EXECUTIVE SUMMARY

At the request of Housing Visions, C&S Engineers, Inc. (C&S) has completed this Phase I Environmental Site Assessment of the Subject Property identified as Tax Map ID No. 68111-18-416166, which is located at 130-132 Harrison Street, in the Village of Newark, Wayne County, New York. The Subject Property is 5.31 acres and is owned by Graybill Real Estate LLC.

The observations made during C&S' August 5, 2024 Subject Property reconnaissance are included in latter sections of this report. The remainder of this report includes information collected from various local, state and federal agencies, interviews, user-provided information, and reasonably ascertainable historical records such as tax records, aerial photographs, fire-insurance maps, local city directories, and topographic maps.

Based on the results of this Phase I ESA, the following findings and opinions are provided:

Findings and Opinions:

- The Subject Property is identified as Tax Map ID No. 68111-18-416166, which is located at 130-132 Harrison Street, in the Village of Newark, Wayne County, New York. The Subject Property is 5.31 acres and is owned by Graybill Real Estate LLC. The Subject Property consists of a 112,676 square-foot three-story building in the center of the property (e.g. the Main Building). There is an adjoining 39,576 square-foot single-story warehouse on the east side of the main building and a 5,280 square-foot two-story annex building on the south side of the property. There are asphalt parking lots to the north, south, and east of the main building and minimal greenspace on the north and south sides of the Subject Property.

- The Subject Property reconnaissance was performed on August 5, 2024. C&S observed minor oil staining in the parking lot on the east side of the warehouse, minor oil staining on the concrete floor in the vicinity of the air compressors and motor in the boiler room, and leaking / staining observed from two deteriorating 5-gallon buckets of Texaco products in the boiler room. These are considered *de minimis* conditions. A 5-gallon bucket of asbestos-containing cement in the boiler room and potential lead-based paint in poor condition throughout the building are considered Business Environmental Risks.

- Two 12,000-gallon no. 2 fuel oil underground storage tanks (USTs) were installed some time before 1986 and removed and closed in October 2013. At the time of closure, contamination was encountered around the tanks and spill no. 1307418 was assigned. Closeout soil samples indicated only two slight exceedances of semi-volatile organic compounds (SVOCs). Benzo(b)fluoranthene was detected at 1.2 parts per million (ppm) compared to the Restricted Residential Use Soil Cleanup Objective (SCO) of 1 ppm. Indeno(1,2,3-cd)pyrene was detected at 0.556 ppm compared to the Restricted Residential Use SCO of 0.5 ppm. Approximately 200 tons of petroleum contaminated soil was excavated and transported to the Ontario County Landfill. According to existing records,

no further remedial work was required and the New York State Department of Environmental Conservation (NYSDEC) closed the spill as not meeting standards. Due to extent of remediation previously performed (200 tons of soil removed) and limited "slight" exceedances from soil samples taken at the time of closure, it is unlikely that the anticipated multi-family residential land use would cause NYSDEC to reopen the spill or require further remediation. However, because contaminants were present at concentrations greater than Unrestricted Use SCOs, the residual impacts are considered a Recognized Environmental Condition.

- The Subject Property was historically utilized for industrial purposes including machining, tinware manufacturing, cosmetics manufacturing, jewelry manufacturing, which involved electroplating, plating, anodizing, coloring, and the generation of hazardous waste. These types of businesses utilize petroleum products and chemicals such as chlorinated solvents. Typically, the use of those types of products in operations such as these led to releases and are often identified as a Recognized Environmental Condition. Site investigations were performed in 2020 and 2023, which included the advancement of 18 soil borings and collection and analysis of 18 soil samples, the installation and sampling of three temporary groundwater monitoring wells, and the collection and analysis of air samples. The samples did not indicate an exceedance of a soil or groundwater standard, although low levels of chlorinated solvents are present in groundwater which may be a contributing factor to soil vapor intrusion. Air sampling data indicated exceedances of NYSDOH criteria at concentrations that requires mitigation. As such, Housing Visions retained C&S to design a sub-slab depressurization system (SSDS). The system was designed to provide at least -0.004 water column inches (wci) below the entire slab of the Main Building and the Annex. The system includes hundreds of feet of trench and multiple vapor pits to collect vapors from below the slab, exhaust piping, roof-mounted exhaust fans, a monitoring system, and an alarm system. Prior to occupancy, the negative pressure below the slab can be verified and indoor air will be tested to document the adequacy of the system. In addition to a potential onsite source of vapors, there is an upgradient site with documented soil vapor concerns. 175 West Union Street has significant onsite and offsite chlorinated solvent impacts (groundwater ~400 parts per billion and vapor concentrations at 25,000 $\mu g/m^3$). Due to proximity and the degree of impacts, the site could be contributing factors to onsite soil vapor intrusion issues. The onsite and offsite soil vapor concerns are considered a Vapor Encroachment Concern and Recognized Environmental Condition.

- During the completion of this assessment, an effort was made to identify known sources of Per- and Polyfluoroalkyl Substances (PFAS) on or in the vicinity of the Subject Property. PFAS are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in a wide variety of products such as water-repellent clothing and furniture, plating solutions, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces, electrical wire insulation, and several other uses.

Our assessment was based upon common industry knowledge at the time this Assessment was completed, as well as the USEPA document *Interim Guidance on the Destruction and Disposal of Perfluoroalkyl and Polyfluoroalkyl Substances and Materials Containing Perfluoroalkyl and Polyfluoroalkyl Substances*. Based on the historical uses at the Subject Property, PFAS could be an issue at the Subject Property because metal plating and cosmetics manufacturing are considered secondary industries that are known to have used PFAS in their operation. Per the guidance document, PFAS releases are possible at any stage of the industrial processes.

In recent years, the NYSDOH, NYSDEC, and USEPA began prioritizing the study of potential health effects of PFAS. There is limited information known to-date regarding PFAS and the regulations associated with them remain fluid. Although there is no precisely-clear definition of what constitutes a PFAS, the EPA lists 6,330 named PFAS substances. In February 2019, NYSDEC mandated the sampling of 21 PFAS substances in groundwater for sites being investigated under certain NYSDEC programs. In July 2024, PFAS was listed as hazardous by CERCLA.

According to the EPA, drinking water can be a source of exposure in communities where these chemicals have contaminated water supplies. Such contamination is typically localized and associated with a specific facility. For example, an industrial facility where PFAS were produced or used to manufacture other products, or locations where firefighting foam was used such as oil refineries, airfields or other training facilities for firefighters.

Due to the listing of plating and cosmetics manufacturing as potential sources of PFAS contamination and a lack of information regarding historical operations on the Subject Property, PFAS is considered a Recognized Environmental Condition.

- With respect to the Subject Property's historical operation of rail spurs and the adjacent property's historical use as a railroad, potential concerns that are related to historic rail lines include the use of treated railroad ties and the application of arsenic-based herbicides for vegetation control, as detailed below:

    - Wooden railroad ties that were used in rail construction were commonly treated with creosote-based preservatives to prevent decay. These products are comprised of polynuclear aromatic hydrocarbons (PAHs) that are regulated due to their potential carcinogenic properties. With respect to the Subject Property's and adjacent property's rail line, the existing ties are intact and part of the rail structure and are therefore not considered to be dumped or disposed of. Further, leaching of PAHs, if any, from the ties would likely be localized to the soil beneath the ties and considered a de minimis condition, similar to isolated automotive fluid staining on a parking lot. Based on these factors, the rail ties are not considered to be a Recognized Environmental Condition with respect to the Subject Property.

- The other potential concern with rail lines relates to the historic use of arsenic-based herbicides in vegetation control. Railroads have historically applied herbicides along the routes of rail lines as a vegetation maintenance practice. ASTM Practice E1527-21 contains a pesticide exclusion (Appendix X1.1.4.3(4)) that is intended to "prevent the typical pesticide user from incurring CERCLA liability when he has done nothing more than to have purchased and applied a pesticide in the customary manner". Under this exclusion, if a property owner or operator (in this case, the railroad) did not conduct chemical management activities, such as filling vessels, mixing, rinsing, storing, or disposal, at the location, then the use of the pesticides within industry standards would not be classified as a Recognized Environmental Condition. No information was obtained during the historical review or site reconnaissance to indicate that activities beyond customary use occurred on or adjacent to the Subject Property. As such, the potential past pesticide application along the rail line is not considered to be a Recognized Environmental Condition with respect to the Subject Property

Please refer to Sections 9 and 10 for the complete Findings, Opinions and Conclusions.

1.0 INTRODUCTION

1.1. Purpose

The purpose of this Phase I Environmental Site Assessment (ESA) is to evaluate whether current or historical activities on or in the vicinity of the property located at 130-132 Harrison Street, in the Village of Newark, Wayne County, New York (the "Subject Property") may have resulted in contamination of the Subject Property by hazardous materials and/or petroleum products. The presence of, or potential for contamination is subsequently referred to in this report as a Recognized Environmental Condition (REC). Specific elements of the Phase I ESA include the identification of:

- Possible environmental contaminants
- The proximity of sensitive receptors
- Past and present uses on or adjacent to the Subject Property that may be a Recognized Environmental Condition
- Hazardous material and waste storage or disposal practices

The work conducted in the process of this Phase I ESA was completed consistent with the applicable guidelines developed in the American Society of Testing Materials (ASTM) Standards E1527-21. The performance of this Phase I ESA is intended to help establish the innocent landowner defense through the identification of potential environmental issues which may affect future development of the Subject Property. Specifically, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practice that constitutes "all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C. 9601(35)(B) and 40 C.F.R. Part 312."

It is C&S' understanding that Housing Visions requires a Phase I ESA for the Subject Property for the purpose of environmental due diligence.

ASTM E1527-21 defines three types of Recognized Environmental Conditions as follows:

Recognized Environmental Condition (REC):
"(1) The presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. "

Controlled Recognized Environmental Condition (CREC):
"A recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or

petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations)."

Historical Recognized Environmental Condition (HREC):
"A previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations)."

In addition to defining Recognized Environmental Conditions, ASTM E1527-21 also defines the following terms that may be applicable when assessing a site's environmental risk:

***De Minimis* Condition:**
A *de minimis* condition is defined as a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. These are not considered to be Recognized Environmental Conditions but may warrant consideration.

Business Environmental Risk (BER):
A Business Environmental Risk is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Figure X4.1 – Simplified REC Logic, as taken from ASTM 1527-21 is provided on the following page. The flow chart is applied to determine if a condition is a Recognized Environmental Condition, Controlled Recognized Environmental Condition, Historic Recognized Environmental Condition, *de minimis*, or not a Recognized Environmental Condition.

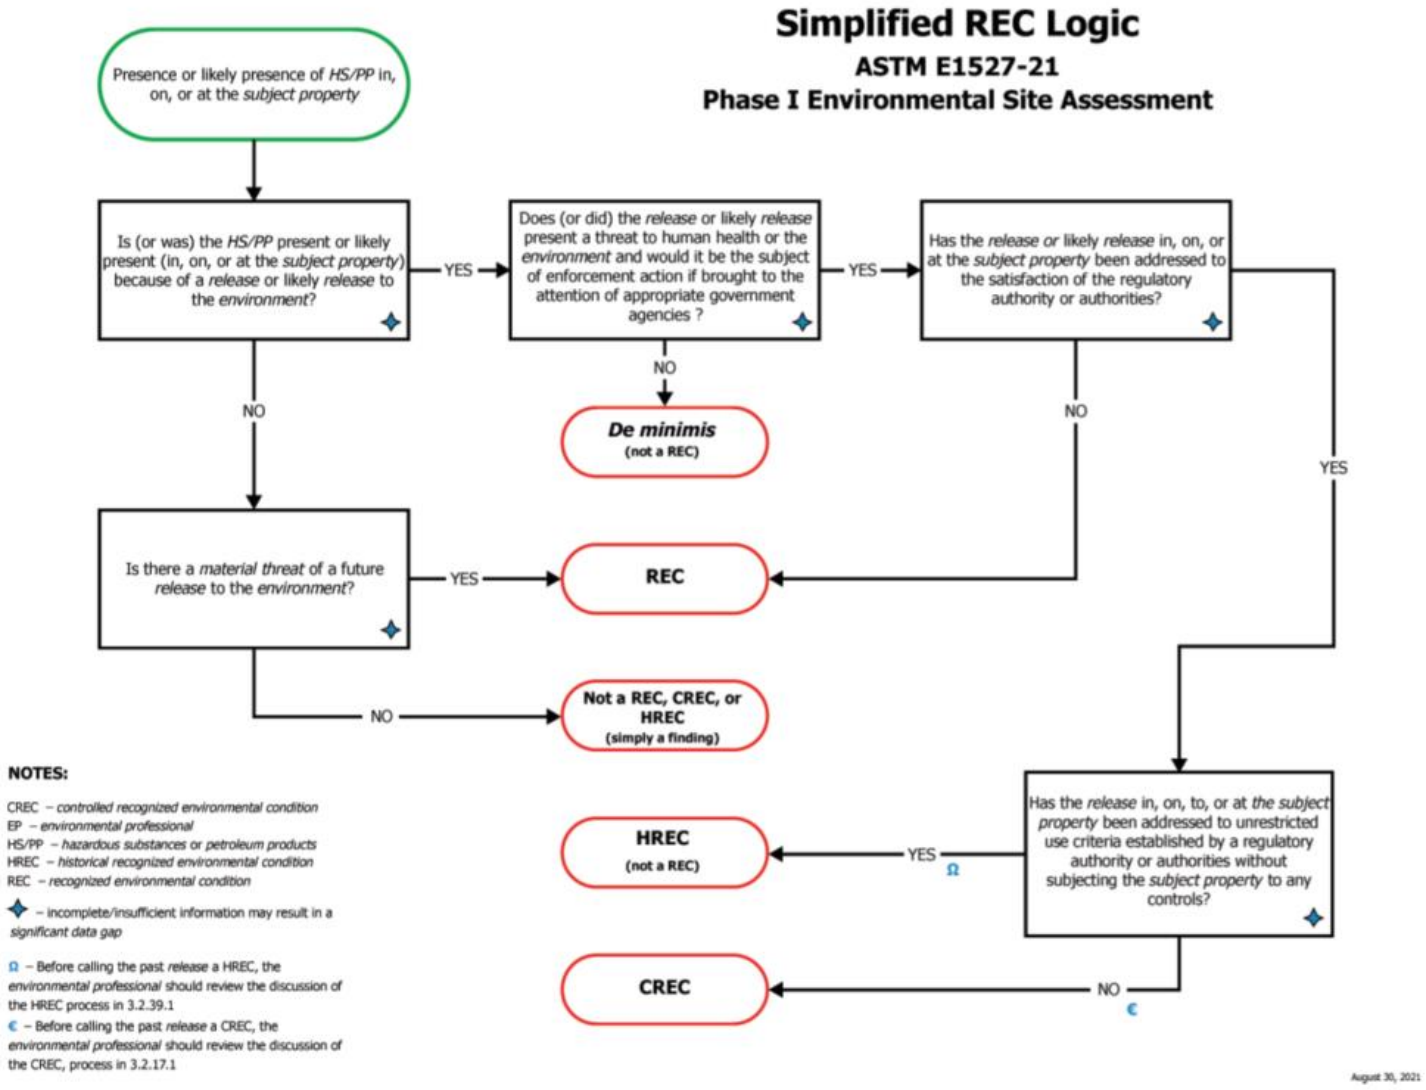

FIG. X4.1 Simplified REC Logic

1.2. Scope of Services

The scope of services for this Phase I Environmental Site Assessment included the following tasks:

- Review of the current and past uses of the Subject Property;
- Review of environmental studies/data readily available for the Subject Property;
- Subject Property reconnaissance to evaluate current conditions;
- Review of state and federal databases;
- Evaluation of the potential environmental impact of adjacent properties on the Subject Property; and
- Interview with state / local agencies and Subject Property owner and / or manager, as available.

The scope of services for the Phase I ESA was described in C&S' agreement with Housing Visions signed and dated July 31, 2024.

1.3. User Reliance

This report was prepared by C&S expressly and exclusively for use by Housing Visions, CREA Coventry Commons, LLC and CREA SLP, LLC and its successors and / or assigns. This entity can use and rely upon the information contained in this report, findings, and conclusions. No one else is authorized to rely on this report for any purpose, except to the extent that such reliance is specifically authorized in writing by C&S. Any person who intends to take action, which is in any way related to or affected by the information contained herein, should independently verify all such information.

1.4. Report Viability

Per E1527-21, a Phase I ESA is presumed to be viable when it is conducted within 180 days prior to the date of acquisition of the Subject Property (or, for transactions not involving an acquisition, the date of the intended transaction). The critical components and dates on which they were conducted are shown in the following table:

Critical Dates	
Receipt of federal, tribal, state, and local government records	August 1, 2024
Visual inspections of the Subject Property	August 5, 2024
Interviews with owners, operators, and occupants	August 9, 2024
Report EP certification	October 22, 2024
Environmental Lien Search	N/A

N/A = Not included within the scope of services

The earliest date of a critical date component of the required Phase I ESA was completed on August 1, 2024. Therefore, this Phase I ESA report is valid until **January 28, 2025.**

2.0 SUBJECT PROPERTY DESCRIPTION

2.1. Location, Use, and Description

The Subject Property is identified as Tax Map ID No. 68111-18-416166, which is located at 130-132 Harrison Street, in the Village of Newark, Wayne County, New York. The Subject Property is 5.31 acres and is owned by Graybill Real Estate LLC.

The Subject Property consists of a 112,676 square-foot three-story building in the center of the property (e.g. the Main Building). There is an adjoining 39,576 square-foot single-story warehouse on the east side of the Main Building and a 5,280 square-foot two-story annex building on the south side of the property. There are asphalt parking lots to the north, south, and east of the main building and minimal greenspace on the north and south sides of the Subject Property. Further information concerning existing Subject Property conditions is summarized in Section 8.

The location of the Subject Property is depicted on a 7.5 Minute USGS Topographic Quadrangle as well as on a site plan, which are provided in the **Figures** section of this report.

2.2. Description of Subject Property Improvements and Utilities

The Subject Property contains three structures, as described below.

Table 2-1
Subject Property Structures

Building	Size (ft^2)	Stories	Constructed	Current Use
Main Building	112,676	3	1898 – 1906	Commercial Tenants
Warehouse	39,576	1	1965	Warehouse Space
Annex	5,280	2	1898 – 1906	Vacant

* **–** The information obtained for the completion of this table was obtained from County tax records and information obtained during the Site reconnaissance

Table 2-2
Structure Features

Building	Heat Source	AC Source	Construction
Main Building	Ceiling Mounted Natural Gas Space Heaters	N/A	• Concrete foundation, wood-framed walls, and flat rubber roof • Finished with brick walls, unfinished ceilings, and a combination of wood, concrete, carpeted, and tile flooring
Warehouse	Ceiling Mounted Natural Gas Space Heaters	N/A	• Concrete foundation, steel-framed walls, and flat rubber roof • Finished with block walls, unfinished ceilings, and concrete flooring

Building	Heat Source	AC Source	Construction
Annex	Natural Gas Water Boiler & Radiator System	Electrical Window AC Units	• Concrete / stone foundation, wood-framed walls, and flat rubber roof • Finished with plaster walls, tile ceilings, and carpeted flooring

* **–** The information obtained for the completion of this table was obtained from County tax records and information obtained during the Site reconnaissance

The following utilities are available in the vicinity of the Subject Property:

- Electric: New York State Electric and Gas (NYSEG)
- Natural Gas: NYSEG
- Sanitary Sewer: Village of Newark
- Potable Water: Village of Newark

2.3. Current Uses of Adjoining Properties

The Subject Property is located in a mixed-use residential and commercial setting. At the time of the Subject Property reconnaissance, the properties which adjoin and are in the vicinity of the Subject Property were viewed from the property line and roadways. The following table provides a summary of the roadways, land uses, and features observed.

Table 2-3
Adjacent Land Uses

Direction	Roadways, Land Uses, Features
North	Residences, Commercial Building (Unknown Use), S Orchard St., E Sherman Ave.
South	B&B's Pizzeria (Commercial), The Arc Wayne Day Habilitation Services (Commercial), The Shop (Auto Repair), Parking Lot, Harrison St., Siegrist St.
East	Residences, Blackmar St.
West	Colacino Industries (Commercial), Reliant Credit Union (Commercial), Residences

3.0 PHYSICAL SETTING

A Physical Setting Report (PSR) was provided by Environmental Risk Information Services (ERIS) (**Appendix A**). The PSR includes detailed information regarding topographic, hydrologic, and geologic conditions for the Subject Property and surrounding areas, as well as information on soil, groundwater, and radon. Geologic mapping and documentation from C&S' private library were also reviewed. The purpose of reviewing physical setting information is to assess the potential for the migration of contaminants from sites of concern. Observations regarding the physical setting are discussed below.

3.1. Physical Setting Description

3.1.1. General Topographic Setting

Information shown on the representative USGS 7.5 Minute Quadrangle indicates that generally, the topography of the Subject Property is sloped downward to the north and is at an approximate elevation of 437 feet above mean sea level.

3.1.2. General Geologic Setting

According to the PSR provided by ERIS, the following soil types and rock formations represent the geologic conditions at the Subject Property:

- Soils consist of Phelps gravelly loam (0 to 3 percent slopes) in the southern portion of the Subject Property and Palmyra gravelly loam (3 to 8 percent slopes) in the northern portion of the Subject Property. Based on previous investigations, those soils are brown / gray / tan in color and are principally silty sands with gravel. Urban Land is also present and contains historic fill material (HFM). HFM is non-native material, deposited on a site to create useable land, and generally was contaminated prior to emplacement. The HFM includes brick, ash, cinder, and coal.

- Bedrock consists of the Camillus and Syracuse Formations of the Upper Silurian period. The primary rock type is shale.

3.1.3. General Hydrogeologic Setting

The Subject Property is located approximately 500 feet north of the Erie Canal and 1000 feet southwest of an unnamed creek. Based on the interpretation of the USGS Topographic Map, groundwater in the area is assumed to move generally to the northeast towards the unnamed creek. Based on previous investigations, the depth to groundwater is approximately 15 feet below grade. Groundwater flow specific to the Subject property has not been determined and may be different from the regional flow. Potential influences include local drainage features, seasonal groundwater level fluctuations, subsurface geology, surface topography, and / or other local site features.

Drinking water is provided by the City of Newark, which is sourced from Canandaigua Lake. Before distribution, the water is filtered by slow sand filtration, diatomaceous earth pressure filtration and vacuum filtration, and sodium hypochlorite is added for disinfection. The most recent report shows compliance with applicable standards.

There are no mapped wetlands located on the Subject Property.

The Subject Property is not shown on FEMA mapping as located in a flood zone.

4.0 USER PROVIDED INFORMATION

In accordance with ASTM E1527-21, a "User" is defined as the party seeking to complete an environmental site assessment of the Subject Property. If the user is aware of any specialized knowledge or experience that is material to Recognized Environmental Conditions in connection with the Subject Property, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to the environmental professional.

Appendix B includes the Phase I ESA Client / User Questionnaire completed by Alexander Grant, of Housing Visions, on August 9, 2024. The Client / User Questionnaire includes questions relative to environmental liens and use limitations, specialized knowledge, valuation reduction for environmental issues, etc. The responses indicate the following item of significance:

- The Subject Property operated as a tinware container manufacturer in the early 1900s and as a Sarah Coventry (jewelry company) manufacturing site in the mid-1900s.

The responses indicated the following Recognized Environmental Condition:

- Spill No. 1307418 was reported when two 12,000-gallon No. 2 fuel oil underground storage tanks (USTs) and approximately 200 tons of fuel-impacted soil were removed from the Subject Property in October 2013. The spill was assigned an inactive status.

5.0 HISTORICAL USE ASSESSMENT

5.1. Historical Use Information on Subject Property and Adjoining Properties

Historical information was used to develop a history of the previous uses of the Subject Property and surrounding area. Typical sources utilized to understand historical land use of a property include topographic maps, aerial photographs, fire insurance maps, building department records, property tax files, city directories, and historical reports. These sources are used to help identify the possibility of past land uses contributing to Recognized Environmental Conditions with respect to a property.

These historical sources satisfy the standard for CERCLA's most "reasonably ascertainable" information available. ASTM E1527-21 defines "reasonably ascertainable" as information that is publicly available, obtainable within reasonable time and cost limits, and practically reviewable.

This assessment used the following informational resources to help identify past and present site uses upon and surrounding the Subject Property.

Table 5-1
Historical Information Summary

Section	Historical Source	Date Range	Source/Comments
5.2	Fire Insurance Maps	1890 – 1963	Environmental Risk Information Services
5.3	Topographic Maps	1899 – 2019	Environmental Risk Information Services
5.4	Aerial Photographs	1938 – 2021	Environmental Risk Information Services
5.5	City Directories	1931 – 2022	Environmental Risk Information Services
5.6	Recorded Land Title Records	N/A	N/A
5.7	Historical Environmental Reports	2013 – 2023	Housing Visions, C&S Engineers, Graybill Real Estate, NYSDEC

These sources were used to help identify the possibility of past land uses contributing to Recognized Environmental Conditions in regard to the current Subject Property.

5.2. Historical Fire Insurance Mapping

A search for fire insurance mapping of the Subject Property and its surrounding area was conducted. The table below summarizes the information shown on these maps and provides interpretations when appropriate (**Appendix A**).

Table 5-2
Fire Insurance Map Review

Year	SP Observations	Proximate Observations
1890	Coverage is not provided for the SP.	The property directly west operates as the Trotter Refrigeration Co. There is a rail spur extending on to the property from the south. A creek is depicted to the west, flowing in a northerly direction. Coverage is not provided for areas to the north, south, or east.
1898	There are five residences on the southern side of the SP, located at 16, 18, 20, and 22 Harrison Street and 2 Seigrest Street.	The Trotter Refrigeration Co. has been converted to the D.I. Garretson (house finishing manufacturer). There are multiple lumber storage areas directly west. The West Shore railroad runs in an east / west direction directly south. Areas to the south appear primarily residential. Coverage is not provided for areas to the north or east.
1906	The existing three-story main building has been constructed in the center of the SP and operates as the Reed Manufacturing Company (tinware manufacturing). There is a boiler house, coal house, and warehouse to the north and a rail spur and hay barn to the east of the main building. The residence at 22 Harrison Street has been demolished and the existing two-story annex building has been constructed in its place. Three residences have been constructed at 4, 6, and 8 Blackmar Street.	The D.I. Garretson factory is now operated by S.N. Keener, manufacturing the same items. Areas to the west and south appear generally unchanged. Areas to the east appear primarily residential. Coverage is not provided for areas to the north.

Year	SP Observations	Proximate Observations
1912	A machine shop has been added directly south of the boiler house. A small tinning plant building and an oil house have been constructed in the northwest corner of the SP. A storehouse has been constructed along the northern SP boundary. The warehouse has been converted to a box factory and lumber house. A second rail spur enters the SP on the north side and terminates at the north end of the main building. A bakery and grocery store has been constructed to the west of the residence at 2 Seigrest Street. A plumber shop has been constructed at 6 ½ Blackmar Street and an additional residence has been constructed at 10 Blackmar Street.	All the structures to the south of Van Buren Street have been demolished and a barge canal (present day Erie Canal) is under construction. There has been substantial residential development to the east. Areas to the north appear primarily residential. There is a large vacant warehouse directly north.
1924	The machine shop has been expanded to connect the boiler house to the main building. A shipping shed has been constructed between the box factory and the main building. The storehouse has been demolished. A junkyard operates on the south side of the main building. The plumber shop has been converted to a tin shop.	The S.N. Keener factory is now operated by the Newark Planing Mill. Inc., manufacturing the same items. The creek is no longer depicted to the west. The P.G. Price Coal Yard has been constructed to the west with an associated rail spur. An auto repair shop and the C.H. Stuart & Co. Inc. factory have been constructed to the south. The large warehouse to the north has been ruined by a fire and there has been some residential development to the north. Areas to the east appear generally unchanged.
1947	The SP appears generally unchanged.	The Newark Planing Mill Inc. is now operated by the J. Walter Cayes Planing Mill. There has been substantial expansion at the C.H. Stuart & Co. Inc. factory. The large warehouse to the north has been demolished and there has been further residential development to the north. The Town or Arcadia Highway Department has been constructed to the northeast.

Year	SP Observations	Proximate Observations
1963	The main building now operates as C.H. Stuart & Co. Inc. (cosmetics manufacturer). The machine shop is now used for storage, the shipping shed, box factory, and lumber house are all used as carton sheds, the tinning factory has been expanded to connect to the boiler room and is used for storage, and the oil house is used as a shed. The residence at 20 Harrison Street has been demolished.	The C.J. Stuart & Co. Inc. factory has been converted to the Sarah Coventry Inc. Jewelry Distributors. A New York Telephone Co. private garage has been constructed directly north. Areas to the west and east appear generally unchanged.

SP = Subject Property

5.3. Historical Topographic Mapping

The table below summarizes the information shown on these topographic maps and provides interpretations when appropriate (**Appendix A)**.

Table 5-3
Topographic Map Review

Year	SP Observations	Proximate Observations
1899	The center of the SP appears undeveloped while the southern and eastern boundaries appear to be developed with residences.	The SP appears to be located in a residential / commercial area. A creek is depicted to the west and the Erie Canal is depicted to the south. Railroad tracks are depicted directly south and to the north.
1902	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
1943	The existing main building is depicted in the center of the SP. There are two railroad spurs entering the SP from the north, one running along the eastern wall of the building and one terminating at the northern wall of the building. There are multiple residences along the southern and eastern SP boundaries.	The creek is no longer depicted to the west. There has been substantial residential and commercial development in all directions.
1952	The SP appears generally unchanged.	A creek is depicted to the north, flowing in a northerly direction.
1976	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2013	Individual structures are no longer depicted on the map.	Individual structures are no longer depicted on the map.
2016	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2019	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.

SP = Subject Property
Observations take into account information gleaned from previous historical sources.

5.4. Historical Aerial Photography

The table below summarizes the information shown on these aerial photographs and provides interpretations when appropriate (**Appendix A**). It should be noted that the scale of the photography can make identification and interpretation of fine details difficult. Therefore, the interpretations that follow are primarily relative to observable gross characteristics and features.

Table 5-4
Historical Aerial Photograph Review

Year	SP Observations	Proximate Observations
1938	The main building is depicted in the center of the SP and the annex building is depicted on the south side of the SP. Residences appear to be present along the southern and eastern SP boundaries.	The SP appears to be located in a residential / commercial area. There is a factory directly west. There is a rail line and the Erie Canal to the south.
1954	The SP appears generally unchanged.	The SP appears generally unchanged.
1963	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
1981	The existing warehouse has been constructed on the east side of the main building. The residences on the SP appear to have been demolished.	Large commercial buildings have been constructed to the south, along the Erie Canal.
1986	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
1995	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2006	A small addition has been constructed on the northwest side of the main building.	One of the factory buildings directly west has been demolished. A large commercial building has been constructed directly north.
2008	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2009	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2011	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2013	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2015	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2016	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.

Year	SP Observations	Proximate Observations
2017	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2019	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.
2021	The SP appears generally unchanged.	Surrounding areas appear generally unchanged.

SP = Subject Property
Observations take into account information gleaned from previous historical sources.

5.5. City Directory Search

City directories (**Appendix A**) are a screening tool to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. A summary of significant entries is provided below.

Table 5-5
City Directory Summary

Year	Property Address	Bearing / Distance / Location	Occupant
1931 – 1996	130 Harison Street	Subject Property	Unlisted
2000 – 2003			Synergy Marketing Group
2008			Unlisted
2012			Graphix Direct Inc.
2016 – 2022			HPH Precision Machining Inc.
1931 – 1932	132 Harrison St.	Subject Property	Unlisted
1986 – 1996			Newark SC Admin
2000 – 2003			Unlisted
2008 – 2022			Victim Resource Center of Wayne County
2008 – 2022	126 Harrison St.	Adjacent / West	Colacino Industries (Electronics Manufacturer) / Newark Electric Corp.
2003	129 Harrison St.	Adjacent / South	Colacino Industries (Electronics Manufacturer)
1984 – 2003	131 Harrison St.	Adjacent / South	Newark Electric Corp.
1986 – 2016	233 Blackmar St.	350 ft / Northeast	Arcadia Town Highway Department

5.6. Recorded Land Title Records

A chain of title / title abstract was requested from Housing Visions. As of the date of this report, a chain of title / title abstract was not provided. This is considered a data gap.

5.7. Other Historical Sources

As part of the review of historical information associated with the Subject Property, C&S reviewed historical reports pertaining to the Subject Property. Pertinent information obtained from those reports is summarized below.

Soil Sampling Investigation Report – 130 Harrison Street, November 2020, Neu-Velle, LLC.

The sampling was performed due to areas of concern noted in a Phase I ESA by LaBella Associates. The investigation included the advancement of three soil borings and sampling of soil for VOCs

and SVOCs. No physical evidence of impacts was observed. VOCs and SVOCs were below laboratory detection limits and metals were below commercial use standards.

Phase I Environmental Site Assessment – Coventry Commons, July 2022, Ravi Engineering & Land Surveying, P.C.

In July 2022, Ravi Engineering & land Surveying, P.C. (Ravi) conducted a Phase I ESA at 130-132 Harrison Street (Coventry Commons). The assessment revealed the following RECs in connection with the Subject Property:

- Historic industrial Subject Property usage is a REC. Site soils and/or groundwater are potentially impacted by historic releases of VOCs.

As a result of the Phase I ESA, they recommended conducting a vapor intrusion assessment of the building to determine if the historic Subject Property usage resulted in a volatile organic compound (VOC) release on Subject Property and / or vapor intrusion into the building. They also recommended that an asbestos survey, lead paint survey, and hazardous material survey be conducted prior to renovation of the building on the Subject Property.

Vapor Intrusion Assessment – 130-132 Harrison Street, Newark, New York, August 2022, Ravi

In August 2022, Ravi conducted a vapor intrusion assessment at the Subject Property. The assessment revealed the presence of trichloroethene (TCE) in sub-slab and indoor air at concentrations that require mitigation, per the New York State Department of Health (NYSDOH) Decision Matrices.

As a result, Ravi recommended the following:

- Prior to site acquisition, Ravi recommend sharing the data with an environmental attorney to determine the path forward.

- A sub-slab depressurization system (SSDS) will be required to mitigate the TCE vapors and achieve compliance with the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York protocols.

- The source of the TCE, PCE, and methylene chloride vapors should be investigated.

- A Phase II ESA should be conducted to determine soil and groundwater conditions at the Subject Property. An initial passive soil gas study was recommended to identify "hotspots" and focus the soil and groundwater sampling locations.

- Air sampling should be repeated during the heating season between November 15 and April 15 in conformance with NYSDOH protocols

Phase II Environmental Site Assessment for Proposed Coventry Commons, January 2023, C&S

In January 2023, C&S conducted a Phase II ESA at the Subject Property. The Phase II focused on the following areas:

- Subsurface soils throughout the Site. These efforts included the advancement of 15 soil borings and the collection and analysis of 15 soil samples.

- Groundwater conditions throughout the Site. These efforts included the construction and sampling of three temporary groundwater monitoring wells.

- Air conditions within buildings on the Site. These efforts included the collection and analysis of three indoor air samples, three sub-slab soil vapor samples, and one ambient air sample.

The following are the results:

- Within soil boring SB-09 at the location of the former USTs, photoionization detector (PID) detections were present at concentrations of 60 parts per million (ppm) at an approximate depth of 10-12 feet bgs. However, evidence of impacts were not observed in any other borings. Evidence of impacts was not observed in the remaining borings.

- The groundwater samples were analyzed for VOCs. Although VOCs were below NYSDEC Technical and Operational Guidance Series 1.1.1 (TOGS) standards, detectable concentrations of TCE and tetrachloroethene (PCE) were present in each well. TCE and PCE values at MW-4 were 1.8 parts per billion (ppb) and 4.1 ppb, respectively. TCE and PCE values at MW-3 and MW-5 were less than 1 ppb. The TOGS limits for TCE and PCE is 5 ppb.

- A total of seven air samples were collected and analyzed for VOCs via USEPA Method TO-15. These samples were collected from multiple locations with one indoor air / sub-slab sample pair located in the office building, one sample pair in the former boiler room, and one sample pair in the main warehouse structure. An ambient upwind outdoor air sample was also collected from the west side of the Site. TCE was detected in two of the three indoor air samples. The NYSDOH guidance value is 2 µg/M^3. TCE was detected at a concentration of 2.5 µg/M^3 in sample IA-2. The concentration of sample IA-3 approached the AGV and was at a concentration of 1.6 µg/M^3. TCE was also detected in corresponding co-located sub-slab air samples. TCE was detected at a concentration of 600 µg/M^3 in sample SS-2 and a concentration of 28 µg/M^3 in sample SS-3. TCE is in the DOH Decision Matrix A. Based on the concentrations at IA-2 / SS-2 and IA-3 / SS-3, mitigation is required.

Based on the results of the vapor intrusion investigation, mitigation was recommended.

Contract Drawings for the Construction of SSDS – Coventry Commons, May 2024, C&S Engineers

As a result of the previous air sampling results, Housing Visions retained C&S to design a sub-slab depressurization system (SSDS). The system was designed to provide at least -0.004 water column inches (wci) below the entire slab of the Main Building and the Annex. The system includes hundreds of feet of trench and multiple vapor pits to collect vapors from below the slab, exhaust piping, roof-mounted exhaust fans, a monitoring system, and an alarm system. Prior to occupancy, the negative pressure below the slab can be verified and indoor air will be tested to document the adequacy of the system.

Copies of the historical information and the SSDS design documents are provided here: Historical Reports.

5.8. Historical Use Summary

The Subject Property, Coventry Commons and surrounding areas have been associated with suburban development since at least 1890. The Subject Property was occupied by residences from 1890 to 1906, which is when the Main Building was completed. It was then that the Subject Property began operating as a tinware manufacturing company. Later in 1912, it was further expanded to include a machine shop and boiler house. There was also coal, lumber and hay storage since 1912 and a junk yard present in 1924 until about 1963. In 1963, cosmetic manufacturing began as C.H. Stewart and Co. For about 23 years, there is no records of new ownership until 1986 when Newark SC Admin offices remained for at least ten years (1996). In 2000, the building was occupied by Synergy Marketing Group until 2008. In 2008, the building housed the Victim Rescue Center of Wayne County which left before 2012. From 2016 to 2022, the building was used solely by HPH Precision Machining Inc. Throughout the years this building has gone through many owners and many different uses. The same can be said about the adjacent / surrounding properties. In 2022, a Phase I Environmental Site Assessment was conducted, which recommended that further investigation be performed due to past industrial uses. A Vapor Intrusion Assessment followed later in 2022, and in 2023 a Phase II ESA was conducted. Those assessments concluded that there was a source of soil vapor intrusion that required mitigation. In 2024, a SSDS was designed to mitigate soil vapor intrusion.

The Subject Property has been surrounded by both residential and commercial / industrial properties since at least the 1890s. These properties include an industrial woodworking facility to the west, that has been adjacent since at least 1898 up until 1963. The facility was a refrigeration manufacturer before that from 1890. The rest of the surroundings properties were residences and have been since 1890 up until 2024.

While the Subject Property has been used for manufacturing purposes since the early 1900s, the 2020 and 2023 site investigations did not reveal subsurface soil or groundwater contamination above applicable standards. However, previous air testing revealed elevated TCE concentrations in the sub-slab and indoor air. This is considered a Vapor Encroachment Concern and Recognized Environmental Condition.

6.0 RECORDS REVIEW

6.1. Standard Environmental Record Sources

C&S reviewed the regulatory status of the Subject Property using a summary report of local, state and federal environmental databases prepared by Environmental Risk Information Services (ERIS). The database report includes up-to-date information from local, state and federal agencies. Records compiled are consistent with standards outlined in ASTM E1527-21 for records that are:

- Within the approximate minimum search distance
- Reasonably ascertainable and are from standard sources
- Provide records under reasonable time and cost constraints

A copy of the database search report is provided in **Appendix A**. The comprehensive list of the reviewed local, state and federal regulatory databases is included in the report.

C&S reviewed the attached database search report to assess which properties or conditions, if any, might result in creating a Recognized Environmental Condition with respect to the Subject Property. Properties that are located within the search distances and were deemed to be significant are described in the subsections below.

The following table lists those databases that produced results that were identified as the most critical to evaluating potential onsite and off-site conditions.

Table 6-1
Environmental Database Review

Database	Search Distance (miles)	Subject Property Listings	Sites Within Radius
Leaking Storage Tanks (LST)	0.50	0	7
Spill Incidents Database (NY SPILLS)	0.125	1	16
RCRA Generator List (RCRA LQG)	0.25	0	1
RCRA Small Quantity Generators List (RCRA SQG)	0.25	0	1
RCRA Very Small Quantity Generators List (RCRA VSQG)	0.25	0	3
RCRA Non-Generators (RCRA NON GEN)	0.25	2	6
Generators from Hazardous Waste Manifests (GEN MANIFEST)	0.125	1	3
ACRES Brownfield Database (FED BROWNFIELDS)	0.50	0	1
Registry of Inactive Hazardous Waste Disposal Sites in NYS (SHWS)	1.00	0	5
Solid Waste Facilities and Landfills (SWF/LF)	0.50	0	2
PFAS Industry Sectors (PFAS IND)	0.50	0	4
PFAS from Toxic Release Inventory (PFAS TRI)	0.50	0	1
Per and Polyfluoroalkyl Substances (PFAS)	0.50	0	1

Database	Search Distance (miles)	Subject Property Listings	Sites Within Radius
Drycleaner Facilities (FED DRYCLEANERS)	0.25	0	1
Delisted Drycleaner Facilities (DELISTED DRYCLEANERS)	0.25	0	1
Underground Storage Tanks (UST)	0.25	1	9
Aboveground Storage Tanks (AST)	0.25	0	4
Chemical Bulk Storage (CBS)	0.25	0	1
SEMS List 8R Archive Sites (SEMS ARCHIVE)	0.50	0	1
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)	0.50	0	1
CERCLIS – No Further Remedial Action Planned (CERCLIS NFRAP)	0.50	0	1
Facility Registry Service / Facility Index (FINDS / FRS)	0.02	3	0
Alternative Fueling Stations (ALT FUELS)	0.25	0	5
Manufactured Gas Plants (MGP)	1.00	0	1
Registered Cooling Towers (COOLING TOWERS)	0.125	0	1

6.1.1. Subject Property Listings

The Subject Property was listed in the following databases:

Table 6-2
Subject Property Listings

Site Name	Database Site No.	Database(s)	Description	REC?
Schlegel EMI Research & Development Center	1	FINDS / FRS	Electroplating, plating, polishing, anodizing, and coloring facility.	No. There is no indication of regulatory non-compliance or a release.
Graybill Real Estate	**2**	**NY SPILLS, UST**	**Two 12,000-gallon No. 2 fuel oil USTs Installed before 1986, removed and closed in 2013. Contamination encountered around tanks. Two slight SVOC exceedances. Approximately 200 tons of petroleum contaminated soil was excavated and transported to the Ontario County Landfill.**	**Yes, residual impacts exceed Unrestricted Use SCOs. No further remedial work was deemed necessary and the spill was closed.**
Newark Central School District	3	GEN MANIFEST, RCRA NON GEN, FINDS/FRS	Generator of corrosive waste (45 gallons) in 1988 and has been a verified non-generator since then.	No. There is no indication of regulatory non-compliance or a release.
CH Stuart Inc.	4	RCRA NON GEN, FINDS/FRS	Costume jewelry and novelty manufacturing facility. Large quantity generator of spent halogenated solvents, nonhalogenated solvents, wastewater treatment sludges, and spent stripping and cleaning bath solutions in 1980. Has been a verified non-generator since then.	No. There is no indication of regulatory non-compliance or a release.

6.1.2. Adjoining Property Listings

The following adjoining site is notable with respect to the Subject Property.

Table 6-3
Adjoining Property Listings

Site Name	Database Site No.	Direction	Database(s)	Description	REC?
Clinton Court Apartments (East Avenue & East Union)	5	S	NY SPILLS	During a soil vapor survey in a soil boring, readings of up to 1535 parts per million were registered. Spill was closed by DEC. No further action needed.	No, it was determined that this site was erroneously plotted and is located approximately 1,000 feet from the Subject Property.

6.1.3. Proximate Property Listings

The following sites are mapped at distances or elevations that are notable with respect to the Subject Property. Except for the last site shown in bold, these sites are not anticipated to have negatively impacted the environmental integrity of the Subject Property based on various factors such as distance, relative elevation, groundwater flow, or regulatory status, except for the site shown in bold.

Table 6-4
Proximate Property Listings

Site Name	Database(s)	Distance / Gradient / Elevation Relative to the SP	REC?
Wilson Automotive (97 East Avenue)	NY SPILLS	200 ft SSE / Higher / Up-gradient	No, no further action was requested by NYSDEC and the spill was closed as not meeting standards.
Zappia Vending Service (201 Ford Street)	NY SPILLS, UST	230 ft N / Higher / Down-gradient	No, the UST and contaminated soil was removed. No further action was requested by NYSDEC and the spill was closed as not meeting standards.

Site Name	Database(s)	Distance / Gradient / Elevation Relative to the SP	REC?
Town of Arcadia Highway Department	UST, NY SPILLS, AST	300 ft NNE / Higher / Down-gradient	No, the tank was pumped out and removed according to PBS records. The spill was closed as not meeting standards.
NYS Canal Sub Station (199 Ban Buren Street)	NY SPILLS	276 ft S / Higher / Up-gradient	No, no further action was requested by NYSDEC and the spill was closed as meeting standards.
Hradchak Residence (118 Ford Street)	NY SPILLS	430ft NW / Higher / Down-gradient	No, the spill was closed by NYSDEC and is not a concern due to distance.
NYSEG – Newark MGP (125 North Main Street)	MGP, SHWS	470 ft SW / Higher / Up-gradient	No, remediation at the site is complete and residual contamination is being managed under a Site Management Plan.
Getty Mart (150 North Main Street)	NY SPILLS	0.11 mi WSW / Higher / Up-gradient	No, all spills were addressed to the satisfaction of NYSDEC and closed.
Arcadia Sports (210 North Main Street)	NY SPILLS	0.11 mi WSW / Higher / Up-gradient	No, no further action was requested by NYSDEC and the spill was closed.
NYSEG Transformer (216 Norton Street)	NY SPILLS	0.11 mi ENE / Higher / Down-gradient	No, no further action was requested by NYSDEC and the spill was closed.
NYSEG (Van Buren Street)	NY SPILLS	0.12 mi SW / Higher / Up-gradient	No, no further action was requested by NYSDEC and the spill was closed.
Former Grand Dry Cleaners (175 West Union Street)	**SHWS**	**0.24 mi SW / Higher / Up-gradient**	**Significant impacts to offsite soil vapor and groundwater documented. Site being evaluated for registry and the state superfund list. This is considered a REC and VEC, please refer to Section 6.2 for more information.**

6.1.4. Unmapped Sites

C&S also reviewed the Orphan List at the rear of the database report. An "Orphan Site" is a record that has insufficient information to be mapped by the GIS system. The review of the Orphan Site List of 7 sites consisted of a comparison of the identified "Orphan" address to roadway mapping of the area surrounding the Subject Property. Based on that evaluation and various factors such as distance, relative elevation, groundwater flow, or regulatory status, none of the identified "Orphans" appears to pose a risk to the Subject Property.

6.2. Vapor Encroachment Screening

A vapor encroachment condition (VEC) is defined as "the presence or likely presence of contaminant of concern (COC) vapors in the sub-surface of the target property caused by a release of vapors from contaminated soil or groundwater either on or near the target property". The review for potential VECs was performed in accordance with the practices prescribed in ASTM Practice E2600-15, entitled *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. For the purposes of this assessment, a Tier 1 screening has been performed. The scoped and purpose of a Tier 1 screening is to conduct a screen for vapor encroachment using information collected in the Phase I ESA to determine if a VEC exists at the Subject Property.

ASTM Practice E2600-15 recommends the following search distances around the Subject Property for use in the Tier 1 Vapor Encroachment Screening process:

ENVIRONMENTAL DATABASE	SEARCH DISTANCE (MILES)	
	Chlorinated COCs	Petroleum Hydrocarbon COCs
Federal NPL Site List	1/3 mile	1/10 mile
Federal CERCLIS / SEMS List	1/3 mile	1/10 mile
Federal CORRACTS Facilities List	1/3 mile	1/10 mile
Federal non-CORRACTS TSD Facilities List	1/3 mile	1/10 mile
Federal RCRA Generators List	Property Only	Property Only
Federal Institutional/Engineering Controls	Property Only	Property Only
Federal ERNS List	Property Only	Property Only
State-Equivalent NPL List	1/3 mile	1/10 mile
State-Equivalent CERCLIS List	1/3 mile	1/10 mile
State Solid Waste Landfill or Solid Waste Disposal Sites	1/3 mile	1/10 mile
State Leaking Storage Tanks Sites	1/3 mile	1/10 mile
State Registered Storage Tank Sites	Property Only	Property Only
State Institutional/Engineering Controls	Property Only	Property Only
State Voluntary Cleanup Sites	1/3 mile	1/10 mile
State Brownfield Sites	1/3 mile	1/10 mile

Based on the information provided, the following database entry suggests the possibility of an offsite source that may present a concern with respect to vapor encroachment:

- 175 West Union Street – This site is a former drycleaner with off-site vapor encroachment concerns. PCE concentrations as high as 24, 819 µg/m^3 were observed in off-site soil vapor and PCE concentrations as high as 387 parts per billion (ppb) were observed in off-site groundwater. The NYSDOH indoor air limit for PCE is 30 µg/m^3 and the NYSDEC groundwater standard is 5 ppb. The site is being considered for placement on the registry of Inactive Hazardous Waste Disposal Sites (State Superfund), which is for sites that pose a significant threat to human health of the environment. The site is 0.24 miles up-gradient of the Subject Property. The database indicates that a site characterization has been requested. Based on the magnitude of impacts to soil vapor and groundwater, this site poses a threat for vapor encroachment upon the Subject Property. This is also considered a Recognized Environmental Condition.

6.3. State and Local Regulatory Environmental Records

A Freedom of Information Law (FOIL) request was sent electronically to NYSDEC Region 8 on July 31, 2024. C&S specifically requested documents pertaining to Spill No. 1307418. A FOIL request was sent electronically to the Village of Newark on July 31, 2024. As of the date of this report, the Village has not responded.

The following information was provided by the NYSDEC:

- A facility information report (FIR), bulk storage applications and renewals, and bulk storage certificate for two 12,000-gallon no. 2 fuel oil underground storage tanks that were closed on October 18, 2013.

- A pre-work notification for the removal of the above tanks. A tank closure report for the above tanks. The report did not include the appendices that were created to include a photo log, building permit, manifests, analytical reports, and weigh tickets. At the time of removal, the tanks were in poor condition and holes were present. Soil around the tanks was impacted, and approximately 200 tons of contaminated soil was removed for offsite disposal at Ontario County Landfill. Close out sample samples were collected and there were no VOC concentrations that exceeded a NYSDEC Part 375 soil cleanup objective. Only two SVOCs slightly exceeded their respective Restricted Residential Use Soil Cleanup Objectives (SCO). Benzo(b)fluoranthene was detected at 1.2 parts per million (ppm) compared to the Restricted Residential Use Soil Cleanup Objective (SCO) of 1 ppm and the Commercial use SCO of 5.6 ppm. Indeno(1,2,3-cd)pyrene was detected at 0.556 ppm compared to the Restricted Residential Use SCO of 0.5 ppm and the Commercial Use SCO of 5.6 ppm. The spill was assigned number 13-07418 with NYSDEC.

- A NYSDEC Spill Report for the tank closure that indicates: "Based on work completed and low levels of petroleum compounds in soil, no further remedial work deemed necessary at this time".

The FOIL documents are provided in **Appendix D**.

6.4. Records Review Summary

The information provided in the database report identified a record associated with the Subject Property which is indicative of a Recognized Environmental Condition:

- Two 12,000-gallon No. 2 fuel oil USTs and approximately 200 tons of fuel-impacted soil were removed from the Subject Property in October 2013. Confirmatory soil samples indicated that VOCs were below applicable standards and two SVOCs slightly exceeded standards. NYSDEC deemed that no further remedial work was required at the time. However, this is considered a REC because the data indicated exceedances of Unrestricted Use criteria at that time.

The FINDS and RCRA database entries for previous occupants on the Subject Property are considered significant as they indicate that they were involved in metal plating and hazardous waste generation. However, the Phase II ESA (see section 5.7) did not indicate the presence of subsurface impacts exceeding standards.

The information provided in the database report identified a record associated with a site in proximity to the Subject Property which may pose a Vapor Encroachment Concern, which is also considered a Recognized Environmental Condition:

- 175 West Union Street – Former drycleaner with off-site vapor encroachment concerns. PCE concentrations as high as 24,819 µg/m^3 were observed in off-site soil vapor and PCE concentrations as high as 387 parts per billion (ppb) were observed in off-site groundwater. The site is being considered for placement on the registry of Inactive Hazardous Waste Disposal Sites (State Superfund). The site is 0.24 miles up-gradient of the Subject Property.

The information generated from the FOIL process indicates that the former USTs are a Recognized Environmental Condition.

7.0 INTERVIEWS

The objective of conducting interviews is to obtain information indicating Recognized Environmental Conditions in connection with the Subject Property, and other pertinent current and historical information. During the course of the Phase I ESA, C&S conducted interviews with the following persons:

Table 7-1
Interview Log

Name	Affiliation	Date
Alexander Grant	Client / User (Housing Visions)	August 9, 2024
Michelle Castelli	Office Manager for Owner (Graybill Real Estate LLC)	August 12, 2024
FOIL Coordinator	NYSDEC Region 8 FOIL Department	September 5, 2024
Lynette Morrison	Village of Newark FOIL Department	N/A

7.1. Interview with Client / User

In accordance with ASTM E1527-21, a "User" is defined as the party seeking to complete an environmental site assessment of the Subject Property. If the user is aware of any specialized knowledge or experience that is material to Recognized Environmental Conditions in connection with the Subject Property, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to the environmental professional.

Appendix B includes the Phase I ESA Client / User Questionnaire completed by Alexander Grant, of Housing Visions, on August 9, 2024. The Client / User Questionnaire includes questions relative to environmental liens and use limitations, specialized knowledge, valuation reduction for environmental issues, etc. The responses indicate the following item of significance:

- The Subject Property operated as a tinware container manufacturer in the early 1900s and as a Sarah Coventry (jewelry company) manufacturing site in the mid-1900s.

The responses indicated the following Recognized Environmental Condition:

- Spill No. 1307418 was reported when two 12,000-gallon No. 2 fuel oil underground storage tanks (USTs) and approximately 200 tons of fuel-impacted soil were removed from the Subject Property in October 2013. The spill was assigned an inactive status.

7.2. Interview with Owner

On August 9, 2024, C&S contacted Graybill Real Estate via email. Graybill Real Estate has owned the Subject Property since 1985. The office manager, Michelle Castelli, completed C&S' interview form and acknowledged the USTs and contaminated soil discussed previously. They identified previous occupants / operators as: CVS, Hickory Machine, Lincare, Upstate Dunnage, Blue Mountain Packaging, and boat / car / camper storage. Graybill also provided a copy of the soil sampling report by Neu-Velle, summarized in Section 5.7.

7.3. Interviews with State and Local Government Officials

FOIL requests were sent to NYSDEC Region 8 and the Village of Newark as indicated in Section 6.3. The information obtained from NYSDEC indicates that the former USTs represent a Recognized Environmental Condition.

7.4. Interview Conclusion

Information obtained from the individuals interviewed did not indicate that a Recognized Environmental Condition exists with respect to the Subject Property. The responses indicated the following Recognized Environmental Condition:

- Spill No. 1307418 was reported when two 12,000-gallon No. 2 fuel oil underground storage tanks (USTs) and approximately 200 tons of fuel-impacted soil were removed from the Subject Property in October 2013. The spill was assigned an inactive status.

8.0 SUBJECT PROPERTY RECONNAISSANCE

8.1. Methodology and Limiting Conditions

Ms. Claire Del Fatti and Ms. Maya Couto, representing C&S, performed a reconnaissance of the Subject Property on August 5, 2024 and recorded their observations. C&S personnel were accompanied by Mr. Alex Grant of Housing Visions during the walkover. C&S personnel conducted a combination of an interior and exterior inspection of the buildings and grounds. Photographs of the Subject Property are provided in **Appendix C**.

The objective of the Subject Property walkover was to identify physical and/or visual evidence indicative of an obviously recognizable environmental condition, such as:

- Soil discoloration
- Stained surfaces
- Stressed and / or dead vegetation
- Spills, leaks, leachate, and / or discolored surface waters
- Evidence of previous fire damage
- Evidence of waste disposal
- Barrels, drums, or other containers
- Areas of subsidence or fill

In addition, there are a variety of physical and visual signs that may potentially indicate the presence of an obviously recognizable subsurface condition, such as:

- Vent pipes or fill ports associated with underground storage tanks (UST)
- Aboveground storage tanks (AST)
- Pipelines
- Electrical transformers and abandoned pads
- Rail yards
- Well casings or riser pipes associated with groundwater monitoring wells
- Landfills or dumps
- Surface impoundments or lagoons

8.2. Subject Property Reconnaissance Observations

Consistent with ASTM E1527-21, the items listed in the following table were documented during the course of the reconnaissance. This includes visual verification or evidence of the feature (e.g. fill ports for a UST). Affirmative responses (designated by an "X") are discussed in detail following the table.

Table 8-1
Subject Property Reconnaissance Observations

Category	Item or Feature	Observed?
Hazardous Substance or Petroleum Product Containers	Aboveground Storage Tanks	X
	Underground Storage Tanks	
	Bulk Containers (drums / totes)	X
	Non-Bulk Containers	X
	Hydraulic Equipment	
	Suspect PCB-Containing Equipment	
	Pipeline	
Olfactory / Visual Evidence of Releases	Odors	
	Pools of Liquid	
	Stains or Corrosion	X
	Stained Soil or Pavement	X
	Stressed Vegetation	
Water, Wastewater, and Waste Management	Drains or Sumps	X
	Pits, Ponds, Lagoons	
	Solid Waste	X
	Land Application of Wastewater Solids	
	Wastewater Sources	
	Septic Systems or Dry Wells	
	Wells	
Other	Fill Materials	X
	Construction / Demolition Debris	
Non-ASTM Items / Features	Suspect Asbestos-Containing Building Materials	X
	Ecological Resources	
	Endangered Species	
	Indoor Air Quality	
	Mold	X
	Radon	
	Potential Lead-Based Paint	X
	Lead in Drinking Water	
	Wetlands	

8.3. Subject Property Reconnaissance Summary

The Subject Property consists of a 112,676 square-foot three-story building in the center of the property. There is an adjoining 39,576 square-foot single-story warehouse on the east side of the main building and a 5,280 square-foot two-story annex building on the south side of the property. There are asphalt parking lots to the north, south, and east of the main building and minimal greenspace on the north and south sides of the Subject Property.

8.3.1. Exterior Observations

The following bullets provide additional detail regarding the significant items noted during the Subject Property reconnaissance:

- Three pole-mounted transformers were observed on the north side of the main building. The transformers did not have blue non-PCB containing stickers. The transformers appeared to be in good condition and no staining was observed.

- A concrete pad was observed on the north side of the main building.

- A wastewater flocculation tank was observed on the north side of the main building. The tank appeared to be in good condition and was empty.

- Minor oil staining was observed on the east side of the warehouse. The staining was contained to the parking lot asphalt.

- A small shed was observed on the north side of the Subject Property. C&S personnel did not enter the shed due to safety concerns regarding the structural integrity of the shed.

- Two sections of rail line were observed on the north side of the Subject Property.

8.3.2. Interior Observations

The following bullets provide additional detail regarding the significant items noted during the Subject Property reconnaissance:

Main Building

- A large, obsolete boiler was observed in the center of the boiler room. It was unclear what was used to power the boiler.

- A large concrete foundation was observed in the center of the boiler room, presumably used for former pieces of machinery. Four circular pits filled with debris were observed within the foundation footprint.

- A trench drain was observed in the center of the boiler room. The trench drain was dry and no staining was observed around the drain.

- A floor drain was observed in the northeast corner of the boiler room. The drain cover was rusted but no staining was observed around the drain.

- A 50-gallon mixing tank was observed in the northeast corner of the boiler room. The tank was partially full of an unknown solid substance.

- Multiple obsolete pipes were observed along the boiler room walls and in the boiler room floor.

- Multiple air compressors and an electric motor were observed on the south side of the boiler room. Some minor oil staining was observed on the concrete floor in the vicinity of the air compressors and motor.

- A 55-gallon lubricant drum was observed on the south side of the boiler room. The drum was in very poor condition and filled with solid waste.

- A 5-gallon bucket of asbestos-containing cement was observed on the south side of the boiler room. The bucket was full and in poor condition.

- A sump pit was observed on the south side of the boiler room. The pit was dry.

- A 5-gallon bucket of Texaco oil and a 5-gallon bucket of Texaco grease was observed on the east side of the boiler room. Both buckets were partially full, in poor condition, and leaking. Staining was observed on the ground around the buckets.

- A 5-gallon bucket of lubricant was observed on the east side of the boiler room. The bucket was partially full and in poor condition. Evidence of leaking was not observed.

- The concrete floor on the east side of the boiler room was in very poor condition.

- An obsolete freight elevator was observed on the north side of the building. The elevator appeared to be electric. C&S personnel were not able to access the elevator penthouse on the roof.

- A 55-gallon drum of degreaser was observed on the north side of the ground floor. The drum was full and in good condition.

- Potential lead-based paint was observed throughout the building. The paint was peeling and in poor condition.

- Multiple ceiling-mounted natural gas space heaters were observed throughout the building. All of the heaters appeared to be in good condition but only a select few were operational.

- Multiple wall-mounted electrical transformers were observed throughout the building and a transformer room was observed on the north side of the ground floor. The transformers appeared to be in good condition.

- A furnace was observed on the south side of the ground floor. The furnace appeared to be in good condition but not operational.

- The second and third floors consisted of vacant storage space. Nothing of significance was noted on either of these floors.

- No obvious water / moisture infiltration or mold was noted. Although some enclosed areas had a mild musty odor.

Warehouse:

- C&S personnel were not granted access to the warehouse space during the Site reconnaissance. A portion of the warehouse was observed from a window on the third floor of the main building. The warehouse space appeared to consist of pre-packaged goods on pallets. This is considered a data gap.

- A pool of water was observed on the warehouse floor from an apparent leak in the ceiling.

- Minor oil staining was observed on the warehouse floor. The staining was contained to the concrete floor.

Annex:

- A natural gas boiler was observed in the basement. The boiler appeared to be in good condition and not operational at the time of reconnaissance.

- A sump pit was observed in the basement. The pit was full of cloudy water with a white film on the surface of the water.

- Numerous paint cans in deteriorating condition were observed in the boiler room in the basement. Leaking was not observed in the vicinity of the cans.

- Numerous consumer-sized containers of paint, sealer, and primer were observed in the basement. The containers appeared to be partially full and in good condition.

- The ground floor and second floor consisted of office space. Nothing of significance was noted on either of these floors.

- No obvious water / moisture infiltration or mold was noted. Although some enclosed areas had a mild musty odor.

8.3.3. Subject Property Reconnaissance Conclusion

Based on the reconnaissance of the Subject Property, there was no visual evidence of a Recognized Environmental Condition.

The following *de minimis* conditions were observed:

- Minor oil staining was observed on the east side of the warehouse. The staining was contained to the parking lot asphalt.

- Multiple air compressors and an electric motor were observed on the south side of the boiler room. Some minor oil staining was observed on the concrete floor in the vicinity of the air compressors and motor.

- A 5-gallon bucket of Texaco oil and a 5-gallon bucket of Texaco grease was observed on the east side of the boiler room. Both buckets were partially full, in poor condition, and leaking. Staining was observed on the ground around the buckets.

The following Business Environmental Risks were observed:

- A 5-gallon bucket of asbestos-containing cement was observed on the south side of the boiler room. The bucket was full and in poor condition.

- Potential lead-based paint was observed throughout the building. The paint was peeling and in poor condition.

9.0 FINDINGS AND OPINIONS

C&S Engineers, Inc. completed this Phase I Environmental Site Assessment consistent with the scope and limitations of ASTM E 1527-21. Based on information gathered during the course of this Phase I Environmental Site Assessment of the Subject Property, including a database search report, the site reconnaissance, and interviews documented in this report, the following has been identified:

- The Subject Property is identified as Tax Map ID No. 68111-18-416166, which is located at 130-132 Harrison Street, in the Village of Newark, Wayne County, New York. The Subject Property is 5.31 acres and is owned by Graybill Real Estate LLC. The Subject Property consists of a 112,676 square-foot three-story building in the center of the property (e.g. the Main Building). There is an adjoining 39,576 square-foot single-story warehouse on the east side of the main building and a 5,280 square-foot two-story annex building on the south side of the property. There are asphalt parking lots to the north, south, and east of the main building and minimal greenspace on the north and south sides of the Subject Property.

- The Subject Property reconnaissance was performed on August 5, 2024. C&S observed minor oil staining in the parking lot on the east side of the warehouse, minor oil staining on the concrete floor in the vicinity of the air compressors and motor in the boiler room, and leaking / staining observed from two deteriorating 5-gallon buckets of Texaco products in the boiler room. These are considered *de minimis* conditions. A 5-gallon bucket of asbestos-containing cement in the boiler room and potential lead-based paint in poor condition throughout the building are considered Business Environmental Risks.

- Two 12,000-gallon no. 2 fuel oil underground storage tanks (USTs) were installed some time before 1986 and removed and closed in October 2013. At the time of closure, contamination was encountered around the tanks and spill no. 1307418 was assigned. Closeout soil samples indicated only two slight exceedances of semi-volatile organic compounds (SVOCs). Benzo(b)fluoranthene was detected at 1.2 parts per million (ppm) compared to the Restricted Residential Use Soil Cleanup Objective (SCO) of 1 ppm. Indeno(1,2,3-cd)pyrene was detected at 0.556 ppm compared to the Restricted Residential Use SCO of 0.5 ppm. Approximately 200 tons of petroleum contaminated soil was excavated and transported to the Ontario County Landfill. According to existing records, no further remedial work was required and the New York State Department of Environmental Conservation (NYSDEC) closed the spill as not meeting standards. Due to extent of remediation previously performed (200 tons of soil removed) and limited "slight" exceedances from soil samples taken at the time of closure, it is unlikely that the anticipated multi-family residential land use would cause NYSDEC to reopen the spill or require further remediation. However, because contaminants were present at concentrations greater than Unrestricted Use SCOs, the residual impacts are considered a Recognized Environmental Condition.

- The Subject Property was historically utilized for industrial purposes including machining, tinware manufacturing, cosmetics manufacturing, jewelry manufacturing, which involved electroplating, plating, anodizing, coloring, and the generation of hazardous waste. These types of businesses utilize petroleum products and chemicals such as chlorinated solvents. Typically, the use of those types of products in operations such as these led to releases and are often identified as a Recognized Environmental Condition. Site investigations were performed in 2020 and 2023, which included the advancement of 18 soil borings and collection and analysis of 18 soil samples, the installation and sampling of three temporary groundwater monitoring wells, and the collection and analysis of air samples. The samples did not indicate an exceedance of a soil or groundwater standard, although low levels of chlorinated solvents are present in groundwater which may be a contributing factor to soil vapor intrusion. Air sampling data indicated exceedances of NYSDOH criteria at concentrations that requires mitigation. As such, Housing Visions retained C&S to design a sub-slab depressurization system (SSDS). The system was designed to provide at least -0.004 water column inches (wci) below the entire slab of the Main Building and the Annex. The system includes hundreds of feet of trench and multiple vapor pits to collect vapors from below the slab, exhaust piping, roof-mounted exhaust fans, a monitoring system, and an alarm system. Prior to occupancy, the negative pressure below the slab can be verified and indoor air will be tested to document the adequacy of the system. In addition to a potential onsite source of vapors, there is an upgradient site with documented soil vapor concerns. 175 West Union Street has significant onsite and offsite chlorinated solvent impacts (groundwater ~400 parts per billion and vapor concentrations at 25,000 µg/m^3). Due to proximity and the degree of impacts, the site could be contributing factors to onsite soil vapor intrusion issues. The onsite and offsite soil vapor concerns are considered a Vapor Encroachment Concern and Recognized Environmental Condition.

- During the completion of this assessment, an effort was made to identify known sources of Per- and Polyfluoroalkyl Substances (PFAS) on or in the vicinity of the Subject Property. PFAS are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in a wide variety of products such as water-repellent clothing and furniture, plating solutions, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces, electrical wire insulation, and several other uses.

  Our assessment was based upon common industry knowledge at the time this Assessment was completed, as well as the USEPA document *Interim Guidance on the Destruction and Disposal of Perfluoroalkyl and Polyfluoroalkyl Substances and Materials Containing Perfluoroalkyl and Polyfluoroalkyl Substances*. Based on the historical uses at the Subject Property, PFAS could be an issue at the Subject Property because metal plating and cosmetics manufacturing are considered secondary industries that are known to have used PFAS in their operation. Per the guidance document, PFAS releases are possible at any stage of the industrial processes.

In recent years, the NYSDOH, NYSDEC, and USEPA began prioritizing the study of potential health effects of PFAS. There is limited information known to-date regarding PFAS and the regulations associated with them remain fluid. Although there is no precisely-clear definition of what constitutes a PFAS, the EPA lists 6,330 named PFAS substances. In February 2019, NYSDEC mandated the sampling of 21 PFAS substances in groundwater for sites being investigated under certain NYSDEC programs. In July 2024, PFAS was listed as hazardous by CERCLA.

According to the EPA, drinking water can be a source of exposure in communities where these chemicals have contaminated water supplies. Such contamination is typically localized and associated with a specific facility. For example, an industrial facility where PFAS were produced or used to manufacture other products, or locations where firefighting foam was used such as oil refineries, airfields or other training facilities for firefighters.

Due to the listing of plating and cosmetics manufacturing as potential sources of PFAS contamination and a lack of information regarding historical operations on the Subject Property, PFAS is considered a Recognized Environmental Condition.

- With respect to the Subject Property's historical operation of rail spurs and the adjacent property's historical use as a railroad, potential concerns that are related to historic rail lines include the use of treated railroad ties and the application of arsenic-based herbicides for vegetation control, as detailed below:

    - Wooden railroad ties that were used in rail construction were commonly treated with creosote-based preservatives to prevent decay. These products are comprised of polynuclear aromatic hydrocarbons (PAHs) that are regulated due to their potential carcinogenic properties. With respect to the Subject Property's and adjacent property's rail line, the existing ties are intact and part of the rail structure and are therefore not considered to be dumped or disposed of. Further, leaching of PAHs, if any, from the ties would likely be localized to the soil beneath the ties and considered a de minimis condition, similar to isolated automotive fluid staining on a parking lot. Based on these factors, the rail ties are not considered to be a Recognized Environmental Condition with respect to the Subject Property.
    - The other potential concern with rail lines relates to the historic use of arsenic-based herbicides in vegetation control. Railroads have historically applied herbicides along the routes of rail lines as a vegetation maintenance practice. ASTM Practice E1527-21 contains a pesticide exclusion (Appendix X1.1.4.3(4)) that is intended to "prevent the typical pesticide user from incurring CERCLA liability when he has done nothing more than to have purchased and applied a pesticide in the customary manner". Under this exclusion, if a property owner or operator (in this case, the railroad) did not conduct chemical management activities, such as filling vessels, mixing, rinsing, storing, or disposal, at the location, then the use of the pesticides within industry standards would not

be classified as a Recognized Environmental Condition. No information was obtained during the historical review or site reconnaissance to indicate that activities beyond customary use occurred on or adjacent to the Subject Property. As such, the potential past pesticide application along the rail line is not considered to be a Recognized Environmental Condition with respect to the Subject Property.

9.1. Data Failure

ASTM E1527-21 defines a data failure as a failure to achieve the historical research objectives of all appropriate inquiries even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Specifically, the historical research objectives include identifying all obvious uses of the Subject Property from the present, back to the Subject Property's first developed use, or back to 1940, whichever is earlier. A data failure was not encountered during this assessment.

9.2. Data Gap

A data gap is a lack or inability to obtain information required despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required, including but not limited to Subject Property reconnaissance and interviews. During the course of this Phase I Environmental Site Assessment, significant data gaps that impaired C&S' ability to formulate opinions were encountered:

- Lack of a chain of title / title abstract.
- Lack of a completed FOIL request from the Village of Newark.
- Lack of a thorough inspection of the adjoining warehouse during site reconnaissance.

10.0 CONCLUSIONS

C&S Engineers, Inc. performed this Phase I Environmental Site Assessment consistent with the scope and limitations of ASTM E1527-21 on the Subject Property identified in Section 1.1 and on various figures located at the rear of this report. Any exceptions to or deletions from ASTM E1527-21 are described in Section 12.2.

As described in this document, this Phase I ESA has revealed no evidence of a Recognized Environmental Conditions, except for:

- Historical metal plating and cosmetics manufacturing that may have utilized PFAS in the process.

- The former 12,000-gallon No. 2 fuel oil USTs.

This Phase I ESA has identified the following Vapor Encroachment Concerns / Recognized Environmental Conditions:

- Elevated TCE concentrations in the Subject Property sub-slab and indoor air.

- 175 West Union Street – Former drycleaner with significant chlorinated solvent contamination and off-site vapor encroachment concerns.

  It is our understanding that the VECs will be addressed via the construction of the proposed sub-slab depressurization system (SSDS).

This Phase I ESA has identified the following Business Environmental Risks:

- Potential asbestos-containing materials throughout the building (including asbestos cement).

- Potential lead-based paint throughout the building.

It is our understanding that these materials will be mitigated prior to building redevelopment.

This Phase I ESA has identified the following *de minimis* conditions:

- Minor oil staining in the parking lot on the east side of the warehouse.

- Minor oil staining on the concrete floor in the vicinity of the air compressors and motor in the boiler room.

- Leaking / staining observed from two deteriorating 5-gallon buckets of Texaco products in the boiler room.

This Phase I ESA has identified the following significant data gaps:

- Lack of a chain of title / title abstract.
- Lack of a completed FOIL request from the Village of Newark.
- Lack of a thorough inspection of the adjoining warehouse during site reconnaissance.

10.1. Opinion on Additional Investigation

Based on the results of this Phase I ESA, further investigation is warranted at the Subject Property, including soil and groundwater sampling for PFAS. The field portion of the investigation has been performed by C&S, and the results will be provided under separate cover.

We also recommend that the owner properly collect and recycle or dispose of the petroleum and chemical containers remaining in the building. This should be done in advance of construction.

If future site development work disturbs soil in the vicinity of the former railroad spur, former USTs, or historic fill material, it should be managed consistent with applicable regulations.

12.0 LIMITATIONS, EXCEPTIONS, ASSUMPTIONS, AND SPECIAL CONDITIONS

12.1. Limitations and Exceptions

C&S has prepared this Phase I ESA consistent with the contract scope of services, using reasonable efforts to identify areas of potential liability associated with Recognized Environmental Conditions at the Subject Property. The conclusions in this report were based solely on a visual review of the Subject Property and on readily available records, interviews, and other secondary sources as cited within this report. C&S has made no independent investigation of the accuracy of these secondary sources and has assumed them to be accurate and complete. C&S does not warrant the accuracy or completeness of the information provided by the secondary sources. C&S does not warrant that contamination that may exist on the Subject Property has been discovered, that the Subject Property is suitable for any particular purpose, or that the Subject Property is clean or free of liability.

No environmental site assessment can wholly eliminate uncertainty regarding the potential for Recognized Environmental Conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.

All appropriate inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of the information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information.

ASTM E1527-21 defines limiting conditions as limitations imposed by physical obstructions such as adjacent buildings, bodies of water, asphalt or other paved areas, and other physical constraints (for example, rain, snow, flooding etc.). As noted during the Subject Property reconnaissance, there were no limiting conditions imposed on this assessment.

12.2. Non-Scope Items

Consistent with ASTM E1527-21, the following items are beyond the scope of Phase I Environmental Site Assessments:

- Asbestos Containing Materials
- Industrial Hygiene
- Health and Safety
- Ecological Resources
- Endangered Species

- Indoor Air Quality (unrelated to releases of hazardous substances or petroleum products into the environment)
- Biological Agents
- Mold
- Radon
- Lead-Based Paint
- Lead in Drinking Water
- Wetlands
- Regulatory Compliance
- Cultural and Historical Resources
- Substances not currently defined as hazardous substances

The Phase I ESA also does not include sampling or chemical analysis of soils, surface water, or groundwater or an intensive examination of facility hazards (compliance audit).

12.3. Significant Assumptions

C&S' conclusions are based on conditions that existed on the Subject Property on August 5, 2024. Past and present conditions that could not be observed were established on the basis of documents. C&S cannot attest to the completeness of accuracy of these materials. The report speaks only as of the date issued. C&S has no responsibility for updating the information herein, and therefore, do not assume that any information contained herein in this Phase I Environmental Site Assessment continues to be accurate subsequent to 180 days from the date of the issuance of this document.

Except where specifically stated to the contrary, the information contained herein was provided to C&S by others and has not been verified independently or otherwise examined to determine accuracy, completeness, or feasibility. In addition, C&S may have had to rely upon the assumptions, especially as to future conditions and events. Accordingly, neither C&S nor any person acting on C&S' behalf (a) makes any warranty or representation, whether expressed or implied, concerning the usefulness of the information contained in this report, or (b) assumes liabilities with respect to the use of or for damages resulting from the use of any information contained in this Environmental Site Assessment report. Further, C&S cannot promise that any assumed conditions will come to pass.

It would be expensive, and perhaps not possible, to conduct an investigation that would ensure the detection of environmental impacts at the Subject Property, which now are, or in the future might be, considered hazardous. This investigation does not guarantee that C&S discovered all the environmental impacts at the Subject Property. Similarly, a property which, in fact, is unaffected by environmental impacts at the time of the assessment may later, due to natural phenomena or other intervention, become contaminated.

Except where stated to be the contrary, this Environmental Site Assessment has been prepared solely on the basis of readily available visual observation. Except where stated to be the contrary, no demolition or removal by C&S has been accomplished to reveal hidden conditions. No testing such as the testing of materials, equipment, or systems has been performed to verify current conditions or to predict future conditions.

Future regulatory modifications, agency interpretation, or policy changes may affect the compliance status of the property.

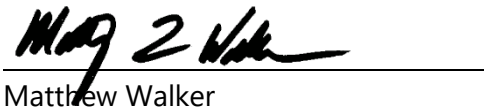

12.4. Special Terms and Conditions

Besides the standard contractual terms between C&S and Housing Visions, this Phase I Environmental Site Assessment was conducted, in C&S' opinion, with no impeding special terms and conditions that would alter the scope and / or effectiveness of ASTM E1527-21.

13.0 SIGNATURES AND QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the Subject Property. To the best of my knowledge and belief, C&S Engineers Inc. has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

ERIS

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit Ca (0.19%)

Map Unit Name:	Canandaigua silt loam
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained
Hydrologic Group - Dominant:	C/D - These soils have moderately high runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Canandaigua(75%)

horizon H1(0cm to 20cm)	Silt loam
horizon H2(20cm to 91cm)	Silt loam
horizon H3(91cm to 152cm)	Stratified silt loam to very fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Ca - Canandaigua silt loam

Component: Canandaigua (75%)
The Canandaigua component makes up 75 percent of the map unit. Slopes are 0 to 3 percent. This component is on depressions. The parent material consists of silty and clayey glaciolacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is not flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, November, December. Organic matter content in the surface horizon is about 10 percent. Nonirrigated land capability classification is 5w. This soil meets hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 1 percent.

Component: Williamson (5%)
Generated brief soil descriptions are created for major components. The Williamson soil is a minor component.

Component: Minoa (5%)
Generated brief soil descriptions are created for major components. The Minoa soil is a minor component.

Component: Lyons (5%)
Generated brief soil descriptions are created for major components. The Lyons soil is a minor component.

Component: Lamson (5%)
Generated brief soil descriptions are created for major components. The Lamson soil is a minor component.

Component: Collamer (5%)
Generated brief soil descriptions are created for major components. The Collamer soil is a minor component.

Map Unit CFL (5.71%)

Map Unit Name:	Cut and fill land
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	137cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Udorthents(70%)

horizon H1(0cm to 23cm)	Channery silt loam
horizon H2(23cm to 152cm)	Channery loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: CFL - Cut and fill land

Component: Udorthents (70%)
The Udorthents component makes up 70 percent of the map unit. Slopes are 0 to 15 percent. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 54 inches during January, February, March, April, May, June, November, December. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria.

Component: Collamer (5%)
Generated brief soil descriptions are created for major components. The Collamer soil is a minor component.

Component: Hilton (5%)
Generated brief soil descriptions are created for major components. The Hilton soil is a minor component.

Component: Halsey (5%)
Generated brief soil descriptions are created for major components. The Halsey soil is a minor component.

Component: Massena (5%)
Generated brief soil descriptions are created for major components. The Massena soil is a minor component.

Component: Lyons (5%)
Generated brief soil descriptions are created for major components. The Lyons soil is a minor component.

Component: Cazenovia (5%)
Generated brief soil descriptions are created for major components. The Cazenovia soil is a minor component.

Map Unit Du (0.41%)

Map Unit Name: Dumps

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Du - Dumps

Component: Dumps (70%)
Generated brief soil descriptions are created for major soil components. The Dumps is a miscellaneous area.

Component: Ira (5%)
Generated brief soil descriptions are created for major components. The Ira soil is a minor component.

Component: Cut and fill (5%)
Generated brief soil descriptions are created for major components. The Cut and fill soil is a minor component.

Component: Ontario (5%)
Generated brief soil descriptions are created for major components. The Ontario soil is a minor component.

Component: Canandaigua (5%)
Generated brief soil descriptions are created for major components. The Canandaigua soil is a minor component.

Component: Niagara (5%)

Soil Information

Generated brief soil descriptions are created for major components. The Niagara soil is a minor component.

Component: Halsey (5%)
Generated brief soil descriptions are created for major components. The Halsey soil is a minor component.

Map Unit ElA (2.15%)

Map Unit Name:	Elnora loamy fine sand, 0 to 2 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	54cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Elnora(80%)

horizon H1(0cm to 25cm)	Loamy fine sand
horizon H2(25cm to 81cm)	Loamy fine sand
horizon H3(81cm to 152cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: ElA - Elnora loamy fine sand, 0 to 2 percent slopes

Component: Elnora (80%)
The Elnora component makes up 80 percent of the map unit. Slopes are 0 to 2 percent. This component is on proglacial beach ridges, proglacial deltas. The parent material consists of sandy glaciofluvial, eolian, or deltaic deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 21 inches during February, March, April, May. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.

Component: Minoa (4%)
Generated brief soil descriptions are created for major components. The Minoa soil is a minor component.

Component: Colonie (4%)
Generated brief soil descriptions are created for major components. The Colonie soil is a minor component.

Component: Junius (4%)
Generated brief soil descriptions are created for major components. The Junius soil is a minor component.

Component: Oakville (4%)
Generated brief soil descriptions are created for major components. The Oakville soil is a minor component.

Component: Williamson (4%)
Generated brief soil descriptions are created for major components. The Williamson soil is a minor component.

Map Unit Ha (0.27%)

Map Unit Name:	Halsey silt loam
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	8cm
Drainage Class - Dominant:	Very poorly drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Halsey(75%)

horizon H1(0cm to 23cm)	Silt loam
horizon H2(23cm to 71cm)	Loam
horizon H3(71cm to 152cm)	Very gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Ha - Halsey silt loam

Component: Halsey (75%)
The Halsey component makes up 75 percent of the map unit. Slopes are 0 to 3 percent. This component is on depressions. The parent material consists of loamy glaciofluvial deposits over sandy and gravelly glaciofluvial deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 3 inches during January, February, March, April, May, June, September, October, November, December. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 5w. This soil meets hydric criteria.

Component: Adrian (5%)
Generated brief soil descriptions are created for major components. The Adrian soil is a minor component.

Component: Lamson (5%)
Generated brief soil descriptions are created for major components. The Lamson soil is a minor component.

Component: Phelps (5%)
Generated brief soil descriptions are created for major components. The Phelps soil is a minor component.

Component: Fredon (5%)
Generated brief soil descriptions are created for major components. The Fredon soil is a minor component.

Component: Palms (3%)
Generated brief soil descriptions are created for major components. The Palms soil is a minor component.

Component: Canandaigua (2%)
Generated brief soil descriptions are created for major components. The Canandaigua soil is a minor component.

Map Unit HnB (0.23%)

Map Unit Name:	Hilton gravelly loam, 3 to 8 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	54cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Hilton(85%)

horizon Ap(0cm to 23cm)	Gravelly loam
horizon E(23cm to 43cm)	Loam
horizon Bt/E(43cm to 61cm)	Gravelly loam
horizon Bt(61cm to 91cm)	Gravelly loam
horizon C1(91cm to 137cm)	Gravelly loam
horizon C2(137cm to 200cm)	Gravelly loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: HnB - Hilton gravelly loam, 3 to 8 percent slopes

Component: Hilton (85%)

Soil Information

The Hilton component makes up 85 percent of the map unit. Slopes are 3 to 8 percent. This component is on ridges, till plains. The parent material consists of calcareous loamy lodgment till derived from limestone, sandstone, and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 21 inches during March, April, May. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent.

Component: Appleton (5%)
Generated brief soil descriptions are created for major soil components. The Appleton soil is a minor component.

Component: Ontario (5%)
Generated brief soil descriptions are created for major soil components. The Ontario soil is a minor component.

Component: Bombay (3%)
Generated brief soil descriptions are created for major soil components. The Bombay soil is a minor component.

Component: Cayuga (2%)
Generated brief soil descriptions are created for major soil components. The Cayuga soil is a minor component.

Map Unit Lm (8.87%)

Map Unit Name:	Lamson very fine sandy loam
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained
Hydrologic Group - Dominant:	A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Lamson(80%)

horizon H1(0cm to 25cm)	Very fine sandy loam
horizon H2(25cm to 84cm)	Fine sandy loam
horizon H3(84cm to 152cm)	Very fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Lm - Lamson very fine sandy loam

Component: Lamson (80%)
The Lamson component makes up 80 percent of the map unit. Slopes are 0 to 3 percent. This component is on depressions. The parent material consists of deltaic or glaciolacustrine deposits with a high content of fine and very fine sand. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, December. Organic matter content in the surface horizon is about 7 percent. Nonirrigated land capability classification is 5w. This soil meets hydric criteria.

Component: Unnamed soils (5%)
Generated brief soil descriptions are created for major components. The Unnamed soils soil is a minor component.

Component: Canandaigua (5%)
Generated brief soil descriptions are created for major components. The Canandaigua soil is a minor component.

Component: Junius (5%)
Generated brief soil descriptions are created for major components. The Junius soil is a minor component.

Component: Minoa (5%)
Generated brief soil descriptions are created for major components. The Minoa soil is a minor component.

Map Unit Mn (0.74%)

Map Unit Name:	Minoa very fine sandy loam
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	31cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Minoa(80%)

horizon H1(0cm to 30cm)	Very fine sandy loam
horizon H2(30cm to 56cm)	Very fine sandy loam
horizon H3(56cm to 81cm)	Loamy very fine sand
horizon H4(81cm to 152cm)	Very fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Mn - Minoa very fine sandy loam

Component: Minoa (80%)
The Minoa component makes up 80 percent of the map unit. Slopes are 0 to 3 percent. This component is on proglacial deltas on lake plains. The parent material consists of deltaic or glaciolacustrine deposits with a high content of fine and very fine sand. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 12 inches during February, March, April. Organic matter content in the surface horizon is about 5 percent. Nonirrigated land capability classification is 3w. This soil does not meet hydric criteria.

Component: Elnora (5%)
Generated brief soil descriptions are created for major components. The Elnora soil is a minor component.

Component: Unnamed soils (5%)
Generated brief soil descriptions are created for major components. The Unnamed soils soil is a minor component.

Component: Lamson (5%)
Generated brief soil descriptions are created for major components. The Lamson soil is a minor component.

Component: Canandaigua (5%)
Generated brief soil descriptions are created for major components. The Canandaigua soil is a minor component.

Map Unit OnB (0.9%)

Map Unit Name:	Ontario gravelly loam, 3 to 8 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Ontario(85%)

horizon Ap(0cm to 20cm)	Gravelly loam
horizon E(20cm to 36cm)	Loam
horizon Bt/E(36cm to 53cm)	Loam
horizon Bt(53cm to 99cm)	Gravelly loam
horizon C1(99cm to 122cm)	Gravelly loam
horizon C2(122cm to 200cm)	Gravelly loam

Soil Information

Component Description:

Minor map unit components are excluded from this report.

Map Unit: OnB - Ontario gravelly loam, 3 to 8 percent slopes

Component: Ontario (85%)
The Ontario component makes up 85 percent of the map unit. Slopes are 3 to 8 percent. This component is on till plains, ridges. The parent material consists of calcareous loamy lodgment till derived from limestone, sandstone, and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent.

Map Unit PcA (12.28%)

Map Unit Name:	Palmyra gravelly loam, 0 to 3 percent slopes
Bedrock Depth - Min:	null

Soil Information

Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Palmyra(80%)

horizon H1(0cm to 23cm)	Gravelly loam
horizon H2(23cm to 61cm)	Gravelly loam
horizon H3(61cm to 152cm)	Stratified gravel to sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: PcA - Palmyra gravelly loam, 0 to 3 percent slopes

Component: Palmyra (80%)
The Palmyra component makes up 80 percent of the map unit. Slopes are 0 to 3 percent. This component is on proglacial deltas, terraces, outwash plains. The parent material consists of loamy over sandy and gravelly glaciofluvial deposits, derived mainly from limestone and other sedimentary rocks. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 5 percent. Nonirrigated land capability classification is 1. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 15 percent.

Generated brief soil descriptions are created for major components. The Phelps soil is a minor component.

Component: Fredon (7%)
Generated brief soil descriptions are created for major components. The Fredon soil is a minor component.

Component: Unnamed soils (6%)
Generated brief soil descriptions are created for major components. The Unnamed soils soil is a minor component.

Map Unit PoA (3.44%)

Soil Information

Map Unit Name:	Phelps gravelly loam, 0 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	54cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Phelps(80%)

horizon H1(0cm to 23cm)	Gravelly loam
horizon H2(23cm to 36cm)	Gravelly loam
horizon H3(36cm to 86cm)	Gravelly clay loam
horizon H4(86cm to 152cm)	Stratified sand to gravel

Component Description:

Minor map unit components are excluded from this report.

Map Unit: PoA - Phelps gravelly loam, 0 to 3 percent slopes

Component: Phelps (80%)
The Phelps component makes up 80 percent of the map unit. Slopes are 0 to 3 percent. This component is on valley trains, terraces. The parent material consists of loamy glaciofluvial deposits over sandy and gravelly glaciofluvial deposits, containing significant amounts of limestone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 21 inches during March, April, May. Organic matter content in the surface horizon is about 5 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 15 percent.

Component: Halsey (4%)
Generated brief soil descriptions are created for major components. The Halsey soil is a minor component.

Component: Unnamed soils (4%)
Generated brief soil descriptions are created for major components. The Unnamed soils soil is a minor component.

Component: Alton (4%)
Generated brief soil descriptions are created for major components. The Alton soil is a minor component.

Component: Fredon (4%)
Generated brief soil descriptions are created for major components. The Fredon soil is a minor component.

Component: Palmyra (4%)
Generated brief soil descriptions are created for major components. The Palmyra soil is a minor component.

Map Unit Pt (1.07%)

Map Unit Name:	Pits, gravel and sand

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Pt - Pits, gravel and sand

Component: Pits, gravel and sand (70%)
Generated brief soil descriptions are created for major soil components. The Pits, gravel and sand is a miscellaneous area.

Component: Halsey (5%)
Generated brief soil descriptions are created for major components. The Halsey soil is a minor component.

Component: Fredon (5%)

Soil Information

Generated brief soil descriptions are created for major components. The Fredon soil is a minor component.

Component: Palmyra (5%)
Generated brief soil descriptions are created for major components. The Palmyra soil is a minor component.

Component: Alton (5%)
Generated brief soil descriptions are created for major components. The Alton soil is a minor component.

Component: Phelps (5%)
Generated brief soil descriptions are created for major components. The Phelps soil is a minor component.

Component: Lamson (5%)
Generated brief soil descriptions are created for major components. The Lamson soil is a minor component.

Map Unit Te (1.37%)

Map Unit Name:	Teel silt loam
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	54cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Teel(85%)

horizon H1(0cm to 23cm)	Silt loam
horizon H2(23cm to 81cm)	Silt loam
horizon H3(81cm to 152cm)	Silt loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Te - Teel silt loam

Component: Teel (85%)
The Teel component makes up 85 percent of the map unit. Slopes are 0 to 3 percent. This component is on flood plains. The parent material consists of silty alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is occasionally flooded. It is not ponded. A seasonal zone of water saturation is at 21 inches during January, February, March, April, May. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.

Component: Hamlin (5%)
Generated brief soil descriptions are created for major components. The Hamlin soil is a minor component.

Component: Udifluvents (5%)
Generated brief soil descriptions are created for major components. The Udifluvents soil is a minor component.

Component: Wayland (5%)
Generated brief soil descriptions are created for major components. The Wayland soil is a minor component.

Map Unit W (47.19%)

Map Unit Name:	Water

No more attributes available for this map unit

Component Description:

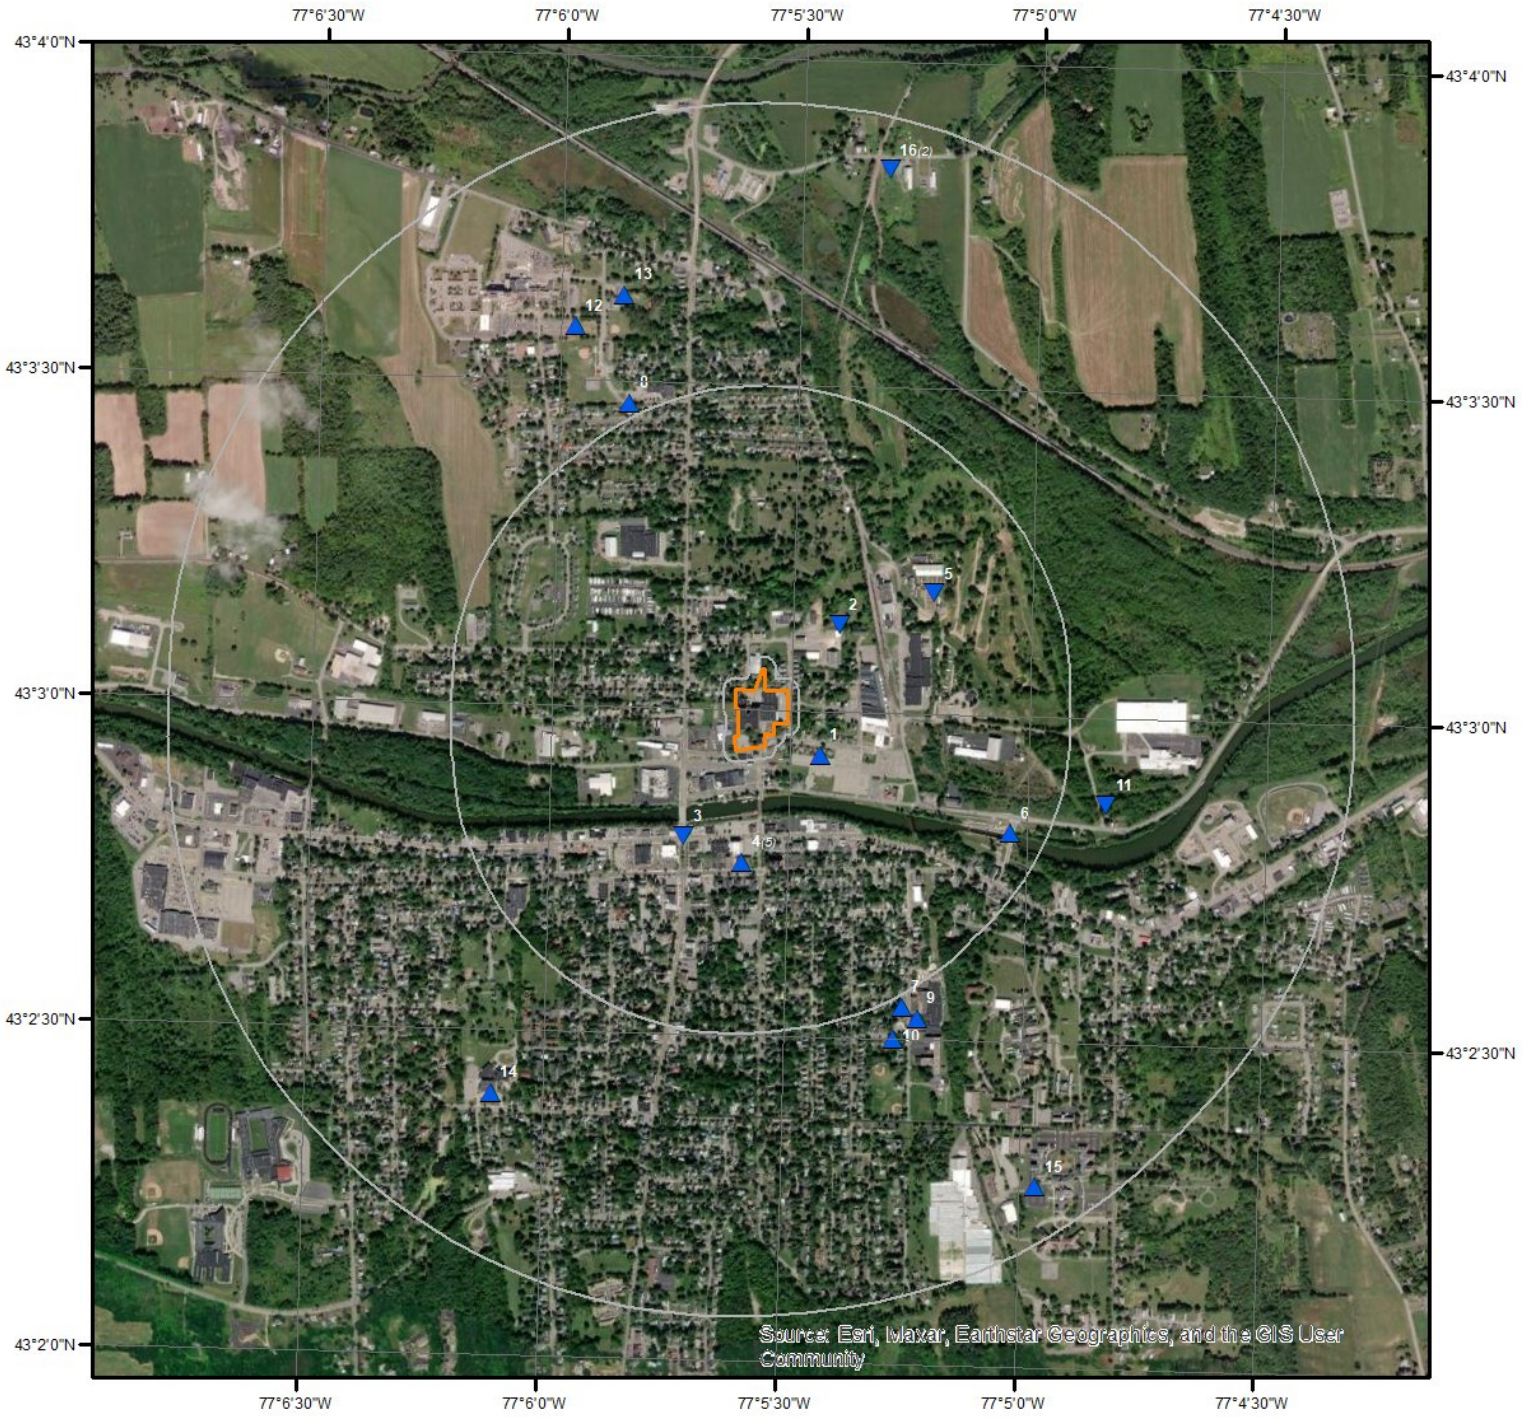

Minor map unit components are excluded from this report.

Soil Information

Map Unit: W - Water

Component: Water (100%)
Generated brief soil descriptions are created for major soil components. The Water is a miscellaneous area.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *WAYNE* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *WAYNE* County

No Measures/Homes:	142
Geometric Mean:	5.8
Arithmetic Mean:	3.8
Median:	1.8
Standard Deviation:	2
Maximum:	35.3
% >4 pCi/L:	20
% >20 pCi/L:	4
Notes on Data Table:	Table 1. Screening indoor radon data compiled by the New York State Department of Health. Data represent 1-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

This list of drinking water violations and enforcement actions is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database, as part of the national download of Safe Drinking Water Act (SDWA) data. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program, including monitoring, enforcement, and violation data related to requirements established by the SWDA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

This national download of Safe Drinking Water Act (SDWA) data is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program related to requirements established by the Safe Drinking Water Act (SDWA). Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The data includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP). The WQP

is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

State Sources

Oil and Gas Wells **OGW**

The Division of Mineral Resources maintains a data management system on wells regulated under the Oil, Gas and Solution Mining Law (OGSML). To assist the Division in the regulation of wells subject to the OGSML, a database of the wells was created in the early 1980's and significantly upgraded in 1998 by the adoption of the Risk Based Data Management System. This system provides information on well ownership, well owners and operators, registered driller, pluggers and companies that provide financial security instruments.

Regulatory Freshwater Wetlands **WETLAND**

The Regulatory Freshwater Wetlands data are a set of ARC/INFO coverages composed of polygonal and linear features. Coverages are based on official New York State Freshwater Wetlands Maps as described in Article 24-0301 of the Environmental Conservation Law. Coverages are not, however, a legal substitute for the official maps. Coverages are available on a county basis for all areas of New York State outside the Adirondack Park. This dataset is provided by New York State Department of Environmental Conservation.

Underground Injection Control Wells **UIC**

A well permit is required from the Division of Mineral Resources for any brine disposal well deeper than 500 feet. This includes any operation to drill, deepen, plug back or convert a well. Regardless of well depth, the NYSDEC Division of Water must be contacted for a determination of whether a SPDES permit is necessary to operate any brine disposal well.

Water Wells Database **WATER WELLS**

The New York State Department of Environmental Conservation (NYS DEC) Bureau of Water Resource Management maintains data on water wells within the state. This data is compiled from NYS DEC public record requests and related NYS well datasets. All counties are included in this list.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

RE: CITY DIRECTORY RESEARCH
130-132 Harrison Street
Newark,NY 14513

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

HISTORICAL AERIALS

Project Property: Coventry Commons Phase I ESA
130-132 Harrison Street
Newark NY 14513

Project No: W96.007.003

Requested By: C&S Companies

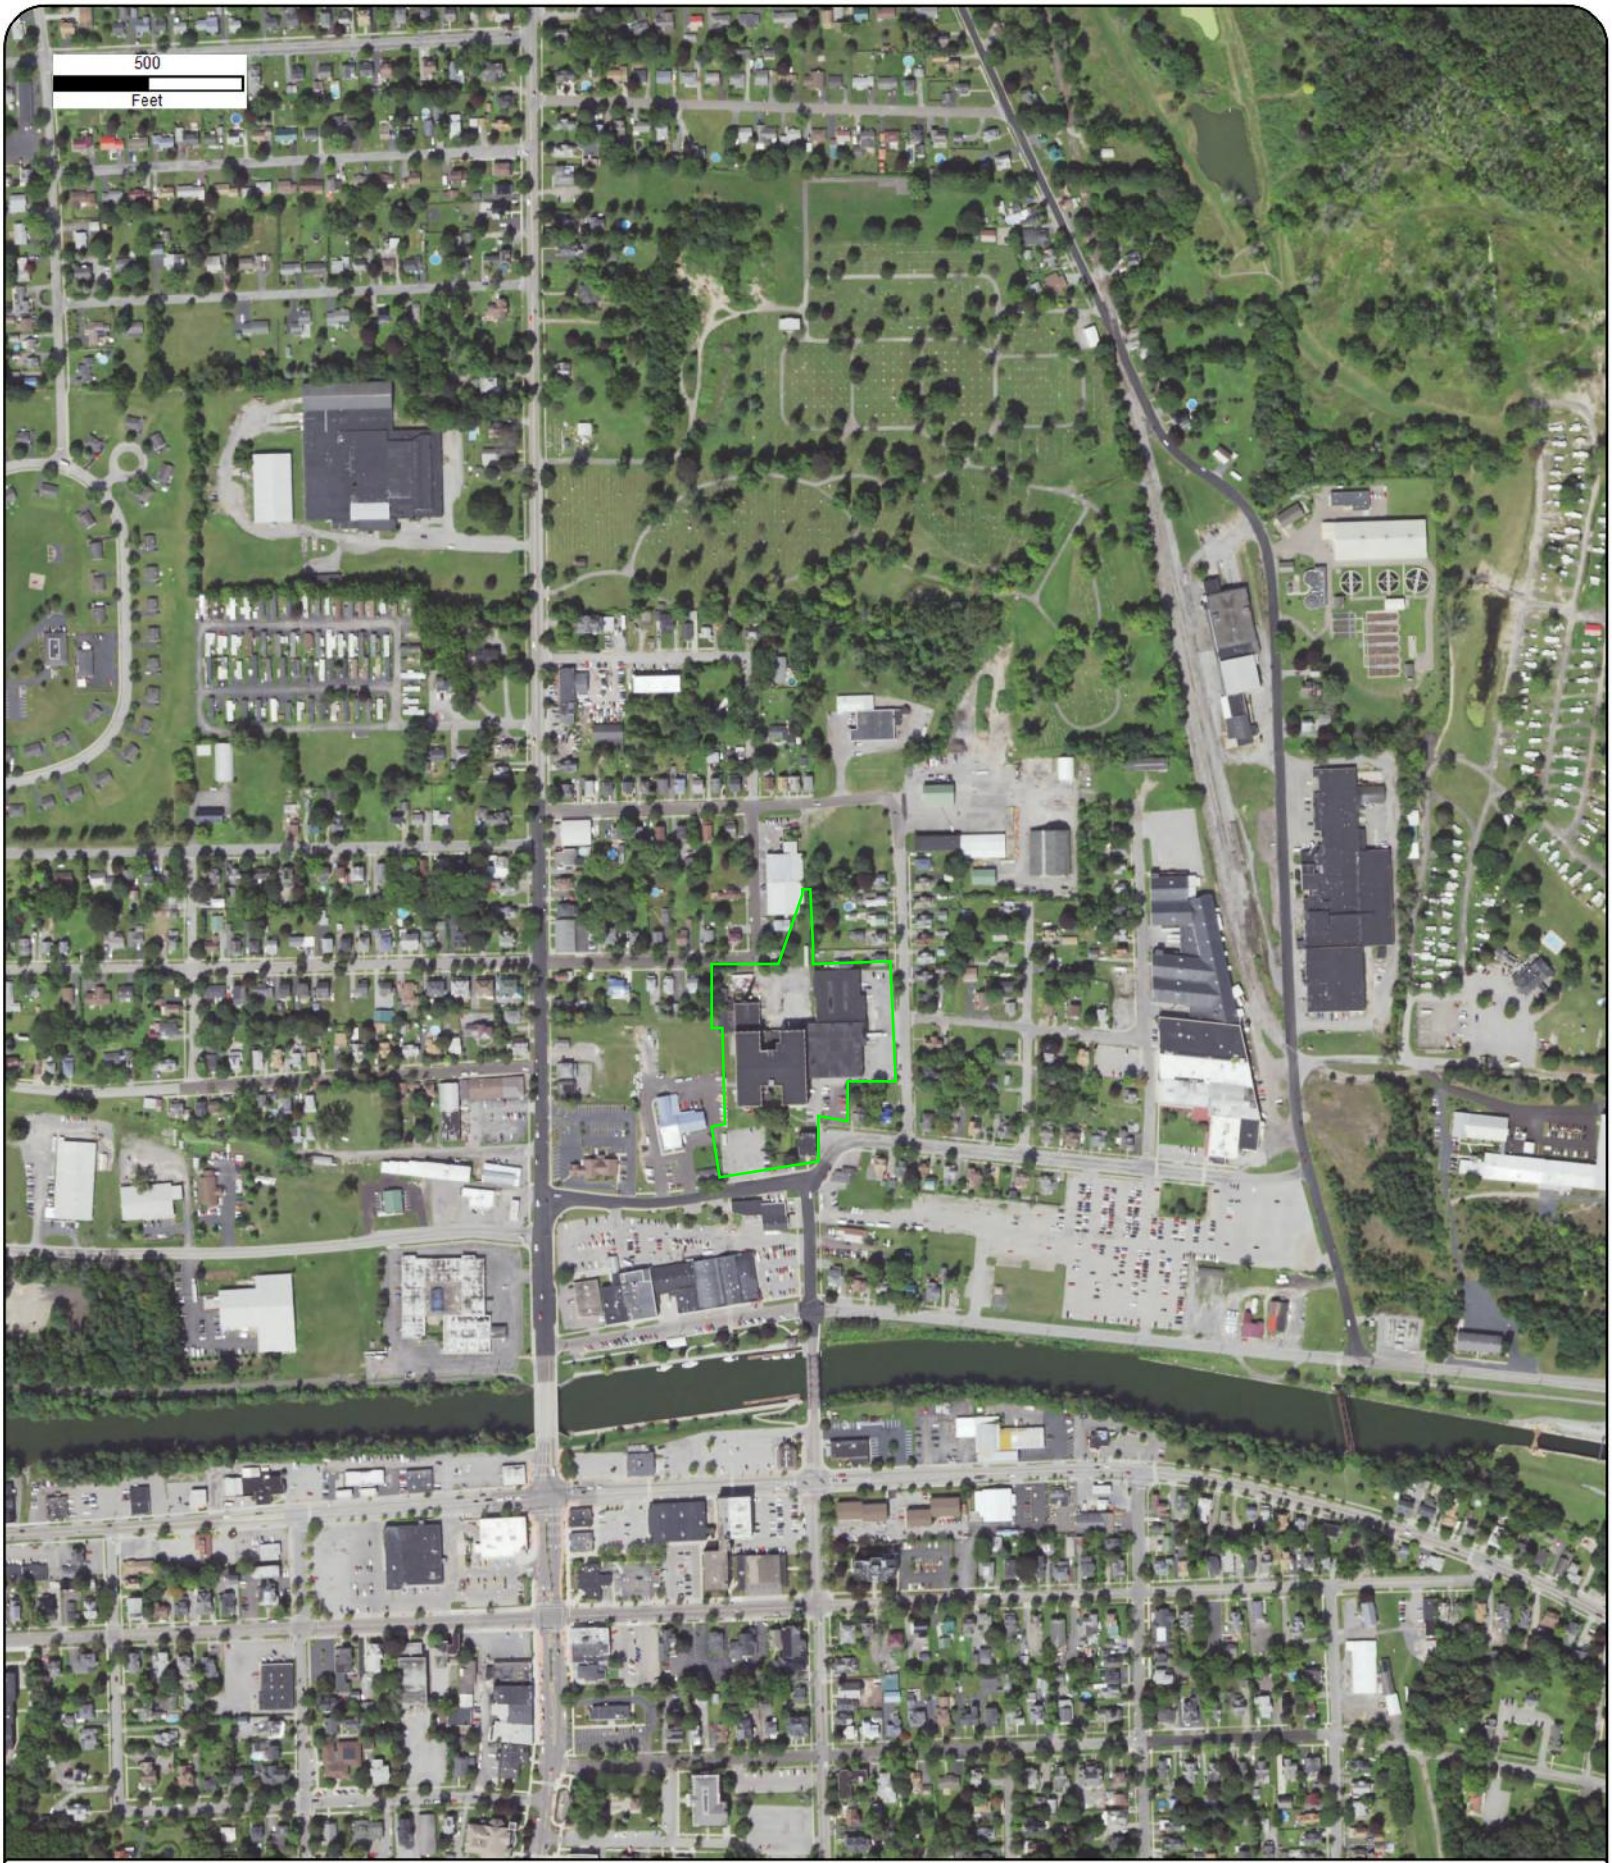

Order No: 24073100709

Date Completed: August 02,2024

Aerial Maps included in this report are produced by the sources listed above and are to be used for research purposes including a phase I report. Maps are not to be resold as commercial property. ERIS provides no warranty of accuracy or liability. The information contained in this report has been produced using aerial photos listed in above sources by ERIS Information Inc. (in the US) and ERIS Information Limited Partnership (in Canada), both doing business as 'ERIS'. The maps contained in this report do not purport to be and do not constitute a guarantee of the accuracy of the information contained herein. Although ERIS has endeavored to present information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Receive Date: 19800818
Handler Name: C H STUART INC ROYAL CREST DIV
Source Type: Notification
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Waste Code Details

Hazardous Waste Code: D000
Waste Code Description: DESCRIPTION

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F009
Waste Code Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Site Class Desc (Web):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	People are not expected to come into direct contact with site-related contaminants in the soil because buildings and pavement cover most of the site. People may come into direct contact with site-related contaminants if they dig below the surface on-site or contact uncovered soils just north of the site. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that obtains its water from a different source not affected by this contamination.

Description:

Location: The Newark Former MGP site is located in a mixed commercial/residential area in the central business district of Newark. The site is west of Route 88 between the New York State Barge Canal and the former railroad. Site Features: The site is approximately one acre and the southern portion of the site is occupied by a portion of the Newark Garden Hotel and parking lot. The northern portion of the site is overlain by West Shore Blvd. The nearest residence is approximately 300 feet north of the site. A commercial facility is located north of West Shore Blvd. Current Zoning/Use(s): The site is zoned commercial and is occupied by a portion of the two-story Newark Hotel. Past Use of the Site: The MGP reportedly operated from circa 1900 into the 1920s. The Newark MGP produced gas using the coal carbonization process and later the carbureted water gas process. Site Geology and Hydrogeology: Site geology includes a fill unit that is generally 10 to 25 feet thick and overlays a till unit that is comprised of a very dense mixture of silt and sand with varied amounts of clay and gravel. The depth to water beneath the site is generally between 11 and 15 feet below ground surface (bgs). Shallow groundwater beneath most of the site appears to flow to the north-northeast; however, there appears to be a component of flow in the direction of the canal (south) in the immediate vicinity of the canal.

Assessment:

Soil exceeding commercial use SCOs for polycyclic aromatic hydrocarbons (PAHs) was found only in samples collected within the footprint of the former MGP structures and immediately to the north of the site at levels above SCOs. These SCO exceedances are primarily associated with the presence of coal tar observed in the subsurface at 7 of the 48 RI boring locations. This suggests that the tar is sporadically distributed and limited in extent. The majority of tar impacts were observed above the water table within the upper nine feet of fill, although an oil-like material was also observed in trace quantities at two locations, both below the water table to depths of about 18 feet below grade. The tar has a solidified appearance and is therefore unlikely to be mobile. The majority of the tar and oil-like material is located near former MGP structures including two holders and a tar well. Tar was also observed in shallow soils (0.6 to 2.5 feet below grade) at three off-site locations just north of the Former MGP footprint. This tar is assumed to have been placed at the same time as the fill. Low levels of benzene in groundwater were detected during one sampling round at MW-10-01 (1.1 ppb) and MW-10-02 (2.1 ppb) at levels slightly above the Class GA standard of 1.0 ppb. Both of these wells are located near former holders. No other detected contaminants of concern (COCs) exceeded Class GA standards or guidance values in any wells. Sub-slab, indoor, and outdoor air samples were collected at the on-site building to assess the potential for soil vapor intrusion from MGP related compounds. The results were compared to the NYSDOH study of VOCs in indoor air of fuel oil heated homes and were found to be generally within background levels. Non-MGP related chlorinated solvents were also detected, but were not found at levels that warrant actions to address exposures.

Location: The Newark Former MGP site is located in a mixed commercial/residential area in the central business district of Newark. The site is west of Route 88 between the New York State Barge Canal and the former railroad. Site Features: The site is approximately one acre and the southern portion of the site is occupied by a portion of the Newark Garden Hotel and parking lot. The northern portion of the site is overlain by West Shore Blvd. The nearest residence is approximately 300 feet north of the site. A commercial facility is located north of West Shore Blvd. Current Zoning/Use(s): The site is zoned commercial and is occupied by a portion of the two-story Newark Hotel. Past Use of the Site: The MGP reportedly operated from circa 1900 into the 1920s. The Newark MGP produced gas using the coal carbonization process and later the carbureted water gas process. Site Geology and Hydrogeology: Site geology includes a fill unit that is generally 10 to 25 feet thick and overlays a till unit that is comprised of a very dense mixture of silt and sand with varied amounts of clay and gravel. The depth to water beneath the site is generally between 11 and 15 feet below ground surface (bgs). Shallow groundwater beneath most of the site appears to flow to the north-northeast; however, there appears to be a component of flow in the direction of the canal (south) in the immediate vicinity of the canal.

Assess ENV:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil and groundwater at this site were benzene, toluene, ethyl benzene, and xylenes (collectively known as BTEX), and polycyclic aromatic hydrocarbon (PAHs). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater will be managed under a Site Management Plan.

Assess DOH:

People are not expected to come into direct contact with site-related contaminants in the soil because buildings and pavement cover most of the site. People may come into direct contact with site-related contaminants if they dig below the surface on-site or contact uncovered soils just north of the site. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that obtains its water from a different source not affected by this contamination.

Tank ID:	150506	**Red Tag Start Date:**	
Tank No:	002	**Red Tag End Date:**	
Tank Status:	1	**Tank Last Test:**	
Tank Status Desc:	In Service	**Tank Next Test Due:**	
Tank Type:	01	**Test Method:**	-
Tank Type Desc:	Steel/Carbon Steel/Iron	**Date Tested:**	
Install Date:	06/01/1988	**Next Test:**	
Close Date:		**Line Last Test Due:**	
Tk Out of Serv Dt:		**Next Line Test Due:**	10/11/2016
Capacity (Gal):	10000	**Line Test Method:**	-
Registered:	True	**Modified by:**	MJGRIFFI
Tank Model:		**Last Modified:**	10/31/2022
Pipe Model:			

Tank Location:	5
Tank Location Desc:	Underground
Category:	2
Category Desc:	Category 2 means a tank which was installed from December 27, 1986 through October 11, 2015
Subpart:	2
Subpart Desc:	Subpart 2 contains requirements for USTs (underground storage tanks) subject to EPA UST regulations and DEC requirements.
Class A Operator:	Daniel Shea
Class B Operator:	JAMES SMITH
Tank Owner Name:	JAMES A. SMITH
Tank Owner Address:	100 WEST GENESEE STREET LOCKPORT, NY. 14095

Material Information

Material Name:	gasoline/ethanol
Percent:	10.00

Equipment Information

Equipment:	E04
Code Name:	Double walled UG
Type:	Piping Secondary Containment
Equipment:	H01
Code Name:	Interstitial - Electronic Monitoring
Type:	Tank Leak Detection
Equipment:	I02

Caller Remark:

"Tank on vehicle failed and spilled onto concrete. All was contained and cleanup in progress. Optech has been dispatched to finalize cleanup."

DEC Remark:

"2/8/11: DD TELECON WITH JOHN QUATRALE FROM VERIZON - DUE TO UNKNOWN REASON (SUSPECTED EQUIPMENT FAILURE), A RLEASE OF GAOLINE OCCURED AT AN ARROWMART GAS STATION FROM A VERIZON TECH TRUCK. GASOLINE WAS RELEASED ONTO CONCRETE FROM VEHICLE; FIRE DEPARTMENT WAS ONSCENE AND PLACED SPEEDY DRY DOWN AND ISOLATED AREA. VERIZON IS HIRING OPTECH FROM SYRACUSE OFFICE, WHO IS MOBILIZING SMALL CREW TO COMPLETE CLEANUP. CREW WILL BE ONSITE APPROX. 1830 HOURS. NO GASOLINE REACHED SOIL OR SEWERS. TRUCK TOWED AWAY. 2/9/11: DD TELECON WITH ARROWMART GAS STATION MANAGER CHERYL (315-331-6971), WHO CONFIRMED CLEANUP WAS COMPLETED LAST NIGHT BY VERIZON/OPTECH. SHE STATED THERE WAS A HOLE IN THE GASOLINE TANK OF THE VEHICLE. ALL RELEASE WAS ON PAVEMENT, WHICH SHE ESTIMATED WAS LESS THAN 4 GALLONS. NO FURTHER ACTIONS REQUIRED BY SPILLS UNIT/SPILL FILE CLOSED. "

Caller Remark:

"SHEEN IN STORM DRAIN ABOUT TEN FEET AWAY FROM SPILL. SPRAY ON BUILDING, UNKNOWN IF SHEEN WAS CAUSED BY TRANSFORMER. MAY HAVE BEEN CAUSED BY ANIMAL . PAVEMENT IMPACT KBH EN ROUTE"

DEC Remark:

"5/31/2022: MB TELECON WITH BRUCE JONES OF KBH AT 2040 HOURS. JONES REPORTS THAT HE HAS MINIMAL INFORMATION AT THIS TIME, ONLY THAT HE IS RESPONDING TO A TRANSFORMER SPILL THAT WAS POTENTIALLY CAUSED BY AN ANIMAL AND COULD POTENTIALLY BE IN A NEARBY STORM WATER CATCH BASIN. JONES SPOKE WITH ONSITE LINEMAN WHO RELAYED THIS INFORMATION. ONCE ONSITE AND ASSESSED THE SITUATION, JONES WILL UPDATE MB. MB TELECON WITH JONES AT 2122 HOURS. JONES PROVIDES SOME PICTURES AS WELL. JONES STATES THAT THE TRANSFORMER SPRAYED TO GRASS, AND ASPHALT BELOW POLE. THERE IS NO EVIDENCE OF THAT SPRAY REACHING THE CATCH BASIN. JONES STATES HE DOES NOT WITNESS ANY STAINING ON THE GRATE WHICH HE BELIEVES WOULD INDICATE OIL GETTING INTO THE CB. JONES PLANS ON APPLYING SPEEDY DRY TO ASPHALT AND HAND DIGGING SOIL BENEATH POLE FOR THE EVENING. JONES TO GIVE UPDATE ONCE ALL IS COMPLETED AND WILL PROVIDE PHOTOS. MB RECEIVES MESSAGES FROM JONES AT 0015 HOURS. PCITURES OF HAND EXCAVATED AREA, ASPHALT AND TRANSFORMER IT SELF. TRANSFORMER IS LABELED NON PCB. JONES HAND EXCAVATED AREA AROUND BASE OF POLE AND STATES NO OIL IMPACTS EXIST. PICTURES SAVED TO DECDOCS. 6/1/2022: MB TELECON WITH JOE MARCHITELL AT 0810 HOURS. MARCHITELL WILL INSPECT SITE DUE TO CONFLICTING INFORMATION REGARDING CATCH BASIN AND TO ASSESS CLEANUP. MB RECEIVES MESSAGE FROM MARCHITELL AT 1105 HOURS. MARCHITELL REPORTS NO RECOVERABLE OIL WITNESSED IN CATCH BASIN. THERE IS A RAINBOW SHEEN ON STAGNANT WATER AT BOTTOM OF CB. IF MINOR AMOUNT OF OIL GOT INTO CB IT WAS FROM SPRAY/MIST, NO EVIDENCE OF FLOW INTO THE CB. CLEANUP IS ADEQUATE. PICTURE FROM MARCHITELL SAVED TO DECDOCS. BASED ON INFORMATION PROVIDED, CLEANUP AND INSPECTION PERFORMED, NFA REQUIRED BY SPILLS UNIT AT THIS TIME - SPILL CLOSED."

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2,

TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U226
Waste Code Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

"WHILE REMOVING 4 UNDERGROUND TANKS CONTAMINATED SOIL ENCOUNTERED PER STORE AROUND TANKS WAS OK EXISTING SOIL SHOWED READING ON METER TWO NEW TANKS TO BR INSTALLED"

Dec Remark:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was JM 10/17/95 JM ON SITE WITH KEVIN HARTSON AND GEORGE FARREL. IN PROCESS OF REMOVING STEEL TANK THAT HAD BEEN FILLED WITH SAND. OTHER TANKS OUT OF EXCAVATION. CONTAMINATED SOIL BEING STOCKPILED ON SITE. EXCAVATION TO BE SAMPLED. NEW TANKS TO BE INSTALLED IN SAME EXCAVATION. 10/20/95 JM ON SITE; NEW TANKS INSTALLED. SAMPLES TAKEN FROM SIDEWALLS AND BOTTOM OF TANK EXCAVATION TO BE SENT TO LAB. RESULTS TO BE FORWARDED TO THIS OFFICE. COMPOSITE SOIL SAMPLE RESULTS FROM BOTTOM AND SIDEWALLS OF EXCAVATION BELOW STARS GUIDANCE VALUES. DISPOSAL RECEIPTS FROM HIGH ACRES LANDFILL FOR DISPOSAL OF APPROXIMATELY 330 TONS OF SOIL RECEIVED ON 12/28/95. RESULTS FROM A WASTE OIL TANK THAT WAS REMOVED, ALSO SHOWED MINIMAL CONTAMINATION IN THE SOIL. NO FURTHER ACTION REQUIRED. AS PART OF A PROPERTY SALE, LABELLA ASSOCIATES CONDUCTED A PHASE II SITE ASSESSMENT. REPORT DATED 03/14/06 SUBMITTED TO THIS DEPARTMENT. SOIL SAMPLES NEAR TANK EXCAVATIONS, PUMP ISLANDS AND HYDRAULIC LIFTS, SHOWED NO PETROLEUM COMPOUNDS. WATER SAMPLE FROM EXISTING UST LOCATION AND LOCATION OF 1995 UST REMOVALS SHOWS MTBE CONCENTRATION OF 59.9 UG/L. LETTER DATED 03/30/06 SENT STATING NO ADDITIONAL REMEDIAL ACTION NEEDED AT THIS TIME. 08/12/08 PAPER FILE REMOVED PER FILE RETENTION POLICY."

Site Class Desc:	Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class N" site.
Site Class Desc (Web):	Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class N" site.
Assess DOH:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Description:

Location: The Former Grand Cleaners site is located at 175 West Union St. in the Village of Newark. The site is .36 acres in size. Site Features: The site has a gas station and small auto repair business currently operating called Union Street Automotive. The area in question, where the former dry cleaning operation building was located, is near the east property line, currently used as Union Street Automotive's parking lot. Current Zoning: The site is commercial, with surrounding properties being mixed commercial. Past Use: This site was a former dry cleaner, that operated in the 40's. At this time, very little is known about the operation history. Site Geology and Hydrogeology: Groundwater flows in a northeast direction. Site characterization work must be completed for more information. This site is the suspected source area of a PCE plume observed at the adjacent property during a NYSDEC Spills division petroleum cleanup. PCE was found, but a source area was not observed. The adjacent spill site, 131 W. Union has two buildings, both have had indoor air issues addressed by the spill cleanup. Sub-slab soil vapor samples had elevated level of petroleum related compounds as well as PCE. A SSDS was installed in both buildings located at 131 W. Union.

Assessment:

Nature and Extent of Contamination: Site characterization must be completed on-site. Soil: Site characterization must be completed on-site. Off-site

PCE soil vapor concentrations as high as 24,819 ug/m3. Groundwater: Site characterization must be completed on-site. Off-sit levels as high as 387ppb. Indoor Air: Site characterization must be completed on-site. Additional information will be added as the site investigation progresses.

Facility ID: BSF0291
County: Wayne
Survey Complete: YES
Survey: Class B Fire Suppression Foam Usage Survey - New York State Bulk Storage Facilities
Q. 6: NO
Q. 7: NO
Q. 8: NO
Q. 9: unknown
Q. 10: NO
Q. 11: NO
Q. 12:
Q. 13:
Reference: If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Site Class Desc:	No Further Action at this Time: Sites are given a classification of "N" when: a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.
Site Class Desc (Web):	No Further Action at this Time: Sites are given a classification of "N" when: a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. Assess DOH:	
Description:	

Site location: This site is a large greenhouse facility located at 612 East Maple Street in the Village of Newark. The site is bordered by East Maple Street to the north, a residential area to the west, wet lands to the south and an office complex to the east. The facility had an access road that ran down the east side of the facility and had a ditch that carried property runoff on the west side of the facility to a federally designated wet land at the south end of the property. Site history: It was reported that pesticides and various other chemicals were sprayed on the plants periodically and it was suspected that excess fluid ended up as run-off that went in to a floor sump and pumped outside into ditches that drained into the wetland area. The Attorney General's Office approved the Consent Order (CO) for Newark Florists on December 12, 1991 to conduct a site investigation. The site investigation work plan was approved by the DEC in October of 1992. Field sampling, which included ground water, surface and subsurface soils, surface water and biota, was completed in May of 1993. H&A Engineering Site Investigation report was submitted to DEC in December of 1993. A review of the data from the site investigation resulted in a determination by NYSDEC that hazardous waste disposal could not be confirmed.

Assessment:

Improper disposal of hazardous wastes by Newark Florist or former owner Jackson & Perkins could not be proven. Though pesticides were found in soil and sediments, its presence on the site could only be shown from agricultural application and not improper handling.There are no environmental problems associated with the disposal of hazardous waste at this site.

As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work

was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Site Class Desc (Web): No Further Action at this Time: Sites are given a classification of "N" when:

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Assess DOH: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Description:

Location: The 1303 N. Main site is located at 1303 N. Main St in the Village of Newark and Town of Arcadia. The site is about 1 acres in size. Site Features: The site currently vacant. Current Zoning: Currently zoned commercial. Past Use: This site was previously used for automotive repair followed by un-permitted solid waste storage for a waste hauling company. The site had a large, dirt floor warehouse building that was demolished and until recently the whole property was covered in dumpsters, waste containers and debris piles.

Assessment:

Nature and Extent of Contamination: Soil: Phase II sampling showed SVOC and PCB contamination above the commercial soil cleanup objectives in some locations. Metals and pesticides were found above restricted soil clean-up objectives. It also showed diesel range organics throughout the property. Groundwater: Phase II sampling showed heavy metals, Iron and Manganese, above NYS groundwater standards and petroleum in groundwater. An asbestos abatement was performed under a consent order, with oversite by the Division of Materials Management. Asbestos was found to be confined to the former buildings basement. The site was then transferred to Spills for investigation and remediation. With the transfer to spills, the site was re-classified to a N site.

Assess DOH:
Description:

The Agrico site, NYSOEC #859003, is located on Welcher Road just north of the Village of Newark in the Town of Arcadia, Wayne County, New York (Figure 1-1). The former Agrico property has been operated as a fertilizer packaging and agricultural supply business for 60 years. From approximately 1966 to 1978, Kerr-McGee operated a plant at the property which blended and packaged fenilizer and sold other agricultural chemicals. Contaminated and damaged chemicals were buried in a dump area (western disposal area) on property owned by Wayne County. located between two railroad tracks southwest of the plant building (Figure 1-2). In 1978, the business was sold to Agrico which utilized a second dwnp area (eastern disposal area) as a construction and demolition (C&O) debris area containing wooden pallets and floor sweepings. In 1980, the eastern disposal area was the subject of a nuisance complaint and a NYSOEC report. The former Agrico property currently is owned by Bohen, Inc. and operated by Empire Agri-Services as a supplier of bulk feed. fertilizer, and other agricultural products. From 1966 to 1978. damaged and contaminated herbicide, pesticide, and fertilizer packages were buried in the western disposal area. In 1982, one resident living northwest of the site on Welcher Road had an independent chemical analysis performed on his well water following detection of chemical odors. The results showed a contravention of New York State standards for water quality due to the unacceptable concentration of nitrates. A second resident, living across the street, complained about a fertilizer smell in their well water. The site area is basically flat. however. the two disposal areas are distinguishable as low profile mounds. Surface drainage is to the south via drainage ditches which enter an unnamed Class D tributary to Ganargua Creek. a Class C waterbody. Shallow groundwater at the site is first encountered in shale and sandstone bedrock within 12 feet of the ground surface and flows westsouthwest. Groundwater is used exclusively for residential supply in the site vicinity. The site is comprised of the former Agrico property and adjoining property owned by Wayne County but the main area of concern consists of two alleged disposal areas.

Assessment:

The PSA that was completed in December of 1995 has concluded that this site no longer poses a threat to the environment.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Apr 22, 2024

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Apr 22, 2024

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Apr 22, 2024

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the EPA's Facility Registry Service map tool.

Government Publication Date: Mar 27, 2024

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Mar 27, 2024

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Apr 8, 2024

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Apr 8, 2024

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Apr 8, 2024

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Apr 8, 2024

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Apr 8, 2024

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Apr 8, 2024

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Apr 8, 2024

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made availabe by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Jun 26, 2024

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Jun 26, 2024

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Apr 22, 2024

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Apr 28, 2024

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Feb 7, 2024

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: Jan 9, 2024

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Jan 9, 2024

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Feb 28, 2024

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from the Federal Communications Commission Data hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Jun 6, 2024

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Mar 27, 2024

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Mar 27, 2024

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

Registry of Inactive Hazardous Waste Disposal Sites in New York State: SHWS

State-and tribal- equivalent CERCLIS. State Superfund Program (Inactive Hazardous Waste Disposal Site Remedial Program) (IHWDS) - Oversees the identification, investigation and cleanup of sites where consequential amounts of hazardous waste exist. These sites go through a process of investigation, evaluation, cleanup and monitoring that has several distinct stages. This list is made available by New York State Department of Environmental Conservation's State Superfund Program.

Government Publication Date: May 3, 2024

Delisted Registry of Inactive Hazardous Waste Disposal Sites in New York: DELISTED SHWS

This database contains a Registry of Inactive Hazardous Waste Disposal sites which have been removed from New York Department of Environmental Conservation's Environmental Site Remediation database.

Government Publication Date: May 3, 2024

Hazardous Substance Waste Disposal Sites: HSWDS

A list of sites included in Hazardous Substance Waste Disposal Site Study reports made available by the New York Department of Environmental Conservation Division of Hazardous Waste Remediation. Provides information regarding the evolving status of hazardous substance waste disposal sites in New York.

Government Publication Date: Oct 24, 2003

Vapor Intrusion Legacy Site List: VAPOR

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion. This list is made available by Department of Environmental Conservation's Vapor Intrusion Legacy Site List. This database is state equivalent CERCLIS.

Government Publication Date: Jul 18, 2024

Solid Waste Facilities and Landfills: SWF/LF

Solid Waste Information Management System (SWIMS) is an inventory containing active and inactive facilities throughout the state. This list is made available by Department of Environmental Conservation's Solid Waste Information Management System (SWIMS).

Government Publication Date: Aug 17, 2023

Inactive Landfill Facilities: LANDFILL INACTIVE

List of inactive landfills in the State of New York. This data is made available by the New York State Department of Environmental Conservation (DEC). DEC notes that these are preliminary data and should not be regarded as a complete inventory of all landfills in the State, and also that site locations and attributes are preliminary and should not be relied upon without independent verification.

Government Publication Date: May 16, 2024

Waste Tire Facilities: WASTE TIRE

This list of active Waste Tire Facilities is maintained by the New York State Department of Environmental Conservation. Waste tire storage facilities (WTSF) store waste tires or portions of waste tires. Most of these facilities require Part 360 permits, but under certain conditions a registration maybe available.

Government Publication Date: Dec 12, 2023

NYC OER Cleanup Sites: OER CLEANUP

Properties remediated under oversight of the New York City (NYC) Mayor's Office of Environmental Remediation (OER), both in the E-Designation program and the NYC Voluntary Cleanup Program. Includes sites completed and in progress.

Government Publication Date: May 13, 2024

Recycling Facilities: RECYCLING

The Department of Environmental Conservation (DEC), Division of Materials Management (DMM), Bureau of Permitting and Planning regulates solid waste management facilities in accordance with 6 NYCRR Part 360. Information pertaining to those facilities is maintained with the Division's Solid Waste Information Management System (SWIMS) database. The Facility List is a dataset related to solid waste management facilities operating in the state, and includes such information as facility location, contact names and associated information, waste types managed, and regulatory information.

Government Publication Date: May 21, 2024

Leaking Storage Tanks: LST

This database contains records of chemical and petroleum spill incidents. They include leaking aboveground storage tanks or leaking underground storage tanks, with incidents of tank test failures, tank failures and tank overfill. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Jun 26, 2024

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Storage Tank sites which has been removed from New York Department of Environmental Conservation's Spill Response Program

Government Publication Date: Jun 26, 2024

Underground Storage Tanks- UST-Petroleum Bulk Storage (PBS): UST

Facilities within the Petroleum Bulk Storage (PBS) that have underground storage tanks. Underground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by NewYork Department of Environmental Conservation's Environmental Site Database Search.

Government Publication Date: May 15, 2024

The Bulk Storage Program Database - AST: AST

Facilities within the Petroleum Bulk Storage (PBS) that have aboveground storage tanks. Aboveground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by New York State Department of Environmental conservation's Petroleum Bulk Storage (PBS) program.

Government Publication Date: May 15, 2024

Petroleum Bulk Storage: TANKS

The Bulk Storage Program Database maintains the registrations of active and inactive bulk storage sites statewide. This database includes Petroleum Bulk Storage (PBS) tanks where no information is available on whether they are ASTs or USTs. This list is made available by Department of Environmental Conservation's Petroleum Bulk Storage (PBS) program.

Government Publication Date: May 15, 2024

Major Oil Storage Facilities (MOSF): MOSF

In 1977, the New York State Legislature passed the "Oil Spill Prevention, Control and Compensation Act" (Article 12 of the Navigation Law). This law regulates all oil terminals and transport vessels operating in the waters of the State which have a storage capacity of 400,000 gallons or more. (Terminals and vessels with a capacity of 400,000 gallons or more are commonly referred to as major oil storage facilities or MOSFs). This list is made available by Department of Environmental Conservation's Major Oil Storage Facility (MOSF) Program.

Government Publication Date: May 15, 2024

Chemical Bulk Storage (CBS): CBS

Facilities that store regulated hazardous substances in aboveground or underground tanks. "Hazardous substance" means any substance listed as hazardous or acutely hazardous in 6 NYCRR Part 597 or a mixture thereof. This list is made available by Department of Environmental Conservation's Chemical Bulk Storage (CBS) Program.

Government Publication Date: May 15, 2024

Delisted Storage Tanks: DELISTED TANKS

List of Storage Tank sites which has been removed from New York Department of Environmental Conservation's Environmental Site Database.

Government Publication Date: Jun 14, 2024

Delisted County Records: DELISTED COUNTY

Records removed from county databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Jul 19, 2024

Registry of Engineering Controls in New York State: ENG

Registry of Engineering Controls in New York State taken from the Environmental Site Remediation Database.

Government Publication Date: May 3, 2024

Registry of Institutional Controls in New York State: INST

Registry of Institutional Controls in New York State taken from the Environmental Site Remediation Database.

Government Publication Date: May 3, 2024

Voluntary Cleanup Agreements: VCP

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites. This list is made available by Department of Environmental Conservation's Voluntary Cleanup Program.

Government Publication Date: May 3, 2024

Environmental Restoration Program Listing: ERP

Environmental Restoration Program - Provides municipalities with financial assistance for site investigation and remediation at eligible brownfield sites. In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (Bond Act). Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. This list is made available by Department of Environmental Conservation's Environmental Restoration Program.

Government Publication Date: May 3, 2024

Brownfields Site List (Subset of Site Remediation): BROWNFIELDS

Brownfield Cleanup Program was developed to enhance private-sector cleanups of brownfields and to reduce development pressure on "Greenfields". A Brownfield site is real property, the redevelopment or reuse of which may be complicated by the presence or potential presence of a contaminant. Contaminants include hazardous waste and/or petroleum. This list is made available by Department of Environmental Conservation's Brownfield Cleanup Program.

Government Publication Date: May 3, 2024

Tribal

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 2, which includes New York, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 28, 2016

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 2, which includes New York, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 04, 2016

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: May 7, 2024

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: May 7, 2024

County

No County databases were selected to be included in the search.

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. Includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures by DSSTox. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time.

Government Publication Date: May 9, 2024

On-Scene Coordinator Response Sites: OSC RESPONSE

This list of On-Scene Coordinator (OSC) Response Sites is provided by the U.S. Environmental Protection Agency (EPA). OSCs are the federal officials responsible for monitoring or directing responses to all oil spills and hazardous substance releases reported to the federal government. OSCs coordinate all federal efforts with, and provide support and information to local, state, and regional response communities. An OSC is an agent of either EPA or the U.S. Coast Guard (USCG), depending on where the incident occurs. EPA's OSCs have primary responsibility for spills and releases to inland areas and waters. USCG OSCs have responsibility for coastal waters and the Great Lakes. In general, an OSC has the following key responsibilities during and after a response: Assessment, Monitoring, Response Assistance, and Evaluation.

Government Publication Date: Apr 4, 2024

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).
Government Publication Date: Apr 26, 2024

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.
Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.
Government Publication Date: Jun 20, 2024

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from 2022 to 2024. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.
Government Publication Date: Apr 1, 2024

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/
Government Publication Date: May 19, 2023

National Response Center PFAS Spills: ERNS PFAS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.
Government Publication Date: Apr 17, 2024

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: May 6, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest : PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Apr 29, 2024

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Jul 1, 2024

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: May 29, 2024

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Nov 30, 2023

Toxic Substances Control Act: TSCA

The U.S. Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI). EPA CDR collections occur approximately every four years and reporting requirements change per collection.

Government Publication Date: May 12, 2022

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Apr 22, 2024

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Government Publication Date: Apr 13, 2024

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 5, 2024

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 5, 2024

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.

Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.

Government Publication Date: May 6, 2024

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Feb 5, 2024

Surface Mining Control and Reclamation Act Sites: SMCRA

This inventory of land and water impacted by past mining (primarily legacy coal mining operations) is maintained by the U.S. Department of the Interior's Office of Surface Mining Reclamation and Enforcement (OSMRE), as it provides information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) Problems, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into e-AMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: May 20, 2024

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 12, 2023

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Apr 30, 2024

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Cases filed since 2010 limited to the following: Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS); and applicable ENRD's Environmental Defense Section (EDS) CERCLA Cases with "Consent" in History Note. CMS may not reflect the latest developments in a case, nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Jun 26, 2024

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Feb 29, 2024

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: May 23, 2024

State

Underground Injection Control Wells: UIC

A well permit is required from the Division of Mineral Resources for any brine disposal well deeper than 500 feet. This includes any operation to drill, deepen, plug back or convert a well. Regardless of well depth, the NYSDEC Division of Water must be contacted for a determination of whether a SPDES permit is necessary to operate any brine disposal well.

Government Publication Date: Aug 6, 2018

New York City Cooling Tower Registrations: COOLING TOWERS NYC

This dataset contains cooling tower systems currently registered in the New York City Cooling Tower Registration Portal and Legionella water test dates as reported by a building's qualified person. Data is provided by the New York City Department of Health and Mental Hygiene. Decommissioned cooling tower systems are excluded from the dataset.

Government Publication Date: May 13, 2024

Manufactured Gas Plants: MGP

A list of former Manufactured Gas Plants (MGP) made available by the New York Department of Environmental Conservation (NYSDEC). From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel. Former MGP structures such as gas holders, tar separators, wells, and tanks were often susceptible to spills and leaks. As a result, these structures were a significant source of contamination from the release of tar and other toxic by-products.

Government Publication Date: May 16, 2024

Spill Incidents Database: NY SPILLS

Spill Incidents Database has records dating back to 1978. This database contains records of chemical and petroleum spill incidents. The DEC Spill Response program receives and compiles reports of hazardous material spills occurring anywhere in New York State. These reports are submitted through the Spill Hotline and other mechanisms, and entered by DEC spill response staff into the state's official data base of Spill Incidents Reports. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Jun 26, 2024

PFAS Remedial Sites: PFAS CONTAM

List of sites being addressed under one of the New York Department of Environmental Conservation (DEC) Division of Environmental Remediation (DER)'s remedial programs, where the waste or contaminant of concern is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Feb 5, 2024

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

A list of sites surveyed by the New York Department of Environmental Conservation to determine locations that manufacture, use, store, or release into the environment materials containing Per- and Polyfluoroalkyl Substances (PFAS). Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Some PFAS are difficult to break down and persist in the environment that may cause harm to the public. This list is made available by the Department of Environmental Conservation of New York State.

Government Publication Date: Jan 16, 2019

Landfill Investigations PFAS Sampling Results: PFAS LANDFILL

A list of inactive landfill sites that have been investigated for Per- and Polyfluoroalkyl Substances (PFAS) in the state of New York made available by the New York State Department of Environmental Conservation.

Government Publication Date: May 16, 2024

Registed Dry Cleaner Facilities: DRYCLEANERS

The Division of Air Resources of the Department of Environmental Conservation (DEC) tracks all registered dry cleaner facilities. Drycleaning drop off locations (i.e., drop off locations not performing drycleaning on-site) do not require registration and are not included in DEC listings of registered drycleaners.

Government Publication Date: Jun 17, 2024

Delisted Dry Cleaner Facilities: DELISTED DRYCLEANERS

Sites removed from the list of dry cleaner facilities registered with the Department of Environmental Conservation (DEC)'s Division of Air Resources.

Government Publication Date: Jun 17, 2024

Hazardous Waste Manifest - Facilities: NY MANIFEST

List of facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), with which no manifests are associated. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records.

Government Publication Date: Jun 24, 2024

Receivers from Hazardous Waste Manifests: REC MANIFEST

List of receiver facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), which are identified as a receiver in associated manifests. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records. Hazardous Waste Code Descriptions are from NY Part 371.4 (6 CRR-NY 371.4) Identification and Listings of Hazardous Waste, unless otherwise noted.

Government Publication Date: Jun 24, 2024

Generators from Hazardous Waste Manifests: GEN MANIFEST

List of generator facilities located in New York that are included in the Hazardous Waste Manifest Data Downloads Location Address data file made available by the New York Department of Environmental Conservation (DEC), which are identified as a generator in associated manifests. The Hazardous Waste Manifest Data made available by the NY DEC is compiled from hazardous waste manifest shipments to, from, or within New York State. The Bureau of Program Management, in the Division of Environmental Remediation, is responsible for maintaining hazardous waste manifest records. Hazardous Waste Code Descriptions are from NY Part 371.4 (6 CRR-NY 371.4) Identification and Listings of Hazardous Waste, unless otherwise noted.

Government Publication Date: Jun 24, 2024

New York City E-Designated Sites: E DESIGNATION

A list of sites with an (E) Designation, described as a New York City (NYC) zoning map designation that indicates the presence of an environmental requirement pertaining to potential hazardous materials contamination, window/wall noise attenuation, or air quality impacts on a particular tax lot. The NYC Office of Environmental Remediation administers the E-Designation Environmental Review Program to avoid significant adverse impacts to human health or the environment through exposure to these hazards. The data is provided by the NYC Department of City Planning (DCP).

Government Publication Date: May 3, 2024

Registered Cooling Towers: COOLING TOWERS

This dataset contains location, legionella sampling results and operational status information for currently operating cooling towers, as well as information on towers that previously operated, in New York State and New York City. The data is self-reported by the cooling tower operator according to Public Health Law, Section 225(5)(a) Subpart 4-1 – Cooling Towers. Data provided by New York State Department of Health.

Government Publication Date: May 2, 2024

Tier 2 Report: TIER 2

A list of Tier 2 facilities in the state of New York. This is a list of facilities which have reported hazardous substances provided by Homeland Security and Emergency Services.

Government Publication Date: Sep 28, 2022

NY DEC Projects of Interest: PROJECTS

A list of permits for notable projects - permit applications that have received a lot of public attention - made available by the New York Department of Environmental Conservation (DEC).

Government Publication Date: Jan 3, 2022

Air Permitted Facilities: AIR PERMITS

This list of issued state facility air permits is maintained by the New York State Department of Environmental Conservation (NYDEC). The listing includes Air State Facility Permits (ASF) and Air Title V Facility Permits (ATV). ASF permits may be required by medium-sized commercial or industrial facilities or larger facilities that have agreed to limit emissions. ATV permits may be required at the largest facilities statewide, or at facilities located in those areas where state implementation plans are in place to improve air quality. Please note: An Issued permit is valid for a stated period of time. Modifications may be made to an issued permit for the remainder of the active permit.

Government Publication Date: Jan 31, 2024

Liens Listing: LIEN

New York Environmental Protection and Spill Compensation Fund (Oil Spill Fund) places liens on properties that are sites of oil spills when the owners are responsible parties and fail to pay for cleanup. The Office of the State Comptroller provides this listing of liens information from the Oil Spill Fund.

Government Publication Date: Mar 13, 2024

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Notice: IMPORTANT INFORMATION:

Service: Client has used a service offered by ERIS Information Inc. ("**ERIS**") to generate this report based upon certain search parameters set by Client, or in the case of ERIS's Vapor Encroachment Screening Tool and Checklist, certain search parameters set by ERIS and modified by Client (the "**Service**"). This report contains the results of a search conducted by ERIS of environmental records maintained by third parties. ERIS does not maintain, and has no responsibility for the accuracy or completeness of, such records.

Agreement: Client's use of the Service and any report generated thereby is subject to the Master Services Agreement previously entered into by Client and ERIS, or the terms and conditions accepted by Client in electronically submitting a request for the Service, (the "**Agreement**") and no provision of this Notice shall modify the Agreement. To the extent there is a conflict between any provision of this Notice and any provision of the Agreement, the latter shall control.

Liability Limitation: ERIS's liability for the Service and this report shall be limited to the amount paid by Client for this report and as otherwise set forth in the Agreement. Although in preparing this report ERIS has endeavored to present information that is accurate, ERIS will not have any liability for any errors, omissions or inaccuracies in such information, even if ERIS sets, or Client modifies, the parameters used to conduct the search.

Reliance on Report: This report (1) applies only to the address and the date specified on the cover page of this report and (2) is not a substitute for a Phase I Environmental Site Assessment, a Vapor Encroachment Assessment or any other similar assessment. It is solely intended to be used as a database search of current environmental records maintained by third parties, and Client should not rely on this report for any purpose for which it is not intended. Client may, in Client's discretion, modify search parameters within some of the tools of the Service that may affect the results for which ERIS is not responsible.

License for Use of Report: Client is licensed to use this report solely for its intended purpose as set forth in this Notice and the Agreement. No page of this report may be used by Client without including this report's cover page, this Notice and the project property identifier.

Client Liability: Use of the Service or this report in a manner contrary to this Notice or the Agreement will be a breach of contract and an infringement of ERIS's copyright and other intellectual property rights, for which ERIS will be entitled to damages and other remedies. In addition, upon any such breach or infringement, ERIS may terminate the Agreement, Client's account with ERIS, Client's license to use any reports previously generated for Client pursuant to the Service, and Client's future use of the Service.

Warranty Disclaimer: **EXCEPT AS EXPRESSLY SET FORTH IN THE AGREEMENT, ERIS MAKES NO WARRANTY OR REPRESENTATION REGARDING THE SERVICE, THIS REPORT OR THE RESULTS OF ANY SEARCH CONDUCTED BY CLIENT USING THE SERVICE.**

Ownership: Client may not use any of ERIS's trademarks or attribute any work product to ERIS other than as expressly set forth in this Notice or the Agreement. The Service and this reports are owned by ERIS (or its licensors) and protected by copyright and other intellectual property rights. No portion of this report may be, in whole or in part, modified, reproduced or transferred to a third party by Client, without the prior written consent of ERIS.

Executive Summary

This Report was produced through the ERIS Vapor Screening Tool. The ERIS Vapor Screening Tool and this report output are designed to help those in conducting a Vapor Encroachment Screening on a Property Involved in Real Estate Transactions under the ASTM Standard Designation E2600-22.

The following table lists the data sources searched and any hits in the Area of Concern (AOC) that have been included in the report. The search distances listed are based on search distances used in the Database Report and the search results are grouped based on the minimum default search distances for Chemicals of Concern (COCs) and Petroleum Hydrocarbon Chemicals of Concern (PHCOCs) as outlined in E2600-22. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment.

Source Type:	Notification
Federal Waste Generator Code:	1
Generator Code Description:	Large Quantity Generator

Waste Code Details

Hazardous Waste Code:	D000
Waste Code Description:	DESCRIPTION
Hazardous Waste Code:	F001
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F003
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F009
Waste Code Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Site Class Desc (Web):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	People are not expected to come into direct contact with site-related contaminants in the soil because buildings and pavement cover most of the site. People may come into direct contact with site-related contaminants if they dig below the surface on-site or contact uncovered soils just north of the site. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that obtains its water from a different source not affected by this contamination.

Description:

Location: The Newark Former MGP site is located in a mixed commercial/residential area in the central business district of Newark. The site is west of Route 88 between the New York State Barge Canal and the former railroad. Site Features: The site is approximately one acre and the southern portion of the site is occupied by a portion of the Newark Garden Hotel and parking lot. The northern portion of the site is overlain by West Shore Blvd. The nearest residence is approximately 300 feet north of the site. A commercial facility is located north of West Shore Blvd. Current Zoning/Use(s): The site is zoned commercial and is occupied by a portion of the two-story Newark Hotel. Past Use of the Site: The MGP reportedly operated from circa 1900 into the 1920s. The Newark MGP produced gas using the coal carbonization process and later the carbureted water gas process. Site Geology and Hydrogeology: Site geology includes a fill unit that is generally 10 to 25 feet thick and overlays a till unit that is comprised of a very dense mixture of silt and sand with varied amounts of clay and gravel. The depth to water beneath the site is generally between 11 and 15 feet below ground surface (bgs). Shallow groundwater beneath most of the site appears to flow to the nortnortheast; however, there appears to be a component of flow in the direction of the canal (south) in the immediate vicinity of the canal.

Assessment:

Soil exceeding commercial use SCOs for polycyclic aromatic hydrocarbons (PAHs) was found only in samples collected within the footprint of the former MGP structures and immediately to the north of the site at levels above SCOs. These SCO exceedances are primarily associated with the presence of coal tar observed in the subsurface at 7 of the 48 RI boring locations. This suggests that the tar is sporadically distributed and limited in extent. The majority of tar impacts were observed above the water table within the upper nine feet of fill, although an oil-like material was also observed in trace quantities at two locations, both below the water table to depths of about 18 feet below grade. The tar has a solidified appearance and is therefore unlikely to be mobile. The majority of the tar and oil-like material is located near former MGP structures including two holders and a tar well. Tar was also observed in shallow soils (0.6 to 2.5 feet below grade) at three off-site locations just north of the Former MGP footprint. This tar is assumed to have been placed at the same time as the fill. Low levels of benzene in groundwater were detected during one sampling round at MW-10-01 (1.1 ppb) and MW-10-02 (2.1 ppb) at levels slightly above the Class GA standard of 1.0 ppb. Both of these wells are located near former holders. No other detected contaminants of concern (COCs) exceeded Class GA standards or guidance values in any wells. Sub-slab, indoor, and outdoor air samples were collected at the on-site building to assess the potential for soil vapor intrusion from MGP related compounds. The results were compared to the NYSDOH study of VOCs in indoor air of fuel oil heated homes and were found to be generally within background levels. Non-MGP related chlorinated solvents were also detected, but were not found at levels that warrant actions to address exposures.

Detail(s)

ï¿½

Description:

Location: The Newark Former MGP site is located in a mixed commercial/residential area in the central business district of Newark. The site is west of Route 88 between the New York State Barge Canal and the former railroad. Site Features: The site is approximately one acre and the southern portion of the site is occupied by a portion of the Newark Garden Hotel and parking lot. The northern portion of the site is overlain by West Shore Blvd. The nearest residence is approximately 300 feet north of the site. A commercial facility is located north of West Shore Blvd. Current Zoning/Use(s): The site is zoned commercial and is occupied by a portion of the two-story Newark Hotel. Past Use of the Site: The MGP reportedly operated from circa 1900 into the 1920s. The Newark MGP produced gas using the coal carbonization process and later the carbureted water gas process. Site Geology and Hydrogeology: Site geology includes a fill unit that is generally 10 to 25 feet thick and overlays a till unit that is comprised of a very dense mixture of silt and sand with varied amounts of clay and gravel. The depth to water beneath the site is generally between 11 and 15 feet below ground surface (bgs). Shallow groundwater beneath most of the site appears to flow to the nortnortheast; however, there appears to be a component of flow in the direction of the canal (south) in the immediate vicinity of the canal.

Assess ENV:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil and groundwater at this site were benzene, toluene, ethyl benzene, and xylenes (collectively known as BTEX), and polycyclic aromatic hydrocarbon (PAHs). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater will be managed under a Site Management Plan.

Assess DOH:

People are not expected to come into direct contact with site-related contaminants in the soil because buildings and pavement cover most of the site. People may come into direct contact with site-related contaminants if they dig below the surface on-site or contact uncovered soils just north of the site. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that obtains its water from a different source not affected by this contamination.

Caller Remark:

"Tank on vehicle failed and spilled onto concrete. All was contained and cleanup in progress. Optech has been dispatched to finalize cleanup."

DEC Remark:

"2/8/11: DD TELECON WITH JOHN QUATRALE FROM VERIZON - DUE TO UNKNOWN REASON (SUSPECTED EQUIPMENT FAILURE), A RLEASE OF GAOLINE OCCURED AT AN ARROWMART GAS STATION FROM A VERIZON TECH TRUCK. GASOLINE WAS RELEASED ONTO CONCRETE FROM VEHICLE; FIRE DEPARTMENT WAS ONSCENE AND PLACED SPEEDY DRY DOWN AND ISOLATED AREA. VERIZON IS HIRING OPTECH FROM SYRACUSE OFFICE, WHO IS MOBILIZING SMALL CREW TO COMPLETE CLEANUP. CREW WILL BE ONSITE APPROX. 1830 HOURS. NO GASOLINE REACHED SOIL OR SEWERS. TRUCK TOWED AWAY. 2/9/11: DD TELECON WITH ARROWMART GAS STATION MANAGER CHERYL (315-331-6971), WHO CONFIRMED CLEANUP WAS COMPLETED LAST NIGHT BY VERIZON/OPTECH. SHE STATED THERE WAS A HOLE IN THE GASOLINE TANK OF THE VEHICLE. ALL RELEASE WAS ON PAVEMENT, WHICH SHE ESTIMATED WAS LESS THAN 4 GALLONS. NO FURTHER ACTIONS REQUIRED BY SPILLS UNIT/SPILL FILE CLOSED. "

Caller Remark:

"contained to sump - cleanup in progress"

DEC Remark:

"12/23/21 CHAD KEHOE, NYSDEC REGION 8 SPILLS TELCON WITH DANIEL SHEA OF REID PETORLEUM AT 1334 HRS. DOUBLE WALLED FIBERGLASS PRODUCT LINE ON REGUALR UNLEADED GASOLINE FAILED. FUEL FLOWED BACK TO TANK TOP SUMP. NO RELEASE TO THE ENVIRONMENT SUSPECTED. SPILL ASSIGNED TO MATT GRIFFITHS (MG) FOR FOLLOW-UP. MG TELCON WITH D SHEA AT 1420 HRS. VAC TRUCK HAS BEEN REQUESTED TO PUMP OUT. PUMPS HAVE BEEN SHUT OFF. MG ADVISES DS TO HAVE SUMP TESTED FOR TIGHTNESS TO VERIFY SUMP INTEGRITY AND NO RELEASE TO SOIL / GROUNDWATER. 1/10/22 M GRIFFITHS RECEIVED PHONE CALL FROM D SHEA. SUMP PASSED TIGHTNESS TESTING AND LINE IS PROCESS OF BEING REPLACED. 4/11/22 RECEIVED SPILL CLOSURE REPORT WITH ANALYTICAL FOR SOIL SAMPLE. NO EXCEEDANCES OF VOCS OR SVOCS. REQUESTED MAP SHOWING SAMPLING LOCATION, EXCAVATION LIMITS AND ANY PHOTOS THAT DOCUMENT CONDITIONS OBSERVED DURING CONSTRUCITON. 4/28/22 RECEIVED EMAIL WITH MAP OF WORK LIMITS AND PHOTOS OF EXCAVATION ARES. 5/6/22 TELCON WITH DAN SHEA. SHEA CLARIFIES THAT NO VISUAL OR OLFACORY INDICATION OF CONTAMIATNION REPORTED BY CONTRACTOR PERFORMING WORK AND NONE THE DAYS HE WAS ON-SITE AND THEREFORE NO REMOVAL OF CONTAMINATED MATERIAL NEEDED. GRIFFITHS REQUESTS ADDITIONAL PRE-WORK NOTIFICATION AND MORE DOCUMENATED FIELD SCREEN OF EXCAVATION AREAS DURING FUTURE TANK SYSTEM REPAIR / REPLACEMENT WORK. NO FURTHER ACTION REQUIRED. SPILL CLOSED."

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U205
Waste Code Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U240
Waste Code Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Hazardous Waste Code: U279
Waste Code Description: CARBARYL (OR) 1-NAPHTHALENOL, METHYLCARBAMATE

Caller Remark:

"WHILE REMOVING 4 UNDERGROUND TANKS CONTAMINATED SOIL ENCOUNTERED PER STORE AROUND TANKS WAS OK EXISTING SOIL SHOWED READING ON METER TWO NEW TANKS TO BR INSTALLED"

Dec Remark:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was JM 10/17/95 JM ON SITE WITH KEVIN HARTSON AND GEORGE FARREL. IN PROCESS OF REMOVING STEEL TANK THAT HAD BEEN FILLED WITH SAND. OTHER TANKS OUT OF EXCAVATION. CONTAMINATED SOIL BEING STOCKPILED ON SITE. EXCAVATION TO BE SAMPLED. NEW TANKS TO BE INSTALLED IN SAME EXCAVATION. 10/20/95 JM ON SITE; NEW TANKS INSTALLED. SAMPLES TAKEN FROM SIDEWALLS AND BOTTOM OF TANK EXCAVATION TO BE SENT TO LAB. RESULTS TO BE FORWARDED TO THIS OFFICE. COMPOSITE SOIL SAMPLE RESULTS FROM BOTTOM AND SIDEWALLS OF EXCAVATION BELOW STARS GUIDANCE VALUES. DISPOSAL RECEIPTS FROM HIGH ACRES LANDFILL FOR DISPOSAL OF APPROXIMATELY 330 TONS OF SOIL RECEIVED ON 12/28/95. RESULTS FROM A WASTE OIL TANK THAT WAS REMOVED, ALSO SHOWED MINIMAL CONTAMINATION IN THE SOIL. NO FURTHER ACTION REQUIRED. AS PART OF A PROPERTY SALE, LABELLA ASSOCIATES CONDUCTED A PHASE II SITE ASSESSMENT. REPORT DATED 03/14/06 SUBMITTED TO THIS DEPARTMENT. SOIL SAMPLES NEAR TANK EXCAVATIONS, PUMP ISLANDS AND HYDRAULIC LIFTS, SHOWED NO PETROLEUM COMPOUNDS. WATER SAMPLE FROM EXISTING UST LOCATION AND LOCATION OF 1995 UST REMOVALS SHOWS MTBE CONCENTRATION OF 59.9 UG/L. LETTER DATED 03/30/06 SENT STATING NO ADDITIONAL REMEDIAL ACTION NEEDED AT THIS TIME. 08/12/08 PAPER FILE REMOVED PER FILE RETENTION POLICY."

Site Class Desc:	Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class N" site.
Site Class Desc (Web):	Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class N" site.
Assess DOH:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Description:

Location: The Former Grand Cleaners site is located at 175 West Union St. in the Village of Newark. The site is .36 acres in size. Site Features: The site has a gas station and small auto repair business currently operating called Union Street Automotive. The area in question, where the former dry cleaning operation building was located, is near the east property line, currently used as Union Street Automotive's parking lot. Current Zoning: The site is commercial, with surrounding properties being mixed commercial. Past Use: This site was a former dry cleaner, that operated in the 40's. At this time, very little is known about the operation history. Site Geology and Hydrogeology: Groundwater flows in a northeast direction. Site characterization work must be completed for more information. This site is the suspected source area of a PCE plume observed at the adjacent property during a NYSDEC Spills division petroleum cleanup. PCE was found, but a source area was not observed. The adjacent spill site, 131 W. Union has two buildings, both have had indoor air issues addressed by the spill cleanup. Sub-slab soil vapor samples had elevated level of petroleum related compounds as well as PCE. A SSDS was installed in both buildings located at 131 W. Union.

Assessment:

Nature and Extent of Contamination: Site characterization must be completed on-site. Soil: Site characterization must be completed on-site. Off-site PCE soil vapor concentrations as high as 24,819 ug/m3. Groundwater: Site characterization must be completed on-site. Off-sit levels as high as 387ppb. Indoor Air: Site characterization must be completed on-site. Additional information will be added as the site investigation progresses.

Client / User Questionnaire

Client/User Questionnaire

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the Client/User must conduct the following inquiries and provide the following information (if available) to C & S Engineers, Inc. Failure to provide this information could result in a determination that "all appropriate inquiries" is not complete.

(1) **Environmental cleanup liens that are filed or recorded against the Subject Property/Properties (40 CFR §312.25).** Are you aware of any environmental cleanup liens against the Subject Property/properties that are filed or recorded under federal, tribal, state, or local law?

☐ YES ☒ NO

Explain: _____

(2) **Activity and land use limitations (AULs) that are in place on the Subject Property/Properties or that have been filed or recorded against the Subject Property/Properties in a registry (40 CFR §312.26).** Are you aware of any AULs, such an engineering controls, land use restrictions, or institutional controls that are in place at the Subject Property/Properties and/or have been filed or recorded against the Subject Property/Properties in a registry under federal, tribal, state, or local law?

☐ YES ☒ NO

Explain: _____

(3) **Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR §312.28).** As the Client/User of this Phase I Environmental Site Assessment, do you have any specialized knowledge or experience related to the Subject Property/Properties or adjoining properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property/Properties or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ YES ☒ NO

Explain: _____

(4) **Relationship of the purchase price to the fair market value of the Subject Property/Properties if they were not contaminated (40 CFR §312.39).** Does the purchase price being paid for this property/these properties reasonably reflect the fair market value of the Subject Property/Properties?

☒ YES ☐ NO

If you answered "No", and the price(s) is/are below fair market value, have you considered that the lower price(s) is/are due to known or presumed contamination at the Subject Property/Properties?

☐ YES ☐ NO

Explain: _____

Client/User Questionnaire

(5) **Commonly known or reasonably ascertainable information about the Subject Property/Properties (40 CFR §312.30).** Are you aware of commonly known or reasonably ascertainable information about the Subject Property/Properties that would help C & S Engineers, Inc., to identify conditions indicative of releases or threatened releases? For example:

(a) Do you know of the past uses of the Subject Property/Properties? ☒ YES ☐ NO

Explain: The onsite building was first the site of a manufacturer of tinware containers in the early 20th century, and then the manufacturing site of Sarah Coventry (home party costume jewelry) in the mid 20th century.

(b) Do you know of specific chemicals that are or once were present at the Subject Property/Properties? ☐ YES ☒ NO

Explain:

(c) Do you know of spills or other chemical releases that have taken place at the Subject Property/Properties?

☒ YES ☐ NO

Explain: Spill #1307418 was reported when two 12,000-gallon #2 fuel oil underground storage tanks (USTs) and approximately 200 tons of fuel-impacted soil was removed in October 2013. The spill was assigned an inactive status.

(d) Do you know of any environmental cleanups that have taken place at the Subject Property/Properties?

☒ YES ☐ NO

Explain: Spill #1307418 was reported when two 12,000-gallon #2 fuel oil underground storage tanks (USTs) and approximately 200 tons of fuel-impacted soil was removed in October 2013. The spill was assigned an inactive status.

(6) **The degree of obviousness of the presence or likely presence of contamination at the Subject Property/Properties, and the ability to detect the contamination by appropriate investigation (40 CFR §312.31).** As the Client/User of this Phase I Environmental Site Assessment and based upon your knowledge and experience related to the Subject Property/Properties, are there any obvious indicators that point to the presence or likely presence of contamination at the Subject Property/properties?

☐ YES ☒ NO

Explain:

PETROLEUM BULK STORAGE APPLICATION - SECTION B - TANK INFORMATION - CODE KEYS

Action (1)

1. Initial Listing
2. Add Tank
3. Close/Remove Tank
4. Information Correction
5. Repair/Reline Tank

Tank Location (3)

1. Aboveground-contact w/soil
2. Aboveground-contact w/ impervious barrier
3. Aboveground on saddles, leggs, stilts, rack or cradle
4. Partially buried tank (tank with 10% or more below ground)
5. Underground including vaulted with no access for inspection
6. Aboveground in Subterranean Vault w/access for inspections

Status (4)

1. In-service
2. Out-of-service
3. Closed-Removed
4. Closed- In Place
5. Tank converted to Non-Regulated use
6. Closed prior to 03/1991

Products Stored (7)

Heating Oils: On-Site Consumption

0001. #2 Fuel Oil
0002. #4 Fuel Oil
0259. #5 Fuel Oil
0003. #6 Fuel Oil
0012. Kerosene
0591. Clarified Oil
2711. Biofuel Oil
2642. Used Oil (Heating)

Heating Oils: Resale/ Redistribution

2718. #2 Fuel Oil
2719. #4 Fuel Oil
2720. #5 Fuel Oil
2721. #6 Fuel Oil
2722. Kerosene
2723. Clarified Oil
2724. Biofuel Oil

Motor Fuels

0009. Gasoline
2712. Gasoline/Ethanol
0008. Diesel
2710. Biodiesel
0011. Jet Fuel
1044. Jet Fuel (Biofuel)
2641. Aviation Gasoline

Emergency Generator Fuels

0001. #2 Fuel Oil
2730. Biodiesel (E-Gen)
2731. Diesel (E-Gen)

Lubricating/Cutting Oils

0013. Lube Oil
0015. Motor Oil
1045. Gear/Spindle Oil
0010. Hydraulic Oil
0007. Cutting Oil
0021. Transmission Fluid
1836. Turbine Oil
0308. Petroleum Grease

Oils Used as Building Materials

2626. Asphaltic Emulsions
0748. Form Oil

Petroleum Spirits

0014. White/Mineral Spirits
1731. Naptha

Mineral/Insulating Oils

0020. Insulating Oil (e.g., Transformer, Cable Oil)
2630. Mineral Oil

Waste/Used/Other Oils

0022 Waste/Used Oil
9999. Other-Please list:*

BARGAIN AND SALE DEED

THIS INDENTURE, made the 21st day of December, 1998

BETWEEN RODNEY J. GRAYBILL, residing at 417 Grace Avenue, Newark, New York 14513, and _____, party of the first part,

n/c And **GRAYBILL REAL ESTATE, LLC** a New York limited liability company, having offices at 101 West Maple Avenue, Newark, New York 14513, party of the second part,

WITNESSETH, that the party of the first part in consideration of One Dollar ($1.00) lawful money of the United States and other good and valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

SEE ATTACHED SCHEDULE

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises;

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

SUBJECT to all easements, agreements, liens restrictions, covenants, and encumbrances of record.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

TANK & SPILL CLOSURE REPORT

COMPANY:	SAW Environmental Consultants LLC
ADDRESS:	672 Frey Road, Macedon, New York 14502
PHONE:	(315) 986-4751
DATE:	December 30, 2013
CLIENT:	Graybill Real Estate 101 West Miller Street Newark, New York 14513
PROJECT LOCATION:	130 Harrison Street Newark, New York **NYSDEC Spill # 13-07418**
WORK PERFORMED:	Removal of two (2) 12,000 gallon Underground Storage Tanks (UST) and excavation and disposal of associated impacted soils.
TANK CLOSURE DATE:	October 21, 2013
TANK DESCRIPTION:	12,000-gallon single wall steel #2 Fuel Oil tanks. The tanks were lying parallel to each other on the north east corner of the structure.

SITE ASSESSMENT

Contents:	The tanks contained approximately 150 gallons of diesel and water.
Condition of Tank:	Both tanks were in poor condition with severe corrosion and pitting located on the tank exterior. Numerous holes were observed in the tanks.
Piping Conditions:	The tank piping was in fair condition and contained a high amount of corrosion and pitting on the pipe and pipe joints.
Soil Conditions:	The tanks were bedded in fine SAND and Some Fine-Medium Gravel. Staining was observed on the base soils under both tanks and it appeared to be more predominant under the tank ballast slab. Impacted soils were discovered at a depth of @ 12 feet below grade surface (bgs).

METHOD OF TANK CLOSURE:

On October 21, 2013, SAW personnel uncovered and removed the tanks utilizing an excavator supplied and operated by Ridley Excavating. Prior to tank removal approximately 150 gallons of #2 Fuel Oil, water and rinsate was pumped out of the tanks and staged in 55-gallon drums. Subsequent to tank content removal the interior of the tanks were pressure washed and pumped clean. The tanks were then relegated to steel scrap to be recycled.

A photo log of the tank removal process is attached to this report as **Appendix A**.

The Village of Newark building permit is attached to this report as **Appendix B.**

ENVIRONMENTAL ASSESSMENT

10-21-2013,

During the tank removal a #2 Fuel Oil release was observed, therefore pursuant to New York State Department of Environmental Conservation spill reporting regulations (6NYCRR Part 613.8), SAW contacted the NYSDEC to report the spill. The NYSDEC assigned **spill # 13-06703** to the site. Impacted soils were excavated and placed on poly sheeting, a landfill profile soil sample was collected for profiling the impacted soils

10-22-2013

The excavation of impacted soils continued, the concrete hold down slab was removed and all impacted soils that could be removed was completed. Confirmatory soil sampling was conducted were conditions permitted. Due to the proximity to the building, depth of excavation and slumping sidewall conditions only two base samples and an eastern sidewall were collected. The tank pit was backfilled with clean back-run gravel and topped with clean native fill excavated from the top of the tank.

The following samples and analytical tests were taken by SAW:

One (1) grab sample:

- East Sidewall
- Base Sample (east & west)

Analytical tests done on confirmatory samples:

- EPA Method 8260 (STARS List Volatile Organic Compounds)
- EPA Method 8270 (STARS List Semi-Volatile Organic Compounds)

Samples were delivered to Pace Environmental Services under standard chain of custody.

Copies of the laboratory reports and chain of custody are attached to this report as **Appendix D**.

Interpretation of UST excavation results:

All volatile organic compounds (VOC) were below the laboratory detection limits and therefore the area of concern meets the NYSDEC Part 375 unrestricted cleanup guidelines for petroleum-contaminated soil for all samples.

Two soil samples (Base-East and East Sidewall) had elevated detections of semi-volatile organic compounds (SVOC). The following lists the compounds;

SAW ENVIRONMENTAL CONSULTANTS LLC

Semi-Volatile Organic Compounds

	Base East	East Sidewall
Anthracene	@ 218 ppb	@ 282 ppb
Benzo(a)anthracene	@ 550 ppb	@ 728 ppb
Benzo(a)pyrene	@ 581 ppb	@ 859 ppb
Benzo(b)flouranthene	@ 733 ppb	**@ 1200 ppb (1,000 ppb threshold)**
Benzo(g.h.i)perylene	@ 415 ppb	@ 596 ppb
Benzo(k)flouranthene	@ 508 ppb	@ 538 ppb
Chrysene	@ 644 ppb	@ 770 ppb
Flouranthene	@ 1320 ppb	@ 2310 ppb
Indeno(1,2,3-cd)pyrene	@ 376 ppb	**@ 556 ppb (500 ppb threshold)**
Phenanthrene	@ 776 ppb	@ 1340 ppb
Pyrene	@ 889 ppb	@ 1260 ppb

Results of the East Sidewall indicated that two compounds exceeded the NYSDEC Part 375 unrestricted and restricted use guidelines. The threshold value for Benzo(b)flouranthene is 1000 ppb and the results are @ 12000 ppb, and the threshold for Indeno(1,2,3-cd)pyrene is 500 ppb and the results are 5560 ppb. Given that the east sidewall sample was collected at 10-12 feet below grade and the sample was collected was located in a diminishing smear zone that was pinching out SAW does not believe these detections pose any risk to human health or the environment.

Contaminated Soil Disposal:

The following analytical tests were required by the landfill for disposal parameters;

- EPA Method 6010 TCLP Lead analysis
- EPA Method 8260B TCLP Benzene
- EPA Method 1010 Flashpoint
- EPA Method 9095b Paint Filter

Analytical results and chain of custody for landfill characterization is attached to this report as **Appendix E.**

Contaminated soils were profiled into Ontario County Landfill located in Stanley New York. On November 11, 2013, 199.37 tons of petroleum-contaminated soil was loaded and transported to Ontario County Landfill by Riccelli Trucking where it was properly disposed of.

Landfill profile and disposal manifests are attached to this report as **Appendix F.**

CONCLUSION:

SAW was retained by Graybill Real Estate to assist in the removal of two (2) 12,000-gallon fuel oil underground storage tanks (UST). The tanks were in poor condition with severe corrosion, pitting and holes present on the tanks. Elevated PID readings along with petroleum odors and visual staining were observed on tank pit soils indicating that #2 fuel oil had impacted surrounding soil. SAW directed the excavation, staging, loading and disposal of 199.37 tons of petroleum impacted soil from the tank excavation at the Ontario County Landfill located in Stanley, New York.

Analysis of confirmatory soil samples collected subsequent to excavation, indicated that all levels of volatile organic compounds from the tank excavation were below laboratory detection levels and meet the NYSDEC Part 375 unrestricted use guidelines for petroleum-contaminated soil, Two (2) soil samples had elevated semi-volatile organic compounds present above the NYSDEC Part 375 threshold values, however the compounds were only slightly above the unrestricted & restricted values and do not appear to pose any health or environment risk. The tank was relegated and decommisioned to steel scrap.

It is SAW's conclusion that soils at the site had been impacted from operation of the underground storage tanks. The petroleum-impacted soils have been removed and properly disposed of. Volatile & Semi Volatile Organic Compound analysis indicates the soils mostly meet NYSDEC unrestricted levels. On behalf of Graybill Real Estate, SAW requests closure of **NYSDEC spill # 13-07418**.

Should you have any questions or comments regarding this report, please feel free to contact our office.

Sincerely,
SAW Environmental Consultants LLC

02. Rubber Liner
03. Fiberglass Liner (FRP)
04. Glass Liner
99. Other-Please list:*

External Protection (10/18)

00. None
01. Painted/Asphalt Coating
02. Original Sacrificial Anode
03. Original Impressed Current
04. Fiberglass
05. Jacketed
06. Wrapped (Piping)
07 Retrofitted Sacrificial Anode
08. Retrofitted Impressed Current
09. Urethane
99. Other-Please list:*

Tank Secondary Containment (11)

00. None
01. Diking (AST Only)
02. Vault (w/access)
03. Vault (w/o access)
04. Double-Walled (UST Only)
05. Synthetic Liner
06. Remote Impounding Area
07. Excavation Liner
09. Modified Double-Walled (AST Only)
10. Impervious Underlayment (AST Only)**
11. Double Bottom (AST Only)**
12. Double-Walled (AST Only)
99. Other - Please list*

Tank Leak Detection (12)

00. None
01. Interstitial Electronic Monitoring
02. Interstitial Manual Monitoring
03. Vapor Well
04. Groundwater Well
05. In-Tank System (Auto Tank
06. Impervious Barrier/Concrete Pad (AST Only)
07. Statistical Inventory Reconciliation (SIR)
08. Weep holes in vaults with no access for inspection
99. Other-Please list: *

Overfill Protection (13)

00. None
01. Float Vent Valve
02. High Level Alarm
03. Automatic Shut-Off
04. Product Level Gauge (AST Only)
05. Vent Whistle
99. Other-Please list:*

Spill Prevention (14)

00. None
01. Catch Basin
99. Other-Please list:*

Pumping/Dispensing Method (15)

00. None
01. Presurized Dispenser
02. Suction Dispenser
03. Gravity
04. On-Site Heating System (Suction)
05. On-Site Heating System (Supply/Return)
06. Tank-Mounted Dispenser
07. Loading Rack/Transfer Pump

Piping Location (16)

00. No Piping
01. Aboveground
02. Underground/On-ground
03. Aboveground/Underground Combination

Piping Type (17)

00. None
01. Steel/Carbon Steel/Iron
02. Galvanized Steel
03. Stainless Steel Alloy
04. Fiberglass Coated Steel
05. Steel Encased in Concrete
06. Fiberglass Reinforced Plastic (FRP)
07. Plastic
08. Equivalent Technology
09. Concrete
10. Copper
11. Flexible Piping
99. Other-Please list:*

Piping Secondary Containment (19)

00. None
01. Diking (Aboveground Only)
02. Vault (w/access)
04. Double-Walled (Underground Only)
06. Remote Impounding Area
07. Trench Liner
12. Double-Walled (Aboveground Only)
99. Other-Please list: *

Pipe Leak Detection (20)

00. None
01. Interstitial Electronic Monitoring
02. Insterstitial Manual Monitoring
03. Vapor Well
04. Groundwater Well
07. Pressurized Piping Leak Detector
09. Exempt Suction Piping
10. Statistical Inventory Reconciliation (SIR)
99. Other-Please list:*

Under Dispenser Containment (UDC) (21)

Check Box if Present

* If other, please list on a separate sheet including tank number,

** Each of these codes must be combined with code 01 or 06 to meet compliance requirements.
