Dear Mr. Klier:

On behalf of William B. Morse Lumber Co. (Morse Lumber), H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) has prepared the enclosed revised *Construction Completion Report* (CCR) to document the completed Interim Remedial Measure (IRM) for the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) site located at 65 Trowbridge Street, Rochester, New York (Site). The CCR dated March 4, 2025 was revised in response to NYSDEC comments provided via letter dated May 13, 2025.

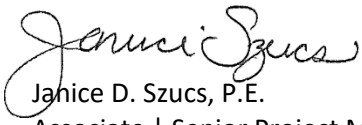

The IRM included excavation and disposal of Site soil, fill, and pavement material and installation of a 1-foot clean cover system. The activities were performed in accordance with the NYSDEC-approved *IRM Work Plan* dated March 12, 2021. This document is being submitted as required by the Brownfield Cleanup Agreement for Site No. C828217, for which Morse Lumber is the Site owner and the Volunteer, and it was developed based on the NYSDEC's "Technical Guidance for Site Investigation and Remediation" (DER-10 dated May 2010).

Please contact the undersigned if there are any questions regarding this submittal or any other aspects of the project.

1. Introduction

On behalf of William B. Morse Lumber Co. (Morse Lumber), H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) has prepared this *Construction Completion Report* (CCR) for the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) designated as Site No. C828217, 65 Trowbridge Street, Rochester, New York (the "Site") for which Morse Lumber is the Site owner and the Volunteer. This CCR is being submitted to document the implementation of the Interim Remedial Measure (IRM) per the approved *Interim Remedial Measures Work Plan* (IRM Work Plan) dated March 12, 2021. This CCR was prepared in accordance with the regulations and guidance applicable to the NYSDEC BCP.

The Site encompasses the northern and eastern portion of a former manufactured gas plant (MGP) facility that ceased operation in the early 1890s (Figure 1). The former MGP was operated for 10 years or less between 1880 to 1891 by the Municipal Gas Light Company of the City of Rochester, which was a predecessor company to Rochester Gas and Electric Corporation (RG&E). Prior to, during, and after the MGP operations, the property had railway use with several tracks/spurs on the property for various uses. Morse Lumber acquired the Site from the previous owner, Donatelli, Inc., in August of 2005. The Site is a 1.2-acre portion of Morse Lumber's 1.8-acre parcel at 65 Trowbridge Street used as a lumber yard storage area. The Site contains an active railroad track used exclusively to deliver lumber to Morse Lumber. Site conditions prior to the IRM implementation are shown on Figure 2. Addendum Item #2 of the BCP Application provides a detailed description of the Site, its historical use, and regulatory history, including a summary of previous Site characterization activities.

The land is currently active and zoned "Center City District," which allows for commercial and industrial use. The Site is located in an urban area primarily surrounded by commercial and industrial properties served by municipal water.

Details on previous Site characterization activities are provided in the *Site Characterization Report* dated January 20, 2008, and the Addendum and Addendum Item #2 of the BCP Application dated March 2020. Because the previous Site characterization did not include analysis for pesticides, herbicides, polychlorinated biphenyls (PCBs), or emerging contaminants, documentation soil samples were tested for these analytes during this IRM, as requested by NYSDEC in their comments to the IRM Work Plan letter dated February 11, 2021.

1.1 OBJECTIVE

As indicated by previous Site characterization activities, there were low-level exceedances of NYSDEC Part 375 Restricted Commercial Use Soil Cleanup Objectives (SCOs) in soil for polycyclic aromatic hydrocarbons (PAHs) and metals at the Site. These exceedances were randomly distributed, within the top 1 foot of existing Site cover and up to 15 feet into the underlying material, which is reflective of urban background and historical industrial settings.

The objective of the approved IRM Work Plan was to remove existing soil, fill, and pavement across the 1.2-acre portion of the former MGP facility to allow for the placement of a demarcation layer and a 1-foot layer of clean, imported material to constitute the cover system for the Site. The installed cover system included a porous pavement system (Geopave) designed to stabilize the aggregate placed in the active lumber yard areas and reduce stormwater runoff.

2. IRM Activities

2.1 MOBILIZATION AND SITE PREPARATION

The IRM work was completed by Sessler Environmental Services (Sessler). Construction oversight, community air monitoring activities, and documentation sampling were performed by Haley & Aldrich of New York personnel.

Equipment, materials, and labor were mobilized to the Site on May 20, 2024. General Site access was restricted to authorized personal via a temporary fence that surrounded the Site perimeter. Prior to the start of excavation work, the following Site preparation activities were conducted:

- **Temporary Staging Area**: A temporary staging area outside of the Site boundary was set up to store construction equipment, an equipment trailer, and a temporary office trailer.
- **Erosion and Sediment Control**: Straw waddles were installed around the IRM work area to minimize suspended sediment and debris from leaving the Site. A track-out control mat was installed within the staging area to minimize sediment and debris being tracked off Site.
- **Location Control Survey**: Costich Engineering surveyed the pre-construction elevations and established control points demarcating the approximate extent of the work area for the IRM activities.
- **Community Air Monitoring**: Community air monitoring equipment was set up for monitoring of volatile organic compounds (VOCs) and particulates in accordance with the New York State Department of Health (NYSDOH) Generic Community Air Monitoring Plan (CAMP) and IRM Work Plan. Three air monitoring units were set up around the perimeter of the Site.
- **Utility Clearance**: Dig Safely New York marked underground utilities. A ground-penetrating radar (GPR) survey was performed by Ravi Engineering to investigate additional underground utilities and underground infrastructure. Hydro X USA completed a soft dig at various locations of detected underground infrastructure and marked out utilities.

2.2 EXCAVATION AND DISPOSAL

Excavation activities began on May 22, 2024 and included the removal of Site soils, fill, pavement, and abandoned railroad spurs and ties to 1 foot below the designed finished grade. Excavation was completed throughout the Site and up to the Site boundary, with the exception of the area within 4 feet from the rails of the active railroad track, as required by the railroad and specified in the IRM Work Plan. Excavation limits are shown on the surveyed maps in Appendix A. The material was excavated using conventional excavation equipment and methods. Excavated material was screened for the presence of VOCs, including petroleum and solvents, with a photoionization detector (PID) during removal to identify areas to collect documentation grab samples and identify areas that could require additional excavation. Materials and soil removed for off-Site disposal were sampled and analyzed according to the landfill's requirements and approved for disposal as non-hazardous material at the WM High Acres Landfill in Fairport, New York, a NYSDEC-permitted landfill (High Acres).

2.2.1 Concrete, Brick, Asphalt, and Railroad Spur Removal

The brick roadway and underlying 6-inch-thick concrete pad, asphalt road, and railroad ties and rails from an abandoned spur were removed during excavation activities (see Figure 2). There was no observed staining or PID detections above background levels during removal of these materials.

During the IRM activities, a reinforced concrete structure located on the southeastern corner of the Site was encountered and was initially believed to be potentially associated with historical MGP-related infrastructure. Other concrete structure remnants were encountered during the removal of soils on the southeastern portion of the Site. Following removal, the concrete structure was identified as an abandoned manhole based on the degraded structural integrity and associated debris within the structure. Communication and a site visit on June 21, 2024 from Monroe County Pure Waters Authority confirmed that the manhole was part of abandoned Monroe County infrastructure and was no longer in use or connected to any in-use piping system. The abandoned manhole, associated debris, and surrounding soils were excavated for off-Site disposal. Final excavation limits associated with the manhole location were approximately 10 feet in diameter and 4 feet deep (see Appendix A, final as-built excavation map). The excavation was backfilled with NYSDEC-approved imported fill.

Concrete, brick, and asphalt were sent for off-Site disposed as construction and demolition (C&D) material. Concrete was broken down into manageable pieces prior to off-Site disposal. Railroad ties were disposed of under a waste profile provided by the landfill. Concrete, brick, and railroad ties were disposed of at High Acres, and approximately 514 tons of C&D material were disposed. Asphalt was recycled at Dolomite Group in Rochester, New York. Abandoned railroad rails were recycled at Premier Metal Group in Rochester, New York. Morse Lumber was given clearance from Rochester Railways to dispose of the abandoned railroad rails. Waste disposal quantities are summarized in Table I. Weight tickets and disposal documentation are included in Appendix B.

2.2.2 Soil Excavation and Disposal

Excavated soils were managed in accordance with the approved IRM Work Plan. Soils were screened using a PID. PID readings were at or below background levels (0.0 to 5.0 parts per million [ppm]). Prior to soil removal and disposal, Sessler pre-characterized on-Site soils at five areas across the Site in accordance with a plan approved in advance by High Acres. A composite sample from each specified area was collected from approximately 0 to 1 foot below ground surface (bgs). Five samples were submitted to Pace Analytical Services for the required analysis specified by High Acres. Pre-characterization sample results were provided to High Acres and approval was received for disposal of up to 6,000 tons. Disposed soils were direct-loaded for off-Site disposal at the landfill or stockpiled prior to disposal. Approximately 3,135 tons of soil were removed for off-Site disposal as non-hazardous material. Table I includes a summary of the soil waste generated during the IRM activities. Weight tickets and disposal documentation provided by High Acres are included in Appendix B.

2.2.3 Documentation Soil Sampling

Following excavation of the soil, fill, and pavement material, documentation soil samples from the bottom of the excavation were collected for every 900 square feet based on DER-10 guidance and the approved IRM Work Plan. Since the previous Site characterization work did not include analysis for pesticides, herbicides, PCBs, and emerging contaminants, these samples were collected from six locations as specified in the IRM Work Plan. Documentation soil sampling was completed in accordance

with the field procedures for soil sampling described in Appendix A and B of the NYSDEC-approved IRM Work Plan. Sampling and analysis for per- and polyfluoroalkyl substances (PFAS) were conducted in accordance with the April 2023 NYSDEC PFAS Sampling guidance. All sample locations are shown on Figure 3.

Grab samples for VOC analysis were collected by filling the laboratory-provided dedicated Terra Core® sampling kits from the bottom of the excavation. The material was then transferred directly into a dedicated, pre-preserved 40-mililiter volatile organics analysis (VOA) vial. Composite samples were collected for the remaining analytical parameters from five locations within each 900-square-foot base of the excavation and mixed in a stainless-steel bowl using a sampling trowel prior to transferring the samples to laboratory-provided sample containers. The stainless-steel bowl and trowel were decontaminated between samples with Alconox and distilled water. Decontamination wastewater was placed in an on-Site 55-gallon drum labeled for disposal.

The documentation samples were submitted to Pace Analytical Services for laboratory testing for the required analysis per the IRM Work Plan and in the Sampling and Analysis Plan (SAP) in Table II. The samples were analyzed for Target Compound List (TCL) VOCs via U.S. Environmental Protection Agency (EPA) Method 8260, Total Analyte List (TAL) Metals via EPA Method 6010, TCL semi-volatile organic compounds (SVOCs) using EPA Method 8270 (including 1,4-dioxane), and cyanide via EPA Method 4500. Select samples were analyzed for the expanded list of parameters, including PCBs via EPA Method 8082, pesticides via EPA Method 8081, herbicides via EPA Method 8151, and PFAS via EPA Method 1633.

2.2.4 Lime-Like Material Removal

During excavation activities on the north side of the Site, a white material with areas of light blue color was encountered that was identified as “lime-like” material, which is indicative of potential former MGP purifier waste and is consistent with previous observations from soil borings SB-16 and MW-4 in the 2008 *Site Characterization Report* that confirmed the presence of lime (Haley & Aldrich of New York, 2008). Cyanide concentrations during the 2008 investigation and in the initial documentation samples taken per the IRM Work Plan activities were below the Commercial SCO of 27 milligrams per kilogram (mg/kg). Test pits were completed to delineate and estimate the amount of lime-like material. Upon discussions with NYSDEC, the lime-like material was removed. Additional soil removal was conducted until the lime-like material was no longer present. Periodic PID readings taken during the excavation showed readings below background levels. Post-excavation documentation grab samples were taken from three 900-square-foot cells (TB-DOC47, TB-DOC48, and TB-DOC50) collected at the excavation base approximately 5 feet bgs, with one composite sample collected that is representative of the entire excavation base (TB-DOC49). The grab samples were analyzed for VOCs, SVOCs, metals, and cyanide. The composite sample was analyzed for PCBs, pesticides, herbicides, and PFAS. Results indicated there were no exceedances of the Commercial SCOs.

Approximately 311 cubic yards of lime-like material comingled with urban fill and soils were excavated, sampled according to landfill requirements, and disposed of at High Acres. Remaining soils from this portion of the Site were regraded and additional documentation samples TB-DOC51, TB-DOC-52, and TB-DOC53 were taken 1 foot below grade in accordance with the approved IRM Work Plan. Samples TB-DOC47 through TB-DOC50 collected at approximately 5 feet bgs and samples TB-DOC51 through TB-DOC53 collected at 1 foot bgs replaced initial documentation samples TB-DOC31, TB-DOC33, and TB-DOC18. Locations for the documentation samples are shown on Figure 3, with results summarized in Table III and Table IV. The location of the lime-like soil excavation is shown in Appendix A.

2.2.5 Additional Excavation

Initial documentation sample results indicated trichloroethylene (TCE) concentrations were present in various locations below the Commercial SCO. Additional excavation was conducted to remove soils from two areas that had the highest concentrations of TCE. These areas were represented by samples TB-DOC1 and TB-DOC43, which contained TCE concentrations of 170 and 96 mg/kg, respectively. Sample location TB-DOC1 was located immediately north of the 90 Canal Street property and proximate to MW-3, which contains TCE in groundwater, and sample location TB-DOC43 was located on the north side of the railroad tracks on the southeastern corner of the Site. TCE has been detected in MW-3 historically and most recently during the 2021 groundwater sampling event with a concentration of 76 micrograms per kilogram (µg/kg). TCE has not been detected in the other Site monitoring wells.

An additional 1 to 2 feet of soil were removed from locations TB-DOC1 and TB-DOC43. The excavated soils were screened with a PID until practical excavation limits were reached based on proximity to the 90 Canal Street property, and to a depth that would not undermine the active railroad track. PID readings in the remaining soils at the time documentation samples were collected ranged from 9.4 to 10.3 ppm. Post-excavation documentation samples TB-DOC63 (representing the previous area TB-DOC1) and TB-DOC64 (representing the previous area TB-DOC43) were collected and submitted for laboratory analysis. TB-DOC63 contained a TCE concentration of 48 mg/kg, and TB-DOC64 contained a TCE concentration of 28 mg/kg. Both locations were backfilled with NYSDEC-approved imported fill and a demarcation layer was placed at 1 foot below grade. Approximately 118 tons of urban fill and soils were sampled for disposal according to landfill requirements and disposed of as non-hazardous material at High Acres. Documentation of sample results is summarized in Table III, and sample locations are shown on Figure 3.

2.2.6 Summary of Results

The analytical results are summarized in Table III and the laboratory reports are provided in Appendix C. Sample locations are shown on Figure 3. There were no detections of VOCs, cyanide, pesticides, herbicides, PFAS, or PCBs that exceeded Commercial SCOs. Exceedances of SVOCs and metals were randomly distributed throughout the Site and do not appear correlated to any specific source typical of urban fill. The results are discussed further in the following sections.

2.2.6.1 Volatile Organic Compounds (VOCs)

Low-level concentrations of VOCs were detected in 43 documentation samples throughout the Site. All VOC detections were below the Commercial SCOs.

2.2.6.2 Semi-Volatile Organic Compounds (SVOCs)

Several SVOCs were detected in the documentation samples throughout the Site. A total of 53 samples had SVOC concentrations above the Commercial SCOs and contained the following five higher-molecular-weight PAHs:

- Benzo(a)anthracene (Commercial SCO = 5.6 mg/kg): 5.8 to 25 mg/kg
- Benzo(a)pyrene (Commercial SCO = 1 mg/kg): 1.2 to 26 kg/mg
- Benzo(b)fluoranthene (Commercial SCO = 5.6 mg/kg): 5.7 to 30 mg/kg

- Diben(a,h)anthracene (Commercial SCO = 0.56 mg/kg): 0.62 to 3.6 mg/kg
- Indeno(1,2,3-cd)pyrene) (Commercial SCO = 5.6 mg/kg): 5.9 to 16 mg/kg

2.2.6.3 Metals

Several metals were detected in the documentation samples throughout the Site. A total of 47 samples had metals concentrations above the Commercial SCOs. The analytes detected above the Commercial SCOs were the following:

- Arsenic (Commercial SCO = 16 mg/kg: 16.5 to 249 mg/kg
- Copper (Commercial SCO = 270 mg/kg): 411 to 464 mg/kg
- Mercury (Commercial SCO = 2.8 mg/kg): 14.1 (J) to 27.9 mg/kg
- Nickel (Commercial SCO = 310 mg/kg): 335 (J) to 430 mg/kg

2.2.6.4 Cyanide

A total of 25 documentation sample locations contained low-level estimated concentrations of cyanide below the Commercial SCO of 27 mg/kg.

2.2.6.5 Expanded List of Parameters

Six post-excavation documentation samples were collected and analyzed for an expanded list of parameters, including PCBs, pesticides and herbicides, and PFAS. Low-level concentrations were detected (some estimated concentrations) in the samples below the Commercial SCOs for the expanded list of parameters. The analytical results are summarized in Table IV. Sample locations are shown on Figure 3.

2.3 EXCAVATION BACKFILL AND SITE RESTORATION

Excavation backfilling and site restoration activities were conducted between June and August 2024. Following the removal of Site soil, fill, and pavement material, and upon achieving the design excavation depth of 1 foot below final finished grade, a demarcation geotextile fabric was placed prior to backfill with NYSDEC-approved imported fill. Remaining soil contamination above the Commercial SCOs for SVOCs and metals below the Site cover system are shown in Figures 4A and 4B.

Various types of aggregate were imported to the Site for use in backfilling and Site restoration activities. The imported aggregate fill was purchased from Heidelburg Materials, Honeoye Falls, New York, a NYSDEC-permitted sand and gravel pit.

Topsoil used for portions of the Site was purchased from Kimball Trucking in Webster, New York. The topsoil was pre-characterized and sampled by Sessler per DER-10 Table 5.4(e)10 and did not contain analyte concentrations above the NYSDEC Commercial SCOs and guidance values. Imported aggregate fill and topsoil were approved by the NYSDEC. Import documentation is included in Appendix D. Table V provides a summary of aggregate material used on the Site.

A 1-foot clean cover layer was placed over the Site, consisting of aggregate, a porous pavement system (Geopave), and a minimum of 4 inches of topsoil that was seeded and mulched. The Geopave system

consisted of permeable gravel pavers installed over a gravel sub-base to provide a permeable stabilized surface for lumber yard vehicular traffic and storage and to reduce stormwater runoff. The different cover types are shown on Figure 5. Details and locations of the cover system types are included in the surveyed drawings in Appendix A and as-built drawings in Appendix E.

In late September 2024, a permanent fence was installed around the portion of the Site to be utilized for lumber yard storage to restrict access and provide overall Site security.

3. Monitoring Well Decommissioning and installation

3.1 MONITORING WELL DECOMMISSIONING

Two monitoring wells, MW-4 on the Site's north side and an old, unnamed well on the southeast corner, were decommissioned in accordance with *NYSDEC CP-43: Groundwater Monitoring Well Decommissioning Policy* during the IRM activities. The unmarked monitoring well was observed to have poor structural integrity and was not previously part of the Site's Remedial Investigation (RI) or Site Characterization work; therefore, it was removed. MW-4, which was part of the Site's RI Work Plan, had previously been covered with vegetation and debris and was discovered during the IRM excavation work. Due to the compromised integrity and debris blockage within the well, it was deemed unsuitable for future groundwater monitoring. MW-4 was removed and replaced with MW-4R. Both monitoring well casings were pulled and tremie-grouted from the bottom to the top with a standard grout mix of 30-50 mesh granular bentonite and Portland limestone cement mixed with potable water. The decommissioning well records are included in Appendix F.

3.2 MONITORING WELL INSTALLATION

The installation of monitoring well MW-4R as a replacement for former MW-4 was completed by Sessler on August 15, 2024. The location of the monitoring well is adjacent to the former MW-4 location and is shown in Appendix A. The well was installed using a Geoprobe 6011 DT and constructed of a 2-inch polyvinyl chloride (PVC) riser and screen. The well was installed to the top of bedrock and screened from 4.5 to 13.4 feet bgs to assess shallow groundwater consistent with the former MW-4 construction. Due to the slow recharge of the well, the well was developed approximately three weeks after installation was completed. The well was developed using a submersible whale pump, and 10 well volumes were purged. The well was monitored and sampled as part of the Site's RI Work Plan. The well installation report is included in Appendix G.

4. Community Air Monitoring

Community air monitoring was conducted in accordance with the NYSDOH CAMP and IRM Work Plan. The air monitoring data was digitally recorded via telemetry equipment during the field activities, with the exception of significant precipitation events or during Site work that did not involve disturbance of soil, concrete, or asphalt material or was not ground-intrusive. Air monitoring was conducted between May 22 and July 26, 2024 during excavation and restoration of the IRM area and on August 18, 2024 during the installation of monitoring well MW-4R. In addition to monitoring dust suppression, an on-Site water tank was used to minimize dust during excavation activities.

The air monitoring data is included as Appendix H. In accordance with the CAMP, the following action levels were used during soil disturbance or ground-intrusive field activities:

- **Total Organic Vapors:** An exceedance of 5 ppm above background for the 15-minute average concentration of total organic vapors at the downwind perimeter of the work area.
- **Respirable Dust:** An exceedance of 100 micrograms per cubic meter ($\mu g/m^3$) above background for the 15-minute average concentration of dust at the downwind perimeter of the work area.

As documented in Appendix H, the air monitoring completed during the Site activities did not result in exceedances of the CAMP action levels. CAMP data were provided to the NYSDOH and NYSDEC weekly.

5. Data Usability Summary

Laboratory analytical data were evaluated in accordance with the NYSDEC *Guidance for the Development of Quality Assurance Plans and Data Usability Summary Reports (DUSRs)*, dated May 2010, and the EPA *National Functional Guidelines for Organic Superfund Methods Data Review* (EPA 540-R-20-005) November 2020, and *National Functional Guidelines for Inorganic Superfund Methods Data Review, Final* (EPA 542-R-20-006), November 2020, and *Sampling, Analysis, and Assessment of Per- And Polyfluoroalkyl Substances (PFAS)* Under NYSDEC's Part 375 Remedial Programs April 2023. Method protocol criteria were also considered, where applicable, as prescribed by the most recent update of "Test Methods for Evaluating Solid Waste," SW846.

A review of the laboratory data indicated that the samples were properly analyzed and that the results presented in the laboratory reports were found to be valid and usable; therefore, the data are compliant with the laboratory completeness goal of 90 percent or greater. Specific minor issues discovered during the validation process are addressed in the DUSR located in Appendix I. A photographic log is provided in Appendix J.

6. Summary and Conclusions

IRM activities were conducted at the 65 Trowbridge Street Site, a former MGP facility with other historical uses, between May and September 2024. The proposed activities of the NYSDEC-approved IRM Work Plan were accomplished through the following activities:

- Soil, fill, and pavement material were removed to accommodate 1 foot of clean NYSDEC-approved cover material. Excavated materials were disposed of at High Acres. A total of approximately 3,135 tons of non-hazardous soil and approximately 514 tons of C&D material were disposed of at the landfill.
- Post-excavation documentation samples were collected from the base of the final excavation depth. Most of the documentation samples results were below the applicable SCOs, except for exceedances for SVOCs of the five higher-molecular-weight PAHs and metals (arsenic, copper, nickel, and mercury). The detections are consistent with historical urban fill heterogeneity, reflecting over a century of industrial and commercial activity.
- Lime-like material was observed on the north side of the Site within the soil and fill and was indicative of MGP-related purifier waste. Cyanide was not detected above the Commercial SCOs. The lime-like material was removed disposed of at an NYSDEC-approved landfill.
- Additional excavation of 1 to 2 feet bgs was performed at two locations that had the highest TCE concentrations. The excavated soils were screened with a PID until practical excavation limits were reached based on proximity to the 90 Canal Street property, and at a depth that would not undermine the active railroad track. Soils were disposed of at the landfill and both locations were backfilled with NYSDEC-approved aggregate.
- Following excavation activities, demarcation fabric was placed 1 foot below finished grade. A 1-foot layer of clean cover was placed over the Site, comprising aggregate, a porous pavement system (Geopave), and topsoil that was seeded and mulched.
- Two on-Site monitoring wells, an old unused well and MW-4, were decommissioned in-place due to their compromised integrity and that they were no longer suitable for future groundwater monitoring. Monitoring well MW-4R was installed to replace the former MW-4 and will be monitored as part of the approved RI Work Plan.

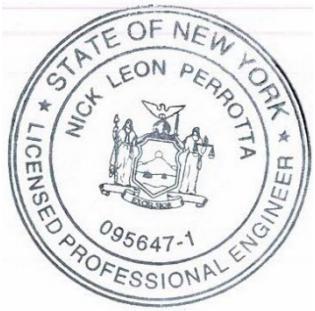

In summary, the Site is located in an urban area with a long history of commercial and industrial use. The post-excavation documentation sample analytical results show that exceedances of the Commercial SCOs are random and typical of urban fill in historical, urban industrial settings. The data do not indicate that a specific source of impacts is present at the Site. The completed excavation activities and installed 1-foot cover system support the overall objective of a Track 4 Cleanup that is protective of the intended and reasonably anticipated future commercial/industrial use of the Site.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

June 19, 2024: This final report includes the results of all requested analyses.

June 18, 2024: This is a preliminary report.

June 11, 2024: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analysis of Total Cyanide was performed at the client's request.

Volatile Organics

L2430944-01D2: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L2430944-01D2: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2430944-02: The sample was analyzed as a High Level Methanol based upon screen results. The sample was then analyzed as a Low Level in order to achieve lower reporting limits. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

L2430944-02 (Low): The internal standard (IS) response for 1,4-dichlorobenzene-d4 (49%) was below the acceptance criteria. Re-analysis achieved IS response within criteria; however, the results could not be reported. The results of original analysis are reported.

L2430944-03: The internal standard (IS) responses for chlorobenzene-d5 (38%) and 1,4-dichlorobenzene-d4 (23%) and the surrogate recovery for 4-bromofluorobenzene (132%) were outside the acceptance criteria;

Case Narrative (continued)

however, re-analysis achieved the following result: 1,4-dichlorobenzene-d4 (31%). The results of the original analysis are reported.
L2430944-05: The internal standard (IS) responses for chlorobenzene-d5 (47%) and 1,4-dichlorobenzene-d4 (34%) were below the acceptance criteria; however, re-analysis achieved the following result: 1,4-dichlorobenzene-d4 (36%). The results of the original analysis are reported.
The WG1932152-4 LCSD recovery, associated with L2430944-04 and -06, is below the individual acceptance criteria for vinyl chloride (56%), but within the overall method allowances. The results of the associated samples are reported.
The WG1932153-4 LCSD recovery, associated with L2430944-01D and -02, is below the individual acceptance criteria for vinyl chloride (56%), but within the overall method allowances. The results of the associated samples are reported.

Semivolatile Organics
L2430944-01, -06, and -07: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.
L2430944-02: The surrogate recovery is outside the individual acceptance criteria for 4-terphenyl-d14 (123%), but within the overall method allowances. The results of the original analysis are reported.

Perfluorinated Alkyl Acids by 1633
L2430944-02, -06, and WG1935798-1/-2/-3: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

Pesticides
L2430944-02 and -08: One or more dual column RPDs are above the acceptance criteria; however, obvious column interferences are present. The result is qualified with a "P" if the higher of the two results is reported.

Case Narrative (continued)

The result is qualified with an "IP" if the lower of the two results is reported.

Herbicides

The WG1931123-2 LCS recovery, associated with L2430944-02, -06, and -08, is above the acceptance criteria for 2,4,5-tp (silvex) (164%); however, the associated samples are non-detect to the RL for this target analyte. The results of the original analysis are reported.

Total Metals

L2430944-01 through -08: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

June 18, 2024: The Semivolatile Organics analyte list has been amended.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2431345-03: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of target compounds in the sample.

L2431345-03: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2431345-03D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

The WG1932766-5 Method Blank, associated with L2431345-01, -02, and -04, has a concentration above the reporting limit for bromomethane. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

The WG1933153-5 Method Blank, associated with L2431345-05, has a concentration above the reporting limit for bromomethane. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

The WG1932773-3/-4 LCS/LCSD recoveries, associated with L2431345-03D, are above the individual acceptance criteria for methyl tert butyl ether (131% LCS) and methyl acetate (149%/149%), but within the overall method allowances. The results of the associated samples are reported; however, all positive detects

for these compounds are considered to have a potentially high bias.
The WG1933153-3/-4 LCS/LCSD recoveries, associated with L2431345-05, are above the individual acceptance criteria for 1,1-dichloroethane (142% LCSD), methyl tert butyl ether (153%/145%) and methyl acetate (156% LCS), but within the overall method allowances. The results of the associated samples are reported; however, all positive detects for these compounds are considered to have a potentially high bias.
The WG1933153-3/-4 LCS/LCSD RPD, associated with L2431345-05, is above the acceptance criteria for 1,1-dichloroethane (42%).

Semivolatile Organics
L2431345-01, -03, -04, and -05: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

Total Metals
L2431345-01 through -05: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.
The WG1932608-1 Method Blank, associated with L2431345-01 through -05, has a concentration above the reporting limit for iron. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Report Submission

June 26, 2024: This final report includes the results of all requested analyses.

June 25, 2024: This is a preliminary report.

June 20, 2024: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

Volatile Organics

L2433099-02: The internal standard (IS) response(s) for 1,4-dichlorobenzene-d4 (29%) and the surrogate recovery for 1,2-dichloroethane-d4 (135%) were outside the acceptance criteria; however, re-analysis achieved the following results: 1,4-dichlorobenzene-d4 (39%). The results of both analyses are reported.

L2433099-03: The internal standard (IS) response(s) for fluorobenzene (10%), chlorobenzene-d5 (10%), and 1,4-dichlorobenzene-d4 (9%) and the surrogate recovery for 1,2-dichloroethane-d4 (137%) were outside the acceptance criteria; however, re-analysis achieved the following results: fluorobenzene (21%), chlorobenzene-d5 (16%), and 1,4-dichlorobenzene-d4 (10%). The results of both analyses are reported. Because the internal standard responses were below the rejection criteria at less than 20% recovery, a high-level analysis was performed and those results are also reported.

The WG1936380-3/-4 LCS/LCSD recoveries, associated with L2433099-02R and -03R, are above the individual acceptance criteria for chloromethane (152%/140%), but within the overall method allowances. The results of the associated samples are reported.

The WG1936437-6/-7 MS/MSD recoveries, performed on L2433099-08, are below the acceptance criteria for methylene chloride (62%/69%), chloroform (63%/67%), 1,2-dichloropropane (62%/65%), dibromochloromethane (47%/51%), 1,1,2-trichloroethane (54%/58%), tetrachloroethene (43%/40%),

chlorobenzene (28%), 1,2-dichloroethane (49%/57%), bromodichloromethane (53%/57%), trans-1,3-dichloropropene (24%/30%), cis-1,3-dichloropropene (34%/39%), bromoform (43%/47%), 1,1,2,2-tetrachloroethane (51%/55%), benzene (61%/62%), toluene (46%/45%), ethylbenzene (31%/28%), trans-1,2-dichloroethene (53%/60%), trichloroethene (46%/48%), 1,2-dichlorobenzene (18%/17%), 1,3-dichlorobenzene (16%/15%), 1,4-dichlorobenzene (14%/13%), p/m-xylene (30%/27%), o-xylene (33%/30%), cis-1,2-dichloroethene (48%/54%), styrene (24%/23%), carbon disulfide (MS 58%), 2-hexanone (46%/56%), bromochloromethane (48%/55%), 1,2-dibromoethane (36%/42%), 1,2-dibromo-3-chloropropane (41%/48%), isopropylbenzene (30%/25%), 1,2,3-trichlorobenzene (11%/12%), and 1,2,4-trichlorobenzene (10%); however, the associated LCS/LCSD recoveries are within overall method allowances.

Semivolatile Organics

L2433099-02D, -04D, -10D, and -11D: The sample has elevated detection limits due to the dilution required by the sample matrix.

L2433099-06D: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2433099-06D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

The WG1935035-2/-3 LCS/LCSD recoveries, associated with L2433099-01, -01D, -02D, -03, -04D, -05, -06D2, -06D, -07, -08, -09, -10D, and -11D, are outside the acceptance criteria for p-chloro-m-cresol (109%), but within the overall method allowances. The results of the associated samples are reported.

The WG1935035-4 MS recovery, performed on L2433099-08, is below the acceptance criteria for 3,3'-dichlorobenzidine (MS 9%); however, it has been identified as a "difficult" analyte. The results of the associated sample are reported.

The WG1935035-5 MSD recoveries, performed on L2433099-08, are outside the acceptance criteria for 3,3'-dichlorobenzidine (11%) and benzo(ghi)perylene (27%).

Project Name:	65 TROWBRIDGE-DOC. SAMPLES	**Lab Number:**	L2433099
Project Number:	0200336-002	**Report Date:**	06/26/24

Case Narrative (continued)

The WG1935035-4/-5 MS/MSD recoveries, performed on L2433099-08, are below the acceptance criteria for hexachlorocyclopentadiene (0%), 4-nitrophenol (MS 0%), 2,4-dinitrophenol (MSD 0%), 4,6-dinitro-o-cresol (0%) due to the concentration of these compounds in the MS/MSD falling below the reported detection limit.

Perfluorinated Alkyl Acids by 1633

WG1937801-1/-2: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

The WG1937801-2 LCS recovery, associated with L2433099-03 and -09, is above the acceptance criteria for n-ethyl perfluorooctanesulfonamidoacetic acid (netfosaa) (151%); however, the associated samples are non-detect to the RL for this target analyte. The results of the original analyses are reported.

Pesticides

L2433099-03: One or more dual column RPDs are above the acceptance criteria; however, obvious column interferences are present. The result is qualified with a "P" if the higher of the two results is reported. The result is qualified with an "IP" if the lower of the two results is reported.

Total Metals

L2433099-01 through -11: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1935625-1 Method Blank, associated with L2433099-01 through -11, has a concentration above the reporting limit for iron. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

The WG1935625-3/-4 MS/MSD recoveries for aluminum (322%/132%), calcium (1120%/0%), iron (2180%/691%), lead (72%/52%), magnesium (389%/64%), manganese (138%/14%) and zinc (MS 50%), performed on L2433099-08, do not apply because the sample concentrations are greater than four times the spike amounts added.

Case Narrative (continued)

The WG1935625-3 MS recovery, performed on L2433099-08, is outside the acceptance criteria for copper (67%). A post digestion spike was performed and was within acceptance criteria.

The WG1935625-3/-4 MS/MSD RPDs for calcium (62%) and magnesium (40%), performed on L2433099-08, are above the acceptance criteria.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Report Submission

June 27, 2024: This final report includes the results of all requested analyses.

June 21, 2024: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analysis of Total Cyanide was performed at the client's request.

Volatile Organics

L2433539-06 and -09: The sample was analyzed as a High Level Methanol based upon screen results. The sample was then analyzed as a Low Level in order to achieve lower reporting limits. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

L2433539-11: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (49%) was outside the acceptance criteria; however, the MS/MSD performed on this sample achieved similar results.

The WG1937092-5 Method Blank, associated with L2433539-06 and -09, has a concentration above the reporting limit for bromomethane. Since the associated sample concentrations are non-detect to the RL for this target analyte, no corrective action is required.

The WG1937146-3 LCS recovery, associated with L2433539-05 and -11, is above the individual acceptance criteria for chloromethane (141%), but within the overall method allowances. The results of the associated samples are reported.

The WG1937146-6/-7 MS/MSD recoveries, performed on L2433539-11, are outside the acceptance criteria for methylene chloride (41%/42%), 1,1-dichloroethane (69%/69%), chloroform (64%/63%), dibromochloromethane (44%/44%), 1,1,2-trichloroethane (62%/61%), tetrachloroethene (46%/44%), chlorobenzene (29%/28%), 1,2-dichloroethane (43%/44%), bromodichloromethane (48%/48%), trans-1,3-

Case Narrative (continued)

dichloropropene (17%/17%), cis-1,3-dichloropropene (21%/21%), bromoform (56%/52%), benzene (58%/56%), toluene (49%/47%), ethylbenzene (42%/40%), 1,1-dichloroethene (52%/53%), trans-1,2-dichloroethene (27%/28%), trichloroethene (32%/32%), 1,2-dichlorobenzene (30%/28%), 1,3-dichlorobenzene (27%/25%), 1,4-dichlorobenzene (25%/22%), p/m-xylene (40%/38%), o-xylene (47%/46%), cis-1,2-dichloroethene (30%/30%), styrene (23%/22%), carbon disulfide (28%/30%), 2-hexanone (46%/49%), bromochloromethane (34%/35%), 1,2-dibromoethane (26%/27%), 1,2-dibromo-3-chloropropane (49%/47%), isopropylbenzene (66%/63%), 1,2,3-trichlorobenzene (13%/13%), 1,2,4-trichlorobenzene (14%/13%), 1,4-dioxane (164%/154%), and methyl cyclohexane (43%/43%); however, the associated LCS/LCSD recoveries are within overall method allowances.
WG1937146-6: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (47%) and the surrogate recovery for 4-bromofluorobenzene (131%) were outside the acceptance criteria.
WG1937146-7: The internal standard response for 1,4-dichlorobenzene-d4 (49%) and the surrogate recovery for 4-bromofluorobenzene (131%) were outside the acceptance criteria.

Semivolatile Organics
L2433539-01, -04, -05, and -08: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.
L2433539-11D: The sample has elevated detection limits due to the dilution required by the sample matrix.
WG1935862: An MS/MSD was not analyzed because the dilution required by the native sample would have caused the spike compounds to be diluted below the range of calibration.

Perfluorinated Alkyl Acids by 1633
WG1937998-1, WG1937998-2, and WG1937998-3: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.
The WG1937998-3 LCS recovery, associated with L2433539-09, is above the acceptance criteria for 3-

Case Narrative (continued)

perfluoroheptyl propanoic acid (7:3ftca) (160%); however, the associated sample is non-detect to the RL for this target analyte. The result of the original analysis is reported.

Total Metals

L2433539-01 through -12: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1936534-1 Method Blank, associated with L2433539-01 through -10, has a concentration above the reporting limit for iron. Since the associated sample concentrations are greater than 10x the blank concentration, no corrective action is required.

The WG1936544-3/-4 MS/MSD recoveries for aluminum (616%/792%), calcium (0%/0%), chromium (385%/19%), copper (126%/213%), iron (0%/0%), lead (171%/395%), magnesium (0%/0%), manganese (0%/0%), nickel (52%/0%), and zinc (467%/903%), performed on L2433539-11, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1936544-3/-4 MS/MSD recoveries, performed on L2433539-11, are outside the acceptance criteria for arsenic (144%/158%), barium (MSD 131%), potassium (140%/149%), silver (138%/144%), and sodium (MSD 140%). Post digestion spikes were performed and were within acceptance criteria.

The WG1936544-3/-4 MS/MSD RPDs for chromium (54%), nickel (32%), and sodium (21%), performed on L2433539-11, are above the acceptance criteria.

The WG1936547-3/-4 MS/MSD recoveries for mercury (0%/0%), performed on L2433539-11, do not apply because the sample concentrations are greater than four times the spike amounts added.

The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

June 28, 2024: This final report includes the results of all requested analyses.

June 25, 2024: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

L2433822-07: Headspace was noted in the sample containers submitted for TCL Volatiles - EPA 8260D. The analysis was performed at the client's request.

Volatile Organics

L2433822-05: The sample was analyzed as a High Level Methanol based upon screen results. The sample was then analyzed as a Low Level in order to achieve lower reporting limits. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

The WG1937092-5 Method Blank, associated with L2433822-01, -02, and -08, has a concentration above the reporting limit for bromomethane. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required.

Semivolatile Organics

L2433822-01 and -05: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2433822-02D: The sample has elevated detection limits due to the dilution required by the elevated

Case Narrative (continued)

concentrations of target compounds in the sample.
L2433822-09D: The sample has elevated detection limits due to the dilution required by the sample matrix.
WG1937164-1: The surrogate recovery is outside the individual acceptance criteria for 2-fluorophenol (19%), but within the overall method allowances. The results of the original analysis are reported; however, all associated compounds are considered to have a potential bias.
The WG1937164-2 LCS/LCSD recoveries, associated with L2433822-06, are outside the acceptance criteria for individual target compounds, but within the overall method allowances. The results of the associated sample are reported; however, all results are considered to have a potentially low bias for 2,4,6-trichlorophenol (29%/21%), 2,4,5-trichlorophenol (LCSD at 27%), and 2,3,4,6-tetrachlorophenol (28%/20%).
The WG1937164-2/-3 LCS/LCSD RPDs, associated with L2433822-06, are above the acceptance criteria for benzidine (36%), 2,4,6-trichlorophenol (32%), 2,4,5-trichlorophenol (34%), and 2,3,4,6-tetrachlorophenol (33%).
WG1937164-2: The surrogate recovery is outside the individual acceptance criteria for 2-fluorophenol (18%), but within the overall method allowances. The results of the original analysis are reported; however, all associated compounds are considered to have a potential bias.
WG1937164-3: The surrogate recovery is outside the individual acceptance criteria for 2-fluorophenol (16%), but within the overall method allowances. The results of the original analysis are reported; however, all associated compounds are considered to have a potential bias.
The WG1937194-3 LCSD recovery, associated with L2433822-01, -02, -05,and -08, is outside the acceptance criteria for individual target compounds, but within the overall method allowances. The results of the associated samples are reported; however, all results are considered to have a potentially low bias for carbazole (52%).

Semivolatile Organics by SIM
The WG1937165-2/-3 LCS/LCSD recoveries, associated with L2433822-06, are outside the acceptance criteria for individual target compounds, but within the overall method allowances. The results of the associated samples are reported; however, all results are considered to have a potentially low bias for pentachlorophenol

(28%/22%).

WG1937165-2: The surrogate recovery is outside the individual acceptance criteria for 2-fluorophenol (19%), but within the overall method allowances. The results of the original analysis are reported; however, all associated compounds are considered to have a potential bias.

WG1937165-3: The surrogate recovery is outside the individual acceptance criteria for 2-fluorophenol (18%), but within the overall method allowances. The results of the original analysis are reported; however, all associated compounds are considered to have a potential bias.

Total Metals

L2433822-01, -02, -05, -08 and -09: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2434436-01, -02, and -03: The sample was analyzed as a High Level Methanol based upon screen results. The sample was then analyzed as a Low Level in order to achieve lower reporting limits. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

L2434436-01: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (38%) was below the acceptance criteria; however, re-analysis achieved the following result: 1,4-dichlorobenzene-d4 (39%). The results of both analyses are reported.

L2434436-02: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (31%) was below the acceptance criteria; however, re-analysis achieved the following result: 1,4-dichlorobenzene-d4 (37%). The results of both analyses are reported.

L2434436-03: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (39%) was below the acceptance criteria; however, re-analysis achieved the following result: 1,4-dichlorobenzene-d4 (45%). The results of both analyses are reported.

L2434436-04, -06, and -07: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of target compounds in the sample.

L2434436-06: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

The WG1939024-3/-4 LCS/LCSD recoveries, associated with L2434436-01R, -02R, -03R, and -08, are above the individual acceptance criteria for chloromethane (148%/142%), but within the overall method allowances. The results of the associated samples are reported.

Case Narrative (continued)

The WG1938992-6/-7 MS/MSD recoveries, performed on L2434436-05, are outside the acceptance criteria for methylene chloride (36%/41%), 1,1-dichloroethane (59%/64%), chloroform (44%/49%), 1,2-dichloropropane (40%/45%), dibromochloromethane (20%/24%), 1,1,2-trichloroethane (24%/30%), tetrachloroethene (54%/60%), chlorobenzene (16%/21%), 1,2-dichloroethane (21%/25%), bromodichloromethane (27%/33%), trans-1,3-dichloropropene (6%/8%), cis-1,3-dichloropropene (11%/15%), bromoform (18%/22%), 1,1,2,2-tetrachloroethane (24%/28%), benzene (46%/52%), toluene (40%/46%), ethylbenzene (33%/37%), trans-1,2-dichloroethene (38%/46%), trichloroethene (36%/43%), 1,2-dichlorobenzene (8%/10%), 1,3-dichlorobenzene (9%/12%), 1,4-dichlorobenzene (7%/9%), methyl tert butyl ether (MS 65%), p/m-xylene (30%/35%), o-xylene (29%/34%), cis-1,2-dichloroethene (26%/32%), styrene (12%/16%), acetone (MS 51%), carbon disulfide (46%/54%), 2-butanone (41%/46%), 4-methyl-2-pentanone (41%/45%), 2-hexanone (18%/22%), bromochloromethane (21%/26%), 1,2-dibromoethane (10%/13%), 1,2-dibromo-3-chloropropane (13%/16%), isopropylbenzene (53%/55%), 1,2,3-trichlorobenzene (3%/3%), 1,2,4-trichlorobenzene (3%/4%), and methyl acetate (MS 50%); however, the associated LCS/LCSD recoveries are within overall method allowances. No further action was required.

Semivolatile Organics

L2434436-01, -05, -06, -08, and -09: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2434436-02D, -03D, and -04D: The sample has elevated detection limits due to the dilution required by the sample matrix.

The WG1938255-4/-5 MS/MSD recoveries, performed on L2434436-05, are outside the acceptance criteria for 3,3'-dichlorobenzidine (17%/24%), hexachlorocyclopentadiene (12%/11%), and 4-nitroaniline (MS 36%).

The WG1938255-4/-5 MS/MSD recoveries, performed on L2434436-05, are outside the acceptance criteria for fluoranthene (14%/34%), benzo(a)anthracene (MS 14%), benzo(a)pyrene (MS 0%), benzo(b)fluoranthene (MS 7%), benzo(k)fluoranthene (0%/27%), chrysene (MS 0%), benzo(ghi)perylene (MS 28%), indeno(1,2,3-

Case Narrative (continued)

cd)pyrene (MS 35%), and pyrene (0%/34%), The unacceptable percent recoveries are attributed to the elevated concentrations of target compounds present in the native sample.

The WG1938255-4/-5 MS/MSD recoveries, performed on L2434436-05, are below the acceptance criteria for 2,4-dinitrophenol (0%/0%) due to the concentration of this compound in the MS/MSD falling below the reported detection limit.

The WG1938255-4/-5 MS/MSD recoveries, performed on L2434436-05, are below the acceptance criteria for 4,6-dinitro-o-cresol (8%/7%); however, it has been identified as a "difficult" analyte. The results of the associated sample are reported.

Total Metals

L2434436-01 through -09: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1937869-3/-4 MS/MSD recoveries for aluminum (0%/0%), arsenic (734%/187%), calcium (451%/0%), iron (MS 12400%), lead (1270%/0%), magnesium (0%/0%), and manganese (280%/73%), performed on L2434436-05, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1937869-3/-4 MS/MSD recoveries, performed on L2434436-05, are outside the acceptance criteria for copper (278%/64%) and zinc (183%/61%). A post digestion spike was performed and was within acceptance criteria.

The WG1937869-3/-4 MS/MSD RPDs for aluminum (39%), arsenic (45%), copper (39%), iron (44%), lead (125%), magnesium (70%), manganese (22%), and zinc (34%), performed on L2434436-05, are above the acceptance criteria.

The WG1937869-6 serial dilution analysis, associated with L2434436-05, had a %D above the acceptance criteria for iron (25%) and magnesium (21%).

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

July 05, 2024: This final report includes the results of all requested analyses.

June 28, 2024: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2435063-02: The analyses of Semivolatile Organics and Total Metals were requested on the Chain of Custody; however, sample containers were not received. This was verified by the client.

Volatile Organics

The WG1940221-3 LCS recovery, associated with L2435063-01, -02, and -04, is below the individual acceptance criteria for 2-butanone (69%), but within the overall method allowances. The results of the associated samples are reported; however, all results for this compound are considered to have a potentially low bias.

Semivolatile Organics

L2435063-01: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

Perfluorinated Alkyl Acids by 1633

L2435063-03, WG1941885-2, and WG1941885-3: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

Case Narrative (continued)

Pesticides

L2435063-03: One or more dual column RPDs are above the acceptance criteria; however, obvious column interferences are present. The result is qualified with a "P" if the higher of the two results is reported. The result is qualified with an "IP" if the lower of the two results is reported.

Total Metals

L2435063-01 and -04: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1939328-1 Method Blank, associated with L2435063-01 and -04, has a concentration above the reporting limit for iron . Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Semivolatile Organics
The WG1940351-2/-3 LCS/LCSD recoveries, associated with L2435588-14, are outside the acceptance criteria for hexachlorocyclopentadiene (34%/33%), but within the overall method allowances. The results of the associated sample are reported.
The WG1941064-2 LCS recovery, associated with L2435588-01 through -13, is outside the acceptance criteria for phenol (95%), but within the overall method allowances. The results of the associated samples are reported.
The WG1941064-4/-5 MS/MSD recoveries, performed on L2435588-09, are outside the acceptance criteria for 3,3'-dichlorobenzidine (15%/21%), hexachloroethane (MS 39%), 4-nitroaniline (MS 38%), 2-nitrophenol (MS 28%), and 1,4-dioxane (39%).
The WG1941064-4/-5 MS/MSD recoveries, performed on L2435588-09, are below the acceptance criteria for hexachlorocyclopentadiene (0%), 2,4-dinitrophenol (0%), and 4,6-dinitro-o-cresol (0%) due to the

Case Narrative (continued)

concentration of these compounds in the MS/MSD falling below the reported detection limit.

Perfluorinated Alkyl Acids by 1633

The WG1942903-2R LCS recovery, associated with L2435588-09, is above the acceptance criteria for 3-perfluoroheptyl propanoic acid (7:3ftca) (183%); however, the associated sample is non-detect to the RL for this target analyte. The results of the original analysis are reported.

WG1942903-2R: The sample was re-analyzed due to QC failures in the original analysis. The results of the re-analysis are reported.

The WG1942903-4/-5 MS/MSD RPDs, performed on L2435588-09, are outside the acceptance criteria for 9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid (9cl-pf3ons) (33%), 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11cl-pf3ouds) (37%), and 3-perfluoroheptyl propanoic acid (7:3ftca) (37%).

WG1942903-5: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

Pesticides

L2435588-09: One or more dual column RPDs are above the acceptance criteria; however, obvious column interferences are present. The result is qualified with a "P" if the higher of the two results is reported. The result is qualified with an "IP" if the lower of the two results is reported.

The WG1941095-5 MSD recovery, performed on L2435588-09, is outside the acceptance criteria for endrin aldehyde (174%).

Total Metals

L2435588-01 through -13: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1940363-3/-4 MS/MSD recoveries for aluminum (258%/224%), calcium (2490%/3620%), iron (0%), magnesium (379%/2170%), manganese (MS 39%) and zinc (0%), performed on L2435588-09, do not apply because the sample concentrations are greater than four times the spike amounts added.

Case Narrative (continued)

The WG1940363-3/-4 MS/MSD recoveries, performed on L2435588-09, are outside the acceptance criteria for arsenic (28%/0%) and copper (51%/37%). A post digestion spike was performed and yielded unacceptable recoveries for arsenic (68%) and copper (68%). The serial dilution recovery was acceptable; therefore, the matrix test passed for the sample matrix.

The WG1940363-3/-4 MS/MSD recoveries, performed on L2435588-09, are outside the acceptance criteria for cadmium (74%/70%), lead (MSD 55%) and potassium (129%/140%). A post digestion spike was performed and was within acceptance criteria.

The WG1940363-4 MSD recovery, performed on L2435588-09, is outside the acceptance criteria for chromium (71%). A post digestion spike was performed and yielded an unacceptable recovery for chromium (72%). The serial dilution recovery was not applicable; therefore, this element fails the matrix test and the result reported in the native sample should be considered estimated.

The WG1940363-3/-4 MS/MSD RPD for magnesium (61%), performed on L2435588-09, is above the acceptance criteria.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

July 10, 2024: The Volatile Organics analyte list has been amended on L2438205-01 and -02.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2438205-01D and -02D: The sample has an elevated detection limit due to the dilution required by the elevated concentration of target compound in the sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

Total Metals

L2438667-01 and -02: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1946094-3 MS recovery, performed on L2438667-01, is outside the acceptance criteria for mercury (125%). A post digestion spike was performed and was within acceptance criteria.

The WG1946103-3 MS recoveries for aluminum (308%), calcium (0%), iron (0%), lead (56%), magnesium (0%), manganese (0%), performed on L2438667-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1946103-3 MS recovery, performed on L2438667-01, is outside the acceptance criteria for zinc (73%). A post digestion spike was performed and was within acceptance criteria.

The WG1946103-4 Laboratory Duplicate RPDs for chromium (21%), iron (28%) and manganese (44%), performed on L2438667-01, are outside the acceptance criteria. The elevated RPDs have been attributed to the non-homogeneous nature of the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

If the material meets requirements of DER-10 section 5.4(e)5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Due to the fact that the No. 1A round stone is a virgin stone and contains less than 10% fines it meets the intent of the regulations and does not require chemical testing

---

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

Hi Josh,

RCRA 8 was inadvertently requested. We will see if the lab can provide the TAL list.

As for quantity of material, 300 CY is what is planned for import. The form will be revised to indicate 200-300 CY. If more than 300 CY is needed, we will submit another request.

CAUTION: External Email

Janice,

Per DER-10, we need two composite samples when importing 300-400 cubic yards of material, not 1.

Is there a reason why RCRA 8 metals were run instead of TAL metals?

Cheers,
Josh.

Hi Josh,

Please see the attached request to import topsoil for the Morse Lumber, 65 Trowbridge Street Site, C828217. Compounds detected were below Commercial Use SCOs, which is the intended use of the site. In addition, the PFOA and PFOS compounds detected were below the guidance values in the April 2023 NYSDEC PFAS Guidance.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

References

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- NFG for Organic Data Review.
- Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under New York State Department of Environmental Conservation's (NYSDEC's) Part 375 Remedial Programs.

- L2431345, dated 18 June 2024;
- L2433099, dated 26 June 2024;
- L2433539, dated 27 June 2024;
- L2433822, dated 28 June 2024;

- L2438205, dated 10 July 2024; and
- L2438667, dated 17 July 2024.

Samples were collected, preserved, and shipped following standard chain of custody (COC) protocols.

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used on the sample cooler(s).
- L2430944, L2433099, L2433539, L2433822, L2435063: Total cyanide analysis was not requested on the COC but was performed at the client's request.
- L2434436: 1,4-dioxane analysis via Method 8270 was requested on the COC; however, the laboratory reported 1,4-dioxane via Method 8260.
- 8270 and 6010 analysis was requested for sample TB-DOC48-062024-1142 on the COC; however, the laboratory did not receive the sample containers. The client confirmed that the sample containers were not included in the cooler.
- Sample TB-DOC59-062424-0900 did not have any analyses marked on the COC. The analyses performed were specified by the client.
- 8081, 8151, 8082, and E1633 analysis was requested for samples TB-DOC63-071024-1050 and TB-DOC64-071024-1030 on the COC. The client canceled these analyses.

Analyses were performed on the samples listed in Table 1. Holding times are listed in Table 2.

1.2 CASE NARRATIVE

The laboratory report case narrative lists various additional quality control issues, such as internal standard exceedances and initial calibration verification (ICV) and/or continuing calibration verification (CCV) exceedances. Since these additional quality control issues were not required as per the QAPP, these quality control issues were not reviewed.

1.3 MULTIPLE SAMPLE RESULTS

The laboratory reported multiple results for the samples listed below. The validator chose the results that best met the DQOs of the project.

Lab ID	Analysis Date/Time	Method	Analyte	Qualification
Various	Various	SW8260D	All VOCs	The laboratory analyzed VOCs from the soil jar and methanol vial. Differences were noted between the results of each analysis and the laboratory attributed them to vial discrepancies. The results from the methanol vial were accepted, and the others were marked non-reportable.
Various	Various	SW8270E	Various	The sample required the dilution due to results exceedance. The laboratory marked the original results non-reportable and the reanalysis results were accepted.
L2434436-06 L2430944-01 L2431345-03	Various	SW8260D	Trichloroethene	The sample required the dilution due to results exceedance. The laboratory marked the original results non-reportable and the reanalysis results were accepted.
L2433099-02	6/18/2024 1:35:00 PM	SW8260D	All VOCs	The laboratory reanalyzed the sample due to QC exceedances. The original results are marked nonreportable and the reanalysis results are accepted.

1.4 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol, with the following exceptions:

- Headspace greater than 6mm in diameter was noted in the VOA sample containers for sample 4444-061424-0003. Since the sample is a trip blank, no additional qualification of the reported results is recommended.
- Sample 4444-062424-00001 was received with a pH less than 12 in the total cyanide container. The laboratory added additional NaOH upon receipt until the pH was greater than 12. No additional qualification of the reported results is recommended.

1.5 REPORTING LIMITS AND SAMPLE DILUTIONS

The RLs for the samples within this SDG met or were below the minimum RL requirements specified by the project-specific QAPP, with the following exceptions:

- Soil limits will vary marginally based on the volume of sample used for analysis. These variations are not considered to be significant.
- Dilution of the project samples were required to lower the concentration of the target analytes to within the instrument calibration range, control matrix interference and/or foaming during analysis, or address an abundance of non-target analytes present in the sample matrix.
- High-level methanol VOC analysis was used due to high concentrations of target analytes.

1.6 REPORTING BASIS (WET/DRY)

Refer to Section E 1.1. Soil data in this SDG were reported on a dry weight basis.

1.7 SURROGATE RECOVERY COMPLIANCE

Refer to Section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory-specified quality control (QC) limits, with the following exceptions:

1.14 PFAS SAMPLE PREPARATION

Refer to Section E 1.14. The laboratory's SOP was reviewed, and the reviewer confirmed it is the laboratory's procedure to use solid-phase extraction (SPE) for sample preparation.

1.15 PFAS IDENTIFICATION

Refer to Section E 1.15. Ion ratios could not be reviewed because the laboratory did not provide an ion ratio summary. However, the lab qualified the following samples with "F" flag:

Sample ID	Analyte	Qualifier	Affected Samples
L2433099-09	Perfluorohexanoic acid (PFHxA)	J	TB-DOC21-061224-1300

The laboratory's SOP was reviewed, and the reviewer confirmed that, when applicable, the laboratory's procedure is to sum the branched and linear peaks.

1.16 EXTRACTION INTERNAL STANDARDS

Refer to Section E 1.16. Recoveries were reviewed and found to be within the limits of 50 to 150 percent of the initial calibration (ICAL) midpoint standard/ initial continuing calibration verification (CCV), with the exceptions listed in Table 9.

Extraction Internal Standards were out of limits for MBs, LCS, MS, and MSD, but did not affect the data.

1.17 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable, except for rejected data in Table 10. A summary of qualifiers applied to this dataset is shown in Table 10.

2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.1 Reporting Basis (Wet/Dry)
  - Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations were made to compensate for the moisture content of the soil sample.
  - Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have greater than or equal to 30 percent solids to be appropriately quantified.
- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the percent recovery (%R) of the compounds.
- E 1.3 Laboratory Control Samples
  - The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post-digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
  - Field blanks are prepared to identify contamination that may have been introduced during field activity. Equipment blanks are prepared to identify contamination that may have been introduced while decontaminating sampling equipment. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.

- The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The relative percent difference (RPD) or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.

- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the relative percent difference (RPD) found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the percent recovery (%R) of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.
- E 1.8 Confirmation Column Review
  - When analyzing for pesticides and polychlorinated biphenyls (PCBs), compound identification based on single-column analysis should be confirmed on a second column or supported by at least one other qualitative technique. When confirmed on a second column, the relative percent difference (RPD) should not exceed 40 percent.
- E 1.14 PFAS Sample Preparation
  - Analysis of PFAS requires specific sample preparation. Aqueous samples must be prepared using Solid Phase Extraction (SPE), unless samples are known to contain high PFAS concentrations or the samples are injected directly into the LC/MS/MS instrument. Samples with greater than 1 percent solids may require centrifugation prior to SPE. The entire sample plus bottle rinsate must be extracted using SPE. If high PFAS concentrations are known, the samples may alternately be prepared using serial dilution performed in duplicate. If prepared by serial dilution, there must be documented project approval for this deviation.
- E 1.15 PFAS Identification
  - Identification of PFAS requires dual confirmation. The chemical derivation of the ion transitions must be documented. A minimum of two ion transitions per analyte are required (except for PFBA and PFPeA). Ratios of the quantitation ion to the confirmation ion should be calculated for samples and be within 50 to 150 percent of the ratios of the quantitation ion to the confirmation ion for standards.
  - Identification of PFAS also requires the proper assessment of branched and linear peaks. Standards for both isomers are not currently available for every PFAS compound, resulting in the common error of quantifying the area of only the branched or the linear isomers, which results in erroneous concentrations.
- E 1.16 Extraction Internal Standards
  - Analysis of PFAS by isotope dilution includes the use of extracted internal standards, which are stable isotope analogs of the PFAS compounds of interest added to each sample prior to extraction of the sample matrix. Matrix interferences that affect the

quantification of the internal standard will affect the calculated target compound concentrations.

5. Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected. The reported sample quantitation limit is approximate.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

Notes:

LCS = Laboratory control/laboratory control spike duplicate percent recoveries or relative percent difference were outside the specified limits.

SUR = Surrogate percent recovery outside the specified limits.

IDL = Isotope dilution outside the specified limits.

MBK = Method blank contamination.

EBK = Equipment blank contamination.

ION = Ion ratios were reviewed and were outside the limits of 50-150%; or the signal to noise ratios (S/N) were not ≥ 10 for all ions used for quantitation; or ≥ 3 for all ions used for confirmation.

EXE = Result exceeds the calibration range.

DUP = Laboratory duplicate relative percent difference exceeds the specified limits.

RPD = Pesticides and PCB confirmation column RPD Exceeded; or MSD/LCS RPD exceedance.

MSD = Matrix spike/matrix spike duplicate percent recoveries or relative percent difference were outside the specified limits.

FDP = Field duplicate qualifier due to an exceedance of the specified limits.

ARA = Another more viable result is available, whether due to dilution, resampling, etc.

J- = The result is an estimated quantity, but the result may be biased low.

J+ = The result is an estimated quantity, but the result may be biased high.

U = The compound was analyzed for but not detected.

UJ = The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

R = The sample results were rejected as unusable; the compound may or may not be present in the sample.

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.
