Attn: Mr. Chris Davidson

RE: Client Project: 5 Hunt Road, Jamestown, NY
Lab Work Order #: D0603

Dear Mr. Davidson:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project.

If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

Agnes R. Ng
CLP Project Manager

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Day Environmental Inc.'s 5 Hunt Road, Jamestown, NY project. Under this deliverable, analysis results are presented for two soil samples that were received on May 25, 2005. Analyses were performed per specifications in the project's contract and the chain of custody forms. Sample Identifications were shortened where necessary due to limitations in data reporting software. Following the narrative is a table of sample identifications for cross-referencing full client sample ID, shortened client sample ID and laboratory sample ID, along with the Mitkem Work Order.

The analyses were performed and reported per NYSDEC ASP (2000 update) requirement for Category B deliverable with the exception of total petroleum hydrocarbons. The analysis results for total petroleum hydrocarbons are presented in the standard Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatiles Analysis:

Trap used for instruments V1 and V6: OI Analytical #10 trap containing 8 cm each of Tenax, silica gel and carbon molecular sieve.

GC column used: 30 m x 0.25 mm id (1.4 um film thickness) DB-624 capillary column.

Alkanes were determined as part of TIC. The alkanes are reported in the Alkane Narrative Report following the SDG Narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of bromofluorobenzene in sample B-840. The sample was re-analyzed at dilution with surrogate recoveries within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: due to high concentration of target analytes, sample B-840 was re-analyzed at dilution by the medium-level approach. In addition to the medium-level analysis, the sample was also analyzed at 2x dilution. No other unusual observation was made for the analysis.

3. Total Petroleum Hydrocarbon Analysis:

Surrogate recovery: recovery was within the QC limits.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: sample B-840 contains resolved and unresolved peaks in the retention time range for a mixture of three petroleum products, two being typical diesel fuel and motor oil. The third product is in the range for a low boiling point product such as gasoline, but the pattern of resolved and unresolved peaks does not match the laboratory standard gasoline. The pattern is similar to keosene or jet fuel, but appears to be in a lower boiling point range than these products. The chromatograms for diesel fuel and motor oil are included. No other unusual observation was made for the analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng
CLP Project Manager

Analytical Data Package for Day Environmental, Inc.

Client Project No.: 5 Hunt Road, Jamestown, NY

Mitkem Work Order ID: D0603

June 22, 2005

Prepared For:

Day Environmental, Inc.
40 Commercial Street
Rochester, NY 14614
Attn: Mr. Jeff Danzinger

Prepared By:

Mitkem Corporation
175 Metro Center Boulevard
Warwick, RI 02886
(401) 732-3400

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Day Environmental Inc.'s 5 Hunt Road, Jamestown, NY project. Under this deliverable, analysis results are presented for two soil samples that were received on May 25, 2005. Analyses were performed per specifications in the project's contract and the chain of custody forms. Sample Identifications were shortened where necessary due to limitations in data reporting software. Following the narrative is a table of sample identifications for cross-referencing full client sample ID, shortened client sample ID and laboratory sample ID, along with the Mitkem Work Order.

The analyses were performed and reported per NYSDEC ASP (2000 update) requirement for Category B deliverable with the exception of total petroleum hydrocarbons. The analysis results for total petroleum hydrocarbons are presented in the standard Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatiles Analysis:

Trap used for instruments V1 and V6: OI Analytical #10 trap containing 8 cm each of Tenax, silica gel and carbon molecular sieve.

GC column used: 30 m x 0.25 mm id (1.4 um film thickness) DB-624 capillary column.

Alkanes were determined as part of TIC. The alkanes are reported in the Alkane Narrative Report following the SDG Narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of bromofluorobenzene in sample B-840. The sample was re-analyzed at dilution with surrogate recoveries within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: due to high concentration of target analytes, sample B-840 was re-analyzed at dilution by the medium-level approach. In addition to the medium-level analysis, the sample was also analyzed at 2x dilution. No other unusual observation was made for the analysis.

3. Total Petroleum Hydrocarbon Analysis:

Surrogate recovery: recovery was within the QC limits.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: sample B-840 contains resolved and unresolved peaks in the retention time range for a mixture of three petroleum products, two being typical diesel fuel and motor oil. The third product is in the range for a low boiling point product such as gasoline, but the pattern of resolved and unresolved peaks does not match the laboratory standard gasoline. The pattern is similar to keosene or jet fuel, but appears to be in a lower boiling point range than these products. The chromatograms for diesel fuel and motor oil are included. No other unusual observation was made for the analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng

QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.

MITKEM CORPORATION

Analysis Report: Fuel Identification

Client: DAY
Analysis: 310.13
Matrix: Soil
Extraction Date: 06/02/2005

Lab ID	Client ID	Result	Analysis Date:
D0603-01	B-8(4.0')	see below	06/07/2005

Fuel Identification:

Sample D0603-01A contains resolved and unresolved peaks in the retention time ranges for a mixture of three petroleum products, two being typical Diesel Fuel and Motor Oil. The third product is in the range for a low boiling point product such as gasoline, but the pattern of resolved and unresolved peaks does not match the laboratory standard gasoline. The pattern is similar to kerosene or jet fuel, but appears to be in a lower boiling point range than these products.

Mitkem Corporation

Date: *14-Jun-05*

Client: Day Environmental, Inc.
Client Sample ID: B-840
Lab ID: D0603-01

Project: Jamestown
Collection Date: 05/23/05 09:54

Analyses	Result	Qual	RL	Units	DF	Date Analyzed	Batch ID

Day Environmental, Inc.
40 Commercial Street
Rochester, NY 14614
Attn: Mr. Chris Davidson

RE: Client Project: 5 Hunt Road, Jamestown, NY
Lab Work Order #: D0618

Dear Mr. Davidson:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project.

If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

Agnes R. Ng
CLP Project Manager

Analytical Data Package for Day Environmental, Inc.

Client Project No.: 5 Hunt Road, Jamestown, NY

Mitkem Work Order ID: D0618

June 27, 2005

Prepared For:

Day Environmental, Inc.
40 Commercial Street
Rochester, NY 14614
Attn: Mr. Jeff Danzinger

Prepared By:

Mitkem Corporation
175 Metro Center Boulevard
Warwick, RI 02886

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Day Environmental Inc.'s 5 Hunt Road, Jamestown, NY project. Under this deliverable, analysis results are presented for ten aqueous samples that were received on May 27, 2005. Analyses were performed per specifications in the project's contract and the chain of custody forms. Please note that the temperature of the sample-shipping coolers were noted to be 8 degrees C, above the normal range of 2-6 degrees C. This was communicated to the client, who approved proceeding with the analyses. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed and reported per NYSDEC ASP (2000 update) requirement for Category B deliverable with the exception of total petroleum hydrocarbons. The analysis results for total petroleum hydrocarbons are presented in the standard Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatiles Analysis:

Trap used for instrument V6: OI Analytical #10 trap containing 8 cm each of Tenax, silica gel and carbon molecular sieve.

GC column used: 30 m x 0.25 mm id (1.4 um film thickness) DB-624 capillary column.

The aqueous samples were acid preserved; pH <2.

Alkanes were determined as part of TIC. The alkanes are reported in the Alkane Narrative Report following the SDG Narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of marginally low recovery of toluene-d8 in sample MW-06 and MW-7. The samples were re-analyzed with at dilution with surrogate recoveries within the QC limits. Toluene-d8 and bromofluorobenzene were recovered low in the second diluted analyses for samples MW-07 and PW-3. Surrogate recoveries were within the QC limits in the initial and first diluted analysis.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample MW-01. Spike recoveries were within the QC limits with the exception of high recovery of toluene in the matrix spike and high recovery of benzene and toluene in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: due to high concentration of target analytes, the following samples were re-analyzed at dilution: MW-03 (20x), MW-04 (20x), MW-06 (10x), MW-07 (50x), MW-7 (1000x) and PW-3 (200x). Due to the concentration of tetrachloroethene and/or cis-1,2-dichloroethene exceeding the instrument calibration range, the following samples were further re-analyzed at dilution: MW-07 (100x) and PW-3 (800x). The suffix "DL1" is appended to the sample IDs, indicating the second analysis at dilution. The diluted analysis for sample MW-7 and the second diluted analysis for samples MW-07 and PW-3 were performed outside of hold time. The initial analysis and initial dilution were performed within hold time. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

GC column: 30 m x 0.25 mm id (0.5 um film thickness) DB-5MS capillary column

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of high recovery of several surrogates in all the samples including the method blank and lab control sample. Due to analyst oversight, sample 55FB0526 and the associated QC samples were mis-spiked. The samples were spiked with a surrogate spike solution that did not contain the two advisory surrogates, 2-chlorophenol-d4 and 1,2-dichlorobenzene-d4. The samples were not re-extracted due to insufficient sample volume.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of 4-chloro-3-methylphenol, 4-nitrophenol, 2, 4-dinitrotoluene and pyrene.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample MW-01. Spike recoveries were within the QC limits with the exception of high recovery of 4-chloro-3-methylphenol, 4-nitrophenol, pentachlorophenol and pyrene in the matrix spike and 4-chloro-3-methylphenol, 4-nitrophenol, 2, 4-dinitrotoluene, pentachlorophenol and pyrene in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. Pesticides/PCB Analysis:

GC column used: 30 m x 0.53 mm id (0.5 um film thickness) CLPPest and 30 m x 0.53 mm id (0.42 um film thickness) CLPPestII megabore columns

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample MW-01. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Total Petroleum Hydrocarbon Analysis:

Surrogate recovery: recovery was within the QC limits.

Lab control sample/lab control sample duplicate: spike recovery and replicate RPD were within the QC limits.

Sample analysis: sample MW-07 contains resolved and unresolved peaks in the retention time range for a low boiling point product such as kerosene or jet fuel. Sample PW-3 contains

TPH consisting of a primarily a single large peak. This indicates a single chemical component, rather than a petroleum product, which is a complex mixture of a large number of chemical components. Sample MW-7 does not contain sufficient hydrocarbons to identify a petroleum product. No other unusual observation was made for the analysis.

6. Metals Analysis:

Mercury was analyzed using a Perkin Elmer Model 100 FIMS cold vapor atomic absorption analyzer. The other elements were analyzed using either a Perkin Elmer Model 3100XL Optima or a Perkin Elmer Model 4300DV ICAP.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample MW-01. Spike recoveries were within the QC limits with the exception of antimony, selenium and silver. These elements are flagged with an "N" on the data report forms. A post digest spike was performed and reported for antimony and selenium. Per the method, a post digest spike is not required for silver. The spike recovery for aluminum, iron, manganese and lead could not be accurately determined, as the sample concentration was significantly greater than the spike concentration. When the sample concentration is more than four times the spike concentration, it tends to obscure the relatively smaller spike amount; control limits do not apply in this circumstance.

Matrix duplicate: matrix duplicate was performed on sample MW-01. Replicate RPDs were within the QC limits.

Sample analysis: serial dilution was performed on sample MW-01 with replicate RPDs within the QC limits with the exception of barium, cobalt, iron, lead, magnesium, manganese, nickel, vanadium and zinc. These elements are qualified with an "E" on the data report forms. This is could be due to matrix interference from the high concentration of salts in the sample. No other unusual observation was made for the analysis.

7. Cyanide Analysis:

The cyanide samples were prepared using minidistill apparatus by Kontes. The resultant distillates were analyzed using a Lachat QuikChem 8000 autoanalyzer.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample MW-01. Spike recovery was within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample MW-01. Replicate RPD was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

MITKEM CORPORATION

Analysis Report: Fuel Identification

Client: DAY
Analysis: 310.13
Matrix: Soil
Extraction Date: 05/31/2005

Lab ID	Client ID	Result	Analysis Date:
D0618-06B	MW-07	see below	06/06/2005
D0618-07B	PW-3	see below	06/06/2005
D0618-08B	MW-7	see below	06/06/2005

Fuel Identification:

Sample D0618-06B contains resolved and unresolved peaks in the retention time range for low boiling-point petroleum product such as kerosene or jet fuel.

Sample D0618-07B contains TPH consisting of primarily a single large peak. This indicates a single chemical component, rather than a petroleum product, which is a complex mixture of a large number of chemical components. This extract could be analyzed by GC/MS to identify this large peak.

Sample D0618-08B does not contain sufficient hydrocarbons to identify a petroleum product.

Analytical Data Package for Day Environmental, Inc.

Client Project No.: 5 Hunt Road, Jamestown, NY

Mitkem Work Order ID: D0618

June 27, 2005

Prepared For:

Day Environmental, Inc.
40 Commercial Street
Rochester, NY 14614
Attn: Mr. Jeff Danzinger

Prepared By:

Mitkem Corporation
175 Metro Center Boulevard
Warwick, RI 02886
(401) 732-3400

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Day Environmental Inc.'s 5 Hunt Road, Jamestown, NY project. Under this deliverable, analysis results are presented for ten aqueous samples that were received on May 27, 2005. Analyses were performed per specifications in the project's contract and the chain of custody forms. Please note that the temperature of the sample-shipping coolers were noted to be 8 degrees C, above the normal range of 2-6 degrees C. This was communicated to the client, who approved proceeding with the analyses. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed and reported per NYSDEC ASP (2000 update) requirement for Category B deliverable with the exception of total petroleum hydrocarbons. The analysis results for total petroleum hydrocarbons are presented in the standard Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatiles Analysis:

Trap used for instrument V6: OI Analytical #10 trap containing 8 cm each of Tenax, silica gel and carbon molecular sieve.

GC column used: 30 m x 0.25 mm id (1.4 um film thickness) DB-624 capillary column.

The aqueous samples were acid preserved; pH <2.

Alkanes were determined as part of TIC. The alkanes are reported in the Alkane Narrative Report following the SDG Narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of marginally low recovery of toluene-d8 in sample MW-06 and MW-7. The samples were re-analyzed with at dilution with surrogate recoveries within the QC limits. Toluene-d8 and bromofluorobenzene were recovered low in the second diluted analyses for samples MW-07 and PW-3. Surrogate recoveries were within the QC limits in the initial and first diluted analysis.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample MW-01. Spike recoveries were within the QC limits with the exception of high recovery of toluene in the matrix spike and high recovery of benzene and toluene in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: due to high concentration of target analytes, the following samples were re-analyzed at dilution: MW-03 (20x), MW-04 (20x), MW-06 (10x), MW-07 (50x), MW-7 (1000x) and PW-3 (200x). Due to the concentration of tetrachloroethene and/or cis-1,2-dichloroethene exceeding the instrument calibration range, the following samples were further re-analyzed at dilution: MW-07 (100x) and PW-3 (800x). The suffix "DL1" is appended to the sample IDs, indicating the second analysis at dilution. The diluted analysis for sample MW-7 and the second diluted analysis for samples MW-07 and PW-3 were performed outside of hold time. The initial analysis and initial dilution were performed within hold time. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

GC column: 30 m x 0.25 mm id (0.5 um film thickness) DB-5MS capillary column

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of high recovery of several surrogates in all the samples including the method blank and lab control sample. Due to analyst oversight, sample 55FB0526 and the associated QC samples were mis-spiked. The samples were spiked with a surrogate spike solution that did not contain the two advisory surrogates, 2-chlorophenol-d4 and 1,2-dichlorobenzene-d4. The samples were not re-extracted due to insufficient sample volume.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of 4-chloro-3-methylphenol, 4-nitrophenol, 2, 4-dinitrotoluene and pyrene.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample MW-01. Spike recoveries were within the QC limits with the exception of high recovery of 4-chloro-3-methylphenol, 4-nitrophenol, pentachlorophenol and pyrene in the matrix spike and 4-chloro-3-methylphenol, 4-nitrophenol, 2, 4-dinitrotoluene, pentachlorophenol and pyrene in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. Pesticides/PCB Analysis:

GC column used: 30 m x 0.53 mm id (0.5 um film thickness) CLPPest and 30 m x 0.53 mm id (0.42 um film thickness) CLPPestII megabore columns

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample MW-01. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Total Petroleum Hydrocarbon Analysis:

Surrogate recovery: recovery was within the QC limits.

Lab control sample/lab control sample duplicate: spike recovery and replicate RPD were within the QC limits.

Sample analysis: sample MW-07 contains resolved and unresolved peaks in the retention time range for a low boiling point product such as kerosene or jet fuel. Sample PW-3 contains

TPH consisting of a primarily a single large peak. This indicates a single chemical component, rather than a petroleum product, which is a complex mixture of a large number of chemical components. Sample MW-7 does not contain sufficient hydrocarbons to identify a petroleum product. No other unusual observation was made for the analysis.

6. Metals Analysis:

Mercury was analyzed using a Perkin Elmer Model 100 FIMS cold vapor atomic absorption analyzer. The other elements were analyzed using either a Perkin Elmer Model 3100XL Optima or a Perkin Elmer Model 4300DV ICAP.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample MW-01. Spike recoveries were within the QC limits with the exception of antimony, selenium and silver. These elements are flagged with an "N" on the data report forms. A post digest spike was performed and reported for antimony and selenium. Per the method, a post digest spike is not required for silver. The spike recovery for aluminum, iron, manganese and lead could not be accurately determined, as the sample concentration was significantly greater than the spike concentration. When the sample concentration is more than four times the spike concentration, it tends to obscure the relatively smaller spike amount; control limits do not apply in this circumstance.

Matrix duplicate: matrix duplicate was performed on sample MW-01. Replicate RPDs were within the QC limits.

Sample analysis: serial dilution was performed on sample MW-01 with replicate RPDs within the QC limits with the exception of barium, cobalt, iron, lead, magnesium, manganese, nickel, vanadium and zinc. These elements are qualified with an "E" on the data report forms. This is could be due to matrix interference from the high concentration of salts in the sample. No other unusual observation was made for the analysis.

7. Cyanide Analysis:

The cyanide samples were prepared using minidistill apparatus by Kontes. The resultant distillates were analyzed using a Lachat QuikChem 8000 autoanalyzer.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample MW-01. Spike recovery was within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample MW-01. Replicate RPD was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount
    exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
