AUGUST 2020

CERTIFICATIONS

I, DANIEL P. NOLL , am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Construction Completion Report (CCR) was implemented and that all construction activities were completed in substantial conformance with the Department-approved IRM Work Plan and the IRM RAOC #1 Design Document.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Daniel P. Noll, of LaBella Associates, D.P.C., 300 State Street, Rochester, New York, am certifying as Owner's Designated Site Representative and I have been authorized and designated by all site owners to sign this certification for the site.

1.0 BACKGROUND AND SITE DESCRIPTION

Jefferson Wollensack, LLC entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in January, 2019, to investigate and remediate a 0.48-acre property located at 872 and 886 Hudson Avenue, Rochester, New York (see Figure 1). The property will be remediated to restricted residential use and will be used for residential apartments.

The site is located in the County of Monroe, New York and is identified as Block 2 Lot 58 and Block 2 Lot 59 on the City of Rochester Tax Map # 091.81-2-59 and #091.81-2-58. The site is situated on an approximately 0.48-acre area bounded by Roycroft Drive and residential properties to the north, Avenue D and a convenience store to the south, residential properties to the east, and Hudson Avenue and residential properties to the west. The boundaries and surrounding properties are shown on Figure 2.

An electronic copy of this Construction Completion Report (CCR) with all supporting documentation is included as Appendix A.

2.0 SUMMARY OF SITE REMEDY

2.1 Remedial Action Objectives

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) were identified for this site.

2.1.1 Groundwater RAOs

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore ground water aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
- Prevent the discharge of contaminants to surface water.
- Remove the source of ground or surface water contamination.

2.1.2 Soil RAOs

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.
- Prevent impacts to biota due to ingestion/direct contact with contaminated soil that would cause toxicity or bioaccumulation through the terrestrial food chain.

2.1.3 Soil Vapor RAOs

RAOs for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at a site.

2.2 Description of Interim Remedial Measures

The site was remediated in accordance with the NYSDEC-approved Interim Remedial Measures (IRM) Work Plan dated August 2019 and NYSDEC approved IRM RAOC #1 Design Document dated January 7, 2020. The IRM Work Plan was conditionally approved by the NYSDEC on November 5, 2019 and the IRM RAOC #1 Design Document was conditionally approved on February 7, 2020.

The factors considered during the IRMs are those listed in 6NYCRR 375-1.8. Please note the final remedy has not been determined as of the date of this report. The work completed as part of the IRM activities included the following components:

1. Installation of a treatment system to mitigate source area CVOC impacts to overburden soil and groundwater; and

2. Removal and disposal of radiation containing building materials.

3.0 DESCRIPTION OF INTERIM REMEDIAL MEASURE ACTIVTIES

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved the IRM Work Plan for the Site dated August 2019 and the IRM RAOC #1 Design Document dated January 7, 2020. The following key activities were completed in accordance with the plans:

1. IRM RAOC #1 - In-Site Chemical Oxidation (ISCO)

   Several chlorinated volatile organic compounds (CVOCs) including TCE, PCE and associated breakdown products have been detected in soil and groundwater above applicable Site cleanup goals (SGCs). TCE was detected in soil up to 98 milligrams per kilogram (mg/kg) at a depth of 13.5 feet (ft) below ground surface (bgs) beneath the southwestern portion of the Site building. TCE was also detected in soil just above bedrock (21.5 ft bgs) and at 15 ft bgs at 27 mg/kg and 25 mg/kg, respectively. TCE and PCE were also detected in overburden groundwater at concentrations up to 180,000 micrograms per liter (ug/l) and 1,800 ug/l, respectively. Impacts were primarily located within the footprint of the southwestern portion of the Site Building and in the right-of-way (i.e., the sidewalk) immediately adjacent to the south and west of the Site Building.

   In-situ chemical oxidation (ISCO) was implemented as an IRM for overburden CVOC impacts. This IRM consisted of the injection of the treatment chemical permanganate (e.g. sodium permanganate) in the overburden within the southwestern portion of the Site Building which is the inferred source of CVOCs in soil and groundwater. One (1) round of injections was completed to date as part of this IRM. Groundwater monitoring was being performed to assess the effectiveness of the IRM and to determine the need for subsequent injections. Any need for subsequent injections and the plan for long-term monitoring will be outlined in the Site Management Plan.

The IRM for RAOC #1 consisted of the installation of approximately seventeen (17) overburden and nine (9) bedrock treatment wells within the southwestern portion of the Site Building on the ground level (i.e., first floor). Overburden treatment wells were spaced approximately 12 to 16 ft apart and extended to the top of bedrock (approximately 20-21.5 ft below the current finished floor). Installation of the treatment system was completed by trenching and connecting piping beneath the floor slab to an exterior access point to allow for additional injections, if required. While this IRM was designed to treat overburden CVOC impacts, it is anticipated the treatment chemical will come into contact with the top of bedrock and may travel through bedrock fractures.

During the installation of the treatment wells, building renovations were underway. Based on the redevelopment of the Site, the timeframe to install treatment wells and inject from within the Site building was limited; as such, one (1) overburden treatment round was completed from within the building during renovations and the treatment wells were manifolded together beneath the floor slab, into the building basement and then to the outside of the building. Installation of this system allows for future injections to overburden or bedrock, if deemed necessary by post-treatment groundwater monitoring, with limited disturbance to building occupants.

2. <u>IRM RAOC #2 – Building Materials Containing Radiation</u>

   Radiological materials were identified during the RI by Austin Master Services (AMS) at discrete building areas. Elevated gamma count rate levels above background were identified in two (2) areas within the building; wooden floor boards at the southwestern portion of the third floor and within the first floor sump. In addition, naturally occurring radioactive materials (NORM) were identified as the clay tile located at the southwest corner of the first floor, fire brick within basement, and clay tile used for construction of the first floor sump. Clay tile and fire brick are commonly identified as NORM due to the presence of zircon in many refractory glazes.

AMS completed the removal of the contaminated wooden floor boards on the third floor and material within first floor sump in January 2020. The first floor sump was filled with concrete in January 2020, encapsulating the NORM in that feature. The fire brick in the basement was removed in December 2019 as part of the basement renovations. The clay tile at the southwestern portion of the first floor is planned to be covered with a layer of cement as part of building renovations. The NORM materials are exempt from NYS regulations and were not included as part of the RAOC #2 IRM work plan. However, the management of the NORM materials in the basement and first floor sump will be documented in this CCR and the covering of the clay tile material on the first floor of the building will be documented in the FER.

3.1 Governing Documents

Governing documents related to the IRMs are included in the following table:

TABLE 3.1 – Governing Documents

Approval Document	Description
Interim Site Management Plan, Former Wollensack Optical, NYSDEC Site #C828209, 872 & 886 Hudson Avenue, Rochester, New York January 2019 by LaBella Associates, D.P.C.	Details procedures to manage contamination at the site that may be encountered during development activities until a site remedy and final SMP are developed and approved by the NYSDEC.
Interim Remedial Measure Work Plan RAOC #1 and ROAC #2, Former Wollensack Optical, 872 & 886 Hudson Avenue, Rochester, New York August 2019 by LaBella Associates, D.P.C. and modifications included in NYSDEC Approval Letter dated November 5, 2019	Details the in-situ chemical oxidation (ISCO) as an IRM for the overburden soil and groundwater in RAOC #1 and removal of building materials containing radiation as an IRM for RAOC #2. AMS authored a work plan specifically for RAOC #2 that was included as Appendix 5 of the IRM Work Plan.
Interim Remedial Measure RAOC #1 Design Document, Former Wollensack Optical Site, BCP Site No. C828209, 872 & 886 Hudson Avenue, Rochester, New York August 2019 by LaBella Associates, D.P.C. and modifications included in NYSDEC Approval Letter dated February 7, 2020	Provides additional detail on the planned IRM for RAOC #1 based on additional bedrock data generated subsequent to the submission of the IRM Work Plan.

All deviations from the NYSDEC approved IRM Work Plan and Design Document are noted in Section 3.7.

3.1.1 Site Specific Health & Safety Plan (HASP)

The HASP was included in Appendix 2 of the IRM Work Plan. The Health and Safety Plan (HASP) was complied with for all remedial and invasive work performed at the Site.

3.1.2 Quality Control Plan (QCP)

The QCP was included as Appendix 3 of the IRM Work Plan. The QCP describes the specific policies, objectives, organization, functional activities and quality assurance/ quality control activities designed to achieve the project data quality objectives.

3.1.3 Excavation Work Plan

All subsurface work was completed in accordance with the ISMP for the Former Wollensack Optical site. The Excavation Work Plan (EWP) was included in Appendix 3 of the ISMP. The EWP governs activities that may encounter remaining contamination and defines methods for notification, excavation, handling, screening, transport, disposal, importation of material, and reuse of materials. The EWP was followed during site activities to ensure compliance with applicable Federal, State and local laws and regulations.

3.1.4 Community Air Monitoring Plan (CAMP)

The CAMP was implemented during the IRM activities in accordance with the NYSDOH Generic CAMP included as Appendix 1 of the IRM Work Plan. Equipment utilized during the CAMP monitoring included upwind and downwind monitoring with a MiniRAE 3000 PIDs for VOC readings and TSI DustTrak™ II Aerosol Monitors (model 8530) for particulate concentrations in air. Based on daily wind conditions, a background monitoring (upwind) location and downwind location were positioned to monitor VOCs and concentrations of particulates in the air. Action levels for VOCs in the CAMP were specified as greater than 5 ppm, in which case work was to be halted and corrective actions are to be taken such as backfilling or covering soils.

Actions levels for particulate concentrations downwind were specified as greater than 100 µg/m^3 average above background concentrations for a 15-minute period or if airborne dust was observed leaving the work area. In the event 100 µg/m^3 is exceeded the CAMP specifies that fugitive dust control techniques must be employed which can include wetting down haul roads, spraying buckets, and covering areas with plastic sheeting. If downwind particulate levels exceed 150 µg/m^3 above background concentrations work must be halted and dust control measures must be reevaluated. Actual CAMP results and response actions are provided in Section 3.2.5.

3.1.5 Community Participation Plan

This Section summarizes the pertinent elements of the Community Participation Plan that were performed during the implementation of the IRM and those elements that pertain to the remainder of the remedial program. Elements of the Community Participation Plan include:

- Copies of the NYSDEC approved IRM Work Plan, the IRM RAOC #1 Design Document and other project documents are located in the following document repositories for public review:
    - Phillis Wheatley Library, 33 Dr. Samuel McCree Way, Rochester, New York
    - NYSDEC Region 8 Office, 6274 East Avon-Lima Road, Avon, New York

The NYSDEC approved Community Participation Plan for this site is dated January 2019.

3.2 IRM Program Elements

3.2.1 Contractors and Consultants

The following table identifies the consultants and contractors involved with the work associated with the IRM Actions:

Table 3.2.1 – Contractors and Consultants

Contractor/ Consultant	Role
LaBella Associates, D.P.C.	Environmental consultant responsible for correspondence with NYSDEC, ensuring compliance with applicable BCP documents, environmental oversight, reporting, sample collection and CAMP monitoring. Certifying Engineer of Record- Daniel P. Noll, P.E.
LaBella Environmental, LLC	Environmental contractor responsible for permanganate injections at injection wells, trenching and connecting injection wells via piping.
Austin Master Services, LLC (AMS)	Responsible for remediation of areas of elevated radioactivity and all associated confirmatory sampling and notification of regulatory agencies as well as completion of the Radiological Remediation Report.
Alpha Analytical (Alpha), Paradigm Laboratories	Laboratory testing of soil and groundwater samples.
Nothnagle Drilling Inc. (Nothnagle)	Contracted for installation of IRM treatment wells, monitoring wells, and well decommissioning.
T&R Towing and Service (aka Finger Lakes Envirotech, LLC or T&R Environmental)	Responsible for removal and disposal of development water from the treatment and monitoring well installations.
Waste Management High Acres Landfill; Covanta Niagara; Waste Control Specialists	Waste disposal facilities.
Casella Waste Systems, Inc.;	Waste hauler for contaminated soil and materials
IPC Services; Wheeling and Lake Erie Railway; CSX Transportation, Inc.; Union Pacific Railroad Company; WATCO Companies, LLC	Haulers involved with transporting low specific activity (LSA) class 7 (radioactive) material generated as part of RAOC #2.

3.2.2 Site Preparation

A Dig Safely underground utility stakeout was conducted prior to all underground intrusive work at the site.

- LaBella mobilized to the Site on January 16, 2020 to mark locations of treatment wells based on the IRM Work Plan and IRM RAOC #1 Design Document.
- AMS mobilized to the Site on January 16, 2020 to remediate areas with elevated radioactivity.
- Nothnagle Drilling mobilized to the Site on January 20, 2020 and LaBella Environmental LLC mobilized equipment and a dumpster lined with polyethylene sheeting.
- Decontamination pad for drilling equipment set up on January 21, 2020
- Underground Injection Control (UIC) inventory form authorization obtained from United States Environmental Protection Agency prior to injection work.
- While injection well installations were on-going, LaBella Environmental LLC mobilized to Site on February 26, 2020 to set up an interior secondary containment area for upcoming first round of injections in southwest corner of building. The area was completed with a containment berm and locked fencing. Drums and containers of 40% sodium permanganate solution were placed in the locked containment area in preparation for upcoming work. Caution signs were affixed to the containment area.
- On March 3, 2020 the IRM work plan and Design Document for trenching are reviewed on-Site with LaBella Environmental LLC staff prior to beginning work on March 4, 2020.
- Following completion of injection wells and well decommissioning by Nothnagle Drilling, LaBella Environmental LLC remobilized to Site on March 10, 2020 for the first injection round.

Work performed as part of the IRM was conducted by the site contractors listed in Table 3.2.1. Table 3.2.2 details the time frames of the remedial and excavation work activities.

Table 3.2.2 – Time Frames of Remedial Work Activities

Item	General Time Frame of Site Work
Radiological Remediation	
Fire Brick Removal	12/3/2019 to 12/6/2019(1)
Remediation of third floor section of floorboards and first floor sump by AMS	1/16/2020, 1/17/2020
Treatment Well Installation	
Installation of treatment wells and monitoring wells.	1/20/2020 through 1/22/2020(2), 1/23/2020, 1/2/2020, 1/27/2020 through 1/31/2020, 2/3/2020 through 2/7/2020, 2/11/2020 through 2/14/2020, 2/17/2020 through 2/21/2020, 2/24/2020 through 2/28/2020, 3/2/2020 through 3/5/2020
Treatment and monitoring Well Development	2/11/2020 through 2/14/2020, 2/17/2020 through 2/21/2020, 2/24/2020 through 2/28/2020, 3/2/2020 through 3/6/2020
Well decommissioning (3)	3/6/2020
Treatment Chemical Injection(3)	
Injection of sodium permanganate (RemOx® L)	3/9/2020 through 3/13/2020, 3/16/2020 through 3/20/2020
Post-injection cleanup	3/23/2020, 3/24/2020
Sampling of holding tank for water derived during installation activities.	3/26/2020
Subgrade Trenching for Injection Well Piping	
Cutting Concrete Slab(3)	3/31/2020 through 4/1/2020
Concrete Removal	4/2/2020
Trenching and Piping Installation	4/3/2020, 4/4/2020, 4/6/2020 through 4/8/2020, 4/13/2020 through 4/15/2020

Notes:

(1) Due to the lack of subsurface disturbance as part of the firebrick removal, CAMP was not required for that specific activity. However, other activities requiring CAMP were being completed at the Site during this same time period and as such, CAMP data was collected on December 3 through 6, 2019 and is included in Appendix B for comprehensiveness.

(2) Refer to Section 3.7 Summary of Deviations

(3) No subsurface disturbances, excavations or drilling. As such, the CAMP was not implemented during this time.

Documentation of NYSDEC approvals for the IRM Work Plan and Design Document are included in Appendix B. Other non-agency permits relating to the remediation project are provided in Appendix C.

Documentation of additional agency approvals required by the NYSDEC including requests for import and contained-in determinations are detailed in Sections 3.5and 3.3.3, respectively.

3.2.3 General Site Controls

Site controls utilized during the remedial work generally consisted of the following:

- Record keeping associated with environmental monitoring was completed by LaBella.
- The site building and boundary were locked each afternoon at the end of the day and all windows were boarded up to prevent access. A fence was placed around the entire site or work area to prevent unauthorized access to the site.
- On-site equipment was decontaminated after use each day or between injection locations by removing soil build-up using hand tools or pressure washer into a decontamination pad. Equipment and vehicles leaving the site were thoroughly scraped of all contaminated soil before exiting the site or being loaded onto transport trailers. Injection chemicals were stored in locked fenced area within the building to prevent unauthorized access during.
- Treatment wells were covered with a tripod and polyethylene sheeting to prevent splashing of any chemicals if the seal on the top of well were to compromised during pressurized injection pumping of treatment chemicals into the wells.
- Neutralizing agents were used to clean up spilled or daylight chemical oxidants during injections.

Any soil derived during well installations or trenching was transferred to polyethylene sheeting-lined rolloff dumpsters on-site prior to characterization for landfill disposal.

3.2.4 Nuisance Controls

Decontamination

Equipment and vehicles leaving the site were thoroughly scraped of all contaminated soil using hand tools (brooms, shovels, etc.) before exiting the Site or being loaded onto transport trailers as needed. Stabilized construction entrances constructed of NYSDEC-approved imported materials and geotextile fabric were also utilized to reduce potential tracking of soil off-site.

Dust Control

Airborne particulate levels were monitored both visually and with the CAMP monitoring equipment. Dust control measures included spraying water on equipment, excavation surfaces, drilling surfaces and cutting surfaces as need.

CAMP thresholds for dust were frequently exceeded during masonry work, electrical work, plumbing work and other interior work. These exceedances during interior work were due to cutting and demolition work being completed by site contractors in other portions of the building and not related to the potential exposure to contaminants from on-site soil, as discussed in Section 3.2.5.

Odor Control

Strong odors associated with contaminants of concern at the site (e.g., petroleum odors) were not encountered during the implementation of the IRM, as such, corrective actions associated with odor control were not required. Some elevated PID readings were identified throughout the project and were related to equipment use by other contractors or the use of plumbing glue during pipe connections. Additionally the CAMP station PIDs were periodically used to screen soils, wells, etc., causing occasional spikes in PID readings. This is discussed further in Section 3.2.5.

Truck Routing

The heaviest traffic to and from the site was associated with the transport of contaminated materials off-site for disposal or importation of backfill materials. Trucks generally entered and exited the Site from Avenue D and traveled Hudson Avenue to the Route 104 expressway.

3.2.5 CAMP Results

Per the IRM Work Plan, one (1) upwind and one (1) downwind CAMP station was generally utilized as part of the IRM implementation for ground intrusive work. During the remedial work, the air monitoring consisted of one upwind (work zone) station and one downwind (doorway) location. Although locations varied slightly by day, the work zone CAMP station was generally located within the Site building in the general vicinity of drilling and trenching while the doorway/out of work zone CAMP station was generally located just inside or just outside of the eastern portion of the Site building near the doorway at the northeast corner of the site building.

Each CAMP station consisted of a particulate monitor (DustTrak II Model 8530) and PID (MiniRAE 3000) which recorded measurements on a 15-minute average. The CAMP monitoring results identified the following particulate or VOC levels above action thresholds identified in the CAMP:

- During the treatment well installations, the PID average reading exceeded 5 ppm for one (1) 15 minute time interval in the work zone on February 14, February 17 and February 19, 2020. The doorway/out of work zone readings on each of these days for the same time intervals indicated that these elevated readings were not leaving the building. The February 14 reading may be related to screening free product that exhibited a solvent odor at the bottom of IW-D-8 during development in the same timeframe. The February 17 elevated reading is related to screening well downhole openings with the work zone PID which identified elevated PID readings in well locations IW-D-13 and IW-D-08. The February 19 elevated work zone PID is not related to the treatment well installations as the drillers were not drilling during the time of the elevated readings, as such, the elevated reading is likely a result of the attempted sampling of product at the bottom of well IW-D-08 that occurred at this time of which the residue was screened with the work zone PID. As such these readings do not represent actual readings within the typical breathing zone in the site building.
- The work zone CAMP station detected elevated PID readings above 5 ppm for one (1) 15 minute time period on April 4, 2020. Based on the notes from this day, elevated readings were likely the result of the use of PVC glue by plumbing contractors in the building. PID readings at the doorway location did not exceed a 5 ppm average for a 15 minute time interval at any point this day.
- The work zone CAMP station detected elevated PID readings above 5 ppm for 15 minute time periods on two occasions on April 6, 2020. Based on the notes from this day, elevated

readings were resulting of the use of PVC glue and spray paint during installation of piping associating with the treatment wells. PID readings at the doorway location did not exceed a 5 ppm average for a 15 minute time interval at any point this day.

- The work zone CAMP station detected elevated PID readings above 5 ppm for 15 minute time periods several times throughout the day on April 7, 2020. The elevated readings can be attributed to the use of PVC glue by LaBella LLC to connect the subgrade treatment well piping and plumbing contractors throughout most of the day. It should be noted that soil PID readings of soil disturbed during trenching did not exceed 5 ppm at any point that day.
- The average PID reading for one (1) 15 minute interval on April 7, 2020 reached approximately 21 ppm over background in the doorway CAMP during installation of piping in trenches connecting the treatment wells. The elevated readings are attributed to the use of PVC glue by plumbers and LaBella LLC in the immediate vicinity of the doorway CAMP station. It should be noted that soil PID readings of soil disturbed during trenching did not exceed 5 ppm at any point that day.
- Dust readings above 150 mg/m^3 in the work zone station were measured on several days during the injection well installations. Elevated readings were recorded on the following days:

January	February			March
• 1/20/20	• 2/3/20	• 2/13/20	• 2/21/20	• 3/2/20
• 1/21/20	• 2/4/20	• 2/14/20	• 2/24/20	• 3/3/20
• 1/22/20	• 2/5/20	• 2/17/20	• 2/25/20	• 3/4/20
• 1/23/20	• 2/6/20	• 2/18/20	• 2/26/20	
• 1/29/20	• 2/11/20	• 2/19/20	• 2/27/20	
• 1/30/20	• 2/12/20	• 2/20/20	• 2/28/20	

It should be noted the exceedances above were the result of masonry work (i.e., cutting concrete, bricks, mixing concrete etc.), demolition of concrete stairs, jackhammering concrete, wood cutting, pipe cutting, moving equipment on floor, dumping stone on ramp, sweeping and coring holes through wooden floor above.

Doorway readings were generally below 150 mg/m^3 with the exception of the following dates on which elevated readings were recorded:

• 1/20/20 • 1/21/20 • 1/22/20 • 2/5/20	• 2/12/20 • 2/14/20 • 2/17/20 • 2/20/20	• 2/21/20

The doorway station exceedances were also a result of masonry work which included, but is not limited to, cutting brick, mixing concrete and breaking exterior bricks, as well as framers sweeping floors before laying down wall frames.

- Work zone dust readings were elevated at 193 mg/m^3 for one (1) 15 minute period on April 3, 2020 during trenching in the Site building. The exact cause of dust was not recorded however; the doorway dust readings were below 150 mg/m^3 at that time.

All other CAMP data was below action thresholds. It should be noted that there are additional occasional spikes of elevated PID readings data related to the use of PVC glue, spray paint, running machinery or tools; however in these instances the 15-minute average remained below the 5 ppm threshold.

Copies of all field data sheets relating to the CAMP are provided in electronic format in Appendix D.

3.2.6 Reporting

Monthly progress reports consisted of a summary of the previous month's activities, including any soils tested and/or transported off-site, agency approvals, relevant laboratory data and mapping and any other pertinent notes about the IRM activities. These reports also included anticipated activities for the coming month. Monthly progress reports were distributed to the NYSDEC, New York State Department of Health (NYSDOH) and other relevant parties.

Daily field notes were recorded during IRM activities to document general information about daily activities. Additional field logs were collected during well installations to document well construction details, during well development, and during groundwater sampling to collect groundwater sampling parameters and well information. All monthly progress reports are included in electronic format in Appendix E. Field logs, well construction logs, well decommissioning logs, and well sampling logs are included in Appendix F.

The digital photo log is included in electronic format in Appendix G.

3.3 Interim Remedial Measure Activities and Contaminated Materials Removal

On-site locations from which materials were removed include RAOC #1 and RAOC #2. They are identified as follows:

- RAOC #1 – Soil from the installation of the treatment wells and subgrade piping and groundwater from the installation of the treatment and monitoring wells.
- RAOC #2 – Building materials containing radiation were removed from a small (3' x 3') contaminated area of floorboards on the third floor of the building, the sump located on the first floor of the building, and fire brick that was located within the building basement.

A list of the soil cleanup objectives (SCOs) for the contaminants of concern for this project is NYCRR Part 375-6.8(b) SCOs for a Restricted Residential Site.

Figures of the location of original sources and areas where contaminated material removal were performed are shown on Figure 3A (RAOC #1) and Figure 3B (RAOC #2).

3.3.1 RAOC #1 – Overburden CVOC Impacts

Treatment Well and Monitoring Well Installation

Between January 20 and March 5, 2020 twenty-nine (29) wells were installed in the interior of the Site building on the first floor (ground floor). Twenty-six (26) wells were installed as treatment wells which consisted of seventeen (17) overburden treatment wells designated as IW-S-01 through IW-S-17 and nine (9) bedrock treatment wells designated as IW-D-03, IW-D-07 through IW-D-09 and IW-D-12 through IW-D-16. Seven (7) pairs of the treatment wells were installed as nested pairs (i.e. an overburden and bedrock well within the same borehole) with the exception of wells IW-D-03 and IW-D-09.

Three (3) monitoring wells were installed within the 1st floor of the building space to replace existing monitoring wells located within the footprints of future residential apartments and one well (i.e. RIMW-16R) was installed to replace well RIMW-16 that was inadvertently destroyed (at an unknown date) during the installation of subgrade plumbing. Two (2) of the monitoring wells (i.e. RIMW-19S and RIMW-19D) consisted of a nested overburden/bedrock well. Well RIMW-16R was installed approximately 8 ft from the former location of RIMW-16. Monitoring well logs are included in Appendix F.

Overburden treatment wells were drilled to the top of bedrock then constructed with 15 ft of 2 inch diameter ID 0.020 inch slot PVC well screen and the appropriate length of solid PVC riser to complete the well. Sand pack was typically installed to approximately 2 ft above the top of the screen followed by a 1 to 2 ft thick bentonite seal above and completed with sand to near the floor surface. Bedrock injection and monitoring wells were typically drilled 10 ft into bedrock and constructed with 8.5 ft of 2 inch diameter 0.020 slot PVC well screen in the bedrock. A sand pack was typically placed to 0.5-ft above the top of the well screen followed by a 1 ft grout seal above the sand pack to separate the zone between the overburden and bedrock interface. In stand-alone bedrock wells the grout seal was extended to just below the floor surface. Treatment well construction logs are included in Appendix F.

During installation of wells excess soil was placed in a polyethylene lined rolloff dumpster and water produced from bedrock drilling and decontaminating equipment was containerized into 55-gallons drums then pumped into a holding tank pending characterization and disposal. Refer to Section 3.3.3 for disposal documentation of soil and water generated as part of the well installations. Locations of the treatment and monitoring wells installed are depicted on Figure 4.

Well Development

Following installation, treatment and groundwater monitoring wells were developed intermittently between the dates of February 11, 2020 and March 6, 2020. Groundwater depths were measured in each well to calculate purge volume and the wells were then purged with a submersible monsoon® pump until February 20, 2020 upon which bailers were used to purge wells due to pump malfunctioning. For development, three (3) well volumes or the amount of water that was lost during drilling, whichever was greater, was removed from each well. Purge volumes are included on Table 3.3.1A. While purging well IW-D-08 on February 13, 2020, a black substance identified as a dense non aqueous phase liquid (DNAPL) was observed in purge water. The purge water was then screened with a PID which indicated a reading of 275.7 ppm. The DNAPL was observed again from the same well on February 14, 2020 and noted to be of a slightly higher viscosity than water; the DNAPL also exhibited a solvent odor. On February 21, 2020 attempts were made to collect a sample of the free product from well IW-D-08, however due to the fact the thickness of the DNAPL layer was minimal (or was just a sheen), the product could not be recovered from the bailers. An additional attempt was made to collect a DNAPL sample on February 25, 2020 utilizing a peristaltic pump, but it was unable to be collected. A similar substance was discovered during purging well IW-D-09 on March 4 and 5, 2020. Attempts were made to sample the substance but it was unable to be recovered as it appeared to be a very thin layer.

Static water levels (SWLs) were collected periodically from the treatment wells prior to the wells being sealed beneath the floor to assess whether the well seal remains competent between the bedrock and overburden treatment wells. SWLs were collected periodically from February 11, 2020 to March 6, 2020 and are included on Table 3.3.1. Based on the SWLs included in Table 3.3.1, there did not appear to be a notable change over time indicating the seals between the bedrock and overburden wells are competent.

Monitoring Well Decommissioning

Five (5) wells (i.e. RIBW-A, RIMW-14, RIMW-15, RIMW-17 and RIMW-18) were decommissioned on March 6, 2020 in accordance with NYSDEC Commissioner Policy 43 (CP-43). The wells were decommissioned as they were in areas that are planned to be used as residential living space following building renovations. Wells were grouted in place (i.e., filled with grout) to the surface of the well casing. Well decommissioning logs are included in Appendix F.

Application of Treatment Chemical

A total of approximately 5,400-pounds (lbs) of the In-Situ Chemical Oxidation (ISCO) treatment chemical, sodium permanganate ("RemOx® L") was applied into the seventeen (17) overburden treatment wells from March 3 to March 20, 2020. Nine (9) 550 lb 55-gallon drums and eight (8) 57 lb 5-gallon containers of 40% solution was shipped to the Site and stored in a secondary containment structure in the interior southwest corner of the Site building. The containment area was secured with a fence and a locked gate when the sodium permanganate was not in use. A neutralizing agent was also stored on-site to mitigate any spills or areas where the chemical day-lighted.

The volume and injection concentrations were estimated by the chemical vendor (Carus) using analytical data and the known geology of the Site with the vendor's proprietary algorithm for estimating permanganate mass necessary to degrade the contaminants and to overcome the natural oxidant demand within the soil. Carus' calculations were included in the IRM Work Plan. In accordance with the IRM work plan, the chemical was to be diluted to 10% on-site by mixing it with approximately 2,000 gallons of potable water. The IRM Work Plan called for approximately 145 gallons of 10% solution to be applied to each treatment well. However, at some treatment well locations a concentration of 20% solution was pumped or gravity fed into wells that could not accept large volumes of the treatment chemical without daylighting. This was done to minimize daylighting. Total volumes and percentages of the treatment chemical applied to each treatment well are summarized on Table 3.3.1B. The sodium permanganate was mixed with an on-site potable water source (i.e., City of Rochester municipal water).

The chemical solution was applied with either a pneumatic pump and/or gravity fed into the top of each overburden treatment well prior to the installation of the subgrade piping. While the chemical was applied, observations of the 1st floor area and basement were frequently made to identify areas of daylighting that were subsequently used to render a decision whether to adjust the pump speed, gravity feed the treatment chemical, and/or adjust the % solution/volume of the treatment chemical into each treatment well. Due to daylighting of the treatment chemical at treatment wells adjacent to the basement, the amount of the treatment chemical was not able to be evenly distributed to each treatment well.

Throughout the injection work minor spills or daylighting of chemicals through cracks in the basement wall or boreholes were identified. During the injections for wells IW-S-06 and IW-S-16, small amounts of the treatment chemical was observed daylighting through cracks in the basement walls. The chemical was neutralized with the on-site reagent and then the cracks were sealed with hydraulic cement to prevent further instances of daylighting in the basement. All minor spills of the treatment chemical or areas where daylighting had occurred were either neutralized with a solution of white vinegar, hydrogen peroxide, or sodium thiosulfate as recommended by Carus. Test strips were used to confirm the chemical was neutralized at areas where it had day lighted.

Following the completion of the injection work on March 18, 2020, bedrock groundwater in nested pairs of the treatment wells was visually checked for the presence of sodium permanganate. Sodium permanganate solution was observed in all nested bedrock wells with the exception of IW-D-03. Following the completion of the injection work, dispersion of the treatment chemical was evaluated on March 26, 2020 by visually monitoring the groundwater color for a purple or red hue in select monitoring wells surrounding the treatment area which would indicate the likely presence of sodium permanganate solution in the groundwater. Groundwater was observed in overburden monitoring wells RIMW-02, RIMW-04, RIMW-05, SB-MW-07, SB-MW-10, SB-MW-14 and SB-MW-16 as well as bedrock monitoring wells BW-01, BW-03 and RIBW-C. However, evidence of dispersion of the sodium permanganate solution was not identified in these wells. On April 4, 2020, LaBella observed the same monitoring wells that were checked on March 26, 2020 with the addition of monitoring wells RIMW-08, RIMW-11, RIMW-16R, SB-MW-15, RIBW-B and BW-02. Sodium permanganate solution was identified only in well RIMW-16R.

Treatment Well Piping and Trenching

Following application of the sodium permanganate, trenching was completed to install horizontal piping beneath the floor slab to be used for subsequent injection events. The piping network was installed to allow for the treatment chemical to be pumped or gravity fed from outside of the building while the Site building is occupied.

The concrete floor was cut to form trenches connecting rows of treatment wells as shown on Figure 4. Trenches were generally approximately 12-16-inches in width. Trenches were excavated to the elevation required to set the pipe to obtain a minimum ¼ inch per foot pitch. Soil removed from the trenching work was disposed off-site as detailed in Section 3.3.3. Refer to Figure 5B for a cross section depicting approximate elevations for a typical row of piping.

The 2-inch PVC treatment well risers were cut to below the floor level, within the trenches at the appropriate elevation to obtain a minimum ¼ inch per foot pitch. A 1-inch diameter PVC pipe was connected to each 2-inch wellhead using a PVC reducing elbow and 1-inch diameter solid PVC piping was connected to the elbow and placed in the trench beneath the floor slab. Trenches were backfilled with NYSDEC-approved pea stone as summarized in Section 3.5. A 6 inch thick layer of concrete was restored to the finished floor elevation.

Each horizontal 1-inch diameter PVC pipe was connected to each well head beneath the floor that was routed to a header pipe in the basement by coring a section through the concrete wall. The cored section was drilled at the elevation of the trenching through the basement wall which is approximately 8-feet above the basement floor. The 1-inch diameter pipes connected to each individual well were routed through the basement wall and each connected to an individual shut off valve that will allow future applications of the treatment chemical to be targeted to a specific well/area. Additionally, pipes were labeled to identify the treatment well associated with each individual pipe and shut off.

The header pipes were routed within the ceiling of the basement through the eastern exterior building wall. Piping was installed at a minimum of ¼ inch per foot pitch towards the treatment wells to allow for treatment chemical to be applied from the eastern exterior of the Site building into the wells so that treatment chemical will not be trapped within the piping.

On the exterior of the building, a header pipe was terminated and capped with a locking cap outside of the eastern building wall where the treatment chemical will be applied for future injections. Refer to Figure 5A for the piping locations, Figure 5B cross section (not to scale) for the treatment system, and Figure 5C for the general schematic of the treatment wells. Refer to the treatment well construction logs for as-built constructions.

3.3.2 RAOC #2 – Building Materials Containing Radiation

AMS was retained to remediate two (2) radiologically contaminated areas consisting of a 3-ft by 3-ft area of contaminated floor boards on the third floor of the Site building and the sump contents located on the first floor (ground floor) of the Site building. AMS removed floor boards on the third floor by cutting through non-contaminated material surrounding the area. The contaminated boards and sump contents were containerized for off-site disposal.

A containment area consisting of plastic sheeting and a metal frame was built around the removal areas prior to remediation. The materials in the sump were containerized and the sump was pressure washed to remove any additional contamination. Water from pressure washing was containerized for off-site disposal. Containerized materials were placed in an area with signs indicating a radioactive hazard and roped off to prevent access until disposal.

Post remediation surveys and wipe samples were completed by AMS to confirm the removal of contamination. It should be noted that AMS indicated the sump contained a terra cotta material with glaze that is suspected of containing NORM and it was filled in with concrete to mitigate exposure. Refer to Appendix H for the Radiological Remediation Project Report completed by AMS dated January 28, 2020 for additional information regarding the remediation of RAOC #2. A copy of the AMS January 2020 Radiological Remediation Project that details the work is included in Appendix H.

Although not part of the IRM for RAOC #2, the former boiler fire brick within the basement contained NORM and was removed between December 3, 2019 to December 6, 2019 and disposed off-site. The removal of the fire brick was conducted concurrently with the basement demolition. In addition clay tile located at the southwestern area of the first floor was identified by AMS as NORM. The clay tile is to be covered with a layer of cement which will be documented in the FER.

Refer to Section 3.3.3 regarding disposal of the radiation containing materials and fire brick.

3.3.3 Disposal Details

Table 3.3.3 details the total quantities of each category of material removed from the site as part of these IRMs and the disposal locations. Waste disposal documentation including laboratory reports, manifests, weight tickets and Contained-In Demonstration approvals are included in Appendix F.

TABLE 3.3.3 – Summary of Contaminated Materials Disposal

Item	Date(s) of Disposal	Total Quantity Removed	Disposal Facility	Disposal Transporter	Summary of Waste Characterization Sampling and Disposal Documentation
Radioactive Waste	3/16/2020	Seven (7) 55-gallon drums	Waste Control Specialists EPA ID TXD988088464	Refer to Appendix I for Transporter Information	-Refer to Appendix I for Disposal Documentation.
Boiler Firebrick	1/6/2020	8.01 tons	High Acres Landfill, 425 Perinton Parkway, Fairport, NY (Landfill Profile #121794NY)	T&R Environmental, Permit No. 7A-709	-Collected a waste characterization sample (Alpha Analytical Lab Report L1934138) for TCLP for the landfill profile and in included in Appendix I -Refer to Appendix I for Disposal Documentation
Drill Cuttings from Treatment and Monitoring Well Installation	12/18/2019	13.12 tons	High Acres Landfill, 425 Perinton Parkway, Fairport, NY (Landfill Profile #122220NY)	Casella, Environmental Permit No. 8A-1099	Collected representative sample from contaminated roll-off dumpster for Contained-In Demonstration and landfill profile. -Alpha Analytical Lab Report L2012797 -Refer to Appendix I for Contained-In Demonstration Approval and Disposal Documentation.
Treatment Well Trench Material	4/15/2020, 4/16/2020	17.30 tons	High Acres Landfill, 425 Perinton Parkway, Fairport, NY Landfill Profile #122279NY	Casella, Environmental Permit No. 8A-1099	Collected representative sample from in place and excavated soil stockpile for Contained-In Demonstration and landfill profile. -Alpha Analytical Lab Reports L2014553 and Paradigm Analytical Lab Report 201494 -Refer to Appendix I for Contained-In Demonstration Approval and Disposal Documentation
Water from Well	4/17/2020	1,499 gallons	Canandaigua Waste Water Treatment Plant,	Finger Lakes Envirotech, LLC, Permit No. 7A-709	Alpha Analytical Lab Report L2013565

Item	Date(s) of Disposal	Total Quantity Removed	Disposal Facility	Disposal Transporter	Summary of Waste Characterization Sampling and Disposal Documentation
Installation and Development			183 Saltonstall Street, Canandaigua, NY 14424 (SPDES Permit No. NY0025968)		-Refer to Appendix I for Disposal Documentation.

3.3.4 On-Site Reuse

On-Site material was not reused as part of RAOC #1 and RAOC #2. Excavated soil for the RAOC #1 treatment well piping trench excavation on the first floor was sampled for reuse. However, the NYSDEC did not allow reuse of this material based on TCE results for samples IWTRENCHREUSE-01-20200403 and DUPE-G-20200403 indicating the concentration for TCE was 2.5 ppm and 4.6 ppm, respectively. The concentration of TCE exceeded the Site's SCO which is the Protection of Groundwater SCO for TCE at 0.47 ppm, not the Restricted Residential use SCO of 21 ppm. As such, this material was disposed off-Site as described in Section 3.3.3.

A copy of the Request to Reuse Soil and NYSDEC correspondence is included in Appendix J.

3.4 Remedial Performance/Documentation Sampling

Groundwater samples were collected as part of the RAOC #1 remedial work and radiation screening was conducted as part of the removal of RAOC #2 radiation containing materials as discussed below. The groundwater sampling results that was conducted as part of the performance monitoring is summarized in Table 3.4.

3.4.1 RAOC #1 Post Injection Groundwater Monitoring

Groundwater monitoring was completed approximately 6 weeks and 12 weeks following the application of the treatment chemical, sodium permanganate. The 6-week monitoring event was conducted on May 12 and May 13, 2020 and the 12-week monitoring event was conducted on June 29 and June 30, 2020. Samples were collected in accordance with the NYSDEC approved IRM Work Plan, the NYSDEC approved IRM RAOC #1 Design Document and LaBella's Quality Control Plan included in Appendix 3 of the IRM Work Plan which included collection of MS/MSD and duplicate samples for each event.

Groundwater monitoring wells BW-01, BW-03, RIMW-02, RIMW-04, RIMW-16R, SB-MW-07, SB-MW-14, SB-MW-15, and SB-MW-16 were sampled for both the 6-week and 12-week monitoring events. A groundwater sample was not collected from monitoring wells RIMW-19S and RIMW-19D as there was a concern that sodium permanganate solution observed in the wells would damage the sampling equipment. However, monitoring wells RIMW-19S and RIMW-19D were sampled during the 12-week monitoring event with a disposable bailer to prevent potential damage to low flow sampling equipment.

To summarize contaminant concentration trends in groundwater, graphs depicting the concentrations of select VOCs (i.e. TCE, cis-1,2-dichloroethene (cis-1,2-DCE), and total VOCs) are included in Appendix K. The results were also compared to samples collected from the monitoring well prior to the application of the treatment chemical to compare baseline concentrations to post injection concentrations.

Overall, substantial contaminant reductions were observed in the original "worst-case" wells (i.e., BW-03, RIMW-16R, SB-MW-07, SB-MW-14, SB-MW-15). Slight changes or relatively stable contaminant concentrations were generally measured in wells that initially did not have extremely elevated concentrations of CVOCs. One (1) well was noted to have a substantial increase in CVOC concentration from baseline; BW-01 which is a bedrock well located off-site to the south of the Site building.

A summary of the pre- and post-treatment groundwater results is below.

RIMW-02

Well RIMW-02 is located slightly upgradient from the source of the groundwater plume, located within the Site building basement, and is approximately 10 ft from the nearest treatment well. Post injection concentrations of VOCs in RIMW-02 generally decreased subsequent to the injection of the treatment chemical during the 6 and 12 week sampling events when compared with the baseline sampling event in August 2018. The table below demonstrates the change in concentration of select VOCs from concentrations encountered in July 2019 (baseline) to the 12 week post injection sampling event.

Table 3.4.1C – RIMW-02 Summary of Contaminant Concentrations

Contaminant	Baseline July 2019 (ug/l)	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Peak Concentration
Total VOCs	261.34	79.78	132.65	-49.2
TCE	200	53	98	-51.0
Cis-1,2-DCE	14	1.9	4.8	-65.7

RIMW-04

Well RIMW-04 is located upgradient from the source of the groundwater plume, located within the Site building basement, and is approximately 25 ft from the nearest treatment well. Post injection concentrations of VOCs slightly increased subsequent to the injection of the treatment chemical during the 6 and 12 week sampling events when compared with the baseline sampling event in July 2019. The slight increase in concentrations does not appear to represent a significant change. Since well RIMW-04 is approximately 25 feet away from the closest treatment well and hydraulically upgradient, immediate, notable influence of the treatment chemical was not anticipated to be observed at this location. Rather, the treatment of the source area by the chemical is anticipated to decrease impacts in this periphery well in the long term. The table below demonstrates the change in concentrations of select VOCs from peak concentrations encountered in the July 2019 sampling event to the 12 week post injection sampling event.

Table 3.4.1D – RIMW-04 Summary of Contaminant Concentrations

Contaminant	Baseline July 2019 (ug/l)	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Peak Concentration
Total VOCs	237.3	585	397.4	+67.5
TCE	120	290	220	+83.3
Cis-1,2-DCE	7.4	41	31	+318.9

RIMW-16R

Well RIMW-16R is located within the treatment area. Post injection concentrations of VOCs decreased subsequent to the injection of the treatment chemical during the 6 and 12 week sampling events when compared with the baseline sampling event in July 2019. The table below demonstrates the change in concentrations of select VOCs from peak concentrations encountered in the July 2019 sampling event to the 12 week post injection sampling event.

Table 3.4.1E – RIMW-16R Summary of Contaminant Concentrations

Contaminant	Baseline July 2019 (ug/l)*	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Peak Concentration
Total VOCs	13,066	5,850	4,460	-65.9
TCE	13,000	5,800	4,400	-66.1
Cis-1,2-DCE	ND	ND	ND	Not Applicable

*Note: Groundwater results from well RIMW-16 were used as a baseline comparison. ND denotes concentration not detected above the laboratory method detection limit.

SB-MW-07

Well SB-MW-07 is located off-site, downgradient from the source of the groundwater plume, within the Hudson Avenue right-of way, and approximately 18 ft from the nearest treatment well. Post injection concentrations of VOCs increased subsequent to the injection of the treatment chemical during 6 week sampling event, then decreased during the 12-week sampling event when compared with the baseline sampling event in July 2019. The increase in concentration of VOCs shown in the 6-week sampling event may be attributed to the application of treatment chemical disturbing the existing equilibrium of the subsurface thus releasing contamination from the formation. The table below demonstrates the change in concentrations of select VOCs from peak concentrations encountered in the July 2019 sampling event to the 12 week post injection sampling event.

Table 3.4.1F – SB-MW-07 Summary of Contaminant Concentrations

Contaminant	Baseline July 2019 (ug/l)	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Baseline
Total VOCs	8,029	14,081	4,300	-46.4
TCE	8,000	14,000	4,316	-46.1
Cis-1,2-DCE	ND	ND	ND	Not Applicable

Note: ND denotes concentration not detected above the laboratory method detection limit.

SB-MW-14

Well SB-MW-14 is located off-site, upgradient from the source of the groundwater plume, located within the Avenue D right-of way, and is approximately 12 ft from the nearest treatment well. Post injection concentrations of VOCs decreased subsequent to the injection of the treatment chemical when compared with the baseline sampling event in July 2019. The table below demonstrates the change in concentrations of select VOCs from the baseline concentrations encountered in the July 2019 sampling event to the 12 week post injection sampling event.

Table 3.4.1G – SB-MW-14 Summary of Contaminant Concentrations

Contaminant	Baseline July 2019 (ug/l)	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Peak Concentration
Total VOCs	181,240	76,000	90,700	-50.0
TCE	180,000	74,000	89,000	-50.6
Cis-1,2-DCE	ND	ND	NS	Not Applicable

Note: ND denotes concentration not detected above the laboratory method detection limit.

SB-MW-15

Well SB-MW-15 is located off-site, downgradient from the source of the groundwater plume within the Hudson Avenue right-of way and is located approximately 20 ft from the nearest treatment well. Post injection concentrations of VOCs decreased subsequent to the injection of the treatment chemical when compared with the baseline sampling event in July 2019. The table below demonstrates the change in concentrations of select VOCs from the baseline concentrations encountered in the July 2019 sampling to the 12 week post injection sampling event.

Table 3.4.1H – SB-MW-15 Summary of Contaminant Concentrations

Contaminant	Baseline July 2019 (ug/l)	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Peak Concentration
Total VOCs	18,538	10,140	6,122	-67.0
TCE	18,000	9,700	5,800	-67.8
Cis-1,2-DCE	280	260	200	-28.6

SB-MW-16

Well SB-MW-16 is located slightly upgradient from the source of the groundwater plume within the Site building's basement and is located approximately 10 ft from the nearest treatment well. Post injection concentrations of VOCs slightly increased subsequent to the injection of the treatment chemical when compared with the baseline sampling event in July 2019. The table below demonstrates the change in concentrations of select VOCs from the baseline concentrations encountered in the July 2019 to the 12 week post injection sampling event.

Table 3.4.1I – SB-MW-16 Summary of Contaminant Concentrations

Contaminant	Baseline July 2019 (ug/l)	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Peak Concentration
Total VOCs	301	630.1	392.08	+30.3
TCE	280	260	350	+25.0
Cis-1,2-DCE	10	8.5	17	+70.0

Although the concentrations of the chemicals of concern increased, the actual change in concentration is not significant when compared to the baseline concentrations. For example, the VOC cis-1,2-DCE increased from 10 ug/l (baseline) to 17 ug/l (12-week monitoring event). As with RIMW-04, because SB-MW-16 is hydraulically upgradient of the treatment area, immediate, notable influence of the treatment chemical was not anticipated to be observed at this location. Rather, the treatment of the source area by the chemical is anticipated to decrease impacts in this periphery well in the long term.

RIMW-19S

Well RIMW-19S is located within the treatment area and was installed during the installation of the treatment system. A graph for well RIMW-19S was not completed as there was not a baseline groundwater sample collected from this well and the only VOC that was detected at a concentration above the NYSDEC groundwater standard was acetone estimated at 78 ug/l.

RIMW-19D

Well RIMW-19D is located within the treatment area and was installed during the installation of the treatment system. A graph for well RIMW-19D was not completed as there was not a baseline groundwater sample collected from this well and the only VOC that was detected at a concentration above the NYSDEC groundwater standard was acetone estimated at 94 ug/l.

Well BW-01

Well BW-01 is off-site but has been used for monitoring purposes based on its proximity to the apparent source area. This well is located upgradient from the source of the groundwater plume, within the Avenue D right-of way and approximately 10 ft from the nearest treatment well. Post injection concentrations of VOCs in BW-01 increased subsequent to the injection of the treatment chemical during 6 and 12 week sampling events when compared with the baseline sampling event in August 2018. The increase in concentration of VOCs may be attributed to the application of treatment chemical disturbing the existing equilibrium of the subsurface, thus causing VOCs within the rock matrix to diffuse into groundwater.

As indicated on the BW-01 graph (Appendix K), peak total VOC concentrations were detected during the 12-week post injection monitoring event at a concentration of 5,634 ug/l that is greater that the August 2018 baseline sampling event total VOC concentration of 155.84 ug/l. The table below shows the increase of the select VOCs from the baseline sampling results to the 6 and 12 week post injection groundwater monitoring results.

Table 3.4.1A - BW-01 Summary of Contaminant Concentrations

Contaminant	Baseline August 2018 (ug/l)	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Peak Concentration
Total VOCs	155.84	4,693	5,634	+3,515
TCE	130	4,500	5,400	+4,054
Cis-1,2-DCE	10	180	220	+2,100

BW-03

Well BW-03 is also located off-site but has been utilized for monitoring purposes. This well is located downgradient from the source of the groundwater plume, within the Hudson Avenue right-of way, and approximately 27 ft from the closest treatment well. Post injection concentrations of VOCs in BW-03 generally decreased subsequent to the injection of the treatment chemical during 6 and 12 week sampling event when compared with the baseline sampling event in August 2018. The table below demonstrates the reduction of select VOCs from peak concentrations encountered in August 2018 (baseline) to the 12 week post injection sampling event.

Table 3.4.1B - BW-03 Summary of Contaminant Concentrations

Contaminant	Baseline August 2018 (ug/l)	6-Week Post Injection Monitoring May 2020 (ug/l)	12-Week Post Injection Monitoring June 2020 (ug/l)	% Change of Contaminant from Peak Concentration
Total VOCs	8,220	3,458	2,855	-64.9
TCE	7,200	120	13	-99.8
Cis-1,2-DCE	1,000	3,300	2,800	+180*

*The concentrations of cis-1,2-DCE increased since the baseline sampling event. Cis-1,2-DCE is a breakdown compound of TCE and may indicate the ongoing attenuation of TCE in groundwater.

NAPL

As described in Section 3.3.1, NAPL was observed in treatment wells IW-D-08 and IW-D-09 during well development. These wells have been connected to the treatment system and thus NAPL gauging in these wells cannot be completed. However, NAPL gauging was completed in all monitoring wells as part of the groundwater sampling events and was not encountered.

A table and figure summarizing all groundwater monitoring results is included in Table 4.3 and Figure 4, respectively

Data Usability Summary Reports (DUSRs) were prepared for all groundwater performance samples. The DUSR is included in Appendix L, and associated ASP B laboratory reports are provided electronically in Appendix M. The results of the DUSR indicate the data should be considered technically defensible and completely usable in its present form.

3.4.2 RAOC #2 – Survey Data Post Removal of Radiation Containing Materials

AMS survey data following the removal of materials containing radiation from the third floor boards and first floor sump are discussed in detail in the report included in Appendix H.

3.5 Imported Backfill

A table of all sources of imported backfill with quantities for each source is shown in Table 4.5. Please note that the imported material was exempt from chemical testing in accordance with DER-10 Section 5.4(e)(5).

TABLE 3.5 – Imported Backfill Material Summary

Location or Use	Type	Source	Estimated Volume or Tonnage	NYSDEC Approval Date
Injection Piping Trench Excavation	Pea Gravel	Valley Sand and Gravel, 91 River Road, Scottsville, NY	19.58 tons	August 14, 2020

Requests for import, associated approvals, and associated weigh or volume receipts are included in Appendix N.

A figure showing the site locations where backfill was used at the site is shown in Figure 5A.

3.6 Soil Cover or Cap System

Exposure to remaining contamination in soil/fill at the site is anticipated to be addressed by a soil cover or cap system placed over the site. The final cover or cap system is presented in a Remedial Action Work Plan and will documented in the final SMP and FER for the site.

3.7 Deviations

The following deviations are noted in Table 3.7 for the work completed as part of the CCR.

Table 3.7 – Summary of Deviations

Item	Deviation
Section 3.3.1	1. Nine (9) bedrock injection wells were installed however the IRM RAOC #1 Design Document indicated that seven (7) bedrock injection wells would be installed. This deviation was discussed and approved by the NYSDEC.

Item	Deviation
	2. An equal amount of permanganate was not introduced into each overburden treatment well. 3. Post injection groundwater monitoring did not include well RIBW-A, RIMW-16, RIMW-17 or RIMW-18. Wells RIMW-A, RIMW-17, and RIMW-18 were decommissioned as they were located within future residential apartments. RIMW-16 was destroyed during the installation of plumbing.
Section 3.3.3	1. Missing manifests for the disposal of the drill cuttings generated from the treatment and monitoring wells and the trench spoils generated from the installation of the horizontal piping on the first floor.
Section 3.2.5 (Appendix B)	1. Issues were encountered downloading work zone/upwind PID data for the dates 1/22/2020 as part of the injection well installation. Data was collected however the monitoring unit was unable to download the data due to equipment malfunction. 2. CAMP data consisting of particulate monitoring and PID readings were not collected on 3/31/2020 because only cuts in concrete slab were completed and no soil was disturbed. 3. CAMP stations were set up on 4/1/2020 however data could not be downloaded due to equipment malfunction. Work that day only consisted of cutting concrete and no soil was disturbed.

Wall Rating Legend

Draftstopping — One Hour Fire Barrier
Two Hour Fire Barrier — One Hour Fire Partition

1. Fire barriers shall extend from the top of the floor/ceiling assembly below to the underside of floor or roof deck above and shall be securely attached thereto. Fire barriers shall be continuous through concealed spaces (ie: space above suspended ceiling). Construction supporting fire barriers shall carry a matching fire resistance rating. Shafts may terminate at the underside of a rated roof/ceiling assembly. Fire barriers shall be fire blocked at every floor.

2. Fire partitions shall extend from the top of the foundation or floor/ceiling assembly below to the underside of the floor or roof sheathing, slab or deck above or to the fire-resistance-rated floor/ceiling or roof/ceiling assembly above, and shall be securely attached thereto. If the partitions are not continuous to the sheathing, deck or slab, and where constructed of combustible construction, the space between the ceiling and the sheathing, deck or slab above shall be fireblocked or draftstopped in accordance with 2015 International Building Code at the partition line. Construction supporting fire partitions shall carry a matching fire-resistance rating. Where the room-side fire-resistance-rated membrane of the corridor is carried through to the underside of the floor or roof sheathing, deck or slab of a fire-resistance-rated floor or roof above, the ceiling of the corridor shall be permitted to be protected by the use of ceiling materials as required for a 1-hour fire-resistance-rated floor or roof system.

For this drawing to be valid this piece of cell measure 1" on a side and the outlines will be the same as the line visible.

SWL - Static Water Level

TABLE 3.3.1B
Injection Log
Former Wollensack Optocal, 872 & 886 Hudson Ave, Rochester NY
Project Number: 2182207

Well ID	Date(s) Injected	Concentration of Permanganate	Gallons Injected
IW-S-01	3/18/2020	10% and 20%	Pumped 75 gal of 10% ; Gravity Fed 28gal of 20%
IW-S-02	3/18/2020	10% and 20%	Pumped 15 gal of 10% ; Gravity Fed 58 gal of 20%
IW-S-03	3/16/2020	10%	145
IW-S-04	3/17/2020	10%	145
IW-S-05	3/20/2020	20%	30
IW-S-06	3/19/2020 and 3/20/2020	20%	40
IW-S-07	3/16/2020	10%	145
IW-S-08	3/13/2020	10%	145
IW-S-09	3/10/2020	10%	145
IW-S-10	3/10/2020	10%	145
IW-S-11	3/9/2020	10%	145
IW-S-12	3/10/2020	10%	145
IW-S-13	3/11/2020 and 3/19/2020	10% and 20%	Pumped 75 gal of 10% ; Gravity Fed 28 gal of 20%
IW-S-14	3/13/2020	10%	145
IW-S-15	3/13/2020	10%	145
IW-S-16	3/13/2020	10%	145
IW-S-17	3/13/2020 and 3/19/2020	10% and 20%	Pumped 25 gal of 10%; gravity fed 40 gal of 20%

REFERENCE PAGE

Former Wollensack Optical - C828209
872 & 886 Hudson Avenue, Rochester, New York
LaBella Project #2182207

All values displayed in milligrams per liter (ug/l) or parts per billion (ppb)

U indicates compound not detected above the indicated laboratory Method Detection Limit (MDL)

ND indicates not detected above laboratory MDL

Yellow highlight indicates that the compound was detected at a concentration above NYCRR Part 703 Groundwater Quality Standard

J indicates an estimated value

VOCs analyzed by USEPA Method 8260

D denotes diluted sample

NL denotes Not Listed

-- Not Applicable or not reported

Q denoted laboratory qualifier

Conc denotes concentration

Re: Interim Remedial Measure Work Plan
Former Wollensack Optical Site
Site No.: C828209
City of Rochester, Monroe (C)

Dear Ms. Vitale:

The New York State Department of Environmental Conservation (Department) and the New York State Department of Health (NYSDOH) (collectively known as the State) have completed their review of the August 2019 Interim Remedial Measure Work Plan (IRMWP) for the Former Wollensack Optical site (Site) located at 872 and 886 Hudson Avenue, City of Rochester. Based on the information presented in the August 2019 IRMWP, the August 2019 IRMWP is approved with the following modifications and clarifications.

1. The State understands that a Dig Safe survey will be completed prior to any ground intrusive activities completed at the Site.

2. The Department understands that all interim remedial measure fieldwork activities and final reports (Construction Completion Report [CCR], Final Engineering Report [FER]) will be conducted and completed in accordance 6 NYCRR Part 375-1.6. The Department understands that Labella Associates is operating under a current Certificate of Authorization (COA) to conduct engineering in New York State. A New York State licensed professional engineer (PE) employed by Labella Associates, Mr. Dan Noll or Ms. Ann Aquillina, will be the PE of record for the Site, and that Labella Associates staff who are direct reports to the PE of record will be on-site for all interim remedial measure (IRM) fieldwork activities. The Department's website provides the specific details: https://www.dec.ny.gov/regulations/90487.html

3. Based on the Department's review of the IRMWP, the Department is requesting the submittal of a detailed design document for the in-situ chemical oxidation (ISCO) injection system component of the IRM. The IRMWP submitted to the Department does not have adequate detail for the construction, installation, management of oxidant at the Site, and the operation of the ISCO injection system, but the proposed concept of conducting ISCO is an acceptable IRM to be undertaken. The ISCO injection system design document will contain the appropriate certification language from DER-10 Section 1.5 and will be signed and stamped by a NYS licensed PE. The design document will be submitted to the State for review and approval.

4. The Department has concerns regarding the construction of the secondary containment system out of wood and poly sheeting. The safety data sheet (SDS) clearly states that the oxidant must be kept away from combustible materials. The ISCO design document must provide additional

details on the construction of the secondary containment area and how precipitation collection in the secondary containment area will be managed.

5. It needs to be noted that the Protection of Groundwater SCOs for those compounds detected in groundwater apply to the Site. Currently based on groundwater sampling conducted to date that includes tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, trans-1,2-dichloroethene, vinyl chloride, 1,1-dichlorothene, benzene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, p/m-xylene, n-propylbenzene, ethylbenzene, naphthalene, and sec-butylbenzene.

6. Section 7.2: The IRMWP indicates that one round of injections will be completed at the Site. Additional rounds (multiple rounds) injections of an oxidant or another groundwater treatment amendment may be needed to in order to achieve State's standards and guidance values.

7. Section 7.2.4: The Department has concerns on how the area where the two (2) 275-gallon totes and the 1,000-gallon poly mixing tank will be secured at the Site from vandalism and theft as well as how the mixed liquid with oxidant will be protected from the freeze/thaw cycle within the tank, totes, and associated piping. This must be addressed in the ISCO design document.

8. Section 7.3: The State is adding the following bedrock groundwater monitoring well to be sampled as part of the post-injection sampling: BW-01 and BW-03. The inclusion of this bedrock well will potentially provide insight as to whether the oxidant is making contact with the bedrock contamination underlying the Site.

   Groundwater elevations will be collected from all groundwater monitoring wells at the Site for all groundwater sampling events. All groundwater monitoring wells (overburden and bedrock) will be checked for NAPL during all groundwater sampling events and will be noted on the groundwater sampling logs.

9. Section 12.0: All IRM derived waste will be managed in accordance with DER-10 Section 3.3(e) and will be disposed off-site at a permitted facility in accordance with all applicable local, State and Federal regulations.

10. Section 13.0: The Department understands that the Construction Completion Report (CCR) or Final Engineering Report (FER) documenting the IRM activities will be developed in accordance with DER-10 Section 5.8 and will include the appropriate certification language from DER-10 Section 1.5 as well as the NYS licensed PE of record stamp and signature. The State understands that a draft of the CCR or FER will be submitted for review 8 months after the date of the injections began (i.e., the date oxidant was introduced into the subsurface environment). The Department understands that all data associated with the IRM activities will be submitted in approved EDD format before proceeding into the remedy selection phase of the project.

11. Figure 1: For future submittals using this figure the BCP site needs to be shown as detailed in the figure's legend.

12. The Department understands that the installation of the injection system and secondary containment area will not impede any future remedial activities at the Site's such as remedy implementation in particular the removal of the underground storage tank located on the eastern side of the 872 Hudson Avenue building.

13. Appendix 5, Radiation Protection Plan (RPP), Page 4: It is stated in Item 2.b the following: *"It is expected that the contaminated surfaces that are not successfully remediated using HEPA Vac or wet wipes will either be decontaminated using a pressure washer or a grinder*". The State

understands that all liquids associated with pressure washing surfaces will be collected and disposed as rad waste at a permitted facility as per all local, State, and Federal regulations.

14. Appendix 5, Radiation Protection Plan, Page 6 – Item 2.e & 2.d: While some radiation projects need to develop scan MDCs and other calculations, for this effort as part of the IRM, the Department understands that the approach can be greatly simplified. First, the calculated Alpha scan MDC of 275 (DPM) appears to be quite large, as does the static value of 45 (DPM); therefore, in trying to prove that there are no areas/materials remaining at the Site that will be above background for all matrices (e.g., wood, steel) can be performed by developing static background (CPM or DPM) values for these materials and ensuring that the after scans and any subsequent required remediation representative the static (CPM or DPM) values are no greater than 2 sigma (i.e., 95% confidence) above that value, averaged over area using normal MARSSIM protocols.

15. Appendix 5, Radiation Protection Plan, Page 6: It is stated in Item 2.d the perimeter area of one foot from the decontamination area will also be surveyed to ensure that no resuspended contamination has spread to the previously "clean area". The State understands that at the time of the waste containers are being removed for shipment to the disposal facility the area(s) where the waste containers had been stored will be surveyed to ensure no introduction of radiation contamination. The State also understands that the surveys will be completed by qualified health physics staff employed by Austin Master Services, LLC (AMS). If contamination is found, the State's PMs for the site must be notified of the contamination and additional remediation measures will be taken to remove the contamination.

16. Appendix 5, Radiation Protection Plan, Page 7: It is stated in Item 3.b: *"Accumulated waste material and their storage area will be surveyed daily, and barriers erected to ensure no one can enter an area with an exposure rate greater than 0.2mSv/h".* The State understands that during the decontamination activities daily surveys will be completed by a qualified health physics staff employed by AMS.

17. Appendix 5, Radiation Protection Plan, Page 7: The State understands that in Item 4.b the surveys will be completed by qualified health physics staff employed by AMS.

18. Appendix 5, Radiation Protection Plan: The RPP does not indicate the name and location of the disposal facility for the rad waste that will be removed from the Site. The State understands that prior to shipment of the rad waste the name, location, and facility identifier will be provided to the State's PMs.

19. Appendix 5, Radiation Protection Plan: The RPP provided to the State does not indicate how long the containerized rad waste will be staged at the Site. The State requests containerized rad waste will be staged no more than 30 days from the date of start of decontamination activities (i.e., the date that rad waste material is placed in approved DOT containers).

20. Appendix 5, Radiation Protection Plan, HASP: The Department understands t hat the HASP was developed for activities to be completed at 872 Hudson Avenue Building and not 886 Hudson Avenue which is a vacant lot.

21. As per the Brownfield Cleanup Agreement and 6 NYCRR Part 375, seven (7) days advance notice of field work activities must be given to the State so that appropriate oversight can be provided.

Within fifteen (15) days of the date of this letter and prior to any fieldwork activities associated with the Interim Remedial Measures Work Plan the Applicant must elect in writing (electronic notification is acceptable) one of the following options:

- Option A: Accept the modified work plan;
- Option B: Invoke dispute resolution as set forth in 6 NYCRR Part 35-1.5(b)(2); or
- Option C: Terminate the Brownfield Cleanup Agreement in accordance with 6 NYCRR Part 375-3.5.

If the Applicant chooses to accept Option A then this letter becomes part of the approved Interim Remedial Measures Work Plan. Also, if Option A is chosen then a copy of the approved Interim Remedial Measures Work Plan along with this letter attached must be placed in the document repository within 1 week of accepting Option A and prior to all IRM fieldwork activities associated with the approved Interim Remedial Measures Work Plan. Please provide notification to the Department that the approved Interim Remedial Measures Work Plan and a copy of this letter have been placed in the document repository (electronic notification is acceptable).

State seeks to resolve any outstanding differences in a mutually agreeable manner which addresses the requirements of the Brownfield Cleanup Agreement and associated work plans. If you have any questions or concerns regarding this letter, the BCP requirements, or need further assistance with the Site, please feel free to contact me at 585-226-5354 or via e-mail at charlotte.theobald@dec.ny.gov.

Sincerely,

Charlotte B. Theobald

Re: Interim Remedial Measure RAOC #1 Design Document
Former Wollensack Optical Site
Site No.: C828209
City of Rochester, Monroe (C)

Dear Ms. Vitale:

The New York State Department of Environmental Conservation (Department) and the New York State Department of Health (NYSDOH) (collectively known as the State) have completed their review of the January 7, 2020 Interim Remedial Measure RAOC #1 Design Document (Document) for the Former Wollensack Optical site (Site) located at 872 and 886 Hudson Avenue, City of Rochester. Based on the information presented in the Document, the Document is approved with the following modifications and clarifications.

1. The State understands that all imported fill material will be imported to the Site in accordance with DER-10 Section 5.4(e). The Request to Import/Reuse Fill/Soil Material will be submitted to the Department for review and approval prior to import of any soil/fill material to the Site.

2. The State understands that the USEPA UIC approval will be provided to the State prior to the commencement of injections at the Site.

3. The State understands that the first round of injections will be low pressure pumped into the injection wells. With that said daylight monitoring needs to be conducted in the boiler room given that there has been previous infiltration of petroleum product in the boiler basin.

4. The State understands that the potable water to be used for the injections will be the City of Rochester drinking water.

5. The State understands that all sub-slab and wall pipe penetrations will be properly sealed to ensure the sub-slab depressurization system will operate properly.

6. The State understands that groundwater levels will be collected in the injection wells (overburden and bedrock) prior to injections and again before the injection wells are sealed below the concrete slab of the building. The groundwater elevations will assist in determining that the seal remains competent between the bedrock over burden injection wells.

7. The State is requesting that preliminary laboratory data from the groundwater performance monitoring events is submitted to the Department upon receipt from the laboratory.

8. The State understands that the 1st groundwater monitoring sampling event will be conducted 6 weeks after the last day of injections are completed.

9. The State understands that there are 2 proposed groundwater performance monitoring events scheduled for the Site. The State is requesting that after completion of the 12-week post-injection groundwater sampling event the groundwater performance monitoring will be conducted quarterly until there is another round of injections completed at the Site or the Site's final Site Management Plan is approved. Based on the schedule provided in the Document the next groundwater performance monitoring event will occur in the 3rd quarter of 2020 (July, August, September 2020).

10. Based on the approved August 2019 Interim Remedial Measures Work Plan, the State understands that the groundwater sampling will be lowflow. The State requests that the depth of the intake is indicated on all of the groundwater sampling logs.

11. The State understands that the laboratory data packages will be Category B and the laboratory will be ELAP certified. A DUSR will be prepared. As stated in the approved August 2019 Interim Remedial Measures Work Plan the analytical parameters will be TCL VOCs plus TICs.

12. The State also understands that the quarterly groundwater performance monitoring data will be submitted to the State in quarterly letter reports or the subsequent Site monthly progress report. The submittal will include but not limited to the laboratory data package, associated field documentation, and the associated DUSR.

13. During all field work activities associated with the IRM completed under a State approved work plan there will be a qualified environmental professional as defined in 6 NYCRR Part 375-1.2(ak) or an individual who is a direct report to the QEP on the property to supervise the activities undertaken.

14. The State understands that the IRM injection activities will be documented in a Construction Completion Report or in the Final Engineering report as per DER-10 Section 5.8. The CCR and/or FER will included all NYS licensed PE stamped and signed as-built drawings and the appropriate certification language as presented in DER-10 Section 1.5. The State also understands that the CCR will also include all activities completed in associated with the radiation decontamination activities completed at the Site. The State also understands that the CCR documenting the IRM activities at the Site will include all supporting documentation including, but not limited to, bills of lading, off-site waste disposal records, CAMP monitoring data, daily field logs, etc.

Within fifteen (15) days of the date of this letter, the Applicant must elect in writing (electronic notification is acceptable) one of the following options:

- Option A: Accept the modified work plan;
- Option B: Invoke dispute resolution as set forth in 6 NYCRR Part 35-1.5(b)(2); or
- Option C: Terminate the Brownfield Cleanup Agreement in accordance with 6 NYCRR Part 375-3.5.

If the Applicant chooses to accept Option A then this letter becomes part of the approved Interim Remedial Measure RAOC #1 Design Document. Also, if Option A is chosen then a copy of the approved Interim Remedial Measure RAOC #1 Design Document along with this letter attached must be placed in the document repository within 1 week of accepting Option A. Please provide notification to the Department that the approved Interim Remedial Measure RAOC #1 Design Document and a copy of this letter have been placed in the document repository (electronic notification is acceptable).

State seeks to resolve any outstanding differences in a mutually agreeable manner which addresses the requirements of the Brownfield Cleanup Agreement and associated work plans. If you have any questions or concerns regarding this letter, the BCP requirements, or need further assistance with the Site, please feel free to contact me at 585-226-5354 or via e-mail at charlotte.theobald@dec.ny.gov.

Subject: RE: C828209 Former Wollensack Optical Site - Inventory of Injection Wells Form
Attachments: C828209 Inventory of Injection Wells Form.pdf

To the owner of the Jefferson Wollensack Housing Development Fund Corp:

The U.S. Environmental Protection Agency (USEPA) Region 2 Drinking Water & Groundwater Protection Section is in receipt of the Underground Injection Control (UIC) inventory information submitted on your behalf by LaBella Associates addressing Class V UIC wells authorized by rule located at 872 Hudson Street, Rochester, NY in accordance with 40 Code of Federal Regulations (CFR) §144.26.

The operation of the following Underground Injection Control wells are authorized by rule, pursuant to 40 CFR §144.24: **Twenty-four (24) temporary Class V B wells.**

Our understanding is that the New York State Department of Environmental Conservation (NYSDEC) has approved the plan. The NYSDEC Brownfield Cleanup Program site is #C828209.

Please inform EPA Region 2 when the wells are permanently closed, via both e-mail and hard copy, to the following contacts:

Drinking Water and Ground Water Protection Section
United States Environmental Protection Agency
290 Broadway, 24th Floor
New York, NY 10007-1866
Attention: Nancy Schlotter
region2_uic@epa.gov

Failure to submit any, and all information truthfully and accurately may subject you to sanctions authorized by federal law. Please also note that all information submitted by you may be used in an administrative, civil judicial, or criminal action. In addition, making a knowing submission of materially false information to the U.S. Government may be a criminal offense.

We may be in touch for additional information or if we have any follow-up questions or concerns. Likewise, if you have any questions or need additional information, please contact Nancy Schlotter of my staff at (212) 637-3947 or by e-mail at schlotter.nancy@epa.gov.

Sincerely,

Christine Ash

Subject: C828209 Former Wollensack Optical Site - Inventory of Injection Wells Form

Christine,

I wanted to follow up on our conversation last week regarding the Inventory of Injection Wells form that was submitted to you and that you intend to respond to the letter this week? Please let me know if you have any questions or anticipate any delays as we are planning to commence injection next week and the NYSDEC is requiring an EPA response prior to the start of work.

-Mike

Subject: C828209 Former Wollensack Optical Site - Inventory of Injection Wells Form

Good Afternoon,

Attached please find a completed Inventory of Injection Wells form for the property located at 872 Hudson Avenue, Rochester New York. The Site is in the NYSDEC BCP (Site #C828209). The injection wells are for application of sodium permanganate to treat chlorinated VOCs in soil and groundwater. The wells will be installed in January-February 2020 and the injections will take place in approximately March 2020. If you require additional information, please feel free to contact me.

Thank you,

Ann Aquilina, PE

COMMENTS *(Optional)*:
Treatment wells will be used for application of sodium permanganate to treat chlorinated VOCs in soil and groundwater. The site is in the NYSDEC BCP with ID C828209.

KEY:

DEG = Degree
MIN = Minute
SEC = Second
SECT = Section
1/4 SECT = Quarter Section

COMM = Commercial
NON-COMM = Non-Commercial
AC = Active
UC = Under Construction
TA = Temporarily Abandoned
PA = Permanently Abandoned and Approved by State
AN = Permanently Abandoned and not Approved by State

SECTION 1. DATE PREPARED: Enter date in order of year, month, and day.

SECTION 2. FACILITY ID NUMBER: In the first two spaces, insert the appropriate U.S. Postal Service State Code. In the third space, insert one of the following one letter alphabetic identifiers:

D - DUNS Number,
G - GSA Number, or
S - State Facility Number.

In the remaining spaces, insert the appropriate nine digit DUNS, GSA, or State Facility Number. For example, A Federal facility (GSA - 123456789) located in Virginia would be entered as : VAG123456789.

SECTION 3. TRANSACTION TYPE: Place an "x" in the applicable box. See below for further instructions.

Deletion. Fill in the Facility ID Number.
First Time Entry. Fill in all the appropriate information.
Entry Change. Fill in the Facility ID Number and the information that has changed.
Replacement.

SECTION 4. FACILITY NAME AND LOCATION:

A. Name. Fill in the facility's official or legal name.
B. Street Address. Self Explanatory.
C. Latitude. Enter the facility's latitude (all latitudes assume North Except for American Samoa).
D. Longitude. Enter the facility's longitude (all longitudes assume West except Guam).
E. Township/Range. Fill in the complete township and range. The first 3 spaces are numerical and the fourth is a letter (N,S,E,W) specifying a compass direction. A township is North or South of the baseline, and a range is East or West of the principal meridian (e.g., 132N, 343W).
F. City/Town. Self Explanatory.
G. State. Insert the U.S. Postal Service State abbreviation.
H. Zip Code. Insert the five digit zip code plus any extension.

SECTION 4. FACILITY NAME & LOCATION (CONT'D.):

I. Numeric County Code. Insert the numeric county code from the Federal Information Processing Standards Publication (FIPS Pub 6-1) June 15, 1970, U.S. Department of Commerce, National Bureau of Standards. For Alaska, use the Census Division Code developed by the U.S. Census Bureau.
J. Indian Land. Mark an "x" in the appropriate box (Yes or No) to indicate if the facility is located on Indian land.

SECTION 5. LEGAL CONTACT:

A. Type. Mark an "x" in the appropriate box to indicate the type of legal contact (Owner or Operator). For wells operated by lease, the operator is the legal contact.
B. Name. Self Explanatory.
C. Phone. Self Explanatory.
D. Organization. If the legal contact is an individual, give the name of the business organization to expedite mail distribution.
E. Street/P.O. Box. Self Explanatory.
F. City/Town. Self Explanatory.
G. State. Insert the U.S. Postal Service State abbreviation.
H. Zip Code. Insert the five digit zip code plus any extension.
I. Ownership. Place an "x" in the appropriate box to indicate ownership status.

SECTION 6. WELL INFORMATION:

A. Class and Type. Fill in the Class and Type of injection wells located at the listed facility. Use the most pertinent code (specified below) to accurately describe each type of injection well. For example, 2R for a Class II Enhanced Recovery Well, or 3M for a Class III Solution Mining Well, etc.
B. Number of Commercial and Non-Commercial Wells. Enter the total number of commercial and non-commercial wells for each Class/Type, as applicable.
C. Total Number of Wells. Enter the total number of injection wells for each specified Class/Type.
D. Well Operation Status. Enter the number of wells for each Class/Type under each operation status (see key on other side).

CLASS I Industrial, Municipal, and Radioactive Waste Disposal Wells used to inject waste below the lowermost Underground Source of Drinking Water (USDW).

TYPE	**1I**	Non-Hazardous Industrial Disposal Well.
	1M	Non-Hazardous Municipal Disposal Well.
	1H	Hazardous Waste Disposal Well injecting below the lowermost USDW.
	1R	Radioactive Waste Disposal Well.
	1X	Other Class I Wells.

CLASS II Oil and Gas Production and Storage Related Injection Wells.

TYPE	**2A**	Annular Disposal Well.
	2D	Produced Fluid Disposal Well.
	2H	Hydrocarbon Storage Well.
	2R	Enhanced Recovery Well.
	2X	Other Class II Wells.

CLASS III Special Process Injection Wells.

TYPE	**3G**	*In Situ* Gasification Well
	3M	Solution Mining Well.

CLASS III (CONT'D.)

TYPE	**3S**	Sulfur Mining Well by Frasch Process.
	3T	Geothermal Well.
	3U	Uranium Mining Well.
	3X	Other Class III Wells.

CLASS IV Wells that inject hazardous waste into/above USDWs.

TYPE	**4H**	Hazardous Facility Injection Well.
	4R	Remediation Well at RCRA or CERCLA site.

CLASS V Any Underground Injection Well not included in Classes I through IV.

TYPE	**5A**	Industrial Well.
	5B	Beneficial Use Well.
	5C	Fluid Return Well.
	5D	Sewage Treatment Effluent Well.
	5E	Cesspools (non-domestic).
	5F	Septic Systems.
	5G	Experimental Technology Well.
	5H	Drainage Well.
	5I	Mine Backfill Well.
	5J	Waste Discharge Well.

PAPERWORK REDUCTION ACT The public reporting and record keeping burden for this collection of information is estimated to average 0.5 hours per response. Burden means the total time, effort, or financial resource expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal Agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to the collection of information; search data sources; complete and review the collection of information; and, transmit or otherwise disclose the information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including the use of automated collection techniques to Director, Collection Strategies Division, U.S. Environmental Protection Agency (2822), 1200 Pennsylvania Ave., NW., Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed forms to this address.

Complete Work Zone DustTrak Data

Yellow highlighted data indicate any work zone dust exceedance that was not caused by LaBella or drillers. Notes are added next to the data to indicate reasons and efforts made to decrease dust. Most of the dust was created by the framers and masons working alongside the drill rig. The LaBella representative on site routinely spoke and worked with the framers and masons to decrease their dust creation by vacuuming dust as they worked and or watering down their work place. Additionally, once dust was created it stayed suspended in the air for about a half hour at a time even with the windows open for ventilation.

****Please refer to the field notebook for more detailed explanations.****

Caused by masons in adjacent room. Dust seen leaving room. CM alerted. Windows opened. Adjacent room closed off. Dust still coming from seems of makeshift door. DRILLING STARTED AT 1310. Drillers wet soil and rig to make sure they were not creating dust. Visible dust not observed coming from drilling operations.

32	01/23/2020	15:27:31	0.046

No exceedence based on baseline (first) reading of 0.021 mg/m^3.

At this time Drillers were setting up Decontamination pad for augers. Most likely when moving items out of the way, dust became airborne. After pad was set up, dust levels decreased. NOT CAUSED FROM DRILLING.

21	02/06/2020	13:18:52	0.042

Not exceedance based on baseline level of 0.085mg/m^3 prior to drilling. However, A daSilva opened additional plywood windows to aid in ventilation.

Caused by drillers securing rig to concrete floor by bolting it down. Dust was most likely concrete dust. Decreased after four holes were drilled into the concrete.

Caused by concrete mixing from masons. NOT FROM DRILLING. An additional plywood window was opened for more ventilation.

Caused by strong winds pushing dust through south west plywood window. It became very windy outside that day.

Caused by masons wet cutting concrete. Even though it was wet cut, the saw was still throwing up dust. A daSilva sprayed the hose on all surfaces and the dust started to decrease. Dust remained suspended in air for a while. NOT FROM DRILLING - drillers were bringing in bagged sand and equipment most of this time. Drilling started at 0845.

31	02/20/2020	15:20:02	0.195
32	02/20/2020	15:35:02	0.177

Caused by concrete mixing from masons; masons cutting brick and concrete; masons sweeping work area to lay down brick. NOT FROM DRILLING. An additional plywood window was opened for more ventilation. A daSilva made sure the masons wetted everything and had vacuums attached to their tools. Even with these ways to decrease dust, dust levels remained high. They started settling out around 1525 when the masons finished for the day.

Caused by construction workers prior to drilling. This was a background reading. NOT FROM DRILLING. An additional plywood window was opened for more ventilation.

Masons were saw cutting when the pump ran out of water for about 10 seconds. That was enough time to allow dust to be airborne. It lingered in the air for a half hour or so. NOT FROM DRILLING. Windows were already opened.

Background reading high from masons mixing concrete. Plywood window was opened for ventilation.

Visible dust from east side of room caused by masons dropping wooden planks on floor.

Background reading high from masons mixing concrete. Plywood window was opened for ventilation.

Dust generated from masons cutting wood in work zone. A daSilva asked them to cut outside or near a window to mitigate dust levels.

Indoor pipe cutting. Cannot mitigate except for vacuum which presents minimal results. A daSilva had them try to shield metal shavings. NOT FROM DRILLING.

Indoor pipe cutting. Cannot mitigate except for vacuum which presents minimal results. A daSilva had them try to shield metal shavings. NOT FROM DRILLING.

Dust generated from masons cutting steel; masons angle grinding cement; drillers moving drums; dust blowing in from the south west plywood window. It was noted that concrete/saw dust appeared to be on everything, so when the drums moved, dust was kicked up from ground and fell off lids. Dust was primarily seen as concrete dust and saw dust. This dust generation fell and increased throughout the day with numerous different forms of mitigation to help prevent it. NOT FROM DRILLING.

****
Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-912310
Unit Firmw V2.20A

Running M Hygiene Mode
Datalog Mc Auto
Diagnostic No
Stop Reaso Power Down

Site ID RAE00000
User ID USER0000

Begin 12/5/2019 8:23
End 12/5/2019 16:30
Sample Per 60
Number of 487

Sensor PID(ppm)
Sensor SN S023030031VC
Measure T Avg
Span 100
Span 2 1000
Low Alarm 50
High Alarm 100
Over Alarm 15000
STEL Alarm 25
TWA Alarm 10
Measurem Isobutylene
Calibration 11/27/2019 14:14
Peak N/A
Min N/A
Average N/A

Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-912310
Unit Firmw V2.20A

Running M Hygiene Mode
Datalog Mc Auto
Diagnostic No
Stop Reaso Power Down

Site ID RAE00000
User ID USER0000

Begin 12/6/2019 8:36
End 12/6/2019 16:11
Sample Per 60
Number of 455

Sensor PID(ppm)
Sensor SN S023030031VC
Measure T Avg
Span 100
Span 2 1000
Low Alarm 50
High Alarm 100
Over Alarm 15000
STEL Alarm 25
TWA Alarm 10
Measurem Isobutylene
Calibration 11/27/2019 14:14
Peak N/A
Min N/A
Average N/A

Complete Work Zone PID Data

Note that the Work Zone PID was used to screen soil periodically throughout the injection well installation. Therefore, there are spikes within the readings. Additionally, due to the cold weather, the PID batteries drained quickly and equipment was periodically changed, causing gaps in some of the data.

****Please refer to the field notebook for more detailed explanations on any exceedances. or spikes in readings****

==========
20/01/20 12:50
****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-910712
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	1/20/2020 12:50
End	1/20/2020 17:06
Sample Period(s)	60
Number of Records	255
Sensor	PID(ppm)
Sensor SN	S023030021Q5
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	1/3/2020 12:41
Peak	3.2
Min	0
Average	0.4

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-910712
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	1/21/2020 8:41
End	1/21/2020 16:49
Sample Period(s)	60
Number of Records	487
Sensor	PID(ppm)
Sensor SN	S023030021Q5
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	1/3/2020 12:41
Peak	2.8
Min	0
Average	0.1

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-910712
Unit Firmware Ver	V2.20A

Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Pause in Communication Mode

Site ID	12345678
User ID	12345678

Begin	1/23/2020 7:49
End	1/23/2020 7:50
Sample Period(s)	60
Number of Records	1

Sensor	PID(ppm)
Sensor SN	S023030021Q5
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	1/3/2020 12:41
Peak	0
Min	0
Average	0

==========
20/01/24 08:21
****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-910712
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	1/24/2020 8:21
End	1/24/2020 15:42
Sample Period(s)	900
Number of Records	29
Sensor	PID(ppm)
Sensor SN	S023030021Q5
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	1/3/2020 12:41
Peak	0.5
Min	0
Average	0.2

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918988
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	4/3/2020 7:08
End	4/3/2020 17:35
Sample Period(s)	60
Number of Records	626
Sensor	PID(ppm)
Sensor SN	S023030089A2
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/1/2020 9:04
Peak	6.1
Min	0
Average	0.6

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918988
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	4/4/2020 6:59
End	4/4/2020 14:11
Sample Period(s)	60
Number of Records	432
Sensor	PID(ppm)
Sensor SN	S023030089A2
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/1/2020 9:04
Peak	6.6
Min	0
Average	1.5

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918988
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	4/6/2020 7:23
End	4/6/2020 15:16
Sample Period(s)	60
Number of Records	472
Sensor	PID(ppm)
Sensor SN	S023030089A2
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/1/2020 9:04
Peak	14.2
Min	0
Average	0.9

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918988
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	4/7/2020 7:09
End	4/7/2020 15:12
Sample Period(s)	60
Number of Records	483
Sensor	PID(ppm)
Sensor SN	S023030089A2
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/1/2020 9:04
Peak	13.1
Min	0
Average	3.1

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918988
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	4/8/2020 7:16
End	4/8/2020 14:58
Sample Period(s)	60
Number of Records	462
Sensor	PID(ppm)
Sensor SN	S023030089A2
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/1/2020 9:04
Peak	5.5
Min	0
Average	0.4

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918988
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	4/13/2020 7:15
End	4/13/2020 11:09
Sample Period(s)	60
Number of Records	233
Sensor	PID(ppm)
Sensor SN	S023030089A2
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/1/2020 9:04
Peak	0.8
Min	0
Average	0.1

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918988
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	4/14/2020 6:58
End	4/14/2020 15:12
Sample Period(s)	60
Number of Records	494
Sensor	PID(ppm)
Sensor SN	S023030089A2
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/1/2020 9:04
Peak	0
Min	0
Average	0

****
Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918988
Unit Firmware Ver	V2.20A
Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	12345678
User ID	12345678
Begin	4/15/2020 7:04
End	4/15/2020 10:52
Sample Period(s)	60
Number of Records	228
Sensor	PID(ppm)
Sensor SN	S023030089A2
Measure Type	Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/1/2020 9:04
Peak	0.1
Min	0
Average	0

Doorway (Outside Workzone) CAMP Dust Monitoring Data

Complete Doorway DustTrak Data

Note that the Doorway PID was placed inside the building near the north central doorway through the dates 1/20/2020 to 2/20/2020 and outside near the north east doorway from the dates 2/21/2020 to 3/5/2020. Yellow highlighted data indicate any work zone dust exceedance. Notes are added next to the data to indicate reasons and efforts made to decrease dust. Most of the dust from building materials during construction activities of other contractors on-site.

****Please refer to the field notebook for more detailed explanations.****

Caused by masons wet cutting concrete. Even though it was wet cut, the saw was still throwing up dust. A daSilva sprayed the hose on all surfaces and the dust started to decrease. Dust remained suspended in air for a while. NOT FROM DRILLING. Drilling started at 0845 because drillers were bringing in sand and equipment prior to that time.

Complete Doorway PID Data

Note that the Doorway PID was placed inside the building near the north central doorway through the dates 1/20/2020 to 2/20/2020 and outside near the north east doorway from the dates 2/21/2020 to 3/5/2020. PID batteries drained quickly and equipment was periodically changed, causing gaps in some of the data.

****Please refer to the field notebook for more detailed explanations on any exceedances. or spikes in readings****

Caused by exhaust from Rig. Next day drillers brought in a vent snake. Rig was shut down if it passed 5ppm on PID or if it passed 18ppm CO on 4 gas meter.

Monthly Progress Reports

April 28, 2020

Charlotte Theobald
NYS Department of Environmental Conservation
6274 East Avon-Lima Road
Avon, New York 14414

Re: January to March 2020 Monthly Progress Report
Former Wollensack Optical Site – C828209
872 & 886 Hudson Avenue, Rochester, New York
LaBella Project #2182207

Dear Ms. Theobald,

LaBella Associates, D.P.C. ("LaBella") is pleased to submit this Monthly Progress Report (MPR) associated with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site (BCP ID No. C828209) located at 872 & 886 Hudson Avenue, Rochester, New York, hereinafter referred to as the "Site." Below is a summary of activities completed in the previous months (January to March 2020) and planned for this month (April 2020).

Activities in Prior Months (January, February, and March 2020)

Installation of SSDS and Sub-Grade Plumbing
The majority of the SSDS subgrade piping and subgrade plumbing was installed. The remaining portion of the SSDS into the western stairwell adjacent to Hudson Avenue will be installed sometime in April 2020. In addition, the above grade SSDS piping and fans have not been fully installed. The CAMP was implemented during the work in accordance with the ISMP. A CCR or FER will include a summary of the work and as-built drawings of the SSDS.

Radiological Remediation
Austin Masters Services (AMS) performed remediation of a small (3' x3") contaminated area of floorboards on the third floor of the building and the sump located on the first floor of the building. A summary of this work is included AMS remediation report dated January 28, 2020 (attached). A CCR will include a summary of the work.

Box-Out of Parking Lot
LaBella was on-site during January to monitor the box-out of the new parking lot. Monitoring of the soil and the implementation of the CAMP was completed during this work. The work included the removal of surface soil for off-site disposal and importation of material for the parking lot subbase. A CCR will include a summary of this work.

Installation of Sanitary Sewer Lateral
A sanitary sewer lateral was installed from the northwest corner of the site building into the Hudson Avenue right-of-way. Monitoring of the soil and the implementation of the CAMP was completed during this work. The excavation was backfilled with #2 crusher run stone. All excavated soil was placed on and covered with poly sheeting on-site pending waste characterization, contained-in approval, and disposal. A CCR will include a summary of this work.

Treatment Well Installation

The installation and monitoring of the treatment wells as part of the NYSDEC approved Interim Remedial Measure (IRM) Work Plan was conducted during January and February 2020. This involved the installation of seventeen (17) overburden and seven (7) bedrock treatment wells. The CAMP was implemented during this work. There were some CAMP exceedances for dust detected during the installation of the treatment wells that were attributed to the ongoing construction work (i.e. masonry, floor cleaning, etc.). These exceedances were documented on the CAMP logs with an explanation.

Periodic static water levels (SWLs) were collected from each treatment well to monitor whether the seal remained competent between the bedrock and over burden treatment wells. Based on the SWLs measurements overtime, the well seals appear to remain competent.

Each treatment well was purged of a minimum of three wells volumes (or until dry). Purge water was stored in 55-gallon drums on-site. During the well purging, DNAPL was observed within bedrock treatment well IW-D-08. A black oily film was observed to smear the bailer during purging. The presence of DNAPL was checked and not observed in any other overburden or bedrock treatment wells. A CCR will include a summary of this work.

Decommission and Installation of Interior Monitoring Wells

Three of the wells that were proposed be used as performance sampling for the chemical application (see below) are located within the residential apartments. These wells were decommissioned in accordance with CP-43 and a nested overburden/bedrock well in a non-residential area was installed as a replacement. This is discussed in the Approved Activity Modifications section below. A CCR will include a summary of the well closure and installation logs.

Application of the In-Situ Chemical Oxidation (ISCO) Chemical

The ISCO chemical permanganate was injected and/or gravity fed into the 17 overburden treatment wells from March 3 through March 20, 2020. Permanganate was applied at either a 10% or 20% solution depending how well each treatment well/location accepted the chemical and to reduce the potential of daylighting. The permanganate was distributed to each treatment well in general accordance with the work plan; with the exception of a couple locations that received less chemical due to concern of daylighting in the basement Any chemical that was observed to be daylighting was immediately neutralized. A CCR or FER will include a summary of the application of permanganate and a summary of the application is provided below.

Well ID	Date(s) of Application	Concentration of Permanganate	Gallons Applied
IW-S-01	3/18/2020	10% and 20%	75 gal of 10% ; 28 gal of 20%
IW-S-02	3/18/2020	10% and 20%	15 gal of 10% ; 58 gal of 20%
IW-S-03	3/16/2020	10%	145
IW-S-04	3/17/2020	10%	145
IW-S-05	3/20/2020	20%	30
IW-S-06	3/19/2020 and 3/20/2020	20%	40
IW-S-07	3/16/2020	10%	145
IW-S-08	3/13/2020	10%	145
IW-S-09	3/10/2020	10%	145
IW-S-10	3/10/2020	10%	145

IW-S-11	3/9/2020	10%	145
IW-S-12	3/10/2020	10%	145
IW-S-13	3/11/2020 and 3/19/2020	10% and 20%	75 gal of 10% ; 28 gal of 20%
IW-S-14	3/13/2020	10%	145
IW-S-15	3/13/2020	10%	145
IW-S-16	3/13/2020	10%	145
IW-S-17	3/3/2020 and 3/19/2020	10% and 20%	25 gal of 10%; 40 gal of 20%

Contained In Use Requests

The following requests for contained-in determinations were approved by the Department from January to March 2020:

Request Type	Material - Source	NYSDEC Approval Date
Contained-In Determination	Sewer Line Excavation	21-February-2020
Contained-In Determination	Treatment Well Installation	27-March-2020

A CCR will include a summary of the disposal and applicable documentation listed above.

Approved Activity Modifications

- The location of the pressure field extension (PFE) monitoring points were reviewed based on the layout of the 1st floor residential space. Two of the PFE locations were located within a residential apartment. One of the points was proposed to be relocated to an adjacent office area, and the other is located at the northwest area of the building. The location at the northwest area of the building was requested to be made temporary since it is located within a future residential living space. A PFE reading will be collected from this location when the SSDS is fully operational to confirm a minimum reading of -0.004 inches of water, then permanently seal the location.
- Reviewing the existing wells with the layout of the building, 3 of the wells that are proposed be used as performance sampling for the chemical application are located within the residential apartments. These wells are to be decommission and a nested overburden/bedrock well in a non-residential area will be installed as a replacement. Two additional bedrock treatment wells will be installed in the area of treatment well (IW-D-08) that detected DNAPL. The locations were approved by the NYSDEC.

A copy of each correspondence for the above approved modifications is attached.

Activities Planned for this Month (April)

- Begin trenching and the installation of horizontal piping beneath the floor slab that will be used for subsequent ISCO application events.

Sampling/Testing Results

The following sampling/testing results were received during this reporting period:

- SPLP PFAS at RI surface soil location (SS-COMP-01 0-2 inches) per new PFAS guidance (lab report L2002747).
- Groundwater samples results for samples BW-01, BW-02, MW-03, SB-MW-10, RIMW-A-1, RIMW-A-2, RIMW-A-3, and RIMW-A-4 (lab report L2002906).
- Trench soil for the plumbing and SSDS installation that were collected in December 2019 (lab report L1960377).
- Groundwater data for the wells BW-03-1 and BW-03-2 (lab report L2000143).
- Waste characterization testing during this reporting period will be included in the CCR.

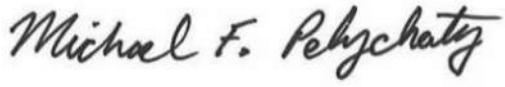
Unresolved Delays Encountered or Anticipated

Unresolved delays have not been encountered nor are they anticipated at this time.

Percentage of Completion

To date, the following key items have been completed as part of the BCP project:

- RIWP Approval
- Interim Site Management Plan submitted to NYSDEC/NYSDOH (pending approval)
- SSDS Work Plan Approval
- RI Report Approval
- IRM Work Plan Approval
- IRM RAOC #1 Design Document
- IRM RAOC #1 Implementation – 50%
- SSDS Installation – 75%



Citizen Participation Plan Activities

No Citizen Participation Plan Activities were undertaken during this reporting report.

We appreciate the opportunity to serve your professional environmental engineering needs. If you have any questions please do not hesitate to contact me at 585-295-6253.

Respectfully submitted,

LaBella Associates

Michael F. Pelychaty, PG
Sr. Environmental Geologist

Re: Former Wollensack Suite Optical January 2020 Radiological Remediation Project

Dear Ms. Vitale

Austin Master Services, LLC (AMS) was contracted to remediate two radiologically contaminated areas at the former Wollensack Optical facility located at 872-886 Hudson Avenue in Rochester New York. The Site is in the New York State Department of Environmental Conservation's (NYSDEC's) Brownfield Cleanup Program as facility #C828209. The radiologically contaminated areas were 1) a small (3' x3") contaminated area of floorboards on the third floor of the building and the sump located on the first floor of the building. The July 2019 report from AMS to your office provides the survey details for both those areas. The following summarizes the results of the remediation activities and AMS recommendations for future actions:

- The 3rd floor area has been successfully removed and no residual contamination remains in the area.
- The interior of sump, after several pressure washings exhibits surface count rates greater than background for the building but do not contribute or increase the building background dose rates above the sump.
- AMS believes those elevated count rates are due to naturally occurring radioactive material contained within the glazed tera cotta material of which the sump is comprised.
- Because 1) the dose rates in the occupied area above the sump are at background levels for the building, 2) the elevated count rates are primarily from the terra cotta material, and 3) the plan is to fill the sump with concrete and install a 30" raised floor above the sump, the radiological risk to any future occupant is zero; consequently AMS recommends no further effort be made to either clean or remove the sump.

The remediation approach, as described in the Radiation Protection Plan (RPP) consisted of the following steps.

1. Cut through the "non-contaminated area surrounding the contaminated 3'x3' section of the floor and remove the 3' x 3' section plus a small uncontaminated border section.
2. Place the removed section into a waste container for disposal out-of state at a suitably permitted facility.
3. Upon completion of the 3rd floor section removal, perform a post remediation/removal survey that includes a wipe and direct measurement of the surfaces adjacent to the removed area.
4. In addition, survey the area, with wipes and direct measurements in the area on the second floor directly below the removed section. This second survey was performed to ensure no loose contaminants fell to the floor below.
5. For the sump, remove the materials in the sump and place in a waste container for disposal out-of state at a suitably permitted facility.
6. After removal of the sump debris, use a pressure washer to clean the interior. Decontamination debris and water were removed and placed in suitable containers for disposal at a suitably permitted out of state facility.
7. After each pressure washing survey the interior of the sump and compare contamination levels to the release criteria recommended by NYSDEC.

8. Note that the release criteria denoting no contamination present was established at the 95% confidence level for the average of the background counts for removable and total surface alpha and beta emissions.

Table 1 below lists the post remediation survey results for the third and second floor areas. The survey detail sheets are contained in Attachment 2 to this letter report. The average post remediation survey count rates were then compared with the background 95% confidence levels for the wood floor in the building; see Attachment 1 for background survey measurements. Post remediation surveys showed the removable contamination and total surface contamination were all less than the 95% CL action level.

Table 1 - 3rd & 2nd Floor Post Remediation Survey Data and Comparison to 95% CL Action Limits

	3rd Floor				2nd Floor (beneath 3rd floor removal area)			
	Wipes		Direct		Wipes		Direct	
	Counts				Counts			
	alpha	Beta	alpha	Beta	alpha	Beta	alpha	Beta
	1	72	7	214	0	50	3	225
	0	70	5	201	0	53	4	214
	0	77	6	199	1	50	7	228
	0	68	3	227	1	56	4	206
	0	83	4	236	0	48	2	223
	0	60	4	219	0	47	1	202
	1	55	5	210	Not Sampled			
	0	53	4	239				
	0	58	6	236				
	0	49	4	201				
	2	52	4	213				
	1	44	5	228				
Mean	0.2	71.7	4.8	216.0	0.3	50.7	3.5	216.3
95% CL (for wood surface)	3.5	85.3	7.8	239.0	3.5	85.3	7.8	239.0

As shown in Table 2, the post remediation direct surface counts for the sump did not meet the RPP 95% confidence levels being used for the release criteria. This was likely a result of the composition of the sump and not the contamination from former facility operations. Survey data sheets are contained in Attachment 3 to this letter report.

The sump is made from a terra cotta material with glazing similar to that found in floor tile on the first floor during the July 2019 scoping survey. It is suspected that the glazing contains some elevated concentrations (i.e. above normal background for the Rochester area) of naturally occurring radionuclides, which is resulting in the alpha and beta surface emissions above the 95% CL. Because this building material itself is naturally slightly radioactive, further surface decontamination will be ineffective in reducing levels below the 95% CL. See Table 2 below for a results summary.

Table 2- Sump Post Remediation Survey Data and Comparison to 95% CL Action Limits

	Wipes (counts)		Direct (counts)	
	α	β	α	β
	1	43	95	874
	9	62	93	1032
	1	52	34	673
	8	76	98	1470
	5	39	52	850
	2	60	28	859
	3	68	16	631
	4	57	91	1064
	2	45	22	663
Mean	3.9	55.8	58.8	901.8
95% CL Bkgd	3.5	85.3	10.1	366.9

Dose rate measurements were made one foot above the sump and then throughout the first floor. The values were 8 urem/h and were consistent with background levels found throughout the building. Given that the dose rate is indistinguishable from background and the building renovation plan is to fill in the sump and then raise the existing first floor elevation over the sump area by approximately 30 inches, there will be no radiological risk to future occupants. Consequently, AMS recommends no further remediation effort be applied to this area.

Finally, approximately 50 ft^3 of contaminated debris and water has been collected to date; there will be additional waste generated from tear down of the sump containment. Drums are currently located in a posted radioactive materials storage area awaiting disposal by AMS. The contaminated debris removal will take place within the next 30 days.

Feel free to call (518-859-1944) or email (pcollopy@austinmasterservices.com) with any questions or comments.

Respectfully,

Peter Collopy

APPROVED MODIFICATION REQUESTS

Pelychaty,Mike

From: Theobald, Charlotte B (DEC) <charlotte.theobald@dec.ny.gov>
Sent: Wednesday, February 19, 2020 3:23 PM
To: Pelychaty,Mike
Cc: Caffoe, Todd (DEC); Gillen, Jennifer
Subject: RE: C828208, Jefferson-Wollensack - Groundwater Monitoring Well Closure, Installation, and DNAPL

Mike:

The Department is well aware of the developer's need to meet HCR's schedule. It would be advantageous to have the monitoring wells in the source area remain for rebound monitoring but the Department understands that it is not convenient to have groundwater monitoring wells located in someone's apartment. With that said, the proposed work below can proceed forward. If after the completion of the IRM activities and submittal of the CCR, any data gaps can be addressed in remedy selection and in the Site's RAWP when that is submitted to the Department for review and approval.

Best Regards,
Charlotte

Charlotte,

The main concern is keeping the driller going on the additional wells, as it may be a while before they can return to the site if they have to demob. If they have to remob to the site at a much later date, it could delay occupancy of the building, as the contractor would have to delay working in the drilling area. With HCR and funding, the project is has to meet certain deadlines, and there are significant cost implications to the client if they cannot. Also, we want the wells installed to we can have them to monitor the performance of the chemical injection.

-Mike

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Charlotte,

DNAPL Layer
We have detected what appears to be a slight DNAPL layer at one of the injection wells shown on the attached figure. We have attempted to measure the thickness of the DNAPL with an oil/water interface probe, but it appears the DNAPL layer is not thick enough to allow an actual measurement. So far we have not detected DNAPL in the other wells. As a contingency, we are proposing to add 2 additional bedrock treatment wells shown on the attached figure.

Well Installation and Decommissioning
Reviewing the existing wells with the layout of the building, 3 of the wells that are proposed be used as performance sampling for the chemical injection are located within the residential apartments as shown on the attached figure. We are proposing to decommission these wells and add a nested overburden/bedrock well in a non-residential area shown on the attached figure.

The installation of the injection wells are progressing on schedule at this point and we anticipate to be completed by sometime next week. Please let me know by Friday 2/21/2020 if you have any objection to the proposed plan discussed above or have any questions. We would like to keep Nothnagle on-site to continue with the work discussed above.

Regards,

Mike Pelychaty

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Charlotte,

I reviewed the location of the pressure field extension (PFE) monitoring points and two of the locations were located within a residential apartment as shown on the attached figure. One of the points I propose to move to an adjacent office area, and the other is located at the northwest area of the building. The location at the northwest area of the building is requested to be made temporary; meaning we will collection PFE readings when the SSDS is fully operational to confirm a minimum reading of -0.004 inches of water, then permanently seal the location.

Please let me know if you accept the proposed change or would like to discuss further.

Regards,

Mike Pelychaty

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2000143-03: A sample identified as "TRIP BLANK" was received, but not listed on the Chain of Custody. The sample was not analyzed.

Volatile Organics

The WG1327138-7 MSD recovery, performed on L2000143-01, is outside the acceptance criteria for trichloroethene (0%). The unacceptable percent recovery is attributed to the elevated concentrations of target compounds present in the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L2000143
Project Number:	2182207	**Report Date:**	01/06/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L2000143
Project Number:	2182207	**Report Date:**	01/06/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L2002747
Project Number:	2182207	**Report Date:**	02/10/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L2002747
Project Number:	2182207	**Report Date:**	02/10/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

February 11, 2020: This final report includes the results of all requested analyses.

January 29, 2020: This is a preliminary report.

January 28, 2020: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2002906-10: A sample identified as "FIELD BLANK" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

L2002906-11: A sample identified as "TRIP BLANK" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

Volatile Organics

L2002906-09D2: The analysis was performed utilizing a compromised vial.

Perfluorinated Alkyl Acids by Isotope Dilution

L2002906-01, -03, -04, and WG1332696-4/-5: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

Total Metals

The WG1332689-3/-4 MS/MSD recoveries for calcium (200%/190%), potassium (MS 129%), and sodium (0%/0%), performed on L2002906-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly Stenstrom

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)		
Perfluorooctadecanoic Acid	PFODA	16517-11-6
Perfluorohexadecanoic Acid	PFHxDA	67905-19-5
Perfluorotetradecanoic Acid	PFTA	376-06-7
Perfluorotridecanoic Acid	PFTrDA	72629-94-8
Perfluorododecanoic Acid	PFDoA	307-55-1
Perfluoroundecanoic Acid	PFUnA	2058-94-8
Perfluorodecanoic Acid	PFDA	335-76-2
Perfluorononanoic Acid	PFNA	375-95-1
Perfluorooctanoic Acid	PFOA	335-67-1
Perfluoroheptanoic Acid	PFHpA	375-85-9
Perfluorohexanoic Acid	PFHxA	307-24-4
Perfluoropentanoic Acid	PFPeA	2706-90-3
Perfluorobutanoic Acid	PFBA	375-22-4
PERFLUOROALKYL SULFONIC ACIDS (PFSAs)		
Perfluorododecanesulfonic Acid	PFDoDS	79780-39-5
Perfluorodecanesulfonic Acid	PFDS	335-77-3
Perfluorononanesulfonic Acid	PFNS	68259-12-1
Perfluorooctanesulfonic Acid	PFOS	1763-23-1
Perfluoroheptanesulfonic Acid	PFHpS	375-92-8
Perfluorohexanesulfonic Acid	PFHxS	355-46-4
Perfluoropentanesulfonic Acid	PFPeS	2706-91-4
Perfluorobutanesulfonic Acid	PFBS	375-73-5
FLUOROTELOMERS		
1H,1H,2H,2H-Perfluorododecanesulfonic Acid	10:2FTS	120226-60-0
1H,1H,2H,2H-Perfluorodecanesulfonic Acid	8:2FTS	39108-34-4
1H,1H,2H,2H-Perfluorooctanesulfonic Acid	6:2FTS	27619-97-2
1H,1H,2H,2H-Perfluorohexanesulfonic Acid	4:2FTS	757124-72-4
PERFLUOROALKANE SULFONAMIDES (FASAs)		
Perfluorooctanesulfonamide	FOSA	754-91-6
N-Ethyl Perfluorooctane Sulfonamide	NEtFOSA	4151-50-2
N-Methyl Perfluorooctane Sulfonamide	NMeFOSA	31506-32-8
PERFLUOROALKANE SULFONYL SUBSTANCES		
N-Ethyl Perfluorooctanesulfonamido Ethanol	NEtFOSE	1691-99-2
N-Methyl Perfluorooctanesulfonamido Ethanol	NMeFOSE	24448-09-7
N-Ethyl Perfluorooctanesulfonamidoacetic Acid	NEtFOSAA	2991-50-6
N-Methyl Perfluorooctanesulfonamidoacetic Acid	NMeFOSAA	2355-31-9
PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS		
2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid	HFPO-DA	13252-13-6
4,8-Dioxa-3h-Perfluorononanoic Acid	ADONA	919005-14-4
CHLORO-PERFLUOROALKYL SULFONIC ACIDS		
11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid	11Cl-PF3OUdS	763051-92-9
9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid	9Cl-PF3ONS	756426-58-1

Project Name:	Not Specified	**Lab Number:**	L2002906

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	Not Specified	**Lab Number:**	L2002906
Project Number:	Not Specified	**Report Date:**	02/11/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Report Format: DU Report with 'J' Qualifiers

Project Name:	Not Specified	**Lab Number:**	L2002906
Project Number:	Not Specified	**Report Date:**	02/11/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

January 23, 2020: This final report includes the results of all requested analyses.

December 24, 2019: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Total Metals

L1960377-03: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly Stenstrom

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L1960377
Project Number:	2182207	**Report Date:**	01/23/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L1960377
Project Number:	2182207	**Report Date:**	01/23/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Avon, New York 14414

RE: APRIL 2020 Monthly Progress Report
Former Wollensack Optical Site – C828209
872 & 886 Hudson Avenue, Rochester, New York
LaBella Project #2182207

Dear Ms. Theobald,

LaBella Associates, D.P.C. ("LaBella") is pleased to submit this Monthly Progress Report (MPR) associated with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site (BCP ID No. C828209) located at 872 & 886 Hudson Avenue, Rochester, New York, hereinafter referred to as the "Site." Below is a summary of activities completed in the previous months (APRIL 2020) and planned for this month (MAY 2020).

Activities in Prior Month (APRIL 2020)

Installation of Sub-Grade Piping for Future Injections
The trenching was completed to install horizontal piping beneath the floor slab that will be used for subsequent groundwater treatment events. This includes the installation and connection of the horizontal piping to the treatment wells, backfilling the trenches and the placement of concrete over the trenches. The horizontal piping network was only installed under the 1st floor space and into the basement. The remaining components to be installed include the horizontal piping within the basement to the exterior of the site. This work is anticipated to be completed in May and/or June once other utility installations have been installed within the basement.

The CAMP was implemented during trenching excavations. Pre-characterization soil reuse sampling results from the trenches were forwarded to the NYSDEC. Based on the results, the NYSDEC did not allow reuse of the soil as the concentration of TCE exceeded the Part 375 Soil Cleanup Objective for the Protection of Groundwater. As such, the soil was disposed off-site under a Contained In Use Determination (see below). A CCR or FER will include a summary to document the installation of the sub-grade piping for the groundwater treatment system.

Treatment Well Water Disposal
Approximately 1,499 gallons of the purge and drilling water generated from the installation of the treatment wells was temporarily staged in 55-gallon drums, treated through carbon and then combined into two 1,000 gallon poly tanks on-site. Based on the concentration of Iron detected in the waste characterization samples, the water was disposed off-site at Covanta Environmental Solutions. A CCR or FER will include a summary of the waste disposal information.

Contained In Use Requests

The following request(s) for import, request for reuse, and/or contained-in determinations were approved by the Department in April 2020:

Request Type	Material - Source	NYSDEC Approval Date
Contained-In Determination	Excavated soil from the Installation of Sub-Grade Piping for Future Groundwater Treatment	10-April-2020

A CCR or FER will include a summary of the disposal and applicable documentation.

Activity Modifications

- Additional 4-inch diameter perforated HDPE pipes were installed within the trenches where horizontal piping was installed for the groundwater treatment system in the same manner as the approved design document. This additional piping for the SSDS system was installed to augment the removal of VOC vapors beneath the floor slab over the area where highest concentration of groundwater and soil impacts appear to be present. This modification of the SSDS will be documented in a CCR or FER.
- Some of the horizontal piping/trenching locations shown on Figure 2 of the IRM RAOC #1 Design Document dated January 7, 2020 was modified based on existing site conditions such as interior walls installed adjacent to the treatment wells, handicap ramp, and underground plumbing. The horizontal piping was installed to obtain a ¼ inch per foot pitch to the treatment wells. This modification will be documented in a CCR or FER.

Activities Planned for this Month (MAY)

- Conduct 6-week groundwater monitoring event following the ISCO Reagent application.
- Installation of groundwater treatment system horizontal piping within basement.

Sampling/Testing Results

The following sampling/testing results were received during this reporting period:

- Sampling of soil to be excavated for the installation of sub-grade piping for future groundwater treatment that was not approved for reuse (lab report L2014553)
- Waste characterization/Contained In Determination soil sample for the excavated soil from the installation of sub-grade piping for future groundwater treatment (lab report 201494).

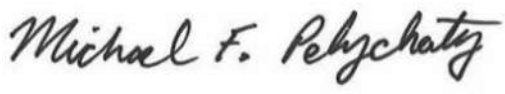
Unresolved Delays Encountered or Anticipated

Unresolved delays have not been encountered nor are they anticipated at this time.

Percentage of Completion

To date, the following key items have been completed as part of the BCP project:

- RIWP Approval
- Interim Site Management Plan submitted to NYSDEC/NYSDOH (pending approval)
- SSDS Work Plan submitted to NYSDEC/NYSDOH (pending approval)
- RI Report Approval
- IRM Work Plan Approval
- IRM RAOC #1 Design Document
- IRM RAOC #1 Implementation – 70%



Citizen Participation Plan Activities

No Citizen Participation Plan Activities were undertaken during this reporting report.

If you have any questions or require additional information please do not hesitate to contact me at 585-295-6253.

Respectfully submitted,

LaBella Associates

Michael F. Pelychaty, PG
Sr. Environmental Geologist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	WOLLENSACK	**Lab Number:**	L2014550
Project Number:	2182207.13	**Report Date:**	04/07/20

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Perfluorinated Alkyl Acids by Isotope Dilution

WG1358589-2: The LCS recovery, associated with L2014550-01 through -03, is above the acceptance criteria for 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2fts) (142%); however, the associated samples are non-detect to the RL for this target analyte. The results of the original analysis are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	WOLLENSACK	**Lab Number:**	L2014550
Project Number:	2182207.13	**Report Date:**	04/07/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Report Format: DU Report with 'J' Qualifiers

Project Name:	WOLLENSACK	**Lab Number:**	L2014550
Project Number:	2182207.13	**Report Date:**	04/07/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

Project Name: WOLLENSACK
Project Number: 2182207.13
Lab Number: L2014550

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.
Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.
LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.
All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.
Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.
Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.
Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.
LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

RE: MAY 2020 Monthly Progress Report
Former Wollensack Optical Site – C828209
872 & 886 Hudson Avenue, Rochester, New York
LaBella Project #2182207

Dear Ms. Theobald,

LaBella Associates, D.P.C. ("LaBella") is pleased to submit this Monthly Progress Report (MPR) associated with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site (BCP ID No. C828209) located at 872 & 886 Hudson Avenue, Rochester, New York, hereinafter referred to as the "Site." Below is a summary of activities completed in the previous months (MAY 2020) and planned for this month (JUNE 2020).

Activities in Prior Month (MAY 2020)

6-Week Post Injection Groundwater Monitoring
Groundwater samples were collected from wells BW-01, BW-03, SB-MW-14, SB-MW-15, SM-MW-16, RIMW-02, RIMW-04. RIMW-16, and SBMW-07 in accordance with the NYSDEC work plan. In addition, a round of static water levels were collected from each well at the Site.

Activity Modifications

- Well RIMW-19S/19D was not sampled due to the presence of permanganate and the concern that it would damage the sampling equipment. Other sample alternatives will be evaluated to collect future samples from these wells such as using a passive diffusion bag or peristaltic pump without the collection of groundwater parameters.

Activities Planned for this Month (JUNE 2020)

- Conduct 12-week groundwater monitoring event following the ISCO Reagent application.
- Complete installation of groundwater treatment system horizontal piping within basement.

Sampling/Testing Results

The following sampling/testing results were received during this reporting period:

- Groundwater results for the 6-week post injection sampling event (lab report L2020006).

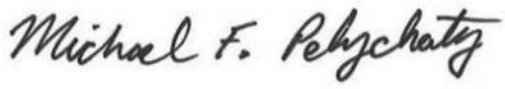
Unresolved Delays Encountered or Anticipated

The norther underground storage tank (UST) was to be closed during June 2020 as the electrical line over the tank was to be moved once RG&E connected power to the Site building. RG&E will not be able to complete the power connection to the Site building until late June or early July 2020. As such, the UST will be closed in July 2020.

Percentage of Completion

To date, the following key items have been completed as part of the BCP project:

- RIWP Approval
- Interim Site Management Plan submitted to NYSDEC/NYSDOH (pending approval)
- SSDS Work Plan submitted to NYSDEC/NYSDOH (pending approval)
- RI Report Approval
- IRM Work Plan Approval
- IRM RAOC #1 Design Document
- IRM RAOC #1 Implementation – 70%



Citizen Participation Plan Activities

No Citizen Participation Plan Activities were undertaken during this reporting report.

If you have any questions or require additional information please do not hesitate to contact me at 585-295-6253.

Respectfully submitted,

LaBella Associates

Michael F. Pelychaty, PG
Sr. Environmental Geologist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2020006-08: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The WG1372229-6/-7 MS/MSD recoveries, performed on L2020006-01, are outside the acceptance criteria for trichloroethene (0%/0%). The unacceptable percent recoveries are attributed to the elevated concentrations of target compounds present in the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	JEFFERSON WOLLENSACK	**Lab Number:**	L2020006
Project Number:	2182207	**Report Date:**	05/20/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Project Name:	JEFFERSON WOLLENSACK	**Lab Number:**	L2020006
Project Number:	2182207	**Report Date:**	05/20/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
EPA TO-12 Non-methane organics
EPA 3C Fixed gases
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water

Form No: 01-25 HC (rev. 30-Sept-2013)

July 9, 2020

Charlotte Theobald
NYS Department of Environmental Conservation
6274 East Avon-Lima Road
Avon, New York 14414

RE: **JUNE 2020 Monthly Progress Report**
Former Wollensack Optical Site – C828209
872 & 886 Hudson Avenue, Rochester, New York
LaBella Project #2182207

Dear Ms. Theobald,

LaBella Associates, D.P.C. ("LaBella") is pleased to submit this Monthly Progress Report (MPR) associated with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site (BCP ID No. C828209) located at 872 & 886 Hudson Avenue, Rochester, New York, hereinafter referred to as the "Site." Below is a summary of activities completed in the previous month (JUNE 2020) and planned for this month (JULY 2020).

Activities in Prior Month (JUNE 2020)

- **12-Week Post Injection Groundwater Monitoring** - Groundwater samples were collected from wells BW-01, BW-03, SB-MW-14, SB-MW-15, SB-MW-16, RIMW-02, RIMW-04. RIMW-16, RIMW-19S, RIMW-19D, and SBMW-07 in general accordance with the NYSDEC work plan. In addition, a round of static water levels were collected from each well at the Site.
- Completion of the installation of the piping for the groundwater treatment system.
- Excavation monitoring and implementation of the CAMP during excavations for the parking lot drainage system.

Activity Modifications

- Wells RIMW-19S/19D was sampled with a bailer as permanganate was observed within the well as there was a concern it would damage the sampling equipment.
- Due to the presence of utilities within the Site building's basement, the elevation of the treatment piping needed to be raised, as such, the injection port is located above grade on the eastern exterior of the building. This modification will be detailed in the Construction Completion Report.

Activities Planned for this Month (JULY 2020)

- Removal of north tank. This work is scheduled to being on July 13th.

Sampling/Testing Results

The following sampling/testing results were received during this reporting period:

- Groundwater results for the 12-week post injection sampling event (lab report L2027694). In addition, attached is a summary table of the post injection monitoring results along with the pre injection groundwater VOC testing results. Overall, the testing results show a decrease in the concentrations of chemicals of concern at the monitoring wells within and downgradient of the treatment area.

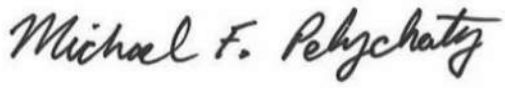
Unresolved Delays Encountered or Anticipated

None.

Percentage of Completion

To date, the following key items have been completed as part of the BCP project:

- RIWP Approval
- Interim Site Management Plan submitted to NYSDEC/NYSDOH (pending approval)
- SSDS Work Plan submitted to NYSDEC/NYSDOH (pending approval)
- RI Report Approval
- IRM Work Plan Approval
- IRM RAOC #1 Design Document
- IRM RAOC #1 Implementation – 90%



Citizen Participation Plan Activities

No Citizen Participation Plan Activities were undertaken during this reporting report.

If you have any questions or require additional information please do not hesitate to contact me at 585-295-6253.

Respectfully submitted,

LaBella Associates

Michael F. Pelychaty, PG
Sr. Environmental Geologist

I:\Jefferson Wollensack LLC\2182207 - 872 & 886 Hudson Brownfield\Reports\Monthly Progress Reports\2020-06 June\MPR.2020-06.C828209 Jefferson Wollensack June 2020.docx

SAMPLING/TESTING RESULTS

REFERNCE PAGE

Former Wollensack Optical - C828209
872 & 886 Hudson Avenue, Rochester, New York
LaBella Project #2182207

All values displayed in milligrams per liter (ug/l) or parts per billion (ppb)

U indicates compound not detected above the indicated laboratory Method Detection Limit (MDL)

ND indicates not detected above laboratory MDL

Gray highlight indicates the MDL was above the NYCRRR Part 703 Groundwater Quality Standard

Yellow highlight indicates that the compound was detected at a concentration above NYCRR Part 703 Groundwater Quality Standard

J indicates an estimated value

VOCs analyzed by USEPA Method 8260

D denotes diluted sample

NL denotes Not Listed

-- Not Applicable or not reported

Q denoted laboratory qualifier

Conc denotes concentration

Well ID: BW-01

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2027694-07: The sample has elevated detection limits due to the dilution required by the sample matrix (sheen).

L2027694-11: The sample has elevated detection limits due to the dilution required by the sample matrix (dark purple).

The WG1388388-7 MSD recovery, performed on L2027694-04, is outside the acceptance criteria for trichloroethene (0%). The unacceptable percent recovery isattributed to the elevated concentrations of target compounds present in the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L2027694
Project Number:	2182207	**Report Date:**	07/02/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L2027694
Project Number:	2182207	**Report Date:**	07/02/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
EPA TO-12 Non-methane organics
EPA 3C Fixed gases
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water

PROJECT Wollensack SHEET ____ OF ____

PROJECT NO. 2182207 CALC. BY ____ DATE ____

SUBJECT ____ SCALE ____

CHECKED BY ____

1/16/2020

0645 J Folger onsite

0700 Set up CAMPs. Hamilton Stern prepping area around 1st floor sump for radiation remediation by Austin Masters. - expected around 0800

0800 Austin Master Services onsite. Cement truck for filling of plumbing trenches on-site

0815 Plumbing trenches beginning to be filled with concrete.

0915 Austin Master setting up. Will begin removal after concrete pouring is complete. Will begin setup at upstairs location while waiting

1000 Both exterior PID batteries dead. No activity requiring monitoring occuring outside

1100 Austin Master begins upstairs radioactive material removal

1130 Concrete pouring done

1330 Upstairs radioactive removal complete, Austin Master cleaning up work area

1400 AMS working on cleaning out downstairs sump

1445 Sump clean up appears to be more contaminated than initially anticipated. Zircon sand in sump. Second floor passed screening. AMS taking down radioactive danger signs. Packing up first floor removal area, will resume tomorrow

1515 J. Folger off-site

LaBella
Powered by partnership.

PROJECT Wollensack SHEET ____ OF ____

PROJECT NO. ____ CALC. BY ____ DATE 1/17/20

SUBJECT ____ SCALE ____

CHECKED BY ____

0800 J. Folger on-site, Austin Master Services on-site
0815 AMS sets up equipment. J. Folger starts 4-gas meter
1000 Prep complete. AMS's pressure washer lines frozen. Going to rental facility to get replacements
1045 AMS returns
1100 AMS begins pressure washing 1st floor sump
1245 Cleanup complete. Still some radiation. ASM will work with DEC to try and get a risk management plan to close out location. Some naturally radioactive terracotta in sump construction. ASM breaks for lunch
1350 AMS removes a sample of terracotta for analysis
1400 AMS begins cleaning up inside tent. ~~Will have to keep work zone active~~ Will not be able to close out area until after hearing from DEC next week

MONDAY
1/20/2020 16°F/SNOWING A.daSilva

0645 - AdaSilva & Hamilton on Site.

0700 - outdoor CAMPS Set up + Indoor Set up + 4 GAS meter
- H's Dumpster Dropped off on Site. No Liner/Cover

0740 - Sarah Logan (LaBella) on site for GW Sampling

0840 - Nothnagle on Site

0900 - LLC (LaBella) Drops off Stand Behind Skidsteer

1000 - LLC Drapes Dumpster w/ Poly

1023 - Nothnagle mobilized in Building

1100 - Nothnagle got Rig in Site Building
* MAX SPIKE on work Zone CAMP spiked (NOT) NOT From Drilling. From Dust Fall from masons in adjacent Room / Walkway

1145 - Dust from adjacent room is entering work Zone AdaSilva told Josh (Hamilton) who told Masons it Needs to be dust free. They Placed Plywood in doorway * Note - Drilling Has Not Even Started

Work Zone Downwind
PID : 592-910712
DUSTTRAK: FA02283

1215 - Masons took Break & Dust is decreasing..
Dust Definetly coming from Masons *

1228 - Coring of Concrete Begins. No Elevated Readings from Rig - All cuttings are wetted and Vacumed

1230 - Confirmed that Josh Spoke w/ masons in adjacent Room & told them it should be Dust Free. Dust Levels Have Significantly Decreased.

1250 - Confirmed NO SAMPLE COLLECTION. Augers begin on IW-S-01 (NE Corner of TREATMENT AREA)

1255 - Drillers take Break & Masons Breeck To work. Since Masons Have Started, Dust Levels have Risen. Josh told them to Lower Dust Again.

1310 - Augering Begins/Continues on IW-S-01

1315 - DUST HAS Decreased to Desired Limits
0-5 Ft = 0.1 ppm via PID
↳ moist F Brown SAND; some SR F-M gravel

1350 - Dust steadily increasing from work in adjacent Room Even though its Blocked off w/ Ply Wood. It does Not appear to be coming from Augering. Moist Soil + Slow Auger speed.
- AdaSilva opens window for Ventilation

1400 - as a precaution, drillers wet Down Soils from Auger to Ensure we are not Creating Dust.
* PID Filter = White Dust = Concrete Dust NOT Dirt.

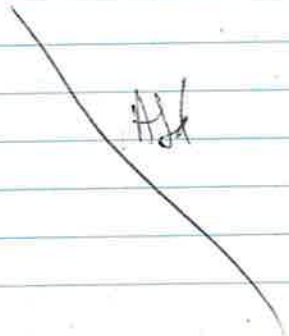
1422 - Dust Lingers in Air, Windows are open wider.

Rite in the Rain

IW-S-01

Depth (ft)	Time	PID (ppm)	
0-5	1315	0.02	Moist - Dry F Brown SAND; some F-m SR gravel
5-10	1422	0.4-0.6	
10-15	7516	0.3	

1450 - Pin on Rig snapped. Drillers working on getting Rig up & Running again.



1500 - Pin Replaced & Drilling Continues

1525 - ↓ SAA

1535 - ↓ SAA

1600 - Drillers Pack up + A. daSilva Packs up & Leaves Site for office

NOTE: All A. daSilva's movement is documented via Iphone Health App & Fitbit throughout this Project.

TUESDAY

1/21/2020 10°F / SNOW A. daSilva

0615 - Dropped off Equipment @ Eco Rental

0630 - Picked up CAMPS from La Bella office

0650 - on Site

0700 - CAMPS (Work Zone + NE Doorway) are set up for Background Readings.

0750 - Spoke w/ Josh (Hamilton). He Spoke w/ Masons, their Foreman is on Site Correcting any further Dust issues.

- Sarah Logan on Site for GSW Sampling

0800 - Masons Start work

0810 - Drillers (Nothnagle) on Site.

→ Masons appear to Be Spraying water to help Reduce Dust. Dust Rose in Both DustTRAKs from ~0.03 mg/m³ to ~0.07 mg/m³ Background ↗

0815 - Rig was turned on, W/o windows open CO spiked to 129 ppm immediately. A. daSilva Had Rig turned off until we have access to take Ply wood window @ North Entrance / Ramp off. CO Hovered 18-20 ppm.

0820 - Ply wood taken Down. CO & Dust Levels Decreased to 13-15 ppm CO & 0.06 mg/m3

↳ A. daSilva checked adjacent Rooms to ensure CO was good for working Conditions

0828 - Augering Continues CO ~11ppm w/ machine on.

0850 - Dust on Both CAMPS is:

Door - 0.252 mg/m3

Work Zone - 0.36 mg/m3

Informed Mason Foreman & Josh ~~Rot~~ in the Rain.

0850 Josh Informed Masons to Iowa Dust. Wet + Tamp area.

Prior of 0845 A. daSilva told Masons to wet Bricks.

0855 - Levels Starting to lower on Dust TRAKS

↳ Dust Does Not Seem to ~~Decrease~~ Mud come from moist Soils Coming up from Auger.

0900 → Masons Paved work to make adjustments & Dust Levels on Both meters Decreased By ~ ~~30~~ 0.08 - 0.1 mg/m³ and Continue to Decrease.

0910 CAMP READING

Work Zone: 0.4ppm 0.256 mg/m³ Door: 0 ppm 0.190 mg/m³

- Steadily Decreasing. Appears as once Concrete Dust is Air Borne - takes a long time to Settle Because its so fine.

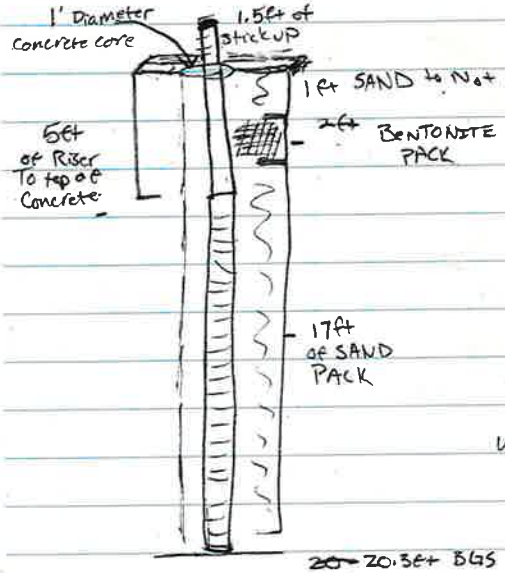
IW-S-01

Depth (Ft)	Time	PID (ppm)	Soil Characteristics
15-20	914	0.3	moist Light Brown F-VF SAND; Some F-m SR gravel

* Refusal @ 20.3 ft BGS DUE TO Presumably Bedrock @ 0928

1000 - Sand Fell in from 15-20 ft BGS. Drillers will Drill Foot

1000 - work zone: 0.1 ppm 0.059 mg/m³ * NOTE: MASONS Back TO WORK W/ New Poly Door Door: 0.0 ppm 0.054 mg/m³



1030 - work zone: 0.08 mg/m³ 0.2 ppm Door: 0.121 mg/m³ 0.0 ppm

- Dust Levels appears to be creeping up from mason work. All drillers augers are Covered in Saturated Soil. No Dust & Cleaned off Before stacking in storage area.

Note → There is an odor of Cut metal Coming from B/E Door/ Coming from Stair case → possible addition of Dust.

This may be why Door Way CAMP is Higher then work Zone CAMP.

IW-S-01 Well Construction Log

Rite in the Rain.

1100 - Work Zone: Doorway:
0.086 mg/m3 0.109 mg/m3
0.1 ppm 0.0 ppm

1220 - Drillers take 15 min Lunch Break

1230 - Work Zone: Doorway:
0.073 mg/m3 0.063 mg/m3
0.1 ppm 0.0 ppm

1242 - CO Level Hit 30ppm. A. daSilva shut Machine turned off and opened up a plywood window to the South of the Building for air circulation.

1300 - Work Zone: Doorway:
0.073 mg/m3 0.068 mg/m3
0.1 ppm 0.0 ppm

1320 - Jon & Mike P (LaBella) on Site.

1330 - IW-S-01 finished - augers will get Decon aminated.
↳ Jon SPOKE w/ Josh about oil in SW corner of Building & Red Fluid on Snow infront of Building. Josh will Bring Some Oil-Dry for Oil & Examine Red fluid.

1448 - A. daSilva Ran into worker w/ Reddish water in Bucket & asked what it was. It is Rinse water from Red Fire Caulk.

1500 - Even w/ Extra plywood windows open, Rig is exceeding CO Level. Nathaniel is seeing if they have an extra Ventilation at this Shop.

1520 - Drillers start to pack up. A. daSilva Tears down CAMP.

1615 - A. daSilva Leaves office after dropping off Equipment

Rite in the Rain

WEDNESDAY

1/22/2020 22°F/Cloudy A. daSilva

NOT Wollensack Time:

615 - 645 → ADaSilva Hours / timesheet

Wollensack Time:

645 - ADaSilva Picks up Equipment From Office

0655 - ADaSilva on site. Will Extract Data from Camps & Convert to PDF.

Drillers should arrive Between 0745 - 0815

0745 - ADaSilva Sets up Doorway & Workzone CAMPS.

- Zero CAL Performed on DustTRAICS w/Filter

0800 - Nathwagle (Drillers) on site. They Brought Ventilation for Drillfumes.

0815 - Workzone: 0.070 mg/m3, 0.1 ppm — Doorway: 0.060 mg/m3, 0.0 ppm

0835 - Lights are Set up & coring of Concrete Begins.

0908 - ~~wa~~ Drilling on IW-S-02 Begins

Work Zone: 0.0 ppm, 0.222 mg/m3 — Doorway: 0.0 ppm, 0.109 mg/m3

↑ Levels are Lowering 0.128 mg/m3 @ 0912

0933 Work Zone: 0.2 ppm, 0.250 mg/m3 — Doorway: 0.0 ppm, 0.220 mg/m3

- A. daSilva will assess to identify Source of Dust

Soil appears to be moist - No DUST.

- ADaSilva Sprayed 1) Equipment 2) Drillers wetted Soil/Auger still High

Drill Log Depth (Ft)	time	Highest (ppm) PID	General Soil Description
0-5	0920	0.2	Brown VF-F SAND; moist; some SR F-M gravel/trace CSAND
5-10	1010	0.4	"
10-15	1058	1.7	SAA, very Moist, Lighter Brown;
15-20	1133	2.3	" appears to Be Saturated

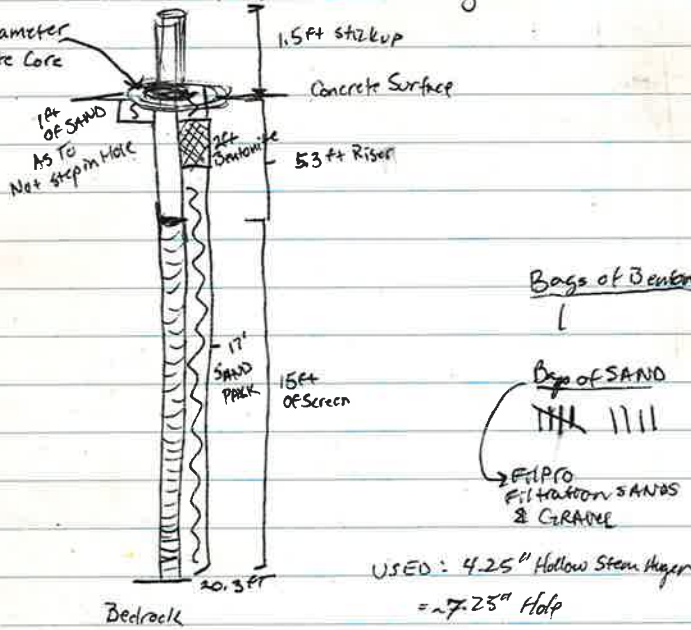
0949 - ADaSilva took down SW Plywood window which created a cross breeze that significantly lowered Dust Levels on BOTH CAMPS to < 0.150 mg/m3 By 1003

DUST MITIGATED - Wind Pushes From SW to NE corner windows *

1005 - Work Zone: CO 0 ppm, LEL 0, H2S 0, O2 20.9, 0.1 ppm, 0.113 mg/m3 — Doorway (Downwind): 0.0 ppm, 0.129 mg/m3

1100 Work Zone: CO 0 ppm, LEL 0, H2S 0, O2 20.9, 0.1 ppm, 0.046 mg/m3 — Doorway: 0.0 ppm, 0.049 mg/m3

1113 - Pin Broke on Drill. Drillers Fix w/in 5-10 min. & are Back up & Running.



1125 - " SAA "

1141 - Hit Bedrock @ 20.3 ft

1200 - Work Zone: CO 3, LEL 0, H2S 0, O2 20.9, 0.1 ppm, 0.042 mg/m3 — Doorway: 0.0 ppm, 0.046 mg/m3

Rain in the Rain.

Rite in the Rain

Well Construction Log IW-S-05.

Depth 20.5 FtBGS

~1530 - Doorway PID DIED.

1541 - End Drilling for today. IW-S-05 w.ll be finished Next Monday. Equipment is Picked up.

1600 - Adam Silva leaves Site to Drop Equipment off at La Belle Lab.

0730 A. Brett on-site, weather cloudy 33°F
Indoor overburden injection wells planned for today

0800 Nothnagle on-site. Kevin Busch - Driller.

0815 A. Brett set up and started CAMP stations Background PID 0.2 ppm and dust ~ 0.080 mg/m3 prior to work starting.

0830 Four gas meter started, rig started (venting outside) CO = 3 ppm
Summary of CAMP units below
- Four Gas: QRAE 3 - FA03826 (Eco identifier)
- Work zone Units: PID - miniRAE 3000 (FA00918) Dust trak (FA02285) runmode Manual - 15
- Doorway Units: PID - miniRAE 3000 (FA00345) Dust trak. (FA02727) runmode Manual - 15

0835 Nothnagle begins finishing installation of IW-S-05

0900

Work zone	CO	H_2S	Doorway
(PID) 0.02 ppm	3 ppm	0.0 ppm	0.0 ppm (PID)
(Dust) 0.073 mg/m3	LEL 0 %	OXY 20.9 %	0.046 mg/m3 (Dust)

0930 IW-S-05 install completed, Nothnagle cleaning up around well. Soil to be added to poly-lined roll off.

0955 Josh of Hamilton Stern informed that they may be digging on-site wednesday or thursday this week for sewer laterals

Rite in the Rain

1000 Workzone: 0.1 ppm (PID); 0.031 mg/m³ (dust) | CO: 4 ppm; LEL: 0 % | H2S: 0.0 ppm; Oxy: 20.9 % | Doorway: 0.0 ppm (PID); 0.028 mg/m³ (dust)

1005 Nothnagle began coring at location for IW-S-06, location was moved by ~ 1/2 foot due to piping. Concrete ~ 0.5-ft (six inches) thick

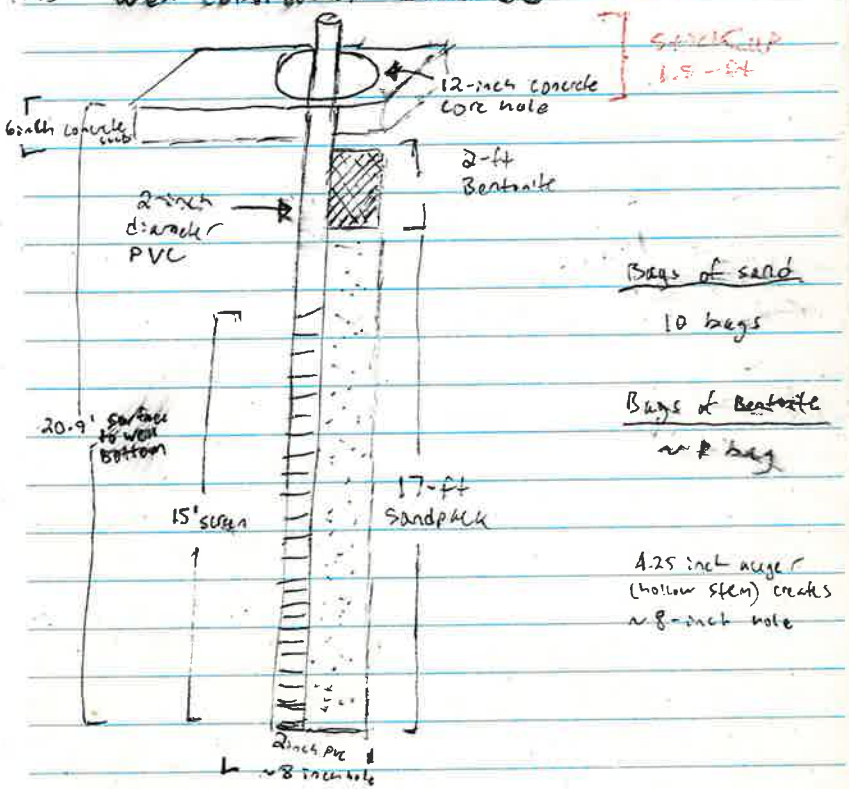
1033 Augers decontaminated prior to beginning augering at IW-S-06. Decon'd with pressure washer in decon pad. Pressure washer vented to outside.

1045 Drilling completed with propane powered floor mounted drill rig. Using 4.25 inch augers

1108 Nothnagle begins auger for IW-S-06 location

1110 Workzone: 0.1 ppm (PID); 0.031 mg/m³ (dust) | CO: 4 ppm; LEL: 0 % | H2S: 0.0 ppm; Oxy: 20.4 % | Doorway: 5.0 ppm (PID); 0.016 mg/m³ (dust)

1120 IW-S-06 Drilling Log



* Workzone PID used for screening

Depth (ft)	Date	Time	PID (ppm)	Description
0-5	1/27/20	1120	0.3	Brown fine sand, little clay, trace silt, moist, no odor
5-10	1/27/20	1136	3.7	Brown silty sand, little clay, trace fine gravel, moist, no odor
10-15	1/27/20	1213	29.5	Brown silty sand, little SA gravel, moist no odor
15-20	1/27/20	1315	2.4	Similar to above
20-20.9	1/27/20	1330	1.0	Similar to above

1333 IW-S-06 installed to 20.9-ft bg with 15-ft of well screen and appropriate amount of sand to surface.

1335 Workzone: 0.1 ppm (PID); 0.041 mg/m³ (dust) | CO: 0 ppm; LEL: 0 % | H2S: 0.0 ppm; Oxy: 20.9 % | Doorway: 0.0 ppm (PID); 0.013 mg/m³ (dust)

1345 Well Construction IW-S-06

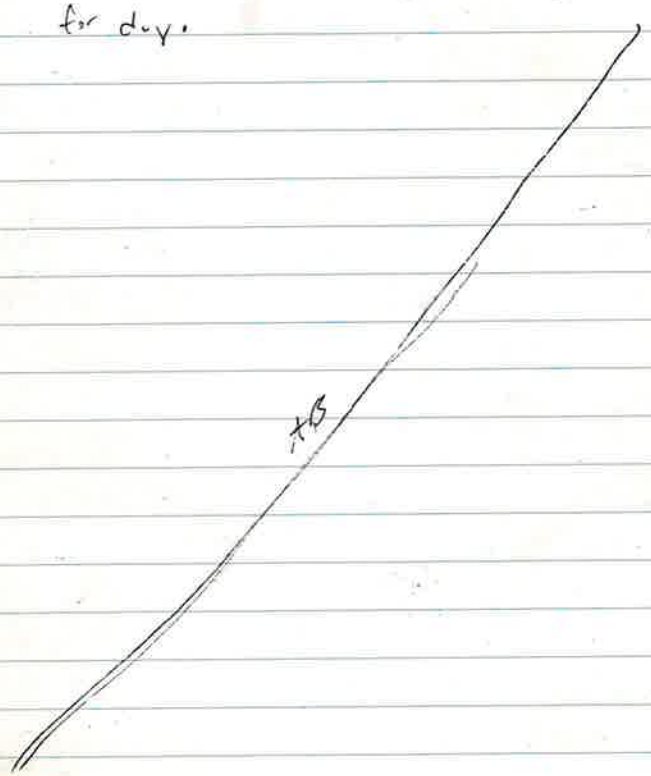
Bags of sand: 10 bags

Bags of Bentonite: ~1 bag

4.25 inch auger (hollow stem) creates ~8-inch hole

1500 Bentonite hydrated with potable water. Sand over top to surface.

1505 Workzone: 0.0 ppm (PID); 0.025 mg/m³ (dust) | CO: 0 ppm; LEC: 0 % | H2S: 0.0 ppm; Oxy: 20.9 % | Doorway: 0.0 ppm (PID); 0.013 mg/m³ (dust)



1510 Doorway PID battery out. Battery replaced, unit restarted.

Rite in the Rain

1515 Soils cuttings from IW-S-06 installation brought to and dumped into poly lined rolloff. Excess soils remain at well to be added to rolloff. Drill rig unscrewed from floor.

1530 Excess soil cuttings scooped into loader, rig back on wheels. Nothnagle moving rig to next location, will not be starting drilling today. Nothnagle putting boards back over window openings. A.Brett ending CAMP monitoring packing up CAMP stations

1545 A.Brett offsite, nothnagle finishing packing up for day.

0730 Alex Brett on site. Raising SB-MW-16 well in basement (1-inch well). PVC coupler and PVC riser added. Hamilton Stern said concrete slab to be poured in basement today.

0745 Weather: Snowy, cloudy, 30° F

0800 Nothnagle arrive on-site, taking boards of window openings, bringing CAMP setups inside.

0855 CAMP setups started (workzone + doorway)

0915 Nothnagle begins coring concrete slab for next location, location already marked on concrete.

0920 Planned site work today includes injection well installation

0940 Nothnagle begins drilling at location

0945

Workzone	Doorway	CO	H_2S

2/28/2020 28°F wind from SE/SW Sunny A. daSilva

0700 - A. daSilva on site & sets up Note Book

0710 - A. daSilva Zero Calibrates Dusttraks

0715 A. daSilva Sets up Cannes (x1 in workzone & x1 at North East Doorway outside). Both Camps Have a PID & DustTRAK.

0720 - A. daSilva gets GW Levels of all Injection Wells

ID	GW Level (Ft TOC)	ID	GW Level (Ft TOC)
IW-S-01	10.38	IW-S-13	9.99
02	10.5	14	10.43
03	10.51	15	10.55
04	9.45	16	10.32
05	10.23	IW-D-07	10.93
06	10.15	08	9.75
07	10.6	12	10.11
08	10.19	13	10.84
09	10.87	14	10.78
10	11.05	15	10.9
11	10.9	16	10.6
12		IW-S-17	10

- Drillers arrive on site
- Drillers install IW-D-18 AKA RIMW-19D
- Drillers Stanton IW-D-09 while IW-D-8 grout Sets.

0730 - A. daSilva opened SW Plywood window of NE Plywood window for ventilation of Pipe-Saw Cutter that Ran on gas Had them turn it off if Exceeded 32 ppm (Plumbers not Drilled)

- Background Prior to Drilling

Workzone	Doorway	CO: 0 ppm	LEL - 0
0.123 mg/m3	0.005 mg/m3	H2S - 0	O2 - 20.7
0 ppm	0 ppm		

0840 - A. daSilva Starts Purging IW-S-17. Purged Dry @ 9 gallons. Very Silty

- Dust Generated from Masons Cutting Steel w/ Electric Saw. Pictures Taken.

0855 - Workzone / Doorway / CO - 0 / H2S - 0

0.127 mg/m3	0.053 mg/m3	LEL - 0	O2 - 20.9%
0 ppm	0 ppm		

→ Caused Exceedance - 0.266 mg/m3 in workzone; Windows were open to increase ventilation. Dust also generated by moving Drums, But Drums Created dust for Isolated as opposed to continuous production from angle grinder. May be a combination. Dust is on everything & all over the floor from Masons / Frames / window installers.

0930 Workzone / Doorway / CO - 0

0.227 mg/m3	0.015 mg/m3	H2S - 0	O2 - 20.9
0 ppm	0 ppm	LEL - 0	

→ Wind Coming in through SW window is kicking up Dust. We Closed window to Just allow Vent Van to Push out Rig vapors, but wind is Still getting through. We had Windows open to Vent CO, No Saw cutting or Drilling or Drum Moving In Last Half Hour. Rain in the Rain

0935- Drillers Moved Rig to IW-D-09 Location.
Crew working on Removing a auger head from one auger & moving it from Iw-D-08.
945- Concrete Core Cutting Begins.
1000- Drillers are through Concrete and are getting ready to auger Soil.
1020- Augering on IW-D-09 Begins.
1[illegible]- [illegible]
1[illegible]- Plumbers used Gas Saw to Cut Pipe. CO levels exceeded 32 ppm. Had them shut off and made sure it did not spike again. Had All opened front Access door to Vent.
1040- Read Doorway PID From Cold.
Soil Characterization IW-D-09

Depth (Ft)	Time	Date	PID (ppm)	General Description
0-5	1040	2/25	0.1	Brown VF Silty SAND, moist, trace Sub-Angular TRAP Clay
5-10	1130	2/25	2.0	SHA fine lighter Brown
10-15	1238	2/25	6.6	" SHA
15-21	1310	2/25	7.5	SHA, soupy

1050 Hit Something hard @ 5ft BGS. This is most be Extend or Auger hole or nearby Encroachment.

Rite in the Rain

3/11/2020

0620 - A. daSilva Stops at Lowes for Goggles; tote/Bin; Bucket; tape.

0650 - A. daSilva Stops @ Walmart for White Vinegar & Hydrogen Peroxide for neutralizing agent.

0730 - A. daSilva & Drillers arrive on Site & set up for injections

0745 - injection on IW-S-13 Begins. Pops off. LLC Realizes They set up on IW-D-13 & pumped ~ 2-3 gals of 10% Solution Down it. They Reset up on IW-S-13 and Begin Pumping @ 0810.

0810 - LaBella Survey Arrives on Site. & Starts setting up

0820 - A. daSilva Helps Survey elevations.

0840 - Survey complete

0845 - Solution Starts Rapidly day breaking through Soil @ a previous Soil Boring & through the Terra cotta tile Surrounding IW-S-13. Roughly 8-10ft Diameter Spill of Solution escaped after LLC Shut Down pump & TRIED To Depressurize Tubing as Fast as possible. Fluid Kept Day breaking from Tile Seems & previous Soil Boring even after Pump was off. LLC & A. daSilva Cleaned up as much chemical w/ Absorbent Provided & Hydrogen Peroxide / Vinegar mix to Neutralize it. A. daSilva Ranout to walmart 2 times to Purchase more Supplies. Mike Polychasty Was Called to discuss proper decon & neutralization of Chemical. An order was placed for additional Neutralizing agents →

→ LLC Containerized Neutralized fluid for Later testing with PH paper. Floors were cleaned off and Everything that got touched by the Chemical in the spill Radius got neutralized thoroughly (Sides, Bottoms; tops). Mainly The Drums Surrounding IW-S-13 got touched by fluid as well as some scrap wood. All A/d Everything Appeared to be neutralized & Clean of fluid.

Pictures were taken of daylighting.

No injections will occur tommorow due to waiting on more neutralizing agent. Instead the LLC will try to Shop vac old borings & grout them in place as deep as the clear them to ensure no future daylighting. Additionally any previous Boring will be Vacced and grouted if it has not been already. Any Area that may be Prone to daylightning will be inspected to ensure it won't & Sealed w/ grout.

* NOTE: It was asumed all Borings were closed w/ grout and all Flooring was Sealed

1400 - LLC Leaves

1430 - A. daSilva Leaves Site.

1433 - Spoke w/ Mike Polychasty who Said to Continue with injections tommorow after holes are patched.

~~1500 - A. daSilva leaves Site~~ A/d

Rite in the Rain.

3/12/2020 38°F cloudy A. daSilva

0700 - A. daSilva on Site to mark out Any potential Day lighting spots to grout. Checked Basement for any Potential Leaks in wall.

0730 - Drillers (LaBella LLC) on site. They Prep to Pump/inject IW-S-08 with 145 gallons of 10% permanganate Solution.
Pumping begins @ 0750. Pumping at slower Rate To Reduce chance of Rapid Day lighting if it were to occur.
- A daSilva works with LLC to clear old Core locations of Sand & gravel with Shop vac and fill in with grout.

0900 - A. daSilva spoke with Dan (Noll) about Furnace Reacting with material (Permanganate). Should Be fine as long as flame was far enough from Chemical ~20 ft. Spoke about gravity feeding 10% Permanganate Soln. into IW-S-13 to determine duration Etc.

0930 - A. daSilva Spoke with Mike Polychaty giving update on Injection & Gravity Feeding IW-S-13. Will gravity Feed IW-S-13 Starting tommorow once LLC Gets Proper fittings from well to funnel.
* Note: a Poly tent surrounds injection Point in Case of sprays if The Pump were to Slip off of well.

1130 - Pump slowed down possibly due to Back Pressure. A. daSilva Had LLC Close the lines & Pause Pumping for ~40 min. to See if the pressure in the lines will equalibrate →

→ before applying more pressure to Reduce chance of pressure popping the pump off the well.

1210 - Daylighting of Chemical occurred in crack adjacent to IW-S-08. It did not Break through Bentonite seal, just the Crack ~40mL. Soln. was Neutralized. A. daSilva informed Mike Polychaty. We could not pump slower.* took 100 gallons @ 3.5 hrs. We are moving on to IW-S-14

1515 - able to pump 100 gal into IW-S-14. From ~~att~~ detaching Hose, ~0.5 gal came out from Back Pressure. All Surfaces were Neutralized & Cleaned using Hydrogen peroxide + Vinegar mix.

1600 - A. daSilva + LLC Left Site.

Rite in the Rain.

3/13/2020 40°F Rain. A. da Silva

0645 - A. da Silva picks up more Hydrogen Peroxide & White Vinegar.

0715 - A. da Silva on Site. & Starts Setting up

0730 - LLC on Site & Sets up Pump.

0745 - Pumping on IW-S-14 Continues. ~45 gal Pumped in w/ minor drips ~~from~~ daylighting from cracks ~1ft from well. & nd Pump @ 0840

0845 - Pumping Continues on ~~IW~~-S-08. The full 145gal injected @ 0930. Minor daylight from Crack ~0.5ft From well.

1000 - Pumping starts on IW-S-15 w/ 10% Permanganate Soln.

1145 - full 145 gals in IW-S-15.

1 - LLC Takes Lunch

1200 - Wait 15 min for Electrician to move Cords out of Hazard Zone

1215 - LLC Preped for IW-S-17 injection. Starts @ 1220

~~1435 - IW-S- Nd~~

1230 - Product comes up Core Hole after 25 gals pumped in ⇒ Switched to IW-S-16.

1240 - Start pumping IW-S-16. End @ 1440 full 145gal

1500 - A. da Silva Checked Basement one last time to Verify No Chemical leaking in. There was Chemical Leaking in. A. da Silva Called M. Polychuky; Dan Noll; Dave Engert to discuss How to Clean & Prevent. LLC & A. da Silva

1715

moved all organics to opposite side. Hydraulic Concrete was purchased to Seal cracks. Permanganate was neutralized & Cleaned. Granular Neutralizer was sprinkled along wall to Prevent further Spills from Leaks. LaBella Stayed on Site until Leaking was brought to a Standstill and all possible Combustables Set far away from Possible leak Route.

1715 - A. da Silva & LLC Locked up and Left Site. Josh from Hamilton Stern was made aware of the Situation and was told to not allow workers in Basement until Cleared by A. da Silva (LaBella).

Rite in the Rain

3/16/2020 38°F A. deSilva

0615 - A. deSilva stopped at office for Expense Reports and ; timesheets ; Paperwork.

0715 - A. deSilva on Site. Checks Basement for Leaks. Minor Chemical mixed with Cement Hydrovit Patches But No Leaks. A. deSilva notified M. Pekchaty. LLC May be Running Late due to Shop update/ Breifing. They Called and let me know @ 0720. We will inject in wells ~20ft away from basement wall.

730 - LLC on site with Sodium Thiosulfate Neutralizer. Start injection on IW-S-03. Full 145gal of 10% Permanganate injected @ 1130.

1130 - Injection Begins on IW-S-02. ~15gals in Before Daylight through Auger Hole. Waited 15min for Bentonite to absorbe moisture & seal. → Tried injection again, still daylighted. Neutralized & Cleaned up Permanganate.

1230 - Injection on IW-S-04 Begins. 100gal injected @ 1440. Evel day.

1440 - LLC Cleans up & locks up.

1520 - LLC Leaves Site while A. deSilva inspects work area for any daylighting. No Leaking in Basement or work area. A. deSilva Packs up Closes windas & Leaves @ 1530

3/17/2020 40°F Cloudy/Rain A. deSilva

0700 - A. deSilva on Site. Checked All cracks Surrounding injection wells for daylighting = NO Daylight.
- Opened windows (Plywood) for ventilation.
- Set up as much as he could before LLC Arrives.

0740 → Appears to be slightly Late. Possible change in Personal or vehicles.

0755 - LLC on Site Start injection IW-S-04

0820 - Frames are putting Frames around IW-S-02 & IW-S-01. A. deSilva spoke w/ Josh (Hamilton) about waiting until wells are fully injected as to not get Chemical that may daylight on them. A. deSilva spoke to workers near by letting them know if they see purple coming from ground to stay away as it is hazardous to them & to Let us know.

0850 - IW-S-04 full 145 gal injected.
Need - Check Bedrock
- Netralize
Gravity feed Basement walls

0900 - IW-S-01 injection Start → only 75gals and Day lighted through Auger Hole Crack @ 1000

1000 - moved To IW-S-07 to Start injection.
- Injection of full 145gal complete @ 1300 - LLC went to Shop for gravity feed tank.

1350 - start Gravity feed 20% Soln into IW-S-02 ~20gal

1545 - A. deSilva Left Site.

Rite in the Rain

3/18/2020 42°F Clear A. daSilva

0700 - A. daSilva on Site. Sets up Notes. Preps Site for injections. Checks for daylighting.

0730 - LLC on Site.

0735 - IW-S-02 injection w/ 20% Soln Continues

1055 - Fill 58 gal of 20% Solution in IW-S-02 via Gravity Feed with Drum & Spout on Bottom.

1040 - Start Gravity feed 20% Soln in to IW-S-01 ~ ~ 28 gal of 20% mixed Soln.

1430 - 75 gal of (Pump) 10% & 28 gal of (Gravity) 20% injected into IW-S-01.

1000 - A. daSilva Sealed additional cracks on Pad cement near IW-S-05 & IW-S-06 in prep. for Tomorrow w/ Hydraulic Cement.

1400 - A. daSilva measured out wells from Columns in Building

1430 - LLC Cleans up & Neutralizes used Equipment + A. daSilva Cleans up.

1515 - A. daSilva Leaves site after inspecting well & Rearranging Caution tape.

NOTE - IW-S-02 Daylight through Auger Hole during Gravity Feed. Mpelychaty was made aware. Also Every Nested / Bedrock well had permanganate in it except IW-D-03.

* All with ~10% permanganate Soln.

1100 - A.daSilva Starts Sampling Process

1200 1230 - LLC Takes 20 min Lunch Break while A.daSilva Keeps Sampling to Stay on track w/ Alpha Pickup.

1200 - LLC Finished Removing all concrete from Trench area.

~~1250~~ 1250 - x LLC Hand Digs around all known Pipes & By Walls ~~with~~ Where Holes will be Drilled for both injection Pipes & Sump slab.

1400 LLC Lays down Poly & Starts Digging trenches x 2 LLC go to Shop & grab Scaffold.

1600 Scaffold is set up in Basement & holes are Starting to Be cored through for Gravity Feed Pipes. x 2 LLC working on trenches hand diggs to Depth around wells.

16 18 - Alpha Comes for Sample Pick up.
- LLC Secures North Enterance & Windows w/ Plywood.

1500 - A.daSilva got Calls from Jen Gotten; Mike Pelychaty; Dave Engert about Progress @ Site. LLC Spoke w/ Dave Engert.

1730 - off site

11 hr

4/4/2020 45°F Rain/Mist A.daSilva

0645 - A.daSilva on Site. & Sets up CAMPS. Gets GW Levels After.

Wells to be checked:

Rain in the Rain

930 - Mike P. on Site. Tallies with Josh & helps dictate Strategy
- Sand is Spiked

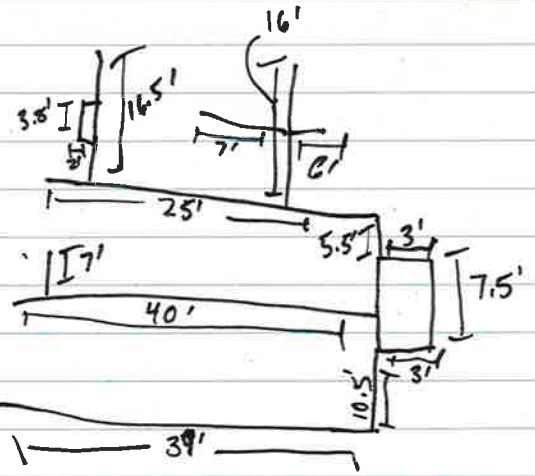
AJdS

11-1130 - Possible High workzone PID Readings of ~ 5-7 ppm from Plumbers glue.

1200 - Trenched Center with Batteries on Mini dried
- Hand dug near Stair case wall for sub-slab install

1415 - Cored full Length of Core bit into footer, no exit on other side.

1430 - Left Site



* NOTE: Pipe Glue throughout day attributed to workzone PID Spikes. Soil Screened Did not Exceed .5 ppm.

4/6/2020 Monday

0700 - A. deSilva on site

0715 - Set up CAMPS for background.

N

1.60 - 1.8' widths

2 ~ ~~349.6~~ 201.1 Linear Feet = Rough calculation for Dave Engert (LLC)

0730 - LLC (Armon + ICT) on Site

0740 - Rob Yarger on Site.
↳ ICT + Armon Start Hammering out Trench footers to allow Pipe to Run through.

0745 - A. deSilva Spoke with Mike Spratling & Andy B. (LLC). They were getting a trailer ready to grab the 1" Pipe from drop off location.
- Rob Yarger Starting to Set up (Level, depth Etc.) for Pipe install

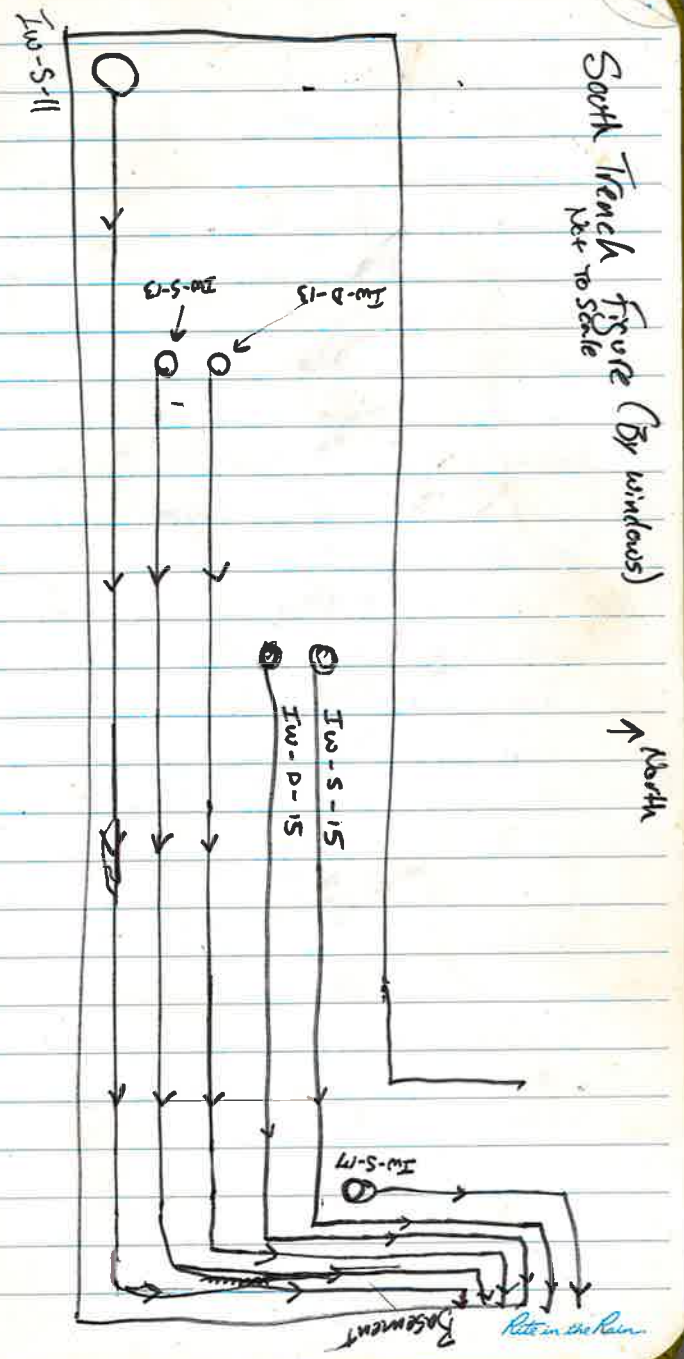
Rite in the Rain

0835- Dust Levels inside were starting to elevate. A. da Silva opened 2 windows on South Side & main door on Site to Vent Dust. Armon Watered down Concrete that was being hammered to Reduce dust.

0920- Pipe on Site

0935- Armon is Coring deeper in Stairwell Concrete Slab to try & get through

0940- Note There are Peaks on Work Zone PID From this time through Rest of day due to Spray Paint & Pipe Glue. @ 1045 No new Soil Excavated



* NOTE: Pipe Glue through out day appeared to Set off Work Zone PID. Soil Screened did not Spike PID over 5ppm.

AJd

1545- Leaves Site

8.75hr

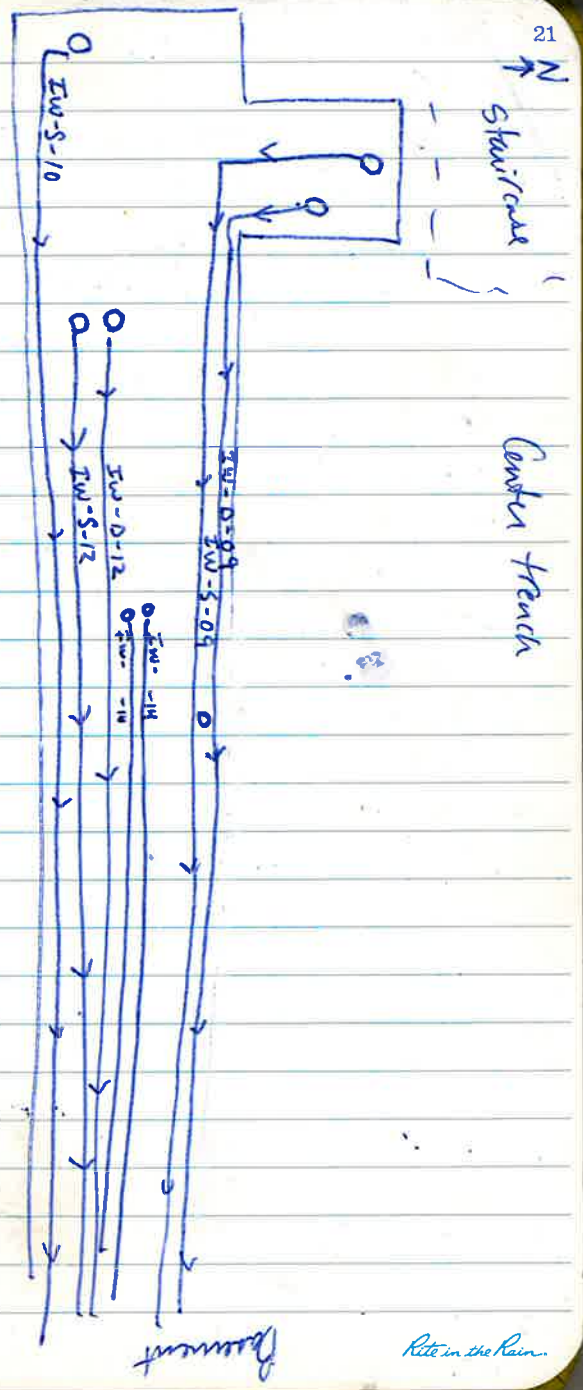
South Trench Figure (By windows)
Not to Scale

4/7/2020 Sunny 50°F A. daSilva

0700 - A. daSilva arrives on site.
- Calls Mr. Polychaty to figure out Soil.

730 - LLC on site.

0800 - Note: Many times throughout the day the Plumbers & Isabella LLC will be using PVC Pipe Glue which when opened or applied gives off strong odors. This may cause spike in PID. Additionally Soil was screened that got removed from trench.



1500 - Soil that was screen throughout day did not exceed 5ppm via Work Zone PID. All Exceedence of PID came from PVC Glue. All accessible windows & Doors were opened to help vent PVC glue odors.

1510 - LLC Cleaned up & left site

1530 - A. daSilva Leaves site

↳ Note: Concrete dumpster switched/removed & Soil dumpster on site.

(+) Pipe Glue throughout day set off work zone PID. Soil screened did not produce high (8.5hr) PID Readings.

Rite in the Rain.

1240	~50		14.3	0.88	1.617	7.26	-57.8	4451.9	NA*		-pumping as slow as possible
1245	Pump off		14.7	1.36	1.607	7.07	-48.9	4347.8	NA*		-well going dry
1300	sampling										-pump on for sample collection

Total 0.4 Gallons Purged

Purge Time Start: 1215 Purge Time End: 1245 Final Static Water Level: dry

OBSERVATIONS

Sample @ 1300 after letting well recharge. Well would go dry when pumping at slowest speed.

*Unable to fit tubing and waterlevel down 1-inch well at the same time; however well was ultimately going dry so end of purging no measurable water level.

APPENDIX G

Photo Log

1/20/2020 - Nothnagle utilized a Genie and a crusher run ramp located in the north eastern corner of the room to deploy the rig.

1/20/2020 – Drilling began on IW-S-01.

1/21/2020 – Northern portion of room with two (2) CAMPs set up. Near the end of February, the doorway CAMP was placed outside the building next to the doorway to identify any dust emerging from building. Most, if not all the dust was caused by the masons and framers working alongside the rig. (Refer to field notes for details).

1/22/2020 – Decontamination pad and injection well supplies storage area.

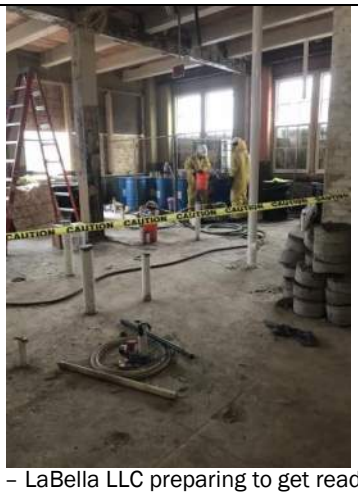
1/22/2020 – Decontamination pad. A sump pump was used to pump the water from the pad into drums. A LaBella representative checked for holes in the double poly pad routinely.

1/23/2020 – Typical appearance of overburden injection well after installation. Notice how information of the well was printed on the side of the stick up to ensure that every well had the correct identification.

2/3/2020 – The bed rock typically had 4 to 12 inches of dolomite at the top with 3 to 12 inches of a dense till filled void followed by more dolomite. The dolomite did not show signs of many natural fractures, however there were several mechanical fractures due to the drilling process.

2/5/2020 – Soil transport to poly coated roll off dumpster.

2/11/2020 – Installation of IW-S-13/IW-D-13. Notice how tiles were removed prior to drilling to ensure that tile dust did not become airborne due to naturally occurring radioactivity in the tile.



2/17/2020 – Shown is the process of keeping the rock core bit watered during rock coring and installation of bedrock injection wells.

2/18/2020 – Typical nested injection well. Red tapped wells were bedrock wells and black tapped wells were overburden wells.

3/6/2020 – Last day drill was on site. The rig got taken out using the gravel ramp in the north west corner of the building.

3/10/2020 – LaBella LLC preparing to get ready a batch of permanganate solution to inject into the ground. Caution tape surrounded the work zone at all times and the drums of chemical were stored on secondary containment that was gated and locked every night after work.

3/12/2020 – Typical injection setup where the joint connecting the pump hose to the PVC injection well was surrounded by poly using a tripod to ensure minimal chemical splatter if the seal was compromised.

3/12/2020 – Daylighting of the permanganate solution was seen coming through cracks in the concrete or seams in tiles at various injection well locations. All daylighting spills were neutralized and cleaned. Refer to injection well table for additional details.

3/31/2020 – Ventilation used for concrete cutting.

4/3/2020 – Soil removed from trenching was screened and placed on poly. The soil pile got covered with poly at the end of each day.

4/6/2020 – PVC pipping running from the basement to the injection wells.

4/6/2020 – PVC piping running into the injection wells.

AMS Radiological Remediation Project Report

Austin Master Services
801 N 1st St
Martins Ferry, OH
740-609-3806 Main Number

1/28/2020

Ms. Carolyn Vitale
Jeffeson Wollensack LLC
312 State Street
Rochester, NY 14614

Re: Former Wollensack Suite Optical January 2020 Radiological Remediation Project

Dear Ms. Vitale

Austin Master Services, LLC (AMS) was contracted to remediate two radiologically contaminated areas at the former Wollensack Optical facility located at 872-886 Hudson Avenue in Rochester New York. The Site is in the New York State Department of Environmental Conservation's (NYSDEC's) Brownfield Cleanup Program as facility #C828209. The radiologically contaminated areas were 1) a small (3' x3") contaminated area of floorboards on the third floor of the building and the sump located on the first floor of the building. The July 2019 report from AMS to your office provides the survey details for both those areas. The following summarizes the results of the remediation activities and AMS recommendations for future actions:

- The 3rd floor area has been successfully removed and no residual contamination remains in the area.
- The interior of sump, after several pressure washings exhibits surface count rates greater than background for the building but do not contribute or increase the building background dose rates above the sump.
- AMS believes those elevated count rates are due to naturally occurring radioactive material contained within the glazed tera cotta material of which the sump is comprised.
- Because 1) the dose rates in the occupied area above the sump are at background levels for the building, 2) the elevated count rates are primarily from the terra cotta material, and 3) the plan is to fill the sump with concrete and install a 30" raised floor above the sump, the radiological risk to any future occupant is zero; consequently AMS recommends no further effort be made to either clean or remove the sump.

The remediation approach, as described in the Radiation Protection Plan (RPP) consisted of the following steps.

1. Cut through the "non-contaminated area surrounding the contaminated 3'x3' section of the floor and remove the 3' x 3' section plus a small uncontaminated border section.
2. Place the removed section into a waste container for disposal out-of state at a suitably permitted facility.
3. Upon completion of the 3rd floor section removal, perform a post remediation/removal survey that includes a wipe and direct measurement of the surfaces adjacent to the removed area.
4. In addition, survey the area, with wipes and direct measurements in the area on the second floor directly below the removed section. This second survey was performed to ensure no loose contaminants fell to the floor below.
5. For the sump, remove the materials in the sump and place in a waste container for disposal out-of state at a suitably permitted facility.
6. After removal of the sump debris, use a pressure washer to clean the interior. Decontamination debris and water were removed and placed in suitable containers for disposal at a suitably permitted out of state facility.
7. After each pressure washing survey the interior of the sump and compare contamination levels to the release criteria recommended by NYSDEC.

8. Note that the release criteria denoting no contamination present was established at the 95% confidence level for the average of the background counts for removable and total surface alpha and beta emissions.

Table 1 below lists the post remediation survey results for the third and second floor areas. The survey detail sheets are contained in Attachment 2 to this letter report. The average post remediation survey count rates were then compared with the background 95% confidence levels for the wood floor in the building; see Attachment 1 for background survey measurements. Post remediation surveys showed the removable contamination and total surface contamination were all less than the 95% CL action level.

Table 1 - 3rd & 2nd Floor Post Remediation Survey Data and Comparison to 95% CL Action Limits

	3rd Floor				2nd Floor (beneath 3rd floor removal area)			
	Wipes		Direct		Wipes		Direct	
	Counts				Counts			
	alpha	Beta	alpha	Beta	alpha	Beta	alpha	Beta
	1	72	7	214	0	50	3	225
	0	70	5	201	0	53	4	214
	0	77	6	199	1	50	7	228
	0	68	3	227	1	56	4	206
	0	83	4	236	0	48	2	223
	0	60	4	219	0	47	1	202
	1	55	5	210	Not Sampled			
	0	53	4	239				
	0	58	6	236				
	0	49	4	201				
	2	52	4	213				
	1	44	5	228				
Mean	0.2	71.7	4.8	216.0	0.3	50.7	3.5	216.3
95% CL (for wood surface)	3.5	85.3	7.8	239.0	3.5	85.3	7.8	239.0

As shown in Table 2, the post remediation direct surface counts for the sump did not meet the RPP 95% confidence levels being used for the release criteria. This was likely a result of the composition of the sump and not the contamination from former facility operations. Survey data sheets are contained in Attachment 3 to this letter report.

The sump is made from a terra cotta material with glazing similar to that found in floor tile on the first floor during the July 2019 scoping survey. It is suspected that the glazing contains some elevated concentrations (i.e. above normal background for the Rochester area) of naturally occurring radionuclides, which is resulting in the alpha and beta surface emissions above the 95% CL. Because this building material itself is naturally slightly radioactive, further surface decontamination will be ineffective in reducing levels below the 95% CL. See Table 2 below for a results summary.

Table 2- Sump Post Remediation Survey Data and Comparison to 95% CL Action Limits

	Wipes (counts)		Direct (counts)	
	α	β	α	β
	1	43	95	874
	9	62	93	1032
	1	52	34	673
	8	76	98	1470
	5	39	52	850
	2	60	28	859
	3	68	16	631
	4	57	91	1064
	2	45	22	663
Mean	3.9	55.8	58.8	901.8
95% CL Bkgd	3.5	85.3	10.1	366.9

Dose rate measurements were made one foot above the sump and then throughout the first floor. The values were 8 urem/h and were consistent with background levels found throughout the building. Given that the dose rate is indistinguishable from background and the building renovation plan is to fill in the sump and then raise the existing first floor elevation over the sump area by approximately 30 inches, there will be no radiological risk to future occupants. Consequently, AMS recommends no further remediation effort be applied to this area.

Finally, approximately 50 ft^3 of contaminated debris and water has been collected to date; there will be additional waste generated from tear down of the sump containment. Drums are currently located in a posted radioactive materials storage area awaiting disposal by AMS. The contaminated debris removal will take place within the next 30 days.

Feel free to call (518-859-1944) or email (pcollopy@austinmasterservices.com) with any questions or comments.

Respectfully,

Peter Collopy

NOTES

1. "Probe Area (cm²)/100 cm²" not used in MDA equation for Scalers.
2. A map is not required if sufficient detail can be included on this page.
3. Activity for direct (D) measurements corrected for probe area to 100 cm².
4. Swipes obtained over 100 cm² when the accessible surface area item exceeds 100cm².
5. **Notify RSO/SRSO when contamination levels exceed Unrestricted Release Criteria Noted Above**.

RE: Project: Woolensack Optical
Pace Project No.: 30298432

Dear Pete Collopy:
Enclosed are the analytical results for sample(s) received by the laboratory on June 07, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jacquelyn Collins

QUALIFIERS

Project: Woolensack Optical
Pace Project No.: 30298432

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: For Safe Drinking Water Act (SDWA) analyses, the reported Unc. Is the calculated Count Uncertainty (95% confidence interval) using a coverage factor of 1.96. For all other matrices (non-SDWA), the reported Unc. is the calculated Expanded Uncertainty (aka Combined Standard Uncertainty, CSU), reported at the 95% confidence interval using a coverage factor of 1.96.

Gamma Spec: The Unc. reported for all gamma-spectroscopy analyses (EPA 901.1), is the calculated Expanded Uncertainty (CSU) at the 95.4% confidence interval, using a coverage factor of 2.0.

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

RA	The reported Ra-226 results were determined using a direct gamma emission (186 keV) shared by both Ra-226 and naturally-occurring U-235. The reported Ra-226 results were determined assuming the shared energy peak is attributable exclusively to Ra-226. Reported results for Ra-226 may be biased high if U-235 is present in the sample.

Subject: C828209 - Wollensack Optical - Radiation Survey Report

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Hello All,

Please find attached the final version of the Wollensack Optical Radiological Survey completed by Austin Master Services (AMS). This version has been revised from the one previously circulated to provide clarifications regarding background readings, etc.

Based on the results of the survey, there are two (2) apparent areas of elevated radiological readings which appear to be associated with prior operations at the Site (i.e., use of thoriated sand) and two (2) areas of apparent naturally occurring radioactive materials (NORM). These areas are identified below and are described in greater detail in the AMS report.

Areas of Elevated Radiological Readings from Apparent Historical Operations:

a. A 1-meter by 1-meter area of the wooden floor surface on the 3rd floor of the building. Some debris/sandy material was removed from this area already and placed in a 55-gallon drum which was properly labeled, secured and placed behind demarcation lines. Removal of this debris decreased the radiological readings on the floor surface but there are still elevated readings in the wooden floor boards themselves in this small area.

While any remaining floor surfaces would normally have to meet regulatory limits for surficial contamination, should these materials (ever) be removed for disposal, this may be an issue. If any are to remain in place, I would suggest that to avoid future issues, any surfaces above background be decontaminated to avoid this possibility.

In the past, in such scenarios, we have recommended that surfaces not exceed background plus two standard deviations compared to similar, non-impacted surfaces.

Should all boards be removed this comment can be ignored as long as there is no residual contamination beneath them. Materials beneath these boards should be surveyed to ensure there is no remaining contamination.

b. The bottom of the concrete sump on the first floor of the building. This sump is currently partially filled with debris including pieces of wood and fiberglass insulation.

I would recommend a similar approach for this location so that in the future, the sump is removed, it can be disposed of without radiological concern.

Areas of Apparent NORM:

a. An area of ceramic floor tile on the first floor of the building.
b. Fire bricks lining the basin below an old boiler in the basement of the building.

Should these materials remain, there are no concerns since they contain NORM. Should they be removed, they are exempt [NYCRR Part 363-7.1(o)(8)]

Based on these results, we wanted to continue the conversation with the Department about how to address these materials. We imagine submission of a detailed work plan to the Department would be required prior to implementation of any remedial actions, but generally we propose these materials would be addressed in the following ways:

3rd Floor: Remove remaining floor boards in 1-meter by 1-meter area on the third floor and place in properly labeled 55-gallon drums. These drums would be properly disposed of off-site in addition to the drum of debris that was already generated from this area.
Sump: Remove debris from the sump, clean the sump and pending results of subsequent screening, grout in place. A risk analysis could also be completed. *As with the floor boards and sump on the first floor, I would recommend a similar approach for this location.*

Two areas of NORM: Remove tiles and fire brick and dispose of properly. *See above.*

Thanks in advance for your input,
Jen

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER WOLLENSACK OPTICAL	**Lab Number:**	L1934138
Project Number:	2182207	**Report Date:**	08/12/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

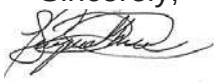
Re: "Contained-In" Determination Request
Former Wollensack Optical
872 Hudson Ave, Rochester, NY
NYSDEC Site No. C828209

Dear Ms. Gillen:



The New York State Department of Environmental Conservation (NYSDEC or the Department) have completed our review of the soil sampling data (Lab Sample ID: L2012797-01) collected during the installation of injection wells within the soil and groundwater treatment area submitted on March 26, 2020, via e-mail request for a "contained-in" determination for the referenced project.

Concentrations detected for individual volatile organic compounds (VOCs) were all less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations (Lab Sample ID: L2012797-01) for tetrachloroethene, trichloroethene and cis-1,2-dichloroethene were below the soil "contained-in" action level and the Land Disposal Restriction concentration. Therefore, approximate 15 cubic yards of soil that was generated from the site during the installation of injection wells within the soil and groundwater treatment area at the subject property, do not have to be managed as a hazardous waste and can be transported off-site to either Waste Management's High Acres landfill in Fairport, NY or Waste Management's Mill Seat landfill in Riga, NY or another permitted 360 solid waste facility able to accept this material, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer
RCRA Permitting Section

Good Morning all,

Attached is the "Contained-in" Determination approval letter.

This email copies you on correspondence from the New York State Department of Environmental Conservation. Electronic attachments may be attached. This document has also been entered into the DECDOC system. A hard copy version will not follow in the mail.

If you have any additional questions, please feel free to contact me.

Henry Wilkie

Subject: C828209 - Former Jefferson Wollensack Contained-In Sample Results for Injection Well Installation

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Henry,

Attached is the lab data results (Lab Report L2012797) reported for waste characterization from an approximate 15 cubic yards of soil that was generated from the site during the installation of injection wells within the soil and

groundwater treatment area. One (1) composite soil sample (from 3-5 discrete locations at the stockpile) was collected and submitted for the following analyses:

- Total VOCs (TCL list)
- TCLP VOCs
- TCLP metals
- TCLP SVOCs
- Reactive cyanide and sulfide
- pH
- flashpoint

Below is a summary of the detected sample results that included in the attached excel table.

ANALYTE	CAS	(ug/kg)	Conc	Q	RL	MDL
VOLATILE ORGANICS BY EPA 5035						
Chloroform	67-66-3		12	J	74	6.9
Tetrachloroethene	127-18-4		280		25	9.7
Trichloroethene	79-01-6		2000		25	6.8
Methyl Acetate	79-20-9		61	J	200	47
Total VOCs			2353	-	-	-
VOLATILE ORGANICS BY EPA 5035-TIC						
Unknown			154	J	0	0
Unknown			119	J	0	0
Cyclotrisiloxane, Hexamethyl-	000541-05-9		182	NJ	0	0
Total TIC Compounds			455	J	0	0
GENERAL CHEMISTRY						
Solids, Total	NONE		87.6		0.1	NA
pH (H)	12408-02-5		9.2		0	NA
Flash Point	NONE		>150		70	NA

ANALYTE	CAS	(mg/l)	Conc	Q	RL	MDL
TCLP VOLATILES BY EPA 1311						
Trichloroethene	79-01-6		0.0096		0.005	0.0018
SUM			0.0096	-	-	-
TCLP SEMIVOLATILES BY EPA 1311						
TCLP METALS BY EPA 1311						
Arsenic, TCLP	7440-38-2		0.036	J	1	0.019
Barium, TCLP	7440-39-3		0.646		0.5	0.021

Based on this data, a contained-in determination is requested for soil to be disposed of as non-hazardous at a Part 360 landfill that would be either Mill Seat Landfill in Riga, NY or High Acres Landfill in Fairport, NY. Please contact me with any questions.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2012797-01: The sample was received in an inappropriate container for the TCLP Volatiles analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER JEFFERSON WOLLENSACK	**Lab Number:**	L2012797
Project Number:	2182207.13	**Report Date:**	03/25/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Project Name:	FORMER JEFFERSON WOLLENSACK	**Lab Number:**	L2012797
Project Number:	2182207.13	**Report Date:**	03/25/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
EPA TO-12 Non-methane organics
EPA 3C Fixed gases
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Re: "Contained-In" Determination Request
Former Wollensack Optical
872 Hudson Ave, Rochester, NY
NYSDEC Site No. C828209

Dear Ms. Gillen:

The New York State Department of Environmental Conservation (NYSDEC or the Department) have completed our review of the soil sampling data (Lab Report ID: L2014553 and 201494) collected during the installation of piping trenches within the soil and groundwater treatment area submitted on April 10, 2020, via e-mail request for a "contained-in" determination for the referenced project.

Concentrations detected for individual volatile organic compounds (VOCs) were all less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations (Lab Sample ID: L2014553-04, L2014553-05 and L2014553-06) for tetrachloroethene, trichloroethene and cis-1,2-dichloroethene were below the soil "contained-in" action level and the Land Disposal Restriction concentration. Therefore, approximate 20 cubic yards of soil that was generated from the site during the installation of piping trenches within the soil and groundwater treatment area at the subject property, do not have to be managed as a hazardous waste and can be transported off-site to either Waste Management's High Acres landfill in Fairport, NY or Waste Management's Mill Seat landfill in Riga, NY or another permitted 360 solid waste facility able to accept this material, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

Good Afternoon All,

Attached is the "Contained-in" Determination approval letter.

This email copies you on correspondence from the New York State Department of Environmental Conservation. Electronic attachments may be attached. This document has also been entered into the DECDOC system. A hard copy version will not follow in the mail.

If you have any additional questions, please feel free to contact me.

Henry Wilkie

Subject: C828209 - Former Jefferson Wollensack Contained-In Sample Results/Request for Injection Trenches

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Henry,

Attached are the lab data results (Lab Reports L2014553 (VOCs only) and 201494) reported for waste characterization from an approximate 20 cubic yards of soil that was generated from the site during the installation of piping trenches within the soil and groundwater treatment area. The two (2) grab samples for VOCs were collected from the in-place soil for that was originally intended for reuse. Based on the concentrations of VOCs (see

attached table), the NYSDEC Project Manager did not allow the material to be reused at the site. The two grab samples are representative of the highest PID reading (i.e. 2.5 ppm and 1.3 ppm) from a total of 8 locations evenly spaced across trench/excavation area. One (1) composite soil sample (from 5 discrete locations at the stockpile) was collected and submitted for the remaining analyses listed below:

- Total VOCs (TCL list) – Lab Report
- TCLP VOCs
- TCLP metals
- TCLP SVOCs
- Reactive cyanide and sulfide
- pH
- flashpoint

As mentioned to you in my email earlier this week, if you could please issue a Contained In Demonstration approval (assuming it meets the guidelines) ASAP, it would be greatly appreciated as the site is under a tight construction schedule. Feel free to call me at 585-507-7198 with any questions.

Regards,

Mike Pelychaty

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2014553-06: The sample was analyzed as a High Level Methanol in order to quantitate results within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analysis. The results of both analyses are reported.

Total Metals

L2014553-01, -02 and -03: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1358126-3/-4 MS/MSD recoveries for aluminum (583%/1030%), calcium (610%/0%), iron (0%/1220%), magnesium (196%/0%) and manganese (0%/0%), performed on L2014553-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1358126-3/-4 MS/MSD recoveries, performed on L2014553-01, are outside the acceptance criteria for cadmium (71%/69%). A post digestion spike was performed and yielded unacceptable recoveries for cadmium (71%). The serial dilution recovery was not applicable; therefore, this element fails the matrix test and the result reported in the native sample should be considered estimated.

The WG1358126-3/-4 MS/MSD recoveries, performed on L2014553-01, are outside the acceptance criteria for lead (MSD 72%), selenium (MSD 72%), sodium (62%/17%) and thallium (64%/45%). A post digestion spike was performed and was within acceptance criteria.

The WG1358126-3/-4 MS/MSD RPDs for calcium (89%), magnesium (43%), manganese (110%) and sodium (26%), performed on L2014553-01, are above the acceptance criteria.

The WG1358127-3/-4 MS/MSD recoveries, performed on L2014553-01, are outside the acceptance criteria for mercury (150%/152%). A post digestion spike was performed and was within acceptance criteria.

Case Narrative (continued)

Cyanide, Total

The WG1358380-2 LCS recovery for cyanide, total (74%), associated with L2014553-01, -02 and -03, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
EPA TO-12 Non-methane organics
EPA 3C Fixed gases
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.
Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.
LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.
All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.
Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.
Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.
Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.
LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2013565-02: The sample was received above the appropriate pH for the Total Metals analysis. The laboratory added additional HNO3; however, the pH would not adjust into the proper range.

Volatile Organics by Method 624

L2013565-01 and -02: Due to the matrix of the sample (foam generation during purging/analysis), the laboratory used Anti-Foam solution in the sample and associated QC.

Semivolatile Organics by Method 625

L2013565-01 and -02: The sample has elevated detection limits due to limited sample volume available for analysis.

The WG1356253-3 LCS recovery, associated with L2013565-01 and -02, is above the acceptance criteria for di-n-octylphthalate (137%); however, the associated samples are non-detect to the RL for this target analyte. The results of the original analysis are reported.

PCBs

L2013565-01 and -02: The sample has elevated detection limits due to limited sample volume available for analysis.

L2013565-01: The surrogate recoveries were outside the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (35%) and decachlorobiphenyl (4%,4%); however, re-extraction achieved similar results: decachlorobiphenyl (19%,19%). The results of both extractions are reported.

Total Metals

Project Name:	WOLLENSACK OPTICAL	**Lab Number:**	L2013565
Project Number:	2182207.13	**Report Date:**	04/02/20

Case Narrative (continued)

L2013565-02: The sample has elevated detection limits for all elements, with the exception of mercury, due to the prep dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
