

(Fact Sheet Begins Next)

Act Now to Continue Receiving Information About This Site!

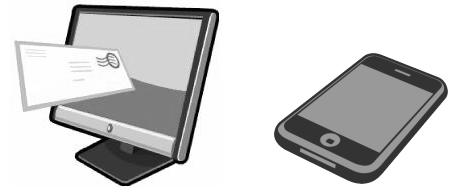

DEC's Division of Environmental Remediation (DER) now distributes information about contaminated sites *electronically by email*.

If you would like to continue to receive information about the contaminated site featured in this fact sheet:

You must sign up for the DER email listserv:

www.dec.ny.gov/chemical/61092.html

DER cannot register your email address - only the email address owner can do so. If you already have signed up for the listserv for the county in which the site is located, you need do nothing.

Why You Should Go “Paperless”:

- Get site information faster and share it easily;
- Receive information about all sites in a chosen county - read what you want, delete the rest;
- It helps the environment and stretches your tax dollars.

If “paperless” is not an option for you, call or write to the DER project manager identified in this fact sheet. Indicate that you need to receive paper copies of fact sheets through the Postal Service. Include the site name in your correspondence. The option to receive paper is available to individuals only. Groups, organizations, businesses, and government entities are assumed to have email access.

Cleanup Action Completed at Brownfield Site

Action has been completed to address the contamination related to the Parkway Plaza Cleaners site ("site") located at a portion of 39 Eastern Boulevard, Canandaigua, Ontario County under New York State's Brownfield Cleanup Program (BCP). Please see the map for the site location.

Cleanup activities were performed by Parkway Plaza Limited Partnership ("applicant") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). The applicant has submitted a proposed Final Engineering Report (FER) for NYSDEC review which states that cleanup requirements have been or will be achieved to fully protect public health and the environment for the proposed site use.

- Access project documents online through the DECinfo Locator: <https://www.dec.ny.gov/data/DecDocs/C835028/>.
- The documents also are available at the location(s) identified at left under "Where to Find Information."

Highlights of the Site Cleanup: The following activities have been or will shortly be completed to achieve the remedial action objectives:

- Excavation - Excavation and off-site disposal of about 21 cubic yards of contaminated material exceeding the Restricted Commercial Use soil cleanup objectives, the site-specific cleanup criteria. Clean fill was brought in to replace the excavated soil and capped with new asphalt.
- In-Situ (in-place) Chemical Oxidation (ISCO) - ISCO is a technology used to treat residual volatile organic compounds (VOCs) in the groundwater. A chemical oxidant was injected into groundwater at two locations, the back of the building and southwest corner of the site property.
- Vapor Mitigation - Installation of a sub-slab depressurization system to mitigate the potential for soil vapor intrusion. A sub-slab depressurization system is similar to a radon mitigation system.
- Site Cover System - The new development will maintain a site cover, which consists of the building and asphalt outside the building.
- Development of a Site Management Plan (SMP) for long-term management of residual contamination as required by the Environmental Easement, including plans for: (1) Institutional and Engineering Controls (IC/ECs); (2) monitoring; (3) operation and maintenance; and (4) reporting.
- An Environmental Easement was recorded to prevent future exposure to any contamination remaining at the site by ensuring implementation of the SMP.

Next Steps: When NYSDEC approves the FER, it will be made available to the public (see "Where to Find Information"). NYSDEC then will issue a Certificate of Completion (COC) that will be announced in a fact sheet. The

BROWNFIELD CLEANUP PROGRAM

applicants would be able to redevelop the site after receiving a COC. In addition, the applicants will be eligible for tax credits to offset a portion of the costs of performing cleanup activities and for redevelopment of the site.

Site Description: The site is a half-acre portion of 39 Eastern Boulevard (strip mall) and is bordered on the west by a restaurant, on the south by Pinnacle North / Canandaigua Multi-brownfield site C835025 (undeveloped), on the north by a parking lot / NYS Rte. 5 and 20, and adjoined on the east by retail. It is currently a one-story coin-operated laundromat with adjoining restaurants on either side. From the 1960's to 1991 the laundromat was a commercial dry cleaner and presently operates as a commercial laundromat.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C835028) at:

<https://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=3>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or

environmental standards, criteria or guidance adopted by DEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit:

<https://www.dec.ny.gov/chemical/8450.html>

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.
