1.0 INTRODUCTION AND BACKGROUND

AFI Environmental (AFI) conducted a Limited Phase II environmental Site Assessment (ESA) at 766 New Babcock Street, Buffalo, New York, hereinafter referred to as the “Site”. The Site consists of a 0.85-acre parcel improved with single story building with concrete floors; the remaining portions of the Site are gravel parking and undeveloped areas. A Site Location Map is included as Figure 1.

A Phase I ESA, completed for the Site in 2010 titled ‘*Phase I Environmental Site Assessment for 766 & 772 New Babcock Street, April 2010,*’ by AFI identified several Potential Areas of Environmental Concern with regards to the Site. Based on the scope of work for the Phase I ESA, the known history of the Site, and the current conditions relative to the Site, the Phase I ESA revealed evidence of Potential Areas of Environmental Concern (PAEC) in connection with the Site including, but not limited to the following:

Current Use of the Site

At the time of the preparation of AFI’s April 2010 Phase 1 ESA the site was being used by Mr. Al Steel and operated as a City of Buffalo approved Asbestos Abatement and Demolition Contractor equipment yard and offices known as Hanna Demolition. Records indicated the owner as Lorraine Stegura.

Unregistered ASTs, incidental leaking heavy equipment causing surface stains, piles of unknown debris, and MSW storage containers were observed on the site.

The warehouse was being used for all phases of equipment repair and maintenance. The potential environmental risks associated with these activities were noted as was the open floor pitPrevious Uses of the Site:

Voelker Analysis was a permitted, hazardous waste chlorinated organic recovery facility. The facility handled solvents such as methylene chloride, trichloroethylene, perchloroethylene and 1,1,1-trichloroethane. The facility was acquired by ENRX in August of 1987 and operations were moved to the adjacent garage where there was secondary containment. The facility did not complete inventory removal from the old wood frame “rendering” building, nor explore the potential migration of waste to the environment. The facility’s permit was revoked in 1989.

Former EPA Clean-up Site:

In 1990, EPA began inventory removal of 398 drums of chlorinated solvents, 86 drums of chlorinated still bottoms, 74 lab packs and 15,000 gallons of chlorinated waste water. Some 15 to 20 drums were removed in January 1992 to complete the EPA removal action. A Preliminary Site Assessment (PSA) was conducted in October and November 1994. Groundwater monitoring did not show contamination related to the hazardous waste disposed. Between 1998 and 1999, the older wood frame portion of the facility was demolished. The contents of the still bottoms tank were re-sampled and tested for TCLP Hazardous Waste Characteristics. The waste material contained TCE at concentrations exceeding the hazardous waste threshold. The material was disposed off-site at a permitted hazardous waste disposal facility.

Internal Sump Pit

A Preliminary Site Assessment (PSA) was conducted in October and November 1994. Laboratory analytical results of sump liquid and sediment samples, and waste/sludge samples revealed the presence of hazardous waste-related Volatile Organic Compounds (VOCs) contamination throughout the building, with the most significant concentrations of TCA, TCE and PCE detected in the sumps and structures in the basement and first floor levels. Metals were found in the sludge remaining in the still bottoms tank exceeding the EP-Toxicity thresholds defining a hazardous waste.

AFIs Phase I recommendation was that the holding tank be cleaned prior to occupancy so that any risk of fugitive release, from the tank, if occurring, would not be the responsibility of the new owners. As such, AFI was hired to clean the tank and certify it; ‘Clean’, prior to occupancy.

On-Site Former Underground Storage Tank:

According to information obtained from a review of the Sanborn Fire Insurance Maps and information obtained from the City of Buffalo Fire Marshall, the historical records indicate the presence of an unregulated Underground Storage Tank (UST) associated with the subject site; registered to Voelker. This tank was closed in 1988; it is unknown whether orphan tanks exist on the site. As such, it is suspected that soil and/or groundwater contamination may be present as a result of historically leaking USTs.

Aboveground Storage Tanks:

Five (5) Above Ground Storage Tanks (AST’s) were observed at the subject property. Three (3) tanks were located outside the subject building and appeared to be leaking with stains surrounding the tanks. As such, it is suspected that soil and/or groundwater contamination may be present as a result of historically leaking ASTs.

It is AFI’s opinion that these Potential Areas of Environmental Concern are Recognized Environmental Conditions (REC’s) as per the ASTM Standard Practice 1527-06 and, as such, represent a concern with regard to potential soil and/or groundwater impairment at the Site.

AFI was requested to conduct a preliminary limited subsurface evaluation in order to evaluate potential subsurface impacts at the Site as part of due diligence activities for a real estate transaction. The intended reuse of the Site is as a light industrial facility with reuse of the existing building and parking lots.

2.0 OBJECTIVE

The objective of this Phase II ESA was to conduct a gross subsurface evaluation in order to evaluate general subsurface conditions at the Site.

3.0 SCOPE OF WORK

The following Scope of Work was undertaken in accordance with our discussions:

1. An Underground Facilities Protection Organization (UFPO) was conducted at the Site, to locate subsurface utilities in the areas where the subsurface assessment would take place.
2. AFI mobilized a JCB 214 Backhoe for one day (i.e. 8-hours) of installing test pits.
3. Soil from the test pits were continuously assessed for visible impairment, olfactory indications of impairment, and/or indications of detectable volatile organic compounds (VOCs) on a Photo-Ionization Detector (PID) total VOC meter. Positive indications from any of these screening methods were collectively referred to as ‘evidence of impairment’. Evidence of impairment gathered at the time of the fieldwork was used to determine the soil sampling locations.
4. Soil and groundwater samples were collected in laboratory supplied bottleware and sent under Chain of Custody procedures to Phoenix Environmental Laboratories, Inc. (Phoenix). Phoenix is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory for the parameters tested.

4.0 INTERNAL SUMP

The central floor drain (Underground Holding Tank) (AOC-F) and associated connector piping located at the base of the indoor loading ramp, observed during the Phase I ESA, which appeared to be 2'-3' deep and 54" in diameter. AFI had concerns that the sump was an unregulated drywell or was potentially impacted by illegal dumping or spillage of regulated hazardous waste.

The major concern for a new owner/operator at this site is that the underground holding tank, observed to contain oily fluids and which recorded a PID Reading in excess of 750 ppm was not properly cleaned and could unknowingly provide a source for future fugitive release of hazardous waste.

AFIs Phase I recommendation was that the holding tank be cleaned prior to occupancy so that any risk of fugitive release, from the tank, if occurring, would not be the responsibility of the new owners. As such, AFI was hired to clean the tank and certify it; ‘Clean’, prior to occupancy.

Subsequent Chemical Analysis of fluids discharging from the sump, showed slight levels of chemical constituents consistent with the types of chemicals that were consistent with those chemical identified with the EPA’s previous activities.

4.1 SUMP CLEANING ACTIVITES

On Thursday, June 24, 2010 AFI mobilized a Vac-Truck, ‘steam-jenny’, spill truck, and hazmat cleaning crew to the site where ~750 Gallons of a mixture of water, sludge and solids were removed from the Underground Holding Tank and connecting lines, and sent for proper disposal. The holding tank, the drains,

the sewer connection and the concrete floor were then pressure washed using 5000psi steam and water. The holding tank was then dried and thoroughly cleaned using oil absorbent and clean rags.

An additional Floor Drain connected to the City Sewer, located in the west garage bay, was opened and cleaned of sludge and solids by hand, then flushed with a pressure, steam and water.

Prior to leaving the site the feed lines, the holding tank, and the drain lines were steam cleaned and wipe tested. Any prior spillage or leakage of the drain, or seepage through the concrete pad MAY have impacted subsurface soils. However, soil testing conducted outdoor near the second accumulator revealed no contaminants at levels higher than what existed during the EPA testing and closeout in 1999. Regional Groundwater impacts were recorded, but EPA listed them as non-threatening due to the lack of wells for drinking water and the area was served by municipal water supply.

5.0 TEST PIT AND GROUNDWATER INVESTIGATION

5.1 FIELD ACTIVITIES

A total of 7 (seven) test pits (designated TP-1 through TP-7) were installed at the Site on May 25, 2010 to evaluate the general subsurface conditions of the Site. The test pits were advanced around the onsite building down to bedrock; depths ranging from about 6 to 8.5-feet below ground surface.

The test pits were installed in the following locations to evaluate potential subsurface impacts due to historic operations at the Site and on the adjoining parcels.

- Test pit TP-1 in Area of Concern (AOC-A) was installed to evaluate the competency of the City of Buffalo combined sewer system and to determine if soil and/or groundwater had been impacted by up-gradient sites.
- Test pits TP-2 and TP-3 were installed in AOC-B to evaluate the impacts to the subsurface from historically leaking unregistered ASTs observed during the Phase I ESA (ASTs removed prior to conducting this Phase II ESA.)
- Test pits TP-4 and TP-6 in AOC-C were installed to evaluate the impacts of the Internal Sump to the soil and groundwater via leaching through the foundation to the South (lower elevation).
- Test pit TP-5 in AOC-D was installed to evaluate the southern property line of the adjoining property 772 New Babcock St.
- Test pit TP-7 in AOC-E was installed to evaluate the impacts of historic truck and equipment storage to the subsurface soils.

The test pit locations are illustrated on Figure 2. The AOCs are illustrated on Figure 3.

Soil Type

Soils at the Site in the gravel parking areas and undeveloped areas consisted of fill that generally ranged from a coarse sand to some coarse to fine-grained Gravel to a Clayey Silt. The Fill Material was found to contain varying amounts of man-made materials including Brick, Concrete, Block, Ash and Wood. The Fill

Material deposits, including the surface gravel was found to a depth of at least 7-feet below grade.

The depth to water beneath the Site ranged from approximately 5.5 to 7.5-feet below the ground surface. Based on surface topography, groundwater flow is anticipated to be toward the southwest, however, and actual groundwater flow direction has not been determined.

PID Field Screening

Table 1 shows PID readings collected from the test pits at the time of the fieldwork.

Table 1
Test Pit PID Readings

Test Pit	Depth of Sample Analyzed				
	0'-2'	2'-4'	4'-6'	6'-8'	8'-8.5'
TP-1	0.0	0.0	0.0	0.0	-----
TP-2	28.7	36.2	51.6	27.2	-----
TP-3	0.0	0.0	0.0	0.0	-----
TP-4	0.0	0.0	0.0	0.0	-----
TP-5	0.0	0.0	0.0	0.0	-----
TP-6	0.0	0.0	0.0	0.0	-----
TP-7	0.0	0.0	0.0	0.0	-----

Note: All PID readings were collected utilizing a MiniRae 3000 photoionization detector and represent total VOCs in ppm
----- denotes soil not scanned for this interval

As noted in Table 1 above, PID readings greater than 5.0 parts per million (ppm) were encountered in soil collected from test pit TP-2 (Former unregulated AST area). TP-1, TP-2, TP-3, TP-4 and TP-7 revealed fill materials which included urban fill and/or ash. These types of fill materials are typically associated with semi-volatile organic compounds (SVOCs) and/or heavy metals.

Copies of the Field Logs are included in Appendix 1.

Groundwater Sampling

To further evaluate subsurface conditions at the Site, groundwater samples were collected from test pits TP1 and TP4 to evaluate the uppermost groundwater zone.

6.0 ANALYTICAL TESTING AND RESULTS

This section discusses the soil and groundwater sampling activities, including the sample locations, analysis performed and the results of the analytical testing.

Soil Sampling Program:

A total of six (6) soil samples were submitted for laboratory analysis from the test pits at the Site. The

samples were sent under proper Chain of Custody control to Phoenix Laboratory located in Manchester, Connecticut (NYS DOH ELAP ID# 11301). The location of soil samples submitted for testing and type of analytical analysis performed are identified below.

- **TP-1 (0'-5'):** analyzed for Target Compound List (TCL) VOCs using United States Environmental Protection Agency (USEPA) Method 8260 and TCL SVOCs using USEPA Method 8270.
- **TP-1 (5'-6'):** analyzed for TCL VOCs using USEPA Method 8260, TCL SVOCs using USEPA Method 8270, Polychlorinated biphenyls (PCBs) using USEPA Method 8082, and Resource Conservation and Recovery act (RCRA) Metals using USEPA Method 6010 and 7471.
- **TP-2 (0'-8'):** analyzed for TCL VOCs using USEPA Method 8260, TCL SVOCs using USEPA Method 8270, PCBs using USEPA Method 8082, and RCRA Metals using USEPA Method 6010 and 7471.
- **TP-4 & 6 (0'-8'):** analyzed for TCL VOCs using USEPA Method 8260, TCL SVOCs using USEPA Method 8270, PCBs using USEPA Method 8082, and RCRA Metals using USEPA Method 6010 and 7471.
- **TP-5 (0'-7'):** analyzed for TCL VOCs using USEPA Method 8260 and TCL SVOCs using USEPA Method 8270.
- **TP-7 (4'-8'):** analyzed for TCL VOCs using USEPA Method 8260, TCL SVOCs using USEPA Method 8270, PCBs using USEPA Method 8082, and RCRA Metals using USEPA Method 6010 and 7471.

The analytical test results were compared to the Recommended Soil Cleanup Objectives (RSCOs) referenced in NYSDEC CP-51 dated October 21, 2010. Copies of the laboratory reports are included in Appendix 2. A discussion of the soil sampling results is provided below.

Volatile Organic Compounds

VOCs were not detected above the laboratory detection limits in any of the six (6) soil samples submitted for analysis from the Site.

Polychlorinated biphenyls

PCBs were not detected above the laboratory detection limits in five (5) of the six (6) soil samples submitted for testing from the Site. PCB sample results are presented below in Table 2.

Table 2
Summary of Detected PCBs in Soil Samples
Analytical Results in Milligrams per Kilogram (mg/Kg) or ppm

Parameter	TP-1 (0'-5')	TP-1 (5'-6')	TP-2 (0'-8')	TP-4&6 (0'-8')	TP-5 (0'-7')	TP-7 (4'-8')	CP-51 (Protection of Ecological Resources)
PCB-1260	NA	ND	ND	1.4	NA	ND	1.0

Notes:

ND denotes that the compound was not detected above the laboratory detection limit.

NA denotes Not Applicable

Semi-Volatile Organic Compounds

SVOCs were not detected above the laboratory detection limits in the three (3) of the six (6) soil samples submitted for testing from the Site. Table 3 below summarizes the testing results for SVOCs detected above the laboratory detection limits for the Site.

Table 3
Summary of Detected SVOCs in Soil Samples
Analytical Results in Milligrams per Kilogram (mg/Kg) or ppm

Parameter	TP-1 (0'-5')	TP-1 (5'-6')	TP-2 (0'-8')	TP-4&6 (0'-8')	TP-5 (0'-7')	TP-7 (4'-8')	CP-51 (Protection of Ecological Resources)
Benz(a)anthracene	ND	ND	ND	0.8	ND	ND	1.0
Benzo(a)pyrene	ND	ND	ND	0.89	ND	ND	1.0
Benzo(b)fluoranthene	ND	ND	ND	1.2	ND	ND	1.0
Benzo(g,h,i)perylene	ND	ND	ND	0.58	ND	ND	100
Benzo(k)fluoranthene	ND	ND	ND	0.37	ND	ND	0.8
Chrysene	ND	ND	ND	0.75	ND	ND	1.0
Fluoranthene	ND	ND	ND	1.8	ND	ND	100
Indeno(1,2,3-cd)pyrene	ND	ND	ND	0.56	ND	ND	0.5
Phenanthrene	ND	ND	0.53	0.99	0.41	ND	100
Phenol	ND	ND	ND	ND	1.1	ND	0.33
Pyrene	ND	ND	ND	1.4	ND	ND	100
2-Methylnaphthalene	ND	ND	0.9	ND	ND	ND	-----

Notes:

ND denotes that the compound was not detected above the laboratory detection limit.

Boldtype highlight denotes that the detected concentration exceeds its associated CP-51 Soil Cleanup Level.

----- denotes no value

RCRA Metals

RCRA Metals were not detected above the Part 375-6.8(a) SCOs in two (2) of the four (4) soil samples submitted for testing from the Site. A summary of the RCRA Metals testing results is provided in Table 4 below:**Table4**

Summary of Detected Metals in Soil Samples
Analytical Results in Milligrams per Kilogram (mg/Kg) or ppm

Parameter	TP-1 (0'-5')	TP-1 (5'-6')	TP-2 (0'-8')	TP-4&6 (0'-8')	TP-5 (0'-7')	TP-7 (4'-8')	Part 375- 6.8(a) SCOs
Arsenic	-----	6.3	3.0	7.9	-----	8.3	13
Barium	-----	118	81.6	127	-----	205	350
Cadmium	-----	0.73	ND	1.75	-----	0.45	2.5

Lead	-----	56.1	57.4	161	-----	24	63
Mercury	-----	ND	0.30	0.39	-----	ND	0.18
Selenium	-----	ND	ND	ND	-----	ND	3.9
Silver	-----	ND	ND	ND	-----	ND	2.0

Notes:

ND denotes that the compound was not detected above the laboratory detection limit.

Boldtype highlight denotes that the detected concentration exceeds its associated Part 375-6.8(a) SCOs.

----- denotes no value.

Groundwater Sampling Program:

Groundwater samples were collected from two (2) test pits; TP-1 and TP-4. The samples were sent under proper Chain of Custody control to Phoenix Laboratory in Manchester Connecticut. The soil samples submitted for testing and analytical analysis performed are identified below.

- **TP-1:** analyzed for TCL VOCS using USEPA Method 8260 and TCL SVOCS using USEPA Method 8270.
- **TP-4:** analyzed for TCL VOCS using USEPA Method 8260 and TCL SVOCS using USEPA Method 8270.

The results of this sampling are summarized on Table 5 below:

Volatile Organic Compounds

Sample TP1 only exceeded the NYSDEC TOGS 1.1.1 Table 5 Groundwater Effluent Limitations for Xylene. Sample TP4 exceeded the same standards for Vinyl Chloride, Toluene, Trichloroethene, Benzene, cis-1,2-Dichloroethene and 1,1-Dichloroethene. Table 5 presents the testing results for VOCs detected above the laboratory detection limits for the samples submitted for analysis for the Former ENRX Site.

Table 5
Summary of Detected VOCs in Groundwater Samples
Analytical Results in Micrograms per Kilogram ($\mu\text{g}/\text{Kg}$) or ppb

Parameter	Well Location		NYCDEC TOGS 1.1.1 (Table 5) Groundwater Effluent Limitations
	TP1	TP4	
1,2,4- Trimethylbenzene	4.0	ND	5
1,1,1-Trichloroethane	ND	1.8	5
1,1-Dichloroethane	ND	27	5
1,3,5- Trimethylbenzene	2.9	ND	5
Ethylbenzene	1.2	ND	5
m&p-Xylene	13	2.4	5
Naphthalene	1.2	ND	10
Tetrachloroethene	2.0	2.0	5
Benzene	ND	26	0.7
Methyl t-butyl ether (MTBE)	ND	300	-----
cis-1,2-Dichloroethene	ND	27	5
toluene	3.7	26	5
o-Xylene	ND	1.7	5
trans-1,2-Dichloroethene	ND	4.2	5
Trichloroethene	ND	16	5
Vinyl chloride	ND	43	2
Total Xylenes	21.8	4.1	5

Notes:

ND denotes that the compound was not detected above the laboratory detection limit.

Boldtype highlight denotes that the detected concentration exceeds its associated TOGS 1.1.1 Groundwater Standards.

----- denotes no value.

Semi- Volatile Organic Compounds

Both groundwater samples exceeded the NYSDEC TOGS 1.1.1 Table 5 Groundwater Effluent Limitations for Benz(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene. Below in Table 6 are the testing results for SVOCs detected above the laboratory detection limits for the Site.

Table 6
Summary of Detected SVOCs in Groundwater Samples
Analytical Results in Micrograms per Kilogram ($\mu\text{g}/\text{Kg}$) or ppb

Parameter	Well Locations		6 NYCDEC TOGS 1.1.1 (Table 5) Groundwater Effluent Limitations
	TP1	TP4	
Benz(a)anthracene	0.22	0.25	0.002
Benzo(a)pyrene	0.21	0.024	0.002
Benzo(b)fluoranthene	0.30	0.029	0.002
Phenanthrene	0.61	0.36	50

Notes:

Boldtype highlight denotes that the detected concentration exceeds its associated TOGS 1.1.1 Groundwater Standards.

7.0 SUMMARY OF FINDINGS AND CONCLUSIONS

The Limited Phase II ESA was conducted to evaluate the gross subsurface and groundwater conditions at the Site. Specifically, this Phase II ESA consisted of advancing seven (7) test pits, field screening and gross examination of soils for nuisance characterization and likelihood for residual contamination . Groundwater samples were recovered from two (2) test pit locations and were analyzed for VOCS and SVOCs. Based on field observations and analytical results from soil and groundwater samples the following findings are presented.

Summary of Findings:

- Analytical Results from the soil samples collected from the test pits did not indicate concentrations of VOCs above the laboratory detection limits.
- Composite soil sample, TP-4&6 (0'-8'), analyzed for SVOCs identified elevated concentrations of Benzo(b)fluoranthene and Indeno(1,2,3-cd)pyrene above the CP-51 Standards. Sample TP-5 (0'-7') identified elevated levels of Phenol above the CP-51 Standards.
- Fill Material which included brick, block, gravel, concrete, urban fill, ash and wood was encountered in all seven (7) test pit locations. The Fill Material deposits, including the surface gravel was found to a depth of at least 7-feet below grade. This indicated that demolition material from the previous buildings was used as backfill for the site.
- Composite soil sample, TP-4&6 (0'-8'), analyzed for RCRA Metals identified elevated concentrations (above below the Part 375 standards) of three (3) RCRA Metals (Chromium, Lead and Mercury). Composite soil sample, TP-2 0'-7' analyzed for RCRA Metals identified elevated concentrations for Mercury. Other samples analyzed for RCRA Metals were below the Part 375 standards.
- Composite soil sample, TP-4&6 (0'-8'), analyzed for PCBs identified slightly elevated concentrations of PCB-1260 above CP-51 Standards.
- The chemical analysis for groundwater sample TP1 analyzed for VOCs exceed NYSDEC TOGS 1.1.1 Effluent Limitations for m&p-Xylene and Total Xylenes. Groundwater analytical for TP4 collected for VOCs exceed NYSDEC TOGS 1.1.1 Effluent Limitations for 1,1-Dichloroethane, cis-1,2-Dichloroethene, Toluene, Trichloroethene, Vinyl chloride and Benzene.
- The Chemical analysis for both groundwater samples collected and analyzed for SVOCs exceeded NYSDEC TOGS 1.1.1 Effluent Limitations for Benz(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene and show traces of Phenanthrene.

Conclusions:

Based on the above findings of the Limited Phase II ESA, AFI recommends the following for each specific area of concern:

- A. **Area of Concern – A:** Based on the lack of impacts to the soils observed through soil screening for nuisance characteristics and through analytical soil sampling, AFI feels that no further action is warranted for this AOC soils in this area.

The Groundwater sampled in this area exceeded TOGS 1.1.1 for VOCs and SVOCs. It is AFIs opinion that based on the location of the Site (i.e. light industrial setting) and portable water being supplied by a municipal water source, the elevated concentration of VOCs and SVOCs do not represent a significant or immediate remedial concern.

- B. **Area of Concern – B:** This area previously housed the leaking unregistered ASTs. Soil scanning with the PID revealed PID readings ranging as high as 51.6 ppm, but never lower than 27.2 ppm. Soil sampling revealed elevated levels of Mercury, but did not reveal any elevated levels of VOCs, SVOCs, or PCBs. As such, AFI feels this area should be scraped and properly disposed of.

Subsequent Site visits after the completion of this Phase II ESA revealed that this Site surface was scraped to a depth of 4" in this area by others. AFI, however, does not have the documentation of disposal of this material.

- C. **Area of Concern – C:** The composite sample collected in this area revealed elevated levels of SVOCs, PCBs, and Heavy Metals. No VOCs were present above the laboratory detection limits.

The Groundwater sampled in this area exceeded TOGS 1.1.1 for VOCs and SVOCs. It is AFIs opinion that based on the location of the Site (i.e. light industrial setting) and portable water being supplied by a municipal water source, the elevated concentration of VOCs and SVOCs do not represent a significant or immediate remedial concern.

- D. **Area of Concern – D:** No nuisance characteristics were observed at the south border of the property. Despite the fill being classified as mostly urban fill, analytical sampling revealed only one exceedance of the CP-51 standards for the SVOC Phenol. AFI feels that no further investigation or remediation is warranted for the soils in this area since the EPA had closed their investigation of the Site.

- E. **Area of Concern – E:** Based on AFI's field observations and analytical sampling results, the truck/equipment storage area does not require any additional investigation or remediation.

F. Area of Concern – F: The internal sump was cleaned and verified clean by AFI. It is AFI's recommendation that this sump should be properly sealed to prevent future fugitive releases.

Niagara Falls, NY 14304**

**Project ID: V1012 BABCOCK
Sample ID#s: AZ08417 - AZ08419**

This laboratory is in compliance with the QA/QC procedures outlined in EPA 600/4-79-019, Handbook for Analytical Quality in Water and Waste Water, March 1979, SW846 QA/QC and NELAC requirements of procedures used.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller".

Phyllis Shiller

Comments:

Elevated reporting limits for volatiles due to dilution for sample matrix. Low-level sample was analyzed with poor internal standard response.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

Elevated reporting limits for volatiles due to dilution for sample matrix. Low-level sample was analyzed with poor internal standard response.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comment:

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

2 = This parameter is outside laboratory lcs/lcqd specified limits.

3 = This parameter is outside laboratory ms/msd specified limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference

LCS - Laboratory Control Sample

LCSD - Laboratory Control Sample Duplicate

MS - Matrix Spike

MS Dup - Matrix Spike Duplicate

NC - No Criteria

This laboratory is in compliance with the QA/QC procedures outlined in EPA 600/4-79-019, Handbook for Analytical Quality in Water and Waste Water, March 1979, SW846 QA/QC and NELAC requirements of procedures used.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller".

Comments:

Elevated reporting limits for volatiles due to dilution for sample matrix. Low-level sample was analyzed with poor internal standard response.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

ND=Not detected BDL=Below Detection Level RL=Reporting Level

2 = This parameter is outside laboratory lcs/lcsd specified limits.

3 = This parameter is outside laboratory ms/msd specified limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference

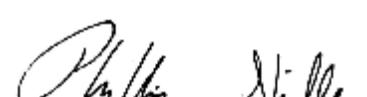

LCS - Laboratory Control Sample

LCSD - Laboratory Control Sample Duplicate

MS - Matrix Spike

MS Dup - Matrix Spike Duplicate

NC - No Criteria
