Re: Supplemental Investigation - Surface Soil Sampling Investigation
Hornell Waste Site
Site #C851027
Hornell, New York

Dear Ms. Miles:

On September 18, 2017, Leader Professional Services, Inc. ("Leader") completed the Supplemental Surface Soil Sampling along the referenced Site's southernmost property line as requested by the New York State Department of Environmental Conservation ("NYSDEC"). The supplemental sampling addressed concerns by the NYSDEC and New York State Department of Health ("NYSDOH") identified in your letter dated June 9, 2017.

Scope of Work

The scope of work for the Supplemental Investigation Work Plan was to collect surface soil samples along the southernmost property line of the Site.

The scope of work was performed without deviation, with the exception of the field blank sample that was collected after conducting the soil sampling.

Task: 1 Sampling and Analysis

Surface soil samples were collected at an interval of approximately one sample per 100 feet of the property line and the locations were surveyed using hand-held global positioning system equipment with sub-meter accuracy. Figure 1 provides the mapped locations of each sample. Once the soil was disturbed, the soil was screened using a portable hand held organic vapor analyzer with a photoionization detector for volatile organic compounds. Field notes from each location are presented as Appendix 1.

All analytical data was reported as a Category B laboratory data package so it can be validated, however, this data package has not been received at this time.

Task: 2 Health and Safety

The Site's Health and Safety Plan for the project included in the November 2014 Work Plan was followed.

Task 3: Reporting

Following the receipt of the sampling data, Leader will begin to revise the Remedial Investigation Report and Remedial Alternatives Analysis Report, including addressing the comments received in the June 9, 2017 letter from the NYSDEC. Once the final data package is received the Data Usability Summary Report will be updated. The data will also be uploaded into the Equis database system.

Discussion of Results

Eight surface soil samples were collected in addition to one duplicate sample (of sample location 6), matrix spike and matrix spike duplicate (samples 9 and 9A, of sample 8), and a field blank sample. Descriptions of the collected soil, visual observations and PID measurements are provided in Appendix 1. All samples were analyzed as specified in the scope of work and the project's QA/QC plan.

Table 1 provides a copy of the laboratory data received to date. Table 2 summarizes the data (detected compounds only) and compares the results to applicable Title 6 of New York State's Code Rules and Regulations ("NYCRR") Part 375 Soil Cleanup Objectives ("SCO"). The results exceeding the restricted use - commercial SCO ("RUCSCO") are the applicable SCO for the former Hornell Waste site.

As Table 2 indicates compounds exceeding the RUCSCO are shown to be restricted to those soil samples collected from sample locations 2, 3, 5 and 6. The following compounds were found to exceed the RUCSCO:

- Arsenic was found at sample locations #2, #3, and #5 at concentrations ranging from 16.5 milligrams per kilogram ("mg/kg") to 41.5 mg/kg. The RUSCO for arsenic is 16.0 mg/kg.
- Copper was found at sample locations #2, #3, and #5 at concentrations ranging from 288 mg/kg to 492 mg/kg. The RUSCO for copper is 270 mg/kg.
- Benzo(b)fluoranthene was found at sample location #2 at a concentration of 18.0 mg/kg. The RUSCO for benzo(b)fluoranthene is 5.6 mg/kg.
- dibenz(a,h)anthracene was found at sample location #2 at a concentration of 2.2 mg/kg. The RUSCO for benzo(b)fluoranthene is 0.56 mg/kg.
- Indeno(1,2,3-cd)pyrene was found at sample location #2 at a concentration of 9.5 mg/kg. The RUSCO for indeno(1,2,3-cd)pyrene is 5.6 mg/kg.
- PCBs were found at sample locations #2, #3, #5, #6, and #8 ranging in concentrations from 1.3 to 7.91 mg/kg. The RUCSCO for PCBs (total) is 1.0 mg/kg.

These samples results are also shown on Figure 2 along with other surface soil sample results from the remedial investigation.

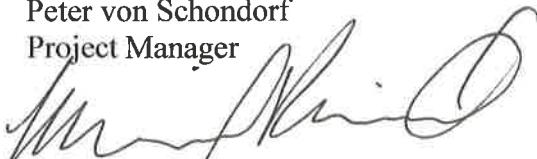

A comparison between sample location 6 and its duplicate sample shows consistency between samples for the identification of the individual compounds, but the quantification of the concentration was not consistent. When a compound was identified at concentrations above the laboratory's reporting limit, the concentrations sometimes differed up to 95% of the co-located sample. PCBs for example were found at a total concentration of 4.05 mg/kg in sample 6, but the duplicate sample contained a total PCB concentration of 7.9 mg/kg. Although not an ideal situation, it is understandable given the soil matrix is not composed of uniform grains and particles.

The field blank and trip blank did not indicate any cross-contamination from the field sampling or the sampling handling; although 0.2 micrograms per liter of benzene was found in the trip blank sample. Since the samples were not analyzed for volatile organic compounds, this finding does not detract from the previous soil sampling. The results of the supplemental investigation are in keeping with the results from the completion of the Remedial Investigation field work in April 2015. This information will be added to the revised Remedial Investigation, Remedial Alternatives Analysis Report as needed, and Data Usability Summary Report, in addition to addressing the NYSDEC's comments on the Remedial Investigation Report.

If you have any questions regarding our findings, please give us a call (585) 248-2413.

Sincerely,
LEADER PROFESSIONAL SERVICES, INC.

Appendix 1
Soil Observations and Portable Organic Vapor Analyzer Results

Sample Location	PID Measurement	Soil Observations
1	0	Sample collected from berm. Mixture of possible fill with fine gravel.
2	0	Sample collected south of berm. Mixture of possible fill and topsoil. Stone and brick visible.
3	0	Sample collected from a mixture of fill and topsoil near existing garage-like building.
4	0	Sample collected from berm containing fill soils and concrete.
5	0	Sample collected from soil adjacent to concrete pad. Scrap wood, plastic drums, and stone on ground in the vicinity of the sample location.
6	0	Sample collected from topsoil and possible fill next to chain linked fence.
7	0	Sample collected from topsoil and possible fill. Some windblown debris and abandoned building materials present.
8	0	Sample collected from topsoil and possible fill. Some brick and concrete on the ground surface.
