SDG NARRATIVE

Job#: A08-B653,A08-B727,A08-B794

Project#: NY3A9052
SDG#: B653
Site Name: Rochester Gas & Electric

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A08-B653
Sample Cooler(s) were received at the following temperature(s); 3.6 °C
All samples were received in good condition.
A08-B727
Sample Cooler(s) were received at the following temperature(s); 4.8 °C
All samples were received in good condition.
A08-B794
Sample Cooler(s) were received at the following temperature(s); 2 @ 2.0 °C
ME: Lab to filter and preserve Dissolved Metals volume.

GC/MS Volatile Data

For method 8260, the recoveries of Trichloroethene in sample MW-2 Matrix Spike and Matrix Spike Duplicate exceeded quality control limits. The Matrix Spike Blank recoveries are compliant.

Linear regression was used to calibrate analytes that were greater than 15% RSD in the initial calibrations A8I0000745-1, A8I0000734-1, A8I0000718-1 and A8I0000712-1.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

For method 8260, all samples were preserved to a pH less than 2 except for sample MW-9 which had a pH>2.

For method 8260, sample MW-9 exhibited a pH>2 at the time of analysis. The analysis was performed after the recommended 7 days for un-preserved samples, therefore all detected concentrations should be considered minimum values and the results estimated.

The analyte Methyl tert-butyl ether was detected in sample MW-9 at a concentration above the linear range of the initial calibration standard curve, requiring a dilution. Due to the high dilution dictated by the concentrations of Benzene and total Xylenes, Methyl tert-butyl ether was diluted out in sample MW-9.

GC/MS Semivolatile Data

The Matrix Spike Blank A8B2292801 exceeded quality control limits for analyte 4-Chloro-3-methylphenol. Since the samples were non-detect for these anlytes and all other recoveries are compliant there is no need for corrective action.

The Relative Percent Difference between the Matrix Spike Blank A8B2324801 and the Matrix Spike Blank Duplicate A8B2324802 exceeded quality control criteria for Pentachlorophenol, though all individual recoveries are compliant. No action required.

The spike recoveries for 4-Nitrophenol and Pentachlorophenol were below the laboratory quality control limits in sample MW-2 Matrix Spike and Matrix Spike Duplicate. Since the Matrix Spike Blank recoveries were compliant for these analytes, no corrective action was required.

Linear regression was used to calibrate analytes that were greater than 15% RSD in the initial calibrations A8I0000600, A8I0000697, A8I000700, A8I000705 and A8I000720.

Linear regression was used to calibrate analytes that were greater than 15% RSD in the initial calibrations A8I000720 and A8I0000722.

The continuing calibration verification standard A8C0002479 exhibited the percent Difference (%D) as greater than 20% on the Form VII for the analyte Pentachlorphenol. Since this analyte was calibrated using linear regression, the CCV must be evaluated using %Drift rather than %Difference. The CCV demonstrated %Drift of 15.1%. No corrective action was required (consistent with the laboratory Standard Operating Procedure (SOP), Section 13.5.2, which states that up to 4 analytes may have a %D or %Drift of greater than 20% but less than 40%).

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

The continuing calibration verification A8C0002500 exhibited the percent Difference (%D) as greater than 40% for the analyte 2,4-Dinitrophenol and greater than 20% for the analyte Pentachlorophenol on the Form VII. Since these analytes were calibrated using linear regression, the CCV must be evaluated using %Drift rather than %Difference. The CCV demonstrated %Drift of 25.36% for 2,4-Dinitrophenol and 16.14% for Pentachlorophenol. No corrective action was required.

Metals Data

The recoveries of sample MW-2 Matrix Spike exhibited a result below the quality control limits for Total Calcium and a result above the quality control limits for Soluble Calcium. The sample results are more than four times greater than the spike added. However, the LFB's were acceptable.

All volumes for Dissolved Metals received on 09/23/2008 were filtered and preserved in the TestAmerica Metals Digestion Laboratory on 09/24/2008. All volumes for Dissolved Metals received on 09/24/2008 were filtered and preserved in the TestAmerica Metals Digestion Laboratory on 09/25/2008. All volumes for Dissolved Metals received on 09/25/2008 were filtered and preserved in the TestAmerica Metals Digestion Laboratory on 09/26/2008. Each sample was filtered using a 0.45 micron Metricel Black Grid filter, Pall Life Sciences Lot #T82395. Each sample was then preserved to a pH <2 with 3.0 mL of Nitric Acid, J.T. Baker lot #G17027.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this Sample Data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature."
