RE: RG&E – Canal Street, Rochester
Former MGP Site – Site Characterization Addendum Report
Multi-Site VCA (MSVCA) Index # B8-0535-98-07 Site # V00594-8

Dear Mr. Priore:

Enclosed for the Department's review is a copy of the Site Characterization Addendum Report (Addendum Report) dated March 2, 2009 prepared by Haley & Aldrich (H&A) for the supplemental site characterization (SC) activities implemented by Rochester Gas and Electric Corporation (RG&E) at the Canal Street former manufactured gas plant (MGP) site. The work was performed pursuant to a Department-approved Site Characterization Work Plan Addendum dated May 30, 2008.

The Addendum Report also summarizes the SC data collected to date; that is, it is inclusive of the data and findings reported in the initial Site Characterization Report for the Canal Street Former MGP Site (SC Report), dated 30 January 2008 prepared by H&A.

As documented in the Addendum Report, neither coal tar nor non-aqueous phase liquid (NAPL) were observed in any of the soil borings, groundwater monitoring well boring installations, or test pits completed as part of the SC work. Additionally, the SC activities did not identify other conditions that suggest former MGP residuals exist that could act as continuing source of contamination and adversely affect the environmental condition of the property.

While the SC activities did identify some low level polycyclic aromatic hydrocarbons (PAHs), benzene, toluene, ethylbenzene and xylene (BTEX), chlorinated volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals in soil and groundwater samples collected from both within and outside of the footprint of the former MGP, the limited number and random pattern of the detections do not suggest that there is an on-site source of contaminants which requires remediation. Rather, the magnitude and extent (relatively few and not of great magnitude) of PAHs and BTEX in the sample results reflect levels that are typical of urban settings. This is underscored by the fact that the properties comprising the Site, as well as the surrounding area, have been used for other industrial uses for over 115 years, whereas the MGP operated for only a 10-year period between 1880-1890.

Based on these and other findings presented in the SC, H&A concluded that no further investigation of the former Canal Street MGP is necessary, and that the BTEX, PAHs and inorganic constituents observed randomly distributed in the soil/fill at and near the Site are typical of urban fill and do not warrant remedial action. Thus, it is evident that the constituents detected during the SC are not and should not be the responsibility of RG&E.
RG&E recognizes that, even though the results of the SC investigations demonstrate that MGP sources are not present at the Site, the origin of the low levels of BTEX and naphthalene detected in the two groundwater wells (MW-2 & MW-3) located in the area of the former gas holder

cannot be readily ascertained. Therefore, in the spirit of cooperation RG&E proposes a proactive approach to address the BTEX and naphthalene in groundwater adjacent to the former holder. Specifically, RG&E would like to inject an oxygen release compound (ORC) at these locations.

By doing so, RG&E is not making an admission of liability or responsibility with respect to the findings at the Site. RG&E would simply prefer to implement a remedial measure to address the BTEX and naphthalene in groundwater at MW-2 and MW-3, rather than expend further resources attempting to determine the exact origin of these compounds.

We are hopeful that, after the Department reviews the Addendum and SC Reports, it will concur with the findings that the data gathered to-date demonstrates that there are not MGP source materials present at the Site and that the former MGP has not adversely affected the conditions at the Site in a manner that requires remediation. Nevertheless, we trust that the Department will allow RG&E to move forward with the injection of the ORC as noted above to address BTEX and naphthalene in the groundwater near the former gas holder on the 65 Trowbridge Street parcel. Further, RG&E respectfully requests that the Department consider providing written confirmation that no further investigation or other remedial activities are required at the 90 Canal Street parcel. This will allow RG&E to update the Notice of Agreement filed with the Monroe County Clerk's Office and fulfill its obligations in the VCA for that parcel. That will also serve to remove any concern from that parcel should the property owner want to perform property or realty transaction with the property.

If you have any questions, please contact me at (585) 771-4556. If it would be helpful to meet and go through the reports and data, please let me know and we will schedule a meeting at your office.

Sincerely,

Steven R. Mullin

Attention: Mr. Steve Mullin

Subject: Site Characterization Report Addendum
Canal Street Former MGP Site
Rochester, New York

Dear Mr. Mullin:

Haley & Aldrich is pleased to present this Site Characterization Report Addendum for the Canal Street Former Manufactured Gas Plant (MGP) Site in Rochester, NY. The site characterization was performed in accordance with the May 2008 Site Characterization Work Plan Addendum, approved by the New York State Department of Environmental Conservation. This report summarizes the findings of the site characterization activities to-date and presents conclusions and recommendations.

If you have any questions, do not hesitate to contact us.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

EXECUTIVE SUMMARY

Rochester Gas and Electric Corporation (RG&E) retained Haley & Aldrich of New York (Haley & Aldrich) to conduct Site Characterization Investigations at the Canal Street Former Manufactured Gas Plant (MGP) site (the Site). Two phases of site characterization investigations have been performed to-date in accordance with the requirements of a Voluntary Cleanup Agreement (Index # B8-0535-98-07, February 20, 2003) (MSVCA) between RG&E and the New York State Department of Environmental Conservation (NYSDEC).

The Site is comprised of approximately 1.6 acres located on portions of two contiguous parcels with the postal addresses of 90 Canal Street, and 65 Trowbridge Street, Rochester, New York. The former MGP was operated by the Municipal Gas Light Company of the City of Rochester (New York), which was a predecessor company to RG&E. The 90 Canal Street and 65 Trowbridge Street parcels are not currently owned by RG&E and have had various property owners and uses since the MGP ceased operation in the early 1890's.

A five story brick building currently occupies the southern portion of the former MGP property with the balance of the MGP situated on a portion of the 65 Trowbridge parcel (see figure). The building at 90 Canal Street is used for: storage of miscellaneous items in the basement; commercial/light industrial on the first floor; storage of residential items on the second floor; and, apartments on the third, fourth and fifth floors. The 65 Trowbridge Street parcel is comprised of 1.8 acres and is now primarily vacant, with the exception of two unused railroad tracks and one active track that traverses the northern portion of the parcel.

The operational life of the MGP was limited to the period between 1880 and 1891 based on historical research. Since MGP operations ceased, the Site has been used for more than 115 years for various commercial and industrial uses including: railroad yard operations, a wholesale grocery business, Eastman Kodak Company, and, since 1967, by various tenants of the five-story building for businesses such as printing, light manufacturing, and administrative offices.

The first phase of site characterization investigation was conducted pursuant to the 2006 NYSDEC-approved Work Plan (BBL, 2006). This investigation was conducted by Haley & Aldrich during November and December 2006, and included the installation of 25 soil borings, of which seven were completed as groundwater monitoring wells; and the collection of 45 soil samples and 25 ground water samples collected during two sampling events. The findings were presented in the Site Characterization Report, dated 30 January 2008 (2008 SC Report) and submitted to the NYSDEC for review.

In summary, the 2008 SC Report indicated that neither coal tar nor non-aqueous phase liquid (NAPL) were encountered and that no apparent MGP-related on-site sources of contamination were identified. The investigation activities did identify that the Site is comprised of fill material and reworked soil that did show a few, widely dispersed, low level concentrations of some heavy molecular weight polycyclic aromatic hydrocarbons (PAHs) and inorganic compounds at random locations both within and outside of the foot print of the former MGP boundaries. The random nature and distribution (i.e., no discernable pattern in depth or lateral coverage) of the PAHs and inorganics in the fill are not indicative of a single source or type of source, and are representative of typical urban background conditions.

Groundwater quality across the Site generally did not exceed NYS ambient water quality water standards with the exception of some sporadic low magnitude detections of benzene, toluene, ethylbenzene and xylene (BTEX), naphthalene and chlorinated solvents in the area of the former gas holder foundation (MW-2 & MW-3). However, the non-detection of any MGP source material during the site characterization investigation makes the origin and source of the limited BTEX, naphthalene and chlorinated solvents detections unknown and likely just the artifact of the property's long industrial use after the MGP closed. As such, further characterization of site soils by RG&E was not recommended.

Prior to formalizing its review comments on the 2008 SC Report, the NYSDEC asked RG&E to collect additional data at the Site. The following objectives were identified in the NYSDEC-approved Site Characterization Work Plan Addendum, dated 20 May 2008 (Addendum):

- Determine if BTEX observed in the groundwater at monitoring wells MW-2 and MW-3 originated on-site or off-site; and

- Collect additional data on subsurface conditions in the area of the former holder foundation.

To accomplish the objectives of the Addendum (i.e., second phase of SC investigations) the following activities were performed during September and October 2008 by Haley and Aldrich:

- Installation of one upgradient overburden groundwater monitoring well (MW-8).
- Installation of one cross gradient overburden groundwater monitoring well (MW-9) in the right-of-way on the west side of Canal Street.
- Excavation of three test pits in and one adjacent to, the outside foundation of the former gas holder.
- Installation of two soil borings within the foot print of the former gas holder located beneath the 90 Canal St building (through the concrete basement floor).
- The collection of one water sample from a sump in the basement of 90 Canal St.
- Collection of twelve soil samples from the soil borings, groundwater monitoring well installation borings, and test pits for analytical testing.
- The collection of nine groundwater samples from the newly installed and existing ground water monitoring wells for analytical testing.

The results of the investigation performed as part of the Addendum are presented in this report and are summarized below:

- Consistent with the first phase of SC investigations, neither coal tar nor NAPL were observed.
- Analytical results from the groundwater sample collected from the newly installed upgradient monitoring well (MW-8) did not detect BTEX compounds.
- Analytical results from the groundwater sample collected from the newly installed cross-gradient monitoring well (MW-9) did detect BTEX and several other volatile organic compounds (VOCs) above NYS ambient water-quality standards.
- Analytical results from soil samples collected within the footprint of the former gasholder beneath the 90 Canal Street building did not detect VOCs above NYSDEC Part 375 residential standards and/or TAGM 4046 recommend soil cleanup objectives SCOs).

- Nearly all VOCs in soil samples collected from the test pits located in and outside of the foundation of the former gasholder were at concentrations below laboratory detection limits.
- While a single sample collected from 1 to 3 feet below ground surface in test pit TP-2 detected seven PAHs above NYSDEC Part 375 residential standards, the sample matrix consisted of dark brown to gray-brown to black silty sand with coal dust and particles, wood cinders, and ash. The wood cinders and ash were not typical of the fill encountered in the other test pits. The sample was collected from an area proximate to a former rail road track that existed on the property between 1918 and 1971. The results appear to be reflective of the fill material sampled, rather than any specific source.
- Analytical results from the groundwater sample collected from the sump in the basement of 90 Canal Street did not detect BTEX compounds or naphthalene.
- Analytical results from the groundwater samples collected from the existing groundwater monitoring wells were generally consistent with previous sample results finding limited magnitude detections of volatile and semi-volatile compounds which attenuated across the Site.
- Inorganic compounds detected in both the soil and groundwater samples were typical of what is commonly found in soils and bedrock in the Rochester area.
- The foundation wall of the former gas holder was encountered, confirming its location.
- The objectives of the Addendum were satisfied.

In review the data collected during both phases of the SC investigations conducted for the Site, the following presents a summary of the conclusions that have been drawn. Further discussions and details are presented in this report.

- Coal tar or NAPL were not observed in any of the soil borings, groundwater well boring installations, or test pits;
- No apparent on-site MGP sources of groundwater contamination were identified;
- Groundwater quality across the Site was generally below the NYS ambient water quality standards, with the exception of some low level detection of BTEX, naphthalene, and a few chlorinated VOCs in the area of the former gas holder. The source or origin of these detections were not observed and the presence of these constituents are typical of urban fill;
- The low magnitude concentrations of BTEX and naphthalene in groundwater samples collected in the area of the former gas holder were higher than concentrations detected in the upgradient monitoring wells. This may be reflective of former MGP operations or other historic industrial operations at the Site. Monitoring wells located relatively short distances downgradient from the former gas holder area did not detect MGP organic constituents above the NYS ambient water quality standards, indicating exceedances are localized and/or rapid attenuation is taking place. Other non-MGP organic constituents were detected on-site and in the study area;
- The low levels of VOC constituents sporadically observed in a limited number of the samples of the soil/fill at the Site in excess of Part 375 SCOs and/or TAGM 4046 SCOs are randomly distributed (both within and outside of the footprint of the MGP boundaries) and do not appear to be indicative or representative of a source or type of source, but rather are widely dispersed and reflective of typical conditions associated with fill in urban settings;
- The former MGP operations do not appear to have left a residual source of contamination that adversely affects the environmental condition of the property;

- Further site characterization does not appear to be warranted, and the quantities and concentrations of contaminants in soil and groundwater do not indicate the need for remedial action.

1. INTRODUCTION

Rochester Gas and Electric Corporation (RG&E) retained Haley & Aldrich of New York (Haley & Aldrich) to conduct this Site Characterization Investigation at the Canal Street Former Manufactured Gas Plant (MGP) Site (the Site). The footprint of the former MGP operations is believed to have been located on portions of two contiguous parcels known as 90 Canal Street and 65 Trowbridge Street, Rochester, New York. The former MGP was operated by the Municipal Gas Light Company of the City of Rochester (New York), which was a predecessor company to RG&E. The Site location is shown on Figure 1. Existing site features are shown on Figure 2A and selected historical site features (MGP structures and railroad tracks) are shown on Figure 2B. An aerial photograph of the Site and its environs is provided in Appendix B.

The 90 Canal Street and 65 Trowbridge Street parcels are not currently owned by RG&E and have had various property owners and uses since the MGP ceased operation in the early 1890's. The investigation was performed in accordance with the requirements of Multi-site Voluntary Cleanup Agreement (Index # B8-0535-98-07, February 20, 2003) (MSVCA) between RG&E and the New York State Department of Environmental Conservation (NYSDEC), the NYSDEC-approved Site Characterization Work Plan dated September 2006 (Work Plan), prepared by Blasland, Bouck, and Lee, Inc. (BBL), and the NYSDEC-approved Site Characterization Work Plan Addendum dated May 2008 (Work Plan Addendum), prepared by Haley & Aldrich.

1.1 Background

RG&E submitted the "Site Characterization Report Canal Street Former MGP Site" (SC Report) dated 30 January 2008 to the NYSDEC. The NYSDEC reviewed the report and provided some initial feedback related to the detections of benzene, toluene, ethylbenzene, and xylenes (BTEX) in groundwater in monitoring wells MW-2 and MW-3. Prior to formalizing its response to the SC Report, the NYSDEC asked RG&E to collect additional data upgradient of the Site to help assess if the BTEX detected in MW-2 and MW-3 is related to off-site influences or originates on-site. This report describes the work conducted and presents the data collected

1.2 Purpose of Investigation

The goal of the supplemental site characterization activities described herein was to collect additional field and analytical data to refine the conceptual site model (CSM) in order to evaluate the necessity for further action at the Site. The following objectives were developed based on telephone conversations held between RG&E and the NYSDEC.

- Determine if BTEX observed in the groundwater at monitoring wells MW-2 and MW-3 originated on-site or off-site.

- Generate additional data on subsurface conditions in the area of the former holder foundation.

These objectives and the investigation plan designed to achieve them were presented in the NYSDEC-approved Site Characterization Work Plan Addendum dated May 2008 (Work Plan Addendum), prepared by Haley & Aldrich.

2. FIELD INVESTIGATION

Prior to the investigation activities, field personnel mobilized to the Site to verify existing conditions and stake (with flagging) the proposed exploration locations. Once the sample locations were marked, Dig Safely New York was contacted to identify and mark underground utilities present on the Site. Field investigations were conducted during August and September 2008 according to the Work Plan Addendum.

2.1 Soil Investigation

The objectives of the soil investigation and the general procedures for obtaining and analyzing subsurface soil samples are detailed below.

2.1.1 Objectives

The objectives for soil investigations were presented in Section 1.2. The subsurface information collected as part of this investigation was used to locate and assess the condition of the wall of the former gas holder, to characterize its contents, and to investigate subsurface conditions outside of and immediately adjacent to the holder. The soil borings drilled through the basement slab of the on-site building were installed to characterize the subsurface soil conditions within the footprint of the former gas holder and under the building floor slab. Additional borings were installed at locations upgradient and crossgradient to the Site. The following sections describe the methods used to collect soils for characterization.

2.1.2 Test Pits

Four test pits were excavated to determine the location of the former gas holder, to evaluate the integrity and contents of the holder, and to investigate subsurface conditions adjacent to the holder. The test pit locations are shown on Figure 3.

The test pits were excavated using a Daewood DH-50 Excavator. Soil was excavated from the test pits and was visually characterized for color, texture, and moisture content, as well as the presence of visible staining and odors, if observed. Each test pit was excavated to the former gas holder floor or to the limits of the excavator reach. Test Pit Logs are included in Appendix A and photographs taken during the test pit excavations are included in Appendix B.

2.1.3 Soil Borings

Four soil borings (SB-20, SB-21, MW-8, and MW-9) were completed as part of the SC Addendum activities. Soil borings SB-20 and SB-21 were advanced in the basement of 90 Canal Street. MW-8 was installed upgradient of the Site and MW-9 was installed cross gradient of the Site on the west side of Canal Street opposite the 90 Canal Street building. The locations of the newly installed soil borings, as well as the previously completed soil boring and monitoring well locations are shown on Figure 3.

The soil borings done in the building basement were completed using an Electric Skid Rig. The soil borings at the monitoring well locations were completed using $2^{1/4}$-inch inside diameter hollow stem augers (HSA). Continuous soil sampling was conducted at the boring locations by advancing a 2-foot long, 2-inch outer diameter (OD) split-spoon sampling device ahead of the augers. Soil recovered from each sample interval was

visually characterized for color, texture, and moisture content. If encountered, the presence of visible staining, non-aqueous phase liquid (NAPL), and obvious odors were noted. In addition, each split spoon sample was screened for volatile organic vapors using a MiniRAE 2000 photoionization detector (PID) equipped with a 10.6 eV lamp. PID readings were recorded on boring logs. Each boring was completed to a depth of refusal (Soil Boring Logs are included in Appendix A).

In an effort to make sure sufficient information was obtained to assess the thickness of the gas holder floor and to understand the geology under the gas holder floor (i.e., soil, weathered rock, competent rock, etc.), the the coring for SB-20 and SB-21 were advanced through the concrete and approximately 2.5 feet into the bedrock below. In both borings the holder concrete floor was found to be directly on the bedrock. The holder floor thicknesses were 0.7 feet and 0.4 feet at SB-20 and SB-21, respectively. Upon completion of the borings, they were filled with cuttings and then grouted to the bottom of the basement floor slab. The holes in the basement floor slab were repaired with concrete.

2.1.4 Soil Analyses

A minimum of one subsurface soil sample from each boring was analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) by SW846 Method 8260B, TCL semivolatile organic compounds (SVOCs) by SW846 Method 8270C, Target Analyte List (TAL) metals by SW846 Methods 6010B and 7471A, and cyanide by SW846 Method 9012A.

Samples were generally selected for laboratory analyses to meet the soil investigation objectives listed above based on the judgment of the field geologist, visual observation of MGP and/or non-MGP residual staining in the soil sample interval, and/or the a high PID reading in the sample interval. If no staining or PID readings were encountered at a boring location, the sample interval immediately above the groundwater table was selected for laboratory analysis. Analytical results are discussed in Section 4.

Air emissions in the worker breathing zone during drilling activities were monitored using a PID. Real-Time Aerosol Monitors (mini-RAMs) were used along with PIDs in accordance with the Community Air Monitoring Plan (CAMP) provided in the Work Plan. Air monitoring documentation is provided in Appendix C. There were no incidences requiring modification of work activities in response to air monitoring information.

Subsequent to the soil sampling activities, a New York State licensed surveyor field surveyed the soil sampling locations and other pertinent site features. For each soil boring, the surveyor determined its location and the ground surface elevation relative to a fixed site-specific datum (see Figure 3).

Non-disposable equipment, including drilling tools and equipment were decontaminated prior to first use on-site, between each investigation location, and prior to demobilization. The integrity of the decontamination procedures were checked periodically with equipment rinse blanks, as required by the quality assurance project plan (QAPP).

2.2 Groundwater Investigation

The groundwater investigation objectives and the general procedures used to obtain and analyze groundwater samples are detailed below.

2.2.1 Objectives

The objectives of the groundwater investigation were presented in Section 1.2. The following sections describe monitoring well installation, groundwater sample collection, and groundwater level readings.

2.2.2 Groundwater Monitoring Well Installation

Two overburden monitoring wells (MW-8 and MW-9) were installed at the locations shown on Figure 3. The number and placement of monitoring wells were selected in accordance with the Work Plan Addendum, consideration of subsurface conditions encountered during borehole drilling, and in consultation with RG&E and the NYSDEC. Monitoring wells were positioned to characterize groundwater quality and determine groundwater flow direction in the overburden soils.

At each monitoring well location, a soil boring was first completed using the methodology described in Section 2.1.3 to refusal at bedrock. The borings were then over-drilled using $4^{1/4}$-inch inside diameter HSAs for the monitoring well installation. Well sumps in MW-8 and MW-9 were installed according to the Work Plan. In MW-8, a 2-foot deep sump was drilled into bedrock and the annulus between the well casing and rock was sealed with grout. The saturated thickness of overburden soils in MW-9 was less than one foot; according to the Work Plan, the rock was cored two feet below the overburden and the annulus between the well casing and rock was filled with sand. The well screen extended to the bottom of the drilled rock. Following completion of the borings, monitoring wells were installed and screened to span the water table surface. Surface mount completions were installed at each location. The monitoring wells were constructed using 2-inch diameter Schedule 40 polyvinyl chloride (PVC) pipe and were completed with 0.01-slot well screen. Due to the relatively shallow bedrock, the well screen lengths had to be adjusted to provide adequate thickness of the seals at the ground surface. Monitoring well installation reports are provided in Appendix A.

Following installation (and immediately prior to well development as discussed below), each monitoring well was checked for the presence of NAPL. Each well was then developed by pumping water from the well until the water was visibly clear or at least 10 well volumes were removed. For well MW-8, ten well volumes were removed during development. For well MW-9, only 5 well volumes were removed because the well went dry at the point and did not recover. Water generated by monitoring well development and equipment decontamination was securely stored in steel 55-gallon drums prior to being transported for off-site disposal by RG&E.

A New York State licensed surveyor field surveyed the monitoring well locations to determine the location, ground surface elevation, and measuring-point elevation (defined as the top of the inner casing).

2.2.3 Groundwater Sampling

Groundwater sampling of the newly installed and existing groundwater monitoring wells was completed during 22-24 September 2008, approximately two weeks following well development of the new wells (MW-8 and MW-9). The wells were purged using low-flow methods. Each well was checked for the presence of NAPL prior to purging and monitored for NAPL during the purging process.

In accordance with the Work Plan, low-flow purging and sampling was completed at MW-1, MW-2, MW-3, MW-5, MW-6, and MW-8. A low-flow purge was attempted at MW-4, MW-7, and MW-9, but could not be completed due to excessive drawdown during purging and slow to immeasurable well recharge. Specifically, due to the low groundwater condition and slow recharge rates in these wells, low-flow sampling was discontinued where drawdown in the well could not be maintained at less than 0.3 feet at the lowest pump flow rate. Therefore, an alternative method was necessary to obtain the water samples. As an alternative to low flow sampling, these wells were purged to dryness using a Whale groundwater purging pump and allowed to recover for 24-hours prior to sampling. Samples from MW-4 and MW-9 were collected using one new disposable bailer per well. A groundwater sample from monitoring well MW-7 could not be collected due to poor recharge after purging. The well was checked three times over a span of two weeks, and each time it was checked the well did not have enough water to collect a sample. As such, there is no new analytical data for this well.

Where it was necessary to use the alternative purging and sampling method described above, suspended soil particles were observed to be entrained in the groundwater samples.

In addition to the monitoring well sampling, the water standing in the sump located in the basement of the on-site building was sampled using a disposable bailer on 27 August 2008.

2.2.4 Groundwater Levels

Water level readings were taken on 22 September 2008 using a Heron Dipper-T water level meter, measuring from the top of the well casing. The water level measurements are reported in on Table 7.

3. WASTE MANAGEMENT

Investigation-derived waste (IDW) including soil cuttings from monitoring well installations, decontamination water, drilling water, and well development/purge water was containerized in 55-gallon drums. Drums were appropriately labeled with the contents, generator, location, and date. RG&E coordinated the disposal of the IDW with Clean-Harbors Environmental Services, Inc. Personal protective equipment (PPE was placed in plastic garbage bags and disposed of with municipal trash. Waste disposal documentation is included in Appendix D.

4. FINDINGS

This section presents findings of the investigation activities based on the information collected during subsurface explorations performed at the Site during August and September 2008. The findings are presented in context with the findings described in the SC Report.

4.1 Subsurface Characterization

The following sections provide a detailed description of the Site's subsurface components including soils, bedrock, and groundwater.

4.1.1 Field Observations

The test pit soils from inside the holder generally can be described as fill comprised of silty sand, with trace amounts of brick fragments, slag, coal dust or particles, glass, and wood. The photographs presented in Appendix B show that practically no large size brick, concrete, timber or other debris were present. Fill was observed in the test pits from the ground surface to 10 to 11 feet below ground surface (bgs), where bucket refusal was noted, presumably at the concrete holder floor. NAPL was not observed and PID readings in the field were all zero. No sheens were observed. Generally odors were not present in the test pits, except for two places, where they were described as "light organic" And "very slight weathered petroleum odor that rapidly vanishes." The test pit soils on the outside of the holder were observed to be similar in characteristics. The remaining holder wall was about five feet thick and constructed of brick. It appeared to be intact where it was encountered. Whether or not the holder wall is still intact beneath the 90 Canal St. building is not known.

The soils encountered in the two soil borings located inside the limits of the former holder beneath the 90 Canal St. building basement were also fill generally comprised of silty sand, with trace amounts of brick fragments, wood and coal. The fill extended to 6.0 to 8.5 feet bgs, where auger refusal occurred at the concrete holder floor (which was confirmed by subsequent rock coring). NAPL was not observed. No sheens were observed. PID readings in SB-20 were all zero and PID readings in SB-21 were 11.1 ppm directly beneath the basement floor, 0.2 ppm 2 to 4 feet beneath the basement floor and zero in the remaining four feet extending to the holder floor. Odors were not observed in the two soil borings, except a "light organic" odor was noted directly beneath the basement floor in SB-20 and a "slight organic" odor was noted 2 to 4 feet beneath the basement floor in SB-21. The concrete in SB-21 was noted to have a "very slight indistinguishable odor." None of the odors noted were described as being suggestive of coal tar.

No MGP residuals, such as coal tar (either as free product or droplets), were observed in the test pits or soil borings in and adjacent to the gas holder. Additionally, the soil exhibited no sheens that might be indicative of source material. The fill materials found inside the limits of the holder contained no greater amounts of brick, coal, glass, ash, etc, than has been observed previously in the urban fill that is found on the balance of the Site.

Monitoring well MW-8 is located outside of and about 100 feet south of the former MGP Site (see Figure 3). It is located between rails of an existing set of railroad tracks and is upgradient from the Site. In MW-8, the fill extended from the ground surface to approximately 4.3 feet bgs and was comprised of silty sand with coal dust and gravel.

Organic soil and alluvial and glacial deposits of silty sand were observed beneath the fill. Bedrock was encountered at about 9.0 feet bgs. PID readings were less than 3.6 ppm in the fill and no odors or sheens were noted in the fill. No NAPL was observed. The static groundwater level in September 2008 was 5.8 feet bgs, which is about 1.5 feet below the bottom of the fill.

Monitoring well MW-9 is located outside of and about 50 feet west of the former MGP Site (see Figure 3). It is located on the west side of Canal St. in the vicinity of a 1993 petroleum spill. There is no evidence to suggest the area west of Canal St. was ever used for MGP operations. In MW-9, the fill extended from the ground surface to approximately 4.0 feet bgs and was comprised of silty sand. Glacial deposits of silty sand were observed beneath the fill and bedrock was encountered at about 5.5 feet bgs. PID readings were zero and no sheens or odors were noted in the fill. No NAPL was observed. The static groundwater level in September 2008 was 7.1 feet bgs, below the bottom of the fill.

In summary, NAPL was not encountered in any of the test pits, soil borings, or monitoring wells. There were also no visual observations of coal tar or impacted soil. These observations as well as the types of fill encountered were consistent with the findings of the previous site characterization investigations described in the SC report.

In general, soil samples were selected for chemical analyses based on consideration of visual, odor, and PID field observations in order to represent expected worst-case conditions. The results of chemical analyses for the soil samples are presented in Tables 1 through 3.

4.1.2 Laboratory Analytical Results

Soil and groundwater samples were analyzed by Severn Trent Laboratories-Buffalo (STL-Buffalo), a New York State Department of Health (NYSDOH) accredited laboratory certified for the selected analyses. Analytical methods, sample handling, and laboratory protocols are outlined in the QAPP (see Work Plan).

4.1.2.1 Data Usability

Sample analyses followed the NYSDEC Analytical Services Protocol (ASP), and included quality assurance/quality control (QA/QC) samples at a frequency indicated in the QAPP. Analytical results for analysis of soil and groundwater samples were reported using NYSDEC ASP Category B data deliverables and are provided in Appendix D, along with the data usability summary reports (DUSRs). The analytical data were validated and determined to be usable for the purposes of this report, with the exception of some of the groundwater results from the October 2007 sampling event.

Due to the sampling procedure described previously for MW-4 and MW-9, these samples had high turbidity. The analytical laboratory indicated that the extraction procedure used in the analysis of SVOCs and metals would capture constituents from any suspended soil particles as well as from the groundwater. As a result, results from SVOCs and metals from those wells are most likely overstated and are not likely representative of true groundwater quality at the two sampling locations and the results should be viewed in light of the sampling conditions. In addition, due to the high turbidity, all locations were sampled for lab-filtered metals to compare to the unfiltered metals results.

The following sections summarize the laboratory analytical results. Site specific soil cleanup objectives are not identified in the MSVCA; therefore, for comparison purposes, soil analytical results were compared to the NYCRR Part 375 SCOs for Restricted Residential Use and Restricted Commercial Use, as well as to the TAGM 4046 SCOs. Groundwater analytical results were compared to the NYS Ambient Water Quality Standards and Guidelines for Class GA Groundwater (AWQS).

4.1.2.1 **Soil Analytical Results**

A description of the soil analytical results collected during this SC addendum work is presented below in Tables A-C and the results of all the analytical results from the SC activities are summarized in Tables 1 through 3. Figure 6 depicts the soil analytical results in excess of the Part 375 Restricted Residential and Restricted Commercial Use SCOs.

Volatile Organic Compounds (VOCs)

VOCs were not detected in any of the soil samples at concentrations exceeding the Part 375 Restricted Residential SCOs or the TAGM 4046 SCOs, as shown in Table A. The detailed analytical testing results for VOCs are given in Table 1.

Table A
Locations of VOC Exceedances Soil Cleanup Objectives and of AWQS

Constituent	Location of Exceedance			
	Part 375 Residential Soil Cleanup Objectives	Part 375 Commercial Soil Cleanup Objectives	TAGM 4046 Soil Cleanup Objectives	NYSDEC TOGS 1.1.1 Class GA Water Quality Standards and Guidelines
1,2-Dichloroethane	DNE	DNE	DNE	MW-9
Benzene	DNE	DNE	DNE	MW-2, MW-3, MW-9
Cis-1,2-Dichloroethene	DNE	DNE	DNE	MW-3, MW-8, SUMP
Ethylbenzene	DNE	DNE	DNE	MW-3, MW-9
Isopropylbenzene	DNE	DNE	DNE	MW-3, MW-9
Toluene	DNE	DNE	DNE	MW-9
Trans-1,2-Dichloroethene	DNE	DNE	DNE	MW-3, SUMP
Trichloroethene	DNE	DNE	DNE	MW-3, SUMP
Vinyl Chloride	DNE	DNE	DNE	MW-3, MW-8, SUMP
Xylenes (total)	DNE	DNE	DNE	MW-3, MW-9

DNE- Did not exceed soil cleanup objective or AWQS.

As can be seen in Table 1, there were no exceedances of Part 375 Residential and Commercial SCOs. This is consistent with previous soil sampling at the Site as described in the SC Report.

Semi-Volatile Organic Compounds (SVOCs)

Samples from one of the test pit locations had SVOCs in excess of the Part 375 SCOs for Restricted Residential Use. The SVOCs detected above the Part 375 SCOs for Restricted Residential Use were the following seven higher molecular weight PAHs: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene (see Table 2). According to Table 2, the same compounds were found to exceed the TAGM 4046 SCOs. Table B shows the locations where SVOCs were found at concentrations in excess of the referenced SCOs.

Table B
Locations of Exceedances of SVOC Soil Cleanup Objectives and of AWQS

Constituent	Location of Exceedance			
	Part 375 Residential Soil Cleanup Objectives	**Part 375 Commercial Soil Cleanup Objectives**	**TAGM 4046 Soil Cleanup Objectives**	**NYSDEC TOGS 1.1.1 Class GA Water Quality Standards and Guidelines**
Benzo(a)anthracene	TP-2	TP-2	TP-2, SB-20, SB-21	DNE
Benzo(a)pyrene	TP-2	TP-2	TP-2, SB-20, SB-21	DNE
Benzo(b)fluoranthene	TP-2	TP-2	TP-2	DNE
Benzo(k)fluoranthene	TP-2	DNE	TP-2	DNE
Biphenyl	DNE	DNE	DNE	MW-3
Chrysene	TP-2	DNE	TP-2, SB-20	DNE
Dibenzo(a,h)anthracene	TP-2	TP-2	TP-2, TP-4, SB-20	DNE
Indeno(1,2,3-cd)pyrene	TP-2	TP-2	TP-2	DNE
Naphthalene	DNE	DNE	DNE	MW-3
Phenol	DNE	DNE	DNE	MW-9

DNE – Did not exceed soil cleanup objective or AWQS.

As can be seen in Table 2, the types and concentrations of SVOCs in site soil sample from the current investigation are the same as those previously observed.

Metals

Table C shows the locations where metals in soil samples were found at concentrations in excess of the above-referenced SCOs. Arsenic, cadmium, calcium, copper, lead, magnesium, mercury, and zinc were detected above the referenced SCOs at a limited number of locations. Only TP-2 at its shallowest depth (1 to 3 feet) had metals (arsenic, lead, and mercury) detected at concentrations in excess of the Part 375 SCOs for Restricted Residential Use. The same metals were found to exceed the TAGM 4046 SCOs, with the addition of cadmium, copper, and zinc. Samples from TP-2 did not exceed the Part 375 SCO for Commercial Use for lead.

Metals were detected at concentrations above the TAGM 4046 SCOs at other locations. Calcium, copper, and magnesium concentrations exceeded the TAGM 4046 SCOs at SB-20. Copper, mercury, and zinc concentrations exceeded the TAGM 4046 SCOs at SB-21. In addition, the mercury concentration exceeded the TAGM 4046 SCO at TP-3 and the zinc concentration exceeded the TAGM 4046 SCO at MW-8.

Table C
Locations of Metal Exceedances of Soil Cleanup Objectives and of AWQS

Constituent	Location of Exceedance			
	Part 375 Residential Soil Cleanup Objectives	Part 375 Commercial Soil Cleanup Objectives	TAGM 4046 Soil Cleanup Objectives (and/or Eastern U.S. Background)	NYSDEC TOGS 1.1.1 Class GA Water Quality Standards
Arsenic	TP-2	TP-2	TP-2	MW-9
Cadmium	DNE[2]	DNE	TP-2	DNE
Calcium	DNE	DNE	SB-20	DNE
Chromium	DNE	DNE	ND	MW-9
Copper	DNE	DNE	SB-20, SB-21, TP-2	DNE
Iron (Total)	DNE	DNE	DNE	MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-8, MW-9, SUMP
Iron (Dissolved)[1]	DNE	DNE	DNE	MW-1
Lead	TP-2	TP-2	TP-2	MW-9, SUMP
Magnesium (Total)	DNE	DNE	SB-20	MW-2, MW-3, MW-4, MW-5, MW-6, MW-8, MW-9
Magnesium (Dissolved)[1]	DNE	DNE	DNE	MW-2, MW-3, MW-4, MW-5, MW-6, MW-8
Manganese (Total)	DNE	DNE	DNE	MW-1, MW-2, MW-3, MW-5, MW-8, MW-9
Manganese (Dissolved)[1]	DNE	DNE	DNE	MW-1, MW-2, MW-5, MW-8
Mercury	TP-2	TP-2	SB-21, TP-2, TP-3	DNE
Nickel	DNE	DNE	DNE	MW-9
Sodium (Total)	DNE	DNE	DNE	MW-1, MW-2, MW-5, MW-6, MW-8, MW-9, SUMP
Sodium (Dissolved)[1]	DNE	DNE	DNE	MW-1, MW-2, MW-5, MW-6, MW-8, MW-9
Zinc	DNE	DNE	MW-8, SB-21, TP-2	DNE

(1) Dissolved metals apply to groundwater samples only.
(2) DNE – Did not exceed soil cleanup objectives or AWQS.

The soil samples which had metals detected above the referenced SCOs were generally collected from the fill. As can be seen in Table 3, types and locations of metals observed in this investigation were the same as previously observed as described in the SC Report.

Cyanide

All of the soil samples collected during this investigation were analyzed for cyanide. None of the samples had cyanide concentrations greater than the Part 375 SCO for Restricted Residential or Commercial Use. Similarly, cyanide was not found to exceed those SCOs in any of the soil samples from previous site investigations.

4.1.2.2 **Groundwater Analytical Results**

A description of the groundwater analytical results is presented below and the results are summarized in Tables 4 through 6. Figure 6 provides a summary of groundwater analytical results that exceed the TOGS 1.1.1 Ambient Water Quality Standards and Guidelines (AWQS). The noted groundwater concentrations were from the unfiltered samples. On Figure 6, for each analyte that exceeded the AWQS, the concentration of the analyte in the soil at the same location is listed. Tables A, B, and C present the locations where exceedances of the AWQS were observed.

VOCs

Only MW-2, MW-3, MW-8, MW-9, and the Sump samples exhibited groundwater quality having VOCs in excess of AWQS (see Table 4). VOCs were not detected above laboratory detection limits in MW-1 (upgradient), MW-4, MW-5, and MW-6 (with the exception of a detection of benzene below the AWQS in MW-4, isopropylbenzene below AWQS in MW-5, and trans-1, 2-dichloroethene and trichloroethene below the AWQS in MW-6).

BTEX compounds (benzene, ethylbenzene, toluene, and/or total xylenes) were detected in wells MW-2, MW-3, and MW-9 at concentrations greater than the AWQS. The concentrations of BTEX compounds in well MW-9 were 1 or 2 orders of magnitude greater than the concentrations found in the other wells.

As can be seen in Table 4, with the exception of high levels of BTEX and detection of MTBE in MW-9 (which was not previously sampled), these results are similar to previous groundwater analyses as described in the SC Report.

SVOCs

Only MW-3 and MW-9 exhibited groundwater quality having SVOCs in excess of AWQS (see Table 5). SVOCs were not detected above laboratory detection limits in MW-1 (upgradient), MW-4, MW-6, and MW-8 (with the exception of diethyl phthalate in MW-8).

Naphthalene was only detected in MW-3 at a concentration greater than the AWQS. In previous sampling rounds, naphthalene was detected at a concentration exceeding the AWQS in MW-3 and in the first round of sampling in MW-2. The high molecular weight PAHs were not detected in any of the wells at concentrations greater than the AWQS during the most recent sampling. Previously, one or more of those PAHs exceeded the AWQS in MW-1, MW-2 and MW-6. Those conditions exhibited no trend or pattern. As a note, MW-1 and MW-6 are located outside of, and are upgradient from the footprint of the former MGP.

Metals

The metals iron, magnesium, manganese, and/or sodium were detected in all eight wells sampled at concentrations greater than the AWQS. Well MW-9 had concentrations of total arsenic, total chromium, total lead, and total nickel that were greater than the AWQS. This sample was collected using a bailer, and therefore the turbidity was high. A separate sample was collected that was lab filtered, showing dissolved metals. In this dissolved sample, arsenic, chromium, lead, and nickel concentrations did not exceed the AWQS.

As shown in Table 6, the types and concentrations of metals observed were consistent with previous groundwater sampling at the Site as described in the SC Report.

Cyanide

Cyanide was not detected in any sample at concentrations greater than the laboratory detection limit. This was true in previous sampling rounds.

4.2 Site Hydrogeology

Table 8 presents the groundwater level measurements in terms of depth below ground surface (bgs) and elevation for September 2008. Figure 7 shows groundwater elevations and generalized groundwater contours. The direction of groundwater flow is generally to the northwest; however, there is a groundwater high in the vicinity of MW-1, which results in local deviation from this general pattern. The groundwater high is apparently associated with high bedrock at the same location. The groundwater flow pattern observed in September 2008 is consistent with previous investigations (including the new data from MW-8 and MW-9). The measurements confirm that MW-8 is upgradient from the Site and MW-9 is crossgradient from the Site. It is unlikely that groundwater in the vicinity of MW-9 migrates to the holder area.

4.3 Summary

As described in the original SC Report and in this SC Report Addendum, signs of coal tar, NAPL, or MGP materials that could be a source of contamination were not observed. The **SITE** and general area around the foot print of the former MGP is comprised of reworked soil and fill typical of urban fill. Some exceedances of VOCs, SVOCs and metals in soil and groundwater were detected during the investigations but are: (1) few in number compared to the number of samples taken; (2) limited in magnitude; and (3) widely dispersed. The random and sporadic nature (i.e., no pattern) of the findings do not suggest there is one source or cause for the detections observed; the detections are typical of urban fill, with the exception of the findings at MW-9 located cross-gradient to the **SITE**, which may be associated with 1993 release of petroleum at 89 Canal Street. However, the data collected do not suggest the impacts found at MW-9 are contributing to detections of contaminants on the **SITE**.

The tables below summarize the data collected during the two phases of investigation and demonstrate the limited number and magnitude of contaminants. The tables show only parameters where SCOs or AWQS were exceeded. For each of those parameters, the range of concentrations observed in the entire data base is given, and the frequency with which that parameter exceeds the SCOs or AWQS is given. Tables D through H are organized to present parameters in exceedance of soil cleanup objectives (Part 375 Restricted Residential and TAGM 4046 SCOs) for VOCs first, then SVOCs, and finally the Inorganic Constituents. Tables I

through K are organized to present groundwater parameters in exceedance of the AWQS for VOCs, SVOCs, and Inorganic Constituents, respectively.

Table D
Selected VOC Concentrations in Soil

VOCs	Applicable TAGM 4046 Guidance Value in mg/Kg	Sample Results Concentration Range mg/Kg	Number of Samples Exceeding TAGM 4046 in Dec 06	Number of Samples Exceeding TAGM 4046 in Sept 08
Acetone	0.2	ND to 0.24	1 of 31	0 of 11
Methylene chloride	0.1	ND to 0.79 J	3 of 31	0 of 11
Xylene (total)	1.2	ND to 1.4 J	1 of 31	0 of 11

Note: There were no exceedances of Part 375 Restricted Residential SCOs for VOCs.

Table E
Selected SVOC Concentrations in Soil

SVOCs	Applicable Restricted Residential Part 375-6.8 SCO in mg/Kg	Sample Results Concentration Range mg/Kg	Number of Samples Exceeding Part 375 Restricted Residential SCO in Dec 06	Number of Samples Exceeding Part 375 Restricted Residential SCO in Sep 08
Benzo(a)anthracene	1	ND to 15	7 of 31	1 of 11

The first objective of the SC Addendum was satisfied. An off-site or upgradient source of BTEX was not identified. Concentrations of BTEX compounds in upgradient wells MW-1, MW-6 and MW-8 were less than BTEX concentrations observed in MW-2 or MW-3. BTEX compounds were not detected in downgradient well MW-4. BTEX concentrations in MW-9 were greater than observed in MW-2 or MW-3; however assessment of groundwater readings

shows that MW-9 is crossgradient from both MW-2 and MW-3, so it is unlikely that the area around MW-9 would be a source of the BTEX observed in MW-2 and MW-3. This corroborates the conclusions of the SC Report, which indicated that the BTEX compounds observed in MW-2 and MW-3 were localized or attenuated rapidly in the downgradient direction.

The second objective of the SC Addendum was also satisfied. The holder area was investigated and the field observations and analytical testing of soil and groundwater inside and outside the holder revealed that the subsurface conditions in the vicinity of the holder were not different from the urban fill encountered across the Site, as described in the SC Report. Consistent with the data given in the SC Report, NAPL was not encountered in any of the test pits, soil borings, or monitoring wells. The location of the holder was confirmed. No apparent MGP-related on-site sources of soil or groundwater contamination were identified.

5. SUMMARY AND CONCLUSIONS

This section summarizes the data and information collected to prepare this SC Addendum and the data collected from the initial SC investigation described in the January 2008 SC Report prepared by Haley & Aldrich, which has been submitted to the NYSDEC. The 2008 Site Characterization Report indicated that neither coal tar nor NAPL were encountered and no apparent MGP-related on-site sources of soil contamination were identified. The investigation activities did identify that the Site is comprised of fill material and reworked soil that did show low level concentrations of some heavy molecular weight polycyclic aromatic hydrocarbons (PAHs) and inorganic compounds at random locations both within and outside of the foot print of the former MGP boundaries. The random nature and distribution (i.e., no discernable pattern in depth or lateral coverage) of the PAHs and inorganic compounds in the fill are not indicative or representative of a single source or type of source, and are similar to typical urban background conditions. Groundwater quality across the Site was generally below AWQS with the exception of some low level detections of BTEX (benzene, toluene, ethylbenzene, and xylene), naphthalene and chlorinated solvents in the area of the former gas holder foundation (MW-2 & MW-3). However, the lack of MGP source material found during the investigation makes the origin or source of the detections unknown; the detections are likely artifacts of the long industrial uses of the property after the MGP closed. As such, further characterization of site soils by RG&E was not recommended.

Prior to formalizing its review comments on the January 2008 Site Characterization Report, the NYSDEC asked RG&E to collect additional data at the Site. The work was performed in accordance with the NYSDEC-approved Site Characterization Work Plan Addendum, dated 20 May 2008 (SCWPA).

The results of the investigation performed to prepare this SC Addendum are summarized below:

- Consistent with the first phase of SC investigations, neither coal tar nor NAPL were observed.
- Analytical results from the groundwater sample collected from the newly installed upgradient monitoring well (MW-8) did not detect BTEX compounds.
- Analytical results from the groundwater sample collected from the newly installed cross-gradient monitoring well (MW-9) did detect BTEX and several other volatile organic compounds (VOCs) above drinking water-based groundwater quality standards.
- Analytical results from soil samples collected within the footprint of the former gasholder beneath the 90 Canal Street building did not detect VOCs above NYSDEC Part 375 residential standards and/or TAGM 4046 recommend soil cleanup objectives (SCOs).
- Nearly all VOCs in soil samples collected from the test pits located in and outside of the foundation of the former gasholder were at concentrations below laboratory detection limits.
- While a single sample collected from 1 to 3 feet below ground surface in test pit TP-2 detected seven PAHs above NYSDEC Part 375 residential standards, the sample matrix consisted of dark brown to gray-brown to black silty sand with coal dust and particles, wood cinders, and ash. The wood cinders and ash were not typical of the fill encountered in the other test pits. The sample was collected from an area proximate to a former rail road track that existed on the property between 1918 and 1971. The results appear to be reflective of the fill material sampled, rather than any specific source.

- Analytical results from the groundwater sample collected from the sump in the basement of 90 Canal Street did not detect BTEX compounds or naphthalene.
- Analytical results from the groundwater samples collected from the existing groundwater monitoring wells were generally consistent with previous sample results finding limited magnitude detections of volatile and semi-volatile compounds which attenuated across the Site.
- Inorganic compounds detected in both the soil and groundwater samples were typical of what is commonly found in soils and bedrock in the Rochester area.
- The foundation wall of the former gas holder was encountered, confirming its location.
- The objectives of the Addendum were satisfied.

In review the data collected during both phases of the SC investigations conducted for the Site, the following presents a summary of the conclusions that have been drawn.

- Coal tar or NAPL were not observed in any of the soil borings, groundwater well boring installations, or test pits;
- No apparent on-site MGP sources of groundwater contamination were identified;
- Groundwater quality across the Site was generally below NYS ambient water quality standards, with the exception of some low level detection of BTEX, naphthalene, and a few chlorinated VOCs in the area of the former gas holder. The source or origin of these detections were not observed and the presence of these constituents typical of urban fill;
- The low magnitude concentrations of BTEX and naphthalene in groundwater samples collected in the area of the former gas holder were higher than concentrations detected in the upgradient monitoring wells. This may be reflective of former MGP operations or other historic industrial operations at the Site. Monitoring wells located relatively short distances downgradient from the former gas holder area did not detect MGP organic constituents above the NYS ambient water quality standards, indicating exceedances are localized and/or rapid attenuation is taking place. Other non-MGP organic constituents were detected on-site and in the study area;
- The low levels of VOC constituents sporadically observed in a limited number of the samples of the soil/fill at the Site in excess of Part 375 SCOs and/or TAGM 4046 SCOs are randomly distributed (both within and outside of the footprint of the MGP boundaries) and do not appear to be indicative or representative of a source or type of source, but rather are widely dispersed and reflective of typical conditions associated with fill in urban settings;
- The former MGP operations do not appear to have left a residual source of contamination that adversely affects the environmental condition of the property;
- Further site characterization does not appear to be warranted, and the quantities and concentrations of contaminants in soil and groundwater do not indicate the need for remedial action.

Notes:
- Compounds with concentrations greater than Part 375 Restricted Residential soil cleanup objectives are shaded gray and bolded.
- Compounds with concentrations greater than TAGM #4046 soil cleanup objectives are shaded gray.
- Nondetected results with quantitation limits greater than Part 375 Restricted Residential soil cleanup objectives are italicized and bolded.
- Nondetected results with quantitation limits greater than TAGM #4046 soil cleanup objectives are italicized.

Data Qualifiers:
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J = The analyte was identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R = The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte can not be verified.

Acronyms
- ND = All analytes in this sample are nondetect.
- N/A = Data Not Available.

Notes:
- Compounds with concentrations greater than Part 375 Restricted Residential soil cleanup objectives are shaded gray and bolded.
- Compounds with concentrations greater than TAGM #4046 soil cleanup objectives are shaded gray.
- ND = All analytes in this sample are nondetect.
- N/A = Data Not Available.
- Total PAHs includes 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene.

Data Qualifiers:
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J = The analyte was identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Notes:
- Compounds with concentrations greater than Part 375 Restricted Residential soil cleanup objectives are shaded gray and bolded.
- Compounds with concentrations greater than TAGM #4046 soil cleanup objectives are shaded gray.
- ND = All analytes in this sample are nondetect.
- N/A = Data Not Available.
- Total PAHs includes 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene.

Data Qualifiers:
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J = The analyte was identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Notes:
- Compounds with concentrations greater than Part 375 Restricted Residential soil cleanup objectives are shaded gray and bolded.
- Compounds with concentrations greater than TAGM #4046 soil cleanup objectives are shaded gray.
- ND = All analytes in this sample are nondetect.
- N/A = Data Not Available.
- Total PAHs includes 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene.

Data Qualifiers:
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J = The analyte was identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Table 4
Groundwater Volatile Organic Compound Results
Canal Street, Rochester, New York
Page 3 of 3

Footnotes:
(1) Division of Water Technical and Operational Guidance Series (1.1.1). Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. June 1998.
(2) Applies to the sum of cis- and trans-1,3-dichloropropene.
(3) Applies to o-, m-, and p-xylene separately.
(4) Guidance value

Notes:
- Shaded values indicate concentrations that exceed the TOGS Water Quality Standards.
- N/A - Data Not Available.
- "U" flagged constituents were *italicized* if the quantitation limit exceeded the TOGS Water Quality Standards.
***** indicate where reporting limit is greather than TOGS Water Quality Standards

Data Qualifiers:
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J = The analyte was identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However the reported quantitation limit is approximateand may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the samples and meet quality control criteria.

Footnotes:
(1) Division of Water Technical and Operational Guidance Series (1.1.1). Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. June 1998.
(2) Applies to sum of phenolic compounds.
(3) Guidance value

Notes:
- Shaded values indicate concentrations that exceed the TOGS Water Quality Standards.
- N/A - Data Not Available.
- "U" flagged constituents were *italicized* if the quantitation limit exceeded the TOGS Water Quality Standards.
***** indicate where reporting limit is greather than TOGS Water Quality Standards

Data Qualifiers:
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J = The analyte was identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the samples and meet quality control criteria.

Table 6
Groundwater Metals and Miscellaneous Parameter Results
Canal Street, Rochester, New York
Page 3 of 3

Footnotes:
(1) Division of Water Technical and Operational Guidance Series (1.1.1). Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. June 1998.
(2) Guidance value
(3) Standard for total iron and manganese is 500 ug/L.

Notes:
- Shaded values indicate concentrations that exceed the TOGS Water Quality Standards.
- N/A - Data Not Available.

Data Qualifiers:
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J = The analyte was identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria.

DESCRIPTION AND CLASSIFICATION OF ROCK

ROCK DESCRIPTIONS NOTED ON THE CORE BORING REPORTS ARE BASED ON MANUAL–VISUAL EXAMINATION OF CORE SAMPLES. THE CRITERIA, TERMS AND DEFINITIONS ARE LISTED BELOW.

FIELD HARDNESS: A MEASURE OF RESISTANCE TO SCRATCHING.

VERY HARD	VH	CANNOT BE SCRATCHED WITH A KNIFE OR SHARP PICK. BREAKING OF HAND SPECIMENS REQUIRES SEVERAL HARD BLOWS OF GEOLOGIST'S PICK.
HARD	H	CAN BE SCRATCHED WITH KNIFE OR PICK ONLY WITH DIFFICULTY. HARD BLOW OF HAMMER REQUIRED TO DETACH HAND SPECIMEN.
MODERATELY HARD	MH	CAN BE SCRATCHED WITH KNIFE OR PICK. GOUGES OR GROOVES TO 1/4 IN. DEEP CAN BE EXCAVATED BY HARD BLOW OF POINT OF A GEOLOGIST'S PICK. HAND SPECIMENS CAN BE DETACHED BY MODERATE BLOW.
MEDIUM	M	CAN BE GROOVED OR GOUGED 1/16 IN. DEEP BY FIRM PRESSURE ON KNIFE OR PICK POINT. CAN BE EXCAVATED IN SMALL CHIPS TO PIECES ABOUT 1 IN. MAXIMUM SIZE BY HARD BLOWS OF THE POINT OF A GEOLOGIST'S PICK.
SOFT	S	CAN BE GOUGED OR GROOVED READILY WITH KNIFE OR PICK POINT. CAN BE EXCAVATED IN CHIPS TO PIECES SEVERAL INCHES IN SIZE BY MODERATE BLOWS OF A PICK POINT. SMALL THIN PIECES CAN BE BROKEN BY FINGER PRESSURE.
VERY SOFT	VS	CAN BE CARVED WITH KNIFE. CAN BE EXCAVATED WITH POINT OF PICK. PIECES 1 IN. OR MORE IN THICKNESS CAN BROKEN WITH FINGER PRESSURE. CAN BE SCRATCHED READILY BY FINGERNAIL.

WEATHERING OF ROCK MASS:

FRESH	FR	NO VISIBLE SIGN OF ROCK MATERIAL WEATHERING: PERHAPS SLIGHT DISCOLORATION ON MAJOR DISCONTINUITY SURFACES.
SLIGHTLY WEATHERED	SW	DISCOLORATION INDICATES WEATHERING OF ROCK MATERIAL AND DISCONTINUITY SURFACES. ALL THE ROCK MATERIAL MAY BE DISCOLORED BY WEATHERING AND MAY BE SOMEWHAT WEAKER EXTERNALLY THAN IN ITS FRESH CONDITION.
MODERATELY WEATHERED	MW	LESS THAN HALF OF THE ROCK MATERIAL IS DECOMPOSED AND/OR DISINTEGRATED TO SOIL. FRESH OR DISCOLORED ROCK IS PRESENT EITHER AS A CONTINUOUS FRAMEWORK OR AS CORESTONES.
HIGHLY WEATHERED	HW	MORE THAN HALF OF THE ROCK MATERIAL IS DECOMPOSED AND/OR DISINTEGRATED TO A SOIL. FRESH OR DISCOLORED ROCK IS PRESENT EITHER AS A DISCONTINUOUS FRAMEWORK OR AS CORESTONES.
SAPROLITE (COMPLETELY WEATHERED)	CW	ALL ROCK MATERIAL IS DECOMPOSED AND/OR DISINTEGRATED TO SOIL. THE ORIGINAL MASS STRUCTURE IS STILL LARGELY INTACT.
RESIDUAL SOIL	RS	ALL ROCK MATERIAL IS CONVERTED TO SOIL. THE MASS STRUCTURE AND MATERIAL FABRIC ARE DESTROYED. THERE IS A LARGE CHANGE IN VOLUME BUT THE SOIL HAS NOT BEEN SIGNIFICANTLY TRANSPORTED.

COLOR: ROCK COLOR IS DESCRIBED IN BASIC TERMS SUCH AS BROWN, RED–BROWN, GRAY, GREEN GRAY, AND WHITE. THESE TERMS ARE OFTEN GIVEN MODIFIERS SUCH AS LIGHT GRAY OR DARK GRAY.

TEXTURE:

APHANITIC	GRAINS NOT INDIVIDUALLY VISIBLE TO THE UNAIDED EYE.
FINE–GRAINED	GRAINS BARELY VISIBLE TO THE UNAIDED EYE, UP TO 1/16 INCH IN DIAMETER.
MEDIUM–GRAINED	GRAINS BETWEEN 1/16 AND 3/16 INCH IN DIAMETER.
COARSE–GRAINED	GRAINS BETWEEN 3/16 AND 1/4 INCH IN DIAMETER.
VERY COARSE–GRAINED	GRAINS LARGER THAN 1/4 INCH IN DIAMETER.

BEDDING OR FOLIATION:

TERM	INCHES
LAMINAE	LESS THAN 1/16
EXTREMELY THIN	1/16–3/4
VERY THIN	3/4 to 2–1/2
THIN	2–1/2 to 8
MEDIUM	8–24
THICK	24–80
VERY THICK	80–240
MASSIVE	> 240
OCCASIONAL	OCCURRING ONCE OR LESS PER FOOT.
FREQUENT	OCCURRING MORE THAN ONCE PER FOOT.
INTERBEDDED	ALTERNATING MATERIALS OF DIFFERING COMPOSITION VARYING IN THICKNESS IN APPROXIMATELY EQUAL AMOUNTS.

DISCONTINUITIES:

EF APPEARS IN THE FRACTURES/FT COLUMN WHERE THERE IS A FRACTURED ZONE AT LEAST 8 INCHES IN LENGTH. FRACTURED ZONES SHORTER THAN 8 INCHES ARE COUNTED AS JOINTS IN THE FRACTURES/FT COLUMN. ASTERISKS ACCOMPANY NUMBERS IN THE FRACTURES/FT COLUMN WHERE THERE ARE FRACTURED ZONES AS WELL AS SINGLE JOINTS COUNTED IN ONE FOOT. TEXT NOTES AT CORRESPONDING DEPTHS ARE MARKED WITH ASTERISKS.

SPACING:

TERM	ABBREVIATION	INCHES
EXTREMELY CLOSE	EC	< 3/4
VERY CLOSE	VC	3/4 to 2–1/2
CLOSE	C	2–1/2 to 8
MODERATE	M	8 to 24
WIDE	W	24 to 80
VERY WIDE	VW	80 to 240
EXTREMELY WIDE	EW	>240

TYPE	ABBREVIATION	DESCRIPTION
JOINT	J	A NATURAL FRACTURE ALONG WHICH NO DISPLACEMENT HAS OCCURED. MAY OCCUR IN PARALLEL GROUPS CALLED SETS.
SHEAR	S	A NATURAL FRACTURE ALONG WHICH DIFFENTIAL MOVEMENT HAS OCCURED. MAY BE SLICKENSIDED OR STRIATED.
FAULT	F	A NATURAL FRACTURE ALONG WHICH DISPLACEMENT HAS OCCURRED. USUALLY LINED WITH GOUGE AND SLICKENSIDES.
BEDDING JOINT	BJ	JOINTS WHICH OCCUR ALONG BEDDING PLANES.
CLEAVAGE JOINT	CJ	JOINTS WHICH OCCUR ON THE SAME PLANE AS THE CLEAVAGE OF THE ROCK MASS.
SHEAR ZONE	SZ	ZONE OF FRACTURED ROCK AND GOUGE BORDERING THE DISPLACEMENT PLANE.

NOTE: SHEAR ZONES ARE OFTEN DESCRIBED WITHIN THE VISUAL DESCRIPTION AND REMARKS COLUMN ON THE CORE BORING REPORT.

FRACTURES PER FOOT: NUMBER OF NATURALLY OCCURING FRACTURES PER FOOT OF ROCK CORE PRIOR TO REMOVAL OF ROCK FROM THE CORE BARREL. THIS DOES NOT INCLUDE HEALED DISCONTINUITIES.

DIP:

TERM	ABBREVIATION	ANGLE (DEGREES)
HORIZONTAL	H	0–5
LOW ANGLE	LA	5–35
MODERATELY DIPPING	MD	35–55
HIGH ANGLE	HA	55–85
VERTICAL	V	85–90

ROUGHNESS: OF DISCONTINUITY SURFACE.

INTERMEDIATE SCALE	ABBREVIATION	SMALL SCALE	ABBREVIATION
STEPPED	S	ROUGH	R
UNDULATING	U	SMOOTH	Sm
PLANAR	P	SLICKENSIDED	K
COULD NOT BE DETERMINED	X	COULD NOT BE DETERMINED	X

WEATHERING OF DISCONTINUITY SURFACES:

TYPE	ABBREVIATION	DESCRIPTION
FRESH	FR	NO VISIBLE SIGN OF WEATHERING OF THE ROCK MATERIAL.
DISCOLORED	DS	THE COLOR OF THE ORIGINAL FRESH ROCK MATERIAL IS CHANGED. THE DEGREE OF CHANGE FROM THE ORIGINAL COLOR SHOULD BE INDICATED. IF THE COLOR CHANGE IS CONFINED TO PARTICULAR MINERAL CONSTITUENTS THIS SHOULD BE DOCUMENTED ON LOGS.
DECOMPOSED	DE	THE ROCK IS WEATHERED TO THE CONDITION OF A SOIL IN WHICH THE ORIGINAL MATERIAL FABRIC IS STILL INTACT, BUT SOME OR ALL OF THE MINERAL GRAINS ARE DECOMPOSED.
DISINTEGRATED	DG	THE ROCK IS WEATHERED TO THE CONDITION OF A SOIL IN WHICH THE ORIGINAL FABRIC IS STILL INTACT. THE ROCK IS FRIABLE, BUT THE MINERAL GRAINS ARE NOT DECOMPOSED.

DISCONTINUITY INFILLING:

TERM	ABBREVIATION
CLAY	CL
SILT	SI
CALCITE	CA
QUARTZ	QZ
CHLORITE	CH
IRON OXIDE STAINING	FE
COULD NOT BE DETERMINED	X

SOLUTION CAVITIES:

TERM	Size
PIT	BARELY VISIBLE – 0.25 in.
VUG	0.25 – 2 in.
CAVITY	2 – 24 in.
CAVE	> 24 in.

LITHOLOGY: MUDSTONE, SILTSTONE, SANDSTONE, CLAYSTONE, ETC.

GENERAL NOTES

1. USE OF A DASH WITH DESCRIPTIVE ABBREVIATIONS (I.E., MH–VS) INDICATES A RANGE IN THE PHYSICAL PROPERTIES (I.E., MODERATELY HARD TO VERY SOFT).
2. A SOLID LINE INDICATES A WELL–DEFINED ABRUPT LITHOLOGIC (ROCK TYPE) CHANGE. A DASHED LINE INDICATES A POORLY DEFINED, GRADATIONAL LITHOLOGIC CHANGE.
3. DESCRIPTIVE TERMINOLOGY ARE GENERALIZED TO DESCRIBE THE AVERAGE CONDITION OF THE ROCK. PORTIONS OF THE ROCK DESCRIBED MAY VARY FROM THE GENERALIZED DESCRIPTION.
4. RQD REFERS TO THE ROCK QUALITY DESIGNATION WHICH IS A MODIFIED CORE RECOVERY PERCENTAGE IN WHICH ALL PIECES OF SOUND CORE OVER 4 INCHES LONG ARE SUMMED AND DIVIDED BY THE LENGTH OF THE CORE RUN. CORE THAT HAS BEEN DESCRIBED AS HIGHLY OR COMPLETELY WEATHERED OR RESIDUAL SOIL WAS NOT INCLUDED IN THE RQD DETERMINATION.

   IF THE ROCK CORE IS BROKEN BY HANDLING OR DRILLING PROCEDURES, THE PIECES ARE FITTED TOGETHER AND ARE COUNTED AS ONE PIECE PROVIDED THEY CONSTITUTE THE MINIMUM 4 INCH LENGTH. WHERE THE RECOVERY FOR A CORE RUN IS GREATER THAN 100%, RQD VALUES ARE ADJUSTED ACCORDINGLY TO ACCOUNT FOR THE PORTION OF THE CORE RUN LEFT IN THE HOLE FROM THE PREVIOUS CORE RUN. ALL LENGTH DETERMINATIONS ARE MEASURED DOWN THE CENTERLINE OF THE CORE.

IDENTIFICATION AND DESCRIPTION OF SOIL MATERIALS

Soil description on logs of subsurface explorations are based on Standard Penetration Test results, visual–manual examination of exposed soil and soil samples, and the results of laboratory tests on selected samples. The criteria, descriptive terms and definitions are as follows:

DENSITY OR CONSISTENCY

Density of Cohesionless Soils	Penetration Resistance (Blows per ft.)	Consistency of Cohesive Soils	Penetration Resistance (Blows per ft.)
Very Loose	0–4	Very Soft	0–2
Loose	5–10	Soft	3–4
Medium	11–30	Medium	5–8
Dense	31–50	Stiff	9–15
Very Dense	over 50	Very Stiff	16–30
		Hard	over 30

PENETRATION RESISTANCE

Standard Penetration Test (ASTM D–1586) – Number of blows required to drive a standard 2 in. O.D. split spoon sampler 1 ft. with a 140 lb. weight falling freely through 30 in.

COLOR: Basic colors and combinations: black, brown, gray, yellow–brown, etc.

SUPPLEMENTAL SOIL TERMINOLOGY:

Lamina	– 0 to 1/16 in. thick (cohesive)
Parting	– 0 to 1/16 in. thick (granular)
Seam	– 1/16 to 1/2 in. thick
Layer	– 1/2 to 12 in. thick
Stratum	– > 12 in. thick
Pocket	– Small, erratic deposit less than 12 in. size
Lens	– Lenticular deposit larger than a pocket
Occasional	– One or less per 12 in. of thickness
Frequent	– More than one per 12 in. of thickness
Interbedded	– Alternating soil layers of differing composition
Varved	– Alternating thin seams of silt and clay
Mottled	– Variation of color

GEOLOGIC INTERPRETATION

Deposit type – GLACIAL TILL, ALLUVIUM, FILL.....

The natural soils are identified by criteria of Unified Soil Classification System (USCS), with appropriate group symbol in parenthesis for each soil description. Fill materials may not be classified by USCS criteria.

U.S. Standard Series Seive							Clear Square Sieve Openings
12"	3"	3/4"	4	10	40	200	
Boulders	Cobbles	Gravel		Sand			Silts and Clays
		Coarse	Fine	Coarse	Medium	Fine	
305 mm	76 mm	19 mm	4.75 mm	2.00 mm	0.43 mm	0.074 mm	

UNIFIED SOIL CLASSIFICATION SYSTEM

MAJOR DIVISIONS			Group Symbol	Graphic Symbol	TYPICAL NAMES
Coarse grained soils: more than half is larger than number 200 sieve	Gravels More than half of coarse fraction is larger than number 4 sieve	Gravels with little or no fines	GW		Well graded gravels, gravel–sand mixtures
			GP		Poorly graded gravels, gravel–sand mixtures
		Gravels with over 12% fines	GM		Silty gravels, poorly graded gravel–sand–silt mixtures
			GC		Clayey gravels, poorly graded gravel–sand–clay mixtures
	Sands More than half of coarse fraction is smaller than number 4 sieve	Sands with little or no fines	SW		Well graded sands, gravelly sands
			SP		Poorly graded sands, gravelly sands
		Sands with over 12% fines	SM		Silty sands, poorly graded sand–silt mixtures
			SC		Clayey sands, poorly graded sand–clay mixtures
Fined–grained soils: more than half smaller than number 200 sieve	Silts and Clays Liquid limit 50% or less		ML		Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
			CL		Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL		Organic clays and organic silty clays of low plasticity
	Silts and Clays Liquid limit greater than 50%		MH		Inorganic silty, micaceous or diatomaceous fine sandy or silty soils, elastic silts
			CH		Inorganic clays of high plasticity, fat clays
			OH		Organic clays of medium to high plasticity, organic silts
Highly organic soils			PT		Peat and other highly organic soils

GENERAL NOTES

1. Logs of subsurface explorations depict soil and groundwater conditions only at the locations specified on the dates indicated. Subsurface conditions may vary at other locations and at other times.
2. Water levels noted on the logs were measured at the times and under the conditions indicated. During test borings, these water levels could have been affected by the introduction of water into the borehole, extraction of tools on other procedures and thus may not reflect actual groundwater level at the test boring location. Groundwater level fluctuations may also occur as a result of variations in precipitation, temperature, season, tides, adjacent construction activities and pumping of water supply wells and construction dewatering systems.

NOTES:

1. ELEVATIONS ARE IN FEET AND REFER TO NAVD88.
2. OFFSET DISTANCES INDICATED ARE MEASURED FROM THE PLAN ELEVATION OF THE PROFILE LINE, PERPENDICLUAR TO THE LINE.
3. WATER LEVELS IN OPEN BOREHOLES WERE OBSERVED ON THE DATE INDICATED ON THE BORING LOG. INDICATED LEVELS MAY NOT REFLECT THE ACTUAL GROULDWATER. FLUCUATIONS IN GROUNDWATER LEVELS CAN OCCUR DUE TO VARIATIONS IN PRECIPITATION, SEASONS, WATER TABLE FLUCTUATION, ADJACENT CONSTRUCTION ACTIVITY, CONSTRUCTION DEWATERING SYSTEMS AND OTHER FACTORS.
4. REFER TO THE REPORT APPENDICES FOR TEST BORING LOGS.
5. THE STANDARD PENETRATION RESISTANCE, "N", IS DEFINED AS THE NUMBER OF BLOWS OF A 140-LB HAMMER FALLING THROUGH A VERTICAL DISTANCE OF 30 INCHES REQUIRED TO DRIVE A 2-INCH O.D., $1\frac{3}{8}$-INCH I.D. SPLIT SPOON SAMPLER 12 INCHES.
6. REFER TO THE REPORT TEXT FOR MORE DETAILED SOIL STRATUM DESCRIPTIONS AND THE TEST BORING LOGS FOR DETAILED SAMPLE DESCRIPTIONS.
7. SUBSURFACE PROFILES DEPICT THE GENERAL GEOLOGIC CONDITIONS AT THE SITE AND ARE BASED ON INTERPRETATION OF DATA ENCOUNTERED IN THE EXPLORATIONS. LINES REPRESENTING INTERFACES BETWEEN STRATA ON THE PROFILE ARE BASED ON ADJACENT BORINGS. THE BORING STICK SHOWS THE INTERPRETED SEQUENCE OF STRATA ENCOUNTERED AT THAT LOCATION. ACTUAL SOIL CONDITIONS AND INTERFACES BETWEEN EXPLORATIONS MAY VARY SIGNIFICANTLY FROM THOSE INDICATED ON THE PROFILES.

- 65 TROWBRIDGE STREET PARCEL
- 90 CANAL STREET PARCEL
- APPROXIMATE LIMITS OF FORMER MUNICIPAL GAS LIGHT COMPANY MANUFACTURED GAS PLANT
- RAILROAD
- PARCEL BOUNDARY LINE
- HISTORIC SITE FEATURES

Soil = White
Groundwater = Gray

EXPLORATION COLOR LEGEND:

- LOCATION WITH NO EXCEEDANCES OF PART 375 RESTRICTED RESIDENTIAL SCO's
- LOCATION WITH ONE OR MORE EXCEEDANCES OF PART 375 RESTRICTED RESIDENTIAL SCO's

NOTES:

1. GROUNDWATER UNITS IN UG/L. SOIL UNITS IN UG/KG.
2. CHEMICALS SHOWN IN DATABOXES HAVE SAMPLE RESULT(S) GREATER THAN ONE OR MORE CRITERIA AT THE LOCATION.
3. SOIL SCREENING CRITERIA CODES ARE SHOWN IN [ ]. SOIL SHOWN IN WHITE BOXES.
   [A] - INDICATES RESULT IS GREATER THAN PART 375 RESTRICTED RESIDENTIAL USE CRITERIA.
   [B] - INDICATES RESULT IS GREATER THAN PART 375 RESTRICTED COMMERCIAL USE CRITERIA.
4. GROUNDWATER SCREENING CRITERIA CODES ARE SHOWN IN [ ]. GROUNDWATER SHOWN IN GRAY BOXES.
   [C] - INDICATES RESULT IS GREATER THAN NYSDEC TOGS 1.1.1 CLASS GA WATER QUALITY STANDARDS.
5. QUALIFIERS ARE AS FOLLOWS:
   J - THE ANALYTE WAS POSITIVELY IDENTIFIED; THE ASSOCIATED NUMERICAL VALUE IS THE APPROXIMATE CONCENTRATION OF THE ANALYTE IN THE SAMPLE.
   U - THE ANALYTE WAS ANALYZED FOR BUT WAS NOT DETECTED ABOVE THE REPORTED SAMPLE QUANTITATION LIMIT.
   UJ - THE ANALYTE WAS NOT DETECTED ABOVE THE REPORTED SAMPLE QUANTITATION LIMIT. HOWEVER, THE REPORTED QUANTITATION LIMIT IS APPROXIMATE AND MAY OR MAY NOT REPRESENT THE ACTUAL LIMIT OF QUANTITATION NECESSARY TO ACCURATELY AND PRECISELY MEASURE THE ANALYTE IN THE SAMPLE.
6. LOCATIONS OF SOIL BORINGS AND MONITORING WELLS WERE SURVEYED BY PARRONE ENGINEERING.
7. BASE PLAN ILLUSTRATING EXISTING SITE STRUCTURES AND FEATURES DERIVED FROM PARRONE ENGINEERING DRAWING 6192.DWG.
8. METALS AND SVOCS LABORATORY RESULTS FOR OCTOBER 2007 MAY NOT BE REPRESENTATIVE OF THE GROUNDWATER CONDITION AT THIS LOCATION DUE TO SUSPENDED SOIL PARTICLES IN THE SAMPLES FOR MW-1, MW-4, MW-5, AND MW-6.
9. METALS AND SVOCs LABORATORY RESULTS FOR SEPTEMBER 2008 MAY NOT BE REPRESENTATIVE OF THE GROUNDWATER CONDITION AT THIS LOCATION DUE TO SUSPENDED SOIL PARTICLES IN THE SAMPLES FOR MW-4 AND MW-9.

APPENDIX E

Laboratory Analytical Results and DUSRs

MEMORANDUM

12 December 2008
File No. 33879-007

TO: Jon Babcock
Sr. Engineer

FROM: Michael G. Nickelsen
Sr. Scientist

SUBJECT: RG&E Canal Street Data Validation

Analytical results for environmental samples associated with Severn Trent Laboratories, Inc. laboratory data packages A08-A475 and A08-B653 were reviewed to determine the data usability. Each laboratory data package was reviewed with guidance provided by the United States Environmental Protection Agency (USEPA) **National Functional Guidelines for Organic Data Review** (EPA 540/R-99/008, Oct 1999), and/or **National Functional Guidelines for Inorganic Data Review** (EPA 540-R-04-004, Oct 2004) and **NYSDEC Guidance for the Development of Quality Assurance Plans and Data Usability Summary Reports (DUSR)**, September 1997. Laboratory method specific criteria as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996 were used, where applicable, if the analytical anomaly identified was not addressed by the guidelines referenced above.

Data validation of the analytical results was performed by Ethan G. Lee and reviewed and approved by me.

Data Usability Summary Report (DUSR)
Canal St. Rochester Former MGP Site
Analytical Laboratory: TestAmerica, Inc. – Buffalo, NY
Sample Delivery Group # A475

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from th following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Inorganic Data Review (EPA 540-R-04-004)
- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or
  USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004)
- NYSDEC "Guidance for the Development of Quality Assurance Plans and
  Data Usability Summary Reports (DUSR)", September 1997

and method protocol criteria where applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Sample ID
90 CANAL ST SUMP	TB-082508
DUP-082808	TB-082808
EB-082908	TP1-S1(10-11)
EB-090208	TP2-S1(1-3)
EB-082508	TP2-S2(8-10)
EB-082608	TP3-S1(4-6)
EB-082808	TP3-S2(7-9)
MW-8 S2(4-6)	TP4-S1(8-10)
MW-9 S3(4-5)	TB-082908
SB-20 S1(4-6)	
SB-21 S1(0.5-2.5)	
SB-21 S4(6.5-8.5)	
TB-090208	

Project Samples were analyzed according to the following analytical methods:

	Parameter	Analytical Method	Holding Time Criteria
1.	VOCs	EPA 8260B	14 days
2.	SVOCs (BNAs)	EPA 8270C	14 days ext/40 days analysis
3.	ICP Metals	EPA 6010B	180 days
4.	Mercury	EPA 7471A	28 days
5.	Mercury	EPA 7470A	28 days
6.	Cyanide, Total	EPA 9012A	14 days
7.	Cyanide, Total	EPA 9012	14 days

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed.

- Holding Times
- GC/MS Instrument Performance Check
- Initial Calibration Procedures
- Continuing Calibration Procedures
- Blank Sample Analysis
- System Monitoring Compound Recoveries
- Laboratory Control Samples, Matrix Spike/Matrix Spike Duplicate Recoveries
- Internal Standard Recoveries
- Duplicate Sample Analysis
- ICP Interference Check Sample Performance
- ICP Serial Dilution Replicate Percent Difference

- Sample Data Reporting Format
- Data Qualifiers
- Summary

Preservation and Holding Times

Maximum allowable holding times, measured from the time of sample collection to the time of sample preparation or analysis, were met for each project sample analyzed as part of this sample delivery group. No qualification of the data is recommended.

GC/MS Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Procedures

Initial instrument calibration procedures for the analysis of project samples were consistent with the guidelines prescribed by EPA protocols, with the following exception(s):

During the analysis of VOCs (SW846 8260B), the initial calibration standards for the following target compound(s) exhibited a percent relative standard deviation (%RSD) greater than the acceptance criteria of 30% and/or a RRF less than 0.05:

Inst.	Date / Time	Target Analyte(s)	%RSD	RRF	Affected Sample(s)	Corrective Action
N	09/05/08 1507	Methylene Chloride	43.30	0.82	EB-090208 TB-090208	See Action #1 Below
P	07/23/08 1550	Methylene Chloride Bromoform	37.70 40.00	0.56 0.33	EB-082508 EB-082608 TB-082508	See Action #1 Below See Action #1 Below

		4,6-Dinitro-2-methylphenol	36.00	0.10		See Action #1 Below
		Pentachlorophenol	35.80	0.10		See Action #1 Below

Action #1

Positive results are qualified "J", estimated and non-detected analytes as "UJ", estimated detection limit.

Continuing Calibration Procedures

Continuing calibration verification (CCV) procedures for the analysis of project samples were consistent with the guidelines prescribed by EPA protocols, with the following exception(s):

During the analysis of VOCs (SW846 8260B), the continuing calibration verification (CCV) standards for the following target compound(s) exhibited a percent drift (%D) greater than the acceptance criteria of 25% and/or a RRF less than 0.05:

Inst.	Date / Time	Target Analyte(s)	%D	RRF	Affected Sample(s)	Corrective Action
F	08/28/08 1039	1,1,2-Trichloro-1,2,2-trifluoroethane	-27.10	0.19	SB-20 S1(4-6) TP1-S1(10-11) TP2-S1(1-3) TP2-S2(8-10) TP3-S1(4-6) TP3-S2(7-9) TP4-S1(8-10)	See Action #1 Below

Action #1
Positive results are qualified "J", estimated and non-detected analytes as "UJ", estimated detection limit.

During the analysis of Metals (EPA Methods 6010B/6020/7470A/7471A), the continuing calibration standards for the following target compound(s) exhibited a percent recovery (%R) outside the acceptance criteria of 75-125%:

Inst.	Date / Time	Target Analyte(s)	%R	Affected Sample(s)	Positive Results	Non Detect (ND)
SUPERTRACE	09/04/08 0707	Beryllium	111.00	90 CANAL ST SUMP DUP-082808	J	

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the projec sample is less than or equal to 10 times (10X) the amount in any blank for metals and the common organic laboratory contaminants (methylen chloride, acetone, 2-butanone, cyclohexane, and phthalate esters), or 5 times (5X) the amount for other target compounds. Target compounds were not detected in associated blank samples (trip, equipment, method) prepared and analyzed concurrently with the project samples, with the following exception(s):

Blank	Target Analyte(s)	Concn.	Affected Sample(s)	Flag sample results with a "U" if < to this value

System Monitoring Compound Recoveries

System monitoring/surrogate compounds are added to each sample prior to analysis of organic parameters by EPA Methods 8260B, 8270C and/or 8082 to confirm the efficiency of the sample preparation procedure. The calculated recovery for each surrogate compound was evaluated to confirm the accuracy of the reported results. The calculated recovery of these compounds fell within the laboratory specific quality control criteria. In a few instances, sample extracts required dilution prior to analysis to either improve instrument performance by minimizing matrix interference or enable quantification of the detected target analytes within the instrument calibration range. Where applicable, the laboratory qualified the reported results indicating the system monitoring compound recovery could not be calculated due to a sample extract dilution. In cases where the instrument resolution appeared to be unaffected by the diluted sample matrix, the sample results were accepted without qualification. No qualification of the data is recommended.

Laboratory Control Samples, Matrix Spike/Matrix Spike Duplicate Recoveries

Analytical precision and accuracy was evaluated based on the laboratory control and matrix spike sample analyses performed concurrently with the project samples. For matrix spike samples, after the addition of a known amount of each target analyte to the sample matrix, the sample was analyzed to confirm the ability to identify these compounds within the sample matrix. For LCS analyses, after the addition of a known amount of each target analyte into laboratory reagent water, the sample was analyzed to confirm the ability of the analytical system to accurately quantify the compounds. The reported recovery of MS/MSD and LCS analyses fell within the laboratory QA acceptance criteria, with the following exception(s):

LCS ID / Project Sample MS	Target Analyte(s)	%R Criteria	%R	Affected Sample(s)
MW-9 S3(4-5)MS	Trichloroethene	74 - 127	61	DUP-082808
	Benzene	74 - 127	62	MW-8 S2(4-6)

Action:

If the LCS %R is greater than the upper acceptance limit, associated target analyte positive results are qualified "J" and non-detects should not be qualified. If the LCS %R is less than the lower acceptance limit associated target analyte positive results are qualified "J" and non-detects are qualified "R". If the MS/MSD is from a project sample and the %R greater than the upper acceptance limit, associated target analyte positive results are qualified "J" and non-detects should not be qualified. If the MS/MSD %R is >10%, but less than the lower acceptance limit, associated analyte positive results are qualified "J" and non-detects are qualified "UJ". If the MS/MSD %R is less than 10% associated target analyte positive results are qualified "J" and non-detects are qualified "R". MS/MSD qualifiers are only applied to affected samples of the same matrix. If the MS/MSD is a LAB sample do not qualify project samples.

LCS ID / Project Sample MS	Type	Target Analyte(s)	%R	Affected Sample(s)	Positive Results	Non Detect (ND)

Internal Standard Recoveries

Internal Standard compounds were added to each sample matrix prior to the analysis of organic parameters by EPA Methods 8260B and/or 8270C to quantify the amount of the target compounds detected within each sample. The calculated response of each IS compound fell within the QA/QC criteria of +100% and – 50% of the corresponding CCV standard. No qualification of the data is recommended.

Duplicate Sample Analysis

The replicate percent difference (RPD) was evaluated for each duplicate sample pair to monitor the reproducibility of the data. The RPD for each sample pair was within the QA/QC limit of 30% for aqueous samples and 50% for solid matrices, for those target analytes with sample concentrations >5X the MDL. No qualification of the data is recommended.

ICP Interference Check Sample Performance

The results of the ICP Interference Check Samples analyzed concurrently with the project samples were all within the acceptance criteria +/- 20% of true value as prescribed by USEPA guidance. No qualification of the data is recommended.

ICP Serial Dilution Replicate Percent Difference

The results of the ICP Serial Dilution samples analyzed concurrently with the project samples were in accordance with the EPA QA acceptance criteria of less than 10% RPD for those target analytes with sample concentrations >50X the MDL, with the following exception(s):

Serial Dilution ID	Target Analyte(s)	%D	Affected Sample(s)
MW-9 S3(4-5)	Barium	11	DUP-082808
	Calcium	11	MW-8 S2(4-6)
	Chromium	16	MW-9 S3(4-5)
	Copper	13	SB-20 S1(4-6)
	Magnesium	11	SB-21 S1(0.5-2.5)
	Nickel	14	SB-21 S4(6.5-8.5)
	Potassium	13	TP1-S1(10-11)
	Vanadium	11	TP2-S1(1-3)
			TP2-S2(8-10)
			TP3-S1(4-6)
			TP3-S2(7-9)
			TP4-S1(8-10)

Action:
For serial dilution %D results >10%, qualify results > the MDL as "J" and non-detects as "UJ".

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit but above the method detection limit, and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with EPA guidance.

Organic analyses samples that contained concentrations of target analytes at a reportable level in the associated method blanks were flagged b the laboratory with a "B". If the target analyte concentration was greater than 10 times (10X) the amount in any blank for the common laboratory contaminants or 5 times (5X) the amount for other target compounds, the "B" qualifier was not carried forward for database input; if less than the 10X or 5X rule the "B" qualifier was replaced with a "U". The "J" qualifier, which indicates an estimated value because the result was between the MDL and RL was carried through to the database.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

Data Usability Summary Report (DUSR)
Rochester Gas & Electric
Analytical Laboratory: TestAmerica, Inc. – Buffalo, NY
Sample Delivery Group # B653

Analytical results for the project samples were reviewed to evaluate the data usability. Data was assessed in accordance with guidance from th following Federal and/or State guidance documents:

- USEPA National Functional Guidelines for Inorganic Data Review (EPA 540-R-04-004)
- USEPA National Functional Guidelines for Organic Data Review (EPA 540/R-99/008) and/or
  USEPA National Functional Guidelines for Low Concentration Organic Data Review (EPA 540-R-04-004)
- NYSDEC "Guidance for the Development of Quality Assurance Plans and
  Data Usability Summary Reports (DUSR)", September 1997

and method protocol criteria where applicable as prescribed by "Test Methods for Evaluating Solid Waste", SW846, Update III, 1996.

This DUSR pertains to the following samples:

Sample ID	Sample ID
EB-092208	TB-092208
EB-092308	TB-092308
EB-092408	TRIP BLANK-092508

MW-9-092508	

Project Samples were analyzed according to the following analytical methods:

	Parameter	Analytical Method	Holding Time Criteria
1.	VOCs	EPA 8260B/624	14 days
2.	SVOCs (BNAs)	EPA 8270C/625	7 days ext/40 days analysis
3.	ICP Metals	EPA 6010B/200.7	180 days
4.	Mercury	EPA 7470A	28 days
5.	Cyanide, Total	EPA 9012A	14 days

The following items/criteria applicable to the analysis of project samples and associated QA/QC procedures were reviewed.

- Holding Times
- GC/MS Instrument Performance Check
- Initial Calibration Procedures
- Continuing Calibration Procedures
- Blank Sample Analysis
- System Monitoring Compound Recoveries
- Laboratory Control Samples, Matrix Spike/Matrix Spike Duplicate Recoveries
- Internal Standard Recoveries
- Duplicate Sample Analysis
- ICP Interference Check Sample Performance
- ICP Serial Dilution Replicate Percent Difference
- Target Compound Identification
- Sample Data Reporting Format

- Data Qualifiers
- Summary

Preservation and Holding Times

Maximum allowable holding times, measured from the time of sample collection to the time of sample preparation or analysis, were met for each project sample analyzed as part of this sample delivery group. No qualification of the data is recommended.

GC/MS Instrument Performance Check

GC/MS instrument performance checks for the instruments used in the analysis of project samples fell within method specific criteria without exception. No qualification of the data is recommended.

Initial Calibration Procedures

Initial instrument calibration procedures for the analysis of project samples were consistent with the guidelines prescribed by EPA protocols, with the following exception(s):

During the analysis of VOCs (SW846 8260B), the initial calibration standards for the following target compound(s) exhibited a percent relative standard deviation (%RSD) greater than the acceptance criteria of 30% and/or a RRF less than 0.05:

Inst.	Date / Time	Target Analyte(s)	%RSD	RRF	Affected Sample(s)	Corrective Action
G	10/08/08 1941	Methylene chloride	32.20	0.53	MW-3-092408 DL MW-9-092408 DL	See Action #1 Below

Action #1
Positive results are qualified "J", estimated and non-detected analytes as "UJ", estimated detection limit.

Blank Sample Analysis

In accordance with cited USEPA guidelines, positive sample results should be reported unless the concentration of the compound in the project sample is less than or equal to 10 times (10X) the amount in any blank for metals and the common organic laboratory contaminants (methylene chloride, acetone, 2-butanone, cyclohexane, and phthalate esters), or 5 times (5X) the amount for other target compounds. Target compounds were not detected in associated blank samples (trip, equipment, method) prepared and analyzed concurrently with the project samples, with the following exception(s):

Blank	Target Analyte(s)	Concn.	Affected Sample(s)	Flag sample results with a "U" if < to this value
EB-092308	Acetone	3.0 ug/L	MW-5-092308	30.0 ug/L

System Monitoring Compound Recoveries

System monitoring/surrogate compounds are added to each sample prior to analysis of organic parameters by EPA Methods 8260B, 8270C and/or 8082 to confirm the efficiency of the sample preparation procedure. The calculated recovery for each surrogate compound was evaluated to confirm the accuracy of the reported results. The calculated recovery of these compounds fell within the laboratory specific quality control criteria. In a few instances, sample extracts required dilution prior to analysis to either improve instrument performance by minimizing matrix interference or enable quantification of the detected target analytes within the instrument calibration range. Where applicable, the laboratory qualified the reported results indicating the system monitoring compound recovery could not be calculated due to a sample extract dilution. In cases where the instrument resolution appeared to be unaffected by the diluted sample matrix, the sample results were accepted without qualification. No qualification of the data is recommended.

Laboratory Control Samples, Matrix Spike/Matrix Spike Duplicate Recoveries

Analytical precision and accuracy was evaluated based on the laboratory control and matrix spike sample analyses performed concurrently with the project samples. For matrix spike samples, after the addition of a known amount of each target analyte to the sample matrix, the sample was analyzed to confirm the ability to identify these compounds within the sample matrix. For LCS analyses, after the addition of a known amount of each target analyte into laboratory reagent water, the sample was analyzed to confirm the ability of the analytical system to accurately quantify the compounds. The reported recovery of MS/MSD and LCS analyses fell within the laboratory QA acceptance criteria, with the following exception(s):

LCS ID / Project Sample MS	Target Analyte(s)	%R Criteria	%R	Affected Sample(s)
MW-2-092208	Trichloroethene	77 - 123	124	MW-1-092208 MW-2-092208 MW-3-092408 MW-3-092408 DL MW-4-092408 MW-5-092308 MW-6-092408 MW-8-092408 MW-9-092408 MW-9-092408 DL

Action:

If the LCS %R is greater than the upper acceptance limit, associated target analyte positive results are qualified "J" and non-detects should not be qualified. If the LCS %R is less than the lower acceptance limit associated target analyte positive results are qualified "J" and non-detects are qualified "R". If the MS/MSD is from a project sample and the %R greater than the upper acceptance limit, associated target analyte positive results are qualified "J" and non-detects should not be qualified. If the MS/MSD %R is >10%, but less than the lower acceptance limit, associated analyte positive results are qualified "J" and non-detects are qualified "UJ". If the MS/MSD %R is less than 10% associated target analyte positive results are qualified "J" and non-detects are qualified "R". MS/MSD qualifiers are only applied to affected samples of the same matrix. If the MS/MSD is a LAB sample do not qualify project samples.

LCS ID / Project Sample MS	Target Analyte(s)	%R Criteria	%R	Affected Sample(s)
LCS SBLK60	4-Chloro-3-methylphenol	64 - 120	59	EB-092208 MW-1-092208 MW-2-092208
MW-2-092208	4-Nitrophenol Pentachlorophenol	16 - 120 39 - 136	5 30	MW-1-092208 MW-2-092208 MW-3-092408 MW-4-092408 MW-5-092308 MW-6-092408 MW-8-092408 MW-9-092408

Action:

If the LCS %R is greater than the upper acceptance limit, associated target analyte positive results are qualified "J" and non-detects should not be qualified. If the LCS %R is less than the lower acceptance limit associated target analyte positive results are qualified "J" and non-detects are qualified "R". If the MS/MSD is from a project sample and the %R greater than the upper acceptance limit, associated target analyte positive results are qualified "J" and non-detects should not be qualified. If the MS/MSD %R is >10%, but less than the lower acceptance limit, associated analyte positive results are qualified "J" and non-detects are qualified "UJ". If the MS/MSD %R is less than 10% associated target analyte positive results are qualified "J" and non-detects are qualified "R". MS/MSD qualifiers are only applied to affected samples of the same matrix. If the MS/MSD is a LAB sample do not qualify project samples.

Internal Standard Recoveries

Internal Standard compounds were added to each sample matrix prior to the analysis of organic parameters by EPA Methods 8260B and/or 8270C to quantify the amount of the target compounds detected within each sample. The calculated response of each IS compound fell within the QA/QC criteria of +100% and – 50% of the corresponding CCV standard. No qualification of the data is recommended.

Duplicate Sample Analysis

The replicate percent difference (RPD) was evaluated for each duplicate sample pair to monitor the reproducibility of the data. The RPD for each sample pair was within the QA/QC limit of 30% for aqueous samples and 50% for solid matrices, for those target analytes with sample concentrations >5X the MDL. No qualification of the data is recommended.

ICP Interference Check Sample Performance

The results of the ICP Interference Check Samples analyzed concurrently with the project samples were all within the acceptance criteria +/- 20% of true value as prescribed by USEPA guidance. No qualification of the data is recommended.

ICP Serial Dilution Replicate Percent Difference

The results of the ICP Serial Dilution samples analyzed concurrently with the project samples were in accordance with the EPA QA acceptance criteria of less than 10% RPD for those target analytes with sample concentrations >50X the MDL. No qualification of the data is recommended.

Target Compound Identification

GC/MS qualitative analysis for organic parameters analyzed by EPA Methods 8260B and/or 8270C was performed to remove mis identifications of the target compounds. The relative retention times (RRT) of all reported target compounds were within +/- 0.06 RRT units o the associated calibration standard RRT, and all ions present in the reference standard spectrum at a relative intensity greater than 10 percent were also present in the sample spectrum. No qualification of the data is recommended.

Sample Data Reporting Format

The sample data are presented using USEPA Contract Laboratory Protocol (CLP) format. The data package has been reviewed for completeness and found to contain each required sample result and associated QA/QC report form. The reporting format is complete and compliant with the objectives of the project. No qualification of the data is recommended.

Data Qualifiers

Data qualifiers were assigned by the laboratory to the reported results to identify target analytes detected below the reporting limit but above the method detection limit, and/or when target analytes were detected in the associated method/preparation blank sample. Based on a spot check of the data qualifiers used, these flags appeared to be applied to the reported results in accordance with EPA guidance.

Organic analyses samples that contained concentrations of target analytes at a reportable level in the associated method blanks were flagged b the laboratory with a “B”. If the target analyte concentration was greater than 10 times (10X) the amount in any blank for the common laboratory contaminants or 5 times (5X) the amount for other target compounds, the “B” qualifier was not carried forward for database input; if less than the 10X or 5X rule the “B” qualifier was replaced with a “U”. The “J” qualifier, which indicates an estimated value because the result was between the MDL and RL was carried through to the database.

Summary

The results presented in each report were found to be compliant with the data quality objectives for the project and usable. Based on our review, the usability of the data is 100%, with the few exceptions noted above.

SDG NARRATIVE

Job#: A08-A475,A08-A629,A08-A713,A08-A718

Project#: NY3A9052
SDG#: A475
Site Name: Rochester Gas & Electric

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A08-A475
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
No volume was received for cyanide analysis but it was requested on th COC. Poured off in Sample Control into preserved NaOH bottles.

A08-A629
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

A08-A713
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

A08-A718
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

GC/MS Volatile Data

The analyte Methylene Chloride was detected in the Method Blanks VBLK01 (A8B2152302), VBLK08 (A8B2170302) and VBLK10 (A8B2178004) at a level above the project established reporting limit. The associated samples had similar levels of Methylene Chloride to that of the Method Blank value. All sample detections for Methylene Chloride may potentially be due to laboratory contamination and should be evaluated accordingly. All associated sample detections were qualified with a "B".

The spike recovery of the analytes Trichloroethene, Benzene, Toluene and Chlorobenzene in the Matrix Spike and in the Matrix spike Duplicate of sample MW-9 S3,4-5 fell below quality control limits. The Relative Percent Difference (RPD) between the Matrix Spike and the Matrix Spike Duplicate of sample MW-9 S3,4-5 exceeded quality control limits for the analyte 1,1-Dichloroethene. The associated Matrix Spike Blank recoveries were compliant, so no corrective action was performed.

Linear regression was used to calibrate all analytes that were greater than 15% RSD in the initial calibration standard curves A8I0000550-1, A8I0000618-1, A8I0000621-1, A8I0000635-1, A8I0000654-1 and A8I0000663-1.

For method 8260, all water samples were preserved to a pH less than 2.

GC/MS Semivolatile Data

Linear regression was used to calibrate all analytes that were greater than 15% RSD in the initial calibration standard curves A8I0000562-1, A8I0000579-1 and A8I0000599-1.

Linear regression was used to calibrate all analytes, with the exception of Benzo(k)fluoranthene, that were greater than 15% RSD in the initial calibration standard curve A8I0000619-. A quadratic equation was used to calibrate the analyte Benzo(k)fluoranthene that was greater than 15% RSD in the initial calibration standard curve A8I0000619-1.

Linear regression was used to calibrate all analytes, with the exception of 2,4-Dinitrophenol, that were greater than 15% RSD in the initial calibration standard curve A8I0000639-1. A quadratic equation was used to calibrate the analyte 2,4-Dinitrophenol that was greater than 15% RSD in the initial calibration standard curve A8I0000639-1.

The continuing calibration verification standard A8C00002212-1 exhibited the percent Difference (%D) as greater than 20% on the Form VII for the analyte Pentachlorophenol. However since this analyte was calibrated using linear regression, the CCV must be evaluated using %Drift rather than %Difference. The CCV demonstrated %Drift of 8.5%. No corrective action was required.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Metals Data

The recoveries of sample MW-9 S3, 4-5 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Calcium and Manganese (SD). The recoveries of sample MW-9 S3, 4-5 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limit for Iron. The sample results were more than four times greater than the spike added. However, the LCS was acceptable.

The recoveries of sample MW-9 S3, 4-5 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limit for Aluminum. The recoveries of sample MW-9 S3, 4-5 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Antimony (MS) and Magnesium (SD). Sample matrix was suspect. However, the LCS was acceptable.

The CCVs, analyzed at 15:25, 17:26, and 18:29, exhibited results below the quality control limit for Potassium. However, the samples were bracketed by compliant CCV's, therefore, no corrective action was necessary.

The CCV recovery, analyzed at 07:07, for Beryllium, in Method 6010 was above the quality control limit. However, since the target analyte was non-detect in samples 90 CANAL ST. SUMP and EB082808 and the high recovery would yield a high bias, no further corrective action was necessary.

The Serial Dilution of sample MW-9 S3, 4-5 exceeded the quality control limits for Barium, Calcium, Chromium, Copper, Magnesium, Nickel, Potassium, and Vanadium. However, the Post Spike was compliant for these elements. Therefore, no corrective action was necessary.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this Sample Data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature."

Paul K. Morrow

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

Date: 09/23/2008 Requested Reporting Limits < Lab PQL Page: 1
Time: 10:53:34 Rept: AN1520

The requested project specific reporting limits listed below were less than lab standard quantitation limits but greater than or equal to lab MDL. It must be noted that results reported below lab standard quantitation limit (PQL) may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

THE LEADER IN ENVIRONMENTAL TESTING

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
G	Indicates a value greater than or equal to the project reporting limit but less than the laboratory quantitation limit
*	Indicates the spike or duplicate analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

SDG NARRATIVE

Job#: A08-A475,A08-A629,A08-A713,A08-A718

Project#: NY3A9052
SDG#: A475
Site Name: Rochester Gas & Electric

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A08-A475
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
No volume was received for cyanide analysis but it was requested on th COC. Poured off in Sample Control into preserved NaOH bottles.

A08-A629
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

A08-A713
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

A08-A718
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

GC/MS Volatile Data

The analyte Methylene Chloride was detected in the Method Blanks VBLK01 (A8B2152302), VBLK08 (A8B2170302) and VBLK10 (A8B2178004) at a level above the project established reporting limit. The associated samples had similar levels of Methylene Chloride to that of the Method Blank value. All sample detections for Methylene Chloride may potentially be due to laboratory contamination and should be evaluated accordingly. All associated sample detections were qualified with a "B".

The spike recovery of the analytes Trichloroethene, Benzene, Toluene and Chlorobenzene in the Matrix Spike and in the Matrix spike Duplicate of sample MW-9 S3,4-5 fell below quality control limits. The Relative Percent Difference (RPD) between the Matrix Spike and the Matrix Spike Duplicate of sample MW-9 S3,4-5 exceeded quality control limits for the analyte 1,1-Dichloroethene. The associated Matrix Spike Blank recoveries were compliant, so no corrective action was performed.

Linear regression was used to calibrate all analytes that were greater than 15% RSD in the initial calibration standard curves A8I0000550-1, A8I0000618-1, A8I0000621-1, A8I0000635-1, A8I0000654-1 and A8I0000663-1.

For method 8260, all water samples were preserved to a pH less than 2.

GC/MS Semivolatile Data

Linear regression was used to calibrate all analytes that were greater than 15% RSD in the initial calibration standard curves A8I0000562-1, A8I0000579-1 and A8I0000599-1.

Linear regression was used to calibrate all analytes, with the exception of Benzo(k)fluoranthene, that were greater than 15% RSD in the initial calibration standard curve A8I0000619-. A quadratic equation was used to calibrate the analyte Benzo(k)fluoranthene that was greater than 15% RSD in the initial calibration standard curve A8I0000619-1.

Linear regression was used to calibrate all analytes, with the exception of 2,4-Dinitrophenol, that were greater than 15% RSD in the initial calibration standard curve A8I0000639-1. A quadratic equation was used to calibrate the analyte 2,4-Dinitrophenol that was greater than 15% RSD in the initial calibration standard curve A8I0000639-1.

The continuing calibration verification standard A8C00002212-1 exhibited the percent Difference (%D) as greater than 20% on the Form VII for the analyte Pentachlorophenol. However since this analyte was calibrated using linear regression, the CCV must be evaluated using %Drift rather than %Difference. The CCV demonstrated %Drift of 8.5%. No corrective action was required.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Metals Data

The recoveries of sample MW-9 S3, 4-5 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Calcium and Manganese (SD). The recoveries of sample MW-9 S3, 4-5 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limit for Iron. The sample results were more than four times greater than the spike added. However, the LCS was acceptable.

The recoveries of sample MW-9 S3, 4-5 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limit for Aluminum. The recoveries of sample MW-9 S3, 4-5 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Antimony (MS) and Magnesium (SD). Sample matrix was suspect. However, the LCS was acceptable.

The CCVs, analyzed at 15:25, 17:26, and 18:29, exhibited results below the quality control limit for Potassium. However, the samples were bracketed by compliant CCV's, therefore, no corrective action was necessary.

The CCV recovery, analyzed at 07:07, for Beryllium, in Method 6010 was above the quality control limit. However, since the target analyte was non-detect in samples 90 CANAL ST. SUMP and EB082808 and the high recovery would yield a high bias, no further corrective action was necessary.

The Serial Dilution of sample MW-9 S3, 4-5 exceeded the quality control limits for Barium, Calcium, Chromium, Copper, Magnesium, Nickel, Potassium, and Vanadium. However, the Post Spike was compliant for these elements. Therefore, no corrective action was necessary.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this Sample Data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature."

Paul K. Morrow
Project Manager

9/27/08
Date

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

SEMIVOLATILE INTERNAL STANDARD AREA AND RT SUMMARY

Lab Name: TestAmerica Laboratories Inc. Contract: EEMC MSPA Labsampid: A8C0002236

Lab Code: RECNY Case No.: _____ SAS No.: _____ SDG No.: A475

Lab File ID (Standard): X26236.RR Date Analyzed: 09/06/2008

Instrument ID: HP5973X Time Analyzed: 09:15

			IS4 (NPT) AREA	#	RT	#	IS5(PHN) AREA	#	RT	#	IS6 (PRY) AREA	#	RT	#
	12 HOUR STD		694282		7.35		655302		11.03		605140		14.63	
	UPPER LIMIT		1388564		7.85		1310604		11.53		1210280		15.13	
	LOWER LIMIT		347141		6.85		327651		10.53		302570		14.13	
	CLIENT SAMPLE	Lab Sample ID												
1	MSB40	A8B2172101	721475		7.28		685451		10.99		639427		14.58	
2	SBLK40	A8B2172102	753039		7.28		661213		10.99		612730		14.57	

	AREA UNIT QC LIMITS	RT QC LIMITS
IS4 (NPT) = Naphthalene-D8	(50-200)	-0.50 / +0.50 min
IS5 (PHN) = Phenanthrene-D10	(50-200)	-0.50 / +0.50 min
IS6 (PRY) = Perylene-D12	(50-200)	-0.50 / +0.50 min

\# Column to be used to flag recovery values
* Values outside of contract required QC limits

METHOD 8270 - TCL SEMI-VOLATILE ORGANICS
