1. Introduction

This report summarizes laboratory analytical results of quarterly groundwater monitoring events completed in 2022 at the Garlock Sealing Technologies Site No. 3 Brownfield Cleanup Program (BCP) Site (referred to as the 'Site', BCP Site #C859028). The Site, which encompasses approximately 28 acres, is located at 1666 Division Street in the Town of Palmyra, Wayne County, New York (Figure 1).

Quarterly groundwater monitoring was conducted at the Site as a requirement of the New York State Department of Environmental Conservation (NYSDEC) approved Site Management Plan (S&W Redevelopment of North America, LLC, July 2011 [revised: December 2011]) and subsequent NYSDEC-approved modifications. GHD Consulting Services Inc. (GHD) performed groundwater sampling in March, June, September, and December 2022. Laboratory analytical services were provided by Alpha Analytical, Inc., of Westborough, Massachusetts. Field results and laboratory analytical results were submitted electronically to the NYSDEC in PDF format (this annual report constitutes the 4th quarter - December 2022 data submittal), as well as in the NYSDEC EQuIS Electronic Data Deliverable (EDD) format, after each quarterly monitoring event.

1.1 Scope and Limitations

This report has been prepared by GHD for Garlock Sealing Technologies and may only be used and relied on by Garlock Sealing Technologies for the purpose agreed between GHD and Garlock Sealing Technologies as set out in this report.

GHD otherwise disclaims responsibility to any person other than Garlock Sealing Technologies arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions, and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions, and any recommendations in this report are based on assumptions made by GHD described in this report. GHD disclaims liability arising from any of the assumptions being incorrect.

The opinions, conclusions, and any recommendations in this report are based on information obtained from, and testing undertaken at or in connection with, specific sample points. Site conditions at other parts of the Site may be different from the Site conditions found at the specific sample points.

Investigations undertaken in respect of this report are constrained by the particular Site conditions, such as the location of buildings, services, and vegetation. As a result, not all relevant Site features and conditions may have been identified in this report.

Site conditions (including the presence of hazardous substances and/or Site contamination) may change after the date of this Report. GHD does not accept responsibility arising from, or in connection with, any change to the Site conditions. GHD is also not responsible for updating this report if the Site conditions change.

GHD has prepared this report on the basis of information provided by Garlock Sealing Technologies and others who provided information to GHD (including Government authorities), which GHD has not independently verified or checked beyond the agreed scope of work. GHD does not accept liability in connection with such unverified information, including errors and omissions in the report which were caused by errors or omissions in that information.

1.2 Background

Garlock Sealing Technologies owns and operates a manufacturing facility located in the Town of Palmyra, NY where they have been making and distributing gaskets and seals for more than 100 years. As part of a modernization process, Garlock entered the New York State BCP to address historic Site contamination.

The overall Site being addressed under the BCP is approximately 45 acres and has been divided into three separate BCP sites at the Garlock facility: Klozures Site, comprising approximately 7 acres; Gylon Site, comprising approximately 10 acres; and Site No. 3, comprising approximately 28 acres. Figure 2 depicts the location of each of the three BCP sites. Separate Certificates of Completion have been issued previously for each of the BCP sites.

Over the course of the long history of manufacturing at the Site, impacts to the environment have been identified that required remedial actions to be completed under the BCP. A comprehensive remedial investigation was conducted for the Site and based on that work, seven Areas of Concern (AOCs) were identified due to groundwater contaminated with volatile organic compounds (VOCs), mainly chlorinated organics and other VOCs. The seven discrete areas were designated as AOC-1, -2, -3, -4, -5, the Carbon Tet area, and the Toluene area.

Remedial actions at the seven AOCs included:

- In-Situ chemical oxidation (ISCO) for AOC-1 and AOC-2
- Source removal for AOC-3, AOC-4, and the Toluene area
- In-situ chemical reduction (ISCR) for AOC-5 and the Carbon Tet area

The following is a brief description of each AOC, including a summary of remedial actions taken and current groundwater sampling conducted at these AOCs:

- **AOC-1:** This is a zone of groundwater that was impacted primarily with trichloroethene (TCE) and its degradation components (i.e., cis-1,2-dichloroethene [DCE] and vinyl chloride [VC]) and lesser concentrations of other VOCs, including benzene and toluene. ISCO was used to treat the contaminated groundwater via injection of a potassium permanganate solution through 17 injection wells. The injection was performed in December 2008. Quarterly groundwater monitoring was conducted between 2009 and 2012 to monitor the effectiveness of the ISCO remedy. The monitoring frequency for AOC-1 was reduced to annual sampling in 2013, with NYSDEC approval. In 2013, the NYSDEC also approved eliminating two (2) groundwater monitoring wells, OW-1/MW-26 and PTOW1-4, from the annual sampling events. The effectiveness of the ISCO injection is currently being monitored at six (6) monitoring wells in this area (Figure 4).
- **AOC-2:** This area is close to the banks of Red Creek and was impacted by TCE, DCE, and VC. ISCO using sodium permanganate injected through 18 injection wells was the selected remedy for AOC-2. The injection was completed in August 2011. The effectiveness of the injection is being monitored quarterly at five down-gradient monitoring wells (Figure 5).
- **AOC-3 & AOC-4:** These two areas of contamination were identified in the former “ballfield” area on the eastern portion of the Site. Groundwater samples from monitoring wells located in AOC-3 and AOC-4 identified concentrations of TCE and DCE up to 310,000 micrograms per liter (ug/L, parts per billion), as well as toluene, during previous investigations. Source removal of contaminated soil, debris, and containers with apparent non-aqueous phase liquid was performed in March 2011. In total, approximately 355 cubic yards and 70 cubic yards of material was excavated from AOC-3 and AOC-4, respectively, and disposed off-site. Quarterly groundwater monitoring is conducted at two wells in each AOC to monitor the effectiveness of source removal (Figure 6).
- **AOC-5:** This was an area of impacted groundwater containing TCE, DCE, and VC. The highest concentrations of TCE and DCE were identified beneath Building 15. The area was treated in August 2011 with an ISCR approach using a combination of zero valent iron and carbon. The zone of highest groundwater concentrations under Building 15 was treated, and injections were performed in a linear array north of Building 15 to serve as a permeable reactive barrier. Effectiveness of the ISCR injections is being monitored quarterly at three monitoring well locations (Figure 7).

- **Carbon Tet Area:** The Carbon Tet area is just west of the Gylon Building. Groundwater in this area was impacted by carbon tetrachloride, benzene, and chlorinated VOCs, primarily DCE and VC. Remediation was performed in August 2011 utilizing an ISCR approach using a combination of zero valent iron and carbon, which was injected through 28 direct push injection points throughout the area. Effectiveness of the ISCR injections is being monitored quarterly at three downgradient monitoring well locations (Figure 4).
- **Toluene Area:** This area is located immediately upgradient of AOC-1 and cross gradient from the Carbon Tet Area in the vicinity of a former underground toluene tank farm west of the Gylon Building. The primary contaminant of concern in this AOC was toluene, with lesser concentrations of benzene and chlorinated VOCs, primarily DCE and VC. Approximately 195 tons of toluene-impacted soil was removed from this area in November 2010 and disposed off-site. Effectiveness of the source removal is being monitored quarterly at two downgradient monitoring well locations (Figure 4).

1.3 Purpose

The objectives of the current groundwater monitoring program are to document water quality and contaminant concentrations following ISCO, ISCR, and source removal remedial actions performed at the Site. Groundwater sampling is conducted on a quarterly basis in AOC-2, -3, -4, -5, the Carbon Tet area, and the Toluene area, and annually in AOC-1. The groundwater data is intended to determine the long-term effectiveness of the remedial actions performed in each AOC. The purpose of this report is to present the sample results, findings, conclusions, and recommendations associated with the 2022 monitoring activities.

1.4 Groundwater Monitoring Schedule and Required Analysis

Through the December 2022 monitoring event, the NYSDEC-approved monitoring schedule and required analytical list was consistent with that presented in Exhibit 1-1 below and was generally followed during the monitoring events discussed in this report. Based on review of historical analytical results, requests to modify the sampling and analysis requirements were periodically made to the NYSDEC, with the most recent requests being included in the 2021 Annual Report and the 2022 Periodic Review Report for Site No. 3. The majority of these requests were approved by NYSDEC in a letter dated January 24, 2023 (see additional discussion in Section 5 of this report).

Exhibit 1-1 Groundwater Monitoring Schedule and Required Analysis

Area of Concern (AOC)	Current Sampling Frequency	Revised Monitoring Locations (as approved by NYSDEC)	Required Analysis
AOC-1	Annual	OW-2, OW-3, OW-4, OW-6/MW-3, OW-7/MW-27, and PTOW1-1	Target Compound List (TCL) VOCs, Total Organic Carbon (TOC), Chemical Oxygen Demand (COD), Field Parameters
AOC-2	Quarterly	OW-1, OW-2/MW-41, OW-3, OW-4/MW-28, and OW-5	TCL VOCs, TOC, COD, Field Parameters
AOC-3	Quarterly	MW0512-02 and MW0911-02	TCL VOCs, Field Parameters
AOC-4	Quarterly	MW0512-01 and MW0911-01	TCL VOCs, Field Parameters
AOC-5	Quarterly	MW-63, MW0610-1, and MW0811-01	TCL VOCs, TOC, COD, Biological Oxygen Demand (BOD), Hardness, Alkalinity, Iron, Magnesium, Manganese, Chloride, Sulfate, Nitrate, Dissolved Gases (ethane, ethene, methane), Field Parameters

Area of Concern (AOC)	Current Sampling Frequency	Revised Monitoring Locations (as approved by NYSDEC)	Required Analysis
Carbon Tet Area	Quarterly	MW0610-4, MW0610-5, and MW0811-02	TCL VOCs, TOC, COD, Biological Oxygen Demand (BOD), Hardness, Alkalinity, Iron, Magnesium, Manganese, Chloride, Sulfate, Nitrate, Dissolved Gases (ethane, ethene, methane), Field Parameters
Toluene Area	Quarterly	IW-1 and IW-2	TCL VOCs, Field Parameters

2. Site Hydrology

Groundwater elevation data from previous investigations indicate that shallow groundwater generally flows toward the northeast across the Site, with localized variations in certain areas. Groundwater flows north toward Red Creek near the northern Site boundary and south toward Mud Creek near the southern Site boundary (see Figure 3 for a general groundwater contour figure based on November 2011 groundwater elevations, which is the last time groundwater elevations were calculated for all on-Site wells).

On much of the Site, the top several feet are comprised of fill material overlying lacustrine silts, clays, and sand lenses to a depth of 5 to 20 feet below ground surface (bgs). This material is underlain by a confining unit consisting of dark gray clay-rich lodgment till. Based on previous investigations, it has been determined that contaminant impacts are generally limited to shallow groundwater across the Site. Low groundwater seepage velocities have appeared to limit both the lateral and vertical extent of contaminant plumes.

2.1 Groundwater Elevations

Prior to purging each groundwater monitoring well, the depth to water and depth of well are recorded using an electronic water level indicator. The measurements are made in reference to the top of the polyvinyl chloride (PVC) well casing, the elevation of which has been surveyed. These readings are recorded on field sheets for use in calculating groundwater elevations. Groundwater elevation data for each monitoring event are summarized in a table in Attachment A.

Groundwater elevations across the Site appear to exhibit minor seasonal fluctuations. Groundwater elevations for the September 2022 groundwater monitoring event, which represents the most recent event where groundwater elevations were measured at all sampled monitoring wells in each of the AOCs (since AOC-1 is only sampled annually at this time), are shown on Figures 4 through 7. Due to the limited number of wells that are monitored, it is not representative to contour groundwater elevations and determine groundwater flow direction for the overall Site based on these measurements.

3. Groundwater Sampling Methods

A total of seventeen (17) groundwater samples were taken from the groundwater monitoring wells identified in Table 1 on a quarterly basis (all AOCs except AOC-1). During the September 2022 groundwater monitoring event, an additional six (6) samples were taken from the AOC-1 groundwater monitoring wells identified in Table 1. Groundwater sampling activities during 2022 were conducted by GHD Consulting Services Inc., as follows:

- 1st Quarter – March 29, 2022
- 2nd Quarter – June 28, 2022
- 3rd Quarter – September 27, 2022
- 4th Quarter – December 20, 2022

Groundwater samples were obtained using dedicated disposable bailers. Prior to sample collection, the wells were purged until at least three well volumes were removed or until the wells went dry, whichever occurred first. The purge water was containerized in 55-gallon steel drums provided by Garlock. Storage, characterization, and disposal of the containerized groundwater was managed and documented by Garlock (Attachment B).

Once each groundwater monitoring well was purged, a groundwater sample was collected using the dedicated disposable bailer and placed directly into containers provided by the laboratory. Field parameters, including temperature, conductivity, dissolved oxygen, pH, oxidation reduction potential, and turbidity, were recorded following sample collection using a multi-parameter field meter. Groundwater samples were packed in ice-filled coolers and submitted to a NYS ELAP-certified laboratory (Alpha Analytical) for analysis. Analytical requirements for each sample taken and analyzed during 2022 are included in Exhibit 1-1.

No quality assurance/quality control (QA/QC) samples were taken during the quarterly groundwater monitoring events. This practice is a deviation from the NYSDEC-approved SMP; however, based on “discussion with NYSDEC, it is understood that only the final round of monitoring will require Category B deliverables and a Data Usability Summary Report” (per Lu Engineers’ Annual Groundwater Monitoring Report – 2013, March 7, 2014).

4. Laboratory Analytical Results

Summary tables of laboratory analytical results and data time series plots at each AOC groundwater monitoring location are included as Attachment A. Laboratory analytical results were compared to the applicable Class GA Groundwater Quality Standards and/or Guidance Values from the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 (June 1998 and subsequent addenda). Copies of the laboratory analytical reports are included as Attachment C. GHD submitted the March, June, September, and December 2022 analytical results to NYSDEC in their required EQuIS EDD format; available NYSDEC approvals received to date are included in Attachment D. Laboratory analytical results were also transmitted quarterly to NYSDEC in PDF format (with the 4th quarter 2022 results being included in this annual report).

4.1 AOC-1

Currently, a total of six (6) groundwater monitoring wells in AOC-1 are sampled annually (September) to determine the long-term effectiveness of an ISCO injection completed in this area. The most current sampling event was completed during September 2022. The contaminants of concern (COCs) in this area are TCE, DCE, VC, and toluene.

It is noted that during a previous monitoring event, groundwater monitoring well OW-2 in AOC-1 was found to be extensively damaged with the flush mount protective casing, concrete pad, and J-plug missing and the PVC riser pipe clogged with debris. As a result, samples can no longer be obtained from OW-2 and, since the adjacent down gradient monitoring points (PTOW1-1, OW-6/MW-3, and OW-7/MW-27) are capable of providing groundwater monitoring for the area, it was recommended that monitoring well OW-2 be decommissioned in the 2021 Annual Report (GHD, May 3, 2022) and in the 2022 PRR (GHD, June 30, 2022). Decommissioning of OW-2 was approved by NYSDEC (January 24, 2023 letter); however, additional information of groundwater flow and well construction details in the area was requested to be added to this report (See Attachment E). NYSDEC will review the additional detail and determine if additional steps are necessary. Site groundwater monitoring well OW-2 will be decommissioned during 2023 in accordance with the grouting in place method outlined in the NYSDEC’s Groundwater Monitoring Well Decommissioning Policy (CP-43, November 2009).

Based on laboratory analytical results presented in the Final Engineering Report (S&W Redevelopment of North America, LLC, December 2011), the highest concentrations of TCE before remedial actions were identified were in OW-6/MW-3 (28,000 ug/L) and OW-9 (7,000 ug/L). Monitoring well OW-9 is no longer sampled as part of the ongoing monitoring program. The most recent round of groundwater results from OW-6/MW-3 (September 2022) identified TCE at a concentration of 0.70 ug/L. Recently, TCE concentrations in samples from OW-6/MW-3 have fluctuated between non-detect above the laboratory method detection limit to low level detections, with identified

concentrations not exceeding the regulatory standard since the September 2015 monitoring event. The highest concentrations of toluene prior to remedial actions were in OW-1/MW-26 (13,000 ug/L) and PTOW1-4 (92,000 ug/L). Toluene had not been detected at concentrations above laboratory detection limits in samples taken from these groundwater monitoring wells since March 2009 and, as a result, these two (2) wells were removed from annual monitoring following the September 2014 monitoring event, with concurrence of NYSDEC.

In general, the analytical results indicate the following observations:

- OW-2 – As noted above, groundwater monitoring well OW-2 has been extensively damaged, and a sample was unable to be obtained during the September 2022 monitoring event. Only benzene had been detected above regulatory standards since the fall of 2017 with an overall generally decreasing trend evident. Recent monitoring events indicate benzene concentrations that are fluctuating around the regulatory standard and that have decreased from a high of 470 ug/L (March 2009) to 2.1 ug/L (September 2020).
- OW-3 – Only VC has been detected above regulatory standards since March 2013, with concentrations fluctuating around the applicable regulatory standard between 2011 and 2016. The most recent monitoring events, 2016 to 2022, have indicated exceedances of the standard for VC with a slight increasing trend generally developing. Overall, VC concentrations have decreased from a high of 54 ug/L (March 2009), to fluctuations between non-detect to less than 2.2 ug/L from February 2011 through September 2015, and have since generally increased to a high of 7.9 ug/L (September 2020 and September 2021) and then slightly decreased to 6.6 ug/L (September 2022). Concentrations will continue to be monitored to see if the reductions continue or if more definitive trends emerge.
- OW-4 – No analyzed for VOCs have been detected above regulatory standards since the fall of 2014. In the September 2022 sample taken from this well, VC, acetone, carbon tetrachloride, and cyclohexane were the only analytes detected above laboratory method detection limits. VC was flagged as an estimated concentration by the laboratory at 0.81 ug/L, below the applicable regulatory standard (last exceedance of standards was identified in March 2010), with concentrations being relatively stable since the spring of 2013. Acetone was detected at 5.1 ug/L, which is below the regulatory standard of 50 ug/L, and generally consistent with historical periodic detections. Carbon tetrachloride was flagged as an estimated concentration by the laboratory at 0.19 ug/L, below the regulatory standard of 5 ug/L. Cyclohexane does not have a regulatory standard established, concentrations are identifying a generally decreasing trend since March 2013, and concentrations are generally identified as estimated concentrations by the laboratory.
- OW-6/MW-3 – Several COCs continue to be consistently detected above applicable regulatory standards, including benzene, cis-DCE, and VC. In general, the commonly detected COCs that remain in samples taken from OW-6/MW-3 have had generally decreasing trends until September 2018 and fluctuating concentrations since. DCE and VC concentrations have decreased from highs of 4,600 ug/L and 2,800 ug/L (May 2008), respectively, to lows of 7 ug/L and 10 ug/L, respectively (September 2018). September 2022 results identified a DCE concentration of 58 ug/L and a VC concentration of 60 ug/L. It is noted that concentrations of tetrachloroethene (PCE) and TCE have not exceeded applicable regulatory standards since June 2012 and September 2015, respectively. As a result, it is expected that identified DCE and VC concentrations should continue to decrease over time due to the apparent lack of parent compounds available to degrade. Benzene concentrations continue to be detected above regulatory standards, and also have exhibited a generally decreasing trend until September 2018 and then fluctuating concentrations since. Benzene concentrations have fluctuated from a high of 106 ug/L (March 2010) to a low of 9.2 ug/L (September 2018) and are currently at 15 ug/L (September 2022). Fluctuations in DCE, VC, and benzene concentrations in samples from this well will continue to be monitored to determine if indicative trends develop or additional action is necessary.
- OW-7/MW-27 – Benzene was the only compound detected above regulatory standards in the sample collected during September 2022, which is consistent with results since September 2016. In general, the concentrations of COCs have decreased since remedial action with some minor variations identified in the more recent sampling events. Chlorinated VOCs of concern have not been detected at concentrations exceeding standards since September 2016 (TCE) and September 2015 (DCE and VC). Benzene concentrations have decreased from a high of 530 ug/L (March 2009) to 56 ug/L (September 2022), although the more recent monitoring events have identified fluctuating concentrations. Fluctuations in benzene

concentrations in samples from this well will continue to be monitored to determine if indicative trends develop or additional action is necessary.

- PTOW1-1 – Only benzene has been detected above regulatory standards since the spring of 2009. Benzene concentrations have fluctuated since remedial action was completed, with concentrations ranging from 18 ug/L (March 2009) to a low of 2.34 ug/L (November 2010) and a high of 74 ug/L (September 2015). Analytical results of monitoring events between September 2015 and September 2018 identified a decrease in benzene concentrations from 74 ug/L to 4.7 ug/L, respectively. Since September 2018, benzene concentrations have been fluctuating, and during the September 2022 monitoring event, were at a concentration of 5.5 ug/L. Fluctuations in benzene concentrations in samples from this well will continue to be monitored to determine if indicative trends develop or additional action is necessary. Detections of chlorinated VOCs of concern in samples from this well are sporadic, generally flagged as estimated values by the laboratory, and have not exceeded applicable standards since at least May 2008. VC, estimated concentration of 0.28 ug/L, was the only chlorinated VOC detected in this sample during the September 2022 monitoring event.

Long-term trends for each groundwater monitoring well, which are included with the attached tables and graphs (Attachment A), generally indicate marked decreases in concentrations of contaminants following ISCO remedial actions. Select chlorinated VOCs of concern, mainly degradation by-products DCE and VC, continue to be identified above groundwater standards in groundwater samples taken from groundwater monitoring well OW-6/MW-3. In addition, benzene continues to be consistently detected above standards in samples taken from wells OW-6/MW-3, OW-07/MW-27, and PTOW1-1.

In general, total organic carbon (TOC) levels have slightly decreased since ISCO occurred and appear to be stabilizing near pre-injection conditions. Chemical oxygen demand (COD) levels are highly variable throughout the AOC, but in general appear to be remaining slightly elevated compared to pre-ISCO levels. The identified levels of TOC and COD indicate that chemical reactions should still be occurring as a result of the potassium permanganate injection.

Based on the analytical data, the concentrations of COCs vary across the area with isolated exceedances, several instances where concentrations are no longer detected above laboratory method detection limits, and other instances where concentrations detected do not exceed applicable standards. There is no discernable correlation between the monitoring points other than the overall generally decreasing trend in COCs in this AOC since the completion of remedial activities in December 2008. These generally decreasing trends reached their minimum concentrations in September 2018 and have fluctuated since. Concentrations in samples from this AOC will continue to be monitored to determine if trends are developing and if additional action is necessary.

4.2 AOC-2

Five (5) groundwater monitoring wells located downgradient of AOC-2, between the AOC and Red Creek, are sampled quarterly to determine the effectiveness of an ISCO injection completed in this area. The COCs in this AOC are chlorinated solvents, primarily TCE and its degradation byproducts DCE and VC. The highest concentrations of COCs prior to remedial activities were identified in groundwater samples taken from OW-2/MW-41, OW-3, and OW-4/MW-28, with maximum detected concentrations as follows:

Exhibit 4-1 Maximum Concentrations of COCs Prior to Remedial Action

Analyte	OW-2/MW-41	OW-3	OW-4/MW-28
TCE	2,200 ug/L (May 2008)	7,720 ug/L (November 2010)	7,720 ug/L (November 2010)
DCE	5,300 ug/L (May 2008)	38,800 ug/L (November 2010)	38,800 ug/L (November 2010)
VC	177 ug/L (November 2010)	433 ug/L (November 2010)	433 ug/L (November 2010)

Since remedial actions were completed in 2011, the concentrations of COCs in groundwater samples taken from this AOC have exhibited decreases; however, concentrations still exceed applicable groundwater standards in samples taken from some of the monitoring wells. The maximum identified concentrations of COCs in groundwater samples taken from AOC-2 during the 2022 monitoring events were:

Exhibit 4-2 Maximum Concentrations of COCs during 2022 Monitoring Events

Analyte	OW-1	OW-2/MW-41	OW-3	OW-4/MW-28	OW-5
TCE	0.30 ug/L (June)	5.7 ug/L (March)	Non-Detect	0.68 ug/L (March)	Non-Detect
DCE	2.1 ug/L (December)	1,800 ug/L (June)	1,500 ug/L (June and September)	31 ug/L (March)	10 ug/L (March)
VC	8.1 ug/L (December)	1,100 ug/L (September and December)	6,000 ug/L (September)	320 ug/L (March)	130 ug/L (March)

In general, the analytical results indicate the following observations:

- OW-1 – Only identified concentrations of VC have exceeded groundwater standards since December 2016, with the 2022 samples varying from 2.0 ug/L (March, equal to the groundwater standard) to 8.1 ug/L (December, above the groundwater standard). TCE and DCE concentrations continue to be detected below regulatory standards and at values generally flagged as estimated by the laboratory. Overall, concentrations identified in samples from this well indicate a decreasing trend over time with minor fluctuations.
- OW-2/MW-41 –DCE, VC, trans-1,2-dichloroethene, 1,1-dichloroethane, and 1,1-dichloroethene are routinely detected at concentrations that exceed regulatory standards in samples taken from this well; however, concentrations have generally decreased over time, except for VC, for which increasing concentrations could be expected due to the sequential degradation of chlorinated organics. TCE concentrations identified since June 2020 have been fluctuating and are typically below the regulatory standard, with periodic exceedances in the June 2020, March 2021, and March 2022 monitoring events. The overall decrease in TCE, and occasional detection of sodium permanganate within the AOC, suggest that degradation should continue over time.
- OW-3 – Samples taken from this well consistently identify the highest concentrations in the AOC for DCE, VC, trans-1,2-dichlorethane, 1,1-dichloroethane, and 1,1-dichlorethane. TCE concentrations have decreased over time and have not been detected at concentrations above the groundwater standard, and generally non-detect, since March 2021. DCE and VC concentrations remain more stable or even slightly increase after the initial post-injection decreases, which can be expected based on the sequential degradation of these compounds. Carbon disulfide was detected for the first time since 2014 at 68 ug/L (above the regulatory standard of 60 ug/L); this concentration was only detected during the September 2022 sampling event and appears to be transient in nature. Overall, groundwater quality in the vicinity of OW-3 appears to be remaining stable and will continue to be monitored for trends during future events.
- OW-4/MW-28 and OW-5 – DCE, VC, and 1,1-dichloroethane commonly exceed standards in samples taken from these wells. DCE and 1,1-dichloroethane concentrations are generally decreasing over time with VC concentrations appearing more stable or even slightly increasing, which as stated previously is not unexpected because of the degradation pathway. Identified concentrations remain lower in samples taken from these well compared to samples from other wells in the AOC.

The identified overall decrease in concentrations of COCs identified throughout this AOC is expected to continue over time.

In general, TOC levels have decreased since ISCO occurred and appear to be stabilizing near pre-injection conditions. COD levels remain slightly elevated compared to pre-ISCO levels. The identified levels of TOC and COD indicate that chemical reactions should still be occurring as a result of the sodium permanganate injection, but likely at a slower rate. The generally decreasing concentrations of TCE and DCE with initial generally increasing concentrations of VC followed by generally decreasing trends evidenced in samples taken from some monitoring wells in AOC-2 is also an indication that degradation continues to occur following remedial action. Laboratory analytical results from these wells will be monitored during future sampling events to determine if discernible trends develop or if additional action is warranted.

4.3 AOC-3

The effectiveness of source removal activities completed in AOC-3 are monitored quarterly utilizing two (2) groundwater monitoring wells; one located within the footprint of excavation (MW0512-02) and one located in the presumed downgradient direction (MW0911-02). Both of these monitoring wells were installed following source removal activities. Baseline concentrations for AOC-3 are based on groundwater samples taken from groundwater monitoring well OW3-2 in May 2008. Based on this sample, the COCs for this area included TCE (80,000 ug/L); DCE (310,000 ug/L); VC (2,900 ug/L); and toluene (46,000 ug/L). Monitoring well OW3-2 was removed during source removal excavation and is no longer sampled.

To allow for collection of groundwater samples in the source area, a culvert well was installed in the excavation prior to backfilling with stone. Several attempts to sample the culvert well indicated that it was dry. As a result, groundwater monitoring well (MW0512-02) was installed in its place to allow for collection of groundwater samples from this area. Since the monitoring well was installed after completion of source removal activities, there is no pre-source removal baseline data available. The first groundwater sample was taken from this well in June 2012 and indicated the following concentrations of COCs:

Exhibit 4-3 Concentrations of COCs Within AOC Following Remedial Action

Analyte	MW0512-02
TCE	90 ug/L
DCE	3,600 ug/L
VC	970 ug/L
Toluene	2,700 ug/L

The downgradient groundwater monitoring well (MW0911-02) was also installed after completion of source removal activities, so there is no pre-source removal baseline data available. The first groundwater sample was taken from this well in October 2011 and indicated the following concentrations of COCs:

Exhibit 4-4 Concentrations of COCs Downgradient of AOC Following Remedial Action

Analyte	MW0911-02
TCE	Non-Detect
DCE	230,000 ug/L
VC	13,000 ug/L
Toluene	14,000 ug/L

The highest concentrations of the COCs in AOC-3 identified during groundwater sampling performed in 2022 are as follows:

Exhibit 4-5 Maximum Concentrations of COCs during 2022 Monitoring Events

Analyte	Well ID	Concentration (µg/L)	Date Sampled
TCE	MW0512-02	120	March
	MW0911-02	11	March
DCE	MW0512-02	6,400	June
	MW0911-02	1,100	June
VC	MW0512-02	6,800	September
	MW0911-02	990	June
Toluene	MW0512-02	1,200	June
	MW0911-02	3,400	June

Based on the concentrations identified prior to remedial activities and the current concentrations, there has been a significant decrease following source removal. In addition, the increasing trend of VC concentrations in samples is likely an indication of ongoing degradation of TCE and DCE within the AOC. However, more recent analytical data indicates a general stabilization of COC concentrations at levels that exceed the applicable regulatory standards. Generally, the concentrations of COCs in the samples collected from MW0512-02 are higher than concentrations detected in samples collected from the presumed downgradient well MW0911-02. This could be an indication of natural attenuation of the concentrations or that groundwater is not significantly migrating in this AOC. A single round of groundwater samples were taken from three further downgradient wells in September 2018 and the analytical results, which were reported in the 3rd Quarter 2018 Groundwater Monitoring Results letter report (GHD, November 5, 2018), appeared to support the assumption that migration of COCs downgradient of the AOC is limited and the qualitative exposure assessment assumptions regarding on-Site and off-Site contamination have not changed and are still valid. Laboratory analytical results from these wells will continue to be monitored during future sampling events to determine if discernable trends develop or if additional action is warranted.

4.4 AOC-4

The effectiveness of source removal activities completed in AOC-4 is monitored quarterly utilizing two (2) groundwater monitoring wells; one located within the footprint of the excavation (MW0512-01) and one located in the presumed downgradient direction (MW0911-01). Both of these monitoring wells were installed following source removal activities. As a result, baseline concentrations for AOC-4 are based on groundwater samples taken from groundwater monitoring well OW4-3 in May 2008, which included PCE (7,400 ug/L); TCE (290,000 ug/L); DCE (270,000 ug/L); VC (1,200 ug/L); toluene (49,000 ug/L); and xylene (13,000 ug/L). Monitoring well OW4-3 was removed during source removal excavation and is no longer sampled.

To allow for collection of groundwater samples in the source area, a culvert well was installed in the excavation prior to backfilling with stone. Several attempts to sample the culvert well indicated that it was dry. As a result, a groundwater monitoring well (MW0512-01) was installed in its place to allow for collection of groundwater samples from this area. Since the monitoring well was installed after completion of source removal activities, there is no pre-source removal baseline data available. The first groundwater sample was taken from this well in June 2012 and indicated the following concentrations of COCs:

Exhibit 4-6 Concentrations of COCs Within AOC Following Remedial Action

Analyte	MW0512-01
PCE	910 ug/L
TCE	11,000 ug/L
DCE	180,000 ug/L
VC	2,600 ug/L
Toluene	19,000 ug/L
Xylene	5,100 ug/L

The presumed downgradient groundwater monitoring well (MW0911-01) was also installed after completion of source removal activities, so there is no pre-source removal baseline data available. The first groundwater sample was taken from this well in October 2011 and indicated the following concentrations of COCs:

Exhibit 4-7 Concentrations of COCs Downgradient of AOC Following Remedial Action

Analyte	MW0911-01
PCE	Non-Detect
TCE	790 ug/L
DCE	8,400 ug/L

Analyte	MW0911-01
VC	740 ug/L
Toluene	330 ug/L
Xylene	1,200 ug/L

The highest concentrations of the COCs in AOC-4 identified during groundwater sampling performed in 2022 are as follows:

Exhibit 4-8 Maximum Concentrations of COCs during 2022 Monitoring Events

Analyte	Concentration (µg/L)	Well ID	Date Sampled
PCE	ND	MW0512-01	All Rounds
	ND	MW0911-01	All Rounds
TCE	110	MW0512-01	March
	52	MW0911-01	September
DCE	52,000	MW0512-01	December
	3,600	MW0911-01	September
VC	1,900	MW0512-01	December
	740	MW0911-01	September
Toluene	4,700	MW0512-01	June
	ND	MW0911-01	All Rounds
Xylene	1,370	MW0512-01	June
	ND	MW0911-01	All Rounds

Based on the concentrations identified prior to remedial activities and the current concentrations, there has been a significant decrease following source removal. However, more recent analytical results indicate a general stabilization of COC concentrations. Generally, the concentrations of TCE, DCE, VC, toluene, and xylenes in samples collected from MW0512-01 are higher than the concentrations in samples collected from presumed downgradient well MW0911-01. This could be an indication of natural attenuation of the concentrations or that groundwater is not significantly migrating in this AOC. A single round of groundwater samples were taken from three further downgradient wells in September 2018 and the analytical results, which were reported in the 3rd Quarter 2018 Groundwater Monitoring Results letter report (GHD, November 5, 2018), appeared to support the assumption that migration of COCs downgradient of the AOC is limited and the qualitative exposure assessment assumptions regarding on-Site and off-Site contamination have not changed and are still valid. Based on recent analytical results, it appears that degradation of chlorinated VOCs appears to have reached a static level following source removal. Laboratory analytical results from these wells will be monitored during future sampling events to determine if discernable trends continue and if additional action is warranted.

4.5 AOC-5

Three (3) groundwater monitoring wells located in and downgradient of AOC-5 are sampled quarterly to determine the effectiveness of an ISCR injection completed in this area. The COCs in this AOC were chlorinated solvents, primarily TCE and its degradation byproducts DCE and VC. The highest concentrations of COCs prior to remedial activities were identified in groundwater samples taken from MW0610-1 (downgradient well) and MW0811-01 (“source area” well beneath Building 15).

Concentrations of COCs identified in groundwater samples taken from each of these wells have shown the following changes since remedial actions were completed:

- TCE in groundwater samples taken from MW0610-1 have decreased from 820 ug/L in August 2011 to 2.8 ug/L in December 2022 (a 99% decrease). Data since 2018 has indicated fluctuations of TCE concentrations

in samples taken from MW0610-1, which will continue to be monitored to determine if additional action is warranted. TCE in groundwater samples taken from MW0811-01 and MW-63 have not exceeded the regulatory standard since August 2011 and generally have not been detected above laboratory method detection limits over the same period of time.

- DCE in groundwater samples taken from MW0610-1 have decreased from 2,600 ug/L in August 2011 to 150 ug/L in December 2022 (a 94% decrease) and in groundwater samples taken from MW0811-01 from 6,300 ug/L in August 2011 to 270 ug/L in December 2022 (a 96% decrease). DCE in groundwater samples taken from MW-63 have increased from 61 ug/L in August 2011 to a high of 540 ug/L in June 2012 with subsequent decreases to 85 ug/L in December 2022. As discussed before, temporary increases in degradation byproducts are not uncommon given the sequential breakdown pathway of TCE.
- VC in groundwater samples taken from MW0610-1 have decreased from 610 ug/L in August 2011 to 160 ug/L in December 2022 (a 74% decrease). Over the same time period, VC concentrations in samples taken from MW0811-01 and MW-63 have increased but are remaining generally stable or slightly increasing during recent monitoring events, which is likely attributable to the sequential degradation of DCE in the AOC.

Concentrations of iron identified in samples taken from each of the groundwater monitoring wells continue to identify elevated concentrations in relation to pre-ISCR concentrations, especially in samples taken from MW0811-01, which is in the center of the ISCR injection area. A similar trend can also be seen in TOC concentrations, particularly in samples taken from MW0811-01. The continued presence of elevated concentrations of these two analytes indicates that substrate from ISCR injections, which was a carbon and zero valent iron slurry, remains available to promote contaminant degradation. Based on groundwater results, degradation of COCs in AOC-5 is expected to continue over time, but likely at a slower rate. Laboratory analytical results from these wells will be monitored during future sampling events to determine if discernable trends occur and if additional action is warranted.

4.6 Carbon Tet Area

Three (3) groundwater monitoring wells located downgradient of the Carbon Tet Area are sampled quarterly to determine the effectiveness of an ISCR injection completed in this area. The COC in this AOC was carbon tetrachloride, with a maximum pre-ISCR concentration of 28 ug/L (MW0610-04). Since remedial actions were completed in 2011, carbon tetrachloride has only been detected above laboratory method detection limits in two samples taken from one of the AOC wells, MW0811-02. Identified concentrations were 0.21 ug/L in April 2018 (flagged as an estimated value by the laboratory) and 0.57 ug/L in March 2022, both of which are well below the regulatory standard of 5 ug/L.

Benzene is generally detected above the applicable groundwater standard in samples taken from MW0610-05 and is intermittently identified in excess of the regulatory standard in samples taken from MW0610-04 (for 2022, March monitoring event only). Benzene concentrations have not exceeded the regulatory standard in samples taken from MW0811-02 since June 2015.

Concentrations of DCE and VC are generally detected above the applicable groundwater standards in samples collected from MW0610-05 (with the exception of DCE in December 2022) and the identified concentrations have been fairly stable over time with slightly decreasing trends identified. Samples taken from MW0610-04 and MW0811-02 occasionally identify low levels of DCE and VC that have not exceeded regulatory standards, with the exception of the June 2017 monitoring event (both analytes in the sample from each well).

Concentrations of iron and TOC in groundwater samples taken from these wells have returned to levels similar to, or slightly elevated from, those identified prior to ISCR injections, which suggests that the injected substrate has been consumed and any ongoing degradation processes will likely be at a slower rate. Laboratory analytical results from these wells will be monitored during future sampling events to determine if discernable trends occur and if additional action is warranted.

4.7 Toluene Area

To demonstrate the effectiveness of source removal activities completed in this area in 2011, groundwater sampling has been performed at two (2) downgradient groundwater monitoring wells on a quarterly basis. The principal COC in this area is toluene, with maximum pre source removal concentrations of 36,000 ug/L (IW-1) and 77,000 ug/L (IW-2). Currently (December 2022), toluene concentrations identified in these groundwater monitoring wells are 22 ug/L (a 99.9% reduction) and non-detect (a 99.9% reduction if the current laboratory detection limit is used in the calculation), respectively. Other VOCs detected in groundwater samples taken from these monitoring wells during the 2022 sampling events that exceed applicable groundwater standards include:

Exhibit 4-9 Concentrations of COCs during 2022 Monitoring Events

Well	Analyte	Concentration (ug/L)	Date Sampled
IW-1	VC	4.6	March
		2.4	June
IW-1	Benzene	13	March
		12	June
		12	September
		8.4	December
IW-2	VC	17	March
		35	June
		25	September
		15	December
IW-2	Benzene	10	March
		4.7	December

AOC-1 is adjacent to and downgradient of the Toluene Area. AOC-1 monitoring wells OW-1/MW-26 and OW-2 are downgradient of IW-1 and IW-2. Toluene concentrations in samples from OW-1/MW-26 had been non-detect since June 2009 and as a result the monitoring well has not been sampled since September 2014, with the concurrence of NYSDEC. Toluene was detected in the sample from OW-2 during the September 2018 and September 2020 monitoring events, below the applicable groundwater standard, at estimated concentrations of 1.5 ug/L and 1.4 ug/L, respectively. These concentrations are significantly reduced from the highest identified toluene concentration in the sample taken from this well in March 2009, 9,400 ug/L. A sample could not be obtained from OW-2 during the September 2022 monitoring event since the well was found to be extensively damaged during a previous sampling event. Based on the groundwater sample analytical data, it appears that the selected remedy was effective at mitigating toluene impacts to groundwater within the AOC.

5. Conclusions and Recommendations

Overall, laboratory analytical results of groundwater samples taken from specific groundwater monitoring wells in each AOC indicate that the remedial actions completed in each of the AOCs were effective in removing/reducing groundwater contamination relative to pre-remediation conditions. The following sections include observations and discussions of the remedial action performance and recommendations for future monitoring activities for each AOC.

5.1 AOC-1

Based on groundwater monitoring conducted since ISCO injection was completed in December 2008, concentrations of COCs in samples taken from each of the groundwater monitoring wells have shown significant decreases.

Residual concentrations of COCs TCE, DCE, and/or VC remain in groundwater samples taken from OW-3, OW-6/MW-3, OW-7/MW-27, and PTOW1-1; however, concentrations from the most recent sampling event (September 2022) only identified the following exceedances of groundwater standards:

- DCE – 58 ug/L (OW-6/MW-3)
- VC – 6.6 ug/L (OW-3) and 60 ug/L (OW-6/MW-3)

In addition, monitoring well PTOW1-1 is immediately upgradient of monitoring well OW-6/MW-3 and concentrations of TCE, DCE, and VC detected in groundwater samples taken from PTOW1-1 have been below groundwater standards since ISCO injections were completed. Elevated concentrations of benzene continue to be identified throughout AOC-1, with most monitoring locations identifying decreasing trends.

It is noted that groundwater monitoring well OW-2 in AOC-1 was found to be extensively damaged rendering it unusable for groundwater monitoring, and therefore it is recommended that monitoring well OW-2 be decommissioned. NYSDEC agreed with decommissioning of Site groundwater monitoring well OW-2; however, they requested additional information, in the form of boring logs and a groundwater flow figure, be included in this report (see Attachment E). NYSDEC will review the information and determine if it is necessary to replace OW-2 or substitute another nearby monitoring well in its place during future monitoring events.

5.2 AOC-2

Concentrations of TCE identified in groundwater samples taken from monitoring wells in this AOC have exhibited significantly decreasing trends since ISCO injection was completed, with identified concentrations in samples taken from OW-1, OW-4/MW-28, and OW-5 remaining below groundwater standards since November 2010, December 2015, and September 2013, respectively. TCE concentrations in samples taken from OW-2/MW-41 and OW-3 have historically shown a decreasing trend since ISCO injection, and the latest results from the December 2022 monitoring event were below regulatory standards, at 1.8 ug/L (flagged as an estimated value by the laboratory) and ND, respectively.

Concentrations of DCE and VC have been more variable over time, with most wells showing initial increases in identified concentrations following ISCO injection. In general, concentrations of DCE exhibited a decreasing trend following the initial increase; however, concentrations remain above the Class GA standard in samples taken from each of the monitoring wells, except OW-1. VC concentrations also exhibited a general decreasing trend following the initial increase, with concentrations remaining above standards in samples taken from all wells within the AOC.

It is recommended that monitoring of the five (5) groundwater monitoring wells in AOC-2 continue on a quarterly basis to continue to assess the effectiveness of the remedy.

5.3 AOC-3

In general, concentrations of VOCs detected in groundwater samples taken from within, and in the presumed downgradient direction of, the source removal area have shown a decrease since source removal activities were completed; however, they remain elevated above Class GA standards and although variable, appear to be stabilizing at these elevated concentrations. Based on analytical results from the one-time additional sampling event completed during September 2018 at three wells downgradient of AOC-3, it appears that there is no significant migration of COCs further downgradient of the source area.

It is recommended that groundwater monitoring of the two (2) monitoring wells in AOC-3 continue on a quarterly basis to better understand long-term effectiveness of the source removal activities and whether natural degradation of COCs continues to occur.

5.4 AOC-4

In general, concentrations of VOCs detected in samples taken from within, and in the presumed downgradient direction of, the source removal area exhibited significant decreases after completion of source removal activities followed by variable but relatively stable concentrations in more recent monitoring events. The concentrations of COCs detected in samples from MW0911-01 appear to continue to exhibit overall decreasing trends. The concentrations of COCs identified in groundwater samples taken from both wells within this AOC remain above Class GA standards. Based on analytical results of the one-time additional sampling event completed during September 2018 at three wells downgradient of AOC-4, it appears that there is no significant migration of COCs further downgradient of the source area.

It is recommended that groundwater monitoring of the two (2) monitoring wells in AOC-4 continue on a quarterly basis to better understand long-term effectiveness of the source removal activities and whether natural degradation of COCs continues to occur.

5.5 AOC-5

Groundwater monitoring well MW0811-01 was installed in the AOC-5 source area. Based on results of the most recent groundwater sample taken from this monitoring well, there has been a decrease in TCE concentrations to below laboratory method detection limits since September 2017; a 96% decrease in DCE; and a 15% increase in VC. The increase observed for VC is likely the result of degradation of TCE and DCE, which can lead to a short-term increase in VC concentrations. Based on the elevated concentration of iron present in the most recent sample taken from MW0811-01, it is believed that injected substrate remains, and that further degradation is anticipated to continue over time but likely at a slower rate.

Similarly, concentrations of COCs in samples taken from downgradient groundwater monitoring well MW0610-1 have identified a 99% decrease in TCE to concentrations below groundwater standards and generally flagged as estimated values by the laboratory; a 94% decrease in DCE; and a 74% decrease in VC. These decreases are expected to continue over time.

Groundwater samples taken from downgradient groundwater monitoring well MW-63 have shown an increase in DCE and VC concentrations since remedial actions were completed. TCE concentrations identified in samples taken from this well have fluctuated over time and have not exceeded standards since at least August 2011. The increasing concentrations of DCE and VC identified in this downgradient well are expected due to the degradation of TCE within the AOC, as discussed above.

Overall, based on significant decreases in concentrations of COCs, the ISCR remedial approach appears to have been effective at reducing the concentrations of COCs in this AOC, and the substrate to continue this degradation appears to remain in the area.

It is recommended that monitoring of the three (3) groundwater monitoring wells continue in order to determine if decreasing downgradient trends persist in AOC-5; however, it should proceed at the NYSDEC approved sampling frequency of semi-annually, during the 1st and 3rd quarters of each year.

5.6 Carbon Tet Area

Based on laboratory analytical results, carbon tetrachloride has not been detected in downgradient groundwater samples at concentrations above laboratory method detection limits since remedial actions were completed in this AOC in September 2011, with the exception of two concentrations identified in the sample taken from MW0811-02: April 2018 at an estimated concentration of 0.21 ug/L and March 2022 with a concentration of 0.57 ug/L. Generally, the other VOC concentrations detected in this AOC have decreased and are consistently below groundwater standards in samples taken from MW0610-4 (except intermittent benzene exceedances) and MW0811-02. Benzene, DCE, and VC continue to be detected at concentrations that exceed groundwater standards in the samples taken from well MW0610-5 and concentrations appear to have stabilized with minor fluctuations. Laboratory results also indicate that iron and total organic carbon levels have generally returned to pre-injection conditions, which suggests that degradation of the remaining VOCs in the area could continue, but likely at a slower rate.

It is recommended that sampling of the three (3) downgradient groundwater monitoring wells in this AOC continue in order to monitor long-term effectiveness of ISCR injections; however, it is requested that the NYSDEC allow the sampling frequency to be reduced from quarterly to annually, during the 3rd quarter of each year.

5.7 Toluene Area

The removal of impacted soil from the Toluene Area in November 2011 has resulted in a 99.9% decrease in toluene concentrations in samples taken from downgradient groundwater monitoring wells IW-1 and IW-2. Concentrations have fluctuated during the 2022 monitoring events and were slightly above groundwater standards in the samples taken from IW-1 in March (22 ug/L), June (7.6), September (19 ug/L), and December (22 ug/L). Toluene concentrations in IW-2 have been below laboratory method detection limits since June 2017 with the exception of September 2018 and March 2019, which were below the regulatory standard and flagged as estimated values by the laboratory.

Based on these trends, it is recommended that monitoring of the two (2) downgradient wells in this AOC continue in order to determine long-term effectiveness of source removal activities; however, it should proceed at the NYSDEC-approved sampling frequency of semi-annually, during the 1st and 3rd quarters of each year.

5.8 Summary of Recommended and Approved Monitoring Program Revisions

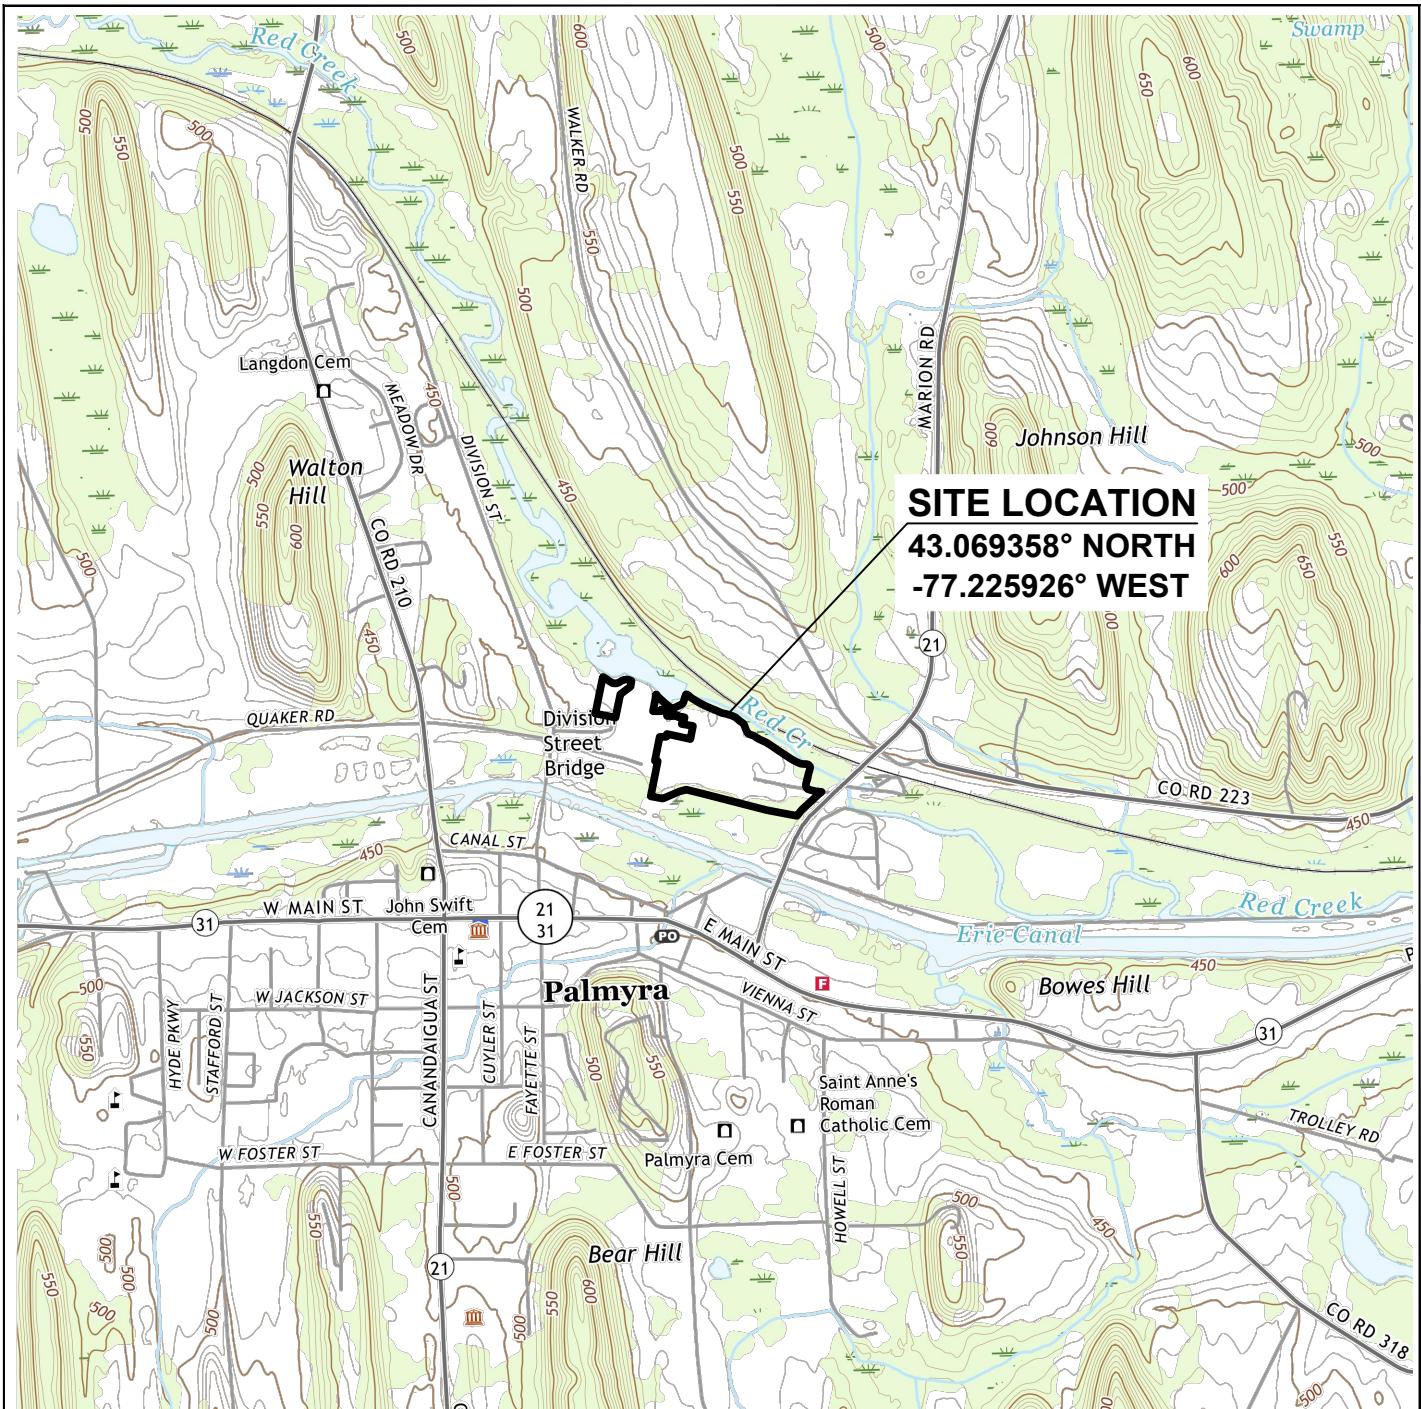

Based on NYSDEC approval of recommended modifications via letter dated January 24, 2023, the following is a summary of the Groundwater Monitoring Program going forward. In addition to the approved modifications, one additional recommendation was made in previous reports, related to the Carbon Tet Area, to reduce to annual monitoring. This request is still awaiting NYSDEC approval and is being requested again at this time. In addition, based on the NYSDEC-approval, it is recommended that monitoring well OW-2 be decommissioned and determination of whether or not an existing well or a new well needs to be added to the Groundwater Monitoring Program in its place (to be determined based on NYSDEC's review of supplemental information provided in Attachment E of this report). Based on these approved changes to the Groundwater Monitoring Program, it is further recommended that the Site No. 3 SMP be updated and revised to reflect the approved changes.

Exhibit 5-1 Summary of Approved and Recommended Monitoring Program Revisions

AOC	Current Monitoring Frequency (as approved by NYSDEC)*	Current Monitoring Locations (as approved by NYSDEC)*	Required Analysis	Recommended Modifications
AOC-1	Annual (3 rd quarter each year)	OW-3, OW-4, OW-6/MW-3, OW-7/MW-27, and PTOW1-1	TCL VOCs, TOC, COD, Field Parameters	Decommission monitoring well OW-2
AOC-2	Quarterly	OW-1, OW-2/MW-41, OW-3, OW-4/MW-28, and OW-5	TCL VOCs, TOC, COD, Field Parameters	No proposed modifications
AOC-3	Quarterly	MW0512-02 and MW0911-02	TCL VOCs, Field Parameters	No proposed modifications
AOC-4	Quarterly	MW0512-01 and MW0911-01	TCL VOCs, Field Parameters	No proposed modifications
AOC-5	Semi-annual (1 st and 3 rd quarters each year)	MW-63, MW0610-1, and MW0811-01	TCL VOCs, TOC, COD, BOD, Hardness, Alkalinity, Iron, Magnesium, Manganese, Chloride, Sulfate, Nitrate, Dissolved Gases (ethane, ethene, methane), Field Parameters	No proposed modifications
Carbon Tet Area	Quarterly	MW0610-4, MW0610-5, and MW0811-02	TCL VOCs, TOC, COD, BOD, Hardness, Alkalinity, Iron, Magnesium, Manganese, Chloride, Sulfate, Nitrate, Dissolved Gases (ethane, ethene, methane), Field Parameters	Same three (3) monitoring wells and analytical list Reduce to annual frequency (3rd quarter each year)
Toluene Area	Semi-annual (1 st and 3 rd quarters each year)	IW-1 and IW-2	TCL VOCs, Field Parameters	No proposed modifications

* - Based on NYSDEC approval via a January 24, 2023 letter, of modifications to the on-going monitoring program requested by Garlock in the 2021 Annual Report and 2022 Periodic Review Report.

Notes:

Only analytes that exceeded Class GA Regulatory Standards in samples taken from at least one monitoring well during at least one monitoring event are included here.

Regulatory Standard - Class GA Groundwater Quality Standard or Guidance Value from NYSDEC

Division of Water TOGS 1.1.1 (June 1998)

<## Not detected above indicated laboratory reporting limit.

Estimated value

mg/L milligrams per liter

ug/L micrograms per liter

Bold and highlighted cells indicate an exceedance of Class GA Regulatory Standards

Notes:

Only analytes that exceeded Class GA Regulatory Standards in samples taken from at least one monitoring well during at least one monitoring event are included here.

Regulatory Standard - Class GA Groundwater Quality Standard or Guidance Value from NYSDEC

Division of Water TOGS 1.1.1 (June 1998)

<## Not detected above indicated laboratory reporting limit.

J estimated value

mg/L milligrams per liter

ug/L micrograms per liter

Bold and highlighted cells indicate an exceedance of Class GA Regulatory Standards

Notes:
 Only analytes that exceeded Class GA Regulatory Standards in samples taken from at least one monitoring well during at least one monitoring event are included here.
 Regulatory Standard - Class GA Groundwater Quality Standard or Guidance Value from NYSDEC Division of Water TOGS 1.1 (June 1998)
 *# Not detected above indicated laboratory reporting limit.
 J estimated value
 mg/L milligrams per liter
 ug/L micrograms per liter
 Bold and highlighted cells indicate an exceedance of Class GA Regulatory Standards

Notes:
 Only analytes that exceeded Class GA Regulatory Standards in samples taken from at least one monitoring well during at least one monitoring event are included here.
 Regulatory Standard - Class GA Groundwater Quality Standard or Guidance Value from NYSDEC Division of Water TOGS 1.1.1 (June 1998)
 *** Not detected above indicated laboratory reporting limit.
 J estimated value
 mg/L milligrams per liter
 ug/L micrograms per liter
 Bold and highlighted cells indicate an exceedance of Class GA Regulatory Standards

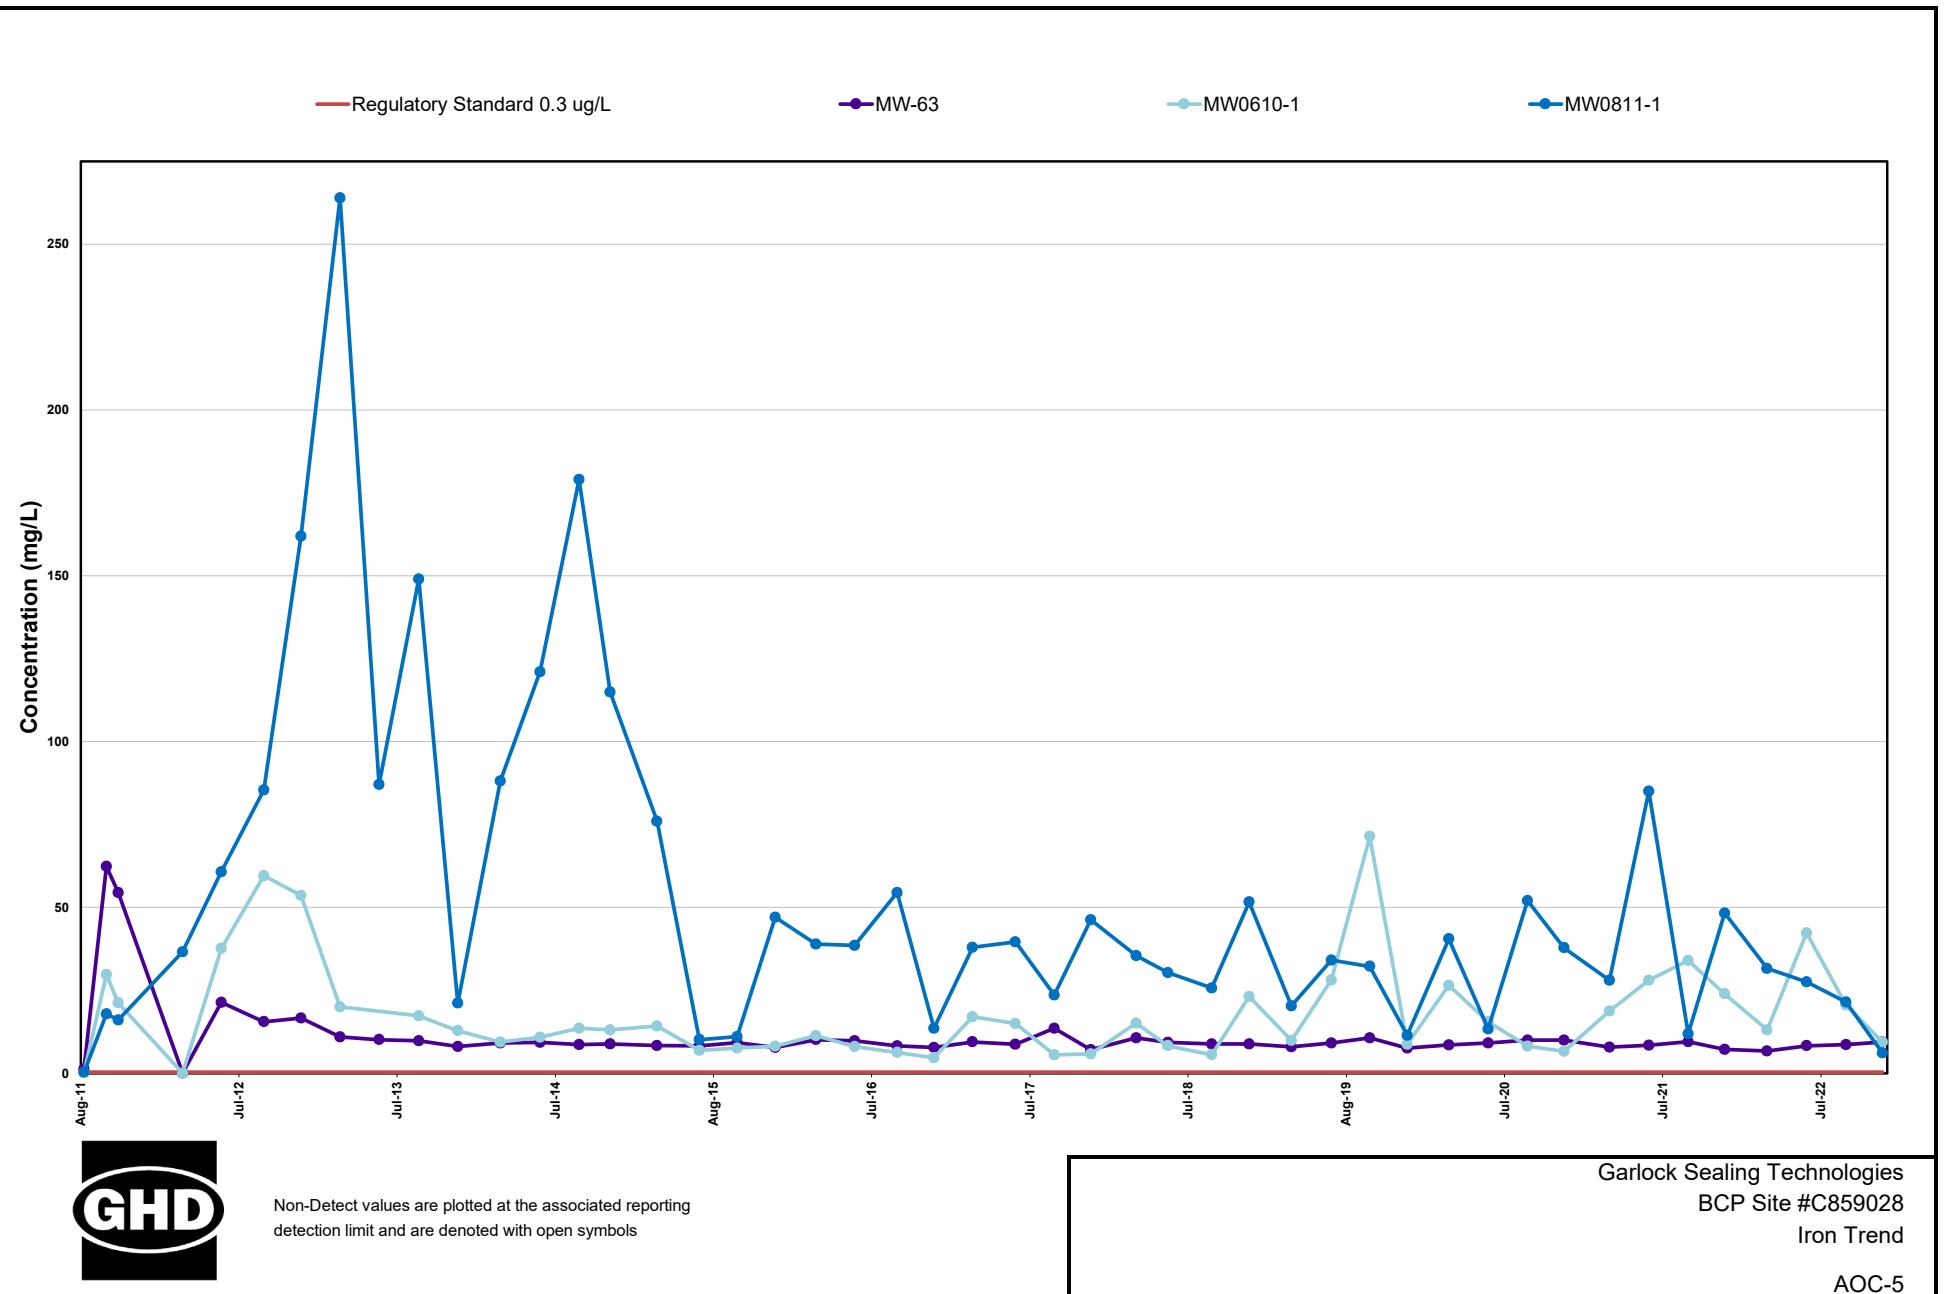

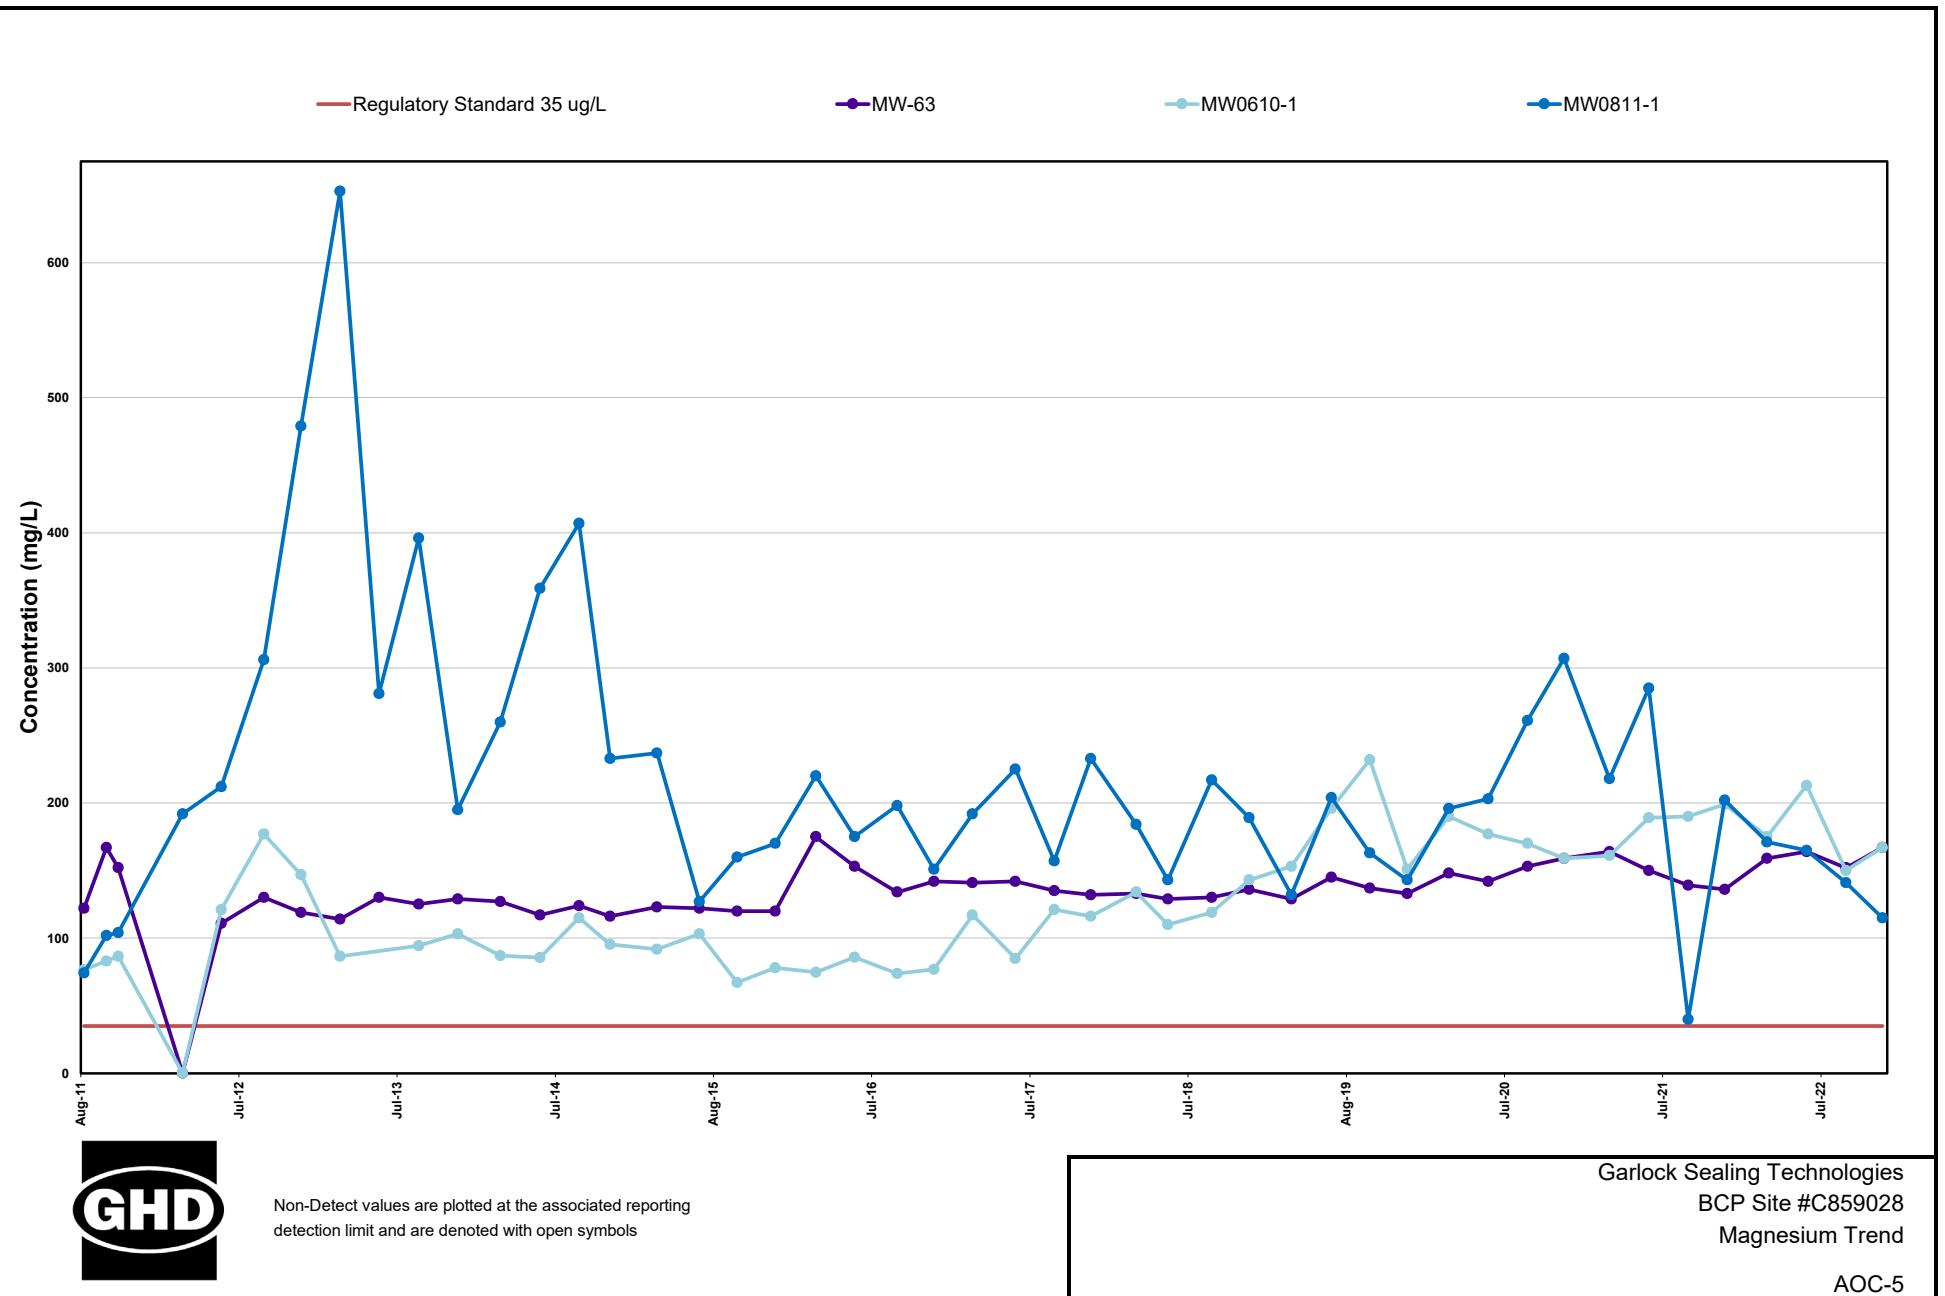

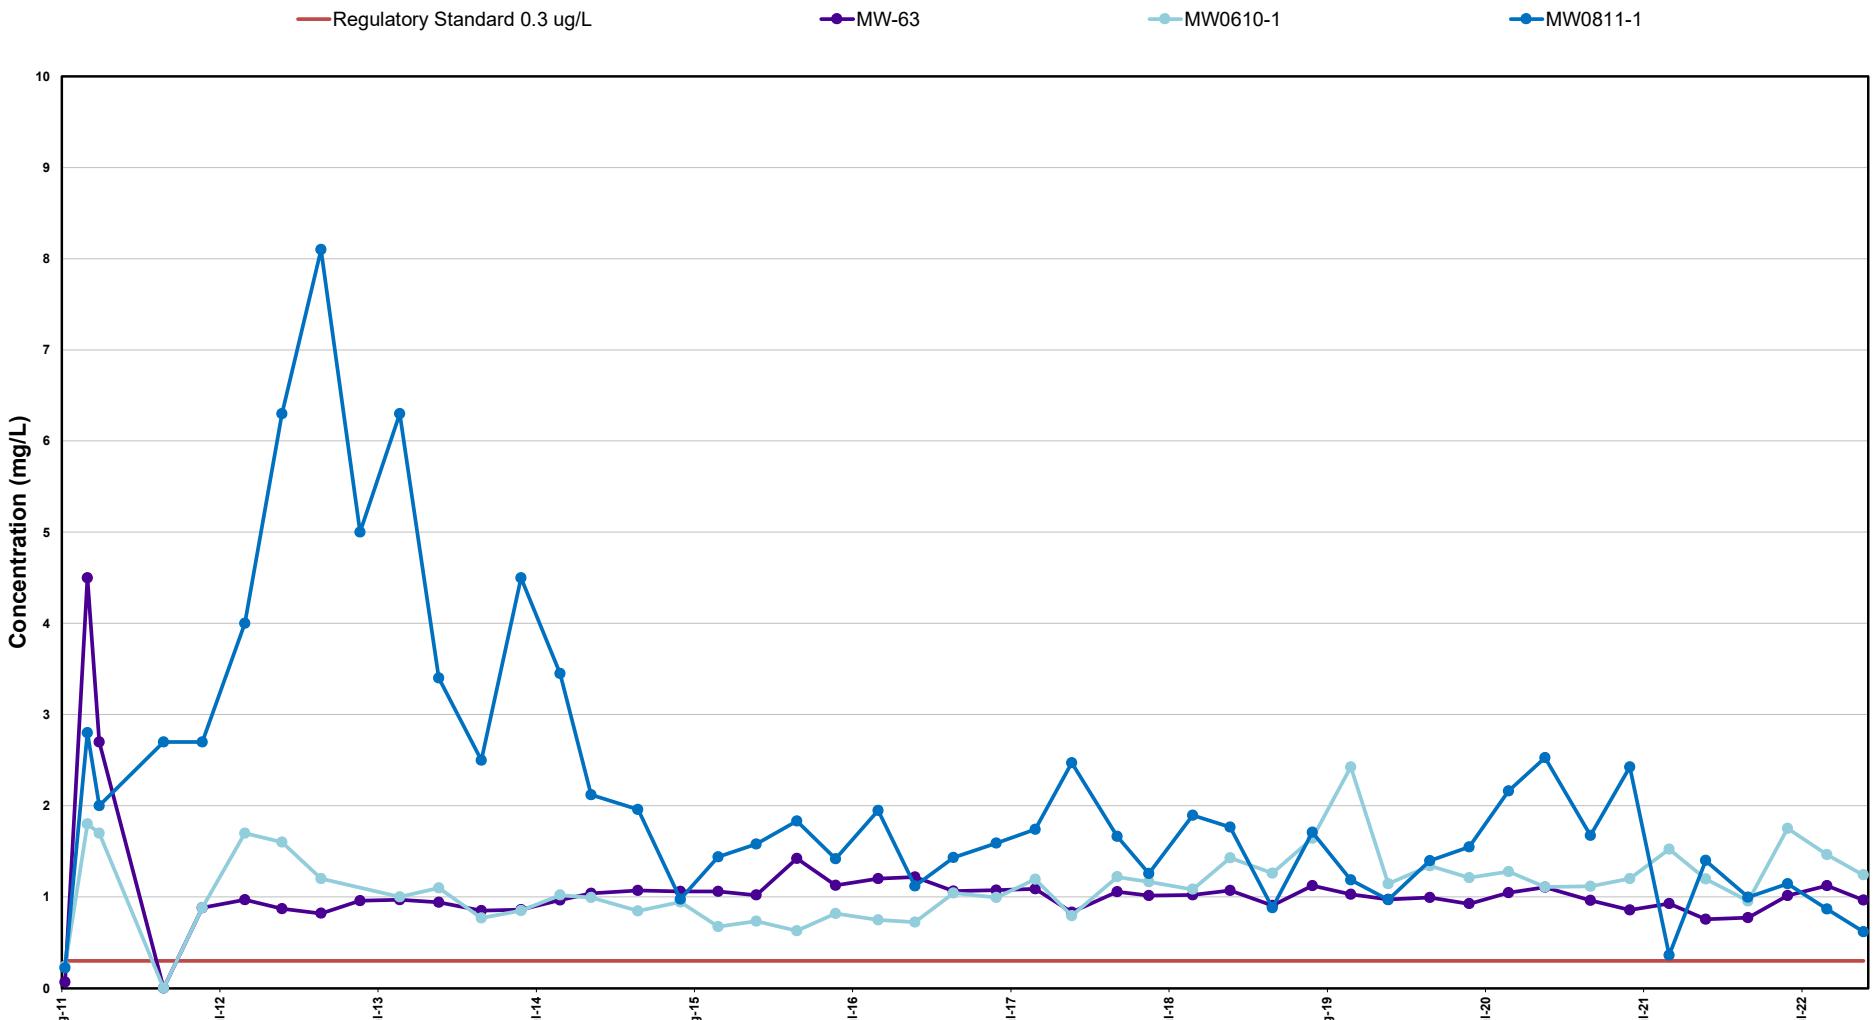

Non-Detect values are plotted at the associated reporting detection limit and are denoted with open symbols

Notes:
Only analytes that exceeded Class GA Regulatory Standards in samples taken from at least one monitoring well during at least one monitoring event are included here

Monitoring Well Sampling at least one monitoring event per quarter.
Regulatory Standard - Class GA Groundwater Quality Standard or Guidance Value from NYSDEC
Division of Water TOGS 1.1.1 (June 1998)
* Not detected above indicated laboratory reporting limit.

<## Not detected above indicated laboratory reporting limit.
Estimated value:

J estimated Value
mg/l milligrams per

ug/L micrograms per liter

Bold and highlighted cells indicate

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2216196
Report Date: 04/19/22

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2216196
Report Date: 04/19/22

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Total Organic Carbon

L2216196-16 and -18: The sample has an elevated detection limit due to the dilution required by the sample matrix.

BOD, 5 day

L2216196-16: The sample was set at the correct dilution for BOD analysis according to prep screening; however, not enough depletion occurred. Therefore, the sample result is reported as "non-detect" at an elevated detection limit. Due to the expiration of the method required holding time, re-analysis could not be performed.

Chemical Oxygen Demand

The WG1625555-3 MS recovery, performed on L2216196-01, is outside the acceptance criteria for chemical oxygen demand (69%); however, the associated LCS recovery is within criteria. No further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Lab Number: L2216196
Report Date: 04/19/22

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2216196
Report Date: 04/19/22

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthrenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e., co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2216196
Report Date: 04/19/22

Data Qualifiers

- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine. SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C**, **SM4500CN-CE**, EPA 180.1, **SM2130B**, **SM4500CI-D**, **SM2320B**, **SM2540C**, **SM4500H-B**, **SM4500NO2-B**

EPA 332: Perchlorate; **EPA 524.2**: THMs and VOCs; **EPA 504.1**: EDB, DBCP.

Microbiology: **SM9215B**; **SM9223-P/A**, **SM9223B-Colilert-QT**, **SM9222D**.

Non-Potable Water

SM4500H,B, EPA 120.1, **SM2510B**, **SM2540C**, **SM2320B**, **SM4500CL-E**, **SM4500F-BC**, **SM4500NH3-BH**: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, LACHAT 10-107-06-1-B: Ammonia-N, **EPA 351.1**, **SM4500NO3-F**, **EPA 353.2**: Nitrate-N, **SM4500P-E**, **SM4500P-B**, **E**, **SM4500SO4-E**, **SM5220D**, EPA 410.4, **SM5210B**, **SM5310C**, **SM4500CL-D**, EPA 1664, **EPA 420.1**, **SM4500-CN-CE**, **SM2540D**, EPA 300: Chloride, Sulfate, Nitrate.

EPA 624.1: Volatile Halocarbons & Aromatics,

EPA 608.3: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625.1: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.

Microbiology: **SM9223B-Colilert-QT**; **Enterolert-QT**, **SM9221E**, EPA 1600, **EPA 1603**, **SM9222D**.

Lab Number: L2234416
Report Date: 07/20/22

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Lab Number: L2234416
Report Date: 07/20/22

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2234416-01, -02, -03, -09, -10, and -11: The sample was received above the appropriate pH for the Total Metals analysis. The laboratory added additional HNO₃ to a pH <2.

Volatile Organics

L2234416-02: The trichloroethene result should be considered estimated due to co-elution with a non-target compound.

L2234416-11D: The analysis was performed utilizing a compromised vial.

Dissolved Gases

L2234416-10: The sample was collected in pre-preserved vials; however, the pH of the sample was determined to be greater than two.

Total Organic Carbon

L2234416-09: The sample has an elevated detection limit due to the dilution required by the sample matrix. The WG1663961-3 Laboratory Duplicate RPD for total organic carbon (43%), performed on L2234416-01, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

BOD, 5 day

L2234416-01, -03, -09, and -11: The sample was set at the correct dilution for BOD analysis according to prep screening; however, not enough depletion occurred. Therefore, the sample result is reported as "non-detect" at an elevated detection limit. Due to the expiration of the method required holding time, re-analysis

Case Narrative (continued)

could not be performed.

L2234416-02: The sample was analyzed with the method required holding time exceeded.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2234416
Report Date: 07/20/22

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2234416
Report Date: 07/20/22

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2234416
Report Date: 07/20/22

Data Qualifiers

Identified Compounds (TICs).

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine. SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C**, **SM4500CN-CE**, **EPA 180.1**, **SM2130B**, **SM4500CI-D**, **SM2320B**, **SM2540C**, **SM4500H-B**, **SM4500NO2-B**

EPA 332: Perchlorate; **EPA 524.2**: THMs and VOCs; **EPA 504.1**: EDB, DBCP.

Microbiology: **SM9215B**; **SM9223-P/A**, **SM9223B-Colilert-QT**, **SM9222D**.

Non-Potable Water

Project Name: GARLOCK
Project Number: 12578577

Lab Number: L2253332
Report Date: 10/20/22

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: GARLOCK
Project Number: 12578577

Lab Number: L2253332
Report Date: 10/20/22

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2253332-02: The sample identified as "MW0512-02-092722" on the chain of custody was identified as "MW0512-01-092722" on the container label. At the client's request, the sample is reported as "MW0512-02-092722".

L2253332-03: The collection date and time on the chain of custody was 27-SEP-22 12:55; however, the collection date/time on the container label was 27-SEP-22 13:25. At the client's request, the collection date/time is reported as 27-SEP-22 13:25.

L2253332-04: The collection date and time on the chain of custody was 27-SEP-22 13:20; however, the collection date/time on the container label was 27-SEP-22 12:55. At the client's request, the collection date/time is reported as 27-SEP-22 12:55.

L2253332-12: The analyses performed were specified by the client.

Dissolved Gases

L2253332-13, -14, -15, -21, -22, and -23: The sample was collected in pre-preserved vials; however, the pH of the sample was determined to be greater than two.

The WG1695604-5 MS recovery, performed on L2253332-15, is outside the acceptance criteria for methane (385%). The unacceptable percent recovery is attributed to the elevated concentrations of target compounds present in the native sample.

Anions by Ion Chromatography

L2253332-14: The sample has an elevated detection limit for sulfate due to the dilution required by the sample matrix.

Case Narrative (continued)

BOD, 5 day

L2253332-21 and -23: The sample was set at the correct dilution for BOD analysis according to prep screening; however, not enough depletion occurred. Therefore, the sample result is reported as "non-detect" at an elevated detection limit. Due to the expiration of the method required holding time, re-analysis could not be performed.

Total Organic Carbon

L2253332-23: The sample has an elevated detection limit due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Lab Number: L2253332
Report Date: 10/20/22

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: GARLOCK
Project Number: 12578577

Lab Number: L2253332
Report Date: 10/20/22

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Lab Number: L2253332
Report Date: 10/20/22

Data Qualifiers

Identified Compounds (TICs).

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine. SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C**, **SM4500CN-CE**, **EPA 180.1**, **SM2130B**, **SM4500CI-D**, **SM2320B**, **SM2540C**, **SM4500H-B**, **SM4500NO2-B**

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2271660
Report Date: 01/06/23

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2271660
Report Date: 01/06/23

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2271660-02: The collection date and time on the chain of custody was 20-DEC-22 12:50; however, the collection date/time on the container label was 20-DEC-22 12:45. At the client's request, the collection date/time is reported as 20-DEC-22 12:50.

L2271660-17: The collection date and time on the chain of custody was 20-DEC-22 14:10; however, the collection date/time on the container label was 20-DEC-22 14:45. At the client's request, the collection date/time is reported as 20-DEC-22 14:45.

L2271660-18: The collection date and time on the chain of custody was 20-DEC-22 14:45; however, the collection date/time on the container label was 20-DEC-22 14:10. At the client's request, the collection date/time is reported as 20-DEC-22 14:10.

The Project Name was specified by the client.

Dissolved Gases

L2271660-13, -14, -15, -16, and -17: The samples were collected in pre-preserved vials; however, the pH of the samples were determined to be greater than two.

Total Metals

The WG1729446 CCV recovery, associated with WG1726501-1, was above the acceptance criteria for hardness. Any associated samples with positive detections were re-analyzed under a passing CCV. The samples that were non-detect for these elements are reporting results from the original analyses.

Anions by Ion Chromatography

L2271660-15: The sample has an elevated detection limit for Sulfate due to the dilution required by the sample

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2271660
Report Date: 01/06/23

Case Narrative (continued)

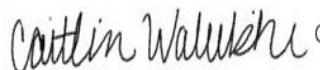

matrix.

Total Organic Carbon

L2271660-18: The sample has an elevated detection limit due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

*Values in parentheses indicate holding time in days

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2271660
Report Date: 01/06/23

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2271660
Report Date: 01/06/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name: GARLOCK
Project Number: 12578577-2201

Lab Number: L2271660
Report Date: 01/06/23

Data Qualifiers

Identified Compounds (TICs).

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine. SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C**, **SM4500CN-CE**, **EPA 180.1**, **SM2130B**, **SM4500CI-D**, **SM2320B**, **SM2540C**, **SM4500H-B**, **SM4500NO2-B**

EPA 332: Perchlorate; **EPA 524.2**: THMs and VOCs; **EPA 504.1**: EDB, DBCP.

Microbiology: **SM9215B**; **SM9223-P/A**, **SM9223B-Colilert-QT**, **SM9222D**.

Non-Potable Water

SM4500H,B, **EPA 120.1**, **SM2510B**, **SM2540C**, **SM2320B**, **SM4500CL-E**, **SM4500F-BC**, **SM4500NH3-BH**: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, LACHAT 10-107-06-1-B: Ammonia-N, **EPA 351.1**, **SM4500NO3-F**, **EPA 353.2**: Nitrate-N, **SM4500P-E**, **SM4500P-B**, **E**, **SM4500SO4-E**, **SM5220D**, **EPA 410.4**, **SM5210B**, **SM5310C**, **SM4500CL-D**, **EPA 1664**, **EPA 420.1**, **SM4500-CN-CE**, **SM2540D**, **EPA 300**: Chloride, Sulfate, Nitrate.

EPA 624.1: Volatile Halocarbons & Aromatics,

EPA 608.3: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625.1: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.

Microbiology: **SM9223B-Colilert-QT**; **Enterolert-QT**, **SM9221E**, **EPA 1600**, **EPA 1603**, **SM9222D**.

Mansfield Facility:

Drinking Water

EPA 200.7: Al, Ba, Cd, Cr, Cu, Fe, Mn, Ni, Na, Ag, Ca, Zn. **EPA 200.8**: Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. **EPA 245.1** Hg. **EPA 522**, **EPA 537.1**.

Non-Potable Water

EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, Ti, V, Zn.

EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Fe, Pb, Mn, Ni, K, Se, Ag, Na, TL, Zn.

EPA 245.1 Hg.

NYSDEC EQuIS Approvals

Carlene Eaton

From: dec.sm.NYENVDATA <NYENVDATA@dec.ny.gov>
Sent: Friday, June 17, 2022 6:39 PM
To: Ian McNamara
Cc: Mumbrue, Tasha L (DEC)
Subject: RE: EDDs for Garlock Site No. 3 BCP Site (#C859028) - 1st Qtr. 2022 Groundwater Sampling

Ian,

Thank you for your EDD submission. NYSDEC has successfully uploaded the data from the EDDs "20220516 0952.C859028.NYSDEC_MERGE" and "20220516 1029.C859028.NYSDEC_MERGE" to Garlock Sealing Technologies Site No. 3 in the NYSDEC database and the data is available for use within the system.

Aaron
NYSDEC EIMS Team

Subject: EDDs for Garlock Site No. 3 BCP Site (#C859028) - 1st Qtr. 2022 Groundwater Sampling

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Hello,

Two EDDs are attached for the above referenced project. These EDDs include field results and groundwater analytical results associated with the 1st Quarter 2022 groundwater sampling conducted at the site on March 29, 2022.

Please let me know if any edits are required or if the EDDs are acceptable.

Thanks,
Ian

		End of Boring				
NOTES: Thicknesses of Bentonite seal and Sand pack are estimated because annular space was too narrow to measure the exact depths. One "cupful" of bentonite was poured over the sand, and more sand poured over that to near the top of PVC. Diameter of bore-hole depicted in well construction diagram is not to scale.
