1.0 EXECUTIVE SUMMARY

The following details the findings of TurnKey relative to identifying RECs for 133 Winsor Street, Jamestown, Chautauqua County, New York (Site).

1.1 General Information

TurnKey has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E 1527-13 and the protocols required by the Client. This section summarizes the findings of the environmental professional relative to the Site. The reader is encouraged to read the entire report.

1.2 Site Description

The Site is located in a highly developed commercial and residential area of the City of Jamestown (see Figure 1). As shown on Figure 2, the Site is currently vacant land.

The Site consists of one parcel totaling approximately 2.1-acres and has access to municipal sanitary sewer, electric, natural-gas and public water.

Information relative to the specific parcel subject to this assessment, as provided by the municipal offices, is provided below:

Number	Street	Tax ID No.	Current Owner	Current Use
133	Winsor Street	387.42-3-13	Kimberly Miller	Vacant Land

1.3 Data Gaps

The following data gaps¹ were identified in completion of this inquiry.

Type of Data Gap	Details of Data Gap	Sources Consulted	Significance
Historical Information	Historical information for the Site was not available at five-year intervals.	Previous studies, city directories, aerial photographs, Sanborn maps, topographic maps and/or municipal information.	This data gap did not significantly limit TurnKey's ability to provide an opinion on RECs related to the Site.
Abstract of Title	The abstract of title was not available for review at the time of report preparation.	Current property owner (i.e., user of this report).	This data gap did not significantly limit TurnKey's ability to provide an opinion on RECs related to the Site.
Site Reconnaissance	Dense vegetation hindered observations at the time of the Site reconnaissance. In addition, TurnKey was unaccompanied at the time of the Site visit thus property boundaries were approximated.	Site reconnaissance	This data gap did not significantly limit TurnKey's ability to provide an opinion on RECs related to the Site.

1.4 Environmental Report Summary

1.4.1 Summary of Site Reconnaissance Potential Concerns

The following potential environmental concerns were identified at the time of the Site reconnaissance:

- TurnKey is aware of the industrial history of the Site and adjacent properties.
- TurnKey is also aware of former on-Site buildings and a portion of the Chadakoin River thus it is possible that fill materials from unknown origins were brought to the Site to bring former building and waterbody areas to grade.

TURNKEY

¹ A data gap is defined by 40 CFR 312.10 as "a lack of or inability to obtain information required by the standards and practices" of preparation of this document "despite good faith efforts by the environmental professional" or others to gather such information.

1.4.2 Summary of Historic Uses

Approximate Years	Reported or Suspected Use	Owner/Occupant
At least 1886 to 2009	Industrial with operations including a lumber yard with lumber supply and storage, a saw mill, printing, glazing, and manufacturing of doors and blinds. In addition, a transformer room, glue room, a paint room, a coal room, and lumber piles were identified on-Site.	Past owners/occupants include J.T. Wilson's Planing Mill, United Lumber and Supply Corporation, TRW Inc./Marlin Rockwell Co., Savitri Washington, County of
	A portion of the Chadakoin River (FKA Log Pond) was formerly located on the central and southwestern portions of the Site until prior to 1930 when on-Site portions of the waterbody were backfilled with fill materials from unknown origins.	Chautauqua, Diane Evan, SKF Industries, and MRC Bearing Inc. The current owner is Kimberly Miller.
Since 2009	Vacant land	

1.4.3 Regulatory Information

Site Listings

Site Database	Address/Name	Summary
Listings		
NY Spills	133 Winsor Street/ Warehouse	Spill No. 0651000 took place on September 20, 2006
	Fire	and involved a warehouse fire at an unknown
		chemical company. Upon investigation several
		drums and containers were noted on the property;
		however, NYSDEC notes indicate that none of the
		containers stored liquids or mercury. Due to no
		spillage at the Site, the spill was reportedly
		reclassified as "closed" by the NYSDEC on January
		11, 2007.

Adjacent Property Listings

rajacent i toperty Listings					
Adjacent Database	Address/Name	Summary			
Listings					
RCRA Nongen/ NLR,	337 Harrison Street/	This adjacent property was listed under multiple databases			
ICIS, US Airs, NY	Watson Industries Div	under EPA id: NYD092473560. This adjacent property was			
Manifest	Afro-Lecon	listed as a RCRA large quantity generator from at least 1984			
		through at least 1994. The facility has multiple notices of			
		violations listed.			
NY Spills	335 Harrison Avenue/	Spill No. 9975611 took place on December 1, 1999 and			
	Watson Plant	involved a hydraulic lift encountered during the demolition			
		of the Watson manufacturing plant. Impacts reportedly			
		remained subsequent to remedial activities and the			
		NYSDEC reclassified this spill incident as "inactive" on			
		June 5, 2001.			

EDR Hist Auto NY Spills	Pit Shop/ 105 Winsor Street Marlin Rockwell Co./	Spill No. 9012314 took place on February 1, 1991 and involved drums near the Jamestown power plant. Upon further inspection, the drums were found to be gone and the spill was reclassified as "closed" by the NYSDEC on March 14, 1991. This adjacent property was listed under the EDR historic auto database as a gasoline service station from at least 1969 through at least 1983 and a general automotive repair shop from at least 2005 through at least 2013. Spill No. 8902365 took place on June 7, 1989 and involved
	Chandler & Winsor Streets	an anonymous call about waste oil dumping. The spill was reportedly added to active Spill No. 8602953 (see below) and classified as "closed" by the NYSDEC on December 20, 1989.
NY Spills	Oil in Chadakoin river/ Windsor & Harrison Street	Spill No. 0075244 took place on July 18, 2000 and involved a call reporting a sheen on the river. The property was inspected, and no sheen was found. The spill was classified as "closed" by the NYSDEC on October 25, 2000.
NY CBS AST	MRC Bearings, Inc./ 402 Chandler Street	This adjacent property was listed in the NY CBS AST database under CBS no. 9-000314 and PBS no. 9-223417 with one 5,500-gallon methanol tank installed April 1979 and is listed as in service.
RCRA-SQG, NY CBS, NY Spills, US Airs, ECHO, NY Manifest, NY SPDES	SKF Aeroengine North America/ 402 Chandler Street	This adjacent property was listed under multiple databases under EPA id: NYD012780441. Spill No. 8602953 took place on July 1, 1986 and involved a tank failure resulting in at least 10,000-gallons of hydraulic oil to be spilled. The spill is currently classified as "active" by the NYSDEC. Spill No. 9901992 took place on May 21, 1999 and involved a malfunction in the float for the oil water separator resulting in a spill of approximately 20-gallons. The spill was addressed and classified as "closed" by the NYSDEC on December 10, 1999. Spill No. 9902001 took place on May 21, 1999 and is a duplicate spill of spill no 9901992 and was listed as "closed" by the NYSDEC on May 21, 1999.
NY Spills	Business/ 402 Chandler Street	Spill No. 1303534 took place on July 2, 2013 and involved approximately four-gallons of an oil/water mixture being spilled due to and equipment overflow. The spill was cleaned up and classified as "inactive" by the NYSDEC on June 6, 2014.
NY UST, NY AST	MRC Bearings Inc./ 402 Chandler Street	This adjacent property is listed as an unregulated/closed PBS facility under NYS PBS id: 9-223417 with five closed/removed USTs and one closed-in-place UST. In addition, four ASTs have also been closed-removed from this adjacent property.

0092-019-002 4

1.4.4 Other Findings

The historic industrial use of the Site and proximate properties suggests a potential VEC. Further testing would be required to assess whether a VEC exists at the Site.

1.4.5 Interviews/Questionnaires

The current property owner completed TurnKey's Environmental Questionnaire and identified the Site as historically being used as a lumber yard and storage facility. Additional information from the current property owner is provided in Section 7.1.

The City of Jamestown Building Inspector would not provide an interview.

1.5 Report Findings

Where applicable for the Site, the following is a list of RECs, CRECs, HRECs, and de minimis conditions. Non-scope considerations are also provided.

RECs

Per ASTM E1527, a REC is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

TurnKey's investigation revealed the following RECs in connection with the Site:

- The long history of industrial uses at the Site (at least 1886 to 2009) with operations including a lumber yard, a saw mill, printing, glazing and manufacturing of doors and blinds. In addition, a transformer room, a glue room, a paint room, a coal room and lumber piles were identified on-Site.
- A portion of the Chadakoin River (FKA Log Pond) was formerly located on the central and southwestern portions of the Site until prior to 1930 when on-Site portions of the waterbody were apparently backfilled with fill materials from unknown origins.

5

• The Site is located in an industrial area.

Controlled RECs

Per ASTM E1527, a CREC is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

TurnKey's ESA did not reveal CRECs for the Site.

Historic RECs

Per ASTM E1527, a HREC is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). For example, a spill that has been remediated to the satisfaction of the appropriate regulators would be considered a HREC.

TurnKey's investigation revealed the following HRECs for the Site:

 The "closed" or "inactive" spill incidents identified for the Site and adjacent/nearby properties are considered HRECs as such have been addressed to the satisfaction of the NYSDEC.

De-minimis Conditions

In accordance with ASTM E-1527, de-minimis conditions are conditions that generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de-minimis conditions are neither RECs nor CRECs.

TurnKey's ESA did not reveal de-minimis conditions for the Site.

Non-Scope Considerations

Per ASTM E1527-13, non-scope considerations are described as ancillary observations during performance of the on-site investigation. Non-scope considerations are not considered RECs under ASTM E1527, but may represent health or environmental issues impacting the Site and/or property value.

TurnKey's investigation identified the following non-scope considerations:

- As the Site is currently vacant land, the presence of asbestos and lead is not anticipated.
- No wetland areas were identified on-site or adjacent to the Site. Areas proximate to the Chadakoin River on the southern portion of the Site are located within the limits of a special flood hazard area.
- Research in the area of the Site completed by the New York State Department of Health Bureau of Environmental Radiation Protection (Radon) suggests an average basement radon concentration of 4.77 pCi/L in the area of the Site, which is slightly above the USEPA action level of 4.0 pCi/L. Radon is not a current concern as the Site is vacant land; however, elevated basement radon concentrations in the area of the Site should be considered as part of future Site development.

1.6 Opinion

Due to the RECs identified above, TurnKey recommends completion of a Phase II Environmental Investigation to assess subsurface conditions.

2.0 Introduction

2.1 Purpose

The primary purpose of this assessment was to provide The Krog Group, LLC with sufficient information about the potential environmental risks associated with the Site.

A secondary purpose of this study was to document the inquiry of the environmental professional for all appropriate inquiries for the Site. Specifically, this document is intended to provide the "all appropriate inquiries" for the purposes of CERCLA Section 101(35)(B). Such is applicable to persons seeking to qualify for: (i) the innocent landowner defense pursuant to CERCLA Sections 101(35) and 107(b)(3); (ii) the bona fide prospective purchaser liability protection pursuant to CERCLA Sections 101(40) and 107(r); and (iii) the contiguous property owner liability protection pursuant to CERCLA Section 107(q). This report was not intended as part of the Site characterization and assessment with use of a grant awarded under CERCLA Section 104(k)(2)(B). More specifically, the scope is intended to identify conditions indicative of releases or threatened releases of hazardous substances in, on, or at the Site.

2.2 Scope of Work

The scope of work is intended to identify RECs at the Site, including the following tasks:

- A) Review of information provided by the User of this Report regarding commonly known or reasonably available information about the Site.
- B) Interviews with past and present owners, operators and occupants (if available).
- C) Review of historical sources of information documenting the Site's use.
- D) Review of Federal, State, tribal and local government records.
- E) A visual inspection of the Site and adjoining properties (to the extent possible).
- F) Preparation of this written report.

2.3 Significant Assumptions

No significant assumptions were made during completion of this study other than as identified Section 2.4.

TURNKEY

2.4 Limitations and Exceptions

2.4.1 Limitations

To the extent of our knowledge, the information contained in this Report is true and accurate. TurnKey personnel have exercised due diligence in the compilation of the information contained herein appropriate to environmental professionals engaged in investigations of this nature. TurnKey makes no guarantees regarding the accuracy of information gained from other sources.

This Phase I ESA is based on current and historical information reviewed by TurnKey and their Site inspection. This Report is not to be considered an environmental audit of the Site or a complete environmental investigation of the Site. Further, the purpose of this assessment is not to proclaim a property is devoid of environmental impact but rather to identify RECs, as defined above.

This Phase I ESA makes no warranties nor implies any liability regarding:

- 1. Site specific practices and/or disposal methods of the past or future owners.
- 2. Adjacent property owners, their environmental practices and/or impact of such properties and practices on the subject property other than observed from the subject property.
- 3. Unreported spills.
- 4. Practices, waste disposal, environmental concerns and/or modifications to waste site indexes after the date on this Report.
- 5. Site groundwater or soil conditions.
- 6. Accuracy or completeness of information supplied to TurnKey by others.
- 7. Environmental conditions in areas not practically or safely accessible.
- 8. Accuracy of previous studies (if any) provided to TurnKey.

This Report is also subject to any and all limitations defined within ASTM E1527-13. This includes, but is not limited to, the limitation that this Report is intended to identify environmental conditions at a specific time and is only valid for a period of six months from the date of issuance.

The principles defined within ASTM E1527-13, and followed within this study, include the following.

- This practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property.
- All appropriate inquiry does not mean an exhaustive assessment of a clean property. One of the purposes of this practice is to identify a balance between limiting costs/time and the reduction of uncertainty about unknown conditions.
- The level of inquiry is variable and depends on the type of property, risk level of the user and information developed in the course of the inquiry.
- Subsequent environmental assessments should not be used as standards to evaluate the appropriateness of prior inquiries based on hindsight, new information or new techniques.

2.4.2 User Responsibilities

The following information is the responsibility of the user and not of the environmental professional. This information may be provided by the user to the environmental professional for use in the final opinion of the all appropriate inquiry. If the information is not provided by the user, the environmental professional's ability to render such an opinion may be hindered and identified as a data gap.

- Searches for environmental cleanup liens against the subject property that are filed or recorded under any Federal, State, tribal, or local law, as required by 40 CFR Section 312.25.
- Assessments of any specialized knowledge or experience on the part of the landowner, as required by 40 CFR Section 312.28.
- An assessment of the relationship of the purchase price to the fair market value of the subject property, if the property was not contaminated, as required by 40 CFR Section 312.29.
- An assessment of commonly known or reasonably ascertainable information about the subject property, as required by 40 CFR Section 312.30.

2.4.3 User Protections

Persons claiming the liability protections under CERCLA must meet the statutory requirements of one of the following landowner liability protections. [It should be noted that

the user must also satisfy certain continuing obligations outside the scope of this Phase I Environmental Assessment, as required by CERCLA].

- The innocent landowner defense pursuant to CERCLA Sections 101(35) and 107(b)(3).
- The bona fide prospective purchaser liability protection pursuant to CERCLA Sections 101(40) and 107(r).
- The contiguous property owner liability protection pursuant to CERCLA Section 107(q).

2.5 Deviations

There were no deviations from the ASTM 1527-13 standard during the completion of this study except that a regulatory file review was not completed. Specifically, while a NYSDEC file review would typically be required under the ASTM standard for Site and adjacent property regulatory listings, such was not completed by TurnKey as: regulatory listings were not identified; completion of the file review was not anticipated to provide new or significant information; or records were not considered reasonably ascertainable in the timeframe of the report deliverable.

2.6 Special Terms and Conditions

The work was completed in accordance with the executed Master Professional Services Agreement between The Krog Group, LLC and TurnKey and Task Order No. 2, dated December 10, 2019.

2.7 Reliance, Certification, and Declaration

This report was prepared for the exclusive use of The Krog Group, LLC their respective affiliates and subsidiaries, and all successors and assigns thereof. Any other use or using this Report in a fashion in which it was not intended, is at the sole risk of the user. Reliance may only be granted upon written consent and is subject to those same terms and conditions as expressed in the Master Professional Services Agreement.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10. We have the specific

qualifications based on education, training, and experience to assess a property of the nature, history and setting of the Site. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

3.0 SITE/VICINITY DESCRIPTION

3.1 Location and Legal Description

The Site is located in the City of Jamestown and consists of one individual tax parcel legally described as Parcel No. 387.42-3-13.

3.2 Activity/Use Limitations

TurnKey is not aware of any institutional controls or activity/use limitations imposed against the referenced Site.

3.3 Site and Vicinity Description

The Site is located in a highly developed commercial and residential area of the City of Jamestown (see Figure 1). As shown on Figure 2, the Site is currently vacant land.

The Site consists of one parcel totaling approximately 2.1-acres and has access to municipal sanitary sewer, electric, natural-gas and public water.

The Site is further described in the table below:

General Site Information			
Site Addresses	133 Winsor Street		
Municipality, County, State	Jamestown, Chautauqua County, New York		
Current Site Use	Vacant Land		
Fronting Streets	Winsor Street, Harrison Street		
Site Size	Approx. 2.1-acres (per municipal information)		
Site Topography	Generally, level at grade		
General Site Elevation (feet above mean sea	1,300		
level)			
Nearest Water Body	Chadakoin River located adjacent to the Site to the southwest		
Improvements	Vacant land		

3.4 Current Use of Property

The Site, as further described below, is currently vacant land.

Number	Street	Tax ID No.	Current Owner	Current Use
133	Winsor Street	387.42-3-13	Kimberly Miller	Vacant Land

3.5 Adjoining Property Information

The adjacent properties were visually inspected from the Site at the time of the Site reconnaissance. The surrounding property uses include the following:

Direction	Current Use	Apparent Past Use	Comments/Concerns
North	Railroad tracks	Railroad tracks	
South:	Chadakoin River and commercial	River and commercial	Railroad tracks and industrial operations could result in
East:	Industrial	Industrial	impacts to the environment.
West:	Vacant land	Industrial	

4.0 USER PROVIDED INFORMATION

The User Questionnaire was not provided to TurnKey for this project.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

Federal and state environmental regulatory information provided by Environmental EDR was reviewed at the radii defined in 40 CFR 312.26 (see Appendix A). Any sites unplottable by EDR were also reviewed, to the extent practical based on the site name and address, to assess whether they are also present within their appropriate radii. Any relevant listings such as those for the Site or any adjacent sites are included in the following table. Refer to Appendix A for complete acronym definitions.

Site Listings

Offe Biotings		
Site Database	Address/Name	Summary
Listings		
NY Spills	133 Winsor Street/ Warehouse	Spill No. 0651000 took place on September 20, 2006
	Fire	and involved a warehouse fire at an unknown
		chemical company. Upon investigation several
		drums and containers were noted on the property;
		however, NYSDEC notes indicate that none of the
		containers stored liquids or mercury. Due to no
		spillage at the Site, the spill was reportedly
		reclassified as "closed" by the NYSDEC on January
		11, 2007.

Adjacent Property Listings

rajacent i Toperty Listings						
Adjacent Database	Address/Name	Summary				
Listings						
RCRA Nongen/ NLR, ICIS, US Airs, NY Manifest	337 Harrison Street/ Watson Industries Div Afro-Lecon	This adjacent property was listed under multiple databases under EPA id: NYD092473560. This adjacent property was listed as a RCRA large quantity generator from at least 1984 through at least 1994. The facility has multiple notices of violations listed.				
NY Spills	335 Harrison Avenue/ Watson Plant	Spill No. 9975611 took place on December 1, 1999 and involved a hydraulic lift encountered during the demolition of the Watson manufacturing plant. Impacts reportedly remained subsequent to remedial activities and the NYSDEC reclassified this spill incident as "inactive" on June 5, 2001. Spill No. 9012314 took place on February 1, 1991 and involved drums near the Jamestown power				

	<u> </u>	plant. Upon further inspection, the drums were
		found to be gone and the spill was reclassified as "closed" by the NYSDEC on March 14, 1991.
EDR Hist Auto	Pit Shop/ 105 Winsor Street	This adjacent property was listed under the EDR historic auto database as a gasoline service station from at least 1969 through at least 1983 and a general automotive repair shop from at least 2005 through at least 2013.
NY Spills	Marlin Rockwell Co./ Chandler & Winsor Streets	Spill No. 8902365 took place on June 7, 1989 and involved an anonymous call about waste oil dumping. The spill was reportedly added to active Spill No. 8602953 (see below) and classified as "closed" by the NYSDEC on December 20, 1989.
NY Spills	Oil in Chadakoin river/ Windsor & Harrison Street	Spill No. 0075244 took place on July 18, 2000 and involved a call reporting a sheen on the river. The property was inspected, and no sheen was found. The spill was classified as "closed" by the NYSDEC on October 25, 2000.
NY CBS AST	MRC Bearings, Inc./ 402 Chandler Street	This adjacent property was listed in the NY CBS AST database under CBS no. 9-000314 and PBS no. 9-223417 with one 5,500-gallon methanol tank installed April 1979 and is listed as in service.
RCRA-SQG, NY CBS, NY Spills, US Airs, ECHO, NY Manifest, NY SPDES	SKF Aeroengine North America/ 402 Chandler Street	This adjacent property was listed under multiple databases under EPA id: NYD012780441. Spill No. 8602953 took place on July 1, 1986 and involved a tank failure resulting in at least 10,000-gallons of hydraulic oil to be spilled. The spill is currently classified as "active" by the NYSDEC. Spill No. 9901992 took place on May 21, 1999 and involved a malfunction in the float for the oil water separator resulting in a spill of approximately 20-gallons. The spill was addressed and classified as "closed" by the NYSDEC on December 10, 1999. Spill No. 9902001 took place on May 21, 1999 and is a duplicate spill of spill no 9901992 and was listed as "closed" by the NYSDEC on May 21, 1999.
NY Spills	Business/ 402 Chandler Street	Spill No. 1303534 took place on July 2, 2013 and involved approximately four-gallons of an oil/water mixture being spilled due to and equipment overflow. The spill was cleaned up and classified as "inactive" by the NYSDEC on June 6, 2014.
NY UST, NY AST	MRC Bearings Inc./ 402 Chandler Street	This adjacent property is listed as an unregulated/closed PBS facility under NYS PBS id: 9-223417 with five closed/ removed USTs and one closed-in-place UST. In addition, four ASTs have

0092-019-002 17

	also	been	closed-removed	from	this	adjacent
	prop	erty.				

Nearby Properties

Additional regulatory listings were identified for nearby properties. Brief summaries of the relevant listings are provided in the table below.

Nearby Database Listings	Address/Name	Summary
EDR Hist Cleaner	61 Winsor Street/ Star Cleaning	This nearby property was listed under the EDR
	Co.	historic cleaner as a dry cleaner from at least 1969
		through at least 1970.
NY Brownfields	Harrison Street Site/ 251-289	This nearby property is listed under the NY
	Harrison Street	Brownfields database under Site ID: 505765
NY Spills and LTANKS	Several properties	The remaining spill incidents identified within the
		search radii for nearby properties are classified as
		"inactive" or "closed" by the NYSDEC.
Numerous Database	Various properties	The numerous remaining regulatory listings were
Listings		reviewed by TurnKey and none of the information
		suggested a specific environmental concern at the
		Site; see below for additional information.

In addition to the nearby properties listed above, several additional sites located proximate to the Site are listed on one or more environmental databases. However, based on TurnKey's review, each of these additional sites falls in one or more of the following categories:

- It is listed on databases that indicate a potential for, but not an actual documented current or historical release (e.g., RCRA small quantity generator or large quantity generator; registered chemical bulk storage or petroleum bulk storage sites). As such, these sites are not considered to pose a REC at the Site due to absence of a documented release.
- It is located greater than one-eighth mile from the Site, and is not considered a REC based on the distance from the Site.
- It is present at a location that is not expected to pose potential for impact on the Site due to topography and likely groundwater flow direction, and is not considered a REC based on unlikelihood for impacts associated with migration of contaminants onto the Site.

The discussion included above regarding adjacent and surrounding properties is based on information supplied to TurnKey as well as observations of nearby properties at the time of the Site reconnaissance. Further study would be required to positively confirm whether the Site has been impacted by nearby properties. It is also important to note that the environmental history and status of nearby properties, real or perceived, can affect the valuation of the target property.

5.2 Additional Environmental Record Sources

To augment the information provided by EDR, a FOIA request was forwarded to the NYSDEC for information concerning the Site (see Appendix B). All responses have yet to be received from the NYSDEC. Should the NYSDEC provide additional information for the Site which identifies a currently unknown REC, an addendum to this report will be issued.

TurnKey also completed a search on the NYSDEC website, including the DECinfo Locator, of readily available records for the Site, including an Environmental Site Database Search for spills, remedial sites and bulk storage facilities. A search of the USEPA Envirofacts website was also completed. Other than information on Spill No. 0651000, no records involving the Site were identified.

5.3 Physical Setting Sources

Figure 1 shows the Site on an undated USGS Topographic Map, Jamestown Quadrangle. The Site is located in a highly developed mixed-use area. Due to extensive development in the area of the Site, individual structures are not shown on the map. The Site is located approximately 1,300 feet above mean sea level.

Groundwater flow is likely to the southeast toward the Chadakoin River or consistent with topography in the area of the Site. Local groundwater flow, however, may be influenced by subsurface features, such as excavations, utilities, and localized fill-conditions.

5.4 Historical Use

The historical use of the Site has been researched through review of previous studies, historic Sanborn maps, historic aerial photographs, municipal records, historic topographic maps, and/or other reasonably obtainable documents. The following sections summarize TurnKey's research.

5.4.1 Historic Aerial Photographs

Historical aerial photographs serve to reveal former topography, buildings, structures and man-made works such as canals, lagoons and railroads that may have been altered or may no longer be in existence. Historical aerial photographs were obtained for additional historical information relative to the Site and surrounding area. Appendix C includes copies of the aerial photographs provided by EDR. Visual observations were limited on some aerial photographs due to poor quality.

YEAR	OBSERVATIONS	
1938, 1953, 1956		
Site	The Site appears to be developed with multiple former industrial buildings on the east, west, and south sides of the property.	
North	Railroad tracks	
South	Commercial	
East	Industrial	
West	Industrial	
1966, 1971, 1988, 1994, 2001, 2006		
Site	The Site appears to be developed with former industrial buildings on the eastern portion of the Site.	
North	Railroad tracks	
South	Commercial	
East	Industrial	
West	Industrial	
2009, 2013, 2017		
Site	The Site appears to be vacant land	
North	Railroad tracks	
South	Commercial	
East	Industrial	
West	Industrial	

5.4.2 Historical Sanborn Maps

Sanborn maps serve to reveal former buildings, building uses, and man-made works such as canals, lagoons and railroads that may have been altered or may no longer be in existence. Historic addresses identified for the Site were identified as 115-131 Winsor Street. The following table summarizes the maps. Appendix D includes copies of the Sanborn Maps provided by EDR.

YEAR	OBSERVATIONS		
1886, 1891, 1896			
	The Site appears to be developed with the J.T. Wilson's Planing Mill with operations		
	including a lumber yard, saw mill, printing, glazing, and manufacturing of doors and blinds.		
Site	In addition, Log Pond, which is presumably a portion of the Chadakoin River, is identified		
	over much of the southwest and central portions of the Site and a transformer room is		
	identified on the northeast portion of the Site.		
North	Railroad tracks		
South	Commercial lumber storage		
East	Jamestown Woolen Mills		
West	Swedish Furniture Manufacturers Co./ Himebauch Bros Wire mattress manufacturers		
1902			
	The Site appears similar to above as a portion of the John T Wilson Planning mill with		
Site	operations including a saw mill, glazing, lumber sheds, door an blind manufacturing. A		
Site	portion of the Chadakoin River is identified on the southwest and central portions of the		
	Site.		
North	Railroad tracks		
South	Chadakoin River		
East	Industrial Jamestown woolen mills		
West	Industrial		
1930, 1949			
	The Chadakoin River (fka Log Pond) was apparently backfilled/redirected and appears		
Site	southeast adjacent to the Site. The Site is occupied by the United Lumber & Supply		
Site	Corporation with operations including wood working and lumber storage. In addition, a glue		
	room, paint room, coal room and lumber pile are identified on-Site.		
North	Railroad tracks		
South	Chadakoin River		
East	Industrial		
West	Industrial		

1981			
	The Site appears to be developed by a division of TRW Inc./Marlin Rockwell Co.		
Site	Operations include shipping, a stock room, and storage. A glue room, coal room and dry		
	kiln are also identified on-Site.		
North	Railroad tracks		
South	Chadakoin River		
East	Industrial		
West	Industrial Dawson Metal Co.		

5.4.3 Historical City Directories

Due to the nature of the Site and other historical sources consulted, city directories were not reviewed for this project.

5.4.4 Historical Topographic Maps

Historical topographic maps were reviewed for additional information regarding the Site. Appendix E includes copies of the maps.

YEAR	OBSERVATIONS		
1904, 1905, 1941, 1942			
Site	The Site appears to be developed with former buildings along the northeast portion of the Site		
1954, 1979			
Site	The Site appears to be developed with a former building on the northeast portion of the Site.		
2013			
Site	Due to extensive development in the area of the Site individual structures are not shown.		

5.4.5 Municipal Records

Records readily available at the City of Jamestown municipal offices (Assessor and Building Department) as well as records available online from the Chautauqua County GIS were reviewed for additional information relative to the Site. TurnKey also researched historic addresses identified for the Site through review of Sanborn maps. Note that a FOIL was submitted to the City of Jamestown as required to access their records. The following summarizes municipal records provided to TurnKey at the time of this assessment; copies of the pertinent records are included in Appendix F.

- The Site, Tax ID No.387.42-3-13, measures approximately 2.1-acres and is currently owned by Kimberly Miller.
- Past owners were identified as Savitri Washington, County of Chautauqua, Diane Evan, SKF Industries, TRW Inc., MRC Bearing Inc.
- The Site has access to natural-gas, municipal sanitary sewer, public water and electric.
- In 1979, a two-story building was reportedly demolished.

The City of Jamestown Building Inspector would not provide TurnKey with an interview relative to the Site.

5.4.6 Abstract of Title

Abstract of Title information was not provided to TurnKey.

5.4.7 Previous Assessments

No previous studies involving the Site were provided to TurnKey.

5.4.8 Summary of Historic Uses

Approximate Years	Reported or Suspected Use	Owner/Occupant
At least 1886 to 2009	Industrial with operations including a lumber yard with lumber supply and storage, a saw mill, printing, glazing, and manufacturing of doors and blinds. In addition, a glue room, a paint room a coal room and lumber piles were identified on-Site.	Past owners/occupants include J.T. Wilson's Planing Mill, United Lumber and Supply Corporation, TRW Inc./Marlin Rockwell Co., Savitri Washington, County of
	A portion of the Chadakoin River (FKA Log Pond) was formerly located on the central and southwestern portions of the Site until prior to 1930 when on-Site portions of the waterbody were backfilled with fill materials from unknown origins.	Chautauqua, Diane Evan, SKF Industries, and MRC Bearing Inc. The current owner is Kimberly Miller.
Since 2009	Vacant land	

5.5 Environmental Liens

TurnKey is not aware of any formal environmental liens, enforcement action, civil, judicial or administrative enforcement cases in connection with the Site.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

A visual review of the Site was completed to document Site conditions and identify potential RECs. The presence of dense vegetation hindered observations of ground surfaces at the time of the Site reconnaissance.

6.2 General Site Setting

Mr. Mike Lesakowski of TurnKey performed the Site reconnaissance on December 20, 2019. TurnKey was unaccompanied at the time of the site visit.

6.3 Site Visit Findings

6.3.1 Current On-Site Operations

The Site is currently vacant land.

6.3.2 Storage Tanks

No evidence indicative of an AST or UST was observed at the time of the Site reconnaissance.

6.3.3 Hazardous or Regulated Materials

None observed.

6.3.4 Solid, Hazardous or Regulated Wastes

No solid, hazardous or regulated wastes are generated on-Site at this time.

6.3.5 Fill

TurnKey observed no visible evidence of fill activity at the time of the Site reconnaissance. However, TurnKey is aware of former buildings at the Site and a portion of the Chadakoin River that was formerly on-Site thus it is possible that fill materials from

0092-019-002 24

unknown origins were brought to the Site to bring former building and waterbody areas to grade.

6.3.6 Suspected Former Building Foundation

None observed.

6.3.7 Staining/Spillage and Pools of Liquid

None observed.

6.3.8 Stressed and/or Dead Vegetation

None observed.

6.3.9 Odors

None noted.

6.3.10 Unidentified Substance Containers

None observed.

6.3.11 Heating/Cooling

The Site is currently vacant land.

6.3.12 Wastewaters

The Site has access to the municipal sanitary sewer system.

6.3.13 Potable Water Supply/Wells

The Site has access to the municipal water supply.

6.3.14 Drains and Sumps

No drains or sumps were observed during the Site reconnaissance.

6.3.15 Air Emissions

No process exhaust systems were noted on-site at the time of the Site inspection.

6.3.16 Pits, Ponds and Lagoons

None observed.

6.3.17 Septic System

None observed.

6.3.18 PCBs

No PCB-containing equipment, such as a transformer, was observed at the time of the site reconnaissance.

6.3.19 Previous Intrusive Work

No evidence of previous intrusive work was observed at the time of the Site reconnaissance.

6.3.20 Adjacent Property Use

Industrial operations and railroad tracks were noted adjacent to the Site.

6.4 Summary of Site Reconnaissance Potential Concerns

The following potential environmental concerns were identified at the time of the Site reconnaissance:

- TurnKey is aware of the industrial history of the Site and adjacent properties.
- TurnKey is also aware of former on-Site buildings and a portion of the Chadakoin River thus it is possible that fill materials from unknown origins were brought to the Site to bring former building and waterbody areas to grade.

0092-019-002 26

7.0 INTERVIEWS

7.1 Site Owner

An Environmental Questionnaire requesting information on any known environmental hazards or impacts at the Site was completed by the current property owner, Mr. Richard Dixon. Appendix G includes the completed questionnaire. The following summarizes the information provided by Mr. Dixon:

- The Site is currently vacant land.
- Past uses of the property include United lumber Co (lumber yard) from 1927 to 1962, SKF Bearings (storage) from 1962 through 1986, and various owners/uses since 1986.
- Mr. Dixon indicated that spill no 0651000 took place on site during a fire in 2006.
- Mr. Dixon is unaware of any pending, threatened or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Site. Further, Mr. Dixon is unaware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products related to the Site.

7.2 Municipal Interview

As indicated above, the City of Jamestown Building Inspectors would not provide interviews relative to the Site.

7.3 Former Site Owner/Operator

Former owners/operators were not interviewed as part of this assessment.

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

Other environmental considerations are discussed below. Such include non-scope considerations, described under ASTM E1527-13 as ancillary conditions that are typically outside the standard Phase I scope of practice. Non-scope considerations, such as asbestos, lead, radon, wetlands and mold, are not considered RECs under ASTM E1527-13, but may represent health or environmental issues impacting the Site and/or property value.

8.1 Asbestos and Lead

As the Site is currently vacant land, the presence of asbestos and lead is not anticipated.

8.2 Radon

Research in the area of the Site completed by the New York State Department of Health - Bureau of Environmental Radiation Protection (Radon) suggests an average basement radon concentration of 4.77 pCi/L in the area of the Site, which is slightly above the USEPA action level of 4.0 pCi/L. Radon is not a current concern as the Site is vacant land; however, elevated basement radon concentrations in the area of the Site should be considered as part of future Site development.

8.3 Wetlands and Flood Zones

The EDR regulatory database includes general information on wetlands and flood zones. No wetland areas were identified on-site or adjacent to the Site. Areas proximate to the Chadakoin River on the southern portion of the Site are located within the limits of a special flood hazard area.

8.4 Microbial Contamination (Mold)

No visual evidence of mold was noted at the time of the Site reconnaissance.

8.5 Vapor Encroachment Conditions

This assessment included review of the regulatory database discussed in Section 6.1 in relation to the ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.

If soil or groundwater is contaminated with a volatile compound such as gasoline or solvents, that contaminant can migrate through the soil pore space and end up in the air inside of buildings, especially within basement areas. Soil vapors do not necessarily migrate along groundwater flow paths; they can also move up hydraulic gradients and can extend beyond a groundwater plume. The ASTM standard named this a VEC, which is a more recent environmental concern and there have been a significant number of sites where vapor intrusion has been discovered. The state and federal environmental regulators have "reopened" numerous spill and waste sites in order to assess whether vapor encroachment is a concern.

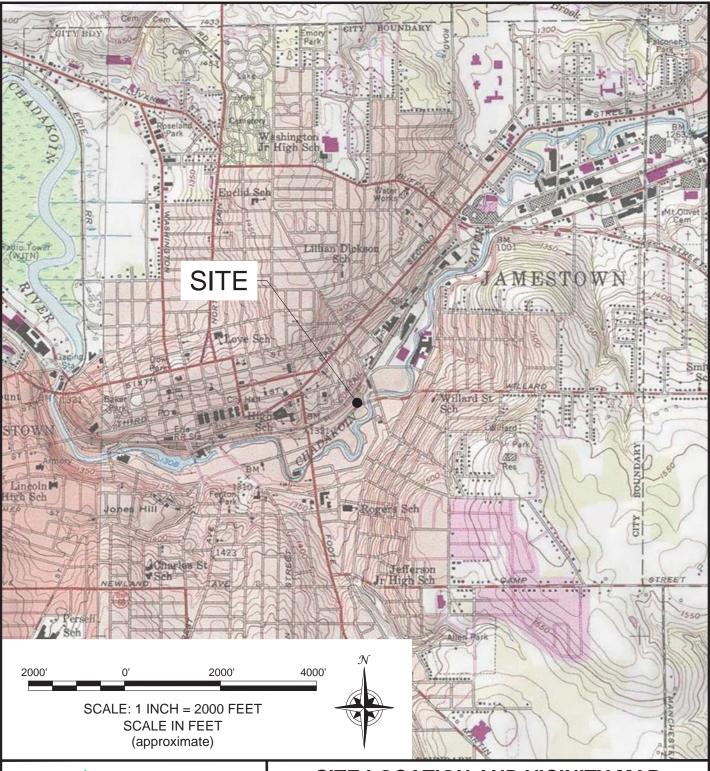

The historic industrial use of the Site and proximate properties suggests a potential VEC. Further testing would be required to assess whether a VEC exists at the Site.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/25/2019 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EPA Id: NYD982184293				

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/24/2019 has revealed that there are 2

CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are

2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 08/19/2019 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/12/2019 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/11/2019 has revealed that there are 11 NY LTANKS sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

Equal/Higher Elevation

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

Direction / Distance

Map ID

Page

A review of the NY Spills list, as provided by EDR, and dated 11/11/2019 has revealed that there are 6 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there are 9 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
JAMESTOWN GAS WORKS	INSTITUTE AND E 1ST	WSW 1/4 - 1/2 (0.389 mi.)	L41	247

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

A 1 AUTO SERVICES	102 WINSOR ST	ESE 0 - 1/8 (0.032 mi.)	B8	24

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

DEC Memo: "7/12/12 FG SITE INSPECTION, MET OWNER - MR. WILLIAMS. HE TOLD ME

THAT HE STORES ALL HIS WASTE OIL AND VEHICLE FLUIDS ON SITE TO BE BURNED IN HIS WASTE OIL BURNER. HE SHOWED ME THE BURNER AND THE STORED OIL. THERE WAS NO EVIDENCE OF ANY PIPE TO THE CREEK OR ANY CONTAMINATION IN THE ADJACENT CREEK. NO FURTHER WORK IS REQUIRED.

SPILL IS CLOSED. ELECTRONIC FILE ONLY."

Remarks: "The following information was received from the complainant via

e-mail either through the DEC public website Report an Environmental Violation Online page or directly to R5 dispatch mailbox: Who Did It: A-1 Auto Service Owner: Herman Williams workers: Terry, Jean Paul What Occurred: The drain tube from the auto shop goes into the water creek that is next to it. Fluids, chemicals, etc. are being washed up into the creek. Oil/gasoline is poured on the grounds around the back and side of the garage by workers. When Did It Occur: This happens

frequently, as the pipe leads to the creek or stream of water. Whenever there is an amount that it is easier to dispose of on the ground instead of properly. County: Chautauqua Municipality: Jamestown Location Or Address: Corner of Willard and Harrison St. I believe the number of the address is 101 Winsor Street. It is the

corner of Winsor and Willard, where Harrison Street ends and turns into Willard. How Did It Occur: Additional Details: I don't think any agency is involved, but the Plumbers HJacks are aware because the Owner of the garage, Herman Williams, called them and they found out that the pipe goes into the creek in 2011 and still have not done anything about fixing it. This is really sad. Complainants Name: Complainants Phone: Complainants Email: Date of Submittal: 07/11/2012" Not reported

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110006448745

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

<u>Click this hyperlink</u> while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

SYSTEM - OIL WATER SEPARATOR. 09/01/88: PRM & RNL ON-SITE, DISCUSSED PROGRESS OF SITE REMEDIATION WITH BOB PFOHL. 10/13/88: MF MV SITE VISIT/DAVE NARDUCCI. OIL STILL COMING TO SURFACE. DAVE CLAIMED THAT AS FAR AS HE KNOWS WORK TO INSTALL A SEPARATOR WILL BEGIN NEXT WEEK. 11/17/88: PRM, MF ON SITE TO INSPECT PROGRESS OF CLEANUP. MET WITH A. VANGELDER-O'BRIEN & GERE, D. COVEY-SKF, D. ZUCK-VFL TECHNOLOGY CORP., AND T. JENKINS-MALCOLM PIRNIE. TRENCH BEING EXCAVATED AROUND PERIMETER. 12/06/88: MF MAV SITE VISIT, SHEEN COMING OUT OF TAIL RACE. INSPECTED INSIDE OF TAIL RACE. PETROLEUM NOTICED COMING IN THRU CRACKS ON THE FACTORY SIDE OF RACE. NEITHER PARTY WOULD COOPERATE TO CONTROL SHEEN. 12/14/88: MF RNL SITE VISIT, BOOM IN PLACE ACROSS TAIL RACE, SHEEN STILL GETTING INTO RIVER. MET /DAVE NARDUCCI, REQUESTED THAT THE PARTIES INVOLVED GET TOGETHER TO CONTAIN SHEEN. 12/15/88: MF TELECON PETE CAPPONI (OBG) NOT IN TODAY, LEFT MESSAGE TO RETURN CALL. LETTERS SENT TO PARTIES INVOLVED REQUESTING COOPERATION IN CONTROLING SHEEN FROM TAIL RACE. 12/16/88: MF TELECON PETE CAPPONI, HE KNEW OF OUR VISIT. I TOLD HIM OF SHEEN COMING FROM TAIL RACE. I ALSO ASKED HOW DRENCH IS BEING DEWATERED. HE CLAIMED IT IS DONE ACCORDING TO DEC SPECS. 12/22/88: MF SITE VISIT, CONTAINMENT BOOM IN PLACE. MALCOLM PERNIE CLAIMED BOOM IS WORKING WELL. TOLD OBG ABOUT DEWATERING EXCAVATION (MUST GO THROUGH SEPARATOR. FREE PRODUCT NOTICED IN EXCAVATION. 01/11/89: MF SITE VISIT AFTER A COMPLAINT OF A SHEEN ON THE RIVER. WHEN I ARRIVED THERE WAS NO SHEEN. HOWEVER OBG HAD THE RIVER FLOW LOWERED TO DO WORK. OBG WAS INFORMED NOT TO LET THIS HAPPEN AGAIN. 03/29/89: RNL PETE CAPPONI TELECON, HE CLAIMED SYSTEM IS IN OPERATION. THE DISCHARGE WATER IS CLEAN (NO SHEEN). EQUIPMENT HAS TO BE FINED TUNED. ONE PUMP MAY HAVE TO BE REPLACED. 03/30/89: MF SITE VISIT, INSTALLATION COMPLETE. SYSTEM WAS DOWN FOR FINE TUNING & HIGH RIVER LEVEL. PUMP STATION #1 WAS ON MANUAL, NO SHEEN NOTICED ON SEPARATOR DISCHARGE. NO SHEEN NOTICED AT TAIL RACE. 04/24/89: MF MAV SITE VISIT, RECOVERY SYSTEM HAD BEEN SHUT DOWN BY MAV BECAUSE OF A SHEEN IN THE DISCHARGE. PETE CAPONI CLAIMED PROBLEM WILL BE REMIDED & SEPARATOR WILL BE CLEANED. 05/16/89: MF MAV SITE VISIT, RECOVERY SYSTEM STILL DOWN, RIVER LEVEL VERY HIGH. WORWILL CONTINUE SHORTLY (AS PER PETE CAPPONI). PETE IS TO KEEP ME INFORMED. 06/01/89: MF MAV PM SITE VISIT/JEFF, NO ACTIVITY BY OBG SINCE LAST VISIT. MRC WORKING ON TAIL RACE. MAV & PM HAD A MEETING WITH DAVE NARDUCCI. 06/08/89: MF PETE CAPPONI TELECON, HE CLAIMED WORK IS STARTING TODAY (6/7/89) TO EXTEND MANWAYS ON SEPARATOR. HE ALSO CLAIMED MRC IS DISCHARGING A SHEEN INTO THE RIVER,. I TOLD HIM TO CALL MAV & REPORT THIS. 06/13/89: MF MAV SITE VISIT, SYSTEM CLEANED & CHECKED. SYSTEM SHOULD BE STARTED WITHIN A WEEK. 08/01/89: MF MAV 7/24/89 SITE VISIT, SYSTEM SHUT DOWN, NO ONE ON SITE. 7/28/89 TELECON PETE CAPPONI, HE CLAINED AIR STRIPPER NEEDS A BLOWER ALARM BEFORE SYSTEM CAN BE PUT IN SERVICE. 09/14/89: MF PRM SITE VISIT, SYSTEM IS DOWN (WE WERE TOLD SYSTEM HAS BEEN DOWN FOR THREE WEEKS. A SHEEN WAS NOTICED COMING OUT OF RIP RAP. NO SHEEN NOTICED FROM THE TAIL RACE AREA. 10/20/89: MF 10/16/89 SITE VISIT, SYSTEM DOWN, SHEEN & FREE PRODUCT NOTICED AT DISCHARGE OF THE TAIL RACE (SAMPLES TAKEN). SKF HAS PLANS TO SEAL THETAIL RACE. 10/26/89: MF SITE VISIT, SYSTEM ON LINE. NO SHEEN OR FREE PRODUCT NOTICED BY THE TAIL RACE. SHORT MEETING WITH DAVE NARDUCCI. 12/12/89: MF RNL PRM MARK JACKSON & TOM (AIR), MEETING / OBG, TRW. AIR PERMIT, SPEDES PERMIT, MW'S WERE DISCUSSED. SITE VISIT SCHEDULED FOR 1/10/90 TO CHECK MW PROTOCAL. 12/14/89: MF MAV SITE VISIT, SYSTEM DOWN (HI RIVER FLOW), JOHN ALLEN'S PERSONNAL ON SITE WORKING ON PUMP STATIONS. NO SHEEN/PRODUCT NOTICED AROUND TAIL RACE. DAVE NARDUCCI ON VACATION. 01/05/90: MF TELECON PETE CAPPONI, THE NEW

AIR STRIPPER WILL NOT BE ON SITE UNTIL THE WEEK OF 1/22/90. THE SYSTEM IS DOWN BECAUSE THE OLD AIR STRIPPER CAN NOT DO THE JOB. 02/02/90: MF MAV SITE VISIT, ARROW ENVIR. ON SITE INSTALLING PAD FOR AIR STRIPPER. MEETING WITH DAVE NARDUCCI, HE CLAIMED CONTAMINATION WAS FOUND WHEN DIGGING, HE SAMPLED. NO SHEEN NOTICED IN THE RIVER. 02/13/90: MF PRM SITE VISIT, CHECKED THE MW'S WITH OBG. THEY REQUESTED A MEETING NEXT MONTH. NO SHEEN NOTICED IN THE RIVER. 04/09/90: MF FOR RNL 3/30/90 TELECON MAV, HEAVY SHEEN & PRODUCT FROM AROUND TAIL RACE. SYSTEM DOWN DUE TO SPEDES VIOLATION. RIVER LEVEL LOW. TELECON PETE CAPPONI, NOT IN. 04/09/90: MF 3/23/90 SITE VISIT THE AIR STRIPPER IS DOWN. NO SHEEN NOTICED BY TAIL RACE. BRIEF MEETING WITH DAVE NARDUCCI. 04/09/90: MF FOR RNL 4/2/90 TELECON PETE CAPPONI, THE AIR STRIPPER IS UNDESIZED. WANTS OK TO OPERATE IT, NO DICE FROM SPILLS OR MARK JACKSON. 05/01/90: MF PRM TED SITE VISIT, GAVE TED A TOUR OF FACILITY. SYSTEM IS IN OPERATION & HAS BEEN FOR APPX 3 WEEKS. SHEEN NOTICED IN RIVER BY TAIL RACE & BY THE RIP RAP. 09/28/93: RNL - SYSTEM IN OPERATION. 689 GALLONS RECOVERED DURING 8/93 (8849 GALLONS TOTAL). 09/28/93: SYSTEM IN OPERATION. 689 GALLONS RECOVERED DURING 8/93 (8849 GALLONS TOTAL). 03/31/94: SYSTEM IN OPERATION. 11263 GAL. PRODUCT RECOVERED AS OF 2/9/94. 12/31/94: SYSTEM IN OPERATION. 12,257 GALS. RECOVERED AS OF 8/94. START STIP. 11/27/95: RECEIVED QUARTERLY REPORT FROM O&G FOR JULY THROUGH SEPTEMBER, PRODUCT IN MONTORING WELLS 4, 7, 8, 10, AND 14 03/18/96; RECEIVED 1995 ANNUAL REPORT FROM OBRIEN & GERE, TREATED 9,000,000 GALLONS DURING 1995, RECOVERED 1867 GALLONS OF OIL DURING 1995 FOR A TOTAL OF 14272 GALLONS SINCE STARTUP (1989) 08/09: Remedial investigation conducted which included forty-three (43) temporary wells/soil borings installed across the interior and exterior of the building. Soil and groundwater samples were collected from select temporary wells/soil borings. 12/21/09: Remedial Investigation Report of the August 2009 remedial investigation activities submitted to the DEC. 08/10: Additional investigation conducted to further characterize the extent of the free product detected beneath the building. Nine (9) monitoring wells (MW-35 through MW-43) and fourteen (14) temporary wells/soil borings (TW-44 through TW-57) were installed. Soil samples were collected from temporary wells/soil borings TW-44 through TW-57. Additionally, aguifer testing and product baildown testing were performed in August 2010. 09/29/10: Remedial Investigation Report Addendum of August remedial investigation activities submitted to the DEC. 09/14/11: Multi-phase extraction (MPE)/bioventing Pilot Study and Test Pit Installation Workplan submitted. 10/07/11: DEC conditional approval letter 10/11-13/11: Conducted a multi-phase extraction (MPE)/bioventing pilot study in the vicinity of monitoring well MW-43 to determine the effectiveness and technical feasibility of MPE as a remedial alternative at the Site. 10/16-17/11: Test pits were installed in the area surrounding monitoring wells MW-20 and MW-24 to determine if a petroleum source(s) were present in these locations which were contributing to the free product historically observed in these wells at thicknesses of greater than one foot. During the test pit investigation activities, a total of approximately 205 tons of soil were excavated and transported for disposal to Soil Remediation Inc. in Lowellville, Ohio. As part of the test pit excavations, monitoring wells MW-20 and MW-24 were removed and 10-inch diameter wells MW-20R and MW-24R were installed during the backfilling activities. The results of the test pit installation activities indicated that the free product thicknesses in the MW-20 and MW-24 areas had

Distance EDR ID Number Elevation Site EDR ID Number Database(s) EPA ID Number

S K F AEROENGINE NORTH AMERICA (Continued)

1000104067

historically been overestimated. No free product sources were identified within the test pit locations, and although petroleum hydrocarbons were present in the excavated soils, the free product thicknesses measured in replacement wells MW-20R and MW-24R following the excavation activities were two orders of magnitude less than the free product thicknesses measured in wells MW-20 and MW-24 prior to the excavation activities. 03/23/12: MPE/bioventing Pilot Study Report submitted to DEC. Based on the pilot test results as well as the logistics of implementing an active system in an occupied building, the MPE technology was determined to be marginally applicable to the conditions at the site and not practical for the foreseeable future. 07/02/13: A release of oil/water mixture occurred from the oil/water separator (OWS) at the Site. Oily water overflowed from the groundwater treatment system OWS onto the asphalt parking lot adjacent to the OWS and to a lower lying unpaved gravel area on the fringe of the parking lot The system was shut down and NYSDEC was notified. Spill No. 1303534 was assigned. Stantec estimated that a volume of less than four gallons of oil was present in the OWS prior to the release. Recovery activities were initiated on July 3, 2013, including vacuum recovery of pooled oil/water mixture and excavation and disposal of impacted soil/gravel to a depth of approximately six inches below grade. Two post-excavation samples were collected from the base of the excavation and along a sidewall of the excavation, respectively. The samples were submitted for analysis of total petroleum hydrocarbons (TPH), VOCs by USEPA Method 8260B, and semi-volatile organic compounds (SVOCs) by USEPA Method 8270C. 09/10/13: TED conference call with Craig Gendron (Stantec Project Manager) and Mike Newton (Stantec Site Manager). Oil seepage from Chadakoin river bank into cofferdam constructed for placement of rip rap along river. Oil seep occured during excavation of bank. Oil contained in cofferdam, pads and booms used to absorb oil. Gravel placed back in excavation. Stantec to provide letter report with site drawing. DEC requested clay or other barrier placed in area of seep to prevent further seepage. 09/11/13: TED site inspection, Jordan Rathbun (Stantec Envir. technician), Duane Roseman (OSC Maintenace), Pat Bliek and Mark (Matrix technicians) on site. Gravel previously placed in prior stream excavation removed and clay put back in its place. Preparing to place filter fabric over clay and place rip rap on top of fabric. Oil seepage began Monday 9/9/13 when excavating to key in rip rap at downstream of cofferdam. Excavation actually located approx. 4feet out from bank and oil seeping up from river bottom begining at 2-3 foot depth. It was noted that prior attempts to dewater dam had beeen unsuccesful do to water seepage through sand and gravel on river bottom beneath the large sand bags used to construct dam. Cofferdam approx. 110 long, east to west on north shore of river. East end of dam were seepage occurred approx. 56 feet east of pumping station P3. Original river sediment which was removed as well as gravel used to fill excavation and then removed stored on plastic and covered with plastic pending sampling and disposal. Per conversation with Pat Bliek earlier excavation to determine thickness of sand and gravel on river bottom, same depth and out same distance from river bank, 15-20 feet west, to determine thickness of sand and gravel, did not result in any seepage. Clay appeared to stop all seepage. Told Stanrec they could remove coffer dam Thursday if no further seepage. 12/23/13: Received Streambank Restoration Status Update/Completion Report. The Work was conducted at the Site to prevent further erosion of the Chadakoin River (the River) bank in

1000104067

proximity to the operating groundwater recovery system trench. The original plan consisted of excavating a key approximately 4 feet deep by 5 feet wide and 80 feet long along the shoreline of the River and backfilling with heavy stone fill similar to the original profile. A coffer dam would be installed around the Work area to minimize turbidity in the Work area. On Monday, September 9, during the streambank excavation, some petroleum hydrocarbon (PHC)-impacted soil was encountered. Product seepage was prevented from entering the River outside cofferdam and the Work area was temporarily secured. On September 16 five hand auger borings were advanced along the edge of the River and 5 Geoprobe borings were advanced along the top of the bank to evaluate the extent of PHC-impacted soil within the Work area. The results of the investigation indicated that PHC-impacted soils were present across the Work area, with the greatest impacts observed along the eastern half of the Work area. To prevent PHC impacts to the River the original plan was modified to incorporate the following additional elements. - Off-site transportation and disposal of PHC-impacted soil. - Continuous operation of a vacuum truck during the excavation work to remove areas of sheen/oil droplets as they developed and transfer of these fluids into the existing Oil/Water Separator for disposal. - Extension of the existing sand bag/plastic sheeting cofferdam into the slope at the east and west ends of the area of Work. - Installation of a reactive core mat (RCM) with Organoclay between the key and the excavated slope to provide a barrier between the PHC-impacted soil and the overlying heavy stone aggregate fill. - Installation of an aggregate layer to secure/protect the RCM. The Work resumed on October 1, 2013 and was completed as described above. 233.61 tons PHC-impacted soil disposed at Chautauqua County Landfill. 01/27/14: Received Spill Response/Mitigation Report 02/14/14: Received semi-annual Site Monitoring Report (SMR) for the period of July through December 2013. Site monitoring wells (MW-1 through MW-43), and temporary wells (TW-1 through TW-57) and RW-1 were gauged on 6/30 & 7/1/13. Wells MW-4, MW-7, MW-17, MW-18 & MW-40 were not accessible and MW-13 was previously destroyed. Also TW-2, TW-7, TW-11, TW-22, TW-23, TW-42, TW-51 and TW-57 were not accessible and wells TW-24, TW-31, TW-32, TW-35 and TW-36 were destroyed and TW-47 previously removed. Free-product was present in 18 monitoring wells and 17 temporary wells at thicknesses ranging from 0.01 feet (MW-24R, TW-46, and TW-56) to 3.65 feet (TW-52); Recovery well RW-1 exhibited a product thickness of 0.04 On October 10, 2013 2,108 gallons of oil/water mixture was retrieved from the oil/water separator; approximately 16 percent of the mixture was determined to be oil. The groundwater remediation system flow data indicated that 3,948,426 gallons of groundwater were recovered and discharged to the City of Jamestown BPU sanitary sewer system between June 24, 2013 and December 30, 2013 . The monthly discharge sampling and analysis has demonstrated that the discharge during the reporting period has been in compliance with the City of Jamestown BPU permit. 05/30/14: Received Remedial Investigation Work Plan for further assessing the location of historical tailraces and their potential influence on ongoing NAPL remediation. 07/01/14: DEC letter approving Remedial Investigation Work Plan. 08/14/14: Received semi-annual Site Monitoring Report (SMR) for the period of Jan. through June 2014. 02/19/15: Received Tailrace Investigation Report LNAPL Recovery Evaluation Work Plan. Fill material consisting of mainly gravel and sand with some silt. clay, cinders, slag, brick, metal shavings and wood was found

EDR ID Number

EPA ID Number

throughout the Site extending from surface to a depth ranging from approximately 7 to 13 feet bgs. A layer of gravelly sand or gravel fill was encountered in every transect at the base of the fill material at a depth of approximately 7 to 10 feet bgs and ranged in thickness from approximately 1 to 5 feet. Samples were collected and analyzed for FOC to evaluate solute transport retardation for possible future use in evaluating remediation enhancements. Following general observations made relating to observed LNAPL impacts: ? With the exception of T5-B3, each soil boring had at least a single depth that received at least a 1 on the UV fluorescence scale, indicating the presence of PHC impacts. ? With the exception of T2-B4, all borings had at least a single depth that received at least a 1 on the shake test scale. ? In general, LNAPL impacts were identified at depths coincident with the basal gravel/sand layer, where encountered. ? Observed LNAPL impacts extended through, but not appreciably beneath, this basal gravel/sand layer in a majority of the borings. ? Sporadic indication of LNAPL impacts were observed in shallower fill materials, such as those encountered on Transect T-5. ? LNAPL impacts generally coincided with the zone of water table fluctuation. ? The highest PID readings (~130 ppm) were observed at boring T6-B1, which coincided with the locations where chemical odors were detected. Discrete zones of thicker fill sequences that correlated to mapped tailraces were not found. Rather, broad zones of thick fill sequences were observed that extend some distance from the edges of the mapped tailraces. The coarse, basal sand/gravel layer was generally thickest where overall fill thickness was greatest. The thicker fill sequences with coarser fill materials generally showed greater LNAPL impacts. Further investigations are warranted to address these, and other, data gaps in the CSM. The balance of this document presents a work plan for these investigations. 5/25/17 GES submitted the Work Plan for the site. They will be advancing 6 borings and evaluating the residual product remaining in the subsurface. They plan to prepare a report of findings and provide it sometime in November 2017. 6/20/17 GES submitted an email: Francine I m following up on a voice mail I left you a few minutes ago. I called to inform you that the pump and treat system at the above referenced site has been shut down temporarily. We recently discovered what appeared to be a leak on the effluent water side of the oil/water separator. The system was shut down upon notice of this (6/6) and today we returned to site with a vacuum digging crew to determine the nature of the problem and hopefully repair. The leak was discovered in the effluent water pipe at the depth of 5 feet below grade and also approximately 1 foot below the water table. We left the system down as we have to regroup with our engineering team to develop a repair alternative or complete an excavation and repair plan, as a repair in the current configuration would require a significant excavation to complete. I ll let you know once we get a plan in place and understand the timing for repairs and restart better. Because the leak was on the treated water side of the separator, and is also upgradient of the recovery trench and HDPE barrier, we do not believe that this represents a release to the environment. Please contact me if you have any questions. Thanks. Devin Devin T. Shay Principal Hydrogeologist Groundwater & Environmental Services, Inc. 5 Technology Place, Suite 4 East Syracuse, NY 13057 (800) 220-3069, extension 4051 (315) 374-7648 mobile dshay@gesonline.com 9/5/17 Northrop Grumman submitted the 8/22/17 GES semiannual gw monitoring report for 1/1/17 to 6/30/17. Product levels were gauged. One vacuum

S K F AEROENGINE NORTH AMERICA (Continued)

1000104067

event took place on 2/14/17. 12/5/17 Northrop Grumman provided a letter documenting well closure on site to accommodate additional use of the building: Northrop Grumman Systems Corporation (NGSC) was recently contacted by the property owner at the above referenced location regarding redevelopment plans for the site. As part of a proposed building modification, the property owner, Jamestown Development Corporation III (JDC) has requested that NGSC abandon selected monitoring wells. Our team has evaluated the request from the property owner to abandon wells TW-1, 2, 3, 37, 38, 45, 46, 48, and 49. Of these wells, TW-48 is the only location where appreciable light non-aqueous phase liquid (LNAPL) is routinely detected during semi-annual gauging events. Typically, approximately 2 feet of LNAPL is detected at this well. Our team has determined that continued gauging of proximal wells TW-4 and TW-7 could serve to monitor possible changes in LNAPL conditions in this area of the site. The remaining monitoring wells could be abandoned without significant technical concern for the project data set, as nearby wells MW-14, MW-18, MW-22, MW-24R, and TW-40 can be utilized to collect representative groundwater elevations from this portion of the site. The technical consultant for JDC, Vince Grandinetti, has agreed with our technical assessment and is in concurrence with this approach. The Department agreed to the well closures. 3/16/18 The semiannual gw summary report was provided by Northrop Grumman: Operation and maintenance (O&M) has been performed on the recovery trench system periodically since startup. GES typically conducts a weekly check of the system. A suspected leak was identified in the discharge line from the oil/water separator during routine maintenance completed on June 6, 2017. The remediation system was immediately shut down as a result of the observation. The subsurface piping adjacent to the oil/water separator was exposed on June 20, 2017 using soft-dig methodologies, to confirm the location of the leak. GES retained Parratt-Wolff, Inc. of East Syracuse, New York to conduct soft-dig activities. The NYSDEC was notified of the confirmed leak, pending repairs, and planned system downtime on June 20, 2017 via email and voice mail. Paragon Environmental Construction, Inc. was retained to repair the subsurface pipe on June 27, 2017. GES provided oversight for the pipe repair activities. The repair was pressure tested prior to backfilling. Weekly visual inspections were conducted on the nearby Chadakoin River during June and July to confirm that LNAPL was not present on the water surface as a result of the system shutdown. The remediation system was restarted on August 1, 2017. A total of 22 operational inspections and system maintenance events were completed from August 1, 2017 through December 31, 2017. The groundwater recovery system flow data indicates that 2,530,505 gallons of groundwater were recovered and discharged to the City of Jamestown BPU sanitary sewer system between June 6, 2017 (last reading from previous reporting period) and December 27, 2017 (last reading from current reporting period). The monthly discharge sampling and analysis has demonstrated that the discharge during the reporting period has been in compliance with the City of Jamestown BPU permitting requirements. A summary of the data collected during the O&M events is summarized on the Remediation System Data Summary provided as Table 2. 10/1/18 On November 15, 2017 Northrop Grumman Systems Corporation (NGSC), at the request of the property owner, communicated with NYSDEC to request abandonment of selected monitoring wells located within and proximal to the northern portion of the building in order to make facility improvements. NYSDEC

S K F AEROENGINE NORTH AMERICA (Continued)

1000104067

approved the reguest on January 8, 2017. On May 14, 2018 through May 16, 2018 wells MW-39, TW-1, TW-2, TW-3, TW-37, TW-38, TW-39, TW-40, TW-44, TW-45, TW-46, TW-48, and TW-49 were abandoned in accordance with NYSDEC Groundwater Well Decommissioning Policy (NYSDEC, 2009). On May 22, 2018, a total of 88 wells were evaluated on the Site. Wells MW-10, MW-21, RW-1, TW-9, TW-36, and TW-40 could not be accessed due to ongoing facility operations which resulted in equipment or materials being staged over the wells. Wells TW-11 and TW-34 could not be accessed due to bent or broken well caps and/or well casings. Wells MW-25 and MW-32 could not be accessed because they were inundated by standing water. A summary of the observations during this event is as follows. " LNAPL was detected in 32 of the 78 wells gauged; "LNAPL sheen was observed on the interface probe at two well locations (MW-2 and TW- 17) but no LNAPL was detected with the probe; "Wells MW-65 and TW-43 were dry; "Apparent LNAPL thickness ranged from 0.01 feet to 0.1 feet in 6 wells; " Apparent LNAPL thickness ranged from 0.1 feet to 1.00 foot in 21 wells; " Apparent LNAPL thickness was greater than 1.00 foot in five (5) wells (MW-66, TW-9, TW- 19, TW-52 and TW-53); and "Maximum apparent LNAPL thickness was 2.35 feet in well TW-52. The LNAPL thicknesses observed from the data acquired during the May 2018 gauging event were consistent with the historical LNAPL thicknesses observed on the Site. As during past gauging events, the greatest LNAPL thicknesses were in wells located within the southern portion of the building (TW-52, MW-66, TW-52, and TW-53), on the easternmost portion of the Site at well MW-19, and within the northern portion of the building at well TW-7. The maximum LNAPL thickness observed during the May gauging event was in well TW-52 (2.35 feet), located within the southern portion of the building. Oil recovered via the groundwater recovery system is temporarily stored on the Site in the oil/water separator until an oil reclaim event is necessary. There was one (1) reclaim event during the reporting period of January 1, 2018 to June 30, 2018. GES provided oversight for the collection and removal of oil/waste from the Site on May 15, 2018. A vacuum truck unit collected 1,833 gallons of oil and water from the oil/water separator and the three (3) pump stations. The amount of oil accumulated in the truck was measured and the volume of oil collected was estimated to equal 600 gallons. The historical oil and water recovery data for the Site from the time of system start-up in 1988 through June 30, 2018, is provided on Table 4. As of June 30, 2018, a total of 20,369 gallons of oil and water have been removed from the Site during reclamation activities. Operation and maintenance (O&M) has been performed on the recovery trench system periodically since startup. A total of 26 operational inspections and system maintenance events were completed from January 1, 2018 through June 30, 2018. The groundwater recovery system flow data indicates that 7,345,863 gallons of groundwater were recovered and discharged to the City of Jamestown BPU sanitary sewer system between December 27, 2017 (last reading from previous reporting period) and June 26, 2018 (last reading from current reporting period). The monthly discharge sampling and analysis has demonstrated that the discharge during the reporting period has been in compliance with the City of Jamestown BPU permitting requirements. A summary of the data collected during the O&M events is summarized on the Remediation System Data Summary 10/16/18 GES provided the Supplemental investigation report. The report requests that the recovery trench system be turned off so that they can evaluate the site without the influence of the trench. FG

1000104067

requested that the owners consultant Vince Grandinetti review the proposal. Vince Grandinetti compco58@roadrunner.com 10/25/18 FG spoke to Vince Grandinetti 628-1241, 745-1307. He agreed to allow GES to turn off the trench recovery system. He will review the workplan when it is submitted and might request an additional well between the trench and the Chadakoin. 1/30/19 Northrup Grumman submitted the workplan for the shut down of the hydraulic system on site: Northrop Grumman Systems Corporation (NGSC) is submitting the attached Work Plan for Temporary Shutdown of Remediation System, prepared by Groundwater & Environmental Services, Inc., for your review and approval. The purpose of the work plan is to request approval for a 6-month temporary remediation system shutdown and monitoring period at the subject property (the Site). This temporary shutdown was recommended in the recently submitted Supplemental Site Investigation and Light Non- Aqueous Phase Liquid (LNAPL) Conceptual Site Model report, submitted to the NYSDEC on October 14, 2018, which summarizes the historic and current LNAPL and hydraulic conditions on the Site. As stated in the report, the next step in the process of evaluating the LNAPL occurrence is to allow the hydrogeologic system on the Site to return to static conditions and develop conclusions regarding the need for long-term hydraulic control. If you have any questions or comments on this report, please do not hesitate to call me at (310) 331-1716 or Kurt Batsel, our project manager, at (770) 578-9696. 2/6/19 GES submitted the semi annual report July - Dec 2018. GES personnel completed liquid level gauging at accessible monitoring wells at the Site on November 6, 2018. The depth to water, depth to LNAPL, and overall LNAPL thickness (if present) were measured with an oil/water interface probe during the monitoring event. If LNAPL was detected in a well, the measured (apparent) groundwater elevation was corrected by multiplying the measured LNAPL thickness in the well by the average specific gravity for LNAPL present on the Site (0.91). This value was then added to the apparent groundwater elevation to achieve the corrected elevation. The locations of LNAPL detections and the LNAPL thicknesses measured in wells across the Site during the November gauging event are summarized in the Liquid Level Data Summary provided as Table 1. The LNAPL distribution across the Site during the November gauging event is presented on Figure 3. A summary of LNAPL detections and thicknesses observed during the liquid level gauging event is provided below. On November 6, 2018, a total of 87 wells were gauged. Wells MW-10, RW-1, and TW-9 could not be accessed due to ongoing facility operations which resulted in equipment or materials being staged over the wells. Wells MW-14 and TW-11 could not be accessed due to bent or broken well caps and/or well casings. A summary of the wells that need cap or casing repairs was completed and repairs are scheduled to be addressed in early 2019. A summary of the observations during this event is as follows. ? LNAPL was detected in 36 of the 82 wells gauged; ? LNAPL sheen was observed on the interface probe at five well locations (MW-20R, MW- 24R, MW-27, OW-5 and TW-25) but no LNAPL was detected with the probe; ? Apparent LNAPL thickness ranged from 0.01 feet to 0.1 feet in 12 wells; ? Apparent LNAPL thickness ranged from 0.1 feet to 1.00 foot in 19 wells; ? Apparent LNAPL thickness was greater than 1.00 foot in five (5) wells (TW-4, TW-7, TW-19, TW-52 and TW-53); and ? Maximum apparent LNAPL thickness was 2.73 feet in well TW-53. The LNAPL thicknesses observed from the data acquired during the November 2018 gauging event were consistent with the historical LNAPL thicknesses observed on the Site. Consistent with past gauging events, the

greatest LNAPL thicknesses were in wells located within the southern portion of the building (TW-52, MW-66, TW-52, and TW-53), on the easternmost portion of the Site at well MW-19, and within the northern portion of the building at well TW-7. The apparent groundwater flow direction on the Site is to the south and to the east towards the groundwater recovery trench. 3/11/19 From: Charles Hampton Sent: Monday, March 11, 2019 3:35 PM To: Gallego, Francine (DEC) Cc: Ray Kampff Subject: RE: Spill Number 1808886 Weber Knapp Francine, We have reviewed the reports that you provided regarding the spill 8602953 TRW Bearings site. Background information in these reports indicate that a vapor degreaser formerly operated at the site and that During the late fall/winter of 1988, a groundwater recovery well (RW-1) was designed and installed in the isolated area on the eastern side of the building for the recovery of volatile halogenated organics detected in groundwater (Stantec, 2015). Would you provide the reports/documents pertaining to the investigation and remediation of the halogenated VOCs at the spill 8602953 TRW Bearings site? Thank You, Charles 3/20/19 The Division of Water provided the SKF pretreatment information from the Jamestown POTW. 3/27/19 Northrup Grumman requested that they be allowed to start the shut down. James Williams, the property owner, agreed that they could start work. NYSDEC is requesting that Northrup Grumman conduct the requested Phase II. cleanup any oil that is getting into the building and analyze a sample of product. 7/8/19 From: Devin T Shay Sent: Monday, July 08, 2019 11:06 AM To: Gallego, Francine (DEC) Cc: Kurt Batsel (batsel@dextra-group.com); compco58@roadrunner.com; 'James Williams' (ifwilliams@oscinc.com) Subject: Former TRW Bearings Site - 402 Chandler Street, Jamestown Francine, Thank you for the approval to proceed with the temporary system shut down work plan. GES is scheduled to turn the system off on July 16, and return to the site on July 18 for the first well gauging and site inspection. A monthly email summary will be provided to you per the approved work plan, with the first summary to be delivered mid-August. Regarding your request for a sample of the LNAPL, GES collected 9 samples of the LNAPL in 2015 which were evaluated by Torkelson Geochemistry, Inc. The physical and chemical analyses completed by Torkelson indicated that the LNAPL was characteristic of extremely weathered lubricating and cutting oils. Results of the analyses are summarized in the GES document Remedial Investigation Report, submitted to the Department on April 19, 2016. Let me know if you have any further questions. Thanks, Devin Devin T. Shay, PG Program Manager / Principal Hydrogeologist Office: 800.220.3069 ext. 4051 Mobile: 315.374.7648 dshay@GESonline.com Groundwater & Environmental Services, Inc. 5 Technology Place, Suite #4 East Syracuse, NY 13057 8/6/19 FG spoke to Devin Shay and Kurt Batsel and requested product sampling of the product in the areas of the original product recovery well where chlorinated solvents were originally identified as having been utilized. FG notified them that if they were not going to do the product sampling requested, the Department would do it. They indicated that we would like to collect a split sample if the Department does sample the recovery well. 8/23/19 From: Devin T Shay Sent: Tuesday, August 20, 2019 3:40 PM To: Gallego, Francine (DEC) Cc: Kurt Batsel (batsel@dextra-group.com); 'James Williams' (jfwilliams@oscinc.com); compco58@roadrunner.com Subject: Jamestown - Former TRW Bearings Facility - Spill # Francine: This email serves as the first monthly summary of activities conducted during the temporary system shut down at the Former TRW Facility in Jamestown.

We have attached a summary table of the well gauging data for your review. Per the approved work plan, weekly gauging is conducted at 33 monitoring wells (7/17, 7/23, 7/30, and 8/6), and comprehensive well gauging is completed monthly (conducted on 8/13). Based on the increase in LNAPL thickness at well MW-56 during the first month s shut down (0.07 ft to 1.78 ft), we plan to add this well to the weekly gauging list. During the reporting period, the Chadakoin River was inspected weekly for any evidence of LNAPL impacts or sheen. No evidence of LNAPL or sheens were noted. Based on the observations so far, we plan to continue with the temporary system shut down evaluation period. Please let me know if you have any questions. Thanks, Devin Devin T. Shay, PG Program Manager / Principal Hydrogeologist Office: 800.220.3069 ext. 4051 Mobile: 315.374.7648 dshay@GESonline.com 8/27/19 TRW submitted the semiannual report 2019. Oil recovered via the groundwater recovery system is temporarily stored on the Site in the oil/water separator until an oil reclaim event is necessary. There were no reclaim events during the reporting period. Historical oil and water recovery data for the Site from the time of system start-up in 1988 through June 30, 2019 is provided in Table 4. As of June 30, 2019, a total of 20,369 gallons of oil and water have been removed from the Site during reclamation activities. Weekly operation and maintenance (O&M) was performed on the recovery trench system during the reporting period. The groundwater recovery system flow data indicates that 5,876,204 gallons of groundwater were recovered and discharged to the City of Jamestown BPU sanitary sewer system between December 27, 2018 (last reading from previous reporting period) and June 25, 2019 (last reading from current reporting period). The monthly discharge sampling and analysis has demonstrated that the discharge during the reporting period has been in compliance with the City of Jamestown BPU permitting requirements. A summary of the data collected during the O&M events is summarized in the Remediation System Data Summary provided as Table 2. 9/19/19 From: Devin T Shay Sent: Thursday, September 19, 2019 9:02 AM To: Gallego, Francine (DEC) Cc: Kurt Batsel (batsel@dextra-group.com); 'James Williams' (ifwilliams@oscinc.com); compco58@roadrunner.com Subject: Jamestown - Former TRW Bearings Facility - Spill #8602953 Francine: This email serves as the second monthly summary of activities conducted during the temporary system shut down at the Former TRW Facility in Jamestown. We have attached a summary table of the well gauging data for your review. Per the approved work plan, weekly gauging is conducted at 33 monitoring wells (8/20, 8/29, 9/3), and comprehensive well gauging is completed monthly (conducted on 9/10). During the reporting period, the Chadakoin River was inspected weekly for any evidence of LNAPL impacts or sheen. No evidence of LNAPL or sheens were noted. Based on the observations so far, we plan to continue with the temporary system shut down evaluation period. Please let me know if you have any questions. Thanks, Devin Devin T. Shay, PG Program Manager / Principal Hydrogeologist Office: 800.220.3069 ext. 4051 Mobile: 315.374.7648 dshay@GESonline.com Groundwater & Environmental Services, Inc. 5 Technology Place, Suite #4 East Syracuse, NY 13057 9/23/19 From: Devin T Shay Sent: Monday, September 23, 2019 1:02 PM To: Gallego, Francine (DEC) Cc: Kurt Batsel (batsel@dextra-group.com) Subject: RE: Former TRW Bearings Site, Jamestown - LNAPL sampling request Francine, Based on your previous emails, you are requesting LNAPL sampling for VOCs analysis and the collection of groundwater samples at the following locations: MW-2,

Distance

Elevation Site

Database(s)

EDR ID Number

EPA ID Number

MW-5, MW-6, MW-10, MW-19, MW-21, MW-29, MW-30, MW-31, MW-32, MW-34, and RW-1. We have added well MW-56 to this list, as it is proximal to MW-10, MW-19, and MW-29. Based on the current gauging data, there is insufficient LNAPL for sampling at wells MW-2, MW-5, MW-29, MW-31, MW-32, MW-34, MW-21, and RW-1. At each of these locations, there is currently no measurable LNAPL, or the LNAPL thickness is less than 0.1 feet. At these locations, we would only be able to collect groundwater samples. At wells MW-19, MW-30, and MW-56, we should be able to collect LNAPL samples, based on the accumulated thickness observed previously. We will also collect groundwater samples. We are not aware of LNAPL thickness at wells MW-6 and MW-10, but we can check them in the field and collect LNAPL and groundwater samples as conditions allow. Groundwater samples will be collected using low-flow methodology and analyzed via EPA Method 8260, reporting the full target list of analytes. Per my previous email, for the LNAPL samples, TestAmerica stated the analysis you requested can be performed by basically treating the LNAPL similar to a soil sample and using methanol to extract the volatiles from the sample. They would then dilute the methanol and analyze for the volatile compounds. This type of analyses typically involves multiple dilutions and results in reporting limits in the ppm, rather than ppb range. Please respond confirming this approach and we will complete the sampling as outlined. Thank you, Devin Devin T. Shav, PG Program Manager / Principal Hydrogeologist Office: 800.220.3069 ext. 4051 Mobile: 315.374.7648 Follow Us: Website - LinkedIn - Twitter Safety. From start to finish. 11/5/19 TRW notified the Department that a sheen was discovered. From: Kurt Batsel Sent: Tuesday. November 05. 2019 3:46 PM To: Gallego, Francine (DEC) Cc: Devin T Shay Subject: Former TRW Plant, Jamestown NY Francine Devin and I tried to reach you today via phone but were unable to leave a voice mail for you. As part of the trench shut down monitoring program at the Jamestown site, GES was onsite today gauging wells and inspecting the Chadakoin River. During the visit, the site technician noticed a sheen emanating from the tailrace where it empties into the Chadakoin. As per our shutdown work plan, the presence of sheen would trigger restart of the pump and treat system, so we restarted the system today. In addition, GES has placing and anchored a length of sorbent boom across the tailrace effluent to catch the sheen. GES will return to site in a day or two to check on the system and inspect the tailrace again. We wanted to let you know of this development and see if you have any questions or need any additional information at this time. Kurt R. Batsel, P.E. - The Dextra Group, Inc. T: 770.578.9696 batsel@dextra-group.com "

DEC Memo: "07/08/13 TDJ WENT TO COMPANY LOCATION WHERE SPILL HAD BEEN CLEANED

UP AND CONTAMINATED STONE AND SOIL HAD BEEN PLACED INTO ROLL OFF CONTAINER. SPOKE WITH COMPANY REP. WHO STATED THAT OVERFLOW OF OIL/WATER SEPERATOR FROM HOLDING TANK CAUSED APPROX. 4 GALLONS OF OIL IN A 150 GALLON MIXTURE WITH WATER TO FLOW ON PAVED AREA TO SOIL ON EDGE. CHADOCOIN RIVER IS ON EDGE OF PROPERTY BUT RUNNOFF DID NOT APPEAR TO REACH THAT FAR. HOLDING TANK ALARMS AND PUMPS WERE BEING WORKD ON AS I WAS ONSITE. NO VISUAL CONTAMINATION IS PRESENT AND DUG AREA WAS FILLED WITH CLEAN STONE. SAMPLES WERE TAKEN FROM CONTAINER FOR LANDFILL APPROVAL. 11/22/13 TDJ SPOKE WITH TIM DIEFFENBACH WHO

STATED THAT THE COMPANY HAS DECIDED TO REMOVED FURTHER SOIL FROM AREA

Waste code: D007

. Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

. Waste code: D010 . Waste name: SELENIUM

. Waste code: D011 . Waste name: SILVER

Waste code: D040

Waste name: TRICHLORETHYLENE

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE,

1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006

Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT

FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF

ALUMINUM.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 1456600

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 316400

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RISK AND TECHNOLOGY REVIEW

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that

EDR ID Number

discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Update By: Site Description: 708

Jamestown (c) 03/23/2015 04/18/2016 BXANDERS

Location: The Harrison Street Site is located in an urban area in the City of Jamestown, Chautuauqua County. The site is located on the north side of Harrison Street and is bounded by Harrison Street to the south, an active railroad line to the north, and vacant land to the east and west. Site Features: The Site is currently vacant land with green areas, trees, a historic parking area and several remnant building slabs on the northeast portion of the site. Numerous industrial buildings underwent phased demolition between 1988 and 1999. Current Zoning/Use: The site is located in a Manufacturing Zone and is currently vacant. Historical Use: The Site was initially developed as a textile mill between 1867 and 1881. There have been a variety of historic operations in connection with the site including a metal plating company, a chemical company, a dry cleaner, metal machining facilities and finally an office furniture manufacturer (Watson Manufacturing Company). Site Geology and Hydrogeology: Site soils predominantly consist of Urban land (Ur) with minor components including Minoa, Valois, Canandaigua, Niagara and Chenango. This soil consists of nearly level to sloping areas in which 85 percent or more of the surface is covered with asphalt, concrete or other impervious materials. The site contains varying thickness (1 to 14 feet) of urban fill consisting of sand, brick and foundry sand. Below the site fill, surficial geology consists of kame deposits including kames, eskers, kame terraces and kame deltas which are composed of coarse to fine gravel and/or sand. These deposits have lateral variability in sorting, coarseness and thickness (ranging from 10 to 30 meters). The overburden is underlain by bedrock consisting of Ellicott and Dexterville formations of shale and siltstone belonging to the Conneaut Group. Groundwater at the site is shallow and presumed to flow to the south-southeast toward the Chadakoin River. A Phase 2 site investigation of the site was previously conducted in 2000. Ten borings were advanced, five of which were sampled and five monitoring wells were installed. The site contains varying thickness (1 to 14 feet) of urban fill consisting of sand, brick and foundry sand. With the exception of the urban fill, evidence of potential contamination was observed in only one boring location. This boring was located in the former courtyard area and exhibited elevated VOC levels as determined by vapor screening and moderately strong petroleum odors. The contamination in this boring sample location consisted of three PAH compounds above unrestricted use SCOs and one PAH compound (benzo(a)pyrene) slightly above the commercial use SCO(1.1 ppm vs.1.0). Arsenic, chromium and silver were detected above unrestricted use SCOs. None of the groundwater samples revealed VOC contamination. The water quality was poor as exhibited by elevated levels of some inorganic compounds. A 5/2015 limited supplemental investigation was implemented to obtain additional site characterization data for BCP eligibility determination. The supplemental investigation revealed several PAHs above unrestricted SCOs, and benzo(a)pyrene at two test pit locations with levels nominally above commercial use SCOs (2.3 to 2.4 ppm vs 1.0). Arsenic was detected in three test pit locations with levels above the

commercial SCO (30.1, 178 and 349 ppm vs. 16). Barium was detected above the commercial SCO at one location (591 ppm vs 400). Other

Env Problem:

ation Site Database(s) EPA ID Number

HARRISON STREET SITE (Continued)

Health Problem:

S117851116

EDR ID Number

metals including chromium, lead, mercury and silver were only detected at levels above unrestricted use. Groundwater was encountered in several of the test pits. A petroleum looking product accumulated on the water surface. Based upon the concentrations and chemical characteristics of the PAHs at or below commercial SCOs, and the absence of any organic compounds in in the monitoring wells situated downgradient of the courtyard area, the soil contamination does not appear to have, nor is it expected to migrate in soil, nor is the soil contamination expected to significantly impact groundwater quality. The extent of this contamination in the courtyard area and hydraulic lift soil cavity has not been fully delineated. The petroleum observed in the 5/2015 limited site characterization will require remediation. The DEC was notified 9/14/2015 that the Applicant withdrew from the BCP. The petroleum contamination was referred to spills 9/15/2015.

Contamination was referred to spills 9/15/2015.

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised

as additional information becomes available.

Town: Jamestown (c)
Record Added Date: 05/10/2019
Record Updated Date: 06/18/2019
Update By: CRSTANIS

Site Description:

Location: The Site is located in an urban-suburban area, on the northwest corner of the intersection of Chandler Street and Allen

Street in the City of Jamestown. The Site is bounded to the west by the Chadakoin River. Site Features: The main site feature is an industrial building comprising approximately 105,500 square feet, which is in active use by the Requestor. An asphalt-paved parking area is located in the southeast portion of the site, in front of the building. The northern edge of the site contains a concrete access driveway. Current Zoning and Land Use: The site is located in the M (Manufacturing) zoning district, which allows a wide variety of commercial, industrial and manufacturing uses. City of Jamestown Code 300-0314. The site s present industrial use (metal fabricating and finishing, with associated office use in a portion of the building) is allowed in the M zoning district. The site is bounded to the north by vacant land, with the D.C. Rollforms site (a now-vacant former industrial site in the State Superfund Program [Site No. 907019]) beyond; to the east by Allen Street, with a residential neighborhood beyond; to the south by Chandler Street, with a parking lot, grassy area, and tavern/restaurant beyond; and to the west by the Chadakoin River, with a separate tax parcel used for the Requestor s industrial operations (i.e., for plating) beyond; note that this separate parcel, located at 415 Chandler Street, is not proposed for inclusion in the Brownfield Cleanup Program in this Application. The surrounding neighborhood contains a mix of residential, commercial, and industrial uses, in zoning districts such as M (Manufacturing), L-M (Light Manufacturing), C-M (Service & Highway Commercial), and R-2 (Double-Family Residential). The nearest residential area is the neighborhood across Allen Street, approximately 50 feet to the east of the site. The former TRW Bearings Division MRC site. a NYSDEC spill site (No. 8602953), is located approximately 90 feet to the

southwest of the site, across the Chadakoin River. Past Use of the

Site: Currently the +/-2.65-acre site is developed with an

EPA ID Number

approximately 105,000 square foot building that was constructed immediately adjacent to the Chadakoin River (on the river s east bank) in about 1910 with subsequent additions to the north, east and northeast through the 1960s. From at least 1902 until sometime between 1930 and 1949, approximately 14 residential buildings and several out-buildings were located on the eastern portion of the site. During this time period, the Morse Avenue right-of-way was located on the site, adjacent to the east of the Weber-Knapp Company (Reguestor) building, trending north-northeast from Chandler Street and ending near the northern edge of the Site. The building at the site is currently used for manufacturing, warehousing and office operations. In the 1930s, a brass foundry was located in the area that is now the northwestern portion of the building, and in the 1940s the brass foundry was moved to an adjacent area to the northeast of the previous location and a metals plating area was constructed in the area of the 1930s brass foundry. Metals plating operations were conducted in the building in the 1940s through about 1975. The original footprint of the building was expanded to the north and east over the Morse Avenue right-of-way and the former residential properties in this area between the 1940s and 1960s. Between about 1969 and 1993, degreasing operations using trichloroethene (TCE)-based solvent were conducted in the central portion of the building. Site Geology and Hydrogeology: The site is located in an urban-suburban area, and while the site contains no surface water bodies or noteworthy geological features, it is bounded to the west by the Chadakoin River. Fill material, generally consisting of sand and gravel, at times intermixed with lesser amounts of concrete, brick, coal, glass and metal fragments, ash, cinders and/or wood/plant fibers, is present at depths ranging between approximately 2.5 ft. bgs and 9.5 ft. bgs. Indigenous soil is present below the fill in each test boring, generally consisting of a silt layer containing plant fibers/peat material, underlain by fine-to-coarse sand and gravel, underlain by glacial till that generally starts at a depth of about 11.5 ft. bgs. The depth to the top of apparent bedrock increases from east to west, ranging from about 9 ft. bgs in the eastern portion of the site to over 16 ft. bgs near the Chadakoin River. The depth to groundwater at the site ranges between approximately 2.0 ft. bgs and 6.4 ft. bgs. Groundwater flow across the site varies by location. Shallow groundwater in the northern portion generally flows from north to south; shallow groundwater in the eastern portion appears to flow toward the west, away from Allen Street; and shallow groundwater on the western portion appears to flow toward the east-southeast, away from the Chadakoin River. The shallow groundwater from the eastern and western portions merges in the central portion (i.e., an area of the site that was previously occupied by Morse Avenue), and thereafter groundwater generally appears to flow toward the south. A continuous concrete retaining wall that extends generally along the western site boundary is the foundation for the west side of the site building. This retaining wall appears to be a hydraulic barrier preventing the discharge of shallow groundwater into the Chadakoin River, and it may contribute to the overall southerly groundwater flow patterns observed.

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available. Information submitted with the BCP application regarding the

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Record Updated Date: 07/25/2019
Update By: JLDYBER

Location: The site is comprised of the off site area surrounding the BCP Site, C907046, situated in the center of the City of Jamestown in Chautauqua County. The site extends along Water Street east of the intersection of Water Street and Foote Avenue. Site Features: The area is generally flat and includes mixed commercial and residential. Current Zoning and Land Use: The area is interspersed with single and multi-family residential and commercial properties. Past Use of the Site: Within the Industrial Heritage Corridor in the City of Jamestown the current uses, save for the lack of manufacturing, are consistent with the past use. The area is interspersed with single and multi-family residential and commercial properties. From as early as 1888 to the late 1840 s the site operated as a worsted mill manufacturing yarns and cloth. By 1963 the Chautauqua Hardware Corporation was located on the site. This company was involved with furniture trimmings and hardware manufacturing. Operations included electroplating, nonferrous die-casting, polishing, anodizing, and other processes related to brass and bronze metal finishing. This operation used various hazardous and petroleum compounds. In 2005, the Chautauqua Hardware Corporation c/o FKI Industries sold the site to the Community Development Association, LLC, which has subsequently merged with Lynn Development, Inc. From 2005 to present primary uses were for various community service groups including: Food Bank of WNY, Community Helping Hands, Christian Bowhunters, etc. Site Geology and Hydrogeology: Local soils can be classified as urban land, which are typically identified and are highly impacted from commercial, industrial or residential use. Much of the site is covered by

EDR ID Number

impervious features such as buildings, streets, and paved parking lots. Fill ranges from 3 feet below ground surface (bgs) up to 8 feet below ground surface along the Chadakoin River. Underlying fill material are layers of silty clay and gravel. Hydrogeology would anticipate flow towards the Chadakoin River to the north, although it could be non-uniform due to impervious structures from past

development and construction activities on site.

Env Problem: Nature and Extent of Contamination: The nature and extent of

contamination is currently being investigated due to presence of sub-slab and indoor air impacts at the Gateway Lofts Supportive Apartments Brownfield Cleanup Program (BCP) site, Site No. C907046, presumed as a result of past operations as a brass and bronze manufacturing facility. Contaminants of concern include Volatile Organic Compounds (VOCs) including trichloroethene (TCE), tetrachloroethylene (PCE) and cis-1,2-dichloroethene. Vapors emanating from source and potential source areas within soil and fill

at the BCP site may have migrated into adjacent property soils and fill, possibly impacting sub-slab and indoor air of off-site

properties. The investigation is on-going and the assessment will be

updated as further information becomes available.

Health Problem: As information for this site becomes available, it will be reviewed by

the NYSDOH to determine if site contamination presents public health

exposure concerns.

Record Updated Date: 05/15/2019
Update By: CRSTANIS
Site Description: Location: The s

Location: The site is comprised of 10 individual parcels, and is approximately located in the center of the City of Jamestown in Chautaugua County. In general, the site is situated in a mostly industrial section of the City that contains some residential structures. The site is located along Water Street in Jamestown east of the intersection of Water Street and Foote Avenue. The rear of the site, north of Water Street, is bordered by the Chadakoin River that runs through the middle of Jamestown. The site is part of the Downtown District of the Chadakoin River Central/Eastern Brownfield Opportunity Area (BOA) and is in an En-Zone Site Features: The site includes a large sprawling former manufacturing facility with multiple sections containing one; two and four-story areas. The building is surrounded by asphalt parking and drive areas and the Chadakoin River is immediately north, northwest and northeast of the site. There are no major changes of topography on the site. The site is generally flat and has a gentle slope towards the north to the river. Current Zoning and Land Use: The site is currently used by Community Helping Hands as a community service center with a soup kitchen, and provides youth activities such as archery ranges, roller park, laser tag and computer and other academic related youth and community services. A few small businesses also operate or store equipment and materials at the site. Some of the former adjacent industrial buildings have been converted to commercial and community service operations. The site and surrounding parcels are all zoned M Manufacturing. Residential and some commercial zoning surround the site. Past Use of the Site: The site and surrounding area have been predominantly used for manufacturing. Historically the site was used by two different manufacturing companies. In 1888 the Jamestown Woolen Spinning Company built a brick factory on the site to produce yarns and cloth. The company changed to the Empire Worsted Mills in 1896 that operated at the site until approximately the late 1940s. By 1963 the Chautauqua Hardware Corporation was located on the site. This company was involved with furniture trimmings and hardware manufacturing and fabrication including metal household furniture. Operations included electroplating, nonferrous die-casting, polishing, anodizing and coloring, brass and zinc castings and zinc, lead, magnesium, tin, brass, bronze, steel and iron tubing; as well as cement, plastic and rubber tubing. This operation used various hazardous and petroleum compounds. In 2005, the Chautauqua Hardware Corporation c/o FKI Industries sold the site to the Community Development Association, LLC, which has subsequently merged with Lynn Development, Inc. From 2005 to present primary uses were for various community service groups including: Food Bank of WNY, Community Helping Hands, Christian Bowhunters, etc. Site Geology and Hydrogeology: Site soil can be classified as urban land, which are typically identified and are highly impacted from commercial, industrial or residential use. Much of the site is covered by impervious features such as buildings, streets, and paved parking

lots. Fill was discovered in soil borings across the site with thicknesses ranging from 3 feet below ground surface (bgs) in the middle of the site to up to 8 feet bgs at the rear of the site along the Chadakoin River. Various industrial material and contaminants were noted within the fill layer. Below fill material sits layers of silty clay and gravel. Hydrogeology on site was not investigated, but most likely flows towards the Chadakoin River to the north, although could be nonuniform due to impervious structures from past

development and construction activities on site.

Env Problem: The nature and extent of contamination is consistent with impacts

from past facility operations including metal cleaning and vapor degreasing. Contaminants of concern include Volatile Organic Compounds (VOCs) including trichloroethene (TCE), tetrachloroethene (PCE),cis -1,2-dichloroethene carbon tetrachloride and methylene chloride. Vapors emanating from source and potential source areas within soil and fill have the potential to migrate into adjacent

property soils and fill. The investigation is on going and the assessment will be updated as further information becomes available.

Information submitted with the BCP application regarding the

conditions at the site are currently under review and will be revised

as additional information becomes available.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SUPERFUND (NON-NPL)

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Site Description: Site Location: The site borders with Allen Street on the east, the

Chadakoin River along west, Webber Knapp and JURA property on the south, and Heavy Press and Tool, Inc. on the north. Site Features: Currently the site is vacant. Only a temporary groundwater treatment building is on site. Current Zoning and Land Use: The property is currently zoned as Industrial / Commercial Past Use of the Site: The

prime type of industry on this site had been metal tool

manufacturing. The manufacturing operations started in approximately in 1910 by J. P. Daniel Company. In 1948, Pendleton Tool Industries acquired the property. In 1964, the property was purchased by the Proto Tool Company, a subsidiary of the Ingersoll-Rand Company. The name of the plant was changed to Ingersoll-Rand in 1976. From 1964 to

1985, chemicals such as trichloroethylene were used in various processes such as acid stripping, etching, solvent cleaning,

electroplating and painting. Prior to 1972, the wastes from various processes were discharged directly to the Chadakoin River. Bulk wastes; such as solvents, paints and sludges, were removed from the site in 1984 during demolition of on-site buildings. In 1985, Ingersoll Rand donated this property to the Jamestown Urban Renewal Agency (JURA). In 1987, JURA sold the site property to Dowcraft Corporation. Site Investigations: In 1991, a Site Assessment was conducted for Dowcraft. The investigation revealed that soil and groundwater are contaminated with volatile organic compounds (VOCs). Elevated levels of metals and oil and grease were found in soil samples. Non-aqueous phase liquid due to oil was also found at the site. Under an interim remedial measures (IRM), an Enhanced Reductive De-chlorination System (injecting molasses into groundwater to degrade chlorinated solvents) and an oil recovery system was installed in 1998. Lead and PCBs contaminated soils were excavated and disposed off-site in 2000. The RI/FS was completed in 2002. A Record of Decision (ROD) was issued in 2003. Elements of the selected remedy consisted of a vacuum-enhanced pumping and recovery (VEP/VER) system to address the non-aqueous phase liquid contaminants and groundwater, excavation of contaminated soils, river bank stabilization, and covering the excavated areas with clean fill. The Responsible Party signed an Order on Consent in 2005 to design and construct the remedy. Construction activities for the Remedial Action were completed in 2007. The Engineering Construction Completion Report and Site Management Plan (SMP) were approved on July 20, 2009. A deed restriction was filed on 11/29/2005. Currently the groundwater at the site is being remediated by the VEP/VER system in accordance with the SMP. Site Geology and Hydrogeology: The site is located along the southern perimeter of the area mapped as part of Jamestown Aquifer. The site geology consists of surficial layer of fill materials (7-15 ft) underlying gray or brown till (less than a foot to over 15 feet). The fill materials consist of silt, gravels, cinders, brick, concrete, and slag. In western half of the site towards the Chadakoin River, native deposits of sand, silt, clay and gravel (generally less than 4 feet in thickness) occur between the fill and underlying till. The bedrock consists of shale rock. The groundwater in the site area flows northwest towards Chadakoin River. Nature and Extent of Contamination: Prior to Remediation: Contamination of soil in the parking lot area of the site (PCBs-up to 10.7 ppm; Lead-up to 33,100 ppm) was excavated and removed from the site in 2000. The levels of groundwater contamination reported during the RI were: TCE (up to 830,000 ppb), DCE (up to 34,000 ppb) and Vinyl Chloride (up to 3,200 ppb). The Responsible Party began addressing the groundwater contamination by in-situ and ex-situ treatment beginning in 1998. The subsurface soil at the site consists of sand, silt, gravels, fill, and slag. The subsurface soil varies from 7 to 15 feet in depth which is underlain by shale bedrock. The surface water and groundwater flow towards the Chadakoin River which

is immediately adjacent to the site. The Remedial Action required by the ROD was conducted at the site during 2007. The remediation addressed the contamination located along the river bank and in sediments in the Chadokoin River. The installation of a barrier wall along the riverbank, coupled with the on-going Groundwater Collection and Treatment System will mitigate contamination migration at the site. Post-Remediation: The site is being monitored under an

contaminated soil or groundwater is unlikely unless they dig below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants in indoor air in the on-site building should it be occupied. An evaluation of the potential for soil vapor intrusion to occur will be completed for any future on site development and actions will be taken to address potential exposures, if necessary. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Ingersoll Rand donated this property to the Jamestown Urban Renewal Agency (JURA). In 1987, JURA sold the site property to Dowcraft Corporation. Site Investigations: In 1991, a Site Assessment was conducted for Dowcraft. The investigation revealed that soil and groundwater are contaminated with volatile organic compounds (VOCs). Elevated levels of metals and oil and grease were found in soil samples. Non-aqueous phase liquid due to oil was also found at the site. Under an interim remedial measures (IRM), an Enhanced Reductive De-chlorination System (injecting molasses into groundwater to degrade chlorinated solvents) and an oil recovery system was installed in 1998. Lead and PCBs contaminated soils were excavated and disposed off-site in 2000. The RI/FS was completed in 2002. A Record of Decision (ROD) was issued in 2003. Elements of the selected remedy consisted of a vacuum-enhanced pumping and recovery (VEP/VER) system to address the non-aqueous phase liquid contaminants and groundwater, excavation of contaminated soils, river bank stabilization, and covering the excavated areas with clean fill. The

Responsible Party signed an Order on Consent in 2005 to design and construct the remedy. Construction activities for the Remedial Action

were completed in 2007. The Engineering Construction Completion Report and Site Management Plan (SMP) were approved on July 20, 2009. A deed restriction was filed on 11/29/2005. Currently the groundwater at the site is being remediated by the VEP/VER system in accordance with the SMP. Site Geology and Hydrogeology: The site is located along the southern perimeter of the area mapped as part of Jamestown Aquifer. The site geology consists of surficial layer of fill materials (7-15 ft) underlying gray or brown till (less than a foot to over 15 feet). The fill materials consist of silt, gravels, cinders, brick, concrete, and slag. In western half of the site towards the Chadakoin River, native deposits of sand, silt, clay and gravel (generally less than 4 feet in thickness) occur between the fill and underlying till. The bedrock consists of shale rock. The groundwater in the site area flows northwest towards Chadakoin River. Nature and Extent of Contamination: Prior to Remediation:

Env Problem:

Contamination of soil in the parking lot area of the site (PCBs-up to 10.7 ppm; Lead-up to 33,100 ppm) was excavated and removed from the site in 2000. The levels of groundwater contamination reported during the RI were: TCE (up to 830,000 ppb), DCE (up to 34,000 ppb) and Vinyl Chloride (up to 3,200 ppb). The Responsible Party began addressing the groundwater contamination by in-situ and ex-situ treatment beginning in 1998. The subsurface soil at the site consists of sand, silt, gravels, fill, and slag. The subsurface soil varies from 7 to 15 feet in depth which is underlain by shale bedrock. The surface water and groundwater flow towards the Chadakoin River which is immediately adjacent to the site. The Remedial Action required by the ROD was conducted at the site during 2007. The remediation addressed the contamination located along the river bank and in sediments in the Chadokoin River. The installation of a barrier wall along the riverbank, coupled with the on-going Groundwater Collection and Treatment System will mitigate contamination migration at the site. Post-Remediation: The site is being monitored under an operation, maintenance and monitoring Plan.

Health Problem:

Access to the site is unrestricted. However, contact with contaminated soil or groundwater is unlikely unless they dig below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants in indoor air in the on-site building should it be occupied. An evaluation of the potential for soil vapor intrusion to occur will be completed for any future on site development and actions will be taken to address potential exposures, if necessary. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 56536

Site Description: Site Location: The site borders with Allen Street on the east, the

Chadakoin River along west, Webber Knapp and JURA property on the south, and Heavy Press and Tool, Inc. on the north. Site Features: Currently the site is vacant. Only a temporary groundwater treatment building is on site. Current Zoning and Land Use: The property is currently zoned as Industrial / Commercial Past Use of the Site: The

prime type of industry on this site had been metal tool

manufacturing. The manufacturing operations started in approximately in 1910 by J. P. Daniel Company. In 1948, Pendleton Tool Industries acquired the property. In 1964, the property was purchased by the Proto Tool Company, a subsidiary of the Ingersoll-Rand Company. The name of the plant was changed to Ingersoll-Rand in 1976. From 1964 to 1985, chemicals such as trichloroethylene were used in various processes such as acid stripping, etching, solvent cleaning, electroplating and painting. Prior to 1972, the wastes from various processes were discharged directly to the Chadakoin River. Bulk wastes; such as solvents, paints and sludges, were removed from the site in 1984 during demolition of on-site buildings. In 1985, Ingersoll Rand donated this property to the Jamestown Urban Renewal Agency (JURA). In 1987, JURA sold the site property to Dowcraft

Corporation. Site Investigations: In 1991, a Site Assessment was conducted for Dowcraft. The investigation revealed that soil and

groundwater are contaminated with volatile organic compounds (VOCs). Elevated levels of metals and oil and grease were found in soil samples. Non-aqueous phase liquid due to oil was also found at the site. Under an interim remedial measures (IRM), an Enhanced Reductive De-chlorination System (injecting molasses into groundwater to degrade chlorinated solvents) and an oil recovery system was installed in 1998. Lead and PCBs contaminated soils were excavated and disposed off-site in 2000. The RI/FS was completed in 2002. A Record of Decision (ROD) was issued in 2003. Elements of the selected remedy consisted of a vacuum-enhanced pumping and recovery (VEP/VER) system to address the non-aqueous phase liquid contaminants and groundwater, excavation of contaminated soils, river bank stabilization, and covering the excavated areas with clean fill. The Responsible Party signed an Order on Consent in 2005 to design and construct the remedy. Construction activities for the Remedial Action were completed in 2007. The Engineering Construction Completion Report and Site Management Plan (SMP) were approved on July 20, 2009. A deed restriction was filed on 11/29/2005. Currently the groundwater at the site is being remediated by the VEP/VER system in accordance with the SMP. Site Geology and Hydrogeology: The site is located along the southern perimeter of the area mapped as part of Jamestown Aquifer. The site geology consists of surficial layer of fill materials (7-15 ft) underlying gray or brown till (less than a foot to over 15 feet). The fill materials consist of silt, gravels, cinders, brick, concrete, and slag. In western half of the site towards the Chadakoin River, native deposits of sand, silt, clay and gravel (generally less than 4 feet in thickness) occur between the fill and underlying till. The bedrock consists of shale rock. The groundwater in the site area flows northwest towards Chadakoin River. Nature and Extent of Contamination: Prior to Remediation: Contamination of soil in the parking lot area of the site (PCBs-up to 10.7 ppm; Lead-up to 33,100 ppm) was excavated and removed from the site in 2000. The levels of groundwater contamination reported during the RI were: TCE (up to 830,000 ppb), DCE (up to 34,000 ppb) and Vinyl Chloride (up to 3,200 ppb). The Responsible Party began addressing the groundwater contamination by in-situ and ex-situ treatment beginning in 1998. The subsurface soil at the site consists of sand, silt, gravels, fill, and slag. The subsurface soil varies from 7 to 15 feet in depth which is underlain by shale bedrock. The surface water and groundwater flow towards the Chadakoin River which is immediately adjacent to the site. The Remedial Action required by the ROD was conducted at the site during 2007. The remediation addressed the contamination located along the river bank and in sediments in the Chadokoin River. The installation of a barrier wall along the riverbank, coupled with the on-going Groundwater Collection and Treatment System will mitigate contamination migration at the site. Post-Remediation: The site is being monitored under an

Health Problem:

Env Problem:

Access to the site is unrestricted. However, contact with contaminated soil or groundwater is unlikely unless they dig below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas

operation, maintenance and monitoring Plan.

from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants in indoor air in the on-site building should it be occupied. An evaluation of the potential for soil vapor intrusion to occur will be completed for any future on site development and actions will be taken to address potential exposures, if necessary. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:

Location: The site is located at 208 E 1st St, Jamestown, NY, Chautauqua County, in an urban area. Site Features: The site is a flat gravel parking lot. An active 3 story industrial brick building lies immediately to the west. Residential structures are situated nearby to the north and northeast, with the closest one across E 1st St., approximately 100 feet north and uphill from the site boundary. An active rail line borders the site on the south. Beyond the tracks, the Chadakoin River lies within 100 feet of the site boundary. Current Zoning and Land Use: The site and surrounding area at E 1st St is zoned as C3, Central Business District - Downtown. However, the area has various pre-existing, nonconforming uses. The site is classified as vacant industrial land. Surrounding lot classifications are a mix of industrial, residential, and commercial, from vacant to improved status. Past Use of the Site: A review of Sanborn Fire Insurance maps shows a former manufactured gas plant (MGP) at this location. The plant suffered a fire in 1901 and never returned to operation. Site Geology and Hydrogeology: Below the surficial fill material, a sand and gravel unit extends across the entire site. forming part of an aquifer which is used for public water supply. Public wells are at locations remote from the site. A confining layer of clay was found around 30 ft bgs, but it does not appear that DNAPL migration has reached this deep. Depth to water in groundwater wells ranged from artesian to 8 ft. Groundwater flow is to the southwest,

toward the Chadakoin River.

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminant of concern is coal tar. Another contaminant of concern is purifier waste. Soil: Evidence of subsurface MGP structures was found in several test pits, and varying levels of MGP impacts were noted at the majority of boring locations. Coal tar coated material and/or blebs were noted in 8 out of 20 boring locations. Out of those locations, 5 were within 15 feet bgs. Coal tar NAPL coatings were observed in soils at 10-14 ft bgs in boring SB-08, located at the southwest corner of the footprint of the water gas house, located at the southwest corner of the site, near the downgradient site boundary. A soil sample at SB-04 at the 10 ft bgs interval where tar coating was observed yielded exceedences of the industrial SCO for various PAHs, including 470 ppm for benzo(a)pyrene and 340 ppm for benzo(b)fluoranthene. A boring at the southeast corner of the site, near the site border, MW-05, exhibited tar blebs around 15 ft bgs. Deeper impacts were found in the gravel unit in SB-09 and SB-11, where blebs were found at 30 ft, and coatings found at 24 ft, respectively. Few blebs were observed in SB-12 from 23-24 ft bgs. Suspected purifier waste was encountered in both gas holders and in test pit in the footprint of the former purifier house. This purifier waste was visually documented as blue and whitish blue. However, cyanide did not exceed Unrestricted SCOs in all soil samples. Suspected purifier waste was found around 3-4 ft bgs in SB-01, above 10 ft bgs and around 17 ft bgs in SB-03, and 7-10 ft bgs in SB-12. Groundwater: A monitoring well immediately downgradient of the northwestern gas holder has a benzene detection of 25 ppb, and the southeastern well, at a downgradient border of the site, has a benzene detection of 16 ppb. An upgradient well showed a

Direction Distance Elevation

Site Database(s) EPA ID Number

JAMESTOWN FORMER MGP (Continued)

S113916728

EDR ID Number

PCE detection of 97 ppb. Soil Vapor & Did oor Air: Soil vapor impacts have not yet been evaluated. No occupied buildings exist on the site.

Health Problem:

The site is not fenced and persons who enter the site could contact contaminants in the soil and groundwater by digging or otherwise disturbing the soil. People are not drinking contaminated groundwater as the area is served by a public water supply that is not affected by this contamination. The potential exists for off-site migration of site contaminants in groundwater into the adjacent creek and sediments but insufficient information exists to determine the potential for exposures to these media. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Since there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants for any future on-site development.

48 J AND S AUTO SUPPLY NY SHWS S113916917 NNE

1/2-1 0.944 mi.

4985 ft.

Relative: SHWS:

Lower J AND S AUTO SUPPLY Name: Address: 1084 EAST SECOND STREET Actual: City, State, Zip: JAMESTOWN, NY 14071 1278 ft.

1084 EAST SECOND STREET

JAMESTOWN, NY 14071

Program: HW 56531 Site Code: Classification: Ν Region: 9 Acres: 0.1 HW Code: 907012 Record Add: 11/18/1999 Record Upd: 02/15/2013 Updated By: **MLDOSTER**

Site Description: The contents of approximately ten 55 gallon drums of waste degreasing

> sludge containing methylene chloride and other solvents were buried in the basement of a demolished house prior to back filling and grading. This disposal occurred in 1984. The property is adjacent to and east of the J and S Auto Supply facilities at 1082 East Second Street. The disposal site is located above a major drinking water aguifer that serves a population of approximately 52,000 including the City of Jamestown and surrounding communities. In February of 1989, trenches were excavated within and just outside of the buried basement. Evidence of contamination showed at one excavation. Soil analysis has been conducted. On April 21, 1989, J&S Auto was found guilty of Federal Resource Conservation Recovery Act violations. In September 1994 the NYSDEC completed six soil borings. Groundwater and

soil samples were taken for analysis. Contamination was not found. Investigations to date have indicated that there are no potential

environmental impacts resulting from this site.

Health Problem: The site is located over glacial sediments serving as a major aquifer

> for the City of Jamestown and other communities. The results of 1994 on-site groundwater sampling identified iron and manganese above NYS drinking water standards. However, exposures via drinking water are not expected because residents in the vicinity of the site are served by public water. The nearest private well is located approximately 3340 meters from the site. The site was filled and paved, reducing

the potential for direct contact exposures.

Dump: Not reported Not reported Structure: Lagoon: Not reported

Count: 2 records.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

SPILLS 80: SPILLS80 data from FirstSearch

Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

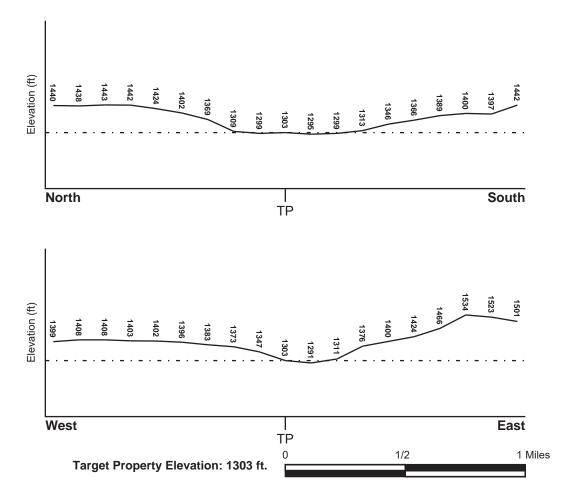

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

JAMESTOWN YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

 FOIL Request :: W062588-121619

 Date:
 Monday, December 16, 2019 10:49:20 AM

Dear Chester:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 12/16/2019 and given the reference number FOIL #W062588-121619 for tracking purposes. You may expect the Department's response to your request no later than 1/15/2020.

Record Requested: For the purpose of environmental review, we are requesting to review records related to 133 Winsor Road, Jamestown. We are interested in records related to tanks, spills/discharges, historic building permits, historic operations, environmental concerns, etc.

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Re: Jamestown Fire

The fire was at a warehouse owned by John Evan, 81, 32 Olson Ave, Jamestown and is located at 133 Winsor St, Jamestown. Originally, the complaint was made that there are two 5-gallon pails in the basement that contain mercury. The information was presented to an ECO and later to me by an eye witness. Chautauqua County HazMat responded and an entry was sent in last night. (We first had to pump out about 5' of water that was used to battle the fire.) They found two pails in the basement but neither contained the alleged mercury. A search of the trailers today showed them to contain miscellaneous building materials, mattresses, white metal goods and assorted junk. 55-gallon drums on the premises were opened and contained mostly junk, dirt and water. Numerous lead-based vehicle batteries were found and they will be disposed of properly. One partial drum of diesel/water was found and also will be disposed of. The fire investigation team is still on-site and will contact me if they should find anything else that may require DEC follow-up.

>>> Martin Doster 9/22/2006 10:46 AM >>> Dan,

Update on the fire:

The location was on Winsor Street in Jamestown in a warehouse. Per Dave the warehouse only had cars, plastics and some antiques. The fire made the news last night. I understand from John/Dave that there are no concerns about the warehouse itself with respect to hazardous materials. However, during the course of the inspection BECI (Otto Tertinek) discovered tractor trailers on the property (not impacted from the fire). One or more of these trailers had materials such as batteries etc.

I understand that BECI is continuing their investigation and Tom Johnson (DEE) is assisting them in the effort. DER has not been requested to assist. DER has contacted EPA and we are ready to assist if asked.

Record Close

Date Spill Closed: 01/11/2007

'Date Spill Closed" means the date the spill case was closed by the case manager in the Department of Environmental Conservation (the Department). The spill case was closed because either; a) the records and data submitted indicate that the necessary cleanup administrative reasons (e.g., multiple reports of a single spill consolidated into a single spill number). The Department however and removal actions have been completed and no further remedial activities are necessary, or b) the case was closed for

1 of 2

12/16/2019, 10:49 AM

reserves the right to require additional remedial work in relation to the spill, if in the future it determines that further action is necessary.

If you have questions about this reported incident, please contact the Regional Office where the incident occurred.

FOIA Coordinator

Re: Freedom of Information Act (FOIA) Request

133 Winsor Street, Jamestown New York

Dear Mr. Olson,

Our company is currently performing a Phase I Environmental Site Assessment (ESA) for the above referenced Site. The property is located at 133 Winsor Street and is owned by Kimberly Miller with SBL. 387.42-3-13.

Under the provisions of the New York Freedom of Information Law, Article 6 of the Public Officers Law, we are requesting any and all records and information from all departments regarding any historical information pertaining to the parcels identified above. Specifically, for the purpose of the environmental study, we are especially interested in Building/Code Enforcement, Fire Department and Assessor records related to underground storage tanks (USTs) installations/removals, hazardous/regulated materials, unpermitted discharges/spills, building construction/demolition permits, historical permits, past ownership information, etc.

Please inform us if any such files exist. We prefer to review the files in person if permitted. We appreciate your assistance in this matter. Please contact us at (716) 856-0599 if you have questions or require additional information.

Sincerely, Chester Hochreiter

Property: 133 WINSOR ST, Jamestown, 14701 SWIS: 060800 SBL: 387.42-3-13
