boundary between the Site parcel identified as 1315 S. Plymouth Avenue and the adjoining 5 Flint Street parcel) and six locations off Site (three locations on the adjoining 5 Flint Street parcel and three locations on the adjoining 15 Flint Street parcel); pesticide/PCB exceedances at two locations on the adjoining 15 Flint Street parcel; and metals exceedances were observed at six on Site locations (two locations on the Site parcel identified as 13 Cottage Street, one location on the Site parcel identified as 102 Violetta Street, two locations on the Site parcel identified as 1315 S. Plymouth Avenue, and one location on the property boundary between 1315 S. Plymouth Avenue and the adjoining 5 Flint Street parcel) and three off Site locations (two locations on the adjoining 5 Flint Street parcel and one location on the adjoining 15 Flint Street parcel) at concentrations at or above TOGS 1.1.1 criteria (groundwater). The soil and groundwater exceedances indicating contamination above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) (with the adjoining 15 Flint Street parcel being topographically and hydraulically upgradient) represent a recognized environmental condition.

- REC #15. Based on historical documentation container storage areas were noted and potentially mismanaged. Containers (*e.g.*, wooden barrels, tin cans, and drums) for kerosene, naphtha, and finished lubricants were stored and manufactured by the former oil refinery. A mismanaged approximate 1,500 gallon empty UST observed near the northwest corner of the Site parcel identified as 13 Cottage Street as described in Section 2.7 is an example of container mismanagement. Historical descriptions of mismanaged containers is a considered a recognized environmental condition.
- REC #16. As noted in Roux's January 12, 2009 report, in June 2008 LaBella encountered (and subsequently disposed of) approximately 100 pounds of asbestos material during test pit activities on the northwestern adjoining 15 Flint Street parcel. Based on the age of the historic features on site, the depiction of a building "covered with asbestos" on the 1892 Sanborn® Map on the Site parcel identified as 1315 S. Plymouth Avenue, the historic presence of ACMs indentified in the Roux report, and the potential for fill and buried demolition debris to contain ACM, recognized environmental conditions were noted with respect to ACM.
- REC #17. Documented disposal of "waste oil" and the "burn pit;" the depiction of disturbed areas on southwestern adjoining parcels and the Site parcels identified as 1315 S. Plymouth Avenue, 69 Cottage Street, and 75 Cottage Street; MCDOH documentation indicating the presence of a petroleum sludge pit located on the southern adjacent parcel south of 13 Cottage Street, the identification of the Site as a confirmed waste site, and the potential for several additional sludge pit locations on the southern portion of the Site and/or southern adjoining parcel are considered recognized environmental conditions with respect to on Site waste disposal or landfilling.
- REC #18. Recognized environmental conditions were noted with respect to solid waste at the Site, specifically the observation of several areas of ash/black foundry sand on the Site parcels identified as 1 Cottage Street, 13 Cottage Street, and 102 Violetta Street and the northern 5 Flint Street parcel.
- **REC #19.** Based on the lack of documentation regarding the appropriate removal and disposal of hazardous materials, recognized environmental conditions were noted with respect to former oil refinery hazardous waste generation.
- **REC #20.** Documentation reviewed in Section 2.2.7 mentions high concentrations of soil gas, with TPH in many locations throughout the Site and chlorinated VOCs in a small area of the Site parcel identified as 102 Violetta Street. As such, this is considered a recognized environmental condition.
- **REC #21.** Former Vacuum Oil, stated as being located near Flint Street and Exchange Street, was listed on the NY Spills database, Spill Number 0370583. The detail indicates that address as 5 Flint Street, the northern adjoining parcel. A spill was reported on January 26, 2004 as having occurred on April 13,

2001. The NYSDEC discussed status of the property and the need for subsurface investigation with ExxonMobil. ExxonMobil was issued a STIP for performing the investigation, and subsequently various investigation work plans were submitted by ExxonMobil to the NYSDEC. The detail also states that a Phase II data summary package was submitted to the NYSDEC by LaBella. The "Remarks" section indicates that SVOCs and BTEX were detected in surface soil, subsurface soil, and groundwater above NYSDEC standards on a 24 acre portion of the Former Vacuum Oil Refinery, as performed by the NYSDEC Hazardous Waste Remediation Section. Due to the location of this listing (being situated hydraulically upgradient from the northern portion of the Site), and the history of the former Vacuum Oil Refinery site, this listing may have an impact on the subject property. As such, this is a recognized environmental condition.

- REC #22. An unaddressed location identified as "Former Vacuum Oil, Cottage Street." is listed as a Hazardous Substance Waste Disposal Site (HSWDS) from 1866 to 1936. The database states that metals, VOCs, and SVOCs, were disposed of at this location. The site code is listed as "leaking tanks, drums, lagoons, or other containers." The potential presence and on Site disposal of hazardous substances without documentation of remediation and/or removal is a recognized environmental condition.
- **REC #23.** 5 Flint Street and 15 Flint Street, located on the northern adjoining parcel and northwestern adjoining parcel, respectively, were listed on the US Brownfields database and NY Spills databases. A note in the EDR report indicates that ExxonMobil and the City are investigating the Site in relation to the former Vacuum Oil Refinery. The EDR report stated the City submitted a BCP Application for both 5 Flint Street and 15 Flint Street covering approximately 7.2 acres; however, the City indicated this has not occurred as of the date of this report. The EDR report states that the location is occupied by Flint Auto Wrecking and improved with a building. 15 Flint Street is part of the former Vacuum Oil Refinery site, and, according to the EDR report, this address has been used in the past as a paper company, tool & die companies, a printing company, a university, a scrap bailing company, a junkyard, and government agencies. Spill Number 0750738 was assigned on August 21, 2007 and subsequently closed on November 3, 2008. According to the EDR report, the spill pertains to the excavation of soil by Marks Auto Parts at this location while removing old tires, scrap vehicles, and other miscellaneous debris. The EDR report indicates that this location is vacant with an intended residential and commercial use. The EDR report states that petroleum, chlorinated solvents, SVOCs, VOCs, metals, and pesticides are known and/or suspected contaminants at this location. Due to the location and history of these parcel locations (the adjoining 5 Flint Street parcel being situated hydraulically upgradient of the northern portion of the Site and the adjoining 15 Flint Street parcel being situated both topographically and hydraulically upgradient from a portion of the Site), and subsurface investigations mentioned herein indicating contamination above, this listing may have an impact on the subject property. As such, this is a recognized environmental condition.
- REC #24. 22 Flint Street, located on the northern adjacent property across Flint Street, was listed on the NY Spills and NY Historical Spills databases. Spill Number 8706537 was opened on November 2, 1987 and subsequently closed on November 4, 1987. This spill was related to soil contamination that was found at this location while excavation was being performed by the City Water Bureau. While excavating, #2 fuel oil was observed, and the junkyard, located immediately southwest of 22 Flint Street across Flint Street, is listed in the EDR report as the "suspect." Due to its upgradient location, this listing may have an impact on the subject property. As such, this is a recognized environmental condition.
- REC #25. One location, addressed as 950-984 Exchange Street (located both topographically and hydraulically upgradient from the Site), was listed in the NY SPILLS database as having an area of soil contamination in exceedance of TAGM #4046 SCOs where former Vacuum Oil Refinery petroleum storage tanks were situated (*i.e.*, on the southern side of the 950-984 Exchange Street parcel near the northwest corner of 15 Flint Street). The EDR report also indicated that groundwater monitoring wells were not installed at this location. This location was also listed in the US BROWNFIELDS database. The EDR report indicates that this location was used as a machine shop during the 1960's. The EDR report also indicates this location has been occupied by the Vacuum Oil

Company, Ontario Machine, and XL Total Machine Corp. The EDR report indicates that soil was contaminated with PAHs, petroleum products, and VOCs and each of these are listed as "cleaned up." However, dates of "clean up" and documentation of appropriate disposal are not listed within the EDR report. The City DEQ stated that remediation did occur at this location, was completed to the satisfaction of the NYSDEC, and subsequently the spill was closed with no further action required. However, the potential for migration of past contamination onto the subject property is considered a recognized environmental condition.

**REC** #26. Several former buildings associated with refinery operations were situated on Site parcels (as depicted on one or more years of Sanborn Maps, Plat Maps, and/or Aerial Photographs as detailed within this Phase I ESA report) including two structures labeled as "Pump Ho." on the Site parcel identified as 1315 S. Plymouth Avenue, one situated near the northern side of the parcel near the northeastern corner of 15 Flint Street, and one situated in the approximate middle of the parcel near the southern corner of 15 Flint Street and two railroads that provided service to the former refinery were situated on the Site parcels identified as 1315 S. Plymouth Avenue and 102 Violetta Street. Several former buildings associated with refinery operations were situated on off Site parcels, including a "Barrel Preparation Bldg" depicted on the 5 Flint Street parcel along with a "Cooper Shop," "Paint Shop," "Drum Store Ho.," "Barrel Drying," "Drum Wash Ho.," and several unidentifiable structures. An "Iron Clad Barrel Run on Trestle 20' to 30' High" is depicted as running from the 5 Flint Street parcel, across the northwest side of the Site, through the adjacent 15 Flint Street parcel and northward across Flint Street to the adjacent parcel. The northwestern adjoining parcel identified as 15 Flint Street is depicted as containing a wide variety of structures, and is labeled "Vacuum Oil Company Oil Refining Plant." The previously mentioned barrel run is depicted as running through the 15 Flint Street parcel. A "Grease Mfg Bldg," "Tank Bldg," "C.B.," "Settling Tanks," approximately 16 cylindrical and 14 horizontal "Oil Tanks," a "Wagon Shed," an "Engine Room," a "Still Ho.," a "Gasoline Ho.," "Condensing Tanks," and several additional unidentifiable structures are depicted on the adjacent 15 Flint Street parcel. A "Stave Shed," "Heading & Iron Storage" building, and the Pennsylvania and Erie Railroads are depicted on the Site. The "Paint Shop" referenced above is also depicted as being partially located on the Site parcel identified as 1315 S. Plymouth Avenue. Former aboveground storage tanks (ASTs) were depicted on the immediate adjoining and adjacent parcels as part of the former oil refinery for the storage of large quantities (i.e., historical information indicates storage volumes between 2,000 gallons and 300,000 gallons per storage tank) of petroleum products. The potential presence of contamination from the historic use of the former oil refinery for the storage and manufacture of kerosene, naphtha, finished lubricants, and crude oil; the transportation of these products; the associated disposal excavations and burn pit which have the potential to be located near the structures identified herein; and the constituent detections in both soil and groundwater above TAGM #4046 SCOs (soil) or 6 NYCRR Part 703/TOGS 1.1.1 criteria (groundwater) in the vicinity of former oil refinery structures are considered a recognized environmental conditions.

In addition, an article from August 1901 presented within the 2005 AMEC report states that a "coat of oil" was present on the Genesee River from the "works and extending out, across, and down to the Court St. dam." Other information related to the "coat of oil" was not available The potential for off Site impacts may represent a future business risk with respect to the Genesee River and river sediments off Site.

### 3.3. NECESSITY FOR ADDITIONAL INVESTIGATION

Due to the recognized environmental conditions identified in Section 3.2, further investigation of Site soil and groundwater is recommended. Based on documented presence of constituents both on Site and off Site related to the former Vacuum Oil refinery, automotive junkyard, scrap metal yard, tin can manufacturing, utility lines, and other industrial activities, soil and groundwater samples should be analyzed for TPH, VOCs, SVOCs, metals, PCBs, and pesticides. Sampling activities should be conducted in areas along the property boundaries near historic operations, in areas of historic and current waste disposal, former pits, and areas of historic constituent occurrences.

## Anthony M. DiNardo, PE

**Project Engineer** 

Mr. DiNardo has 12 years of professional experience. He has provided a variety of environmental investigations for residential and commercial properties. He has been involved with data gathering and data preparation for reports and studies along with preparing these reports. As a Project Engineer with O'Brien & Gere, he has conducted Phase I Environmental Site Assessments, Phase II Investigations, and provided construction oversight during Remedial Investigations.

### REPRESENTATIVE PROJECTS

City of Rochester, Remedial Investigation/Alternatives Analysis Project, Seneca Avenue, Monroe County, Rochester, NY, Project Engineer - Conducted a site-wide utility survey at a former manufacturing facility. Prepared portions of a Remedial Investigation/Alternatives Analysis Work Plan involving several on-site soil and groundwater investigation tasks. Conducted soil and groundwater sampling program and prepared electronic searchable database containing analytical laboratory results. Prepared detailed AutoCAD and ArcGIS drawings of groundwater contours. Assisted with the installation of seven sub-surface, one ambient air, five indoor air, and five sub-slab vapor points across the site. Assisted with setup, installation, and observation of SUMMA® canisters during vapor collection. Prepared portions of a Remedial Investigation / Alternatives Analysis. Conducted a subsequent soil vapor intrusion sampling at four properties adjacent to a former manufacturing facility. Prepared letters to property occupants regarding results of vapor intrusion sampling. Prepared Vapor Intrusion Report which included a summary of work conducted on the four properties and a summary of sampling results. Provided oversight during the installation and development of three bedrock groundwater monitoring wells and conducted a subsequent round of groundwater sampling. Conducted hydraulic conductivity testing of several overburden and bedrock groundwater monitoring wells.

City of Rochester, Remedial Investigation/Remedial Design and Corrective Action Plan, South Mount Hope Avenue, Rochester, NY, Project Engineer – Conducted a site-wide utility survey at a former gasoline service station/automobile repair site. Conducted a soil and groundwater sampling program. Prepared detailed AutoCAD and ArcGIS drawings of site data. Provided oversight during the excavation and offsite disposal of approximately 5,100 tons of petroleum-impacted soil/fill. The next phase included the installation of an *in situ* groundwater

### TECHNICAL EXPERTISE

ASTM Phase I/II ESA Training

treatment program which consisted of an oxygen injection system and periodic groundwater monitoring. The work is being completed as a designbuild project. Prepared a remedial construction/closure report and environmental management plan upon completion of field activities. The work was completed as a design-build project.

City of Rochester, Former Vacuum Oil Refinery Site, Monroe County, Rochester, NY, Project **Engineer** – Provided assistance with program management, third-party observation services, and data review of a sub-surface investigation and evaluation of soil and groundwater conditions at a former petroleum refinery. Prepared an electronic searchable database containing soil and groundwater sample analytical laboratory results. Performed thirdparty oversight of subcontractors. Prepared detailed ArcGIS drawings of soil and groundwater sample data. Prepared a Phase I ESA report for eight City-owned parcels totaling approximately 15 acres within the footprint of the former oil refinery. The Phase I ESA was prepared as part of the City's potential Brownfield Cleanup Program (BCP) Application.

### BB&T Capital Partners, II LLC, Optical Manufacturer, Pittsford, NY, Project Engineer –

Prepared a Phase I ESA report for a manufacturer of precision optical components with a variety of processes for a range of applications for commercial, industrial, and military uses. Subsequently conducted a soil vapor intrusion investigation which included the installation of several ambient air, indoor air, and sub-slab vapor points across the site. Assisted with setup, installation, and observation of SUMMA® canisters during vapor collection.

LaBella Associates, P.C., Former Emerson Street Landfill – Vapor Intrusion, Rochester, NY, Project Engineer – Performed site investigations at several locations for the presence of volatile organic compounds and landfill-related gases in buildings located within the footprint of the former Emerson Street Landfill. Also involved with the review of historical research and subsequent site investigation reporting.

**Eastman Kodak Company, U.S. Environmental Protection Agency (USEPA) Reporting Assistance, Rochester, NY, Project Engineer** – Assisted Kodak
with Toxic Substances Control Act (TSCA) reporting
to the USEPA.

NPEC, Inc., Soil Vapor Intrusion Investigation, Rochester, NY, Project Engineer – Conducted a soil vapor intrusion investigation to evaluate existing TCE concentrations in sub-slab vapor and indoor air at a food and spirits manufacturing/distribution facility which included the installation of several ambient air, indoor air, and sub-slab vapor points across the site. Assisted with setup, installation, and observation of SUMMA® canisters during vapor collection; evaluation of analytical data; and preparation of a final report.

NPEC, Inc., Eastman Business Park RCRA Facility Investigation, Rochester, NY, Project Engineer – Conducted an investigation on several existing not-fit-for-use sewer pipe segments and manholes, and corresponding nearby environmental sampling data to evaluate potential subsurface impact. Data was evaluated and a supplemental investigation technical approach was prepared and presented.

New York State Office of General Services (OGS), Warrensburg Department of Transportation (DOT) Tank Pull, Warrensburg, Warren County, NY, Project Engineer – Performed oversight during the removal of two underground storage tanks at a NYSDOT facility. Assisted OGS field personnel with the initial phase of delineating the extent of subsurface petroleum contamination.

New York State Office of General Services (OGS), Willard Firing Range, Seneca County, Willard, NY, Project Engineer – Prepared a Site Characterization Work Plan for a soil and groundwater investigation at a former New York State Department of Corrections pistol and shotgun firing range. Conducted subsequent surface soil, subsurface soil, sediment, surface water, and groundwater sampling.

New York State Office of General Services (OGS), Town of Malone Firing Range, Malone, NY, Project Engineer – Prepared a Site Characterization Work Plan for a soil and groundwater investigation at a former New York State Department of Corrections pistol, rifle, shotgun, and teargas canister firing range.

New York State Office of General Services (OGS), Division of Military Affairs, Geneseo, NY, Project Engineer – Performed underground storage tank removal oversight for a 10,000-gallon #2 fuel oil tank at an active New York State Armory.

Confidential Client, Receptor Evaluations, Passaic and Union Counties, Passaic, Paterson, and Plainfield NJ, Project Engineer – Conducted land use and groundwater receptor evaluations for facilities in Passaic, Paterson, and Plainfield. Work involved identifying groundwater monitoring wells, potable groundwater wells, land uses (specifically "sensitive use" parcels), and groundwater contamination within specified distances of the site. Also generated maps and associated forms depicting this information.

Industrial Client, Receptor Evaluations,
Gloucester County, West Deptford Township, NJ,
Project Engineer – Conducted land use and
groundwater receptor evaluations for a large
petroleum refinery. Work involved identifying
groundwater monitoring wells, potable groundwater
wells, land uses (specifically "sensitive use" parcels),
and groundwater contamination within specified
distances of the site and generating maps and
associated forms depicting this information.

T.Y. Lin International, Erie-Lackawanna
Pedestrian Bridge, Rochester, NY, Project
Engineer – Conducted asbestos and lead-based paint
surveys and associated reporting for the existing,
former Erie-Lackawanna Railroad Bridge located
adjacent to the University of Rochester campus.
Ongoing work includes environmental screening
during the client's clearing, grubbing, and seeding
phase of work.

## Hauser Visioneer LLC, Phase II Environmental Site Assessment (ESA), Macedon, NY, Project Engineer

 Provided oversight during the advancement of soil borings and installation of groundwater monitoring wells and subsequently conducted a soil, groundwater, and surface water sampling program at a manufacturing facility. Prepared a Phase II Environmental Site Assessment Report upon completion of field work.

### Industrial Client, Rochester, NY, Project Engineer

 Provided oversight during the advancement of soil borings and installation of groundwater monitoring wells and subsequently conducted a soil and groundwater sampling program at an industrial/commercial multi-tenant facility. Prepared a Phase II Environmental Site Assessment Report upon completion of field work. Industrial Manufacturer, Project Arapahoe, Multiple U.S. Sites, Project Engineer – Provided environmental due diligence services for several commercial, industrial, and military sites in order to provide an assessment of environmental issues and risks, if any, at each of the sites.

**Industrial Manufacturer, Project EDO, Multiple U.S. Sites, Project Engineer** – Provided review of several Phase I Environmental Site Assessments for completeness regarding environmental due diligence. Prepared subcontractor quotes for drilling and utility locating services at several sites.

**Industrial Manufacturer, Boulder, CO, Project Engineer** – Conducted a Phase I Environmental Site Assessment of a leased portion of commercial property formerly used as office space.

### Kegler Brown Hill & Ritter LPA, Former Ripley Stateline Truck Stop, Ripley, NY, Project Engineer

 Prepared detailed AutoCAD and ArcGIS drawings of groundwater contours and soil and groundwater isoconcentrations. Provided oversight during the advancement of soil borings and installation of groundwater monitoring wells and subsequently conducted a soil and groundwater sampling program. Assisted with preparation of a site investigation report.

County of Orleans Industrial Development Agency, Former Abex Foundry Site, Town of Ridgeway, NY, Project Engineer – Prepared detailed AutoCAD drawings of groundwater contours and conducted a soil and groundwater sampling program at a former foundry site. Prepared a Remedial Investigation / Alternatives Analysis Work Plan involving several onsite soil and groundwater investigation tasks. Conducted a soil, groundwater, surface water, and sediment sampling program at the site.

**Industrial Manufacturer, AutoCAD Drawings, Upstate, NY, Project Engineer** – Prepared several AutoCAD drawings depicting environmental media sample locations at a manufacturing facility.

## Industrial Manufacturer, Title V Air Emissions Inventory, Upstate, NY, Project Engineer –

Conducted a visual inventory of laboratory air emissions sources and updated the facility database as needed for approximately 100 laboratories. Coordinated inventory with individual laboratory owners.

Industrial Manufacturer, Project MINO, Upstate, NY, Project Engineer – Prepared detailed AutoCAD drawings for various aspects of the project including environmental media sampling results, demolition areas, and bid specification materials. Assisted with the preparation of various contractor bid specification documents.

Industrial Manufacturer, Building
Demolition/Expansion, Upstate, NY, Project
Engineer – Prepared detailed AutoCAD drawings for
various aspects of the project including
environmental media sampling results. Prepared a
soil management and sampling plan and conducted
associated soil sampling for excavated materials.

Industrial Manufacturer, Safety Slides, Upstate, NY, Project Engineer – Prepared a series of safety moment slides for toolbox safety meetings. Slides were subsequently developed into a mobile application for client/public use.

### Industrial Manufacturer, Medical Waste Management Plan, Palo Alto, CA, Project Engineer

– Prepared a medical waste management plan for a biosafety level 1 (BSL-1) laboratory working with non-infectious media.

Emerson Power Transmission Corporation, Wastewater Sampling, Ithaca, NY, Project Engineer – Collected wastewater samples and split samples with City of Ithaca personnel from several on-site and off-site locations, treatment systems and manholes, using 24-hour automatic composite sampling equipment for a 110-acre steel product manufacturing facility on a biannual basis.

Emerson Power Transmission Corporation, Quarterly Calibration Observations, Ithaca, NY, Project Engineer – Observed calibration of pH meters and ultrasonic v-notch weir flow sensors for three on-site wastewater treatment systems at a 110acre steel product manufacturing facility on an ongoing quarterly basis.

Emerson Power Transmission Corporation, Air Emission Inventory and Permitting, Ithaca, NY, Project Engineer – Conducted a site visit and prepared inventory of air emission points for a 110-acre steel product manufacturing facility.

Emerson Power Transmission Corporation, Spill Prevention, Control and Countermeasure Plan, Ithaca, NY, Project Engineer – Prepared a detailed Spill Prevention, Control, and Countermeasure Plan for a 110-acre steel product manufacturing facility containing approximately 85,000 gallons of oil.

## **Emerson Power Transmission Corporation, Spill Prevention Report, Ithaca, NY, Project Engineer –**

Prepared Spill Prevention Report for a 110-acre steel product manufacturing facility containing a 2,000-gallon anhydrous ammonia tank.

Baldwin Richardson Foods Company,
Construction Oversight, Wayne County, East
Williamson, NY, Project Engineer – Conducted daily
site visits to observe cleanout of existing wastewater
treatment facility lagoon and construction /
installation of new earthen berm and associated
wastewater treatment system piping. Prepared
construction report and as-built AutoCAD drawings of
the work performed at the facility.

Baldwin Richardson Foods Company, Macedon, NY, Project Engineer – Conducted a Phase II Environmental Site Assessment at a 14.8 acre manufacturing facility, including a 90,000-square foot tool and die building. Conducted a soil and groundwater sampling program. Conducted dye testing of unknown piping to evaluate potential connections to storm/sanitary sewer utilities.

### Industrial Client, Geological Drawings, West Deptford Township, NJ, Project Engineer –

Prepared detailed AutoCAD drawings of isoconcentration plumes, contour maps, and cross-sections for groundwater, liquid non-aqueous phase liquid, and several chemical compounds at a petroleum refinery.

### Industrial Client, Chemical Spill Drawings, West Deptford Township, NJ, Project Engineer –

Prepared detailed AutoCAD drawings for site-wide chemical spills and analytical laboratory data at large petroleum refinery along the Delaware River. Providing support with soil and groundwater investigations and remedial efforts.

### Industrial Client, Oxygen Injection Systems, West Deptford Township, NJ, Project Engineer –

Performing an ongoing evaluation of the performance and operation of three, multi-point oxygen injection systems located at a large petroleum refinery. The oxygen injection systems are intended to address dissolved phase MTBE and TBA observed in groundwater at the site.

### Industrial Client, Groundwater Reports, West Deptford Township, NJ, Project Engineer –

Prepared annual groundwater reports detailing semiannual gauging and groundwater sampling activities at a large petroleum refinery. Included the preparation of several AutoCAD/ArcGIS drawings.

**Icon International, Phase I Environmental Site Assessment, Jamestown, NY, Project Engineer** –
Conducted a Phase I Environmental Site Assessment for a 0.11-acre vacant lot using ASTM standards.

**Konar Properties, Environmental Observations, Macedon, NY, Project Engineer** – Conducted an environmental observation for a 14.8-acre manufacturing facility, including a 90,000-square foot tool and die building.

GAF Materials Corporation, Phase II
Environmental Site Assessment, Erie, PA, Project
Engineer – Collected groundwater samples using
low-flow techniques for six shallow groundwater
monitoring wells at a former manufacturing facility
along Lake Erie.

**EV Lewis, Impacted Soil Removal, Honeoye Falls, NY, Project Engineer** – Provided waste characterization sampling and oversight during the removal of petroleum-impacted soils from a former airport.

Confidential Client, Nassau County, Jimmy's Dry Cleaners, Roosevelt, NY, Project Engineer – Performed detailed feasibility study cost analysis for several remedial alternatives for groundwater remediation at a dry cleaning facility.

Monroe County, Champion Photochemistry Chemical Bulk Storage Project, Rochester, New York, Project Engineer – Involved with updating the CBS permit and Spill Prevention Report for a 14-tank facility.

### **PRIOR TO O'BRIEN & GERE**

Confidential Client, Rochester, NY, Project
Engineer – Conducted sub-surface vapor intrusion
sampling following NYSDOH guidelines for a
petroleum-impacted site. This consisted of
procurement and oversight of subcontractor during
the installation of six sub-surface vapor points.
Provided setup and observation of SUMMA® canisters
during collection of samples (included ambient air
and sub-surface within a stone-covered parking lot).

Confidential Client, Rochester, NY, Project
Engineer – Provided oversight during a UST
investigation and subsequent groundwater
monitoring well installation. Collected soil samples
and performed low-flow groundwater sampling.
Conducted sub-slab vapor intrusion sampling
following NYSDOH guidelines and interfaced with
county and state regulatory agencies.

Confidential Client, Rochester, NY, Project Engineer – Conducted indoor air and sub-slab sampling following NYSDOH guidelines for a site impacted with chlorinated solvents. Provided setup, installation, and observation of SUMMA® canisters during collection of samples (included ambient, indoor air, and sub-slab within a basement).

### City of Rochester, Brooks Landing Redevelopment, Rochester, NY, Project Engineer –

Provided third-party oversight on behalf of the City during the excavation and removal of hazardous soils at a site adjacent to the Genesee River, and also during the installation of utility conduits for a residential/commercial development.

Town of Gorham, Former Ford Garage, Gasoline Remediation, Gorham, NY, Project Engineer – Assisted with remediation of a gasoline-impacted groundwater plume utilizing microbes and oxygen release compounds in 20 shallow groundwater monitoring wells. Conducted low-flow sampling of the groundwater monitoring wells.

Monroe County Pure Waters, Sanitary Sewer Construction, Chili, Henrietta, and Ogden, NY, Field Inspector – Provided oversight on behalf of Monroe County during the construction and installation of new residential sanitary sewer systems by various contractors. Conducted field testing of sewers including visual observation, air pressure testing, water leakage testing, and deflection testing. Responsible for keeping field logs of site activities.

Various Confidential Clients including Residential Home Owners, Public Institutions, Petroleum Facilities, Banks, and other Commercial Entities, Phase I and II Environmental Site Assessments, IN, MI, and NY, Project Engineer/Project Manager — Conducted background research, report writing, and soil/groundwater sampling for a wide range of residential and commercial properties and parcel sizes, including former railroad depots, gasoline service stations, oil-changing facilities, automotive repair facilities, vacant farmland, vacant wooded land,

Christmas tree farms, single- and multi-family homes, apartment complexes, retail shops, national hardware store chains, lumber companies, and automobile scrapyards using appropriate ASTM standards.

Various Clients, Percolation Tests, Multiple Sites within IN and MI, Project Manager – Conducted soil percolation tests for residential, commercial, and municipal properties.

Various Clients, Geotechnical Investigations, Multiple Sites within IN and MI, Project Manager –

Conducted numerous geotechnical investigations for residential and commercial properties. The investigations consisted of selecting boring locations, logging soil descriptions, and evaluating soil bearing capacities. Investigations were conducted using a variety of hand tools and oversight of drilling subcontractors.

Good Hospitality, Inc., Texas Township, MI, Project Manager – Conducted percolation tests, sieve analyses, geotechnical investigations, and Phase I Environmental Site Assessments at various hotel development sites.

Edgewater Automation, Inc., Former Auto
Specialties Company Site, Baseline Environmental
Assessment, St. Joseph, Berrien County, MI,
Project Manager – Assisted with the preparation of a
Baseline Environmental Assessment for 0.7 acres of a
132-acre, former malleable iron foundry site with
historical manufacturing of cast iron automobile
parts, hydraulic jacks, mechanical jacks, and
fabrication/assembly of brake shoes.

KRF, Former Bangor Train Depot, Baseline
Environmental Assessment, Bangor, Van Buren
County, MI, Project Manager – Conducted a Baseline
Environmental Assessment at a former railroad train
depot historically used for coal storage and bulk fuel
petroleum storage.

Pokagon Band of Potawatomi Indians, Preliminary Soil Investigation, LaGrange Township, MI, Project Manager – Conducted a soil investigation at a 300-acre development site.

Confidential Client, Brockport, NY, Project
Engineer – Provided oversight during groundwater
monitoring well installation and interfaced with state
regulatory agencies. Logged soil descriptions and
collected both soil and groundwater samples.
Prepared groundwater contour maps using Surfer
software. Provided oversight of subcontractors during

soil excavation and the introduction of oxygen release compounds.

Drake Builders, LLC. and Gierczyk Constructors, Inc., Geotechnical Investigations, (Chesterton, Mishawaka, and Valparaiso, IN; New Buffalo, MI), Project Manager – Conducted numerous geotechnical investigations for a large Midwest developer of residential and commercial properties. The investigations consisted of selecting boring locations, logging soil descriptions, and evaluating soil bearing capacities. Investigations were conducted using a variety of hand tools and oversight of drilling subcontractors.

Areté 3, Ltd. and J. Carroll Realty, Inc.,
Geotechnical Investigations, New Buffalo, MI,
Project Manager – Conducted Phase I Environmental
Site Assessments and geotechnical investigations for
two commercial developers at a proposed four-story
townhouse development and a proposed three-story
residential structure. The geotechnical investigations
consisted of selecting boring locations, logging soil
descriptions, and evaluating soil bearing capacities.
Investigations were conducted using a variety of hand
tools and oversight of drilling subcontractors.

Village of Edwardsburg and Village of Cassopolis, Wellhead Protection Program, Cass County, MI, Project Manager – Managed the Wellhead Protection Program for two municipalities during the background research and data collection phases. This work involved locating potential sources of groundwater contamination within the public water supply delineation area. Managed the release of information to the public via mailers and newspaper articles. Coordinated municipal team member meetings. Coordinated project steps with Michigan Department of Environmental Quality (MDEQ) management. Completed various grant application documents on behalf of the municipalities.

Village of Cassopolis, Abandoned Well
Management Program, Cass County, MI, Project
Manager – Provided quarterly financial statements
and progress reports to the MDEQ. Prepared
Advertisements for Bids on behalf of the Village for
the abandonment of a drinking water supply well.
Prepared press releases to local newspapers
regarding the Abandoned Well Management Program.
Conducted door-to-door search for groundwater
wells within the Wellhead Protection Area.

City of Watervliet, Abandoned Well Management Grant Application, Berrien County, MI, Project Manager – Prepared Abandoned Well Management Grant Application, Work Plan, and quarterly financial status reports to the MDEQ on behalf of municipality.

Village of Three Oaks, Abandoned Well Management Grant Application, Berrien County, MI, Project Manager – Prepared quarterly financial status reports, press releases to local newspapers, public notices, door-to-door search for groundwater wells within the Wellhead Protection Area, Advertisements for Bids for the abandonment of a drinking water supply well, and quarterly progress reports to the MDEQ on behalf of municipality.

Village of Marcellus, Wellhead Protection
Program Grant Application, Marcellus, Cass
County, MI, Project Manager – Prepared Wellhead
Protection Program Grant Application, Work Plan,
press releases to local newspapers, quarterly
progress reports, and Wellhead Delineation Report.
Conducted aquifer tests on behalf of municipality.

Thimm's Grocery, UST Closure Report, Project Manager – Completed a Leaking Underground Storage Tank Closure Report for the MDEQ.

Szatkowski, Baseline Environmental Assessment, East Michigan Avenue, Paw Paw, Van Buren County, MI, Project Manager – Conducted a Baseline Environmental Assessment for a 1.2-acre commercial property with known groundwater contamination.

Andrews University, Berrien Springs, MI, Project Manager – Conducted air emissions reporting for University using Michigan Air Emissions Reporting System.

**Soil Erosion and Sediment Control Monitoring, Berrien County MI, Project Manager** – Provided oversight at several development sites to ensure compliance with MDEQ Stormwater Management regulations.

Southwestern Michigan College, Asbestos
Sampling and Geotechnical Investigation,
Dowagiac, Berrien County, MI, Project Manager –
Prepared letter report detailing the findings of
asbestos samples collected at the college. Conducted
geotechnical investigation and prepared letter report
for proposed two-story structure with basement at
the college.

Confidential Client, Wetland Delineation, 42<sup>nd</sup> Street, Kalamazoo County, MI, Project Manager – Assisted in delineating wetlands for a potential road construction project. This involved investigating the area for wetland indicators including vegetation, hydrology, and soil type.

Analytical Environmental Services, Sound Study, Gun Lake Casino, Wayland Township, MI, Project Manager – Conducted a sound study at a casino development site. Determined that sound generated during the short-term construction and development of the casino would not have a significant impact on the surrounding area.

Brian Lintner, Underground Storage Tank Removal Oversight, Benton Harbor, MI, Project Manager – Provided oversight and sampling during the removal of a 1,000-gallon fuel oil underground storage tank at a residential property.

Lake Pines Path, Underground Storage Tank Removal Oversight, Berrien County, St. Joseph, MI, Project Manager – Oversight and sampling during removal of 1,000-gallon fuel oil underground storage tank at a residential property.

**Fernwood Botanical Gardens, Berrien County, Berrien Springs, MI, Project Manager** – Oversight and sampling during removal of 300-gallon gasoline underground storage tank. Prepared a UST Assessment Report.

**Various Industrial and Chemical Clients, Western NY, Civil Engineer** – Performed chemical bulk storage tank ultrasonic thickness testing and secondary containment evaluations for a variety of industrial, chemical, and manufacturing clients.

Confidential Client, Landfill Permit Application, PA, Civil Engineer – Assisted in preparing permit application for a Class I Residual Waste Landfill including background research, site reconnaissance, liner design, and volume design calculations per applicable Pennsylvania Department of Environmental Protection regulations.

## Kevin D. Ignaszak, PE

Senior Project Manager

Mr. Ignaszak has more than 19 years of professional environmental experience. As a Senior Project Manager with O'Brien & Gere, he directs and supervises technical staff on major projects. He assumes responsibility for preparation and administration of project budgets and schedules, and periodically reviews billing status. Mr. Ignaszak selects project teams and coordinates assignments and schedules of work, and assigns technical and administrative responsibilities. He also is responsible for budgetary responsibility to the client and for direct client interaction to maintain delivery of the contract designs. He continues to maintain client contact following project completion.

### REPRESENTATIVE PROJECTS

City of Rochester, Energy Efficiency Programs under Department of Energy (DoE) Energy Efficiency and Conservation Block Grant (EECBG) Program, NY, Project Manager – City-wide energy program involving 200+ facilities. Interactive process utilizing a facilitated strategy session to obtain county consensus throughout multiple departments for utilization of the \$2.5M DoE EECBG. Developed EECBG strategy implementing benchmarking and auditing; energy conservation measures; retro-commissioning; renewable energy projects; energy web-site; revolving loan fund for energy efficiency projects; energy, sustainability and climate change master plan.

City of Rochester, NYSERDA FlexTech Study, Parking Garage Facilities Energy Audit, NY, Project Manager – Project Manager responsible for client management, coordination, communications, budget, schedule and review of deliverables. Project consisted of energy audits on five parking facilities with the City of Rochester. The project includes an energy evaluation to identify energy conservation measures pertaining to the lighting, elevators, ventilation, and security of the facilities. Technical potential was assessed to determine the feasibility of the upgrades; and economical analysis was performed in order to estimate the cost savings, capital costs, and simple payback of the efficiency upgrades.

T.Y. Lin International, Erie-Lackawanna Pedestrian Bridge, Rochester, NY, Project Manager – Conducted asbestos and leadbased paint surveys and associated reporting for the existing, former Erie-Lackawanna Railroad Bridge located adjacent to the University of Rochester campus.

8-hr Hazardous Waste Site Supervisor Training, OSHA

**County of Orleans Industrial Development Agency** (COIDA), Medina, NY, Client Manager - Client manager for an environmental restoration project in Orleans County that will be completed for COIDA. Project involves completion of a remedial investigation/alternatives analysis (RI/AA) study at the sites. The objective of the RI/AA will be to characterize site conditions and develop remedial action objectives and general response actions to the basis of site contamination issues and the COIDA's redevelopment plans for the site. Also assisted COIDA on completion of a fast track Phase II investigation. securing permits, completion of SEQRA, completion of endangered flora and fauna studies, and evaluated potential wetlands issues for the lease of sub-parcel of the site to allow an adjacent industrial facility to expand via the construction of a new building.

Norampac Industries, Inc., State Pollutant **Discharge Elimination System (SPDES) Permit** Application Support, Niagara Falls, NY, Project Manager - Aided the Client in submitting a SPDES permit application in order to reduce its overall costs for discharging to the publicly owned treatment works (POTW). Provided an acceptable demonstration of the dimensions of the near-field mixing zone and the estimated dilution factor (using CORMIX modeling) for the proposed discharge. Prepared a revised SPDES (Form 2c) permit application, an Article 15 Protection of Waters Permit (Joint Permit Application), a Long Environmental Assessment Form, and a preliminary outfall design. Also provided a pipeline alternatives evaluation in order to identify the more cost-effective method of transporting the effluent to the outfall, identify potential permitting requirements for each alternative, and provide a budgetary cost comparison to aid in choosing a discharge alternative.

City of Rochester, South Mount Hope Avenue Cleanup, Rochester, NY, Project Manager – Work underway on a petroleum spill site remediation project that includes a remedial investigation, remedial design and Corrective Action Plan generation. To date, 5,000 tons of petroleum impacted soil has been excavated and disposed of offsite. The next phase includes the installation of an *in situ* groundwater treatment program which consists of an oxygen injection system and periodic groundwater monitoring. Work is being completed as a designbuild project.

City of Rochester, 24 Seneca, Rochester, NY, Project Manager – Work underway on this Site Investigation and Remedial Alternatives Analysis being performed on a brownfield Site pursuant to a NYSDEC ERP Grant. Site Investigation to date includes asbestos, PCB wipe sampling, collection and analysis of surface, subsurface and groundwater samples, soil gas and data validation. The draft RI/AA Report is currently being reviewed by the NYSDEC.

Monroe County, Renaissance Square Redevelopment Project, Rochester, NY, Project Manager - Completed the schematic design for the demolition of 10 multi-story buildings, two parking garages, two pedestrian skywalks, two utility tunnels, and various utilities. Developed a Demolition Program Report, which included identifying buildings, structures, and utilities designated to remain or to be demolished/removed; collecting and reviewing available documentation and data related to the demolition program; conducting a walkthrough of buildings and structures to review existing conditions; summarizing applicable laws and regulations; completing a demolition program schematic design; developing a preliminary demolition schedule; identifying assumptions; and identifying additional data requirements necessary for the design of the demolition program.

Confidential Client, Former Petroleum Refinery and Terminal, Clay, NY, Project Manager – Provided brownfield regulatory and funding options, opinion regarding potential options, preferred redevelopment scenario, demolition cost estimate schedule, and proposed outline presenting next steps to be taken moving forward to redevelop the Site.

City of Rochester, Former Vacuum Oil Refinery, City of Rochester, NY, Project Manager – Providing Brownfield Opportunity Area program support, program management and third party observation services at this former, 58 acre petroleum refinery. Work primarily involves providing these services during a subsurface investigation being conducted by Exxon Mobil. Project is currently underway.

Confidential Oil Company, Active Petroleum Refinery, West Deptford, New Jersey, Project Manager – Providing ongoing environmental consulting services since January 2007, which include:

NJDEP ISRA case team interaction and management services

- Soil and groundwater investigation and sampling services
- Remedial system pilot test services
- Remedial design services
- Remedial system air compliance support
- Operation and Monitoring of remedial systems

## Confidential Client, Petroleum Spill Site Remediation, Honeove Falls, NY, Project Manager

 Providing turn-key engineering and construction services regarding a petroleum spill site remediation project. Work includes removal of an underground storage tank, removal of petroleum contaminated soils, collection of groundwater samples and development of a Remedial Action Plan.
 Contaminated soils to be treated on-site utilizing an *ex situ* bioremediation treatment cell.

Monroe County Water Authority, Denise Reservoir, Waste Characterization and Drum Removal, Pittsford, NY, Project Engineer – Provided turn-key engineering and construction

Provided turn-key engineering and construction management regarding waste characterization and disposal of orphan drums containing a hazardous waste.

Norampac, Discharge Permit, Niagara Falls, NY, Project Manager – Prepared the application of a State Pollutant Discharge Elimination System (SPDES) for the discharge of pretreated processing paper/pulp mil wastewater into the Niagara River. Application submitted to the New York State Department of Environmental Conservation. Project is currently underway.

Confidential Client, Litigation Technical Support, Yates County, NY, Project Manager – Provided litigation technical support to a defendant regarding a Phase II investigation and contamination in fill materials.

New York State Department of Environmental Conservation, Interim Remedial Measure, Rochester, NY Environmental Engineer – Managed a Geoprobe soil sampling program with soil samples for laboratory analysis. Performed construction oversight during the excavation of polychlorinated byphenol (PCB) contaminated soils and collected confirmatory and waste characterization soil samples. Soils loaded and transported off-site to a permitted landfill. Prepared summary report memos and plan view drawings using AutoCAD.

Confidential Client, Due Diligence Investigation, Devens, MA, Environmental Engineer – Assisted in performing a Phase I Environmental Site Assessment (ESA) walkthrough of the property and historical document review to potentially identify contamination issues associated with a former military facility.

Northrop Grumman Newport News, Remediation System, Newport News, VA, Environmental Engineer – Provided engineering support for a proposed remediation system to collect and remove VOCs generated from the treatment of a soil and groundwater contamination plume. Prepared a conceptual design for a proposed soil vapor extraction system to be used in connection with ozone, steam injection or bioslurping systems. System summary write-up included research and system description, potential permits necessary, operation and monitoring, estimated cost summary and preparation of schematic drawings using AutoCAD.

Confidential Client, Diligence Investigate, Multiple Sites, Project Manager – Managed a multi disciplinary team situated within several offices to complete a due diligence project on a fast track basis for this confidential military contractor. Work included the following at multiple sites across the eastern United States:

- Phase I ESAs
- Phase II ESAs
- Radon sampling programs
- Asbestos sampling programs
- Environmental Health and Safety compliance audits
- Preparation of FIN-47 estimates
- Remedial cost estimates

Baldwin Richardson Foods Co., Wastewater
Treatment Facility Upgrades, East Williamson, NY,
Project Manager – Provided turnkey design-build
services to upgrade an existing wastewater treatment
facility (WWTF). The existing treatment system was
oversized and in need of upgrades. The overall
success of this project was attributable to O'Brien &
Gere's ability to provide the design, procurement, and
construction services to support the overall goals of
the project and sole-source responsibility to deliver

the project in accordance with BR Foods expectations. Aspects of the project included:

- Wastewater treatment facility engineering report
- Identification of the hydraulic and organic loading capacities
- Identification and evaluation of the WWTF's operating parameters
- Design services
- Operational evaluation and pump sizing
- Construction-phase engineering assistance
- Construction services
- SPDES Permit application preparation

#### PRIOR TO O'BRIEN & GERE

#### **Environmental Services**

#### **Environmental Site Management**

City of Rochester, 399 Gregory Street, Rochester, NY, Project Engineer – Performed oversight of a remedial design investigation pursuant to a NYSDEC Brownfield grant at a former automobile service and collision repair facility located at 399 Gregory Street for the City of Rochester. Investigation included utility dye testing, advancement of soil borings, installation of groundwater wells, indoor air sampling, and laboratory testing of soil and groundwater samples. Also co-presented with the City of Rochester at public participation meetings.

New York State Department of Transportation, Route 17 and Interstate 390 Interchange, Future I-86 Corridor Project, Corning, NY, Environmental **Engineer** – Provided environmental engineering support for the realignment and reconstruction of this major transportation reconstruction project. The work included a hazardous waste/contaminated materials screening assessment, subsurface investigation of a former landfill, subsurface investigation of several gas stations and a dry-cleaner, bridge asbestos surveys, wetland delineations, preparation of opinions of probable costs to remediate the impacts within the proposed work areas and right-of-ways, and generation of contract documents including bid forms, drawings and specifications.

City of Rochester, Former APCO Property, Brownfields Project, Rochester, NY, Project Engineer – Performed oversight of a design investigation, IRM design and implementation, and final remedial design and construction pursuant to a NYSDEC Brownfields grant at the Former APCO Property for the City of Rochester. Removed six underground storage tanks, seven above ground storage tanks, miscellaneous debris characterization, off-site disposal of 28,500 tons of construction and demolition debris, metals and heavy petroleum impacted soils and asbestos containing materials, an *in situ* oxygen injection groundwater remediation system, an *ex situ* biocell to treat 5,500 yd³ of gasoline and diesel impacted soils, etc. Work completed as a design-build project.

**City of Rochester, Water Bureau Facility, Rochester, NY, Project Engineer** – Completed a remedial investigation, remedial design, Corrective Action Plan generation, free product recovery, and excavation and off-site disposal of approximately 3,000 yd<sup>3</sup> of petroleum impacted soils. Work completed as a design-build project.

City of Rochester, SI/RA Report Completion Pursuant to a NYSDEC Brownfields' Grant, Rochester, NY, Project Engineer – Completed development and evaluation of remedial alternatives, cost estimating, effectiveness, etc.

City of Rochester, Brooks Landing
Redevelopment, Rochester, NY, Project Engineer –
Completed a fast-track remediation project that
included a remedial investigation, remedial design,
Corrective Action Plan generation, removal of free
product, excavation and removal of hazardous soils
impacted with chlorinated solvents, and the
application of Hydrogen Release Compound to
facilitate *in situ* groundwater remediation.

City of Rochester, Corn Hill Redevelopment, City of Rochester, NY, Project Engineer – Completed fast-track remediation project that included a remedial investigation, remedial design, Corrective Action Plan generation, and excavation and off-site disposal of hazardous soils impacted with lead. Work completed as a design-build project.

City of Buffalo, Former Industrial Facility,
Brownfields Site Cleanup, New York State Clean
Water/Clean Air Bond Act, Buffalo, NY, Project
Engineer – Performed oversight of a Brownfields site
cleanup involving remedial design. Prepared
construction bid documents. Provided construction
management services, field
observation/documentation and prepared a final

engineering report. The clean up involved the removal and disposal of approximately 2,600 tons of petroleum impacted soils and miscellaneous surface debris and the excavation of approximately 4,000 yd<sup>3</sup> of clean material in order to access the impacted soils.

Savings Bank of the Finger Lakes, Permeable Reactive Barrier, Geneva, NY, Project Engineer – Completed design, construction, and monitoring of a 360-foot long permeable reactive barrier wall using zero valence iron to treat chlorinated solvents *in situ*. Work completed through a NYSDEC Voluntary Cleanup Agreement. Work included a NYSDEC Contained-In-Demonstration for the disposal of hazardous soils in a nonhazardous Subtitle D facility. Work completed as a design-build project.

Barnard Shopping Center, Product Recovery and Soil Vapor Extraction System, Rochester, NY, Project Engineer – Designed a product recovery and soil vapor extraction system for a site located in Rochester, NY. Contamination included gasoline from leaking underground storage tanks.

**Confidential Client, Gasoline Remediation, Rochester, NY, Project Engineer** – Provided remediation of a gasoline impacted groundwater plume utilizing Oxygen Release Compound (ORC).

Corning Hospital Founders Pavilion, Removal and Replacement of an Underground Storage Tank, Corning, NY, Project Engineer – Provided oversight for the design, technical specifications, bid documents and construction for the removal and replacement of an underground storage tank. Work included miscellaneous site work such as sidewalks, handicapped access ramps, storm sewers, trench drains and paving.

Confidential Client, Risk Based Corrective Action (RBCA) Petroleum Site Remediation, Medina, NY, Project Engineer – Completed a Risk Based Corrective Action (RBCA) petroleum site remediation.

**Fort Drum, 120 Underground Storage Tanks, Watertown, NY, Project Engineer** – Conducted the site inspection, inventory, database compilation, and generation of closure technical specifications.

**Confidential Client, Landfarm Biocell Petroleum Remediation, Chili, NY, Project Engineer** –
Provided the design, construction, operation and maintenance of an *ex situ* landfarm biocell for the remediation of petroleum impacted soils.
Remediation completed in two months.

Confidential Client, Tank Removal and Investigation, Rochester, NY, Project Engineer – Managed the excavation and removal of six underground storage tanks. Conducted a drywell investigation and associated remediation of petroleum affected soils. Remediation included off site disposal and *in situ* treatment via a soil vapor extraction system.

American Airlines, Underground Storage Tank Removal Removal, Location, Site Engineer – Replaced an underground storage tank located at an international airport. Remediation included the design and construction of a passive vent system to initially treat the petroleum affected soils prior to final disposal at a landfill.

Coca-Cola, Groundwater Pump and Treatment System, Massena, NY, Project Engineer – Designed and installed a groundwater pump and treatment system for BTEX contaminated groundwater at a site in Massena, NY. System included a pneumatic bladder pump in conjunction with activated carbon for treatment. Final discharge was via an existing stormwater sewer.

**Confidential Client, Soil Vapor Extraction System, Albany, NY, Project Engineer** – Constructed a soil vapor extraction system. The *in situ* system was constructed to remove dry cleaning solvents from both soil and groundwater.

Balta Brothers Bakery, Petroleum Impacted Soil Excavation, Henrietta, NY, Project Engineer – Provided excavation, removal and backfilling of approximately 4,300 tons of petroleum impacted soil.

Bethlehem Steel Corporation, Remedial Investigation, Western New York, Site Supervisor / Site Safety Officer — Conducted a phased remedial investigation of a Western New York steel facility. Investigative tasks involved 26 monitoring well installations, the installation of 8 piezometers, the sampling of 21 hazardous waste management units and lagoons, a geophysical survey, creek surface and sediment sampling, a soil gas survey and the installation of mini-piezometers and seepage meters.

Bethlehem Steel Corporation, Remedial Investigation, Western NY, Site Supervisor/Site Safety Officer – Performed oversight of the drilling, logging and installation of more than 40 monitoring wells and six piezometers for a remedial investigation at a Western New York Steel facility. Tasks also completed include the sampling of 18 hazardous

waste management units, the installation of a meteorological station, and the installation and programming of water level data transducers.

Ramco Steel Foundry, Remedial Investigation, Western New York, Site Supervisor / Site Safety Officer – Conducted a remedial investigation of a former steel foundry located in Western New York. Field work completed included the installation and sampling of six groundwater monitoring wells, the collection of sediment samples from a detention pond and the collection of outfall soil samples.

#### Waste Management Facilities / Landfills

Schultz C&D Landfill, Groundwater/Leachate Collection System, Buffalo, NY, Project Engineer – Designed a groundwater/leachate collection system for a C&D landfill. Design included bedrock and overburden recovery wells, pneumatic pumps, lift station, instrumentation and controls.

#### Schultz C&D Landfill, Buffalo, NY, Project Engineer

– Prepared the final cover system design of a C&D landfill. Design included geosynthetic and soil layer cover components, cost estimates and the generation of a construction QA/QC Plan.

West Valley Demonstration Project, West Valley, NY, Project Engineer – Performed a structural analysis of an underground nuclear waste storage pool including reinforced concrete design with seismic considerations.

West Valley Demonstration Project, West Valley, NY, Project Engineer – Designed the foundation for a sprung structure.

West Valley Demonstration Project, West Valley, NY, Deputy Project Manager – Managed the SDA trench infiltration control project at the West Valley Demonstration Project. Responsible for tracking project budget and schedule.

Dunlop Tire, Landfill Closure, Tonawanda, NY, Site Engineer / Quality Control Manager — Managed the construction of an inactive hazardous waste landfill closure. Responsible for ensuring all work was done according to the specifications and directing field operations and all personnel in the installation of an 18-inch clay cap placed over a 22-acre area surface impoundment. Performed quality control testing for compaction using a Troxler Nuclear Gauge along with Shelby tubes for verification of permeability. Also involved in the drainage, solidification and removal of sludge from a 2.5-mg settling pond.

Chemetron, Landfill Closure, Cleveland, OH, Project Engineer – Assisted in the closure design of a solid and low-level nuclear waste site. Tasks included a schematic design depicting the landfill containment unit plan view and cross sections, a stormwater management and drainage plan, a groundwater intercept trench, and a municipal gravity sewer system bypass. Cap system design included geomembranes and geosynthetics in conjunction with a clay cap. All work was conducted according to OEPA and NRC guidelines.

BP Chemicals, Radioactive Waste Landfill Design, Ohio, Site Engineer – Assisted in the design of the radioactive waste landfill containment units at the facility. Included designing with geomembranes and geosynthetics in conjunction with a clay liner and cap. Involved with all calculations including volumes, settlement, drainage, leachate collection, liner system anchoring, stresses and strains, drainage design and cost estimation.

Cornell University, Hazardous Waste Surface Impoundment, Central New York, Project Engineer – Design implemented several low profile options which would meet RCRA requirements. Cap design included geosynthetics and geomembranes.

New York State University Construction Fund, C&D Landfill, Brockport, NY, Project Engineer –

Designed a C&D landfill reclamation project. Developed design components meeting NYCRR Part 360 regulations for conducting a landfill reclamation. Work mainly involved segregating the regulated wastes from the soil, rock, and non-regulated hard wastes. Generated bid documents to complete the work, which included specifications and drawings. Conducted construction oversight field staff management and generated engineering certification report.

#### Chemicals

Olin Chemical, 23 Chemical Bulk Storage Tanks and 10 Transfer Stations, Niagara Falls, NY, Project Engineer – Assisted in a plan to bring 23 chemical bulk storage tanks and 10 transfer stations into compliance. Work included field inspections, secondary containment for tanks and piping, loading and unloading procedures, etc. Aboveground storage tank sizes ranged from 375 to 800,000 gallons. Results were summarized in a letter report.

American Axle and Manufacturing, Bulk Storage Tank Design, Buffalo, NY, Project Engineer –

Assisted in the design of a 10,000 Gallon Methanol Storage and Delivery System Assisted in the design of a 10,000 gallon methanol storage and delivery system for an automotive parts manufacturer. Design performed in accordance with Chemical Bulk Storage, USEPA, OSHA, NFPA, local and insurance carrier regulations and requirements.

#### **Decommissioning**

Confidential Client, Radar Testing Facility
Decommissioning, East Bloomfield, CT, Project
Engineer – Conducted the demolition of a testing
tower, dismantling of sensitive equipment, removal
and closure of underground storage tanks, collection
and disposal of non-hazardous waste, hazardous
waste and refrigerants. Client wished to eliminate all
environmental liabilities that may have occurred
during its leasing of the property.

## **Regulatory Analysis and Compliance**

Ford Motor Company, Industrial Stormwater Effluent, Oil/Water Separator Design, Buffalo, NY, Project Engineer – Designed an oil/water separator, flow measurement and composite sampling configuration for an industry's stormwater effluent. Design included a concrete baffle tank and weir.

Miscellaneous Clients, Spill Prevention, Control and Countermeasure Plan (SPCC), Various Locations, Project Manager and Engineer – Completed Spill Prevention, Control and Countermeasure Plans (SPCC) for the following facilities:

- Nuclear power plants
- Fossil fuel power plants
- Mining facilities
- Petroleum storage and refining facilities
- Radio transmission stations
- Small, medium and large manufacturing plants, including food processing to heavy equipment manufacturing
- Healthcare facilities
- United States Military Bases

#### **Regulatory Permitting**

**Confidential Client, Well Variance, Upstate NY, Project Engineer** – Obtained a well variance from the

City of Corning for a client located in Upstate New York.

Confidential Client, Air Permit Review and Renewal Application, Farmington, NY, Project Engineer – Reviewed and completed an existing industrial facility's air permit for renewal. Completed application submittal.

Monro Muffler Brake, Air Permit Applications, Various Locations, Project Engineer – Completed evaporator air permit applications for a client's facilities located in New York, New Hampshire, and New Jersey.

#### Sports, Recreation, and Leisure

**Rochester Rotary Sunshine Campus, Recreational Pond, Rochester, NY, Project Engineer** – Designed a geosynthetic liner system for a 1.5-acre recreational pond.

#### **Wastewater Management**

Confidential Client, Industrial Wastewater Permit, Ithaca, NY, Project Manager and Engineer – Completed a fast-track Baseline Monitoring Report for a large manufacturing facility. Work included weir and ultrasonic flow meter design and installation, programming, 24-hour baseline sewer effluent sampling, and report generation.

Confidential Client, Sewer Replacement Project, South Carolina, Project Engineer – Designed a gravity storm sewer, an industrial wastewater sewer, a double containment, force main industrial wastewater return line including pumps and valves, a double contained piping system for oil and sludge, a weir bypass structure and an oil/water separator.

Confidential Client, Stormwater Management Systems, West Valley and Elmira, New York, Project Engineer – Designed stormwater management systems for an office installation located at the West Valley Demonstration Project in West Valley, N.Y. and for an industry located in Elmira, N.Y. Calculations implemented rational method and TR-55 methodology. Design ranged from calculations of areas and pipe sizing to flow monitoring and sampling for SPDES requirements.

Confidential Client, Mobile Home Park Sanitary Waste Treatment, Erie, PA, Project Engineer — Evaluated the design, construction and maintenance of a facultative lagoon for the treatment of sanitary wastes from a 250-unit mobile home park. Tasks included field inspection of pumps, piping, weirs,

lagoons, chlorine and phosphorous addition mechanisms, and reviewing operational and maintenance practices. Developed a report which included new equipment design and reconstruction, associated construction costs, and recommendations concerning the system's operation and maintenance.

**Town of Lewiston, Wastewater Treatment Plant, Lewiston, NY, Project Engineer** – Designed a geosynthetic liner system for the Town of Lewiston's Wastewater Treatment Plant overflow detention basins.

## Tina S. Bickerstaff, CPG

**Managing Scientist** 

Ms. Bickerstaff has more than 21 years of professional experience and has held responsibility for the coordination, management and completion of all aspects of site investigations including administrative tasks, development of drill programs, sampling, and field programs, supervision and performance of field activities, data evaluation and interpretation, report preparation and submittal, and negotiations with regulatory agencies.

As a Managing Scientist with O'Brien & Gere, she provides for the technical delivery of solutions for clients. She is responsible for managing small to medium size projects and is accountable for scope and budget, staff administration and development, and client management. Ms. Bickerstaff prepares project authorizations, establishes project budget costs and schedules, maintains and regularly updates all CIS system reports, and periodically reviews the fiscal status and schedule of projects. She also assumes a project management role in leading multidisciplinary project teams. She provides continuous follow-up on client relations by maintaining personal contact with clients throughout the duration of a project and following project completion.

## REPRESENTATIVE PROJECTS

# **Environmental Compliance, Investigation, and Remediation Asbestos**

**Charleston AFB, Indefinite Delivery Contract, SC, Project Scientist** – Coordinated environmental evaluations for asbestos as part of the water tank corrosion control task order. A lead survey of the structure was performed to identify the presence of lead.

**George Weston Bakeries, Asbestos Program, Frederick, MD, Project Manager** – Project involved the performance of worker health and safety (H&S) monitoring, indoor air monitoring, construction phase services, preparation of contract documents, and compilation of closure documents for asbestos removal related to a roof replacement project.

**George Weston Bakeries, Asbestos Program, Frederick, MD, Project Manager** – Design and construction phase removal of asbestos-containing caulk material from a number of locations within two horizontal pipe chases.

#### TECHNICAL EXPERTISE

Hydrogeological investigation and evaluation

**RCRA Corrective Action** 

Coastal plain, karst, and bedrock geology

Site investigations, characterizations, and corrective action plans

Contaminant plume delineation and remediation

Environmental Site Assessments (ESAs)

#### PROFESSIONAL REGISTRATION

Certified Professional Geologist – AIPG #9633PROJECT ASSIGNMENT

#### SPECIAL TRAINING

40 hr OSHA Hazwoper Certified

#### PROFESSIONAL AFFILIATION

American Institute of Professional Geologists (CPG 9633)

Geological Society of America

National Groundwater Association

National Association of Environmental Professionals

The Society of American Military Engineers

Air & Waste Management Association

National Shipbuilding Research Program

Program involved indoor air monitoring, worker health and safety (H&S) monitoring, preparation of contract documents, and compilation of closure documents.

#### **Hydrogeological Investigations**

Administrative responsibilities have included obtaining cost quotations and selection of subcontractors, fee proposal development and submittal, budget maintenance, fee negotiations, report preparation, review, and submittal, and negotiations with regulatory agencies.

Responsibilities of field activities have included: coordination of subcontractors for drilling, laboratory analyses, surveying, and contaminated waste disposal; supervision of field crews for on-site activities including drilling, purging, sampling, waste handling and disposal, and well installations; identification and recording of soil/rock classification; multi-media sample collection; conducting pump tests and in-situ permeability testing; delineation of vertical and horizontal plume boundaries; hydropunch installations, and groundwater flow, DNAPL, and LNAPL monitoring.

Supervised the installation of soil borings and monitoring wells for the evaluation of hydrocarbon contamination at numerous UST, AST and pipeline sites. Responsible for the collection of multi-media samples. Evaluated the vertical and horizontal extent of free, dissolved, and residual phased contaminant plumes including JP-4, JP-5, heptane, diesel fuel, heating oil, Navy Special Fuel Oil, creosote, gasoline, and hydraulic oil. Prepared site characterizations, reports, remediation and site evaluations, and Corrective Action Plans.

Conducted numerous environmental investigations at industrial sites involving heavy metals, TCE, VOCs, PCBs, DNAPL, PAHs, SVOCs, and radon. Responsibilities range from completion and supervision of field activities to report generation and data evaluation.

Performed numerous programs at various Department of Defense installations in Virginia, North Carolina, and Florida including:

#### Virginia

- Naval Amphibious Base, Little Creek
- Naval Base, Norfolk
- Naval Air Station, Norfolk

- Naval Air Station, Oceana
- Northwest Naval Security Group
- Yorktown Weapons Station
- Fort A.P. Hill
- Fort Pickett
- Marine Corps Base, Camp Elmore

#### **North Carolina**

- Marine Corps Base, Camp Lejeune
- Marine Corps Base
- Camp Johnson
- Marine Corps AS New River
- Marine Corps AS Cherry Point
- Bogue Field

#### Florida

- Cape Canaveral Air Force Base
- Patrick Air Force Base
- Eglin Air Force Base
- Hurlbert Field Air Force Base

U.S. Army Corp of Engineers (USACE), Philadelphia District, Regional Support Command Resource Conservation and Recovery Act (RCRA) Surveys, Various, Project Manager - Conducted RCRA surveys of solid waste generating activities within the 99th Regional Support Command (RSC). The project involves conducting solid waste surveys at 32 RSC facilities in 13 states. Site surveys were designed to facilitate the diversion, re-use, and recycling of materials to assist in achieving federal waste and pollution reduction goals. The project is part of the U.S. Army's goal of environmental stewardship and promotion of sustainable military communities. Project tasks include identification of recycling opportunities at each selected RSC installation to reduce waste, enhance recycling and reuse opportunities, and ultimately reduce waste volume at local municipal landfills. The results of the site surveys provide critical data for the development of waste management and pollution prevention plans to support the management of future installation waste that is both economical and compliant with regulations. In addition, this project will provide input data to the federal solid waste annual reporting web-

based system (SWARWeb), required at each installation by the Department of Defense (DoD), to improve tracking of these waste reducing activities.

Former American Cyanamid Superfund Site,
Bridgewater Township, NJ, Project Geologist –
Conducted test trenches around perimeter of
hazardous waste landfill area working in Level C PPE.
Collected multi-media samples including soil,
sediments, waste, groundwater, and immiscible fluids.
Developed geological cross sections and vertical fill
profiles.

Stafford County, Comprehensive Groundwater Supply Study, Stafford County, MD, Project Geologist – Prepared a comprehensive groundwater supply study, which provided the concept for the Widewater area water supply system, based on aquifer performance tests, water quality analyses, and preliminary layout of a water treatment plant.

City of Charlottesville, Rivanna Water Supply Project, Charlottesville, VA, Project Geologist – Evaluated groundwater as a potential water supply for the City of Charlottesville. Assessed hydrogeology, water quality, and water availability.

City of Columbia, Multi-Media Sampling Program, Columbia, MD, Project Geologist – Involved in the development of a multi-media sampling program including bedrock monitoring well installation, groundwater, surface water, and sediment sampling for VOCs and radon at a RCRA facility. In addition, performed aquifer characteristic testing on deep aquifers for aquifer yield and connectivity.

Explo-Tech, Sampling Program, Westernport, MD, Project Geologist – Developed and implemented sampling program including soil boring and hydropunch probe installation, groundwater and soil sampling, and vertical and horizontal contaminant plume delineation.

Adamstown, RCRA Facility Sampling Activities, Adamstown, MD, Senior Project Geologist –

Performed quarterly sampling activities at a RCRA facility contaminated with VOCs. Activities included containerization and management of purge waters, groundwater sampling, subcontractor coordination, data evaluation, and report preparation.

National Lead, Superfund Site, Pedricktown, NJ, Project Geologist - Involved in the hydrogeologic investigations of a Superfund site involving a closed lead smelting plant. Supervised monitoring well

installation by mud rotary drilling methods with gamma logging in nested pairs. Participated in surface water, sediment, soil and groundwater monitoring and sampling.

KDI, Superfund Site, Northeast MD, Project Geologist – Performed monthly sampling activities including residential water sampling, groundwater level monitoring, and water meter reading.

## **United States Army Corps of Engineers, Site Investigations, Fort A.P. Hill, VA, Project Geologist**

- Conducted three site investigations for the completion of Site Characterization Reports. Activities included the development of the field programs, selection of subcontractors, supervision of monitoring well and soil boring installation by hollow stem auger, soil and groundwater sampling, data evaluation and interpretation, report preparation, and negotiations with regulatory agency to obtain an approved closure for all three sites.

FMC, RCRA Correction Action, Baltimore, MD, Project Geologist – Participated in 72-hour pump test involving 60 wells at pesticide and herbicide plant. Also, completed LNAPL and DNAPL sampling and monitoring. Collected various groundwater samples for coupon testing and pilot testing.

BASF Williamsburg, RCRA Corrective Action, Williamsburg, VA, Project Geologist – Performed sampling activities required to complete a hydrogeological investigation involving heavy metal (zinc) contamination at a landfill site. Developed and installed a monitoring well network including more than 38 monitoring wells to monitor and sample the water table.

Confidential Client, RCRA Corrective Measures
Investigation, Elkton, VA, Task Manager for Field
Operations – Provided the regulatory, technical, and
project management support to implement a RCRA
CMI at five Areas of Concern (AOCs), including closed
RCRA landfill. Field investigation included installation
of multi-level monitoring wells, soil gas sampling,
vapor monitoring, installation of bedrock monitoring
wells, installation of horizontal wells, aquifer testing,
groundwater sampling and analysis, bioremediation
sampling and assessment, waste characterization,
subcontractor oversight, data evaluation, and report
generation.

Confidential Client, Groundwater Investigation in Karst Topography, Elkton, VA, Task Manager for Field Operations – Developed and implemented a

hydrological investigation of groundwater and thermal mounding conditions resulting from a facility utility leak. Program included the installation of 30 piezometer points and nested groundwater monitoring wells to identify utility leak location without interruption to plant operations or processes. Included groundwater data collection, data evaluation, and trend analyses for temperature and groundwater levels. Project also included H&S protocol, facility permitting requirements, and subcontractor oversight.

Northrop Grumman Newport News, RCRA Corrective Action Program, Newport News, VA, **Project Manager** – Managed a multi-million dollar RCRA Corrective Action Program for 50 SWMUs/AOCs. Responsibilities included project management, budgetary and schedule control, regulatory negotiations, development and implementation of remedial strategies. In addition, conducted RCRA site investigation of closed surface impoundments including monitoring well, soil boring and hydropunch installation, groundwater monitoring, sampling and analysis, in-situ permeability testing, contaminant plume delineation, AS/VES pilot study, biosparge pilot study, post closure groundwater monitoring, remediation system O&M and performance evaluation, RCRA reporting.

Northrop Grumman Newport News, Virginia
Petroleum Storage Tank Program, Site
Characterization Report, Newport News, VA,
Project Manager – Coordinated Site Characterization
Report associated with onsite fueling station.
Activities included utility locating and marking,
lithologic soil descriptions, soil and groundwater
sample collection using direct push technologies,
subcontractor oversight, laboratory analysis, data
evaluation, risk assessment, and report generation.
Responsible for budget and schedule administration
and overall technical content and quality.

WR Grace, RCRA Corrective Action Program, Columbia, MD, Project Manager – Managed multimedia sampling program for a RCRA Corrective Action site including bedrock monitoring well installation, groundwater, surface water, and sediment sampling for VOCs and radon. Tasks included RFI, Ecological Risk Assessment, CMS, aquifer characteristic testing on bedrock aquifers for aquifer yield and connectivity, fracture trace analysis, corrective measures implementation and O&M, and regulatory negotiation and reporting. Final remedies included SVE, bedrock pump and treat, and MNA.

George Weston Bakeries, Inc. Elkridge, MD, Project Manager – Developed and implemented a Site Characterization and Correction Action for a site impacted with free product, residual, and dissolved phase contamination from underground storage tanks. Site constituents included BTEX, VOCs, and TPH. Activities included plume delineation, soil and groundwater sampling and analysis, risk assessment, remediation assessment, free product recovery, regulatory negotiations, data interpretation, and report generation. Responsibilities included resource allocation, contractor oversight, budget and schedule administration, fieldwork, technical content, and quality.

Newport News Shipbuilding and Drydock, RCRA Site Investigation, Newport News, VA, Project Geologist – Conducted RCRA post closure site investigation of closed surface impoundments including monitoring well, soil boring and hydropunch installation, groundwater monitoring, sampling and analysis, in situ permeability testing, RCRA report generation. The second phase of project included pilot study, design, and installation of remediation system for LNAPL and dissolved constituents. The system installed included LNAPL skimmer and removal plus air sparging/vacuum extraction. System was later augmented to include ozone and peroxide injection.

NAVFAC, Atlantic Division, Field Investigations, Norfolk, VA, Project Geologist – Performed field investigations at more than six sites involving petroleum hydrocarbon contamination. Activities included the supervision of over 60 monitoring wells, four recovery wells, and soil borings by hollow stem auger; soil, groundwater, and free product sampling; water table and free product monitoring; conducting pump tests and in situ permeability tests; pre-design activities; data evaluation and interpretation; groundwater and contaminant modeling; qualitative and quantitative risk assessments; preparation of site assessments, remediation assessments, and corrective action plans.

NAVFAC, Atlantic Division, Field Investigations, Virginia Beach, VA, Project Geologist – Performed field investigations at more than six sites involving JP-5 and JP-4 fuel line leaks and UST sites. Supervised the installation of more than 50 monitoring wells by hollow stem auger. Conducted aquifer characteristic testing involving pump tests, in situ permeability testing, pre-design activities, and soil and

groundwater sample collection. Responsible for Corrective Action Plan composition.

NAVFAC, Atlantic Division, Field Activities,
Chesapeake, VA, Project Geologist – Conducted field
activities including the installation of monitoring
wells by hollow stem auger, groundwater and soil
sampling, and water table and free product
monitoring. Evaluated hydrogeologic conditions,
delineated vertical and horizontal extent of petroleum
hydrocarbon occurrences and prepared remedial and
site assessments.

NAVFAC, Atlantic Division, Site Investigations, NC, Project Manager – Coordinated and supervised site investigations for waste oil from USTs. Activities included the supervision of over 100 monitoring well installations by hollow stem auger, groundwater and soil sampling and analysis, hydropunch installation, in situ permeability testing, pump tests, waste disposal, data evaluation, plume delineation, and report preparation.

NAVFAC, Atlantic Division, Site Characterization Reports, Camp Lejeune, NC, Project Geologist – Conducted all administrative, supervisory, and field activities related to the completion of Site Characterization Reports for more than eight sites contaminated with waste oil. Parameters of concern included PCBs, TCLP, TPH, BTEX, TOX. Activities included monitoring well, soil boring, and hydropunch installation, soil and groundwater sampling, in situ permeability testing, data evaluation, plume delineation, waste disposal, and report preparation.

**Town of Chapin, Groundwater Sampling, Chapin, SC, Project Geologist** – Performed groundwater sample collection, analysis and reporting. Supervised bedrock monitoring well installation by mud rotary drilling methods and rock coring. Coordinated multimedia waste identification and disposal.

City of Yakima, Monitoring Well Installation, Yakima, WA, Project Manager – Supervised monitoring well installation by air rotary drill method for metals-contaminated groundwater. Coordinated groundwater sampling program including negotiations with the DOE.

## Chemical Manufacturing Plant, Hydrogeologic Investigation, Portsmouth, VA, Project Supervisor

- Supervised monitoring well installation by hollow stem auger necessary to complete a hydrogeologic investigation at a chemical manufacturing facility. Conducted surface sediment, soil, and groundwater sampling.

City of Charlotte, Hydrogeologic Investigations, Charlotte, NC, Project Manager – Conducted hydrogeologic investigations including bedrock monitoring well installation by air rotary drilling methods, groundwater sample collection, and fracture trace analysis.

City of Danville, Superfund Work Plan, Danville, VA, Project Geologist – Involved in the preparation, approval, and implementation of RI/FS Work Plan for a heavy metals superfund site. Coordinated, supervised and completed all aspects of field activities in addition to being the Site's Health and Safety Officer.

Navy Public Works Center, Miscellaneous Environmental Projects, Norfolk, VA, Senior Project Geologist – Completed over 22 environmental projects including tasks ranging from fee estimate, negotiations, supervising and coordination of subcontractors/field activities, to report preparation, and submittal. Received eleven certificates of appreciation from Public Works Center for jobs completed with an "outstanding" evaluation.

Navy Public Works Center, St. Julien's Creek Annex, Norfolk, VA, Project Geologist – Completed all activities necessary for a Corrective Action Plan including installation of soil borings, monitoring wells, and hand augering, groundwater and soil sampling, groundwater elevation and free product monitoring, data evaluation and interpretation, site and remediation assessments, report writing and editing.

Navy Public Works Center, Naval Base Norfolk, Norfolk, VA, Project Geologist - Completed a minimum of 10 site characterizations to satisfy Virginia Regulations VR680-13-02, Section 6.4. Received a letter of appreciation and outstanding evaluations for 6 of the completed projects. Projects included USTs, ASTs, and underground pipelines, used in association with JP4, JP5, diesel, gasoline, waste oil, kerosene, and heating fuel. Contaminants involved volatile and semi-volatile organic compounds (VOCs), total and dissolved lead, polychlorinated biphenyls (PCBs), total petroleum hydrocarbons (TPH), and polynuclear aromatic hydrocarbons (PAHs). Supervised all aspects of the site investigations from fee submittal and negotiations to report completion and submittal. Field investigations included

monitoring well, soil boring, and hydropunch installation, soil and groundwater sampling, TCM and PID monitoring, groundwater elevation and free product monitoring, and aquifer testing. Responsible for report generation and submittal.

Navy Public Works Center, Naval Base Norfolk, Norfolk, VA, Project Geologist – Completed two site checks and initial remediation reports for sites contaminated with diesel and waste oil from USTs. Field work included release confirmation and contaminant identification with soil sampling and hydro punches. Responsible for report generation and State checklist completion.

**U.S. Air Force, Pump Test, Patrick AFB, FL, Project Geologist** – Completed a 72-hr pump test to determine aquifer characteristics and provide initial remediation results. Completed field test with transducer and data logger. Responsible for report generation and computer modeling of particle transportation, flow direction, capture zone, cone of influence, and hydraulic characteristics.

**U.S. Air Force, Permeability Testing, Patrick Air Force Base, FL, Project Geologist** – Conducted in situ permeability testing on monitoring wells using a transducer and data logger. Utilized computer programs to retrieve, analyze, and evaluate data. Responsible for report generation.

**U.S. Air Force, Environmental Investigation, Eglin Air Force Base, FL, Project Geologist** – Participated in groundwater monitoring, sampling in a base-wide environmental investigation.

**U.S. Air Force, Monitoring Sampling and Analysis Program, Cape Canaveral, FL, Project Geologist** –
Participated in a base-wide groundwater monitoring sampling and analysis program.

BAE Systems Norfolk Ship Repair, RCRA
Corrective Action, Norfolk, VA, Project Manager –
Negotiated a Facility Lead Permit and developed a
RCRA Facility Investigation Work Plan. Inspected 34
solid waste management units (SWMUs) and
evaluated conditions for regulatory compliance.
Conducted release assessments on SWMUs.
Responsible for the coordination of resources, budget
and schedule administration, technical content, and
overall quality.

Smurfit Stone Corporation, Voluntary Remediation Program (VRP), West Point, VA, Project Manager - Project manager for VRP program at paper mill including bleach plant, liquor lagoons, and lime mud settling ponds. Project included ecological and human risk assessments, plume delineation, soil and groundwater sampling an analysis, statistical analysis of data, and regulatory reporting and negotiations.

Honeywell, RCRA Post Closure Assessment,
Baltimore, MD, Project Manager - Project Manager
for post closure assessment of a hazardous waste
landfill. Assessment included quantitative and
qualitative risk assessment, groundwater sampling
and analysis, surface water sampling and analysis,
pre-design of corrective measures, regulatory
reporting, and negotiations with City and State
agencies. Served as Site Health and Safety Officer.

#### **Environmental Compliance**

Joint Base Langley – Eustis (JBLE), Integrated Contingency Plan, Newport News, VA, Project Manager – Prepared an installation-wide Integrated Contingency Plan, including SPCC and Hazardous Waste Contingency Plans, staff training, and comprehensive AST inspections and inventories for motor pools, gasoline stations, hazardous waste accumulation facilities, field hospitals, fire departments, hobby shops, and explosive ordnance disposal units. Established project budget costs and schedules, and provided continuous follow-up throughout the duration of the project and following project completion.

RockTenn, Multi-Media Environmental
Compliance Audit Program, Facilities in US,
Mexico, and South America, Technical Reviewer –
Conducted a third party multi-media environmental
compliance audit program conducted at over 70
facilities over a three-year period. Supervised audits
performed in Virginia focused on USEPA regulatory
programs.

Philip Morris, DOT Hazardous Materials
Transportation Training, Richmond, VA, Project
Manager – Developed and conducted an 8-hour DOT
class to workers who handled and/or shipped
hazardous materials, customized to address industryspecific issues. Developed lectures, class text,
interactive worksheets, and final exam. Course
designed and implemented to meet the requirements
of 49 CFR 100 – 185. Also conducted IATA and IMO
classes for air and ship transport of hazardous
substances.

Philip Morris, Wastewater Sampling, Richmond, VA, Project Manager – Responsible for the coordination and completion of wastewater sampling from three manufacturing facilities. Activities included split sampling with USEPA, regulatory negotiations, data interpretation, and report.

WR Grace, SPCC and SWP3 Updates, Columbia, MD, Project Manager – Developed spill prevention and stormwater prevention updates for RCRA site. Responsible for resource allocation, budget and schedule administration, technical content, and overall quality.

Fort Story, SWP3 Plan, Virginia Beach, VA, Project Manager – Developed Stormwater Pollution
Prevention Plan for entire army base including motor pools, gasoline station, hazardous waste accumulation facility, field hospital, fire department, hobby shop, and explosive ordnance disposal units. Included detailed drawings indicating outdoor petroleum and chemical storage as well as drainage patterns and flow directions. Involved a site-wide evaluation of regulatory compliance and SWP3 requirements.

Fort Story, SPCC Plan, Virginia Beach, VA, Project Manager – Developed Spill Prevention Countermeasures and Control (SPCC) Plan for entire army base including motor pools, gasoline station, hazardous waste accumulation facility, field hospital, fire department, hobby shop, and explosive ordnance disposal units. Evaluated best management practices and oil handling procedures.

## **Due Diligence and Environmental Site Assessments**

Syratech Corp., Phase I and II Environmental
Liability Assessments, Crisfield, MD, Project
Geologist – Conducted Phase I and Phase II
environmental liability assessments for closed cutlery
plant. Contaminants included cyanide, VOCs, TPH,
TCE, and metals.

Fairview Park Industrial Park, Phase I
Environmental Site Assessments, Falls Church, VA,
Project Manager - Conducted multiple Phase I
Environmental Site Assessments in compliance with
All Appropriate Inquiry (AAI) requirements at
developing industrial park.

Ready-Mix Concrete, ESA and Compliance Evaluations, Southeast VA, Project Manager – Responsible for the coordination and completion of 49 Phase I ESA and compliance evaluations at concrete plants in VA and NC. Phase I ESA issues included USTs, ASTs, and stained soils. Compliance issues included SPCC issues, EPCRA reporting requirements, and stormwater runoff.

Cogentrix Energy, Inc., Phase I ESAs, Richmond, VA, Project Manager – Coordinated the execution of Phase I ESAs at two cogeneration plants. Activities included site visits, historical reviews, personnel interviews, and federal and state database reviews. Responsible for resource allocation, budget and schedule administration, technical content, and overall quality.

City of Virginia Beach, IDC, Virginia Beach, VA, Project Manager – Responsible for the coordination, technical content, and quality of multiple Phase I ESAs of properties including undeveloped property, farmland, commercial, and residential parcels. Issues addressed included ASTs, USTs, material storage, stained soil, on-site and off-site recognized environmental concerns, federal and state database reviews, and recommendations for Phase II ESA activities.

City of Virginia Beach, Limited Phase II
Environmental Site Assessment (ESA), Virginia
Beach, VA, Project Manager – Coordinated Limited
Phase II ESA activities for parcel of land associated
with former gasoline service station. Site activities
included utility locating and marking, shallow soil
sampling utilizing a hand auger, soil and groundwater
sampling in the vicinity of USTs / ASTs using direct
push technologies, and ground penetrating radar
survey. Responsible for budget, schedule, technical
content, and quality.

Reeves Construction, Phase I and II
Environmental Site Assessments, GA, Project
Manager - Responsible for the coordination, technical
content, and quality of Phase I ESAs of four asphalt
plants. Issues addressed included ASTs, USTs,
material storage, landfilling, stained soil, on-site and
off-site recognized environmental concerns, federal
and state database reviews, and recommendations for
Phase II ESA activities. Phase II ESA activities included
landfill removal, soil excavation, soil and groundwater
testing and analysis.

## Facility Services and Decommissioning/Demolition

Northrop Grumman Shipbuilding, Newport News Operations, Newport News, VA, Project Manager -Responsible for the inspection and environmental assessment of 330 transformers and 11 generators.

Transformers were inspected for likelihood of release, assessment of potential risk to human health and the environment; and overall condition. Secondary containment conceptual design was developed.

#### Confidential Client, Building Decommissioning Assessment, Baltimore, MD, Project Manager –

Performed building decommissioning assessments including identification of environmental concerns, confirmatory sampling, analysis of suspected contaminated equipment or facilities (hazardous and non hazardous), construction oversight during demolition, decontamination of RCRA material storage areas, inspection of ASTs, material collection and disposal, report generation, and regulatory interaction.

Ford Motor Company, Building Demolition, Rockville, MD, Project Manager - Responsible for construction management of demolition activities including management of demolished materials, removal of USTs, confirmatory sampling and analysis of soil and groundwater, sediment and erosion planning, contractor oversight, permitting, and reporting.

#### **OTHER SPECIAL TRAINING**

Bioremediation Short Course, University of Maryland College Park, 2000

**Confined Space Trained** 

Remediation Innovative Technology Seminar, NAVFAC and NFESC, 2001

Project Management Boot Camp, O'Brien & Gere, 2003

Understanding and Accelerating Bioremediation of Contaminated Groundwater, 2005

Intensive Executive Development and Leadership Workshop, Farr Associates, 2006

#### **AWARDS/HONORS**

Client Service and Operational Excellence Award, O'Brien & Gere, 2006

Outstanding Performance Award, General Motors Environmental Services, 2006

Cornelius B. Murphy, Jr., Excellence in Science Award, O'Brien & Gere, 2005

# The EDR Aerial Photo Decade Package

## **EDR Aerial Photo Decade Package**

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

#### **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

# **EDR** Historical Topographic Map Report

## **EDR Historical Topographic Map Report**

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

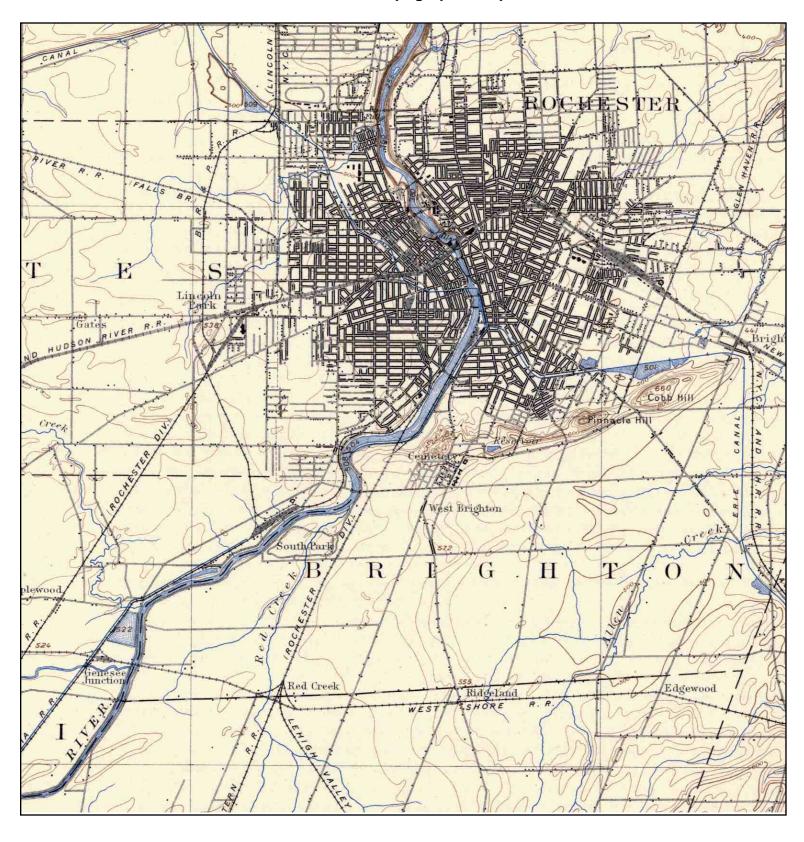

**Thank you for your business.**Please contact EDR at 1-800-352-0050 with any questions or comments.

#### **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

#### **EXECUTIVE SUMMARY**

#### **DESCRIPTION**

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1926 through 2008. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

#### **RECORD SOURCES**

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.

#### **RESEARCH SUMMARY**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.
