# CERTIFICATIONS

I, Daniel Noll, am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Construction Completion Report (CCR) was implemented and that all construction activities were completed in substantial conformance with the Department-approved ISMP.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Daniel P. Noll, of LaBella Associates, D.P.C., 300 State Street, Rochester, New York, am certifying as Owner's Designated Site Representative and I have been authorized and designated by all site owners to sign this certification for the site.

## 1.0 BACKGROUND AND SITE DESCRIPTION

---

Jefferson Wollensack, LLC entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in January, 2019, to investigate and remediate a 0.48-acre property located at 872 and 878 Hudson Avenue, Rochester, New York (see Figure 1). The property will be remediated to restricted residential use and will be used for residential apartments.

The site is located in the County of Monroe, New York and is identified as Block 2 Lot 58 and Block 2 Lot 59 on the City of Rochester Tax Map # 091.81-2-59 and #091.81-2-58. The site is situated on an approximately 0.48-acre area bounded by Roycroft Drive and residential properties to the north, Avenue D and a convenience store to the south, residential properties to the east, and Hudson Avenue and residential properties to the west. The boundaries and surrounding properties are shown on Figure 2.

An electronic copy of this Construction Completion Report (CCR) with all supporting documentation is included as Appendix A.

## 2.0 SUMMARY OF SITE REMEDY

---

### 2.1 Remedial Action Objectives

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) were identified for this site and presented in the ISMP.

#### 2.1.1 Groundwater RAOs

##### RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

#### RAOs for Environmental Protection

- Restore ground water aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
- Prevent the discharge of contaminants to surface water.
- Remove the source of ground or surface water contamination.

#### **2.1.2 Soil RAOs**

##### RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

##### RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.
- Prevent impacts to biota due to ingestion/direct contact with contaminated soil that would cause toxicity or bioaccumulation through the terrestrial food chain.

#### **2.1.3 Soil Vapor RAOs**

##### RAOs for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at a site.

## 2.2 Description of ISMP Activities

Excavation management and remedial activities at the site were conducted in accordance with the ISMP dated January, 2019.

The factors considered during the excavation activities are those listed in 6NYCRR 375-1.8. Please note the final remedy has not been determined as of the date of this report. The work completed as part of the excavation activities included the following components:

- Decommissioning of aboveground storage tanks (ASTs) and one (1) underground storage tank (UST) in accordance with 6NYCRR Part 613.
- Compliance with the requirements of the ISMP that include components of the excavation work plan that relate to the site development project.

### **3.0 INTERIM REMEDIAL MEASURES, OPERABLE UNITS, AND REMEDIAL CONTRACTS**

---

The ISMP was implemented prior to the completion of the Remedial Investigation (RI) and to manage contamination at the site during redevelopment activities until a site wide remedy decision and final Site Management Plan (SMP) are developed, approved, and implemented. The site development included the rehabilitation of the existing vacant building into a residential apartment building. Monitoring was conducted at the site during the disturbance of the subsurface that was associated with underground utilities, parking lot construction, and removal of ASTs and a UST. Logs related to the monitoring work associated with the ISMP are included in the applicable Appendices that are discussed and referenced in Section 4.0.

## 4.0 DESCRIPTION OF REMEDIAL ACTIONS PERFORMED

---

Remedial and excavation work activities completed at the site were conducted in accordance with the ISMP for the Former Wollensack Optical site (January, 2019). All deviations from the ISMP are noted below in Section 4.7. The following key activities were completed in accordance with the ISMP:

- Removal/closure of seven (7) 275-gallon fuel oil ASTs located in the southern vault.
- Pumping of two (2) USTs and removal of the southern UST located immediately east of the site building.
- Excavation of petroleum contaminated soil in the area of the southern UST pit and documentation soil sampling following the remedial excavation in accordance with DER-10 and NYSDEC approval.
- Pumping and disposal of water in Site building basement.
- Installation of underground plumbing within the site building footprint.
- Installation of a sanitary sewer lateral north of the site building.
- Box-out of parking lot area and placement of NYSDEC-approved stone.
- Removal of the basement concrete slab.
- Importation and placement of NYSDEC approved backfill material.
- Reuse of NYSDEC approved on-site material.
- Implementation of the Community Air Monitoring Plan (CAMP) during all earthwork activities.

### 4.1 Governing Documents

#### 4.1.1 Site Specific Health & Safety Plan (HASP)

The HASP was included in Appendix 4 of the ISMP. All work performed was in compliance with governmental requirements, including site and worker safety requirements mandated by Federal OSHA.

The Health and Safety Plan (HASP) was complied with for all remedial and invasive work performed at the Site.

#### **4.1.2 Quality Assurance Project Plan (QAPP)**

The QAPP was included as Appendix 5 of the ISMP. The QAPP describes the specific policies, objectives, organization, functional activities and quality assurance/ quality control activities designed to achieve the project data quality objectives.

#### **4.1.3 Soil/Materials Management Plan (S/MMP)**

All subsurface work was completed in accordance with the ISMP for the Former Wollensack Optical site. The Excavation Work Plan (EWP) was included in Appendix 3 of the ISMP. The EWP governs activities that may encounter remaining contamination and defines methods for notification, excavation, handling, screening, transport, disposal, importation of material, and reuse of materials. The EWP was followed during site activities to ensure compliance with applicable Federal, State and local laws and regulations.

#### **4.1.4 Community Air Monitoring Plan (CAMP)**

The CAMP was implemented during the ISMP activities and was conducted in accordance with the NYSDOH Generic CAMP included as Appendix 4 of the ISMP. Equipment for CAMP monitoring included upwind and downwind monitoring with a MiniRAE 3000 PIDs for VOC readings and TSI DustTrak™ II Aerosol Monitors (model 8530) for particulate concentrations in air. Based on daily wind conditions, a background monitoring (upwind) location and downwind location were positioned to monitor VOCs and concentrations of particulates in the air. Action levels for VOCs in the CAMP were specified as greater than 5 ppm, in which case work was to be halted and corrective actions are to be taken such as backfilling or covering soils.

Actions levels for particulate concentrations downwind were specified as greater than 100 µg/m<sup>3</sup> above background concentrations for a 15-minute period or if airborne dust was observed leaving the work area. In the event 100 µg/m<sup>3</sup> is exceeded the CAMP specifies that fugitive dust control techniques must be employed which can include wetting down haul roads, spraying buckets, and covering areas with plastic sheeting. If downwind particulate levels exceed

150 µg/m<sup>3</sup> above background concentrations work must be halted and dust control measures must be reevaluated. Actual CAMP results and response actions are provided in section 4.2.5.

#### **4.1.5 *Community Participant Plan***

This Section summarizes the pertinent elements of the Community Participation Plan that were performed during the implementation of the ISMP and those elements that pertain to the remainder of the remedial program. Elements of the Community Participation Plan include:

- Copies of the ISMP and other project documents are located in the following document repositories for public review:
  - Phillis Wheatley Library, 33 Dr. Samuel McCree Way, Rochester, New York
  - NYSDEC Region 8 Office, 6274 East Avon-Lima Road, Avon, New York

The NYSDEC approved Community Participation Plan for this site is dated January 2019.

## **4.2 Remedial and ISMP Program Elements**

### **4.2.1 *Contractors and Consultants***

The following provides consultants and contractors involved with the work associated with the ISMP:

**Table 4.2.1 – Contractors and Consultants**

| <b>Contractor/ Consultant</b>                                                  | <b>Role</b>                                                                                                                                                                                                                                                                                                                                                                                                               |

| Riccelli Enterprises; T&R Towing and Service; Casella                          | Waste hauler for contaminated soil.                                                                                                                                                                                                                                                                                                                                                                                       |

#### **4.2.2 Site Preparation**

A Dig Safely underground utility stakeout was conducted prior to all underground intrusive work at the site.

Rock Environmental previously mobilized equipment to the site for general site development of the building structure several weeks prior to AST removal. LaBella mobilized an excavator to the site for the UST removal the week of the planned work. Public utility mark outs were completed prior to ground intrusive activities.

NYSDEC PBS pre-work notifications were submitted to the department prior to removal or excavation of ASTs and USTs. Tank removal permits were acquired from the City of Rochester prior to tank removals at the site and are included in Appendix C. It should be noted that the permit for UST removal included the northern UST; however, the northern UST is located beneath a temporary electrical line supplying power to the site building and job trailer, and therefore was not removed. The northern UST is planned to be removed in July 2020. The City of Rochester Fire Marshal was also notified to observe the tank removals. A right-of-way permit was secured by Rock Environmental for work on the sidewalk to access the AST vault. The portion of the sidewalk was marked off to prevent public access to the area prior to and during work until it the sidewalk was restored.

Work performed as part of the remediation site development work was conducted by the site contractors listed in Table 4.2.1 that were previously mobilized to the site to perform other construction tasks. Table 4.2.2 details the time frames of the remedial and excavation work activities.

**Table 4.2.2 – Time Frames of Remedial and Excavation Work Activities**

| <b>Item</b>                                             | <b>General Time Frame of Site Work</b> |
|---------------------------------------------------------|----------------------------------------|
| <b><i>AST Decommissioning</i></b>                       |                                        |
| AST decommissioning and disposal                        | 5/22/2019                              |
| Backfill AST vault with flowable fill                   | 6/11/2019, 6/12/2019                   |
| <b><i>UST Decommissioning</i></b>                       |                                        |
| Remove and dispose of tank contents                     | 11/13/2019, 1/6/2020 (drums)           |
| Test pits surrounding southern UST                      | 11/13/2019                             |
| <b><i>Containerized Water From Basement</i></b>         |                                        |
| Remove and dispose of water from Site building basement | 12/3/2019, 4/7/2020                    |
| UST decommissioning, disposal and backfill              | 12/19/19*, 12/20/19, 12/30/20          |
| Soil disposal                                           | 1/6/20*, 1/10/20, 1/13/20              |

| Item                                                           | General Time Frame of Site Work                                                                                |
|----------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| <b><i>Parking Lot Box-Out</i></b>                              |                                                                                                                |
| Box-Out parking lot and soil disposal                          | 1/8/20 to 1/10/20                                                                                              |
| Grading imported crushed stone in parking lot                  | 1/13/2020                                                                                                      |
| <b><i>Basement Slab Removal</i></b>                            |                                                                                                                |
| Removal of basement slab                                       | 12/3/2019 to 12/6/2019                                                                                         |
| <b><i>Subgrade Plumbing Installation for Site Building</i></b> |                                                                                                                |
| Plumbing installation                                          | 12/13/19, 12/16/19, 12/17/19,<br>12/30/19, 12/31/19, 1/2/20, 1/3/20*,<br>1/6/20 to 1/10/20, 1/13/20 to 1/16/20 |
| <b><i>Sanitary Sewer Lateral Installation</i></b>              |                                                                                                                |
| Install Sanitary Sewer Lateral                                 | 2/4/20, 2/5/20,                                                                                                |
| Soil Disposal                                                  | 2/26/20                                                                                                        |

Notes:

- (1) \*Refer to Section 4.7 Summary of Deviations
- (2) Subsurface excavation work not completed in May and June 2019. As such, the CAMP was not implemented during this time.
- (3) One (1) CAMP setup was utilized days when only interior work was conducted. The following dates only 1 CAMP setup was used: 12/3/2019 through 12/6/2019, 12/13/2019, 12/16/2019, 12/17/2019, 12/31/2019, 1/2/2020, 1/3/2020, 1/6/2020 and 1/7/2020. Refer to section 4.2.5 for more information.
- (4) Upwind and Downwind CAMP data was collected from January 14, 2020 to January 16, 2020 however no exterior activities were completed in this timeframe requiring CAMP.

Documentation of agency approvals required by the ISMP including requests for import and contained-in determinations are detailed in Sections 4.5 and 4.3.6, respectively. Other non-agency permits relating to the remediation project are provided in Appendix C.

#### **4.2.3 General Site Controls**

Site controls utilized during the ISMP implementation generally consisted of the following:

- Record keeping associated with environmental monitoring was completed by LaBella.
- The site building and boundary were locked each afternoon at the end of the day and all windows were boarded up to prevent access. A fence was placed around the entire site or work area after AST removals to prevent unauthorized access to the site.
- On-site equipment was decontaminated after use each day by removing soil build-up using hand tools. Equipment and vehicles leaving the site were thoroughly scraped of all contaminated soil before exiting the site or being loaded onto transport trailers.
- Construction of the stabilized entrances using NYSDEC-approved clean stone to reduce soil tracking and potential cross-contamination.

Any soil excavated from the site was placed on top of polyethylene sheeting in designated stockpiles for landfill disposal and/or characterization for potential on-site reuse. At the end of each work day any exposed stockpiles were covered with polyethylene sheeting and secured for erosion control.

#### **4.2.4 Nuisance Controls**

##### **Decontamination**

Equipment and vehicles leaving the site were thoroughly scraped of all contaminated soil using hand tools (brooms, shovels, etc.) before exiting the Site or being loaded onto transport trailers as needed. Stabilized construction entrances constructed of NYSDEC-approved imported materials and geotextile fabric were also utilized to reduce potential tracking of soil off-site.

##### **Dust Control**

Airborne particulate levels were monitored both visually and with the CAMP monitoring equipment. As described further in Section 4.2.5.

CAMP thresholds were frequently exceeded for dust during the demolition of the basement slab and other interior work. These exceedances during interior work were due to demolition work being completed by site contractors in other portions of the building, as discussed in Section 4.2.5.

##### **Odor Control**

Strong odors associated with contaminants of concern at the site (e.g., petroleum odors) were not encountered during the ISMP implementation for the tank removals and other subsurface work described in this CCR and as such, corrective actions associated with odor control were not required.

##### **Truck Routing**

The heaviest traffic to and from the site was associated with the transport of contaminated materials off-site for disposal or importation of backfill materials. Trucks generally entered and exited the Site from Avenue D and traveled Hudson Avenue to the Route 104 expressway.

#### **4.2.5 CAMP Results**

Per the ISMP, one (1) upwind and one (1) downwind CAMP station was generally utilized as part of the ISMP implementation for ground intrusive work. During interior excavation work, one (1) CAMP station was utilized as noted as a deviation in Section 4.7. Although locations varied slightly by day due to wind direction, the upwind CAMP station was generally located in the northern portion of the Site while the downwind CAMP station was generally located in the southern portion of the Site, along the property line bordering Avenue D.

Each CAMP station consisted of a particulate monitor (DustTrak II Model 8530) and PID (MiniRAE 3000) which recorded measurements on a 15-minute average. The CAMP monitoring results did not identify any particulate or VOC levels above action thresholds identified in the CAMP, with the exception of the following:

- During the demolition of the concrete slab within the building basement. These exceedances are attributed to the dust from breaking up the concrete and not from the subsurface soil beneath the basement slab. Workers performing the demolition work donned respirators and Tyvek suits.
- Exceedances for dust were common at CAMP stations placed within the interior of the site building due to interior demolition and rehabilitation work, sweeping of the floors, and other activities not associated with the excavation of soil. Moving the CAMP station away from these areas at times did show a decrease in dust concentrations. This data along with visual observations at the time of the work, indicate dust exceedances were a result of interior renovation work and not from soil/subsurface excavations.
- The action level for VOCs was exceeded on December 30 and 31, 2019 and January 3, 2020. These exceedances were attributed to the plumbers petroleum fueled equipment to saw cut and remove the floor and glues to connect the piping being used within the monitoring area, and not with VOC emissions from subsurface media. This was confirmed by moving the PID away from where the glue was being used or when the glues were no longer in use and their containers sealed. Once the PID was moved away from the plumbing glue or when the glue was not used and container sealed, VOC readings decreased to background concentrations.

No CAMP monitoring was completed during the removal of the ASTs in the vault as no excavation/disturbance of subsurface soil was required, no petroleum products were identified within the ASTs, and no petroleum odors were observed throughout the AST removal.

Copies of all field data sheets relating to the CAMP are provided in electronic format in Appendix B.

#### **4.2.6 Reporting**

Monthly progress reports consisted of a summary of the previous month's activities, including any soils tested and/or transported off-site, agency approvals, relevant laboratory data and mapping and any other pertinent notes about the ISMP. These reports also included anticipated activities for the coming month. Monthly progress reports were distributed to the NYSDEC, New York State Department of Health (NYSDOH) and other relevant parties.

Daily field notes were recorded during tank removal and site development activities to document general information about daily activities and tanks. All daily and monthly reports are included in electronic format in Appendix D.

The digital photo log is included in electronic format in Appendix E.

#### **4.3 Contaminated Materials Removal and ISMP Related Excavation Management Activities**

On-site locations from which materials were removed from the site are identified as follows:

- Aboveground Storage Tanks (ASTs)
- Underground Storage Tank (UST)
- Basement Slab Removal and Subgrade Plumbing within the Site Building
- Parking Lot Box-Out and North Entrance Stabilization
- Sanitary Sewer Lateral

A list of the soil cleanup objectives (SCOs) for the contaminants of concern for this project is NYCRR Part 375-6.8(b) SCOs for a Restricted Residential Site.

Figures of the location of original sources and areas where excavations were performed are shown in Figures 3 and 4.

Contaminated material removed as part of the work is summarized below.

#### **4.3.1 AST Closure**

Seven (7) unregistered 275-gallon heating oil (fuel oil) tanks from a vault under the sidewalk along Avenue D (see Figure 3) and just south of the site building was completed on May 22, 2019. The vault was connected to the site building basement by a doorway and appeared to have a concrete bottom and cinder block or concrete block walls. The tank vault is located outside of the BCP site boundary.

The NYSDEC Pre-work Notification for Bulk Storage Tank Installation or Closure form was completed and submitted to the NYSDEC by Rock Environmental prior to removal of the ASTs. Additionally, a Petroleum Bulk Storage Application was submitted to the NYSDEC by Rock Environmental for the registration and permanent closure of the seven (7) 275-gallon ASTs following the removal of the tanks on-site.

The seven (7) 275-gallon ASTs in the vault appeared to be highly corroded single-walled steel tanks. Each tank was observed to have rusted holes of varying size on the upper half of each tank. Inspection of each tank interior did not identify any liquid or sludge contents (i.e. the tanks were empty) and thus the tanks did not require any pumping prior to removal. A portion of the concrete vault ceiling (Avenue D sidewalk) was removed to provide access to the ASTs for removal. The interiors of each tank were gauged with a 4-gas meter which indicated a zero (0) percent lower explosive limit (LEL) in each tank and oxygen levels in each tank at 20.9%. Following inspection and approval from a City of Rochester Fire Marshal (Mr. Steve Ersteniuk), the ASTs were removed from the vault via an excavator and placed on a LaBella trailer. The ASTs were subsequently disposed as scrap metal at Metalico, Inc. scrap yard located at 1515 Scottsville Road in Rochester, New York. The vault containing the AST was filled with flowable fill and a new concrete sidewalk was installed. A bilco door area on-Site was also filled with flowable fill when the AST vault was backfilled. A LaBella representative was not on-site for the backfilling activities using flowable fill.

Refer to Section 4.3.6 for disposal documentation and Section 4.5 for a summary of backfill materials. Refer to Appendix E for photos associated with the AST removals.

#### **4.3.2 UST Closure – Southern UST**

During the remedial investigation, two USTs were identified adjacent to suspect fill port pipes. One UST designated as the “Southern UST” was located immediately adjacent to the eastern side of the site building and the second UST (designated as the “Northern UST”) was located in the north eastern portion of the site at the location shown on Figure 3.

During a site visit by LaBella personnel on November 7, 2019 a fuel oil odor was noted in the building. LaBella discovered approximately 6-inches of water in the former boiler pit within the basement with less than 1-inch of apparent fuel oil floating on top of it. Based on this discovery, Spill #1907970 was opened with the NYSDEC. LaBella also completed test pitting around the exterior underground storage tank (UST) located immediately east of the basement. Test pits completed to the north, south and east of the UST did not identify significant evidence of impairment but soils directly below the UST could not be accessed at this time. The maximum PID reading measured was 30-ppm at 5-ft below ground surface (bgs) directly south of the UST. Test pit logs and field notes are included in Appendix D.

The UST was accessed using the excavator and was found to have filled with apparent rainwater with 8-inches of oil floating on top of the water within the UST. When this UST was first discovered in June 2019, approximately 8.5-inches of oily water was observed in this tank. Refer to the June 2019 Monthly Progress Report for additional information.

The contents of each UST were removed on November 13, 2019. Approximately 8.5-inches of an oily water mixture was pumped out of the northern UST and an oil water mixture consisting of approximately 40-inches of water and 8-inches of oil was pumped from the Southern UST. At this time, water was also pumped from the basement boiler pit that appeared to have accumulated over-time as the building was vacant for several years. As of the date of this CCR, only the southern UST has been removed, as an electrical line is located over the Northern UST. As previously discussed with the NYSDEC, the Northern UST is planned to be removed in July 2020 once the electrical line is relocated. As previously noted, the contents of the Northern UST were pumped on November 13, 2019 to prevent a release.

On December 19, 2019 LaBella Environmental, LLC mobilized to the site and began by pumping out approximately 200 gallons of water that had appeared to re-enter the Southern UST since it was previously pumped-out on November 13, 2019. The 200-gallons of water was pumped into 55-gallon drums pending disposal. Soil was excavated above the tank segregating “clean” soil from petroleum impacted soil. Non-petroleum impacted soil from the top 2-ft of the soil column was staged in a separate pile on and covered by poly-sheeting. This pile was approximately 5 cubic yards in volume. This segregated pile was later shipped to the landfill during the parking lot box-out work (refer to Section 4.3.3).

The tank measured approximately 11-ft long and 4-ft in diameter indicating it was approximately 1,000 gallons in size. The City of Rochester Fire Marshal (Mr. Steve Ersteniuk) observed the tank removal work to confirm compliance with City of Rochester regulations. A permit was obtained from the City of Rochester for the tank removal and included in Appendix C. The UST was rendered inert by adding carbon dioxide into the tank. The final meter readings on the tank approved for removal by the City of Rochester Fire Marshal were zero (0) percent LEL and fourteen (14) percent oxygen. The tank was then removed from the subsurface and placed onto a LaBella trailer, cleaned, and transported to Metalico, Inc. and disposed as scrap metal. The UST was constructed of steel and was observed to have several holes in the tank due to rusting. Refer to Appendix E for photos of the UST removal.

On December 20, 2019, petroleum contaminated soil was removed from the base and sidewalls of the tank pit that exhibited evidence of impairment. A poly-lined roll-off dumpster was filled with contaminated soil, and additional contaminated soil was placed on poly sheeting next to the roll-off dumpster pending disposal. This pile was approximately 25-cubic yards in volume. Documentation samples were collected from the north, south, east and west sidewalls and from bottom of the excavation at locations that exhibited the highest remaining PID readings that are detailed on Figure 3. Following the collection of documentation samples, the bottom and sidewalls of the tank pit were lined with poly sheeting as a demarcation layer and the pit was backfilled with NYSDEC-approved imported stone.

Material disposed as part of this work is detailed in Section 4.3.6 and the excavation was backfilled with NYSDEC-approved crusher run stone as detailed in Section 4.5.

### ***4.3.3 Parking Lot Box-Out Area and North Entrance Stabilization***

In the Spring of 2019 Hamilton-Stern excavated surface soil from the north entrance and placed recycled concrete to stabilize the entrance in the area shown on Figure 4. A LaBella environmental monitor was not notified about or on-site for the excavation and stockpiling of soil or the importation of recycled concrete. The NSYDEC was then notified on May 23, 2019 and made aware of the soil pile generated and imported recycled concrete. Approximately 30-40 cubic yards of soil material was generated and staged in the parking lot area. The stockpile was not staged on poly sheeting but it was covered with plastic and the excavated material was disposed with the material as part of the parking lot box out discussed below.

Beginning on January 8, 2020, Victor Excavating began excavating soil at the site to place the subbase for the exterior parking lot, sidewalk, and other exterior rehabilitation work. The soil removal encompassed the north and east areas of the site building as shown on Figure 4. Soil was generally excavated from the ground surface to approximately 2 feet below grade and directly loaded directly into Part 364 permitted trucks for disposal. Victor Excavating completed the parking lot soil excavation on January 10, 2020. This work also included disposal of the soil pile generated in Spring 2019 and the top-cut of non-petroleum impacted soil generated during the Southern UST removal (refer to Section 4.3.2). Approximately 2-feet of remaining material below the soil pile generated in Spring 2019 was also removed as part of the parking lot box-out. Soil disposed as part of this work is detailed in Section 4.3.6. Although parking lot construction is not yet completed, approximately 24-inches of NYSDEC-approved crusher run stone was placed in the parking-lot box out at this time, as detailed in Section 4.5.

### ***4.3.4 Basement Slab Removal and Subgrade Plumbing Installation at Site Building***

As requested by the NYSDEC, LaBella conducted CAMP monitoring for the concrete basement slab removal during the timeframe of December 3 to 6, 2019. As part of this work additional water that accumulated in the basement was pumped into a holding tank and disposed off-site. A new concrete basement slab was installed on February 18, 2020. Refer to Section 4.3.6 for disposal documentation.

Intermittently from December 13, 2019 to January 16, 2020, excavations for the installation of the sub-grade plumbing were completed on the 1<sup>st</sup> floor of the building at the locations shown on Figure 4. A sump was also installed within the basement during this time. The soil excavated was placed on and covered with poly sheeting and characterized for reuse at the site. The NYSDEC approved the reuse of this material on December 26, 2019, and the material was used to backfill the plumbing excavations (see Section 4.3.7). Following reuse of this material, approximately 6 inches of concrete was poured over the reused soil/plumbing excavations.

#### **4.3.5 Sanitary Sewer Lateral Installation**

On February 4, 2020, Victor Excavating began excavation of a trench on-site for installation of a new sewer lateral line that was completed on February 5, 2020. The trench was excavated to approximately 6-ft wide and extended to a depth of approximately 8-ft and a portion of the excavation extended outside the BCP site boundary onto the Hudson Avenue right-of-way. Soil removed from the trench was placed on poly sheeting, sampled for waste characterization, and covered with poly sheeting. No excavated soil was reused as backfill.

Soil disposed as part of this work is detailed in Section 4.3.6 and the excavation was backfilled with NYSDEC-approved imported stone as detailed in Section 4.5.

#### **4.3.6 Disposal Details**

Table 4.3.6A shows the total quantities of each category of material removed from the site and the disposal locations. Waste disposal documentation including laboratory reports, manifests, weight tickets and Contained-In Demonstration approvals are included in Appendix F.

**TABLE 4.3.6A – Summary of Contaminated Materials Disposal**

| <b>Item</b>                 | <b>Date(s) of Disposal</b> | <b>Total Quantity Removed</b> | <b>Disposal Facility</b>                                 | <b>Disposal Transporter</b> | <b>Summary of Waste Characterization Sampling and Disposal Documentation</b>  |
|-----------------------------|----------------------------|-------------------------------|----------------------------------------------------------|-----------------------------|-------------------------------------------------------------------------------|
| AST Closure – Tank Disposal | 5/22/2019                  | Seven 275 gallon tanks        | Metalico Rochester, 1615 Scottsville Road, Rochester, NY | LaBella Environmental, LLC  | -Disposed as scrap Metal.<br>-Refer to Appendix F for Disposal Documentation. |

\*See attached Table 4.3.6B for a summary of soil disposal.

#### 4.3.7 On-Site Reuse

Excavated material was generated during the installation of the subgrade plumbing for the site building. The excavated soil was placed on and covered with poly sheeting within the Site building and sampled for reuse in accordance with DER-10 Table 5.4(e)10. A Request to Reuse Soil was submitted to the NYSDEC and approved on December 26, 2019. A copy of the Request to Reuse Soil and NYSDEC approval as well as associated analytical data is included in Appendix G.

The soil was reused within the excavated plumbing trench it was removed from at the location shown on Figure 5. The soil was subsequently covered with concrete when the floor slab was re-poured.

#### 4.4 Remedial Performance/Documentation Sampling

Documentation Sampling was only completed as part of the UST closure work.

Documentation samples were conducted in accordance with NYSDEC DER-10 Section 5.4(b)(5)(2) and correspondence with the NYSDEC. Due to the size of the excavation, four (4) excavation sidewalls and one (1) bottom documentation samples were collected from the remedial excavation and analyzed for USEPA TCL and NYSDEC CP-51 list VOCs and USEPA TCL and NYSDEC CP-51 list SVOCs using USEPA Methods 8260 and 8270, respectively. The samples were designated as TANK-BOT-122019, TANK-EAST-122019, TANK-NORTH-122019, TANK-SOUTH-122019, and TANK-WEST-122019 were collected at depths of 11-ft bgs, 10-ft bgs, 8-ft bgs, 8-ft bgs and 8-ft bgs, respectively from the southern UST pit at the locations of the highest remaining PID readings. A summary of the documentation sample results are included in Table 4.4A below.

**Table 4.4A – Summary of Documentation Sample Results**

| Sample ID        | Sample Depth (ft bgs) | PID Reading (ppm) | Summary of Results                                                           |
|------------------|-----------------------|-------------------|------------------------------------------------------------------------------|
| TANK-BOT-122019  | 11                    | 30                | No VOCs or SVOCs detected at concentrations above the Unrestricted Use SCOs. |
| TANK-EAST-122019 | 10                    | 2.8               | No VOCs or SVOCs detected at concentrations above the Unrestricted Use SCOs. |

| Sample ID         | Sample Depth (ft bgs) | PID Reading (ppm) | Summary of Results                                                                                                                                                                                                                                    |
|-------------------|-----------------------|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TANK-NORTH-122019 | 8                     | 2.7               | No VOCs or SVOCs detected at concentrations above the Unrestricted Use SCOs, with the exception of the VOC acetone at an estimated concentration. The estimated concentrations of acetone was not detected above the Restricted Residential Use SCOs. |
| TANK-SOUTH-122019 | 8                     | 45.4              | No VOCs or SVOCs detected at concentrations above the Unrestricted Use SCOs.                                                                                                                                                                          |
| TANK-WEST-122019  | 8                     | 16.4              | No VOCs or SVOCs detected at concentrations above the Unrestricted Use SCOs.                                                                                                                                                                          |

Sampling activities were conducted in accordance with LaBella's Quality Control Program included in Appendix 6 of the ISMP. The results indicate that sample results are below the Restricted Residential Use SCOs.

Only the VOC acetone was detected above the Unrestricted Use SCOs at an estimated concentration. Acetone is a common laboratory contaminant and this detection likely does not represent actual site conditions.

A table and figure summarizing all end-point sampling is included in Table 4.4B and Figure 3, respectively, and all exceedances of SCOs are highlighted.

Data Usability Summary Reports (DUSRs) were prepared for all documentation samples. The DUSR is included in Appendix H, and associated raw is provided electronically in Appendix I. The results of the DUSR indicate the data should be considered technically defensible and completely usable in its present form.

#### 4.5 Imported Backfill

A table of all sources of imported backfill with quantities for each source is shown in Table 4.5. Please note that some imported material was exempt from chemical testing in accordance with DER-10 Section 5.4(e)(5).

**TABLE 4.5 – Imported Backfill Material Summary**

| Location or Use                                            | Type                     | Source                                                         | Estimated Volume or Tonnage                                                      | NYSDEC Approval Date |
|------------------------------------------------------------|--------------------------|----------------------------------------------------------------|----------------------------------------------------------------------------------|----------------------|
| Site Entrances/Exits for stabilization and erosion control | Recycled Concrete        | The Dolomite Group<br>1085 Buffalo Road<br>Rochester, New York | 30.15 tons                                                                       | May 23, 2019         |
| Backfill of southern UST pit                               | CR#2 (Crusher Run Stone) | The Dolomite Group<br>746 Whalen Road<br>Rochester, New York   | 68.48 tons                                                                       | December 18, 2019    |
| Parking Lot Subbase, Sanitary Sewer Lateral                | CR#2 (Crusher Run Stone) | The Dolomite Group<br>746 Whalen Road<br>Rochester, New York   | -Parking Lot Subbase 717.44 tons<br>-Sanitary Sewer Lateral 144.98 tons          | January 13, 2020     |
| Backfill of AST and Bilco Door Area                        | Flowable Fill*           | Manitou Concrete<br>1260 Jefferson Road<br>Rochester, New York | 16 Cubic Yards (total)<br>-Bilco Door 4 cubic yards<br>-AST Vault 12 cubic yards | NA*                  |
| Sanitary Sewer Lateral                                     | #1 and #2 Blend Stone    | The Dolomite Group<br>746 Whalen Road<br>Rochester, New York   | 18.94 tons                                                                       | December 26, 2020    |

Note:

\*Note material was technically not imported for this use in AST vault as it was not within the BCP Site boundary. The material receipt shows 16 cubic yards of flowable fill were received, however, a portion of this material was also used for backfill of the Bilco door area shown on Figure 5. No approval required per DER-10.

A request for import of 3A and 4A stone from the Dolomite Group quarry on Penfield Road in Rochester was submitted to the NYSDEC on May 30, 2019 and approved on June 6, 2019 for use as backfill within the AST vault. However, only flowable fill was used and the 3A and 4A stone was not imported and used at the site.

Requests for import, associated approvals, and associated weigh or volume receipts are included in Appendix J.

A figure showing the site locations where backfill was used at the site is shown in Figure 5.

#### 4.6 Soil Cover or Cap System

Exposure to remaining contamination in soil/fill at the site is anticipated to be addressed by a soil cover or cap system placed over the site. The final cover or cap system is anticipated to be presented in a Remedial Action Work Plan and documented in the final SMP and FER for the site.

#### 4.7 Deviations from the ISMP

The following deviations are noted in Table 4.7 for the work completed as part of the CCR.

**Table 4.7 – Summary of Deviations**

| Item                       | Deviation                                                                                                                                                                                                                                                                                          |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Section 4.3.6              | A manifest ID is not listed on weight ticket 1329769 but is assumed to be related to manifest 70317 based on the corresponding manifest.                                                                                                                                                           |
| Section 4.3.6              | Imported materials (CR #2) were approved for import from the Dolomite facility in Penfield, NY. The contractor also imported CR #2 from the Dolomite facilities in Walworth, NY and Iroquois Stone (Brockport, NY).                                                                                |
| Section 4.2.5 (Appendix B) | Upwind data from 12/19/2019 and 12/20/2019 during the UST removal was collected; however, data was unable to be downloaded from the equipment due to equipment malfunction.                                                                                                                        |
| Section 4.2.5 (Appendix B) | Issues were encountered downloading downwind PID data for the dates 2/4/2020 and 2/5/2020 as part of the sewer trench excavation. Data was collected however the monitoring unit was unable to download the data. Documents showing the dates and times of data collected are shown in Appendix B. |
| Section 4.2.5 (Appendix B) | CAMP data consisting of particulate monitoring and PID readings collected at the upwind location on 2/26/2020 during load out of soils related to the sewer lateral trench could not be downloaded due to equipment malfunction.                                                                   |
| Section 4.2.5 (Appendix B) | Interior work utilized one (1) CAMP setup to monitor dust and VOC levels within the work zone in the interior of the building rather than an upwind and downwind perimeter stations.                                                                                                               |

| Item                       | Deviation                                                                                                                                                                                                                                                           |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                            |                                                                                                                                                                                                                                                                     |
| Section 4.2.5 (Appendix B) | Exterior CAMP data for 1/6/2020 could not be located.                                                                                                                                                                                                               |
| Appendix D                 | Although not a deviation, field notes dated 12/18/2019 are incorrectly dated and should be identified as 12/19/2019. Additionally field notes dated 10/2/2019 through 10/6/2019 are also incorrectly dated and are actually from dates 12/2/2019 through 12/6/2019. |
| Section 4.2.2 (Appendix D) | Field notes collected on 1/3/2020 could not be located. However, LaBella was on-site and CAMP data was collected and provided on this date.                                                                                                                         |

NOTES:  
All values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm).  
"NL" indicates Not Listed.  
"U" indicates the compound was not detected above the indicated laboratory method detection limit (MDL).  
"D" indicates the sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.  
"J" indicates an estimated value.  
"-" indicates not applicable  
Single Underline indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objective (SCO).  
Yellow highlight indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(b) Protection of Groundwater SCO.  
VOCs analyzed by USEPA Method 8260.

NOTES:

All values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm).

"NL" indicates Not Listed.

"U" indicates the compound was not detected above the indicated laboratory method detection limit (MDL).

"D" indicates the sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

"J" indicates an estimated value.

"-" indicates not applicable

SVOCs analyzed by USEPA Method 8270.

## Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

-----

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Battery Low

-----

Site ID RAE00000

User ID USER0000

-----

Begin 12/3/2019 9:17

End 12/3/2019 13:44

Sample Per 60

Number of 266

-----

Sensor PID(ppm)

Sensor SN S023030031VC

Measure Type Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

\*\*\*\*\*

## Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

-----

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Power Down

-----

Site ID RAE00000

User ID USER0000

-----

Begin 12/3/2019 13:55

End 12/3/2019 16:27

Sample Per 60

Number of 152

-----

Sensor PID(ppm)

Sensor SN S023030031VC

Measure T<sub>1</sub> Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

\*\*\*\*\*

## Datalog

## Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

-----

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Power Down

-----

Site ID RAE00000

User ID USER0000

-----

Begin 12/4/2019 8:21

End 12/4/2019 16:33

Sample Per 60

Number of 491

-----

Sensor PID(ppm)

Sensor SN S023030031VC

Measure Type Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

\*\*\*\*\*

## Datalog

| Index | Date/Time      | PID(ppm)<br>(Avg) |

## Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

-----

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Power Down

-----

Site ID RAE00000

User ID USER0000

-----

Begin 12/5/2019 8:23

End 12/5/2019 16:30

Sample Per 60

Number of 487

-----

Sensor PID(ppm)

Sensor SN S023030031VC

Measure T<sub>1</sub> Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

\*\*\*\*\*

## Datalog

## Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

-----

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Power Down

-----

Site ID RAE00000

User ID USER0000

-----

Begin 12/6/2019 8:36

End 12/6/2019 16:11

Sample Per 60

Number of 455

-----

Sensor PID(ppm)

Sensor SN S023030031VC

Measure T<sub>1</sub> Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

\*\*\*\*\*

## Datalog

## Summary

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Power Down

Site ID RAE00000

User ID USER0000

Begin 12/13/2019 9:32

End 12/13/2019 16:33

Sample Per 60

Number of 420

Sensor PID(ppm)

Sensor SN S023030031VC

Measure T<sub>1</sub> Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

## Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

-----

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Power Down

-----

Site ID RAE00000

User ID USER0000

-----

Begin 12/16/2019 8:54

End 12/16/2019 12:33

Sample Per 60

Number of 219

-----

Sensor PID(ppm)

Sensor SN S023030031VC

Measure T<sub>1</sub> Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

## Summary

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Power Down

Site ID RAE00000

User ID USER0000

Begin 12/17/2019 8:54

End 12/17/2019 13:25

Sample Per 60

Number of 270

Sensor PID(ppm)

Sensor SN S023030031VC

Measure Type Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

\*\*\*\*\*

## Datalog

## Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-907676

Unit Firmw V2.20A

-----

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Power Down

-----

Site ID 12345678

User ID 12345678

-----

Begin 12/30/2019 7:37

End 12/30/2019 15:20

Sample Per 900

Number of 30

-----

Sensor PID(ppm)

Sensor SN S023030130U6

Measure Type Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 12/27/2019 14:06

Peak 16.6

Min 0.3

Average 2.9

\*\*\*\*\*

## Summary

Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-925155  
Unit Firmware Ver V2.20A

Running Mode Hygiene Mode  
Datalog Mode Auto  
Diagnostic Mode No  
Stop Reason Battery Low

Site ID 12345682  
User ID 12345678

Begin 12/30/2019 10:10  
End 12/30/2019 12:00  
Sample Period(s) 900  
Number of Records 7

Sensor PID(ppm)  
Sensor SN S023030202V3  
Measure Type Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurement Gas Isobutylene  
Calibration Time 12/27/2019 13:57  
Peak 1  
Min 0.4  
Average 0.6

# Summary

Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-912821  
Unit Firmware Ver V2.20A

Running Mode Hygiene Mode  
Datalog Mode Auto  
Diagnostic Mode No  
Stop Reason Battery Low

Site ID 12345678  
User ID 12345678

Begin 11/13/2019 9:31  
End 11/13/2019 13:28  
Sample Period(s) 60  
Number of Records 237

Sensor PID(ppm)  
Sensor SN S023030084R6  
Measure Type Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurement Gas Isobutylene  
Calibration Time 10/14/2019 10:30  
Peak 0  
Min 0  
Average 0

Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-910712

Unit Firmw V2.20A

-----

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Battery Low

-----

Site ID 12345678

User ID 12345678

-----

Begin 1/8/2020 12:40

End 1/8/2020 13:26

Sample Per 60

Number of 46

-----

Sensor PID(ppm)

Sensor SN S023030021Q5

Measure Type Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 1/3/2020 12:41

Peak 0.1

Min 0

Average 0

=====

20/01/08 14:01

\*\*\*\*\*

Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-910712

Unit Firmw V2.20A

-----

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Power Down

-----

Site ID 12345678

User ID 12345678

-----

Begin 1/8/2020 14:01

End 1/8/2020 16:04

Sample Per 60

Number of 123

-----

Sensor PID(ppm)

Sensor SN S023030021Q5

Measure T<sub>1</sub> Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 1/3/2020 12:41

Peak 0.1

Min 0

Average 0

Summary

-----  
Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-910712  
Unit Firmw V2.20A  
-----

Running M Hygiene Mode  
Datalog Mc Auto  
Diagnostic No  
Stop Reaso Battery Low  
-----

Site ID 12345678  
User ID 12345678  
-----

Begin 1/9/2020 8:45  
End 1/9/2020 10:23  
Sample Per 60  
Number of 98  
-----

Sensor PID(ppm)  
Sensor SN S023030021Q5  
Measure T<sub>1</sub> Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurem Isobutylene  
Calibration 1/3/2020 12:41  
Peak 0.2  
Min 0.1  
Average 0.1

\*\*\*\*\*

Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-910712

Unit Firmw V2.20A

-----

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Battery Low

-----

Site ID 12345678

User ID 12345678

-----

Begin 1/9/2020 11:05

End 1/9/2020 12:22

Sample Per 60

Number of 76

-----

Sensor PID(ppm)

Sensor SN S023030021Q5

Measure T<sub>1</sub> Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 1/3/2020 12:41

Peak 0.1

Min 0

Average 0.1

\*\*\*\*\*

Summary

-----  
Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-910712  
Unit Firmw V2.20A  
-----

Running M Hygiene Mode  
Datalog Mc Auto  
Diagnostic No  
Stop Reaso Battery Low  
-----

Site ID 12345678  
User ID 12345678  
-----

Begin 1/13/2020 8:34  
End 1/13/2020 11:41  
Sample Per 60  
Number of 186  
-----

Sensor PID(ppm)  
Sensor SN S023030021Q5  
Measure T<sub>1</sub> Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurem Isobutylene  
Calibration 1/3/2020 12:41  
Peak 0.1  
Min 0  
Average 0.1

=====

20/01/13 12:34

\*\*\*\*\*

Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-910712

Unit Firmw V2.20A

-----

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Battery Low

-----

Site ID 12345678

User ID 12345678

-----

Begin 1/13/2020 12:34

End 1/13/2020 15:15

Sample Per 60

Number of 160

-----

Sensor PID(ppm)

Sensor SN S023030021Q5

Measure T<sub>1</sub> Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 1/3/2020 12:41

Peak 0.2

Min 0

Average 0

=====

20/01/14 08:40

\*\*\*\*\*

Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-910712

Unit Firmw V2.20A

-----

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Battery Low

-----

Site ID 12345678

User ID 12345678

-----

Begin 1/14/2020 8:40

End 1/14/2020 11:37

Sample Per 60

Number of 177

-----

Sensor PID(ppm)

Sensor SN S023030021Q5

Measure Type Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 1/3/2020 12:41

Peak 0

Min 0

Average 0

=====

20/01/14 08:40

\*\*\*\*\*

Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-910712

Unit Firmw V2.20A

-----

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Battery Low

-----

Site ID 12345678

User ID 12345678

-----

Begin 1/14/2020 8:40

End 1/14/2020 11:37

Sample Per 60

Number of 177

-----

Sensor PID(ppm)

Sensor SN S023030021Q5

Measure Type Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 1/3/2020 12:41

Peak 0

Min 0

Average 0

## Summary

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-910712

Unit Firmw V2.20A

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Battery Low

Site ID 12345678

User ID 12345678

Begin 1/15/2020 8:37

End 1/15/2020 12:41

Sample Per 60

Number of 244

Sensor PID(ppm)

Sensor SN S023030021Q5

Measure Type Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 1/3/2020 12:41

Peak 0.1

Min 0

Average 0

=====  
20/01/16 08:34  
\*\*\*\*\*

Summary

-----  
Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-910712  
Unit Firmw V2.20A  
-----

Running M Hygiene Mode  
Datalog Mc Auto  
Diagnostic No  
Stop Reaso Battery Low  
-----

Site ID 12345678  
User ID 12345678  
-----

Begin 1/16/2020 8:34  
End 1/16/2020 11:35  
Sample Per 60  
Number of 181  
-----

Sensor PID(ppm)  
Sensor SN S023030021Q5  
Measure T<sub>1</sub> Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurem Isobutylene  
Calibration 1/3/2020 12:41  
Peak 0.1  
Min 0  
Average 0.1

## Summary

Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-907676  
Unit Firmware Ver V2.20A

Running Mode Hygiene Mode  
Datalog Mode Auto  
Diagnostic Mode No  
Stop Reason Power Down

Site ID 12345678  
User ID 12345678

Begin 2/4/2020 7:29  
End 2/4/2020 14:58  
Sample Period(s) 900  
Number of Records 29

Sensor PID(ppm)  
Sensor SN S023030130U6  
Measure Type Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurement Gas Isobutylene  
Calibration Time 12/27/2019 14:06  
Peak 0  
Min 0  
Average 0

## Summary

Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-907676  
Unit Firmware Ver V2.20A

Running Mode Hygiene Mode  
Datalog Mode Auto  
Diagnostic Mode No  
Stop Reason Battery Low

Site ID 12345678  
User ID 12345678

Begin 2/5/2020 7:25  
End 2/5/2020 8:57  
Sample Period(s) 900  
Number of Records 6

Sensor PID(ppm)  
Sensor SN S023030130U6  
Measure Type Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurement Gas Isobutylene  
Calibration Time 12/27/2019 14:06  
Peak 0  
Min 0  
Average 0

# Summary

-----  
Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-919444  
Unit Firmware Ver V2.20A  
-----

Running Mode Hygiene Mode  
Datalog Mode Auto  
Diagnostic Mode No  
Stop Reason Power Down  
-----

Site ID 12345678  
User ID 12345678  
-----

Begin 11/13/2019 10:22  
End 11/13/2019 15:54  
Sample Period(s) 60  
Number of Records 212  
-----

Sensor PID(ppm)  
Sensor SN S023030357U5  
Measure Type Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurement Gas Isobutylene  
Calibration Time 10/14/2019 12:05  
Peak 0  
Min 0  
Average 0

19/12/19 10:12

\*\*\*\*\*

Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

-----

Running M Hygiene Mode

Datalog Mc Auto

Diagnostic No

Stop Reaso Power Down

-----

Site ID RAE00000

User ID USER0000

-----

Begin 12/19/2019 10:12

End 12/19/2019 15:48

Sample Per 60

Number of 335

-----

Sensor PID(ppm)

Sensor SN S023030031VC

Measure T<sub>1</sub> Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

\*\*\*\*\*

## Summary

-----

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-912310

Unit Firmw V2.20A

-----

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic No

Stop Reason Power Down

-----

Site ID RAE00000

User ID USER0000

-----

Begin 12/20/2019 9:46

End 12/20/2019 15:38

Sample Per 60

Number of 352

-----

Sensor PID(ppm)

Sensor SN S023030031VC

Measure T<sub>1</sub> Avg

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurement Isobutylene

Calibration 11/27/2019 14:14

Peak N/A

Min N/A

Average N/A

\*\*\*\*\*

## Datalog

## Summary

Unit Name MiniRAE 3000(PGM-7320)  
Unit SN 592-925155  
Unit Firmware Ver V2.20A

Running Mode Hygiene Mode  
Datalog Mode Auto  
Diagnostic Mode No  
Stop Reason Battery Low

Site ID 12345682  
User ID 12345678

Begin 12/30/2019 10:10  
End 12/30/2019 12:00  
Sample Period(s) 900  
Number of Records 7

Sensor PID(ppm)  
Sensor SN S023030202V3  
Measure Type Avg; Max; Real  
Span 100  
Span 2 1000  
Low Alarm 50  
High Alarm 100  
Over Alarm 15000  
STEL Alarm 25  
TWA Alarm 10  
Measurement Gas Isobutylene  
Calibration Time 12/27/2019 13:57  
Peak 1  
Min 0.4  
Average 0.6

Client: \_\_\_\_\_  
Proj.#: \_\_\_\_\_

CASE NO. 684104

DAVE ENGERT  
300 STATE ST  
ROCHESTER NY 14614

Date Letter Printed: 03/04/20  
Date Permit Issued : 01/08/20  
Permit Number : 1197074

Permit Location: 0872 HUDSON AV

Permit description:

REMOVAL OF (1) 500 AND (1) 1,000 GALLON HEATING OIL STORAGE TANK ON VACANT LAND.

Dear Applicant / Owner:

The work performed at the permit location covered by Permit Number 1197074 has been completed and is in substantial compliance with the applicable requirements of the Municipal Code of the City of Rochester and the New York State Uniform Fire Prevention and Building Code.

STEVE ERSTENIUK

Inspector of Record: \_\_\_\_\_

# APPENDIX D

## Monthly Progress Reports and Field Logs

# Daily Field Logs

16

2182207  
Former Wollersack

5/22/14

- 0730 A. Britt onsite, Rock environmental onsite already, AMS setting up.
- 0745 weather cloudy, 50°.
- 0754 Rock Environmental plans to break up concrete and remove over tanks to get them out of the vault in basement area.
- 0800 Concrete barricades being moved by Rock environmental using excavator.
- 0815 Rock removing metal plate above concrete tank area. Determining how to remove vault.
- 0816 AMS ready to screen metal prior to removal. Metal duct work piping etc.
- 0830 Tom Risher of Rock Environmental on site. Determining method to remove concrete slab over tank area. AMS screening sidewalk, property perimeter.
- 0915 Rock environmental cutting concrete above tanks with demolisher saw. AMS begin screening 1st floor (ground level) with dig detector.
- 1010 continued on next page.

5/22/14

2182207  
Former Wollersack

17

- 1001 Rock Env. used Jack Hammer to make holes in concrete in addition to hole already in concrete slab in order to hook chain up to remove portion of concrete.
- 1020 Pete Sprague and Kevin Miller of LaBella on-site with trailer, with trailer drums and compressor.
- 1051 AMS completed accessible portions of 1st floor/ground level. Ground level readings appeared to be "low". AMS also begin to screen basement stairs. Circular coated glass piece had elevated readings 172 uR. AMS said the elevated object was found in corner of basement stairs. Similar circular glass/plastic pieces were found elsewhere throughout the building however were not elevated for radioactivity.
- 1135 Tank at vault in basement opened up by breaking concrete with excavator (Rock Env). Tanks prior to breaking concrete had holes in tops some concrete fell into tanks.

18

2182207  
Former Wollersack

5/22/19

- 1130 I-beam in way preventing access to remove tanks. Beam to be cut and removed by Rocky Ferra.
- 1139 Fire Marshall on-site Steve Engleniuk to look at tank removals, Steve said tanks with large holes can be removed without screening (LEL). Tank 7 without large openings to be screened, one tank had been removed prior to Fire Marshall on-site. Fire Marshall said he has to be on-site before removed.
- 1147 Four tanks removed, none of tanks have any ~~petroleum~~ oil of water, water will be pumped out by Labella if present.
- 1204 Oxygen 20.9%. CO 8ppm LEL 0 in tank
- 1205 LEL 0 CO 15.5% CO 10ppm after putting CO into tank
- 1210 Another tank without large holes pumped with CO<sub>2</sub> O<sub>2</sub> 10.3% LEL 0 CO 11ppm readings after CO<sub>2</sub> introduced.
- 1230 Labella P. Spagnola + K. Mikel offsite with 4-275 gallon tanker to bring to scrap.

5/22/19

2182207  
Former Wollersack

A

- 1331 P. Spagnola + K. Mikel to return for remaining three tanks after draping at scrap.
- 1416 Tank #5 removed from basement Labella Buck onsite for removal. Fire Marshall on-site.
- 1430 Tank #6 removed large holes in tank prior to removal.
- 1445 Tank #7 injected with CO<sub>2</sub> O<sub>2</sub> 10.3% LEL 0 CO 10ppm. Tanks being pulled.
- 1447 Tanks were measured with a QRAEII meter to measure oxygen, CO, LEL, and SO<sub>2</sub>.
- 1500 None of the tanks needed to be pumped prior to removal.
- 1501 P. Spagnola + K. Mikel strapped tanks to trailer to bring to scrap yard (Metulico).
- 1600 A. Brett offsite.

5/22/19  
AB

36

2182207  
Former Wellinsack

11/13/19

A. Betti and Pete Spagnola on-site @ 8 am. Weather: snowing ~ 8 inches of snow on ground, wind appears to be traveling to the east-northeast @ 2-3 mph. overcast

0815 J. Gillet on site. P. Spagnola shovel snow in vicinity of tank immediately east of building, fuel oil odor noted while shoveling

0820 Excavator delivered to site (Cat 305-SE)

0830 P. Spagnola leaving to pick up poly sheeting

0845 Small boarded opening to basement from outside opened and screened with PTD, 0.6 ppm inside. Fan turned on and put in open to clear out vapors in basement, PID reading in air at 0.1 and slowly climbing

0846 A. Betti & J. Gillet go into basement, fuel oil odor present. Boiler pit appears to have oil & water mix in it. Screen debris/walls/pipes with PID for any indication of route of material

37

2182207  
Former Wellinsack

11/13/19  
Debris 26 mm paint/pollut. Fan blowing air outside  
16 mm in debris  
8 mm in debris

Pictures taken by J. Gillet

0905 J. Gillet offsite

0923 Camp monitors place upwind & downwind T&R stopped up inside to pump tanks and pit

0930 P. Spagnola returned onsite

0940 Begin pumping boiler pits with T&R Vacuum truck

0950 Boiler pit pumped of all liquid, some residual oil on surfaces

1000 CAMP Station started

1007 T&R begins pumping Northern tank ~ 8.5 inches of oil/water mix, 90 inches from top of fill port to bottom of tank

38

Q182207

11/5/79

1115 P. Seagrave begins scraping soil  
at top of tank location

1115 Top of tank located. Tank appears  
to be full. P. Seagrave used water  
piston on tank stick to determine  
approximately 8 inches of oil and the  
rest water ~ 40 inches water. Soils screened  
off top of tank placed on poly  
sheeting approximately 1.5 ft of soil  
removed to get to top of tank.

1137 T&R done pumping northern tank,  
moving to southern tank (just east  
of building).

1140 Downwind CAMP

Manual 38 Distruct Dt D2

Upwind Camp

Manual A4 Distruct D-2

1200 Logs on separate sheets

1400 CAMP Taken down. LaBelle offsite

PLUMBERS CONTINUING TO PLACE PIPE IN TRENCH DUG YESTERDAY, COLLING THROUGH FOOTER FOR OUTSIDE CONNECTION

• AMBIENT PZD READINGS ~ 0.3-7 0.8 PPM

0900 EMAILS & CONVERSATIONS WERE DISCUSSED ABOUT SOIL REUSE. JOSH GROBE WAS SPOKEN WITH ABOUT TESTING SOIL & ITS TEMPERATURES; ALSO THE PROPER STORAGE OF SOILS NOT YET TESTED. CONVERSATIONS WILL HAPPEN FOR THE IMPORT OF SPONGE & CRUSHER RUN.

CONCRETE FLOOR IS BEING PLACED IN ROLL-OFF FOR REMOVAL

1000 SAMPLE KITS ARE ORDERED FOR ON-SITE REUSE TESTING, KITS WILL BE PICKED UP LATER TODAY & SAMPLES GATHERED TOMORROW.

1130 NO FURTHER DIGGING WILL BE DONE TODAY, NOW CONCRETE REMOVAL. LABELLA NOT NEEDED ON SITE. CAMP PACKED UP.  
S. LOGAN OFF SITE

12/17/19, TUESDAY

- 0700 ARRIVE ON SITE, SET UP CAMP STATION. WAITING FOR MENS EXCAVATOR OPERATOR TO ARRIVE TO DIG HOLES FOR SOIL SAMPLING. PLUMBERS CONTINUING TO INSTALL PIPE CONNECTIONS THROUGH FLOOR FOR SEWER/STORMWATER.
- 1000 EXCAVATOR REMOVING CONCRETE PIECES TO UNCOVER SOIL UNDERNEATH. CONCRETE BEING PLACED ON DUMPSTER FOR DISPOSAL. NO PID READINGS.
- 1100 SOIL SAMPLES TAKEN FOR REUSE TESTING - 2 DISCRETE VOLS, 1 COMPOSITE FOR REST OF FULL SUITE PARAMETERS.
- DIS-01-121719 : SW CORNER, 11:00  
 DIS-02-121719 : E SIDE, 11:30  
 COMP-01-121719 : 7 LOCATIONS ON 1<sup>ST</sup> FLOOR, 12:00

1230 LEAVE SITE TO DROP OFF SAMPLES. CAMP STATION  
BROKEN DOWN - NOT NEEDED UNTIL SAMPLE RESULTS  
COME IN & PLUMBERS CAN RESUME DIGGING.

1400 BACK ON SITE FOR PLACING PIDB BAGS ON WELLS.

1500 OFF SITE FOR DAY

2182207 FOREIGN WILMERSACK - TANK PULL

WRONG DATE ON  
FIELD NOTE  
-CORRECT DATE IS  
12/19/19

12/18/19

0800 ON SITE

0830 P. SPAGNOLA & CREW ARRIVE, DUMPSTER & EXCAVATOR  
ARRIVE SHORTLY AFTER. GUY D. ARRIVES.  
-TANK IS PURGED OF ~ 3.55 GALLONS  
0845 DUMPSTER IS LOADED.  
LEZ FROM DEC ARRIVES

0850 SOIL STARTING TO BE REMOVED FROM AROUND TANK. "CLEAN"  
SOIL IS STAGED ON POLY FOR TESTING. DIRT IS PLACED  
IN DUMPSTER.

TANK LENGTH: 10'6"

DIA: 4'

1000 TANK IS LIFTED ONTO AN ANGLE, STILL IN ITS TIE, TO  
FURTHER DRAIN IT

1100 TANK IS REINVERTED INVERT VIA CO<sub>2</sub> GAS

1125 FERG MARSHALL ARRIVES. CO<sub>2</sub> IS ADDED AGAIN TO SHOW INVERT  
NUMBERS. 14% O<sub>2</sub>, 0% LEZ IN THE TANK. FERG  
MARSHALL CLEARS TANK PULL.

1140 TANK IS LOADED INTO LABEULA MATRICK FOR TRANSPORT  
TO THE LLC FOR CLEANING & DISPOSAL.

1200 LABEULA LLC LEAVES SITE TO TRANSPORT TANK.

1300 LLC BACK ON SITE. CR#2 WON'T BE ON SITE UNTIL  
TOMORROW, SO EXPLORATORY DIGGING OCCURS, TO TRY TO FIND  
POSSIBLE POCKET OF CONTAMINATION

1400 DIGGING DONE FOR THE DAY. STOCKPILE IS COVERED  
AND FENCING IS PLACED AROUND THE PIT FOR SAFETY

1500 OFF SITE. DIGGING RESUMES TOMORROW, 8 AM.

2182207 FORMER WOLLENSACK OPTICAL

12/20/19

TANK PULL, DAY 2

0800 ARRIVE ON SITE, SET UP CAMP

0815 LLC ARRIVES ON SITE, PULLS DOWN PROTECTIVE FENCING.

CLEANER SOIL ON TOP LAYERS ARE SHIFTED TO THE SIDE, STILL IN THE PIT, TO CONTINUE LOOKING FOR SIGNS OF GROSS CONTAMINATION.

ORIGINALLY THOUGHT TO BE PART OF THE FOOTER, A ROCK IS SCRAPED CLEAN & SHIFTED, TO REVEAL STAINING ON THE ROCK & STRONG STAINING / ODOR NEXT TO & BELOW IT. CONTAMINATED SOIL IS REMOVED & PLACED IN ROLL-OFF DUMPSTER. DUMPSTER IS FILLED TO TRANSPORTABLE CAPACITY.

1000 ERIC D. FROM LABEUA & LEZ FROM DEC HAVE ARRIVED. 2 LOADS OF CR#2 HAVE BEEN DELIVERED & PLACED ON POLY SHEETING.

SEVERAL MORE BUCKET-FULLS OF CONTAMINATED SOIL ARE PLACED ON POLY NEXT TO THE ROLL-OFF FOR PART OF THE DISPOSAL DETERMINATION.

1030 - 1230 SAMPLES FOR DOCUMENTATION OF SOILS STAYING IN THE PIT, PLUS CONTAINED-IN SAMPLES ARE COLLECTED.

LLC CREW LEAVES TO GET A REPLACEMENT TAMPER, AS THE ONE ON SITE IS UNREPAIRABLE.

1330 CLEANER SOIL IS SHIFTED BACK TO BOTTOM OF PIT & TAMPED. POLY SHEETING IS PLACED AS DEMARCATION LAYER.

12/20/19 CONT.

1330... CR #2 IS THEN PLACED IN PIT & TAMPED DOWN IN 8" LEPTS

1430 PIT IS ~1.5' FROM GRADE WHEN CR #2 PILE IS DEPLETED. 1 MORE LOAD WILL NEED TO BE DELIVERED NEXT WEEK TO BRING PIT UP TO GRADE.

CAMP IS BROKEN DOWN. S. LOGAN OFF SITE.

### DISPOSAL SAMPLES:

★ 3 DAY TAT  
CAT B + DUSR

- WC-GRAB-122019, TAKEN @ 12:30 FROM WITHIN ROLL-OFF
- WC-COMP-122019, TAKEN FROM LOCATIONS IN ROLL-OFF PLUS SMALL PILE ON POLY NEXT TO DUMPSTER.

### DOCUMENTATION SAMPLES:

★ STANDARD TAT

| SAMPLE                   | LOCATION        | DEPTH | PID  | TIME  |
|--------------------------|-----------------|-------|------|-------|
| • TANK-EAST-122019 (10') | EAST SIDE WALL  | 10'   | 2.8  | 10:10 |
| • TANK-BOT-122019 (11')  | EXCAVATED FLOOR | 11'   | 30   | 10:30 |
| • TANK-WEST-122019 (8')  | WEST SIDE WALL  | 8'    | 16.1 | 10:40 |

SHEET \_\_\_\_\_ OF \_\_\_\_\_

PROJECT NO. \_\_\_\_\_

CALC. BY \_\_\_\_\_

DATE 1/9/20

SUBJECT \_\_\_\_\_

SCALE \_\_\_\_\_

CHECKED BY \_\_\_\_\_

0645 J. Folger on-site  
 0700 Set up CAMP stations. Interior station now includes 4-gas meter to track CO and O<sub>2</sub> levels per DEC comment.  
 0715 All CAMP stations running, waiting for trucks to resume excavation.  
 0730 Stone deliveries begin  
 0750 Excavation resumes  
 0820 MW-12 bumped by excavator during digging. Uncertain if damaged. Roll-off collected by Cassella.  
 930 Truck 466 3A-1079 USDOT 757485 799959  
 915 Roll-off overloaded, placed back on-site  
 930 PID batteries dead in both upwind and downwind stations. Changed batteries, no more spares. Likely due to extreme cold  
 1045 Check CAMPs okay. Elevated dust in Jack Bement from Austin Master Services on-site to check radiological areas → Mobilize next Thursday  
 1100 Jack Bement off-site  
 1105 Upwind PID battery dead. Swapped for old one, hopefully warming weather will provide some battery life. Screened elevated dust readings from indoor CAMP station due to jackhammering.  
 1140 Upwind PID battery dead  
 1205 Notified Victor excavation of mud being trucked off-site. Victor spreads stone around site entrance  
 1210 Power to building cut, possibly by excavators  
 1400 Plumber off-site pack up interior camp  
 14:30 Victor done excavating pack up CAMP  
 15:00 Off-site

Excavation Trucks #21, 360, 338, 11, 17

PROJECT Wollensack SHEET      OF     

PROJECT NO.                      CALC. BY              DATE 1/13/2020

SUBJECT                                      SCALE             

CHECKED BY                                     

- 0645 J. Folger on-site
- 0700 Set up interior and exterior CAMP. Victor will grade and dress parking lot. No additional stone planned for delivery.  
Ask plumbers to uncover monitoring well damaged during trenching
- 0800 Check CAMPs all okay
- 0815 Victor brings tree removal equipment for removal of tree near Hudson Ave entrance
- 0945 Poly tank delivered for pumping out basement
- 1015 Tree removal complete
- 1100 Replaced dead battery in Upwind PID
- 1230 Check CAMP stations, all okay. Victor continuing to grade parking lot. Plumbers burying SSDS
- 1315 Victor pick up and removes excavator from site
- 1400 Victor off-site
- 1415 Victor on-site, bulldozer loaded on truck and removed from site
- 1500 Plumbers off-site, pack up CAMP stations
- 1515 Dan Noll on-site to review SSDS system. Conduct walkthrough with Josh of Hamilton Stern.  
Discuss depressurization of stairwells.
- 1545 Off-site

PROJECT Wollensack SHEET      OF       
PROJECT NO. 2182207 CALC. BY      DATE 1/14/20  
SUBJECT      SCALE       
CHECKED BY     

0645 J. Folger on-site

0700 Set up CAMP stations

0715 A. Brett on-site for J. Folger, CAMP set ups consisting/comprised below

| Dusttrucks | Run Mode   | PIDs (min-Rae 3000) | Location                       |
|------------|------------|---------------------|--------------------------------|
| FA02727    | Manual-003 | FA01644             | North near temp electric panel |
| FA02283    | Manual-005 | FA00918             | South site border              |
| FA01274    | Manual-011 | FA00345             | Indoors SW portion of building |

0730 Gas meter monitoring indoor air also used due to indoor equipment

use, measuring CO, H<sub>2</sub>S, O<sub>2</sub>, LEL  
(PPM) (PPM) (%) (%)

QRAE 3

FA03226

0745 Contractor digging soil from trench for installation of SSDs piping (perforated pipe with sleeve to prevent rocks and dust inside). Minimal amounts of soil removed and added to stockpile. Digging/excavation completed with hand shovels, cuts in concrete already present.

0815 Backfilling around perforated pipe with pea stone gravel

0820 Contractor continuing removing small amounts of soil for placement of SSDs piping

0840 Contractor adding sleeves to piping and placing in trench, backfilling with pea stone. Pipe appears to be black corrugated pipe with perforations @ 4" diameter

- Soil pile
- Piping (perforated) for SSDs installed below current floor grade
- walk
- ===== Piping above current floor grade solid PVC that will be covered when floor grade will be brought up
- ||||| Stairs
- △ door or doorway
- Note: measurements of piping lengths are approximate
- ② Drawing not to scale

0900 Load of pea stone brought in with mini loader, QRAE 3 checked CO = 3 ppm  
Checking Dusttrucks and PIDs, all functioning with no exceedances  
Plumbers in meeting with Hamilton Stern

1045 Contractors sweeping up excess pea stone from floor, soil added to SE pile inside

- 0645 J. Folger on-site  
 0700 Set up CAMPs. Plumbers plan to clean up edges of concrete in preparation for concrete pouring  
 0815 Check CAMP stations. Downwind DustTruck not recording, flow issues. Reset unit, now working fine. All other stations okay  
 0915 Check CAMPs, all okay, plumbers preparing for concrete pouring: <sup>covering</sup> ~~covering~~ pipe ends, edging concrete  
 1030 CAMPs all okay, some dust generated by plumber activity, not excessive  
 1130 CAMP all okay  
 1215 CAMP all okay, plumbers starting to drill concrete for rebar, creating dust, still at acceptable levels  
 1330 CAMP upwind PID battery dead. No activity needing monitoring occurring outside. Plumbers continuing to drill and spread plastic in trenches  
 1430 Interior CAMP okay, dust ~~at~~ levels significantly decreased. Plumbers continuing to lay plastic  
 1500 Plumbers off-site, Pack up CAMPs  
 1515 J. Folger off-site

1/16/2020

- 0645 J. Folger on-site  
 0700 Set up CAMPs. Hamilton Stern prepping area around 1<sup>st</sup> floor sump for radiation remediation by Austin Masters. - expected around 0800  
 0800 Austin Master Services on-site. Cement truck for filling of plumbing trenches on-site  
 0815 Plumbing trenches beginning to be filled with concrete.  
 0915 Austin Master setting up. Will begin removal after concrete pouring is complete. Will begin setup at upstairs location while waiting  
 1000 Both exterior PID batteries dead. No activity requiring monitoring occurring outside  
 1100 Austin Master begins upstairs radioactive material removal  
 1130 Concrete pouring done  
 1330 Upstairs radioactive removal complete, Austin Master cleaning up work area  
 1400 AMS working on cleaning out downstairs sump  
 1445 Sump cleanup appears to be more contaminated than initially anticipated. Zircon sent in sump. Second floor passed screening. AMS taking down radioactive danger signs. Packing up first floor removal area, will resume tomorrow  
 1515 J. Folger off-site

## IW-5-09 Soil Log

| (ft)<br>Depth | TIME  | DATE   | PID<br>(ppm) | General Description                                           |
|---------------|-------|--------|--------------|---------------------------------------------------------------|
| 0-5           | 1435  | 2/3/20 | 2.7          | Brown, VF SAND & SILT; TRACE CLAY, moist, some F-SA-SR gravel |
| 5-10          | 1500  | 2/3/20 | 0.9          | Brown SILT; trace clay; trace F-VF SA-SR gravel moist.        |
| 10-15         | 0900  | 2/4/20 | 9.7          |                                                               |
| 15-21         | ~1030 | 2/4/20 | 32           |                                                               |

1445

| Workzone                     | upwind                       | Downwind                    | CO-0  | LEL-0   |
|------------------------------|------------------------------|-----------------------------|-------|---------|
| 0.004 $\text{mg}/\text{m}^3$ | 0.016 $\text{mg}/\text{m}^3$ | 0.05 $\text{mg}/\text{m}^3$ | H2S-0 | O2-20.9 |
| 0 ppm                        | Dead PID                     | 0 ppm                       |       |         |

1452 - Workzone Dust levels appear to be within our desired levels of  $< 0.150 \text{ mg}/\text{m}^3$

\*NOTE - USING WORKZONE PID to screen Soil.

1535 - Digging ends - Clean up CAMPS + WORK AREA

1600 - A. da Silva Leaves Site.

2/4/2020

34°F Cloudy

A. da Silva 43

0630 - A. da Silva @ office (Korak + Hours) } office Charge

0700 - A. da Silva on Site. Zero

calibrates all CAMPS (DUSTRACKS). Sets

up CAMPS By 0730

- There should be outdoor Excavation onsite today

for Sewer Line. A. da Silva will send update Email to PMS

0740 - Indoor Concrete ~~exterior~~ <sup>Asst</sup> Demolition of Stairs begins via Rock Environmental, May Cause Dust Buildup. They are Wetting Surfaces.

Dust levels increasing. A. da Silva Removes ply-wood windows on NE corner of Building.

0800 - w/ Ply wood windows down in NE & SW corners,

Dust levels in workzone hang around  $0.1 \text{ mg}/\text{m}^3$

- Differs on Site.

| Workzone                     | upwind                       | Downwind                     | CO-0  | LEL-0   |
|------------------------------|------------------------------|------------------------------|-------|---------|
| 0.106 $\text{mg}/\text{m}^3$ | 0.043 $\text{mg}/\text{m}^3$ | 0.051 $\text{mg}/\text{m}^3$ | H2S-0 | O2-20.9 |
| 0.0 PPM                      | 0 ppm                        | 0 ppm                        |       |         |

→ All Soil on site appears to be moist Due to Recent Melting of Snow. (Hamilton) Plans on using the Air Profiler Crusher Run for Back Fill.

0810 - Augering begins on <sup>(Continues)</sup> IW-5-09. Refer to Pg. 42 for Soil log.

0820 - Victor Excavation took (1) Excavator offsite.

Prepping for onsite Excavation of Sewer Line.

0845 - Workzone PID SPIKE, Some kind of ~~fraser~~ <sup>Sweet</sup> glue smell coming from North End of Building. NOT SOIL

- May Be Roof glue

Rite in the Rain.

1) 20 - Noticable Spike in work zone dust TRAIL white Rock Environment  
is being guiding steel near Stairways Addition  
Will take down an Additional Plywood window in SW Corner.

Top 1.5 - 2 ft are Black urban fill w/ cinders, slag, glass, metal, etc.  
TRACE Brick

↳ Soil Below 3 is silty Brown - light Brown SAND; trace - little clay; little VF - F sand gravel; some large stones 6" - 12" diameter. No odors

- 1-2 ft ~~stone~~<sup>ASPH</sup> of 1.5' 2" stone surrounds Piping
- Cr #2 (crusher Run) will be used for the Rest of Backfill

Rite in the Rain.

1131 - opening other Ply wood window appeared to mitigate dust levels.

- Excavation outside (onsite) for sewer line parallel for adding supports on sides.

### IW-S-09 Well construction Log

- 1150 - TRUCK load of <sup>Gravel (possible 1 1/2\"/></sup>

| 1225 Work Zone          | UPWIND                  | Downwind                | CO-5  | LEL-0 <sup>47</sup> |

**RE: June 2019 Monthly Progress Report  
Former Wollensack Optical Site – C828209  
872 & 886 Hudson Avenue, Rochester, New York  
LaBella Project #2182207**

Dear Ms. Theobald,

LaBella Associates, D.P.C. (“LaBella”) is pleased to submit this Monthly Progress Report (MPR) associated with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site (BCP ID No. C828209) located at 872 & 886 Hudson Avenue, Rochester, New York, hereinafter referred to as the “Site.” Below is a summary of activities completed in the previous month (May) and planned for this month (June).

**Activities in Prior Month (May)**

- Based on comments received from the NYSDEC on March 14, 2019 for the Remedial Investigation Work Plan (RIWP) and subsequent discussions with the NYSDEC, the revised RIWP was submitted to the NYSDEC on April 4, 2019. In an effort to move forward with the project and after notifying the NYSDEC, portions of Task 2 of the RIWP (i.e., Floor Slab Evaluation) were completed the week of May 13, 2019. Activities completed as part of Task 2 included:
  - Sub-slab vapor screening – DRAFT PID measurement modeling is attached to this MPR. Final modeling will be included in the Remedial Investigation (RI) Report. The preliminary modeling indicates the highest sub-slab vapor VOC concentrations were measured in the southwestern quadrant of the building.
  - Floor penetration evaluation – The locations of several drains on the first floor of the Site building were documented. A plumbing subcontractor mobilized to the Site on May 16, 2019 but due to blockages in several of the drains, only one drain was able to be partially scoped. Dye testing could not be completed in any of the drains due to the blockages.
- Based on preliminary comments regarding Task 1 of the RIWP (Radiation Survey) received from the NYSDEC on April 24, 2019, Task 1 of the RIWP began on May 20, 2019 and was completed by Austin Master Services (AMS), a NYSDOH Radioactive Material Licensed contractor. AMS is currently drafting a report summarizing the scope completed and results of this survey; however, preliminary findings previously shared with the NYSDEC indicate elevated levels of radiation within a sump located on the first floor of the Site building and in one (1) approximately 3-feet (ft) by 3-ft area on the wooden floor surface of the third floor of the Site building.

- Seven (7) aboveground storage tanks (ASTs) were removed from the vault located immediately adjacent to the south of the Site on May 22, 2019. This vault was accessible through the Site building's basement and is located beneath the right-of-way (ROW) along Avenue D. During removal, the ASTs were observed to be generally empty and several of the ASTs were observed to have holes in them. The AST removal will be further documented in the RI Report.
- During a meeting at the Site with the contractors (Hamilton Stern Construction LLC and Rock Environmental) on May 24, 2019, a suspect underground storage tank (UST) fill port was observed in the northeastern portion of the Site (refer to attached Figure 2). Upon further inspection of this suspect fill port, this pipe does appear to be associated with an approximately 48-inch diameter UST with approximately 8.5-inches of oily water in the bottom of the tank. This UST is partially located beneath temporary electrical utilities recently installed as part of the Site redevelopment work and thus test pitting to further assess this UST could not be completed. Soil borings will be advanced to assess the subsurface in the vicinity of this UST during the RI.
- Received NYSDEC approval of RIWP on May 31, 2019.
- On June 4, 2019, Rock Environmental was breaking up a concrete pad located directly east of the Site building and an apparent UST was encountered beneath the pad (refer to attached Figure 2). Upon further inspection, this appears to be a 1,000-gallon UST with approximately 10-inches of oily water in the bottom of the tank. This UST appears to be surrounded by underground concrete walls potentially comprising a vault. Soil borings will be advanced to assess the subsurface in the vicinity of this UST during the RI.
- A Request for Importation of recycled concrete was submitted to the NYSDEC on May 22, 2019 and subsequently approved by the NYSDEC. Recycled concrete was imported to the Site on May 24, 2019 and placed on the Site surface to prevent tracking of soils due to wet conditions. This work included excavation of a few inches of soil in this area and placement of that soil in a pile on the eastern side of the Site. LaBella was on-site to implement the Community Air Monitoring Plan (CAMP) during this work.
- Following approval of the RIWP by the NYSDEC, soil borings were completed in the Site building basement per the RIWP. Based on the holes observed in the ASTs during their removal, a soil boring was also advanced through the vault's floor. Soil samples were submitted from each of the four (4) soil borings. AMS was on-site during this work and screened each boring with radiological detection equipment. Additional details regarding this work and associated results will be documented in the RI Report.
- A Request for Importation of #3A and #4A stone (i.e., cobbles) was submitted to the NYSDEC on May 30, 2019 and subsequently approved by the NYSDEC. This material was imported to the Site on June 10, 2019, and utilized to fill the former AST vault located immediately adjacent to the south of the Site, beneath the ROW (i.e., sidewalk).

#### **Activities Planned for this Month (June)**

- Implementation of much of the RIWP is planned to take place in June and July 2019. Please see the attached schedule for a detailed timeline of the anticipated RIWP activities.
- Submission to the NYSDEC of a work plan for sub-slab depressurization system (SSDS) design.

### **Sampling/Testing Results**

Laboratory data associated with the Site was not been received since the Site was enrolled in the BCP.

### **Unresolved Delays Encountered or Anticipated**

Unresolved delays have not been encountered nor are they anticipated at this time.

### **Percentage of Completion**

To date, the following key items have been completed as part of the BCP project:

- RIWP Approval
- Interim Site Management Plan submitted to NYSDEC/NYSDOH (pending approval)

### **Activities Undertaken in Support of the Citizen Participation Plan**

- A public comment period has been completed for the RIWP.
- A copy of this Monthly Progress Report will be submitted to the document repository.

If you have any questions or require additional information please do not hesitate to contact me at 585-295-6648.

Respectfully submitted,

**LaBella Associates**

**RE: December 2019 Monthly Progress Report  
Former Wollensack Optical Site – C828209  
872 & 886 Hudson Avenue, Rochester, New York  
LaBella Project #2182207**

Dear Ms. Theobald,

LaBella Associates, D.P.C. (“LaBella”) is pleased to submit this Monthly Progress Report (MPR) associated with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site (BCP ID No. C828209) located at 872 & 886 Hudson Avenue, Rochester, New York, hereinafter referred to as the “Site.” Below is a summary of activities completed in the previous month (December 2019) and planned for this month (January 2020).

#### **Activities in Prior Month (December 2019)**

- During a site visit by LaBella personnel on November 7, 2019 a fuel oil odor was noted in the building. LaBella discovered approximately 6-inches of water in the former boiler pit within the basement with less than 1-inch of apparent fuel oil floating on top of it. Based on this discovery, Spill #1907970 was opened with the NYSDEC. A vac truck was mobilized to the Site on November 13, 2019 and pumped the oil-water mixture from the Site. LaBella also completed test pitting around the exterior underground storage tank (UST) located immediately east of the basement. Test pits completed to the north, south and east of the UST did not identify significant evidence of impairment but soils directly below the UST could not be accessed at this time. The maximum PID reading measured was 30-ppm at 5-ft below ground surface (bgs) directly south of the UST.

The UST was accessed using the excavator and was found to have filled with apparent rainwater with 8-inches of oil floating on top of the water within the UST. When this UST was first discovered in June 2019, approximately 8.5-inches of oily water was observed in this tank. Refer to the June 2019 Monthly Progress Report for additional information.

Following discussions with the NYSDEC, the UST was properly removed on December 19-20, 2019. Approximately 25-cubic yards of impacted soil were excavated from the tank pit for off-site disposal at High Acres Landfill in Fairport, New York. Confirmatory samples collected from the tank pit did not identify targeted compounds above Site SCGs with the exception of acetone in one (1) sample slightly above the NYCRR Part 375 Unrestricted Use and Protection of Groundwater Soil Cleanup Objectives (SCOs). Data tables and the unvalidated laboratory report are attached to this letter. After excavation, impacted soils were staged in a lined roll-off dumpster and on poly-sheeting and covered with poly-sheeting. Waste characterization sampling was completed and a contained-in determination was approved by the NYSDEC on January 2, 2020. Impacted soils were disposed of at the landfill the week of January 6, 2020. This work will be further documented in a Construction Completion Report (CCR). The CCR will include all relevant disposal documentation.

- The basement floor was removed as part of redevelopment operations in November and December 2019. LaBella was on-site to implement the CAMP during this period and screen exposed soils in the basement. Evidence of impairment was not noted in soils below the basement floor slab at that time. A CCR will include a summary of this work as well as concrete recycling documentation.
- Trenching associated with plumbing and sub-slab depressurization system installation on the first floor of the building was completed in December 2019. Soils excavated as part of this work were sampled for reuse per DER-10 Section 5.4. These soils were approved for reuse by the Department on December 26, 2019 with the condition that the soils would be re-used beneath the building floor slab as the PFAS data has not yet been received for this material.
- Firebrick from beneath the former boiler in the building basement was previously identified to contain levels of radiological activity above background. This radiological activity was deemed to be associated with Naturally Occurring Radioactive Material (NORM) by the radiological consultant, Austin Master Services (AMS) during their radiological survey completed during the RI and not associated with a release at the Site. Following waste characterization and landfill approval, the firebrick was removed from the Site on January 6, 2020 for disposal at High Acres Landfill in Fairport, NY. Removal of this material and associated disposal documentation will be included in the CCR.
- Drums containing investigation derived waste (soil and water) generated during the RI were removed from the Site. To facilitate removal of these drums from the Site, any water from the drums was pumped to a holding tank on-site in November 2019 for waste characterization sampling and subsequent disposal. Following coordination with Monroe County Pure Waters regarding permitting and disposal, the water from this tank was transported via vac truck on January 6, 2020 to Monroe County's VanLare Treatment Plant in Irondequoit, NY. Soil drums were disposed of on December 31, 2019 following completion of a contained-in demonstration which was approved by the NYSDEC on December 22, 2019. Note that the Department's November 5, 2019 conditional approval letter for the Remedial Investigation Report allotted the Volunteer 30-days to remove these drums from the Site. However, following discussions with the Department regarding the Monroe County permitting process and need for the contained-in determination, the Department was made aware that the drums would be properly disposed of off-site but could not be removed within the 30-days timeframe.
- The NYSDEC's November 2019 conditional approval letter for the Interim Remedial Measure (IRM) requested a design document be submitted associated with the treatment wells and infrastructure to be installed at the Site. This document was submitted to the NYSDEC on January 7, 2020. Treatment well installation is scheduled to begin on January 20, 2020. The well installation will require approximately 1-month to complete.
- The following requests for import, request for reuse and contained-in determinations were approved by the Department in December 2019 (and early January 2020):

| Request Type       | Material - Source                  | Use                  | NYSDEC Approval Date |
|--------------------|------------------------------------|----------------------|----------------------|
| Request for Import | Crusher Run #2 – Dolomite Penfield | UST removal backfill | 12/18/2019           |
| Request for Import | #1 Washed Stone – Dolomite Palmyra | Plumbing bedding     | 12/23/2020           |

| Request Type               | Material - Source                                       | Use                                                     | NYSDEC Approval Date |
|----------------------------|---------------------------------------------------------|---------------------------------------------------------|----------------------|
| Request for Import         | Crusher Run #2 and 1&2 Stone - Dolomite Penfield        | Parking subbase and utility bedding                     | 1/13/2020            |
| Request for Reuse          | Soil from excavation of interior plumbing trenches      | Backfill in interior plumbing trenches below floor slab | 12/23/2019           |
| Contained-In Determination | Investigation derived waste (soil drums)                | NA                                                      | 12/26/2019           |
| Contained-In Determination | Top 2-ft of soil in future parking lot footprint        | NA                                                      | 12/30/2019           |
| Contained-In Determination | Petroleum-impacted soils from December 2019 UST Removal | NA                                                      | 1/2/2020             |

#### Activities Planned for this Month (January)

- Completion of the following additional RI activities identified in the Department's November 5, 2019 RI Report conditional approval letter and described in LaBella's November 8, 2019 clarification letter. This work will be completed in accordance with the RIWP.
  - Collection of shallow soil sample COMP-SS-01 (0-2-inches) for SPLP PFAS analysis.
  - Sampling of well SB-MW-10 for TCL & CP-51 VOCs and TICs.
  - Sampling of wells BW-01, BW-02 and BW-03 for full-suite parameters.
  - Collection of a round of static water levels and completion of NAPL gauging during these measurements.
- Decommissioning of former well/boring SB-17 in accordance with CP-43. This boring was advanced in 2018 as part of the initial Phase II ESA. The boring could not be advanced past 8-ft below ground surface (bgs) and groundwater was never encountered in it.
- Installation of the sub-slab depressurization system (SSDS) within the building. The Volunteer understands the SSDS Work Plan submitted to the Department in June 2019 has not yet been approved by the Department.
- Excavation of parking lot footprint and placement of stone in this area as well as installation of underground utilities, primarily sewers. Asphalt paving is planned to occur later in 2020. The ISMP will continue to be implemented during all earthwork at the Site.
- Completion of radiation remediation by AMS per the approved IRM Work Plan.

#### Sampling/Testing Results

- The currently unvalidated data report for confirmatory sample data for the December 2019 UST removal as well as data summary tables (Table 1A and 1B) are attached to this MPR.
- Data associated with the various request for reuse, request of importation and contained-in determination were previously submitted under separate cover and will be included in the CCR.

### **Unresolved Delays Encountered or Anticipated**

Unresolved delays have not been encountered nor are they anticipated at this time.

### **Percentage of Completion**

To date, the following key items have been completed as part of the BCP project:

- RIWP Approval
- Interim Site Management Plan submitted to NYSDEC/NYSDOH (pending approval)
- SSDS Work Plan submitted to NYSDEC/NYSDOH (pending approval)
- RI Report Approval
- IRM Work Plan Approval
- IRM RAOC #1 Design Document submitted to NYSDEC/NYSDOH (pending approval)

### **Activities Undertaken in Support of the Citizen Participation Plan**

- Public comment periods have been completed for the RIWP and the IRM Work Plan.
- A copy of this Monthly Progress Report will be submitted to the document repository.

If you have any questions or require additional information please do not hesitate to contact me at 585-295-6648.

Respectfully submitted,

NOTES:  
All values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm).  
"NL" indicates Not Listed.  
"U" indicates the compound was not detected above the indicated laboratory method detection limit (MDL).  
"D" indicates the sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.  
"J" indicates an estimated value.  
*Italicised font indicates the compound was detected above the MDL but did not exceed any Soil Cleanup Objective (SCO).*  
Single Underline indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objective (SCO).  
Red font indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(b) Restricted Residential Use SCO.  
Yellow highlight indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(b) Protection of Groundwater SCO.  
Double underline indicates that the compound was detected at a concentration above its respective New York DEC Commissioner's Policy-51 (CP-51) Soil Cleanup Levels.  
VOCs analyzed by USEPA Method 8260.

NOTES:  
All values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm).  
"NL" indicates Not Listed.  
"U" indicates the compound was not detected above the indicated laboratory method detection limit (MDL).  
"D" indicates the sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.  
"J" indicates an estimated value.  
*Italicised font indicates the compound was detected above the MDL but did not exceed any Soil Cleanup Objective (SCO).*  
Single Underline indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objective (SCO).  
Red font indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(b) Restricted Residential Use SCO.  
Yellow highlight indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(b) Protection of Groundwater SCO.  
Double underline indicates that the compound was detected at a concentration above its respective New York DEC Commissioner's Policy-51 (CP-51) Soil Cleanup Levels.  
SVOCs analyzed by USEPA Method 8270.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

**Report Date:** 12/30/19

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Volatile Organics

L1961284-02, -03, -04, and -06: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The WG1325623-5 Method Blank, associated with L1961284-01, has a concentration above the reporting limit for bromomethane. Since the sample was non-detect to the RL for this target analyte, no further actions were taken. The results of the original analysis are reported.

The WG1325768-6 MS recovery, performed on L1961284-05, is outside the acceptance criteria for acetone (0%). The unacceptable percent recovery is attributed to the elevated concentrations of target compounds present in the native sample.

#### Semivolatile Organics

L1961284-03, -04, and -06: The sample has elevated detection limits due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

# SEMIVOLATILES

**Project Name:** FORMER WOLLENSACK OPTICAL  
**Project Number:** 2182207

**Lab Number:** L1961284  
**Report Date:** 12/30/19

**SAMPLE RESULTS**

**Lab ID:** L1961284-01  
**Client ID:** TANK-EAST-122019 (10')  
**Sample Location:** 872 HUDSON AVE, ROCHESTER, NY

**Date Collected:** 12/20/19 10:10  
**Date Received:** 12/20/19  
**Field Prep:** Not Specified

**Sample Depth:**

**Matrix:** Soil  
**Analytical Method:** 1,8270D  
**Analytical Date:** 12/24/19 02:09  
**Analyst:** EK  
**Percent Solids:** 89%

**Extraction Method:** EPA 3546  
**Extraction Date:** 12/22/19 09:01

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DL       | - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                               |
| EDL      | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).                        |
| EMPC     | - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.                                                                                                                                                              |
| EPA      | - Environmental Protection Agency.                                                                                                                                                                                                                                                                                                                                                                                                                        |
| LCS      | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.                                                                                                                                                                                                                                                         |
| LCS D    | - Laboratory Control Sample Duplicate: Refer to LCS.                                                                                                                                                                                                                                                                                                                                                                                                      |
| LFB      | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.                                                                                                                                                                                                                                                        |
| LOD      | - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                                                                              |
| LOQ      | - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                                                                                                                                |
|          | Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                                                                                                                                  |
| MDL      | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.                                                                                                                         |
| MS       | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.                                                                                                                                   |
| MSD      | - Matrix Spike Sample Duplicate: Refer to MS.                                                                                                                                                                                                                                                                                                                                                                                                             |
| NA       | - Not Applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NC       | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.                                                                                                                                                                                                                                                                                                          |
| NDPA/DPA | - N-Nitrosodiphenylamine/Diphenylamine.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| NI       | - Not Ignitable.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NP       | - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.                                                                                                                                                                                                                                                                                                                                                                             |
| RL       | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.                                                                                                                                                                                                                                  |
| RPD      | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report. |
| SRM      | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.                                                                                                                                                                                                                                                                                                    |
| STLP     | - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.                                                                                                                                                                                                                                                                                                                                                                                               |
| TEF      | - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.                                                                                                                                                                                                                                                                                                                            |
| TEQ      | - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.                                                                                                                                                                                                                                                                                       |
| TIC      | - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.                                                                                                                                                                                                     |

### Footnotes

Report Format: DU Report with 'J' Qualifiers

**Project Name:** FORMER WOLLENSACK OPTICAL  
**Project Number:** 2182207

**Lab Number:** L1961284  
**Report Date:** 12/30/19

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

## Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

## Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** FORMER WOLLENSACK OPTICAL  
**Project Number:** 2182207

**Lab Number:** L1961284  
**Report Date:** 12/30/19

**Data Qualifiers**

- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

**Re: January to March 2020 Monthly Progress Report**  
Former Wollensack Optical Site – C828209  
872 & 886 Hudson Avenue, Rochester, New York  
LaBella Project #2182207

Dear Ms. Theobald,

LaBella Associates, D.P.C. (“LaBella”) is pleased to submit this Monthly Progress Report (MPR) associated with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site (BCP ID No. C828209) located at 872 & 886 Hudson Avenue, Rochester, New York, hereinafter referred to as the “Site.” Below is a summary of activities completed in the previous months (January to March 2020) and planned for this month (April 2020).

### **Activities in Prior Months (January, February, and March 2020)**

#### Installation of SSDS and Sub-Grade Plumbing

The majority of the SSDS subgrade piping and subgrade plumbing was installed. The remaining portion of the SSDS into the western stairwell adjacent to Hudson Avenue will be installed sometime in April 2020. In addition, the above grade SSDS piping and fans have not been fully installed. The CAMP was implemented during the work in accordance with the ISMP. A CCR or FER will include a summary of the work and as-built drawings of the SSDS.

#### Radiological Remediation

Austin Masters Services (AMS) performed remediation of a small (3’ x3”) contaminated area of floorboards on the third floor of the building and the sump located on the first floor of the building. A summary of this work is included AMS remediation report dated January 28, 2020 (attached). A CCR will include a summary of the work.

#### Box-Out of Parking Lot

LaBella was on-site during January to monitor the box-out of the new parking lot. Monitoring of the soil and the implementation of the CAMP was completed during this work. The work included the removal of surface soil for off-site disposal and importation of material for the parking lot subbase. A CCR will include a summary of this work.

#### Installation of Sanitary Sewer Lateral

A sanitary sewer lateral was installed from the northwest corner of the site building into the Hudson Avenue right-of-way. Monitoring of the soil and the implementation of the CAMP was completed during this work. The excavation was backfilled with #2 crusher run stone. All excavated soil was placed on and covered with poly sheeting on-site pending waste characterization, contained-in approval, and disposal. A CCR will include a summary of this work.

### Treatment Well Installation

The installation and monitoring of the treatment wells as part of the NYSDEC approved Interim Remedial Measure (IRM) Work Plan was conducted during January and February 2020. This involved the installation of seventeen (17) overburden and seven (7) bedrock treatment wells. The CAMP was implemented during this work. There were some CAMP exceedances for dust detected during the installation of the treatment wells that were attributed to the ongoing construction work (i.e. masonry, floor cleaning, etc.). These exceedances were documented on the CAMP logs with an explanation.

Periodic static water levels (SWLs) were collected from each treatment well to monitor whether the seal remained competent between the bedrock and overburden treatment wells. Based on the SWLs measurements overtime, the well seals appear to remain competent.

Each treatment well was purged of a minimum of three wells volumes (or until dry). Purge water was stored in 55-gallon drums on-site. During the well purging, DNAPL was observed within bedrock treatment well IW-D-08. A black oily film was observed to smear the bailer during purging. The presence of DNAPL was checked and not observed in any other overburden or bedrock treatment wells. A CCR will include a summary of this work.

### Decommission and Installation of Interior Monitoring Wells

Three of the wells that were proposed be used as performance sampling for the chemical application (see below) are located within the residential apartments. These wells were decommissioned in accordance with CP-43 and a nested overburden/bedrock well in a non-residential area was installed as a replacement. This is discussed in the Approved Activity Modifications section below. A CCR will include a summary of the well closure and installation logs.

### Application of the In-Situ Chemical Oxidation (ISCO) Chemical

The ISCO chemical permanganate was injected and/or gravity fed into the 17 overburden treatment wells from March 3 through March 20, 2020. Permanganate was applied at either a 10% or 20% solution depending how well each treatment well/location accepted the chemical and to reduce the potential of daylighting. The permanganate was distributed to each treatment well in general accordance with the work plan; with the exception of a couple locations that received less chemical due to concern of daylighting in the basement. Any chemical that was observed to be daylighting was immediately neutralized. A CCR or FER will include a summary of the application of permanganate and a summary of the application is provided below.

| Well ID | Date(s) of Application  | Concentration of Permanganate | Gallons Applied               |
|---------|-------------------------|-------------------------------|-------------------------------|
| IW-S-01 | 3/18/2020               | 10% and 20%                   | 75 gal of 10% ; 28 gal of 20% |
| IW-S-02 | 3/18/2020               | 10% and 20%                   | 15 gal of 10% ; 58 gal of 20% |

#### Contained In Use Requests

The following requests for contained-in determinations were approved by the Department from January to March 2020:

| Request Type               | Material - Source           | NYSDEC Approval Date |
|----------------------------|-----------------------------|----------------------|
| Contained-In Determination | Sewer Line Excavation       | 21-February-2020     |
| Contained-In Determination | Treatment Well Installation | 27-March-2020        |

A CCR will include a summary of the disposal and applicable documentation listed above.

#### **Approved Activity Modifications**

- The location of the pressure field extension (PFE) monitoring points were reviewed based on the layout of the 1<sup>st</sup> floor residential space. Two of the PFE locations were located within a residential apartment. One of the points was proposed to be relocated to an adjacent office area, and the other is located at the northwest area of the building. The location at the northwest area of the building was requested to be made temporary since it is located within a future residential living space. A PFE reading will be collected from this location when the SSDS is fully operational to confirm a minimum reading of -0.004 inches of water, then permanently seal the location.
- Reviewing the existing wells with the layout of the building, 3 of the wells that are proposed be used as performance sampling for the chemical application are located within the residential apartments. These wells are to be decommission and a nested overburden/bedrock well in a non-residential area will be installed as a replacement. Two additional bedrock treatment wells will be installed in the area of treatment well (IW-D-08) that detected DNAPL. The locations were approved by the NYSDEC.

A copy of each correspondence for the above approved modifications is attached.

### Activities Planned for this Month (April)

- Begin trenching and the installation of horizontal piping beneath the floor slab that will be used for subsequent ISCO application events.

### Sampling/Testing Results

The following sampling/testing results were received during this reporting period:

- SPLP PFAS at RI surface soil location (SS-COMP-01 0-2 inches) per new PFAS guidance (lab report L2002747).
- Groundwater samples results for samples BW-01, BW-02, MW-03, SB-MW-10, RIMW-A-1, RIMW-A-2, RIMW-A-3, and RIMW-A-4 (lab report L2002906).
- Trench soil for the plumbing and SSDS installation that were collected in December 2019 (lab report L1960377).
- Groundwater data for the wells BW-03-1 and BW-03-2 (lab report L2000143).
- Waste characterization testing during this reporting period will be included in the CCR.

### Unresolved Delays Encountered or Anticipated

Unresolved delays have not been encountered nor are they anticipated at this time.

### Percentage of Completion

To date, the following key items have been completed as part of the BCP project:

- RIWP Approval
- Interim Site Management Plan submitted to NYSDEC/NYSDOH (pending approval)
- SSDS Work Plan Approval
- RI Report Approval
- IRM Work Plan Approval
- IRM RAOC #1 Design Document
- IRM RAOC #1 Implementation – 50%
- SSDS Installation – 75%

## Citizen Participation Plan Activities

No Citizen Participation Plan Activities were undertaken during this reporting report.

We appreciate the opportunity to serve your professional environmental engineering needs. If you have any questions please do not hesitate to contact me at 585-295-6253.

Respectfully submitted,

Re: Former Wollensack Suite Optical January 2020 Radiological Remediation Project

Dear Ms. Vitale

Austin Master Services, LLC (AMS) was contracted to remediate two radiologically contaminated areas at the former Wollensack Optical facility located at 872-886 Hudson Avenue in Rochester New York. The Site is in the New York State Department of Environmental Conservation's (NYSDEC's) Brownfield Cleanup Program as facility #C828209. The radiologically contaminated areas were 1) a small (3' x3") contaminated area of floorboards on the third floor of the building and the sump located on the first floor of the building. The July 2019 report from AMS to your office provides the survey details for both those areas. The following summarizes the results of the remediation activities and AMS recommendations for future actions:

- The 3<sup>rd</sup> floor area has been successfully removed and no residual contamination remains in the area.
- The interior of sump, after several pressure washings exhibits surface count rates greater than background for the building but do not contribute or increase the building background dose rates above the sump.
- AMS believes those elevated count rates are due to naturally occurring radioactive material contained within the glazed terra cotta material of which the sump is comprised.
- Because 1) the dose rates in the occupied area above the sump are at background levels for the building, 2) the elevated count rates are primarily from the terra cotta material, and 3) the plan is to fill the sump with concrete and install a 30" raised floor above the sump, the radiological risk to any future occupant is zero; consequently AMS recommends no further effort be made to either clean or remove the sump.

The remediation approach, as described in the Radiation Protection Plan (RPP) consisted of the following steps.

1. Cut through the "non-contaminated area surrounding the contaminated 3'x3' section of the floor and remove the 3' x 3' section plus a small uncontaminated border section.
2. Place the removed section into a waste container for disposal out-of state at a suitably permitted facility.
3. Upon completion of the 3<sup>rd</sup> floor section removal, perform a post remediation/removal survey that includes a wipe and direct measurement of the surfaces adjacent to the removed area.
4. In addition, survey the area, with wipes and direct measurements in the area on the second floor directly below the removed section. This second survey was performed to ensure no loose contaminants fell to the floor below.
5. For the sump, remove the materials in the sump and place in a waste container for disposal out-of state at a suitably permitted facility.
6. After removal of the sump debris, use a pressure washer to clean the interior. Decontamination debris and water were removed and placed in suitable containers for disposal at a suitably permitted out of state facility.
7. After each pressure washing survey the interior of the sump and compare contamination levels to the release criteria recommended by NYSDEC.

8. Note that the release criteria denoting no contamination present was established at the 95% confidence level for the average of the background counts for removable and total surface alpha and beta emissions.

Table 1 below lists the post remediation survey results for the third and second floor areas. The survey detail sheets are contained in Attachment 2 to this letter report. The average post remediation survey count rates were then compared with the background 95% confidence levels for the wood floor in the building; see Attachment 1 for background survey measurements. Post remediation surveys showed the removable contamination and total surface contamination were all less than the 95% CL action level.

*Table 1 - 3rd & 2nd Floor Post Remediation Survey Data and Comparison to 95% CL Action Limits*

| 2                            | 52        | 4    | 213    |             |                                                        |      |        |       |
| 1                            | 44        | 5    | 228    |             |                                                        |      |        |       |
| Mean                         | 0.2       | 71.7 | 4.8    | 216.0       | 0.3                                                    | 50.7 | 3.5    | 216.3 |
| 95% CL<br>(for wood surface) | 3.5       | 85.3 | 7.8    | 239.0       | 3.5                                                    | 85.3 | 7.8    | 239.0 |

As shown in Table 2, the post remediation direct surface counts for the sump did not meet the RPP 95% confidence levels being used for the release criteria. This was likely a result of the composition of the sump and not the contamination from former facility operations. Survey data sheets are contained in Attachment 3 to this letter report.

The sump is made from a terra cotta material with glazing similar to that found in floor tile on the **first** floor during the July 2019 scoping survey. It is suspected that the glazing contains some elevated concentrations (i.e. above normal background for the Rochester area) of naturally occurring radionuclides, which is resulting in the alpha and beta surface emissions above the 95% CL. Because this building material itself is naturally slightly radioactive, further surface decontamination will be ineffective in reducing levels below the 95% CL. See Table 2 below for a results summary.

*Table 2- Sump Post Remediation Survey Data and Comparison to 95% CL Action Limits*

|                         | Wipes (counts) |         | Direct (counts) |         |
|-------------------------|----------------|---------|-----------------|---------|
|                         | $\alpha$       | $\beta$ | $\alpha$        | $\beta$ |
|                         | 1              | 43      | 95              | 874     |
|                         | 9              | 62      | 93              | 1032    |
|                         | 1              | 52      | 34              | 673     |
|                         | 8              | 76      | 98              | 1470    |
|                         | 5              | 39      | 52              | 850     |
|                         | 2              | 60      | 28              | 859     |
|                         | 3              | 68      | 16              | 631     |
|                         | 4              | 57      | 91              | 1064    |
|                         | 2              | 45      | 22              | 663     |
| Mean                    | 3.9            | 55.8    | 58.8            | 901.8   |
| 95% CL Bk <sub>ad</sub> | 3.5            | 85.3    | 10.1            | 366.9   |

Dose rate measurements were made one foot above the sump and then throughout the first floor. The values were 8 urem/h and were consistent with background levels found throughout the building. Given that the dose rate is indistinguishable from background and the building renovation plan is to fill in the sump and then raise the existing first floor elevation over the sump area by approximately 30 inches, there will be no radiological risk to future occupants. Consequently, AMS recommends no further remediation effort be applied to this area.

Finally, approximately 50 ft<sup>3</sup> of contaminated debris and water has been collected to date; there will be additional waste generated from tear down of the sump containment. Drums are currently located in a posted radioactive materials storage area awaiting disposal by AMS. The contaminated debris removal will take place within the next 30 days.

Feel free to call (518-859-1944) or email ([pcollopy@austinmasterservices.com](mailto:pcollopy@austinmasterservices.com)) with any questions or comments.

Respectfully,

## Survey Types

D = Direct Scan

S = Swipe

## NOTES

1. "Probe Area (cm<sup>2</sup>)/100 cm<sup>2</sup>" not used in MDA equation for Scalers.
2. A map is not required if sufficient detail can be included on this page.
3. Activity for direct (D) measurements corrected for probe area to 100 cm<sup>2</sup>.
4. Swipes obtained over 100 cm<sup>2</sup> when the accessible surface area item exceeds 100cm<sup>2</sup>.
5. Notify RSO/SRSO when contamination levels exceed Unrestricted Release Criteria Noted Above.

## Survey Types

D = Direct Scan

S = Swipe

## NOTES

1. "Probe Area (cm<sup>2</sup>)/100 cm<sup>2</sup>" not used in MDA equation for Scalers.
2. A map is not required if sufficient detail can be included on this page.
3. Activity for direct (D) measurements corrected for probe area to 100 cm<sup>2</sup>.
4. Swipes obtained over 100 cm<sup>2</sup> when the accessible surface area item exceeds 100cm<sup>2</sup>.
5. **Notify RSO/SRSO when contamination levels exceed Unrestricted Release Criteria Noted Above.**

**Cc:** Caffoe, Todd (DEC); Gillen, Jennifer  
**Subject:** RE: C828208, Jefferson-Wollensack - Groundwater Monitoring Well Closure, Installation, and DNAPL

Mike:

The Department is well aware of the developer's need to meet HCR's schedule. It would be advantageous to have the monitoring wells in the source area remain for rebound monitoring but the Department understands that it is not convenient to have groundwater monitoring wells located in someone's apartment. With that said, the proposed work below can proceed forward. If after the completion of the IRM activities and submittal of the CCR, any data gaps can be addressed in remedy selection and in the Site's RAWP when that is submitted to the Department for review and approval.

Best Regards,  
Charlotte

Charlotte,

The main concern is keeping the driller going on the additional wells, as it may be a while before they can return to the site if they have to demob. If they have to remob to the site at a much later date, it could delay occupancy of the building, as the contractor would have to delay working in the drilling area. With HCR and funding, the project is has to meet certain deadlines, and there are significant cost implications to the client if they cannot. Also, we want the wells installed to we can have them to monitor the performance of the chemical injection.

-Mike

Charlotte,

#### DNAPL Layer

We have detected what appears to be a slight DNAPL layer at one of the injection wells shown on the attached figure. We have attempted to measure the thickness of the DNAPL with an oil/water interface probe, but it appears the DNAPL layer is not thick enough to allow an actual measurement. So far we have not detected DNAPL in the other wells. As a contingency, we are proposing to add 2 additional bedrock treatment wells shown on the attached figure.

#### Well Installation and Decommissioning

Reviewing the existing wells with the layout of the building, 3 of the wells that are proposed be used as performance sampling for the chemical injection are located within the residential apartments as shown on the attached figure. We are proposing to decommission these wells and add a nested overburden/bedrock well in a non-residential area shown on the attached figure.

The installation of the injection wells are progressing on schedule at this point and we anticipate to be completed by sometime next week. Please let me know by Friday 2/21/2020 if you have any objection to the proposed plan discussed above or have any questions. We would like to keep Nothnagle on-site to continue with the work discussed above.

Regards,

Mike Pelychaty

*ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.*

Charlotte,

I reviewed the location of the pressure field extension (PFE) monitoring points and two of the locations were located within a residential apartment as shown on the attached figure. One of the points I propose to move to an adjacent office area, and the other is located at the northwest area of the building. The location at the northwest area of the building is requested to be made temporary; meaning we will collection PFE readings when the SSDS is fully operational to confirm a minimum reading of -0.004 inches of water, then permanently seal the location.

Please let me know if you accept the proposed change or would like to discuss further.

Regards,

Mike Pelychaty

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

L2000143-03: A sample identified as "TRIP BLANK" was received, but not listed on the Chain of Custody. The sample was not analyzed.

#### Volatile Organics

The WG1327138-7 MSD recovery, performed on L2000143-01, is outside the acceptance criteria for trichloroethene (0%). The unacceptable percent recovery is attributed to the elevated concentrations of target compounds present in the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DL       | - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                                                                                                |
| EDL      | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).                                                                                         |
| EMPC     | - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.                                                                                                                                                                                                                               |
| EPA      | - Environmental Protection Agency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| LCS      | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.                                                                                                                                                                                                                                                                                                                          |
| LCS D    | - Laboratory Control Sample Duplicate: Refer to LCS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| LFB      | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.                                                                                                                                                                                                                                                                                                                         |
| LOD      | - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                                                                                                                                               |
| LOQ      | - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)<br><br>Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) |
| MDL      | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.                                                                                                                                                                                          |
| MS       | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.                                                                                                                                                                                                    |
| MSD      | - Matrix Spike Sample Duplicate: Refer to MS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| NA       | - Not Applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NC       | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.                                                                                                                                                                                                                                                                                                                                                                           |
| NDPA/DPA | - N-Nitrosodiphenylamine/Diphenylamine.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| NI       | - Not Ignitable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| NP       | - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| RL       | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.                                                                                                                                                                                                                                                                                                   |
| RPD      | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.                                                                  |
| SRM      | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.                                                                                                                                                                                                                                                                                                                                                                     |
| STLP     | - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| TEF      | - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.                                                                                                                                                                                                                                                                                                                                                                                             |
| TEQ      | - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.                                                                                                                                                                                                                                                                                                                                                        |
| TIC      | - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.                                                                                                                                                                                                                                                                      |

### Footnotes

Report Format: DU Report with 'J' Qualifiers

**Project Name:** FORMER WOLLENSACK OPTICAL  
**Project Number:** 2182207

**Lab Number:** L2000143  
**Report Date:** 01/06/20

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** FORMER WOLLENSACK OPTICAL  
**Project Number:** 2182207

**Lab Number:** L2000143  
**Report Date:** 01/06/20

**Data Qualifiers**

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### SPLP Perfluorinated Alkyl Acids by Isotope Dilution

L2002747-01: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

WG1334679-4: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

WG1334679-5: This blank represents the SPLP tumbling blank associated with L2002747-01.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

### PFAS PARAMETER SUMMARY

| Parameter                                                               | Acronym      | CAS Number  |
|-------------------------------------------------------------------------|--------------|-------------|
| PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)                                 |              |             |
| Perfluorooctadecanoic Acid                                              | PFODA        | 16517-11-6  |
| Perfluorohexadecanoic Acid                                              | PFHxDA       | 67905-19-5  |
| Perfluorotetradecanoic Acid                                             | PFTA         | 376-06-7    |
| Perfluorotridecanoic Acid                                               | PFTrDA       | 72629-94-8  |
| Perfluorododecanoic Acid                                                | PFDoA        | 307-55-1    |
| Perfluoroundecanoic Acid                                                | PFUnA        | 2058-94-8   |
| Perfluorodecanoic Acid                                                  | PFDA         | 335-76-2    |
| Perfluorononanoic Acid                                                  | PFNA         | 375-95-1    |
| Perfluorooctanoic Acid                                                  | PFOA         | 335-67-1    |
| Perfluoroheptanoic Acid                                                 | PFHpA        | 375-85-9    |
| Perfluorohexanoic Acid                                                  | PFHxA        | 307-24-4    |
| Perfluoropentanoic Acid                                                 | PFPeA        | 2706-90-3   |
| Perfluorobutanoic Acid                                                  | PFBA         | 375-22-4    |
| PERFLUOROALKYL SULFONIC ACIDS (PFSAs)                                   |              |             |
| Perfluorododecanesulfonic Acid                                          | PFDoDS       | 79780-39-5  |
| Perfluorodecanesulfonic Acid                                            | PFDS         | 335-77-3    |
| Perfluorononanesulfonic Acid                                            | PFNS         | 68259-12-1  |
| Perfluorooctanesulfonic Acid                                            | PFOS         | 1763-23-1   |
| Perfluoroheptanesulfonic Acid                                           | PFHpS        | 375-92-8    |
| Perfluorohexanesulfonic Acid                                            | PFHxS        | 355-46-4    |
| Perfluoropentanesulfonic Acid                                           | PFPeS        | 2706-91-4   |
| Perfluorobutanesulfonic Acid                                            | PFBS         | 375-73-5    |
| FLUOROTELOMERS                                                          |              |             |
| 1H,1H,2H,2H-Perfluorododecanesulfonic Acid                              | 10:2FTS      | 120226-60-0 |
| 1H,1H,2H,2H-Perfluorodecanesulfonic Acid                                | 8:2FTS       | 39108-34-4  |
| 1H,1H,2H,2H-Perfluorooctanesulfonic Acid                                | 6:2FTS       | 27619-97-2  |
| 1H,1H,2H,2H-Perfluorohexanesulfonic Acid                                | 4:2FTS       | 757124-72-4 |
| PERFLUOROALKANE SULFONAMIDES (FASAs)                                    |              |             |
| Perfluorooctanesulfonamide                                              | FOSA         | 754-91-6    |
| N-Ethyl Perfluorooctane Sulfonamide                                     | NEtFOSA      | 4151-50-2   |
| N-Methyl Perfluorooctane Sulfonamide                                    | NMeFOSA      | 31506-32-8  |
| PERFLUOROALKANE SULFONYL SUBSTANCES                                     |              |             |
| N-Ethyl Perfluorooctanesulfonamido Ethanol                              | NEtFOSE      | 1691-99-2   |
| N-Methyl Perfluorooctanesulfonamido Ethanol                             | NMeFOSE      | 24448-09-7  |
| N-Ethyl Perfluorooctanesulfonamidoacetic Acid                           | NEtFOSAA     | 2991-50-6   |
| N-Methyl Perfluorooctanesulfonamidoacetic Acid                          | NMeFOSAA     | 2355-31-9   |
| PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS                         |              |             |
| 2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid | HFPO-DA      | 13252-13-6  |
| 4,8-Dioxa-3h-Perfluorononanoic Acid                                     | ADONA        | 919005-14-4 |
| CHLORO-PERFLUOROALKYL SULFONIC ACIDS                                    |              |             |
| 11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid                     | 11Cl-PF3OUdS | 763051-92-9 |
| 9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid                        | 9Cl-PF3ONS   | 756426-58-1 |

## GLOSSARY

### Acronyms

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DL       | - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                               |
| EDL      | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).                        |
| EMPC     | - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.                                                                                                                                                              |
| EPA      | - Environmental Protection Agency.                                                                                                                                                                                                                                                                                                                                                                                                                        |
| LCS      | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.                                                                                                                                                                                                                                                         |
| LCS D    | - Laboratory Control Sample Duplicate: Refer to LCS.                                                                                                                                                                                                                                                                                                                                                                                                      |
| LFB      | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.                                                                                                                                                                                                                                                        |
| LOD      | - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                                                                              |
| LOQ      | - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                                                                                                                                |
|          | Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)                                                                                                                                                                                                  |
| MDL      | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.                                                                                                                         |
| MS       | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.                                                                                                                                   |
| MSD      | - Matrix Spike Sample Duplicate: Refer to MS.                                                                                                                                                                                                                                                                                                                                                                                                             |
| NA       | - Not Applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NC       | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.                                                                                                                                                                                                                                                                                                          |
| NDPA/DPA | - N-Nitrosodiphenylamine/Diphenylamine.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| NI       | - Not Ignitable.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NP       | - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.                                                                                                                                                                                                                                                                                                                                                                             |
| RL       | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.                                                                                                                                                                                                                                  |
| RPD      | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report. |
| SRM      | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.                                                                                                                                                                                                                                                                                                    |
| STLP     | - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.                                                                                                                                                                                                                                                                                                                                                                                               |
| TEF      | - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.                                                                                                                                                                                                                                                                                                                            |
| TEQ      | - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.                                                                                                                                                                                                                                                                                       |
| TIC      | - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.                                                                                                                                                                                                     |

### Footnotes

Report Format: DU Report with 'J' Qualifiers

**Project Name:** FORMER WOLLENSACK OPTICAL  
**Project Number:** 2182207

**Lab Number:** L2002747  
**Report Date:** 02/10/20

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

## Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

## Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** FORMER WOLLENSACK OPTICAL  
**Project Number:** 2182207

**Lab Number:** L2002747  
**Report Date:** 02/10/20

**Data Qualifiers**

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

February 11, 2020: This final report includes the results of all requested analyses.

January 29, 2020: This is a preliminary report.

January 28, 2020: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

L2002906-10: A sample identified as "FIELD BLANK" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

L2002906-11: A sample identified as "TRIP BLANK" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

#### Volatile Organics

L2002906-09D2: The analysis was performed utilizing a compromised vial.

#### Perfluorinated Alkyl Acids by Isotope Dilution

L2002906-01, -03, -04, and WG1332696-4/-5: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

#### Total Metals

The WG1332689-3/-4 MS/MSD recoveries for calcium (200%/190%), potassium (MS 129%), and sodium (0%/0%), performed on L2002906-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
