ABBY STREET WORK PLAN

For The Collection and Removal of Soils from the Abby Street / Hydro-Air Work Site.

General Description

This work plan details the pickup, hauling and disposal of soils and solid waste excavated during the construction of Abby Street in the City of Buffalo.

During the construction of Abby Street excess excavated material consisting dirt mixed with timbers, concrete, rubber belting, and steel was stock piled at the rear of the site to be occupied by the new Hydro-Air manufacturing facility. Because the soils are mixed with solid waste they could not be used as fill material on the Hydro-Air site and will be removed and transferred to an appropriate solid waste disposal facility. Separating the soil and solid waste was considered and ruled out due to cost and schedule considerations.

Work Plan

The soils containing miscellaneous solid waste will be loaded in to dump trucks and hauled to Modern Waste's Transfer station on South Ogden Street. Each load received at the transfer station will be weighted and a receipt issued before dumping. The details relating to location pile identification and records are listed below.

- **Pile Location:** Piles of soil excavated from the city of Buffalo Right-of-Way have been staked for identification in the field and are shown on the attached plan. On December 12th 2006 the representatives from Benchmark, Parsons, Visone and the City of Buffalo met at the site to review pile locations. An inspector will be at the site to monitor removal.
- **Testing:** At the request of Modern Disposal additional TCLP Metals testing was conducted on four composite samples for lead and chromium levels. The test results were favorable as none of the samples exceeded the hazardous waste threshold of 5mg/L. The analysis results are included as Attachment 2.
- **Loading** The City of Buffalo has contracted with Visone Construction Inc. to load and transport the soils to the transfer facility.

Abby Street Work Plan

- **Disposal:** The City of Buffalo has entered into an agreement with Modern Disposal Services Inc. to accept the materials. All soil and solid waste will be trucked to Modern's transfer station located on 793 South Ogden Street in the City of Buffalo. Upon arrival at the facility each truck will be weighted and a delivery ticket issued.
- **Work Dates** Work is scheduled to begin on or about December 18th 2006 and is expected to be completed in two weeks.
- **Records:** After removal has been completed a memo detailing the quantity of material delivered to the transfer station and copies of the delivery tickets will be forwarded to the NYSDEC.

Subject: Abby Street TCLP results

Dan,

The TCLP results are favorable...they do not exceed hazardous waste threshold of 5 mg/L. I also forwarded these results to Mike Gullo at Modern Disposal.

Regards,

Mike
