1. Introduction

Subject to the limitations presented in this Section, this Report presents the results of a Phase I Environmental Site Assessment (ESA) of approximately 1.7 acres of land located at 1132 Seneca Street and 2.2 acres of land located at 1146 Seneca Street in Buffalo, New York (Site). Together the parcels total 3.9 acres and are located adjacent to each other. The ESA was commissioned by Flexo Transparent, Inc. (Flexo) and was conducted by Malcolm Pirnie pursuant to an Agreement signed on August 9, 2007. This agreement covers the scope of services first described in Malcolm Pirnie's Task Order No. 1 document to Mr. Ron Mabry dated August 7, 2007.

The scope of this assessment consisted of a site reconnaissance performed by Ms. Tracy Hemmerling of Malcolm Pirnie, escorted by Mr. Daniel Steger of Flexo on August 14, 2007. Mr. Stegler is the Project and Safety Manager for Flexo and has been associated with the company for 17 years. The owners of the Site did not accompany Malcolm Pirnie during the site visit and were not available for interview prior to completion of this report. Malcolm Pirnie also subsequently performed a detailed environmental database search and records review of the Site.

1.1. Purpose of ESA

The purpose of an Environmental Site Assessment is to identify recognized environmental conditions on a property, as the term is defined by the American Society of Testing Materials in ASTM E 1527-05. This report is based on ASTM E 1527-05 which provides a procedure for satisfying, in part, the Standards and Practices for All Appropriate Inquiries. However, this Report is one aspect of the Client's environmental due diligence assessment into the previous ownership and uses of the property consistent with good commercial or customary practices. The Report may not address all the requirements that may be required in the Client's or other user's due diligence assessment of risks associated with this property, including but not limited to an evaluation of the relationship of the purchase price to the fair market value considering site contamination, if any. Disclosures by the property seller and the buyers own specialized knowledge and experience may also be factors in determining the extent of a due diligence effort.

1.2. General Site Description

The Site is located at 1132 and 1146 Seneca Street in Buffalo, New York as shown in Appendix A. The Site consists of two parcels, identified by Erie County's GIS website as Parcel 83423 (1132 Seneca Street) and Parcel 83422 (1146 Seneca Street). Together the parcels total approximately 3.9 acres. The property located at 1132 Seneca Street is

zoned “Manufacturing and Processing” and the property located at 1146 Seneca Street is zoned “Vacant Industrial”. For the purposes of this Phase I ESA, both properties are considered the Site.

1132 Seneca Street

The 1132 Seneca Street portion of the Site is improved with a manufacturing building that covers the majority of the property. The construction date of the manufacturing building is estimated to be circa 1920. The manufacturing building houses office, warehouse, and manufacturing areas. Operations at 1132 Seneca Street previously included use as a lumber yard, railroad yard, manufacture of fiberglass railroad transfer platforms (Fiberright) and transformers and machines (Westinghouse and Eastern Electric). At the time of the site visit, Fiberright was vacating the property. The northern, eastern, and western portions of the Site are enclosed with a chain link fence. Paved access roads are located along the western and eastern property boundaries that lead to an unpaved dirt/gravel area where fiberglass platforms, an abandoned car, a dumpster, and plastic and metal refuse were located. The southern boundary of the Site is Seneca Street, where two large garage doors provide access to the manufacturing building. Overgrown shrubs located on 1146 Seneca Street are located east of 1132 Seneca Street.

1146 Seneca Street

The 1146 Seneca Street portion of the Site is a vacant property that is entirely overgrown with 6 to 8 feet tall shrubs. A 123 ft by 19 ft concrete pad is located on the property, the use of which is unknown. Operations at 1146 Seneca Street reportedly included use as a lumber yard, railroad yard, clay products manufacturing, and a gas station. A portion of the property may also have been used by Westinghouse and Eastern Electric for manufacture of transformers and machines. A chain link fence and locked gate are located along the southern portion of 1146 Seneca Street, beyond which is Seneca Street. An abandoned playground is located on the southeastern portion of the property. Flexo Transparent’s manufacturing building is located adjacent to the northeastern portion of 1146 Seneca Street.

1.3. General Vicinity Description

The following are descriptions of land and land uses immediately adjacent to the Site:

- North: The Site is bordered immediately to the north by an area of overgrown brush (1070 Seneca Street). Beyond the overgrown brush are railroad tracks and industrial properties.
- South: The Site is bordered immediately by Seneca Street. Beyond Seneca Street are residential and commercial properties.

- East: The Site is bordered to the east by a community center and Flexo Transparent. Farther east, beyond these are Wasson Street and residential properties.
- West: The Site is bordered to the west by the City of Buffalo Engineering Garage. Farther west, beyond the City Garage property is CTS Concrete Mixing Plant and Rock and Stone Crushing Plant (1070 Seneca Street). Farther west are railroad tracks.

1.4. Physical Environmental Setting

This Section contains a description of the physical environmental setting based upon visual observations, appropriate USGS 7.5 Minute Topographic Maps, and information provided in reports generated by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut (Appendix B).

1.4.1. General Topography and Soils

Based on the EDR report, (Appendix B) the elevation of the Site is approximately 590 feet above mean sea level. The Site is located in an area of generally flat terrain with a general topographic gradient sloping towards the south. According to the EDR report, the Site is located outside 100-year and 500-year flood zones.

According to the EDR Physical Setting Source Summary (Appendix B), surface soils are comprised of sandy loam. The Site is identified as Urban Land, and physical details such as soil texture and drainage can not be provided.

1.4.2. Surface Waters and Wetlands

No wetlands were identified on the Site according to the National Wetland Inventory. The EDR Report did identify wetland areas located approximately one-half mile to the south of the Site. Additional wetlands were identified east and south of the Site within one mile. No additional information regarding these wetlands was provided in the EDR Report.

No surface water bodies were identified on the Site. The Buffalo River is located approximately one-half mile south of the Site.

1.4.3. Hydrogeology

The EDR Physical Setting Source Summary (Appendix B) provides information regarding the groundwater flow characteristics within a 1-mile radius of the Site. Based on local topography and the location of the nearest surface water body, groundwater at the Site is expected to flow towards the south.

Five Federal USGS wells and two State wells were identified in the database information obtained from EDR within a one-mile radius of the Site. The attached EDR report (Appendix B) provides the location of these wells but does not provide any information

related to groundwater quality or depth to groundwater information. No public water supply wells were identified.

1.5. Limitations

This Environmental Site Assessment Report (Report) has been prepared for the sole use of Malcolm Pirnie's Client, Flexo Transparent, Inc. (Client). The purpose of this Report is to provide information to the Client on the environmental conditions of the Site, which consists of approximately 3.9 acres of land located at 1132 and 1146 Seneca Street in Buffalo, New York.

The use of and reliance on this Report by any person or entity other than the Client is not authorized unless the user enters a secondary user agreement with Malcolm Pirnie. At the time this report was written there were no authorized users identified. It is the responsibility of the unauthorized user to assure itself that information contained herein is accurate and complete. Any reliance on the contents shall be solely at the unauthorized user's risk.

Malcolm Pirnie's work presented in this Report was performed pursuant to an Agreement between Malcolm Pirnie, Inc. and the Client, signed on August 9, 2007. This Agreement included the scope of work as described in Malcolm Pirnie's Task Order No. 1 document dated August 7, 2007. Material deviations or exceptions to the services proposed or limitations in the scope of the Environmental Site Assessment arising out of site access issues and the actual availability of data and information related to the Site are as described as follows:

- No chain of title was provided for the Site by the Client.
- No information pertaining to the relationship of the purchase price to the fair market value of the Site was provided by the Client.
- No information regarding any environmental cleanup liens or activity and land use limitations (AULs) such as deed restrictions, engineering controls or institutional controls were provided by the Client.

This Report may not address all the requirements that may be required in the Client's or other user's due diligence assessment of risks associated with this property, including but not limited to an evaluation of the relationship of the purchase price to the fair market value considering site contamination, if any.

An Environmental Site Assessment can reduce but not wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with the Site. The conclusions in this Report have been based, in part, on information obtained from third parties including historical aerial photographs, environmental agency records, and other public records regarding the Site obtained from various sources. Unless noted,

Malcolm Pirnie has not independently evaluated or verified the accuracy or completeness of such third party information. Visual observations related to hazardous materials or waste on the Site only represent conditions at the time of the Site visit. Malcolm Pirnie makes no warranties that the on-Site observations made during the Environmental Site Assessment are representative of historical or future conditions at the Site. Malcolm Pirnie performed its services and prepared this Report at the level customary for other prudent and competent professional engineers performing such services at the time and place where the services are provided. Malcolm Pirnie makes no other warranty, expressed or implied.

1.6. Required Statements

1.6.1. Statement of Qualifications

Malcolm Pirnie, Inc. declares that, to the best of its professional knowledge and belief, the Malcolm Pirnie, Inc. employees responsible for this Report meet the definition of Environmental Professionals.

(Signature)

Kent McManus

(Printed Name)

Senior Associate

(Title)

September 21, 2007

(Date)

1.6.2. Statement of Completion

Malcolm Pirnie, Inc. has assigned the appropriate personnel with the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. Malcolm Pirnie, Inc. has developed and performed its approach relative to the all appropriate inquiries in conformance with the standards and practices set forth in ASTM E1527-05.

2. Records Review

Malcolm Pirnie reviewed records from reasonably ascertainable sources to obtain information regarding the potential for recognized environmental conditions associated with the Site. A description of the source and the information obtained is provided in the following subsections. The historical records review was completed to as far back as 1899.

2.1. Site Contact - Provided Information

Malcolm Pirnie reviewed the following information obtained from Flexo:

- Limited Environmental Site Data Review Letter from Environmental Audits, Inc. dated May 3, 2001.
- Sale/Lease Information Sheet and Site Survey from J.R. Militello Realty, Inc.
- Additional Environmental Evaluations, Fiberight Manufacturing Facility by Evergreen dated September 28, 2001.
- ASTM E 1527-05 User Questionnaire

2.2. Site Chain of Title

Chain of Title records were not provided by Flexo prior to completion of this Report.

2.3. Regulatory Agency Records

For the purpose of obtaining information on potential recognized environmental conditions for the Site, the following regulatory agency was contacted:

New York Department of Environmental Conservation (NYSDEC)

Region 9

Ms. Elaine Butler

716-851-7201

A request to complete a file review was submitted on August 9, 2007 and was completed on September 18, 2007.

2.4. Databases of Environmental Enforcement Records

Malcolm Pirnie obtained a listing of Federal and State environmental databases identifying sites located in the vicinity of the Subject Property. A private database management firm, Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, was contracted to provide this information. The Federal and State lists included in the EDR Database Report are compiled from government agency sources and presented in a

consolidated format. A copy of the database report is provided in Appendix B. A list of databases searched, geographic areas included in the search, and acronyms used are provided in the report.

Based on information obtained during the database search, the Site appears in four Federal databases and five State databases reviewed, as follows:

- **Resource Conservation and Recovery Act Small Quantity Generator (RCRA SQG):** The Site is listed in the RCRA info database as a Small Quantity Generator (SQG) of hazardous waste. SQGs generate 100 kilograms or less per month of hazardous waste, or 1 kilogram or less per month of acutely hazardous waste. EDR reported two previous occupants of the Site, Eastern Electric and Fiberright Auto Manufacturing (Fiberright), as RCRA-SQGs. No RCRA violations were reported for either Eastern Electric or Fiberright.
- **Toxic Release Inventory System (TRIS):** Fiberright Automotive, a previous tenant of 1132 Seneca Street was listed in TRIS database. TRIS identifies facilities that release toxic chemicals to the air, water and land in reportable quantities. No additional information was provided in the EDR report.
- **Historical FIFRA/TSCA Tracking System (HIST FTTS):** This database contains a complete case listing form the Federal Insecticide, Fungicide and Rodenticide and the Toxic Substance Control Act (TSCA). Eastern Electric was listed in the database. The EPA conducted an investigation under TSCA in 1989 and no violations were reported.
- **Facility Index System/Facility Registry System (FINDS):** The Site was listed in the FINDS database, which indicates that other pertinent environmental activity is identified at the Site. FINDS indicated that Eastern Electric was identified in six other databases including: New York Facility Information System (FIS), Aerometric Information Retrieval System (ARIS), National Emissions Inventory (NEI), National Compliance Data Base (NCDB), RCRA-Info, and TRIS. The databases that were searched directly (i.e. RCRA, TRIS) are discussed further elsewhere in this Section. EDR did not provide additional information regarding the FIS, ARIS, or NCDB listings.
- **Chemical Bulk Storage Above Ground Storage Tanks (CBS AST):** Eastern Electric was listed in the CBS AST site listings. CBS AST facilities store regulated hazardous substances in AST with a capacity equal to or greater than 185 gallons, or in underground storage tanks (USTs) of any size. Eastern Electric is reported as having one 2,200-gallon AST used for xylene storage. The AST is reported as closed in 1995. No violations or spills associated with xylene storage were reported in the database.
- **New York Spills:** The Spills database contains data collected on spills reported to the NYSDEC. Eastern Electric is reported as having a spill of an unknown petroleum product of unreported quantity on July 11, 1991. The EDR report indicated that the NYSDEC recommended the file be closed.

- **New York Historic Spills:** This database contains records of chemical and petroleum spill incidents. The database is no longer updated, and has been replaced by the NY Spills database. Eastern Electric is listed in the Historic Spills database for a petroleum spill incident, previously discussed.
- **New York Manifests:** Eastern Electric, Fibreright Automotive, and Westinghouse Electric Company are reported as listed in NY Manifest database. The Manifest database tracks hazardous waste from the generator through transporters to a treatment storage, and disposal facility.

The following summarizes the findings of the EDR database review for sites that are located within applicable ASTM distances of the Subject Property:

- **Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) Database** (sites located 0.5 mile/2,640 feet from the Subject Property) contains data on potentially hazardous waste sites that are either on, proposed to be on, or are in the assessment phase for inclusion on the National Priority List (NPL). Four sites were identified within the applicable search radius.
 - **Clinton Warehouse** (located at 1221 Clinton Street, 2,185 feet northeast and up-gradient of the Site) reportedly had fuel tanks and four unregistered trailers that contain plastic and steel drums abandoned at the site. Some of the drums were reported as leaking, and one drum was labeled as “35% Hydrogen Peroxide”. Containers of paints, solvents and unknown contents were scattered through out the site. A Removal Assessment was conducted in 2001 and removal completed in May of 2005. The site is not listed on the NPL. Based on the potential contaminant transport mechanisms such as inferred groundwater flow direction and storm water runoff direction, this CERCLIS site has the potential to impact the Subject Property.
 - **Bern Metals** (located 22 Bender Street, 2,263 feet north and up-gradient of the Site) is reported as an abandoned metal-waste reprocessing and recycling industrial facility. Removal actions were reported in 1988, 1989, 1990, and 1991. EDR reported that the environmental impacts at the site have been mitigated and environmental threats have been removed. The site is being monitored and maintained under a long term Operations and Management Plan by the City of Buffalo. The site is also listed in the State Hazardous Waste Sites database and is reported to have 200 55-gallon drums of unreported contents, metal turnings, waste chemicals, sludges, battery cases, spilled battery acids and 25 leaking transformers containing PCBs at the site. The site was remediated according to the Record of Decision by consolidating contaminated soils on 3.7 acres of the Bern Metal Corp property and capping the area. According to the NY Engineering Controls database, institutional controls are in place and access to the site is controlled with fencing to protect public health. The site is also listed in the Consent database. The site is not on the NPL. Based on site status and distance from the Subject Property, this CERCLIS site has a low potential to impact the Subject Property.

- **Clinton Street and Bender Ave** (located 2,310 feet north and up-gradient of the Site) is a residential neighborhood that was reported with high levels of lead in soils. The contamination was reportedly from stormwater runoff from the adjacent Bern Metals site. The Potentially Responsible Party completed removal actions and the site was listed as stabilized in 1995. The site is not on the NPL. Based on site status, this CERCLIS site has a low potential to impact the Subject Property.
 - **Universal Irons and Metal** (located at 993 Clinton Street, 2,297 feet north and up-gradient of the Site) is reported as an abandoned scrap metal reprocessing and recycling facility. PCB and lead contaminated soils were reported at the site. Removal was completed in 1991 and the site was reported as stabilized. A Site Inspection was conducted in 1993 and the site was reported as No Further Remedial Action Planned. The site is not on the NPL. Based on site status, this CERCLIS site has a low potential to impact the Subject Property.
- **Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) No Further Remedial Action Planned (NFRAP) Database** (sites located 0.5 mile/2,640 feet from the Subject Property) contains archived sites that have been removed from the CERCLIS inventory indicating that the site was determined to not be a potential National Priority List site. Four CERCLIS-NFRAP sites were identified within the applicable search radius of the Site.
- **Babcock Warehouse** (located at 383 Babcock Street, 1,552 feet east-northeast and up-gradient of the Subject Property). The EDR report indicated that there were 8,000 cubic yards of soils contaminated with semi-volatile organic compounds and heavy metals located at the site. NYSDEC sampling revealed tetrachloroethene at 7,500 parts per billion (ppb) in the groundwater and one million ppb in liquid contained within a drum. This site is also reported as having containers of paints, solvents and unknown contents throughout the facility. The EPA website reported that a removal assessment was conducted in 2001 and removal was completed in 2002. According to EDR, this site was archived in 2005.
 - **Bengart & Memel** (located at 1091 Clinton Street, 1,983 feet north-northeast and up-gradient of the Site) is listed in the CERCLIS-NFRAP. The EDR report stated that a discovery was made in April 1980; however, it did not provide any further information on the type of contamination or the nature of the discovery at the site. A preliminary assessment was conducted in December of 1987 and a “NFRAP” status was assigned to the site. This site was archived in 1998.
 - **Peregrine Buffalo Warehouse** (located at 1167 Clinton Street, 2,015 feet northeast and up-gradient of the Site). The EDR reported that in 1991 the owner of the site discovered hazardous materials that were stored on the property by the previous tenant, ENRX Inc. The types of hazardous materials

discovered were not reported. Cleanup was completed at the site in 1992. This site was archived in 2000.

- **C&D Power Systems – Buffalo Sates** (located at 45 Scoville Avenue, 2,395 feet east-northeast and up-gradient of the Site). The EDR report stated that a discovery was made in July 1985; however, it did not provide any further information on the type of contamination at the site. A preliminary assessment was conducted in December 1987 and a “High” priority level was assigned to the site. According to the EPA web site, a site inspection was conducted in December of 1989 and the site was archived in 1997.

Based on the potential contaminant transport mechanisms such as inferred groundwater flow direction and storm water runoff direction, these CERCLIS-NFRAP sites have the potential to impact the Subject Property.

- **Resource Conservation and Recovery Act Large Quantity Generator (RCRA-LQG) Database** (sites located within 0.250 mile/1,320 feet of the Subject Property) includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste in quantities over 1,000 kg of hazardous waste per month. One RCRA-LQG was identified within the applicable search radius.

- **Flexo Transparent** (located at 28 Wasson Street, adjacent and cross-gradient of the Site) is listed as a RCRA-LQG. Flexo Transparent, located adjacent to the Subject Property, is reported as having seven violations from 1990 to 2002. The areas of violation listed were “General Requirements”, “All Requirements”, “Annual Reporting Requirements”, and “Land Ban Requirements”. All violations were reported as achieving compliance.

Based on the compliance status of the violations, this RCRA-LQG was evaluated to have a low potential to impact the Subject Property.

- **Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG) Database** (sites located within 0.250 mile/1,320 feet of the Subject Property) includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste in quantities between 100 kg and 1,000 kg of hazardous waste per month. This database also includes conditionally exempt small quantity generators (CESQ) that generate, transport, store and/or dispose of hazardous waste in quantities less than 100 kg of hazardous waste per month. Two sites were identified in this database within the applicable search radius.

- **Battaglia Trucking** (located at 1037 Seneca Street, 864 feet west and cross-gradient of the Site) is a RCRA-CESQG. No violations were noted in the EDR database.
- **South Division Property LLC** (located at 315 Babcock Street, 864 feet east-northeast and up-gradient of the Site) is a RCRA-SQG. No violations were noted in the EDR database.

Based on the compliance status of these RCRA-SQG sites, they were evaluated to have a low potential to impact the Subject Property.

- **Resource Conservation and Recovery Act Treat Store and/or Disposal Facility (RCRA-TSDF) Database** (sites located 0.5 mile/2,640 feet from the Subject Property) includes selective information on sites that treat, store or dispose of hazardous waste. Two sites were identified as RCRA-TSDF within the applicable search radius:

- **Honeywell Buffalo Research Laboratory** (located at 20 Peabody Street, 1,821 feet south-southwest and down-gradient of the Site) is a RCRA-TSDF. The site is reported as having five violations from 1984 to 2000. The areas of violation listed were “Other Requirements” “Land Ban Requirements” and “Financial Responsibility Requirements”. All of the violations were reported as achieving compliance.
- **Buffalo Color** (located at 340 Elk Street, 2,116 feet southwest and down-gradient of the Site) is a RCRA-TSDF. The site is reported as having 27 violations from 1984 to 2004. The areas of violation listed were “Generator-Special Conditions”, “Other Requirements (Oversight)”, “Groundwater Monitoring Requirements”, “Financial Responsibility Requirements”, “Closure/Post Closure Requirements”, “Part B Application”, and “Generator-Manifest Requirements”. All of the violations were reported as achieving compliance.

Based on the compliance status of the violations, these RCRA-TSDF sites were evaluated to have a low potential to impact the Subject Property.

- **Resource Conservation and Recovery Act Corrective Actions Activity (CORRACTS) Database** (sites located within 1.0 mile/5,280 feet from the Subject Property) provides selective information on handlers that have had a corrective action activity. Five handlers were identified within the applicable search radius:

- **Honeywell Buffalo Research Laboratories** (located at 20 Peabody Street, 1,821 feet south-southwest and down-gradient of the Site) is listed in the CORRACTS database. The EDR report indicated that the notice of contamination occurred on November 14, 1990 and that a Certification of Remedy Completion or Construction Completion was issued on May 17, 1999.
- **Mobile Oil Corp** (located at 635 Elk Street, 2,820 feet south-south east and down-gradient from the Site) is reported as deferred to RCRA from the CERCLIS-NFRAP program in 1985. The site was assigned a medium correction action priority in 1994. The EDR report did not provide further information on the site.
- **Buffalo Color** (located at 340 Elk Street, 2116 feet southwest and down-gradient from the Site) is reported as a synthetic organic dye and pigment manufacturing facility. The site was reported in the CORRACTS database as having human exposures under control in 2004 and groundwater contamination verified as under control in 2005. The EDR report did not provide any further information on the type of contamination or current status

of the site in the CORRACTS database. This site is listed in several other databases, and information found under those listings is provided elsewhere in this section of the report.

- **PVS Chemicals** (located at 55 Lee Street, 3,126 feet and down-gradient from the Site) is reported as a miscellaneous chemical product and preparation manufacturing facility. The Site was assigned a high corrective action priority in 1991 and then re-assigned a medium priority in 2004. The EDR report did not provide any further information on the site.
- **Allied Chemical, Industrial Chemical Division** (located at 55 Lee Street, 3,126 feet southwest and down-gradient of the Site) is reported under the RCRA-CORRACTS as a low correction priority assigned in 1996. The EDR report did not provide any further information on the type of contamination or current status in the CORRACTS database. The site was also reported in CERCLIS-NFRAP, outside of the applicable ASTM search radius for CERCLIS-NFRAP sites, which indicated that acids and metallic nitrate rinses were discharged to onsite surface impoundments. The contamination was recorded as discovered in 1981. Accumulated solids and contaminated soils were excavated, and the site was designated NFRAP in 1989.

Based on the down-gradient location and distance from the Subject Property these RCRA-CORRACTS sites were evaluated to have a low potential to impact the Subject Property.

- **Engineering Controls Database** (sites located 0.5 mile/2,640 feet from the Subject Property) lists sites with engineering controls in place. One site was identified within the applicable search radius.

- **Buffalo Color** (located at 340 Elk Street, 2,116 feet southwest and down-gradient from the Site) is listed as having engineer controls in place as of March 25, 1995. The EDR report did not provide any further information on the site in the Engineering Controls database. This site is listed in several other databases, and information found under those listings is provided elsewhere in this Section.

Based on the down-gradient location and distance from the Subject Property, this site was evaluated to have a low potential to impact the Subject Property.

- **Institutional Controls** (sites located 0.5 mile/2,640 feet from the Subject Property) lists sites with institutional controls in place. One site was identified within the applicable search radius.

- **Buffalo Color** (located at 340 Elk Street, 2,116 feet southwest and down-gradient from the Site) is listed in this database. The EDR report did not provide any further information on this site in the Institutional Controls database. This site is listed in several other databases, and information found under those listings is provided elsewhere in this Section.

Based on the down-gradient location and distance from the Subject Property, this site was evaluated to have a low potential to impact the Subject Property.

- **Consent Database** (sites located within 1.0 mile/5,280 feet from the Subject Property) lists sites that, after legal settlements, have established responsibilities and standards for cleanup at superfund sites. One site was identified within the applicable search radius.

- **Bern Metals** (located at 22 Bender Avenue, 2,263 feet north and up-gradient from the Site) is reported by EDR to have environmental impacts at the site that have mitigated. EDR further reports that the environmental threats have been removed. The site is being monitored and maintained under a long term Operations and Management Plan by the City of Buffalo.

Based on the current status of the site, it was evaluated to have a low potential to impact the Subject Property.

- **Hazardous Substance Waste Disposal Sites (HSWDS) Database** (sites located 0.5 mile/2,640 feet from the Subject Property) includes a list of any known or suspected hazardous substance waste disposal sites. Five sites were identified within the applicable search radius.

- **Houdaille Manzel** (located at 315 Babcock Street, 1,034 feet east-north-east and up-gradient of the Site) is reported to have PCBs disposed of at the site. No further information is provided by EDR as to the status of the site.
 - **Allied Chemical Research and Development Facility** (located at 20 Peabody Street, 1,834 feet south-southwest and down-gradient of the Site) was listed in the HSWDS database, however the EDR report did not provide any additional information on this site.
 - **Erie Lackawanna Railroad** (located at 515 Babcock Street, 2,346 feet northeast and up-gradient of the Site) is reported to have volatile organic compounds at the site. The EDR report did not provide any further information on this site.
 - **Chapman 105 Dorothy** (located at 105 Dorothy, 2,465 feet east and up-gradient of the site) is reported as an active site and to have PCBs and metals disposed of at the site. The EDR report did not provide further information on this site.
 - **Buffalo Color- Deepwell** (located at 340 Elk Street, 2,128 southwest and down-gradient of the Site) is reported to have metals disposed of at the site. The EDR report did not provide further information on this site.

Based on potential contaminant transport mechanisms such as inferred groundwater flow direction and storm water runoff direction, the up-gradient HSWDSs (Houdaille Manzel, Erie Lackawanna Railroad, and Chapman 105 Dorothy) have the potential to impact the Subject Property.

- **State Hazardous Waste Sites (SHWS) Database** (sites located within 1.0 mile/5,280 feet from the Subject Property) lists potentially hazardous waste sites under the State's program. Five sites were identified within the applicable search radius.

- **Behringer Property** (located at 181 Imson Street, 1,200 feet east and up-gradient of the Site) is reported to have lead contaminated soils at this residential property. The DEC removed the contaminated soil. A Record of Decision was signed in April of 1996 stating that no further action is required.
- **Bengert and Memel** (located at 1091 Clinton Street, 1,983 feet north-northeast and up-gradient of the Site) is reported to have PCB contaminated soils and groundwater. Remedial actions included the excavation of contaminated soils, instillation of a groundwater collection and treatment system, and chemical treatment of PCB contaminated soils. Treatment of the contaminated soils was completed in 1986. Soils containing PCBs less than 50 parts per million (ppm) were left in place at the site and the PCB contaminated area was covered with an asphalt cap. The EDR report stated that the responsible party had not maintained the asphalt cap or the leachate collection system from 2001 to 2006. Current status of the site was not provided.
- **Bern Metal Corp** (located at 22 Bender Street, 2,263 feet north and up-gradient of the Site) is reported to have 200 55-gallon drums of unreported contents, metal turnings, waste chemicals, sludges, battery cases, spilled battery acids and 25 leaking transformers containing PCBs at the site. The site was remediated according to the Record of Decision by consolidating contaminated soils on 3.7 acres of the Bern Metal Corp property and capping the area. The project was completed in 2002 and is currently under a long term Operations and Management Plan implemented by the City of Buffalo. As stated in the Consent database the threat was removed.
- **Mobil Oil Corp** (located at 635 Elk Street, 2,820 feet south-southeast and down-gradient of the Site) is reported to have high levels of lead and various organic compounds in soil samples collected in August of 1982. The site is also part of a 77-acre petroleum storage and distribution terminal which was historically an oil refinery. Two remedial systems are in place to contain and recover spilled oils in soils and groundwater. Access to the site is limited due to fencing. The lead wastes were reported as not a significant threat to the environment.
- **Buffalo Color** (located at 340 Elk Street, 2,116 feet southwest and down-gradient of the Site) is reported to have contamination from the disposal of iron oxide sludge, metal sludges, petroleum products and chemicals from previous operations at the site. A Remedial Investigation/Feasibility Study began in 1988. The Record of Decision signed in 1991, required remediation to include a slurry wall and cap, extraction and treatment of groundwater, removal of contaminated sediments from the Buffalo River and protection of the river shoreline from erosion. Remediation was completed in 1999 and long-term monitoring is on-going at the site.

Based on potential contaminant transport mechanisms such as inferred groundwater flow direction and storm water runoff direction, the up-gradient HSWDS, Bengert and Memel has the potential to impact the Subject Property.

- **Delisted State Hazardous Waste Sites (DEL SHWS) Database** (sites located within 1.0 mile/5,280 feet from the Subject Property) lists sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites. One site was identified within the applicable search radius.

- **Behringer Property** (located at 181 Imson Street, 1,200 feet east and up-gradient of the Site) is reported to have lead contaminated soils at this residential property. The DEC removed the contaminated soil. A Record of Decision was signed in April of 1996 stating that no further action is required.

Based on the status of the site, the Behringer Property was evaluated to have low potential to negatively impact the Subject Property.

- **Solid Waste Facilities and Landfill Sites (SWF/LF) Database** (sites located 0.5 mile/2,640 feet from the Subject Property) contains an inventory of solid waste facilities and landfills in New York. Four facilities were identified within the applicable search radius.
 - **CTS Crushing and Recycling** (located at 1070 Seneca Street) has two facilities reported in the list (one is located 459 feet west and cross-gradient of the Site and the second is located 2,357 feet south-south east and down-gradient of the Site). Both are reported as active facilities that process construction and demolition wastes.
 - **Battaglia Trucking** (located at 1037 Seneca Street, 864 feet west and cross-gradient of the Site) is an active facility that accepts construction and demolition debris including brick, concrete, rock, and clean and contaminated wood.
 - **Clinton Auto Wrecking** (located 1125 Clinton Street, 2,031 feet north-northeast and up-gradient of the Site) is an active vehicle dismantling facility.

Based on the distance from the Subject Property and potential contaminant transport mechanisms such as inferred groundwater flow direction and storm water runoff direction, these SWF/LF facilities are evaluated to have a low potential to impact the Subject Property.

- **Leaking Storage Tanks Incidents Reports (LTANKS) Database** (sites located 0.5 mile/2,640 feet from the Subject Property) contains an inventory of leaking above ground (AST) and underground (UST) storage tanks incidents reported from April 1, 1986. Sixteen LTANKS sites were identified within the applicable search radius. All sixteen incidents were reported as closed.

The Buffalo City Engineering Garage property located adjacent and west of the Subject property is one of the LUST sites identified by EDR. The EDR report stated that a 2,000-gallon capacity petroleum UST failed a tank test in January of 1990. The

tank was retested in November of 1990 and the DEC determined that No Further Remedial Action was needed.

Based on the closed status of the LTANKS incidents, these sites were evaluated to have a low potential to negatively impact the Subject Property.

- **Historical LTANKS Database** (sites located 0.5 mile/2,640 feet from the Subject Property) is no longer updated, and current information may be found in the LTANKS database. The Historic LTANKS database provides fields that are no longer available. Twelve incidents were identified within the applicable search radius. All twelve incidents were reported as closed.

Based on the closed status of the Historic LTANKS incidents, these sites were evaluated to have a low potential to negatively impact the Subject Property.

- **Underground Storage Tank (UST) Database** (sites located within 0.250 mile/1,320 feet of the Subject Property) contains a list of registered USTs. One site was identified within the applicable search radius.

- **Buffalo City Engineering Garage** is the adjacent property to the west of the Site. The site is reported as having two 2,000-gallon USTs removed in 1995. Based on the closed status, this site was evaluated to have a low potential to impact the Subject Property.

- **Historic Underground Storage Tank (Hist UST) Database** (sites located within 0.250 mile/1,320 feet of the Subject Property) is no longer updated and the current information may be found in the UST database. The Hist UST database provides fields that are no longer available. One site was identified within the applicable search radius.

- **Buffalo City Engineering Garage** is the adjacent property to the west of the Site. The site is reported as having two 2,000-gallon USTs removed from the ground in 1995. Based on the closed status, this site was evaluated to have a low potential to impact the Subject Property.

- **Manifests Database** (sites located within 0.250 mile/1,320 feet of the Subject Property) contains a list of facilities that transport hazardous waste. The database does not provide information on spills or violations associated with the transportation activities. Two facilities were identified within the applicable search radius.

- **Flexo Transparent** (located at 28 Wasson Street, 655 feet east-northeast and cross-gradient of the Site) is identified in the Manifest Database.
- **South Division Property** (located at 315 Babcock Street, 1,037 feet east-northeast and up-gradient of the Site) is identified in the Manifest Database.

Both sites are listed in other databases, and information found under those listings is provided elsewhere in this Section. Based on review of this database, both sites were evaluated to have low potential to impact the Subject Property.

- **Spills Database** (sites located 0.125 miles/660 feet from the Subject Property) contains a list of spills occurring since April 1, 1986. Thirteen sites were identified within the applicable search radius. All thirteen sites were reported as closed.
 - **Buffalo City Engineering Garage** is the adjacent property to the west of the Site. On October 24, 1995, free oil was observed perched on the groundwater during the excavation of an UST. On October 30, 1995 contaminated soils were identified during the excavation of two 2,000-gallon gasoline USTs. Biotreatment of soils begun in August 1996 and were completed in 1997. A Closure Report was submitted to the DEC in August of 1997 and the DEC determined No Further Action was required.

Based on the closed status of the Spills sites, they were evaluated to have a low potential to impact the Subject Property.

- **Historic Spills Database** (sites located 0.125 miles/660 feet from the Subject Property) is no longer updated and current information maybe found in the Spills Database. The Historic Spills Database provides fields that are no longer available. Twelve sites were identified within the applicable search radius. All twelve sites were reported as closed.

Based on the closed status of the Historic Spills sites, they were evaluated to have a low potential to impact the Subject Property.

- **New York Engineering Controls** (sites located within 0.5mile/2,640 feet from the Site) is a state database that contains a list of environmental remediation sites with engineering controls in place. One site was identified within the applicable search radius.
 - **Bern Metal Corp** (located at 22 Bender Street, 2,263 feet north and up-gradient of the Site) is reported to have 200 55-gallon drums of unreported contents, metal turnings, waste chemicals, sludges, battery cases, spilled batter acids, and 25 leaking transformers containing PCBs at the site. The site was remediated according to the Record of Decision by consolidating contaminated soils on 3.7 acres of the Berne Metal Corp property and capping the area. The project was completed in 2002 and is currently under a long term Operations and Management Plan implemented by the City of Buffalo. Institutional controls are in place and access to the site is controlled with fencing to protect public health.

This site was evaluated to have a low potential to impact the subject property.

- **New York Institutional Controls** (sites located within 0.5mile/2,640 feet from the Site) is a state database that contains a list of environmental remediation sites with institutional controls in place. Bern Metal Corp, discussed above, was the only site reported in this database.

Forty orphan sites, defined as sites that were not mapped due to poor or inadequate address information, were identified in the vicinity of the Subject Property; however none of the orphan sites were located adjacent to the Site.

2.5. Area Radon Information

Based on Malcolm Pirnie's review of published information available through the USEPA, the Subject Property is located within Erie County which is listed as a Zone 1 area in the Federal USEPA Radon Database. Zone 1 is classified as having an indoor average greater than 4 pCi/L. The USEPA recommended action level for radon in residential structures is 4.0 pCi/L.

Malcolm Pirnie obtained radon information from EDR. The EDR provided information states that 622 sites were tested, and the average of living space radon levels was 1.00 pCi/L and the average basement radon levels were 1.150 pCi/L.

2.6. Publicly Available Maps

Malcolm Pirnie reviewed the U.S. Geological Survey, 7.5 Minute Topographic Quadrangle for Buffalo, New York to determine Site and regional topographic characteristics. These characteristics are described, as appropriate, elsewhere in this Report. A portion of the topographic quadrangle is provided in Appendix A.

2.7. Historical Aerial Photographs

Malcolm Pirnie contracted with EDR to conduct a search of their aerial photograph collection of the Site and the surrounding properties. Copies of the aerial photographs are included in Appendix D. Information obtained from the photographs is summarized in the following paragraphs.

Historical Aerial Photograph dated 1958 (Scale 1" = 750'): The Site appears to be developed with several structures. North of the site appears to be a railroad yard. The adjacent property to the west appears undeveloped. The surrounding areas to the north, south, east, and west appear densely developed. The New York State Thruway is visible to the south.

Historical Aerial Photograph dated 1966 (Scale 1" = 750'): The Site and vicinity appear to be generally the same as the previous photograph.

Historical Aerial Photograph dated 1978(Scale 1" = 833'): The Site and vicinity appear to be generally the same as the previous photograph.

Historical Aerial Photograph dated 1983 (Scale 1" = 750'): The western portion of the Site appears developed with two structures and the eastern portion of the Site appears vacant. The adjacent areas to the west and north where the railroad yard was previously appear now to be vacant. Railroad tracks are visible further to the north and the New York State Thruway is visible to the south. The surrounding areas to the north, south, east and west appears densely developed.

Historical Aerial Photograph dated 1995 (Scale 1" = 750'): The Site and vicinity appear to be generally the same as the previous photograph.

2.8. Historical Topographic Maps

Malcolm Pirnie reviewed topographic maps of the Site and the surrounding properties for the years 1901, 1948, 1950, and 1965. The historical topographic maps were obtained from EDR. Copies of the topographic maps are included in Appendix E. Information obtained from the maps is summarized in the following paragraphs.

Historical Topographic Map for Buffalo dated 1901 (Approximate Scale = 1:62,500): No structures are depicted on the Site. Several structures are visible in the surrounding area, but due to the scale of the map they appear as dots. A network of roads is visible and railroad tracks are visible adjacent to the Site to the north. Buffalo Creek is visible to the south and Lake Erie is farther visible to the west.

Historical Topographic Map for Buffalo Southeast dated 1948 (Approximate Scale = 1:25,000): The Site and greater surrounding area are densely developed. The Site appears developed with two or three structures with railroad spurs entering the buildings. Railroad tracks are visible on adjacent properties to the north and west. The Buffalo River is visible to the south and west and Lake Erie is visible farther to the west.

Historical Topographic Map for Buffalo Southeast dated 1950 (Approximate Scale = 1:24,000): No significant changes are evident as compared to the previous topographic map.

Historical Topographic Map for Buffalo Southeast dated 1965 (Approximate Scale = 1:24,000): The buildings are no longer visible on the map; however, the railroad spurs are. Railroad tracks are visible to the north and west of the Site. The Buffalo River is located to the south and west and Lake Erie farther to the west.

2.9. Historical City Directories

Malcolm Pirnie contracted with EDR to conduct a search of city directories to provide reasonably attainable information on the Site's history. The search included a review of the city directories for the available years 1974, 1980, 1984, 1990, 1995, and 2006. Westinghouse Electric Repair was listed as the occupant of the Site in the 1974, 1980 and 1984 directories. Eastern Electric Apparatus was listed as the occupant in the 1990 and 1995 directories, and no occupant was listed in the 2000 directory. The 2006 directory lists two occupants, Buffalo Industries Group and Fibreright Manufacturing, Inc. Several businesses and residences were listed as occupants of surrounding areas located on Seneca Street. A copy of the EDR City Directory Report is included in Appendix F.

2.10. Fire Insurance Maps

Malcolm Pirnie reviewed Sanborn Fire Insurance Maps of the Site and the surrounding properties for the years 1893, 1900, 1917, 1939, 1950, and 1986. The Sanborn Maps were obtained from EDR. Copies of the maps are included in Appendix G. Information obtained from the maps is summarized in the following paragraphs.

Sanborn Fire Insurance Map for Buffalo dated 1893: The Site appears to be occupied by Empire Lumber Company. The Site is developed with one structure and appears to be used as a lumber yard with access to the railroad. The Site is bordered by Seneca Street to the south. Farther south, across Seneca Street appears to be developed with residences. Walter Street, Maurice Street, Orlando Street, all running in a north-south direction and terminating at Seneca Street are visible south of the Site. Wasson Street and Babcock Street are visible to the east of the Site.

Sanborn Fire Insurance Map for Buffalo dated 1900: The Site appears to be occupied by Empire Lumber Company. The adjacent property to the northeast, where Flexo Transparent is currently located, is identified as F.J. Bayless and Company and is developed with seven structures. The adjacent property to the east is developed and Wasson Street is visible farther to the east. Railroad tracks are visible north of the Site. Farther north, across the railroad tracks are a leather tannery, two lumber yards and an iron and coal company. The Site is bordered by Seneca Street to the south.

Sanborn Fire Insurance Map for Buffalo dated 1917: The Site is occupied by multiple lumber companies: National Lumber Co. Hardwood Lumber, Davenport & Ridley Inc. Hardwood Lumber, and Miller-Sturm & Miller Hardwood Lumber. It appears that the Site was used as lumber yards with access to railroad, located to the north of the Site. The eastern portion of the Site is identified as Robinson Clay Products Co and is developed with six structures. Blakeslee-Perrin and Darling Hardwood and Lumber are located on the adjacent property to the west of the Miller Sturm and Miller property. The adjacent property to the east identified as W. L. Loeser Co., Rags, Metal, and Rubber. Wasson Street is located further to the east. The Site is bordered by Seneca Street to the south.

Sanborn Fire Insurance Map for Buffalo dated 1939: The western portion of the Site is identified as Westinghouse Electric and Manufacturing Co. and appears to be developed with three contiguous buildings, two of which are identified as Service Shop and Warehouse. A parking area is identified in the northern portion of the Site. The eastern portion of the Site is identified as Robinson Clay Products Company of New York. This portion of the Site is developed with several buildings and included a tile and lumber yard on the northern side of the Site. National Lumber Company is located adjacent and west of Westinghouse buildings. A feed mill is located northeast of the

Robinson buildings and Wasson Street is located further east. The Site is bordered by Seneca Street to the south and railroad tracks to the north.

Sanborn Fire Insurance Map for Buffalo dated 1950: No significant changes are evident as compared to the previous map.

Sanborn Fire Insurance Map for Buffalo dated 1986: The western portion of the Site is occupied by the Westinghouse Electric and Manufacturing Company. The eastern portion of the Site appears to be vacant. The adjacent property to the west and north also appears to be vacant. Railroad tracks are located to the north of the Site. Farther north the Buffalo Wire Works Company is visible. The Site is bordered to the south by Seneca Street. The adjacent property to the east is developed with several buildings including a Community Center and a plastic bag manufacturing facility, Flexo Transparent, Inc. Farther east beyond the Flexo Transparent property is Wasson Street.

2.11. Environmental Clean-Up Liens/AULs

Mr. Stegler stated that he was not aware of any environmental cleanup liens or activity and land use limitations (AULs) such as deed restrictions, engineering controls, or institutional controls associated with the Site. No information was obtained from the Site owner regarding environmental cleanup liens or AULs.

The EDR Environmental LienSearch Report (Appendix H) indicated that there are no environmental liens or other activity and use limitations found by EDR.

2.12. Summary Conclusions of Site Records Review

Information obtained as part of the records review did not reveal the presence of recognized environmental conditions at the Site. The records review did reveal the following other environmental conditions:

- Site development for both parcels began in the late 1800s. Both parcels were used by lumber companies from the late 1800s to 1930s. 1132 Seneca Street was used by Westinghouse and Eastern Electric for manufacture of transformers and machines from the 1930s to the 1990s. Fiberight used 1132 Seneca Street for the manufacture of fiberglass railroad platforms. 1146 Seneca Street was used by Robinson Clay Products in the 1920s and as a gas station from the 1930s to the 1950s. Westinghouse and Eastern Electric may also have used 1146 Seneca Street for manufacturing activities.
- Fiberight Automotive, a previous tenant of 1132 Seneca Street, was listed in the Toxic Release Inventory System (TRIS) database. TRIS identifies facilities that release toxic chemicals to the air, water and land in reportable quantities. No additional information was provided in the EDR report.

- The Site was listed in the Facility Index System/Facility Registry System (FINDS) database, which indicates that other pertinent environmental activity is identified at the Site. FINDS indicated that Eastern Electric was identified in six other databases including: New York Facility Information System (FIS), Aerometric Information Retrieval System (ARIS), National Emissions Inventory (NEI), National Compliance Data Base (NCDB), RCRA-Info, and TRIS. The databases that were searched directly (i.e. RCRA, TRIS) are discussed further elsewhere in this Section. EDR did not provide additional information regarding the FIS, ARIS, or NCDB listings.
- Eastern Electric was listed in the Chemical Bulk Storage Above Ground Storage Tanks (CBS AST) site listings. CBS AST facilities store regulated hazardous substances in ASTs with a capacity equal to or greater than 185 gallons, or in USTs of any size. Eastern Electric is reported as having one 2,200-gallon AST used for xylene storage. The AST is reported as closed in 1995. No violations or spills associated with xylene storage were reported in the database.
- The New York Spills database contains data collected on spills reported to the NYSDEC. Eastern Electric is reported as having a spill of an unknown petroleum product of unreported quantity on July 11, 1991. The EDR report indicated that the NYSDEC recommended the file be closed. No additional information was provided.
- The Site is located in a highly developed industrial area that has been used for industrial purposes since the late 1800s. As such, there are many brownfields located within close proximity Site. Review of the EDR database indicated that based on the potential contaminant transport mechanisms such as inferred groundwater flow direction and storm water runoff direction the following up-gradient sites have the potential to impact the Subject Property:
 - **Clinton Warehouse** (CERCLIS site located at 1221 Clinton Street, 2,185 feet northeast and up-gradient of the Site) reportedly had fuel tanks and four unregistered trailers that contain plastic and steel drums abandoned at the site. Some of the drums were reported as leaking, and one drum was labeled as “35% Hydrogen Peroxide”. Containers of paints, solvents and unknown contents were scattered through out the site. A Removal Assessment was conducted in 2001 and removal completed in May of 2005. The site is not listed on the NPL.
 - **Babcock Warehouse** (CERCLIS-NFRAP site located at 383 Babcock Street, 1,552 feet east-northeast and up-gradient of the Subject Property) - The EDR report indicated that there were 8,000 cubic yards of soils contaminated with SVOCs and heavy metals located at the site. NYSDEC sampling revealed tetrachloroethene at 7,500 ppb in the groundwater and one million ppb in liquid contained within a drum. This site is also reported as having containers of paints, solvents and unknown contents throughout the facility. The EPA website reported that a removal assessment was conducted in 2001 and removal was completed in 2002. According to EDR, this site was archived in 2005.

- **Bergart & Memel** (CERCLIS-NFRAP, HSWDS, and SHWS site located at 1091 Clinton Street, 1,983 feet north-northeast and up-gradient of the Site) - The EDR report stated that a discovery was made in April 1980; however, it did not provide any further information on the type of contamination or the nature of the discovery at the site. A preliminary assessment was conducted in December of 1987 and a “NFRAP” status was assigned to the site. This site was archived in 1998.
- EDR also reported this site as a HSWDS and SHWS (database descriptions provided by EDR match) and indicated that it is reported to have PCB contaminated soils and groundwater. Remedial actions included the excavation of contaminated soils, instillation of a groundwater collection and treatment system, and chemical treatment of PCB contaminated soils. Treatment of the contaminated soils was completed in 1986. Soils containing PCBs less than 50 parts per million (ppm) were left in place at the site and the PCB contaminated area was covered with an asphalt cap. The EDR report stated that the responsible party had not maintained the asphalt cap or the leachate collection system from 2001 to 2006. Current status of the site was not provided.
- **Peregrine Buffalo Warehouse** (CERCLIS-NFRAP site located at 1167 Clinton Street, 2,015 feet northeast and up-gradient of the Site). The EDR reported that in 1991 the owner of the site discovered hazardous materials that were stored on the property by the previous tenant, ENRX Inc. The types of hazardous materials discovered were not reported. Cleanup was completed at the site in 1992. This site was archived in 2000.
- **C&D Power Systems** (CERCLIS-NFRAP site located at 45 Scoville Avenue, 2,395 feet east-northeast and up-gradient of the Site). - The EDR report stated that a discovery was made in July 1985; however, it did not provide any further information on the type of contamination at the site. A preliminary assessment was conducted in December 1987 and a “High” priority level was assigned to the site. According to the EPA web site, a site inspection was conducted in December of 1989 and the site was archived in 1997.
- **Houdaille Manzel** (HSWDS site located at 315 Babcock Street, 1,034 feet east-northeast and up-gradient of the Site) – EDR stated that this site is reported to have PCBs disposed of at the site. No further information is provided by EDR as to the status of the site.
- **Erie Lackawanna Railroad** (HSWDS site located at 515 Babcock Street, 2,346 feet northeast and up-gradient of the Site) – EDR stated that this site is reported to have volatile organic compounds at the site. The EDR report did not provide any further information on this site.
- **Chapman 105 Dorothy** (HSWDS site located at 105 Dorothy, 2,465 feet east and up-gradient of the site), EDR stated that this site is reported as active and has PCBs and metals disposed of at the site. The EDR report did not provide further information on this site.

3. Site Reconnaissance

Malcolm Pirnie performed a site reconnaissance to visually obtain information indicating the likelihood of recognized environmental conditions in connection with the Site. Observations made during the site reconnaissance are presented below. Malcolm Pirnie also performed a windshield survey of properties surrounding the Site and the general area. Observations made during the windshield survey are incorporated into area descriptions provided in preceding parts of this Report. The site reconnaissance and windshield survey took place on August 14, 2007 and was conducted by Ms. Tracy Hemmerling of Malcolm Pirnie. Accompanying Malcolm Pirnie during the site reconnaissance was Mr. Daniel Steger of Flexo Transparent, Inc. Photographs taken during the site visit are included in Appendix I.

3.1. Observations of Exterior and Interior Portions of Property

3.1.1. Exterior Property Description

1132 Seneca Street

The exterior portion of the 1132 Seneca Street property consists of a paved access roads located along the western and eastern boundaries that lead to an unpaved dirt/gravel area located in the northern portion of the property where fiberglass platforms, an abandoned car, a dumpster, and miscellaneous plastic and metal refuse were located. It appeared that at one time a rail spur entered the Site building from the north along the eastern property boundary. The northern, eastern, and western portions of the Site are enclosed with a chain link fence. The southern boundary of the Site is Seneca Street, where two large garage doors provide access to the manufacturing building.

1146 Seneca Street

The 1146 Seneca Street portion of the Site is a vacant property that is overgrown with 6 to 8 feet tall shrubs. A 123 ft by 19 ft concrete pad was located on the property, the use of which is unknown. Information obtained through the file review conducted for the property located at 1070 Seneca Street indicated that a biopad (which may have been the use of the 123 ft by 19 ft concrete pad) was located on 1146 Seneca Street which was used for bioremediation of petroleum impacted soils from the 1070 Seneca Street property. A chain link fence and locked gate are located along the southern portion of 1146 Seneca Street, beyond which is Seneca Street. An abandoned playground is located on the southeastern portion of the property. Flexo Transparent's manufacturing building is located adjacent to the northeastern portion of 1146 Seneca Street.

3.1.2. Observations of Structures on Property

1132 Seneca Street

The 1132 Seneca Street portion of the Site is improved with a manufacturing building, the construction date of which is estimated to be between 1920 and 1950. The manufacturing building has a concrete foundation and concrete floors. The walls are glass/block covered with insulated metal siding with wood and metal interior framing. The western portion of the manufacturing building is two-story. The roof is a pitched, built-up roof. The front section of the manufacturing building consists of 20,350 square feet and the older section consists of 19,400 square feet. Offices are located on the western side of the manufacturing building.

The manufacturing building houses office, warehouse, and manufacturing areas. Operations at 1132 Seneca Street previously included manufacture of fiberglass railroad transfer platforms (Fiberright) and transformers and machines (Westinghouse and Eastern Electric). At the time of the site visit, Fiberright was vacating the property and no manufacturing activities were observed. The majority of the equipment was removed from the building at the time of the site visit; however, there was a large quantity of miscellaneous materials located throughout the building, the majority of which appeared to be refuse. A significant amount of paint was observed to be peeling off the interior surfaces of the manufacturing building.

1146 Seneca Street

No structures are located on the 1146 Seneca Street portion of the Site.

3.1.3. Roads, Parking Areas, and Site Access

Both 1132 Seneca Street and 1146 Seneca Street are accessed via Seneca Street. Paved access roads are located along the western and eastern portions of 1132 Seneca Street. The access road leads to an unpaved dirt/gravel area located in the northern portion of the property. There are no roads or parking areas located on the 1146 Seneca Street portion of the Site.

3.1.4. Hazardous Substances and Petroleum Products Storage Areas

The following materials were observed in the manufacturing building located at 1132 Seneca Street:

- Seven 55-gallon drums of unknown blue liquid in the southern portion of the manufacturing building near the garage doors. The drums were not sealed and were observed to be full.

- Twenty 55-gallon drums of miscellaneous paints and resins located in the resin storage room.
- Thirty bags of carpet adhesive located in the upstairs office area.

No chemicals were observed on the 1146 Seneca Street portion of the Site during the site visit.

3.1.5. Underground Storage Tanks (USTs) and Aboveground Storage Tanks (ASTs)

There were no indications of USTs or ASTs observed on either 1132 Seneca Street or 1146 Seneca Street during the site visit. However, review of the following documents revealed that USTs and ASTs have existed in the past and may still be present at the Site:

- **Evergreen's 2001 Phase II Report** - Review of Evergreen's report dated September 28, 2001 (included in Appendix C) indicated that a geophysical survey was conducted by Baron and Associates in July 2001 on 1132 Seneca Street and 1146 Seneca Street. The purpose of this geophysical survey was to identify the location of any magnetic anomalies which could be indicative of USTs. The results of this survey indicated five anomalies, four were concrete pads and one was in an area of a former UST located west of the manufacturing building. Three soil borings were advanced in the area of the former UST. The samples were submitted for laboratory analysis of volatile organic compounds (VOCs) by EPA Method 8021 and semivolatile organic compounds (SVOCs) by EPA Method 8270. Both groundwater and soil sample laboratory analytical results were below NYSDEC STARS criteria for VOCs and SVOCs.

The Evergreen report also indicated that another UST area was located in the vacant lot east of the manufacturing building (1146 Seneca Street property). Four soil borings were advanced in this area. The samples were submitted for laboratory analysis of VOCs by EPA Method 8021 and SVOCs by EPA Method 8270. Laboratory analytical results indicated no exceedences of NYSDEC STARS criteria for SVOCs, but several exceedences of NYSDEC criteria for VOCs. The report concluded that additional subsurface testing and excavation/removal/disposal would be required.

- **Environmental Audit's May 2001 Letter** – Review of Environmental Audit's (EA) May 3, 2001 letter to Mr. Roman Bolubash indicated the following:
 - Three USTs were located at 1120 Seneca Street (office and mailing address for Westinghouse). No records regarding UST locations or removals could be verified by EA. EA concluded that the USTs were likely located at unknown locations on the 1132 Seneca Street property.

- Two 1,000-gallon gasoline USTs located on 1132 Seneca Street were identified through review of a 1964 City of Buffalo inspection report. The USTs were located on the outside western wall of the manufacturing building.
 - Review of NYSDEC files identified an additional UST of unknown size, contents and location.
 - Review of City of Buffalo files indicated that Gulf Oil operated a filling station on 1146 Seneca Street portion of the property that included at least four USTs of unknown size and contents.
 - Review of City of Buffalo files also indicated that Robinson Clay Products was issued a permit to install a 50,000-gallon gasoline UST. The location of this UST was not specified in the City's files.
- **EDR Database Report** - The EDR report included in Appendix B indicated that a 2,200-gallon xylene AST was located on the 1132 portion of the Site. The AST is reported as closed in 1995. No violations or spills associated with xylene storage were reported in the database. Malcolm Pirnie did not observe this AST during the site visit.

3.1.6. Solid Waste and Waste Disposal Areas

An unpaved dirt/gravel area where fiberglass platforms, an abandoned car, a dumpster, and miscellaneous plastic and metal refuse were located north of the manufacturing building located on 1132 Seneca Street during the site visit. No information regarding whom or how often the Site and is/was serviced by waste disposal companies was provided during the site visit.

No solid waste was observed located on 1146 Seneca Street during the site visit; however, the property was very overgrown with shrubs and consequently, Malcolm Pirnie could not observe the entire property.

3.1.7. Odors

No odors were detected during the site reconnaissance.

3.1.8. Stained Soil, Stained Pavement, and Stressed Vegetation

Stressed vegetation and stained soil were not observed during the site reconnaissance. Significant staining and cracking was evident of the concrete floor of the manufacturing building. The entire manufacturing building was covered with dust, either black or white.

EA's May 2001 letter indicated that during their site visit, EA observed "oily-greasy" soil located north of the manufacturing building located at 1132 Seneca Street. This stained soil was located near the location of Westinghouse's former PCB-containing sludge piles.

EA performed a review of NYSDEC files and determined that NYSDEC was involved with planning the cleanup of the sludge piles but no files pertaining to the actual cleanup were available with the NYSDEC.

EA's May 2001 letter indicated that during their site visit, evidence of bio-treatment of petroleum contaminated soil was observed on the 1146 Seneca Street portion of the Site. EA's site inspection also stated that "oily-greasy" soil was observed in the central portion of the parcel. Malcolm Pirnie did not observe this during the site visit conducted on August 14, 2007.

3.1.9. Pools of Liquid

No pools of liquid were observed during the site reconnaissance.

3.1.10. Stormwater and Wastewater

Storm water and sanitary sewer services are provided by the Buffalo Sewer Authority. No information pertaining to current or previous use of septic tanks could be obtained. No information pertaining to process wastewater was provided.

3.1.11. Pits, Ponds, or Lagoons

No ponds or lagoons were observed during the site reconnaissance.

Two below-grade pits are located in northern portion of the manufacturing building. These pits were reportedly installed by Fiberright in 2001 and are approximately 10 feet by four feet, with unknown depths. Both pits contained a black oily liquid. The integrity of the pits could not be verified by Malcolm Pirnie.

EA's May 2001 letter indicated that there was a former cleaning sump which was used for PCB-containing sludge. This sump was not observed during Malcolm Pirnie's site visit and no information could be provided regarding its location, current condition, or past uses.

3.1.12. Wells

No wells were observed during the site reconnaissance.

3.1.13. PCBs and Asbestos

There were nine transformers observed inside a room located along the eastern wall of the manufacturing building. The PCB content of the transformers was not indicated on labels. The floor of the transformer room was black with dust, and as such, staining and the integrity of the floor could not be verified. No information pertaining to ownership or PCB content of the transformers was provided.

Based on the past use of the 1132 Seneca Street property by Westinghouse and Eastern Electric for manufacture and repair of transformers and machines containing PCB-fluids,

a subsurface testing program was completed in July 2001. Review of Evergreen's report dated September 28, 2001 (included in Appendix C) indicated high levels of PCB contamination in the vicinity of the loading dock area (3,500 mg/kg) and north of the manufacturing building (10 mg/kg). The NYSDEC TAGM clean up objective is 5 mg/kg, and anything exceeding 50 mg/kg is considered to be hazardous waste. As such, the PCB concentration of 3,500 mg/kg is considered to be hazardous. The report concluded that soil and groundwater remediation will be required in the loading dock area.

No information pertaining to asbestos containing materials (ACM) was provided. Malcolm Pirnie did not observe any labeling of ACM. Malcolm Pirnie observed fire door insulation, pipe wraps, ceiling tiles, floor tiles, and window caulk that based on the age of the manufacturing building (circa 1920) could likely be ACM.

3.1.14. Interior Utilities and Equipment

Information regarding heating and cooling was not provided. Potable water is provided by the City of Buffalo Water Department and the sanitary sewer service is provided by the Buffalo Sewer Authority. Electricity is provided by National Grid. Natural gas is provided by National Fuel Gas

3.2. Observations of Adjoining Properties

- North: The Site is bordered immediately to the north by an area of overgrown brush (1070 Seneca Street). Beyond the overgrown brush are railroad tracks and industrial properties.
- South: The Site is bordered immediately by Seneca Street. Beyond Seneca Street are residential and commercial properties.
- East: The Site is bordered to the east by a community center and Flexo Transparent. Farther east, beyond these are Wasson Street and residential properties.
- West: The Site is bordered to the west by the City of Buffalo Engineering Garage. Farther west, beyond the City Garage property is CTS Concrete Mixing Plant and Rock and Stone Crushing Plant (1070 Seneca Street). Farther west are railroad tracks.

4. Information from Interviews

As part of this ESA, Malcolm Pirnie contacted individuals thought to have knowledge about the Site, to request an interview about the Site's recognized environmental conditions. The following summarizes information obtained during the interviews.

4.1. Interviews with Current Owners and Occupants of the Subject Property

Mr. Daniel Stegler
Project & Safety Manager
Flexo Transparent, Inc.
716-825-7710

Interview conducted on August 14, 2007 during the Site visit. Information obtained during the site visit is summarized in Section 3.

4.2. Interviews with Parties other than Current Owner and Occupant

New York Department of Environmental Conservation (NYSDEC)
Region 9
Ms. Elaine Butler
716-851-7201

Request to complete a file review was submitted on August 9, 2007 and was subsequently completed on September 18, 2007. Information collected during the file review is summarized below.

Remediation Work Plan dated March 9, 1989

The objective of the Work Plan was to remediate an active spray booth area (removal of liquid and sludge and washing the concrete surfaces) and contaminated sludge piles (were a result of materials removed from the spray booth). Information presented in the Work Plan indicated that Westinghouse constructed the facility in 1932 and used it to repair transformers, motors, generators and other electrical apparatus. On June 30, 1986, Westinghouse sold the facility to Eastern Electric Apparatus Repair Company.

Westinghouse initiated discussions with the NYSDEC in October 1988 and submitted the Work Plan to remediate the spray booth located inside the facility and two sludge piles located at the northeast corner of the facility. In an effort to

define the extent of contamination from the sludge piles. Westinghouse collected six sludge pile samples for analysis of VOCs and PCBs. The laboratory analytical results indicated that all samples contained greater than 50 ppm of PCBs (hazardous waste). Only trace concentrations of VOCs were detected. Sludge samples collected from the pit indicated PCB concentrations that exceeded hazardous waste levels. Water samples collected from the pit indicated only trace concentrations of VOCs.

The spray booth was a 12 ft by 12 ft area at floor level that was sectioned off from the remainder of the room by two parallel vertical walls. The booth had a steel grate floor and was a bi-level pit. The first level of the pit was 9 ft by 12 ft and 3 ft deep. The second level of the pit was 7 ft by 12 ft and was 7 ft deep. According to the Work Plan the pit contained up to 1,000 gallons of liquid and 5 cubic yards of sludge. Adjacent to the pit was a sump that was connected by a decantation pipe to the sewer system.

The sludge piles were located in the northeast corner of the property. Pile 1 straddled the Eastern Electric property and the adjoining property. The surface dimensions of the pile were 9 ft by 13 ft with a maximum height of 20 inches that sloped down to 6 inches. Pile 1 contained 8 cubic yards of material. Pile 2 was located between Pile 1 and a block building located 40 feet away. The pile was 3 ft by 4 ft and 11 inches high. Pile 2 contained 0.5 cubic yards of material.

Removal of Contaminated Soil dated October 16, 1991

The report summarized contaminated soil removal and decontamination of the spray booth conducted by Dames and Moore at the Eastern Electric property located at 1132 Seneca Street.

The soil removal effort was performed in three phases (November 1989, June 1990, and October 1990) and consisted of the removal of Piles 1 and 2, previously referenced. The piles were located at the northeast corner of the property and encompassed an area approximately 40 square feet. Confirmation soil samples were collected for analysis of VOCs and PCBs following each round of sampling, and following the third phase of soil excavation sample results were within target cleanup levels. In total 145 cubic yards of material was excavated and disposed off-site at Chemical Waste Management's landfill located in Model City, New York. The area of excavation was backfilled with clean fill.

5. Findings

Malcolm Pirnie has performed a Phase I Environmental Site Assessment in conformance with the scope proposed and subject to limitations described in this Report. Any exceptions to, or deletions from, this practice are described in the Limitations section of this Report.

5.1. Property Data Gaps

A data gap, as defined by ASTM, is a lack of or inability to obtain information required by the standard and practices listed in ASTM despite good faith efforts by the Environmental Professional to gather information pertaining to the Site. The following significant data gaps were identified for the Site:

- Past uses of the property could not be confirmed. A Chain of Title Search was not provided by the Client prior to completion of the report. According to historical sources searched, site development for both parcels began in the late 1800s. Both parcels were used by lumber companies from the late 1800s to 1930s. 1132 Seneca Street was used by Westinghouse and Eastern Electric for manufacture of transformers and machines from the 1930s to the 1990s. Fiberight used 1132 Seneca Street for the manufacture of fiberglass railroad platforms. 1146 Seneca Street was used by Robinson Clay Products in the 1920s and as a gas station from the 1930s to the 1950s. Westinghouse and Eastern Electric may also have used 1146 Seneca Street for manufacturing activities.
- The EDR report indicated that Fiberright Automotive (a previous tenant of 1132 Seneca Street), is listed in Toxic Release Inventory System database. No additional information pertaining to the release was provided by EDR.
- The New York Spills database contains data collected on spills reported to the NYSDEC. Eastern Electric is reported as having a spill of an unknown petroleum product of unreported quantity on July 11, 1991. The EDR report indicated that the NYSDEC recommended the file be closed. No additional information was provided by EDR or could be obtained during the site visit.
- Other than information provided by EDR, Evergreen's 2001 report and Environmental Audit's May 2001 letter, no information related to ASTs or USTs was provided.
- Other than information provided in the Remediation Work Plan dated 1989, no information related to the location or decontamination of the spray booth was provided.

- No information regarding site utilities (electric, gas, potable water), process wastewater discharges, septic tanks was provided during the site visit.
- Two below-grade pits are located in the manufacturing building. These pits are approximately ten feet by four feet, with unknown depths and contained a black oily liquid. The integrity of the pits could not be verified by Malcolm Pirnie.
- EA's May 2001 letter indicated that there was a former cleaning sump which was used for PCB-containing sludge. This sump was not observed during Malcolm Pirnie's site visit and no information could be provided regarding its location, current condition, or past uses.
- There were nine transformers observed inside a room located along the eastern wall of the manufacturing building. The PCB content of the transformers was not indicated on labels. No information pertaining to ownership or PCB content of the transformers was provided.
- No information pertaining to asbestos containing materials (ACM) was provided.

The following other data gap were identified for the Site:

- No information pertaining to the relationship of the purchase price to the fair market value of the Site was provided by the Client.
- No information regarding any environmental cleanup liens or activity and land use limitations (AULs) such as deed restrictions, engineering controls or institutional controls were provided by the Client.

5.2. Findings

This Environmental Site Assessment has revealed the following evidence of recognized environmental conditions associated with the Site:

- The Site is located in a highly developed industrial area that has been used for industrial purposes since the late 1800s. As such, there are many brownfields located within close proximity of the Site. Review of the EDR database indicated that based on the potential contaminant transport mechanisms such as inferred groundwater flow direction and storm water runoff direction the following up-gradient sites have the potential to impact the Subject Property:
 - **Clinton Warehouse** (CERCLIS site located at 1221 Clinton Street, 2,185 feet northeast and up-gradient of the Site) reportedly had fuel tanks and four unregistered trailers that contain plastic and steel drums abandoned at the site. Some of the drums were reported as leaking, and one drum was labeled as "35% Hydrogen Peroxide". Containers of paints, solvents and unknown contents were scattered through out the site. A Removal Assessment was conducted in 2001 and removal completed in May of 2005. The site is not listed on the NPL.
 - **Babcock Warehouse** (CERCLIS-NFRAP site located at 383 Babcock Street, 1,552 feet east-northeast and up-gradient of the Subject Property) - The EDR

report indicated that there were 8,000 cubic yards of soils contaminated with SVOCs and heavy metals located at the site. NYSDEC sampling revealed tetrachloroethene at 7,500 ppb in the groundwater and one million ppb in liquid contained within a drum. This site is also reported as having containers of paints, solvents and unknown contents throughout the facility. The EPA website reported that a removal assessment was conducted in 2001 and removal was completed in 2002. According to EDR, this site was archived in 2005.

- **Bergart & Memel** (CERCLIS-NFRAP, HSWDS, and SHWS site located at 1091 Clinton Street, 1,983 feet north-northeast and up-gradient of the Site) - The EDR report stated that a discovery was made in April 1980; however, it did not provide any further information on the type of contamination or the nature of the discovery at the site. A preliminary assessment was conducted in December of 1987 and a “NFRAP” status was assigned to the site. This site was archived in 1998.
- EDR also reported this site as a HSWDS and SHWS (database descriptions provided by EDR match) and indicated that it is reported to have PCB contaminated soils and groundwater. Remedial actions included the excavation of contaminated soils, instillation of a groundwater collection and treatment system, and chemical treatment of PCB contaminated soils. Treatment of the contaminated soils was completed in 1986. Soils containing PCBs less than 50 parts per million (ppm) were left in place at the site and the PCB contaminated area was covered with an asphalt cap. The EDR report stated that the responsible party had not maintained the asphalt cap or the leachate collection system from 2001 to 2006. Current status of the site was not provided.
- **Peregrine Buffalo Warehouse** (CERCLIS-NFRAP site located at 1167 Clinton Street, 2,015 feet northeast and up-gradient of the Site). The EDR reported that in 1991 the owner of the site discovered hazardous materials that were stored on the property by the previous tenant, ENRX Inc. The types of hazardous materials discovered were not reported. Cleanup was completed at the site in 1992. This site was archived in 2000.
- **C&D Power Systems** (CERCLIS-NFRAP site located at 45 Scoville Avenue, 2,395 feet east-northeast and up-gradient of the Site). - The EDR report stated that a discovery was made in July 1985; however, it did not provide any further information on the type of contamination at the site. A preliminary assessment was conducted in December 1987 and a “High” priority level was assigned to the site. According to the EPA web site, a site inspection was conducted in December of 1989 and the site was archived in 1997.
- **Houdaille Manzel** (HSWDS site located at 315 Babcock Street, 1,034 feet east-northeast and up-gradient of the Site) – EDR stated that this site is reported to have PCBs disposed of at the site. No further information is provided by EDR as to the status of the site.

- **Erie Lackawanna Railroad** (HSWDS site located at 515 Babcock Street, 2,346 feet northeast and up-gradient of the Site) – EDR stated that this site is reported to have volatile organic compounds at the site. The EDR report did not provide any further information on this site.
 - **Chapman 105 Dorothy** (HSWDS site located at 105 Dorothy, 2,465 feet east and up-gradient of the site), EDR stated that this site is reported as active and has PCBs and metals disposed of at the site. The EDR report did not provide further information on this site.
- Significant staining and cracking was evident on concrete floor of the manufacturing building was observed. The entire manufacturing building was covered with either a black or white dust.
 - EA's May 2001 letter indicated that during their site visit, EA observed "oily-greasy" soil located north of the manufacturing building located at 1132 Seneca Street. This stained soil was located near the location of Westinghouse's former PCB-containing sludge piles. EA performed a review of NYSDEC files and determined that NYSDEC was involved with planning the cleanup of the sludge piles but no files pertaining to the actual cleanup were available with the NYSDEC.
 - EA's May 2001 letter indicated that during their site visit, evidence of bio-treatment of petroleum contaminated soil was observed on the 1146 Seneca Street portion of the Site. EA's site inspection also stated that "oily-greasy" soil was observed in the central portion of the parcel. Malcolm Pirnie did not observe this during the site visit conducted on August 14, 2007.
 - Based on the past use of the 1132 Seneca Street property by Westinghouse and Eastern Electric for manufacture and repair of transformers and machines containing PCB-fluids, a subsurface testing program was completed in July 2001. Review of Evergreen's report dated September 28, 2001 (included in Appendix C) indicated high levels of PCB contamination in the vicinity of the loading dock area (3,500 mg/kg) and north of the manufacturing building (10 mg/kg). The NYSDEC TAGM clean up objective is 5 mg/kg, and anything exceeding 50 mg/kg is considered to be hazardous waste. The Brownfield Site Clean-up Objective for PCBs for industrial end use is 25 mg/kg. The report concludes that soil and groundwater remediation would be required in the loading dock area.
 - The Evergreen report also indicated that another tank area was located in the vacant lot east of the manufacturing building (1146 Seneca Street property). Four soil borings were advanced in this area. The samples were submitted for laboratory analysis of VOCs by EPA Method 8021 and SVOCs by EPA Method 8270. Laboratory analytical results indicated no exceedences of NYSDEC STARS criteria for SVOCs and several exceedences of NYSDEC criteria for VOCs. The report concluded that additional subsurface testing and excavation/removal/disposal would be required.

Based upon the information obtained during the ESA, the following other environmental conditions were identified on or at the Site which are not recognized environmental

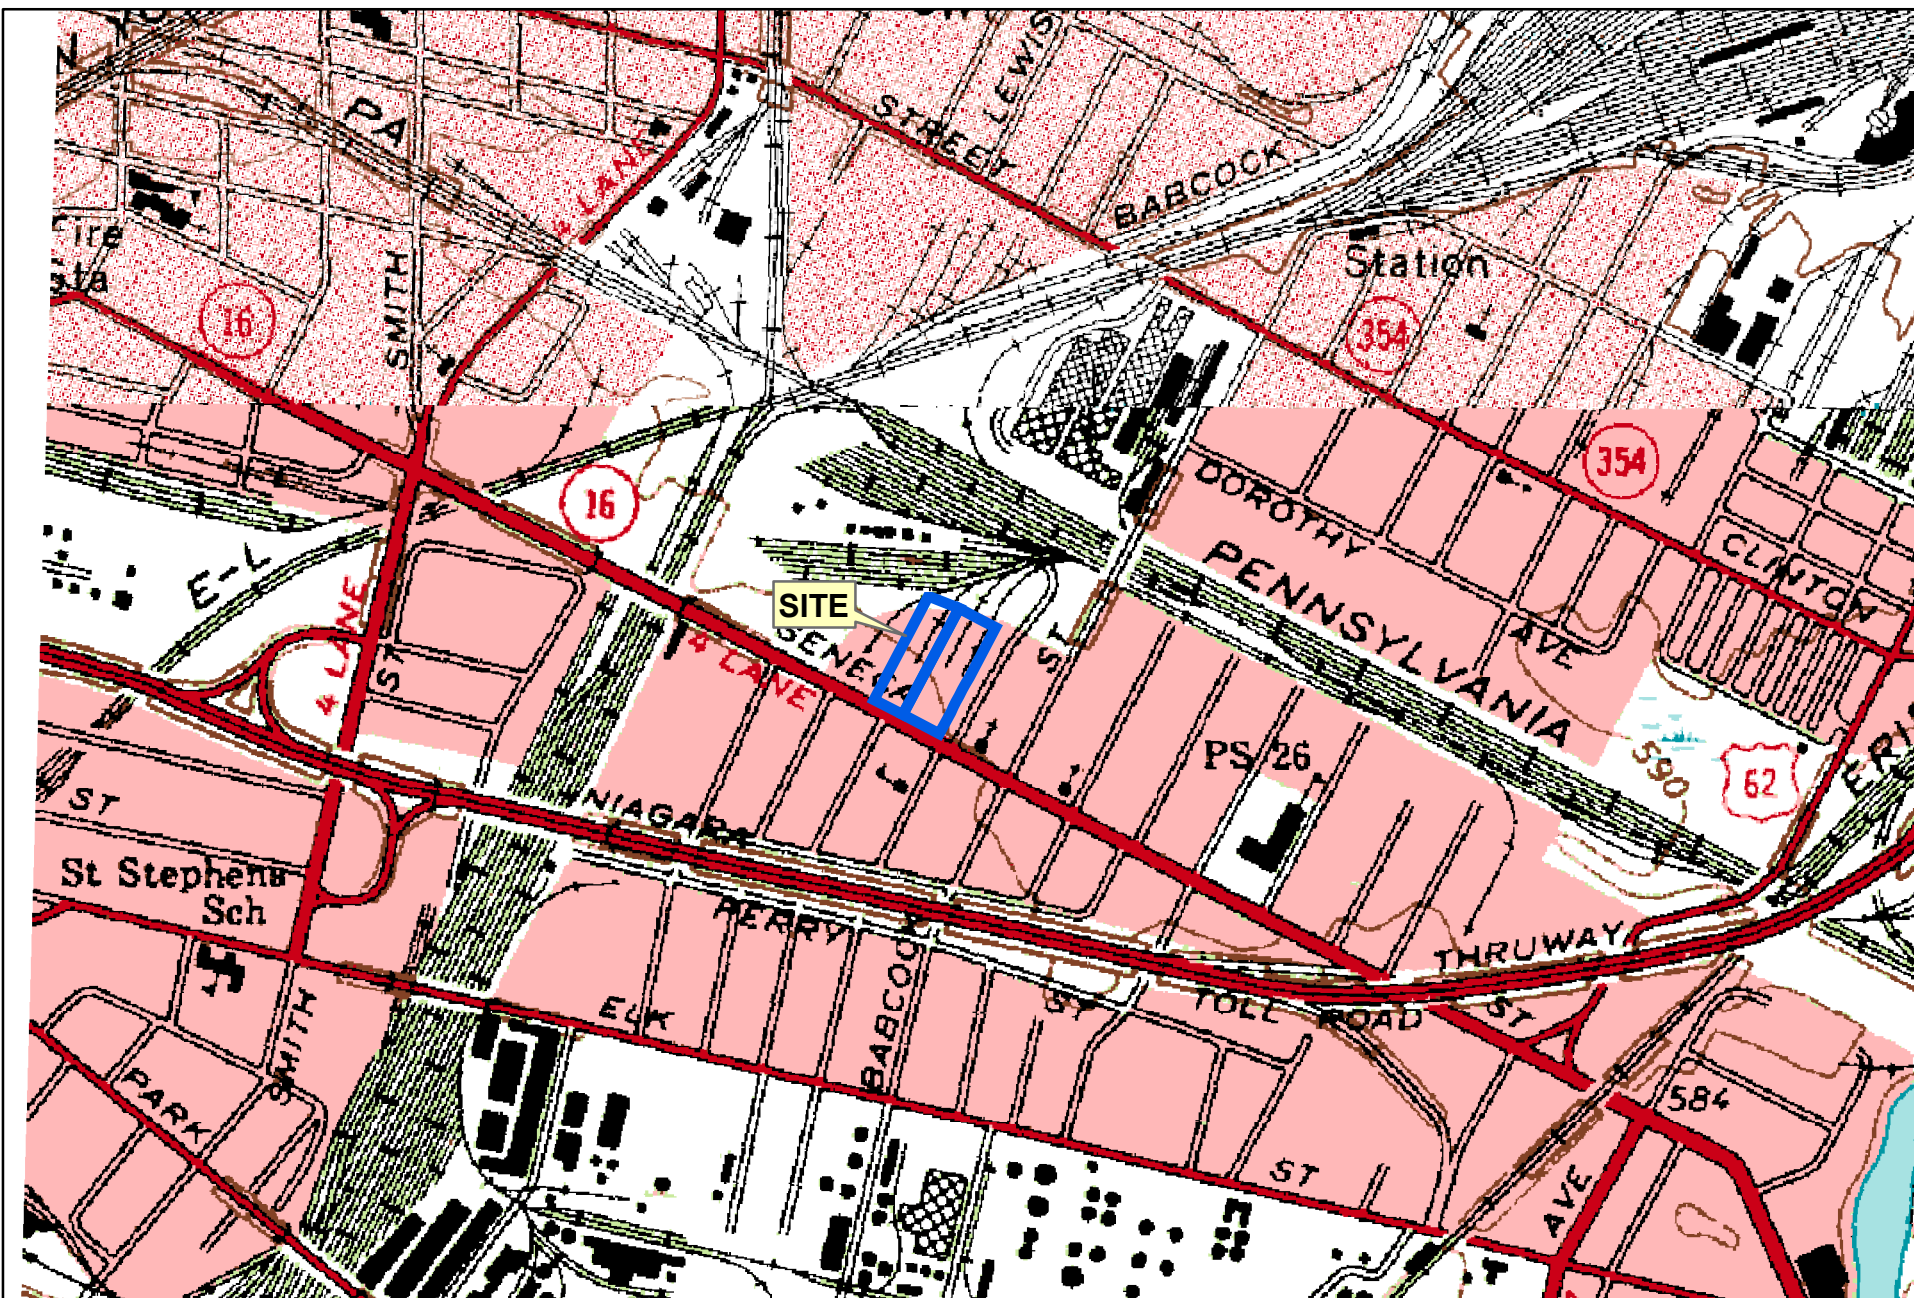

conditions but may be on-Site de minimis environmental conditions excluded in ASTM E1527, contaminants not considered as hazardous substances under CERCLA, or off-Site conditions which do not appear to create a recognized environmental condition on the Site:

- Malcolm Pirnie did not observe any labeling of asbestos containing material (ACM). Malcolm Pirnie observed fire door insulation, pipe wraps, ceiling tiles, floor tiles, and window caulk that based on the age of the manufacturing building (circa 1920) could likely be ACM.
- Malcolm Pirnie observed a large amount of peeling paint on the ceiling and walls. Based on the age of the building, lead based paint may be present.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/27/2007 has revealed that there are 4 CERCLIS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 03/21/2007 has revealed that there are 4 CERC-NFRAP sites within approximately 0.5 miles of the target property.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/13/2006 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

STATE AND LOCAL RECORDS

HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 5 HSWDS sites within approximately 0.5 miles of the target property.

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 05/01/2007 has revealed that there are 5 SHWS sites within approximately 1 mile of the target property.

HIST SPILLS: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 12 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

DEC Field was "RJJ" 6/13/2000:RJJ SITE INVESTIGATION AT 1000...MEET WITH RICH
CROUCH,BARRON & ASSOCIATES,HE STARTED TO DIG TEST PITS,AT VARIOUS LOCATIONS,IN
THE 30 ACRES OF PROPERTY,WHICH IS AT 1070 SENECA ST...ONE OF THE PITS HAD A HIGH
PID READING AND AN ODOR...RICH TOLD ME THAT THE CURRENT OWNER OF THE PROPERTY
IS HARRISON INDUSTRIAL PARK INC.,ADDRESS,P.O. BOX 1011,BUFFALO,N.Y. 14240...THE
SBL # OF THE PROPERTY IS 122.36-1-2.11...I WILL DRAFT AND SEND HARRISON A
RESPONSIBLE PARTY LETTER...RICH ALSO SAID THAT THE CLIENT,WHICH WANTS TO
PURCHASE THE PROPERTY,MAY DO THE REMEDIATION...HE WILL GET BACK TO ME ON HIS
FINDINGS. 6/15/2000:TED KOSIOR,HARRISON INDUSTRIAL PARK,INC.,TELECON
RJJ...HE WANTED TO KNOW WHY I SENT HIM THE 'RESPONSIBLE PARTY LETTER'...I TOLD
HIM THAT RICH CROUCH,FROM BARRON ASSOCIATES,DUG SOME TEST PITS AND IN ONE OF
THEM,THEY FOUND PETROLEUM ODORS...TED WILL CONTACT RICH AND GET BACK TO ME ON
THEIR NEXT STEP-OF-ACTION. 9/5/2000:BILL HEITZENRATER,AFI,TELECON RJJ,BILL
SAID THAT HE WILL BE HANDLING THIS SITE FOR INDUSTRIAL REALTORS,PART OF HARRISON
PROPERTIES,THE PROPERTY OWNERS...HE WANTED TO KNOW WHAT I KNEW OF THIS SITE,I
TOLDHIM THAT I WAS WAITING FOR THE PHASE 11 REPORT FROM RICH CROUCH,TO
DETERMINE WHAT THE EXTENT OF CONTAMINATION ON THIS SITE IS...BILL WILL CONTACT
RICH AND GET THE REPORT AND THEN SEND ME HIS REPORT AND ACTION PLAN...BILL
TELEPHONE # IS (716)283-7645CELL PHONE # 622-6008. 9/7/2000:RECEIVED A
LETTER FROM BILL HEITZENRATER EXPLAINING THAT THEY WILL SEND ME THEIR
INVESTIGATION PLAN IN ABOUT 3 WEEKS. 9/22/2000:RECEIVED THE PHASE 11 SITE
WORK PLAN FROM AFI ,AND TALKED WITH BILL HEITZENRATER ANDTOLD HIM THAT I
APPROVE THIS PLAN...HE WILL CALL ME WHEN THEY START. 9/27/2000:BILL
HEITZENRATER TELECON RJJ SAID THAT THEY WILL START REMEDIATING THE SITE
TOMORROW...THEY WILL EXCAVATE 3 AREAS,WHERE THEY ENCOUNTERED HIGH PID

CONTAMINATED SOIL TO THE BIO-SITE, THEY SHOULD BE DONE TODAY, THEN THEY WILL BEGIN TO MOVE THE SOIL PILE NEAREST THE COMMUNITY CENTER TO THE OTHER BIO-SITE, THEN COVER IT AND PUT UP A FENCE... SINCE THE STREET IS GETTING DIRTY FROM THE SOIL, AFI IS GETTING A BOBCAT/SWEEPER TO CLEAN UP THE STREET... I TELECON RICH CROUCH, BARRON ASSOCIATES, AND ASKED HIM IF HE COULD SEND ME THE SITE MAP AS TO WHERE EXACTLY THE TEST PITS HE TOOK WHERE... HE WILL ASK CTS FIRST, THEN SEND ME IT... HE DID SAY THAT THERE WAS NO TEST PIT TAKEN ON THE ONE ACRE WHERE THE BIO-SITE IS SINCE THIS WAS THE ONE ACRE THAT CTS WAS NOT BUYING. 3/15/2001: MIKE FRONCKOWIAK TELECON RJJ, 481-4444, SAID THAT THEY HAVE HIRED AFI TO TAKE A SAMPLE OF THE TRANSFORMERS AND TO HAVE THEM DISPOSED OF. 3/16/2001: RJJ AT A MEETING WITH BRIAN SCHECTMAN, V-PHARRISON INDUSTRIAL, CRAIG SLATER, THEIR ATTORNEY, BILL HEITZENRATER, AFI, AND COUNCILMAN FONTANA, CITY HALL... WE DISCUSSED 1070 SENECA ST. AND THE PROBLEM WITH THE BIO-CELL, NEXT TO THE COMMUNITY CENTER... AFTER THE DISCUSSION, MR. SCHECTMAN AGREED TO TRANSPORT ALL OF THE CONTAMINATED SOIL TO MODERN LANDFILL, STARTING TODAY... I HAD HIM FILL OUT THE APPLICATION FOR TREATMENT OR DISPOSAL OF AN INDUSTRIAL WASTE STREAM FORM AND HAD MARK HANNS APPROVE IT, THEN I FAXED IT TO MIKE GULLO AT MODERN... CRAIG SLATER WILL RELEASE A STATEMENT TO THE PRESS EXPLAINING HIS CLIENT'S ACTIONS, ALL WITH DEC'S APPROVAL... I EXPLAINED ALL THIS TO THE COMMUNITY CENTER... THEY WERE HAPPY THAT THE SOIL WILL BE REMOVED... CRAIG SLATER ASKED ME TO DRAFT A LETTER EXPLAINING THAT THE DEC IS IN FAVOR OF DISPOSAL, RATHER THAN HAVING THE PROBLEMS WITH THE BIO-CELL... I WILL DRAFT AND SEND HIM THIS LETTER. 3/19/2001: HARRISON INDUSTRIAL HAS STARTED TO BEGIN TO TRANSPORT THE CONTAMINATED FROM THE BIO-CELL TO MODERN LANDFILL... THIS SHOULD TAKE ABOUT 1 WEEK TO COMPLETE. 3/20/2001: HARRISON INDUSTRIAL HAS DECIDED TO CHANGE THEIR LANDFILL FROM MODERN TO CID, SO NOW CID NEEDS THE ANALYTICAL DATA, BEFORE THEY WILL ACCEPT THE SOIL... THIS WILL TAKE A COUPLE OF DAYS, FOR NOW, THERE WILL BE NO HAULING OF SOIL, UNTIL CID GIVES THE OK. 3/23/2001: RJJ TELECON MIKE FRONCKOWIAK, CTS, AND ASKED IF HE HAD ANY INFORMATION ON THE TRANSFORMERS... HE SAID THAT HE WILL CALL BILL HEITZENRATER, AFI, AND CHECK ON THIS. 3/27/2001: RJJ TELECON MIKE FRONCKOWIAK, CTS, HE SAID THAT THEY HIRED PARADIGM ENVIRONMENTAL TO SAMPLE THE TRANSFORMERS AND TAKE COMPOSITE SOIL SAMPLES NEARBY, FOR PCB'S... AFTER THE ANALYTICAL COMES BACK, THEY WILL DISPOSE OF THE TRANSFORMERS. 4/25/2001: RECEIVED THE ANALYTICAL RESULTS FROM THE TRANSFORMERS, WHICH TURNED OUT NOT TO BE TRANSFORMERS, THE RESULTS WERE NON-DETECT FOR PCB'S... I FAXED THESE RESULTS TO BOB GOGEL, PRESIDENT SENECA-BABCOCK BLOCK ASSOCIATION. 5/11/2001: RECEIVED THE FINAL CLOSURE REPORT FROM AFI ENVIRONMENTAL FROM 1070 SENECA ST, WHICH INCLUDES THE SOIL DISPOSAL RECEIPTS... THEY DISPOSED 404.54 TONS OF SOIL AT MODERN AND 3309.21 TONS OF SOIL AT BFI... SINCE THEY DID NOT TAKE A SIDEWALL SAMPLE, WE WILL MAKE THIS SITE INACTIVE... DRAFTED AND SENT AN INACTIVE LETTER TO WILLIAM HEITZENRATER, AFI... NO FURTHER ACTION NEEDED... SPILL CLOSED OUT.

Remark: DURING PHASE II SITE ASSESSMENT WORK, PETROLEUM ODORS WERE OBSERVED IN ONE TEST PIT, FILL IS INDUSTRIAL OVER SILT W/SOME CLAY, ODORS NOTED AT THE INDUSTRIAL FILL/SILT INTERFACE.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:

**Actual:
597 ft.**

The "site" was a yard located behind a building owned by the Behringer's. The samples, shown to be characteristic hazardous waste (lead from 5.57 ppm to 250 ppm), were taken from the yard near the corner of a shed located in the yard behind the building. The soil consisted of mixed fill.

MAP FINDINGS

Database(s)
 EDR ID Number
 EPA ID Number

BEHRINGER PROPERTY (IMSON STREET) (Continued)

S108061186

Clay was encountered at a shallow depth (less than 5 feet). The shallow aquifer was perched and seasonal. The clay layer acted as an aquitard for vertical migration of groundwater. The location is in South Buffalo in an industrial/residential area. The groundwater below the site is not used as a potable water supply, however, there was a potential for exposure via direct contact and wind erosion of the contaminated soil. A routine site inspection by DEC Staff, noted that the owner had stockpiled high level lead contaminated soil. Children were documented playing in the soil. The owner refused to address the issue citing insufficient financial capability. The DEC removed the contaminated soil under an Emergency Removal Contract. A Record of Decision (ROD) was signed in April 1996. The ROD no further action was required.

Environmental Problems: High levels of lead that were found in site soils have been removed. No further action is required. Groundwater was not impacted.

Health Problems Assessment: A completed interim remedial measure which included the excavation and off-site disposal of approximately 1,000 cubic yards of lead contaminated soil and the backfilling and covering of the excavation with at least two feet of "clean" earth cover material should prevent exposures from occurring. Public water serves the area which eliminates potential exposures via drinking water.

Site Description: A reported 8000 cu yds of soils contaminated with semi-volatile organic compounds and heavy metals. State sampling revealed tetrachloroethene at 7500 ppb in the groundwater and 1,000,000 ppb in liquid in a drum. In addition there are many scattered containers of paints, solvents and unknowns throughout the building. An assessment will be conducted to determine removal eligibility. Site is being archived with approval of removal program. (see J. Witkowski email dated 6/13/05)

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

1448 HRS. SPILL ENTERED SEWER TO WATER TREATMENT PLANT. NOTHING TO SEE AT THIS POINT. MJS SPOKE WITH CHIEF BORCYNski WITH USCG REGARDING INCIDENT.
01/03/00: MJS REVIEWFILE. NO DOCUMENTATION. MJS TELECON TO JAY HOESTERMANN, LEFT MESSAGE FOR HIM TO CALL. 01/04/00: MJS TELECON FROM MR HOESTERMANN. HE WILL FORWARD A REPORT HE SUBMITTED TO BUFFALO SEWER AUTHORITY. 01/05/00: MJS RECEIVED FAXED REPORT FROM MR HOESTERMANN. SPILL CAUSED BY EMPLOYEE FILLING DRUM AND NOT WATCHING OPERATION. MATERIAL IS BORON TRIFLUORIDE DIETHYL ETHER. 47 BORON TRIFLUORIDE 165 LBS), 53 ETHYL ETHER 185 LBS) - 350 LBS TOTAL. MUCH OF SPILL WENT TO SEWER, THEY ESTIMATE GREATER THAN 100 LBS EHTYL ETHER REACHED SEWER BASED ON RECOVERY. NOTE: RECENT NAME CHANGE FROM ALLIED SIGNAL TO HONEYWELL. MJS SENT DISPOSAL RECIEPT LETTER TO RP. 01/07/00: MJS RECEIVED MAILED COPY OF SAME REPORT AS ABOVE. 01/31/00: MJS RECEIVED COPY OF HAZ-WASTE MANIFEST FOR DISPOSAL DOCUMENTATION. NO FURTHER ACTION REQUIRED. MJS CLOSE FILE.

Remark: employee was filling drum and overfilled - product spilled on land and did enter sewer which flows to water treatment plant - ethyl ether other product involved 53 - 185 lbs spilled

DEC Field was "MF" 11/12/02: MF S/I/JOHN SOWINSKI, MANAGER OF TRANSERVICE. HE
CLAIMED ONE OF HIS TRUCKS HAD A SPILL ON THE THRUWAY BETWEEN EXITS 48 & 48A ON
10/22/02, 0630 (SPILL #0207832). HE TOLD ME TOM HALL OF REG 8 SPILLS TOLD HIM
TO TAKE THE CLEANUP DEBRIS BACK TO BUFFALO, EITHER PUT IT IN HIS DUMPSTER OR
SPREAD IT IN HIS LOT. THERE WAS 2-55 DRUMS OF DEBRIS. HE PUT THE DEBRIS IN A
LOW SPOT ON HIS LOT BETWEEN DOORS 3 & 4. THERE IS FP & SHEEN AT THIS LOCATION.
WE LOOKED OVER THE REST OF THE PROPERTY, DID NOT NOTICE ADDITIONAL SPILLAGE.
TOLD HIM AREA MUST BE REMEDIATED & SOIL & WATER MUST BE PROPERLY DISPOSED OF.
THERE IS A 10K DIESEL AGT ON SITE, HE TOLD ME FLEMING OWNS IT. TOLD HIM HE WILL
GET FINED DEPENDING ON WHAT REG 8 TELLS ME. T/C/TOM HALL, REG 8, HE TOLD ME HE
GAVE PERMISSION TO RP TO TAKE SOIL BACK TO BUFFALO & PUT IT IN HIS DUMPSTER. HE
DID NOT TELL HIM TO SPREAD IT ON HIS YARD. 11/13/02: MF E-MAIL TO ECO'S
REGARDING ILLEGAL DISPOSAL. E-MAIL TO PBS REGARDING REGISTRATION OF 10K AST.
CLEAN UP LETTER TO RP. SCHEDULE BY 11/18/02. 11/15/02: MF S/I/JOHN ULASKO,
AREA CLEANED. DEBRIS INSIDE IN 4 DRUMS. GAVE OK TO BACKFILL. T/C DAVE
DIPISQUALE, ECO ASSIGNED TO CASE. HE WILL ISSUE FINE. 01/07/03: MF 1ST
DISPOSAL LETTER, DUE 1/31/03. 01/15/03: MF T/C ECO RON BOSELA CALLED, HE HAS
BEEN IN TOUCH WITH MITCHEL MITGANG, 917-855-0170, 516-488-3400 x 122 OF
TRANSERVICE IN LONG ISLAND. MITCH CANNOT BELIEVE SOIL WAS DUMPED. DOES NOT
AGREE WITH FINE. T/C MITCH TOLD HIM WHAT I KNOW OF THIS SPILL. 01/24/03: MF
RECEIVED FAX OF SAMPLING & DISPOSAL PAPER WORK. 02/18/03: MF E-MAIL FROM RON
BOSELA, ECO. FINE HAS BEEN PAID. NO FURTHER ACTION NECESSARY. END DECRemark -
0275406

Site Description:

The Bengart and Memel (B&M) site is located in an urban commercial area on the south side of Clinton St. in the city of Buffalo. The surrounding land use is a mix of commercial and warehousing operations on the southern side of Clinton St. with residential and commercial on the north side of Clinton St. The southern end of the site is bounded by railroad lines. During B&M operations, scrap metal was processed and sorted. B&M periodically received transformers and capacitors containing PCB oils. These operations were primarily limited to the northwest portion of the site where PCB contamination was detected. The PCB containing oils were spilled on this portion of the site contaminating the soil and shallow groundwater. Oil spills also drained off the site reaching the Buffalo Sewer Authority (BSA) sanitary sewer system on Clinton St. PCB contamination of the sanitary sewer system was discovered by the BSA. In 1982, a Consent Order was executed by B&M which required remediation of the PCB spill area on the site. Remedial actions included excavation of contaminated soil, installation of a groundwater collection and treatment system, chemical treatment of PCB contaminated soils as part of an EPA demonstration project. In 1985 contaminated soil in excess of 50 ppm PCBs was excavated and placed in drums for subsequent chemical treatment to reduce the PCB levels to less than 50 ppm. This demonstration project was moderately successful, achieving up to 90% reduction in PCB levels in the soils. Treatment of the contaminated soils was completed in 1986. Some of treated soils were placed back onto the site and used as fill or were disposed offsite in a secure landfill. Because PCBs less than 50 ppm were left in place at the site, a shallow groundwater collection system was installed to capture PCB impacted groundwater in the shallow groundwater horizon. Collected water was batch processed by a carbon adsorption system prior to discharge to the Buffalo sanitary sewer system. The PCB contaminated area was covered with an asphalt cap to minimize contact with residual level PCB contaminated soil and reduce the generation of PCB impacted shallow groundwater. The site was reclassified to Class 4 in 1987. Initially during the signing of the Department Order on Consent, the main site features consisted of three concrete block buildings with the balance of land previously used for employee parking and for

non-ferrous scrap metal stockpiling and sorting. The PCB contaminated area currently contains a dilapidated concrete block building, the asphalt capped area, and groundwater collection and treatment system. The balance and larger portion of the original site containing the larger buildings was subdivided and sold several times since the issuance of a Department Order on Consent. The subdivided portion of the site is currently being utilized by an automobile wrecking operation. The remaining portion of the subdivided site containing remediation measures remains idle. Currently, the groundwater collection and treatment system is inoperable, and the responsible party has failed to maintain and operate the system. NYSDEC will assess site conditions and develop a long-term site management strategy during 2006.

Environmental Problems: 01/13/06 - Exposure to PCBs was to be eliminated by the management of shallow groundwater and maintenance of the asphalt cap area at the northwest section of the site. The responsible party has not maintained the asphalt cap nor operated the PCB leachate collection system since 2001. Potential release points include groundwater bypassing collection sump, broken pipes in treatment system, and overflow from potentially contaminated media in the treatment system containment area. Pending securing site access agreements, a site evaluation to assess current site conditions will commence.

Health Problems Assessment: Contaminated soils were excavated and treated. A groundwater collection and treatment system is in operation. These remedial actions have eliminated the potential for contact exposures to contaminants. Exposures via drinking water are not expected because public water serves the area. Public access to the site is controlled.

RCRAInfo Corrective Action Summary:

Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Site Description:

The site consists of a 19 acre parcel of land known as the "D" area. The "D" area is bounded by the Buffalo River, an active rail line, an abandoned Railroad Right-Of-Way and the Buffalo Color Plant site on the fourth side. The area was operated by Allied Chemical and is currently inactive. Contaminants on the site were from iron oxide lagoons which were used to dispose of iron oxide sludge wastes and a metal sludge weathering area which was used for the disposal of triphenylmethane dyes. Several other areas were contaminated with petroleum products and process chemicals from past operations. The area was originally owned and operated by Allied Chemical for the production of petroleum based detergents, dye intermediates, picric acid, and various other chemicals until 1974. The facility was sold to Buffalo Color in 1977. A Consent Agreement was signed in April 1982. Buffalo Color razed all buildings on the site in 1984. A field investigation was completed which determined that the site posed a significant threat to the environment based on waste disposal and groundwater contamination. A Remedial Investigation/Feasibility Study (RI/FS) began in 1988. The FS was finalized in July 1991. The Record of Decision (ROD), signed in November 1991 selected a remedy consisting of containment of waste by a slurry wall and cap, extraction

and treatment of groundwater, removal of contaminated sediments from the Buffalo River, and protection of its shoreline from erosion. Allied Signal signed a Remedial Design/Remedial Action (RD/RA) agreement in June 1993. Remedial Design was completed in March 1996. Remedial work began in July 1996 and was completed in October 1998. Final shore line planting was done in Spring 1999. Long term monitoring is underway, and a study of sediments is under review.

Environmental Problems: Contamination of groundwater and Buffalo River sediments by organic chemicals and metals had occurred. Surface and subsurface soils are also contaminated. Remedial efforts have partially isolated the contaminated materials from the river ecosystem.

Health Problems Assesment: Although access to the site is restricted, there is the potential for exposure through inhalation of contaminated dust and direct contact with contaminated surface water, sediments, and soil. The site is in an industrial/commercial area of Buffalo that is served by public water. Exposures via drinking water are not expected because public water serves the area. The remedial actions which include a cap, a slurry wall, and a groundwater collection and treatment system should eliminate the potential for human exposures.

Other Pertinent Environmental Activity Identified at Site

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: Site contains fuel tanks and four unregistered abandoned trailers that contain plastic and steel drums. Some of these drums appear to be leaking and one is labeled "35% Hydrogen Peroxide." Local inspection identified many containers of paints, solvents and unknowns scattered throughout the structure. An assessment will be conducted to determine removal eligibility.

Region: 9
Acres: 3.700
HW Code: 915135
Record Add: 1999-11-18 12:00:00
Record Upd: 2007-03-26 10:00:00
Updated By: MLDOSTER
Site Description:

The site consisted of two properties known as: Bern Metals (3.7 acres) and Universal Metals (1.5 acres). The site was an abandoned scrap reprocessor. Based upon complaints from citizens, DEC conducted a Phase I Investigation in 1987. Approximately two hundred 55 gallon drums were found on the Bern Metals property, along with other wastes including: metal turnings, waste chemicals, sludges, battery cases, spilled battery acids. Subsequently, 25 leaking transformers containing PCBs were found on the Universal Metals property. In 1990 USEPA conducted an emergency removal at the site. Drums, gas cylinders and transformers, were removed from the site. Under order by USEPA in 1994, a group of potentially responsible parties (PRPs) remediated neighboring residential properties and erected a fence around the contaminated site. The PRPs conducted a Remedial Investigation and Feasibility Study (RI/FS) of the site during the period 1993-1995. The Record of Decision (ROD) was signed in 1996 which required the contaminated soils be consolidated and properly capped. Under a separate New York State consent order, the PRPs consolidated and capped the waste onto the property known as Bern Metals (approximate acreage of 3.7 acres), completing the project in 2002. The long-term Operation, Maintenance and Monitoring Plan is in effect and is being implemented by the City of Buffalo. The Universal Metals property has been remediated as required by the ROD. This parcel no longer poses any environmental or human health threats and has been removed from the site. The reclassified site has been renamed the Bern Metals site.

Environmental Problems: With remediation of site, the wastes are contained. The environmental impacts have been mitigated and environmental threats have been removed. The site is being monitored and maintained under a long term O and M Plan by the City of Buffalo.

Health Problems Assessment: This site is located in a mixed industrial/residential area in the City of Buffalo that is served by public water. There are no known private wells in the immediate area. Therefore, human exposures to site-related contaminants via drinking water are not expected. Elevated levels of lead, up to 176,000

milligrams per kilogram, were present on-site in subsurface soils. These soils have been consolidated and capped on the site. NYSDOH coordinated blood lead testing of nearby residents in 1991 and no elevated blood lead levels attributable to the site were found. The USEPA replaced nearby residential yard soils with clean soil in 1992 and 1993. Along with the consolidation and capping of site soils, institutional controls and fencing are in place to protect public health.

Other Pertinent Environmental Activity Identified at Site

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Env Problem: With remediation of site, the wastes are contained. The environmental impacts have been mitigated and environmental threats have been removed. The site is being monitored and maintained under a long term O and M Plan by the City of Buffalo. With remediation of site, the wastes are contained. The environmental impacts have been mitigated and environmental threats have been removed. The site is being monitored and maintained under a long term O and M Plan by the City of Buffalo.

Site Description: The site consisted of two properties known as: Bern Metals (3.7 acres) and Universal Metals (1.5 acres). The site was an abandoned scrap reprocessor. Based upon complaints from citizens, DEC conducted a Phase I Investigation in 1987. ApproximateThe site consisted of two properties known as: Bern Metals (3.7 acres) and Universal Metals (1.5 acres). The site was an abandoned scrap reprocessor. Based upon complaints from citizens, DEC conducted a Phase I Investigation in 1987. Approximately two hundred 55 gallon drums were found on the Bern Metals property, along with other wastes including: metal turnings, waste chemicals, sludges, battery cases, spilled battery acids. Subsequently, 25 leaking transformers containing PCBs were found on the Bern Metals property, along with other wastes including: metal turnings, waste chemicals, sludges, battery cases, spilled battery acids. Subsequently, 25 leaking transformers containing PCBs were found on the Universal Metals property. In 1990 USEPA conducted an emergency removal at the site. Drums, gas cylinders and transformers, were removed from the site. Under order by USEPA in 1994, a group of potentially responsible parties (PRPs) remed on the Universal Metals property. In 1990 USEPA conducted an emergency removal at the site. Drums, gas cylinders and transformers, were removed from the site. Under order by USEPA in 1994, a group of potentially responsible parties (PRPs) remediated neighboring residential properties and erected a fence around the contaminated site. The PRPs conducted a Remedial Investigation and Feasibility Study (RI/FS) of the site during the period 1993-1995. The Record of Decision (ROD) was signed indicating neighboring residential properties and erected a fence around the contaminated site. The PRPs conducted a Remedial Investigation and Feasibility Study (RI/FS) of the site during the period 1993-1995. The Record of Decision (ROD) was signed in 1996 which required the contaminated soils be consolidated and properly capped. Under a separate New York State consent order, the PRPs consolidated and capped the waste onto the property known as Bern Metals (approximate acreage of 3.7 acres), completing the project in 2002. The long-term Operation, Maintenance and Monitoring Plan is in effect and is being implemented by the City of Buffalo. The Universal Metals property has been remediated as required by the ROD. This parcel no longer completing the project in 2002. The long-term Operation, Maintenance and Monitoring Plan is

Other Pertinent Environmental Activity Identified at Site

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start DECRemark - 0507553 9/23/05 FG SITE INSPECTION. MET ROCKY HINES, CONTRACTOR AND KEN KRZEMINSKI, OWNER SOUTH DIVISION PROPERTIES, LLC, 1352 GENESEE ST, BUFFALO, NY 14211. THE REPORTED 12,000 GALLON UST HAD BEEN UNCOVERED. A LINE WAS BROKEN AND PRODUCT WAS ALL AROUND THE EXCAVATION. MR. HINES PLANS WERE TO HAVE THE OIL AND WATER VACCED OUT ON MONDAY. INSPECTED THE LOADING DOCK AREA WHERE A REPORTED 5 1000 GALLON UST'S WHICH CONTAINED SOME SORT OF SOLVENT WERE SUPPOSED TO HAVE BEEN LOCATED. THEY HAD EXCAVATED THE AREA LOOKING FOR UST'S BUT NONE WERE FOUND BUT THEY DID REPORT A SOLVENT ODOR. THEY WILL SAMPLE TO DETERMINE WHAT SORT OF SOLVENT IS IN THE GROUND. THEY POINTED OUT A DEAD END SUMP IN THE LOADING DOCK AREA. THEY SAID THEY PUMPED THE WATER THAT WAS IN THERE OUT. THEY PLAN ON EXCAVATING THE CONTAMINATED SOIL AND STAGING ON PLASTIC FOR DISPOSAL. 9/26/05 FG SITE INSPECTION. FRANKS VAC SERVICE WAS VACCING OUT THE OIL AND WATER FROM THE UST. SOLVENT LOADING DOCK AREA HAD BEEN PARTIALLY EXCAVATED AND SOIL WAS STAGED ON THE GRASSY AREA. 9/29/05 FG SITE INSPECTION. THE SLUDGE IN THE BOTTOM OF THE UST IS THICK AND HEAVY. EPIC LOADED SOME SLUDGE BOXES WITH THE MATERIAL BUT IT SPILLED OUT OVER THE ROAD BECAUSE IT WAS TOO WET. THEY WILL NOW BE CONSOLIDATING IN THE UST AND LOADING FOR DISPOSAL FROM THERE. THEY WILL BE GETTING SAWDUST IN FOR CONSOLIDATION AND ARE CLEANING UP THE SPILL FROM THE SLUDGE BOXES. 10/27/05 ROCKY HINES PROVIDED THE ANALYTICAL RESULTS OF A SAMPLE COLLECTED FROM THE SOLVENT AREA. THE RESULTS SHOW THE FOLLOWING TO BE PRESENT: ETHYLBENZENE 82 PPB XYLENES 220 PPB NAPHTHALENE 199 124 TRIMETHYLBENZENE 4700 135 TRIMETHYLBENZENE 250 ISOPROPYLBENZENE 330 N-BUTYLBENZENE 670 N-PROPYLBENZENE 900 P-ISOPROPYLTOLUENE 240 SEC-BUTYLBENZENE 549 MR. HINES IS PROVIDING ALL ANALYTICAL TO ENSOL TO RECEIVE THEIR APPROVAL FOR DISPOSAL. ONCE HE RECEIVES APPROVAL, HE WILL BEGIN EXCAVATION ACTIVITIES AGAIN. ROCKY HINES CELL 818-8970 11/14/05 FG, CGM SITE INSPECTION. FUEL OIL UST EXCAVATION WAS CLEAN TO CLAY ON 4 SIDEWALLS AND TO BEDROCK ON BOTTOM. ROCKY HINES, CONTRACTOR WILL COLLECT FIVE SEPARATE SAMPLES FOR 8260 AND 8270 STARS LIST ANALYSIS. THE SOLVENT AREA, LOADING DOCK HAS A CONCRETE BOTTOM AND 4 FOUNDATION SIDEWALLS. ROCKY HINES WILL TRY TO GET A BOTTOM SAMPLE BY DIGGING THROUGH THE FLOOR. KEN KRZEMINSKY SHOWED US THE BASEMENT BEHIND THE LOADING DOCK AREA. THERE WAS A SUMP THAT MR. KRZEMINSKY SAID HAD A BOTTOM. THEY WERE CLEANING THAT AREA OUT. ROCKY HINES SAID HE WILL COLLECT A SAMPLE FOR ANALYSIS FROM THE WATER STAGED IN THE BAKER TANKS ON SITE. THEY WILL GET APPROVAL FROM THE CITY OF BUFFALO SEWER AUTHORITY FOR DISCHARGE OF THE WATER. 11/15/05 FG SITE INSPECTION. SOLVENT AREA HAD BEEN DUG OUT. FLOOR WAS CONCRETE, SIDEWALLS WERE FOUNDATIONS. NO IMPACTS TO SURROUNDING SOILS. ROCKY HINES WILL TRY TO GET A SOIL SAMPLE FROM UNDERNEATH THE CONCRETE FLOOR. HE WILL ALSO TAKE A SAMPLE FROM THE OUTSIDE OF THE FOUNDATION WALL. HE WILL PROVIDE SAMPLE RESULTS, DISPOSAL RECEIPTS AND A SITE MAP FOR A CLOSURE REPORT ONCE HE DISCHARGES THE WATER. 1/5/06 ROCKY HINES WITH EPIC CALLED ASKING WHAT THE DEPT WOULD NEED FOR CLOSURE. I TOLD HIM ALL DISPOSAL RECPTS, ALL ANALYTICAL GENERATED, SITE MAP AND DISCUSSION OF THE WATER THAT WAS DISCHARGED TO THE CITY OF BUFFALO SYSTEM. HE SAID HE WILL PROVIDE BY THE END OF NEXT WEEK, 1/13/06.

Site Description:

The site is located along the Buffalo River and was used for the disposal of wastes such as demolition debris, tank sediments, sewer sediments, soils containing asphalt and general refuse. Prior to Mobil's ownership, the property was used by the City of Buffalo for the disposal of municipal wastes. The U.S.G.S. analysis of soil samples taken in August of 1982 indicated the presence of high levels of lead and various organic compounds. A State Superfund Phase I Investigation Report was completed in 1983. A Phase II Report by Mobil Oil was completed in 1987. Data from this report showed the presence of lead in soil samples at levels of up to 3,160 ppm. The Industrial Waste Survey of 1979 indicates that sludge containing tetraethyl-lead was disposed at this site. Further site investigation was conducted under the DEC's Multi-Media Pollution Prevention (M2P2) Program. The site is part of a 77 acre petroleum storage and distribution terminal which was historically an oil refinery. Currently two remedial systems are in place to contain and

recover spilled oil in soils and groundwater. This system has operated since 1971. In 2004 Exxon/Mobil submitted plans to upgrade the containment system. As part of this effort buried abandoned pipes are being removed from the northern portion of the terminal.

Environmental Problems: Soil is contaminated with lead, which may in part be due to tetraethyl-lead. Oily seeps are visible along the Buffalo River. Adsorbents are placed in the seeps areas. Access to this site is limited by fencing and the lead waste at the site is not considered a significant threat to the environment.

Health Problems Assessment: Direct contact with contaminated on-site soils is unlikely because site access is restricted by a locked fence. Exposures through drinking water ingestion are not expected because the area is served by public water.

FINDS:

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FRP

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

NPDES

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that

RCRAInfo Corrective Action Summary:
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.
Event Date: 09/29/1996

RCRAInfo:
Owner: ALLIED CHEMICAL CORP
(716) 824-8424
EPA ID: NYD001863372
Contact: LEON MATTIOLI
(716) 824-8424

Classification: Small Quantity Generator
TSDF Activities: Not reported

Violation Status: Violations exist

Regulation Violated: Not reported
Area of Violation: GENERATOR-ALL REQUIREMENTS (OVERSIGHT)
Date Violation Determined: 07/23/1986
Actual Date Achieved Compliance: 12/21/1986

Enforcement Action: WRITTEN INFORMAL
Enforcement Action Date: 07/23/1986
Penalty Type: Not reported

Regulation Violated: Not reported
Area of Violation: GENERATOR-ALL REQUIREMENTS (OVERSIGHT)
Date Violation Determined: 05/06/1982
Actual Date Achieved Compliance: 07/23/1987

Enforcement Action: INITIAL 3008(A) COMPLIANCE ORDER
Enforcement Action Date: 04/30/1984
Penalty Type: Proposed Monetary Penalty

Enforcement Action: FINAL 3008(A) COMPLIANCE ORDER
Enforcement Action Date: 04/27/1984
Penalty Type: Proposed Monetary Penalty

There are 2 violation record(s) reported at this site:

Evaluation	Area of Violation	Date of Compliance
Financial Record Review	GENERATOR-ALL REQUIREMENTS (OVERSIGHT)	19861221
Compliance Evaluation Inspection	GENERATOR-ALL REQUIREMENTS (OVERSIGHT)	19870723

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CORRACTS:

EPA ID: NYD001863372
EPA Region: 02
Area Name: SITEWIDE
Actual Date: 09/29/1996
Action: CA075LO - CA Prioritization, Facility or area was assigned a low corrective action priority
NAICS Code(s): Not reported

CERC-NFRAP:

Site ID: 0201327
Federal Facility: Not a Federal Facility
NPL Status: Not on the NPL
Non NPL Status: NFRAP

CERCLIS-NFRAP Site Alias Name(s):

Alias Name: ALLIED CHEMICAL, INDUSTRIAL CHEMICAL DIV
Alias Address: Not reported
ERIE, NY

Site Description: WASTEWATER CONTAINING NIFRIC AND SULFURIC ACIDS AND METALLIC NITRATE RINSES WERE DISCHARGED TO ONSITE SURFACE IMPOUNDMENTS. THE LAGOON UNCLOSED AND THE ACCUMULATED SOLIDS AND CONTAMINATED SOILS WERE EXCAVATED.

CERCLIS-NFRAP Assessment History:

Action: DISCOVERY
Date Started: Not reported
Date Completed: 06/01/1981
Priority Level: Not reported

Action: PRELIMINARY ASSESSMENT
Date Started: 09/19/1986
Date Completed: 09/29/1986

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D003	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
D004	ARSENIC
D007	CHROMIUM
D008	LEAD
D009	MERCURY
D019	CARBON TETRACHLORIDE
D021	CHLOROBENZENE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/20/2007	Source: EPA
Date Data Arrived at EDR: 05/03/2007	Telephone: N/A
Date Made Active in Reports: 07/05/2007	Last EDR Contact: 08/03/2007
Number of Days to Update: 63	Next Scheduled EDR Contact: 10/29/2007
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Date Data Arrived at EDR: 02/02/1994

Date Made Active in Reports: 03/30/1994

Number of Days to Update: 56

Last EDR Contact: 05/21/2007

Next Scheduled EDR Contact: 08/20/2007

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/27/2007

Date Data Arrived at EDR: 03/21/2007

Source: EPA

Telephone: 703-412-9810

Last EDR Contact: 06/20/2007

Next Scheduled EDR Contact: 09/17/2007

Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006	Source: EPA
Date Data Arrived at EDR: 06/28/2006	Telephone: (212) 637-3660

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 04/04/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/04/2007	Telephone: 202-566-2777

	Data Release Frequency: Varies

ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 03/27/2007	Source: EPA
Date Data Arrived at EDR: 03/27/2007	Telephone: 703-416-0223
Date Made Active in Reports: 04/27/2007	Last EDR Contact: 07/02/2007
Number of Days to Update: 31	Next Scheduled EDR Contact: 10/01/2007
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 12/31/2005	Source: Department of Energy
Date Data Arrived at EDR: 11/08/2006	Telephone: 505-845-0011

	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2005	Source: EPA
Date Data Arrived at EDR: 03/13/2007	Telephone: 202-564-4203

	Data Release Frequency: Quarterly

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/01/2006	Source: Drug Enforcement Administration

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Number of Days to Update: 41

Next Scheduled EDR Contact: 09/10/2007

Data Release Frequency: Annually

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
ERIE, NY

FEMA Flood
Electronic Data
YES - refer to the Overview Map and Detail Map

BUFFALO SE

NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Devonian
Series: Middle Devonian
Code: D2 (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

User Questionnaire
Phase I Environmental Site Assessment ASTM E 1527 – 05

Site/Facility Name: _____

Location: 1146 Seneca Street

Date: 8/10/07

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (*the Brownfields Amendments*), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

1. Environmental cleanup liens that re filed or recorded against the site (40 CFR 312.25).
Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).
Are you aware of any AULS (activity and use limitations), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

User Questionnaire
Phase I Environmental Site Assessment ASTM E 1527 – 05

5. Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonable ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- a. *Do you know the past uses of the property?*

Gas station at Seneca Street

- b. *Do you know of specific chemicals that are present or once were present at the property?*

Approx. 5 yrs ago there was soil filled with oil stored on the property. The neighbors complained of the smell so it was removed.

- c. *Do you know of spills or other chemical releases that have taken place at the property?*

Above

- d. *Do you know of any environmental cleanups that have taken place at the property?*

Above

6. The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

User Questionnaire
Phase I Environmental Site Assessment ASTM E 1527 – 05

Site/Facility Name: Eastern Electric

Location: 1132 Seneca Street

Date: 8/10/07

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (*the Brownfields Amendments*), the user must provide the following information (if available) to the *environmental professional*. Roman Solubash, Partner
50 Bowwood Lane
Cheektowaga, New York 14227Reference: Limited Environmental Site Data Review:
Industrial Property, 1132 Seneca Street, Buffalo, NY
Via: Faxing (716) 856-1831

Dear Mr. Solubash:

Pursuant to your request, Environmental Audits, Inc. (EA) is pleased to submit this brief summary of conditions of environmental concern developed as a result of EA's very limited historic data review and on-site inspection of the above-referenced (subject) site. It should be noted that due to the restricted data sources reviewed, the information presented below should be considered preliminary with regard to determining the environmental condition of the subject site. In general, data sources were limited to NYSDOC files, select Sanborn maps and Polk Directories, City of Buffalo Fire Department files, and other information provided by the Client.

In evaluating the subject site, EA has segregated it into three separate areas for discussion: the undeveloped eastern parcel, the parcel upon which the building is situated and the building itself. The preliminary conditions environmental concern developed by EA for each of these areas are presented below:

Eastern Parcel

Historic records for this parcel indicate that it was originally used as a lumber yard during the late 1800s and early 1900s. Several building footers and concrete floors still exist on-site from unknown former operations in the central portions of the parcel. Three separate firms, including Gulf Oil, operated a filling station on-site between the 1930s and the 1950s. Records of at least four USTs being installed exist, and no records regarding UST removals could be located. During this time, the parcel was also used by a firm known as Robinson Clay Products. City records indicate that Robinson Clay was issued a permit to install a 50,000 gallon (assumed by EA to be a 5,000 gallon) gasoline tank in an unknown area. In addition, evidence observed during the site inspection indicates that the recent bio-treatment of petroleum-contaminated soils may have taken place on-site. EA also observed what appeared to be oily-grassy soil in the central area of this parcel. Previous Phase II EBA results provided to the Client only address surface and shallow soil conditions in the southwestern portion of this parcel.

Building Parcel

Historic records for this parcel indicate that it was also part of the lumber yard complex during the late 1800s and early 1900s. Records of at least three USTs exist for Westinghouse Electric at 1120 Seneca Street (the office and mailing address for the complex that included 1132 Seneca), and no records regarding UST locations or removals could be located by EA. Evidence observed outside the west wall of the building during the site inspection indicates that the two 1,000 gallon gasoline USTs (1984 City Installation permit) may still be located on this parcel. The third UST is reportedly located on the 1120 Seneca property, based on NYSDEC records. EA also observed what appeared to be oily greasy soil to the north of the building where the current degreasing sludge piles were once located by Westinghouse Electric. Although the NYSDEC was involved in the planning of the clean-up of these sludge piles, no records were located by EA which indicated that the clean-up was completed and/or verified. Previous Phase II ESA results provided to the Client also present evidence that high levels of PCBs and Chlorobenzene (well above current clean-up levels) were detected in the surface soils of the railroad spur just inside the building and at lower levels (still above current clean-up levels) just north of the building and in the rear portion of the parcel.

On-site Building

A variety of concerns exist with regard to the environmental condition of the building, based on EA's Brief Inspection, including, but not limited to, the following:

- o Suspect Asbestos containing materials, including fire door insulation, pipe wraps floor and ceiling tiles, linoleum, window caulk, various wallboards, etc.;
- o Suspect Lead based paints on all interior surfaces;
- o Heavy floor staining in the old oil room;
- o Numerous transformers which are not labeled and may contain PCB contaminated oils;
- o The former steam cleaning sump which formerly contained PCB sludges; and
- o Conditions under the floor of the building due to the past use of machining and hydraulic oils, PCBs, solvents, etc.

This should adequately describe EA's summary of conditions or environmental concern at the subject site. If you have any questions regarding the information presented, please contact me directly.

Very truly yours,

ENVIRONMENTAL AUDITS, INC.

Re: Eastern Electric Apparatus
1132 Seneca Street
Buffalo, NY

Dear Ms. Grotefend:

This is to acknowledge receipt of subject facility remediation revised work plan dated March 9, 1989. The revisions have been reviewed and while there has been substantial progress there are certain items which must be reconciled before it can be considered acceptable. Please review the following comments and make the requested revisions and/or additions:

- 1.) Page 2 states that the sewers downstream from the discharge in question will be inspected but does not describe how they will be inspected or what steps will be taken if sludge is encountered.
- 2.) Page 5. The primary target cleanup levels are complete removal of both PCB's and volatile organic contaminants. If this is not achievable then a secondary cleanup level of 1 ppm for PCB's and 1 ppb for volatiles must be achieved. The proposal should place no upper limit on the amount of contamination Westinghouse will remove to reach the secondary cleanup levels (1 ppm).
- 3.) Analytikem is still not on DEE's list of technically acceptable laboratories. If this laboratory has not been found to be technically acceptable by the time samples are collected then another lab should be selected.
- 4.) Page 6. Please describe procedures for decontaminating the trackhoe.

- 5.) Page 7. Please clarify what is meant by "Condition 2" under EPA SW 846.
- 6.) Page 7. The third paragraph covering target cleanup levels should be modified according to the wording in Maura Desmond's letter of March 10, 1989.
- 7.) The Health and Safety Plan (HSP) has not been revised as requested (item #18 - letter of 2/16/89).
- 8.) All revisions to the HSP should not be deferred until after site work is started (item #20 and #21).
- 9.) No new information has been provided in response to item #23. We need to know specific practical quantification limits (PQL) which your laboratory will deliver for volatile organics and PCB's. There is still confusion in this regard because you have circled a factor of 125 on page 5 of Method 8240 without justification.

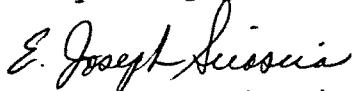

You have already had analyses done on this matrix (sludge/soil) and therefore PQL's should be readily available. However your lab will have to justify anything higher than low level PQL's listed in Methods 8240 and State Contract Laboratory Protocol (SCLP) for PCB's. This is an important issue because PQL's are the primary cleanup targets.

- 10.) Please show north on diagram C-4.
- 11.) Figure C-3 shows a depth for the planned excavation. We interpret this as being conceptual. The actual cleanup will proceed to the target levels specified in our March 10, 1989 letter.

If it is more convenient, the above changes can be contained in an addendum. The requested revision should be submitted to this office within 10 days of receipt of this letter.

Should there be any questions, please feel free to contact Maura Desmond or myself (716-847-4582).

Very truly yours,

**New York State Department of Environmental Conservation****MEMORANDUM**

TO: Jack Hyden
FROM: Joe Sciascia
SUBJECT: Eastern Electric Apparatus Co.
Proposed Work Plan - 3/9/89
DATE: March 27, 1989

Thank you for your written comments related to the subject PCB cleanup proposal. A number of those comments have been included in the attached letter. Others have not for the following reason:

- 1.) A number of comments requested additional details on the inside tank cleanup. Our primary concern is that sludge is removed and disposed in a safe approved manner. The plan should be capable of accomplishing this.
- 2.) The narrative description of the decontamination area in Section 5.2.1. seems to be adequate.
- 3.) The sludge pile area has recently been fenced, therefore the fencing should protect against accidental entry (Section 5.2.3).
- 4.) The maximum depth of excavation will depend on the extent of contamination. We prefer not to set limits on the areal or vertical extent of soil/sludge to be removed.
- 5.) Section 5.2.5 screening for PCBs on backfill soil should be adequate.

FILE

E. Joseph Sciascia
John W. Hyden
Eastern Electric Apparatus Facility
1132 Seneca Street, Buffalo, New York
March 23, 1989

This memorandum provides our comments on the March 9 Remediation Work Plan for the above referenced project. The primary deficiencies in this latest revised work plan are in showing layouts of the work zones and in presenting details of various safety and remediation procedures to be followed. Our specific comments are given in the remainder of this memorandum.

Section 4.1, fourth, fifth, and sixth sentences: A drawing showing the location of the sumps adjacent to the spray booth and also of the primary and secondary sludge pits should be given. This drawing should also show the plumbing (e.g. sump decantation pipe) and the devices that prevent carryover of sludge from the pits into the sewer system.

Section 5.1.1: A layout of the site setup, including the hot zone, decontamination area, support zone, and work area should be given. A catalog cut of the Visqueen material (first paragraph) should be included.

Section 5.1.2: Specific measures for preventing spilling of the water and pumpable sludge (second sentence) should be shown and/or described. The layout of the staging areas (third and fourth sentences) for the collection drums should be included. Specific characteristics (e.g. catalog cuts) of the DOT approved drums (first sentence) and/or Type 17H drums (fourth sentence) should be added.

Section 5.1.3: Measures to prevent rather than minimize escape of mists and wash and rinse waters from the pit area (third paragraph) are preferred. These methods should be described in detail. Similar to our comment on Section 5.1.2, the characteristics of the Type 17E drums (first paragraph) should be given.

Section 5.1.4: The layout and location of the staging area for the containers (second paragraph) should be shown. Details of the cited DOT containers (first paragraph) should be given.

Section 5.2.1: Similar to our comment on Section 5.1.1, the layout of the site setup for this portion of the project should be given.

Section 5.2.3: Details of the covering(s) to be used and security measures to be followed for the open excavation (second paragraph) should be described. Specific procedures for decontaminating the trackhoe (third paragraph) should be included.

Section 5.2.4: In addition to the areal extent, the maximum depth to which Westinghouse intends to extend the two excavations (third paragraph) should be given.

Section 5.2.5: Provision should be made for a complete chemical analysis (e.g. TCL) of the proposed backfill, not just for PCB's.

Thank you for the opportunity to review this work plan. If you have questions on our comments, please contact us.

Re: Eastern Electric Apparatus
1132 Seneca Street
Buffalo, New York

Dear Mr. Sciascia:

In response to your comments presented in your letter dated February 16, 1989, concerning the work plan submitted by Westinghouse Electric Corporation for remediation efforts at the above-reference facility, enclosed for your review are three copies of a revised work plan. The work plan presents the procedures that will be used to remediate the active spray booth area and the contaminated sludge piles at the Eastern Electric facility.

The majority of the comments presented by the New York State Department of Environmental Conservation (NYDEC) have been addressed in the body of the work plan. I have attempted to facilitate your review of the work plan by directing you to the appropriate section or page of the work plan where responses to your comments can be found. In a few cases, it was not appropriate to address NYDEC comments in the work plan itself, thus I have provided a response in the discussion presented below. (Refer to your February 16, 1989 correspondence).

1. Refer to title page of enclosed report - Remediation Work Plan, Eastern Electric Apparatus Facility, 1132 Seneca Street, Buffalo, New York, March 9, 1989.
2. Done.

Mr. E. Joseph Sciascia
March 10, 1989
Page Two

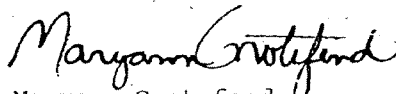

3. Refer to Drawing C-2 (Site Plan) in Appendix A.
4. Refer to Drawing C-4 (Sampling Layout) and following discussion in Appendix A.
5. Refer to page 8, Section 7.0-Project Coordination.
6. Refer to page 8, Section 6.0-Disposal of Waste & Reporting
7. Refer to page 4, Section 5.1.3-Decontamination.
8. Refer to page 7, Section 5.2.4-Sampling and Analytical Testing. Target cleanup levels and the possibility of further remedial efforts have been discussed with NYDEC and agreement was reached. Please reference the letter from William D. Wall, Senior Counsel, Environmental Affairs, Westinghouse Law Department, to Maura C. Desmond, Senior Attorney, NYDEC dated February 22, 1989.
9. Refer to pages 5 and 6, Sections 5.2-Contaminated Soil Area and 5.2.3-Contaminant Screening.
10. Field screening for PCBs will not be performed. Laboratory procedures concerning PCB testing can be found in Appendix C.
11. Refer to Appendix B.
12. Refer to page 6, Section 5.2.4-Sampling and Analytical Testing.
13. Refer to Appendix C.
14. Refer to page 7, Section 5.2.4-Sampling and Analytical Testing.
15. Refer to pages 3, 4, and 8, Sections 5.1.2-Material Removal, 5.1.4-Site Breakdown, and 7.0-Project Coordination.
16. Refer to page 5, Section 5.2.2-Materials Removal.
17. Refer to Drawing C-3 (Cross-Section Pile #1) in Appendix A.

Mr. E. Joseph Sciascia
March 10, 1989
Page Three

18. Refer to Appendix D. A chain-link fence has been installed around the sludge pile as requested by NYDEC which serves to limit access to the contaminated sludge pile. During the remediation, access to the area will be limited and only those persons working in the remediation effort will be permitted near the contaminated zone as specified in the site health and safety plan.
19. Refer to C-2 (Site Plan).
20. Further revisions to the health & safety plan will be made once the remediation site is mobilized to the site.
21. Same as item 20 above.
22. The checklist has been provided for the health and safety officer in case the need arises.
23. Refer to Appendix C.
24. Refer to page 2, Section 4.1-Spray Booth. The Buffalo Sewer Authority, will be apprised of the results of our investigation.
25. A field G.C. will be not used in this effort.
27. Daily field logs will be maintained and a final report presenting the results of the remediation effort will be provided to NYDEC.

Your expeditious review is required in order to utilize the existing right of access to the adjoining property, which such access expires on midnight March 31, 1989. If you have further questions or need additional information please do not hesitate to call me at (412) 642-3951.

Sincerely,

Maryann Grotefend

Remediation Work Plan
Eastern Electric Apparatus Facility
Buffalo, New York

1.0 Work Plan Objectives

The objective of this work plan is to present procedures that will be employed to remediate the active spray booth area and the contaminated sludge piles at the Eastern Electric Apparatus Repair Company, Inc. facility, located at 1132 Seneca Street in Buffalo, New York.

Methods will be outlined as to how the water and sludge will be removed from the spray booth pit and the precautions that will be taken to prevent contaminated or cleaning water from escaping the pit area. The method of removal of the small piles of contaminated sludge in the northeast corner of the Eastern Electric property will also be addressed.

The work plan will review the procedures that will be used to decontaminate the spray booth area and to dispose of contaminated soil, water and sludge from the property. It will also discuss the quality control program that will provide for the safe and successful completion of this project.

2.0 Site History

Westinghouse constructed the present repair facility in 1932. Since that time the facility has been used to repair transformers, motors, generators and other electrical apparatus. On June 30, 1986 Westinghouse sold the Buffalo repair facility to Eastern Electric Apparatus Repair Company, Inc.

Westinghouse initiated discussions with the New York Department of Environmental Conservation in October 1988 and submitted a work plan concerning remediation of the spray booth and of two sludge piles located in the northeast corner of the facility. In an effort to define the extent of contamination arising from the sludge piles and to assess the spray booth, Westinghouse obtained several samples of sludge, soil and spray booth wastewater. The results of this sampling are presented in Appendix A.

3.0 Project Overview

The remediation project at the Eastern Electric Company facility in Buffalo, New York consists of two separate tasks. The first, involves the decontamination of the spray booth located inside the Eastern Electric building. This task requires liquid and sludge removal, and washing of concrete and metal surfaces to reduce concentrations of PCB contamination to acceptable levels. The second task requires the excavation and disposal of two sludge piles located in the northeast corner of the property. These sludge piles resulted from the disposal of materials formerly removed from the before mentioned spray booth.

4.0 Site Description

4.1 Spray Booth

The spray booth is a 12 ft. X 12 ft. area at floor level that is sectioned off from the remainder of the room by two parallel vertical walls. The booth has a steel grate floor and is above a bi-level pit. This first level of the pit was found to be 9 ft. wide by 12 ft. long by 3 ft. deep and the second level 7 ft. wide by 12 ft. long by 7 ft. deep (refer to drawing C-1). The pit contains approximately 850 to 1000 gallons of pumpable liquid and 5 cubic yards of sludge. Adjacent to the pit is a sump that is connected by a decantation pipe, which pours off into the sewer system. All waters flow from the sewer system into two pits (primary and secondary). There is no carryover of solids from the pits into the sewer system. Although previous inspections of the pits have not indicated the presence of solids, they will be inspected again following mobilization of the cleanup crews.

4.2 Sludge Piles

The second area to be addressed is two sludge piles located in the northeast corner of the property. Pile #1 straddles Eastern Electric property and the adjoining property. The surface dimensions of the pile are 9 feet wide by 13 feet long (refer to drawing C-4). The pile has a maximum height of approximately 20 inches and slopes downward to about 6 inches high on the neighboring property (refer to drawing C-3). Pile #1 contains approximately 8 cubic yards of contaminated material. Pile #2 is located between Pile #1 and a block building 40 feet away (refer to drawing C-2). This pile has dimensions of 3 feet wide by 4 feet long by 11 inches high. The pile contains about one-half cubic yards of material.

5.0 Scope of Work

The tasks included in this work plan center around two separate work areas: the spray booth area, and the contaminated sludge pile area. This section will describe the methods and procedures that will be used during the remediation of these two areas.

5.1 Spray Booth Area

5.1.1 Site Set Up

Upon arrival on site, the cleanup team will establish a Hot zone, Support zone and a decontamination area for exit/entry. The Hot zone will consist of the booth area and a small work area surrounding the booth for staging and handling of drums. The booth will be enclosed by a visqueen curtain to contain contamination migration. The work area will be established by barrier tape to prevent improper entry/exit into the Hot zone. This area will also be covered by visqueen secured to the floor to limit the spread of contamination.

A decontamination area will be established on the edge of the work area. In this area, equipment and personnel will be cleaned and expendable gear discarded before entering into other areas of the plant.

A Support zone will be established adjacent to the decontamination area. This area will consist of a First Aid Station, personal protective equipment area and drum staging area.

5.1.2 Material Removal

Upon completion of site set up, the cleanup team will commence material removal by pumping pumpable sludge and water from the pit into DOT approved drums. Care will be taken to prevent spillage when handling these materials. Several drums will be brought into the work area at a time. These drums will be filled, closed, wiped off and transferred back to the Support area for later disposition. When the water has been completely removed, the crew will begin containerizing the remaining sludge into 17H drums. This will be performed in two different steps. A 2 inch diaphragm pump will be utilized to pump as much of the sludge as possible. The remainder of the heavier sludge will be shoveled into buckets, raised and poured into drums.

5.1.3 Decontamination

After the completion of material removal, a two phase washing process will begin. All concrete and metal surfaces will be scrubbed with stiff bristle brushes and Kerosene/Diesel fuel. The liquid will then be absorbed utilizing organic sorbent pads. After all surfaces have been treated in this manner, a penetone Power Cleaner 155 solution will be applied and allowed to soak into the surfaces. A high pressure washer will be utilized to rinse all surfaces twice. A penetone and water solution will be used in the rinsing process. All wash and rinse waters will be pumped into 17E drums for disposition with other contaminated liquids. The sump and decantation pipe will be cleaned in the same manner as the pit, as well as associated grating.

The decontamination method described was selected based on experience gained from numerous other projects. This method was selected based on the following:

1. Small overall surface area to be cleaned.
2. The number of vertical and horizontal features associated with the location.
3. The limitation of possible risk of spreading contamination to adjacent work areas.
4. Economic factors.

The kerosene/diesel fuel acts as a "solvent" to remove the PCB's from the concrete or metal surface. Once removed, the PCB's become bonded with the kerosene/diesel which is collected and disposed of properly. The Penetone Power Cleaner (a alkaline degreaser) is applied to help remove the kerosene/diesel fuel. The product has a surfactant that enables the organic solvent to be removed from the surface material.

Care will be taken during the cleaning operation to minimize escape of initial wash or rinse from the pit area, as well as spray from the washing procedure. Drains in the area will be plugged prior to startup and protective covering will be erected where necessary to keep misting to a minimum. All wash and rinse liquids will be handled as potentially contaminated or analyzed and verified clean.

5.1.4 Site Breakdown

This last phase of work is a combination of many small tasks. After the pit, grates, sump and booth are clean, breakdown procedures will begin with decontamination of all reusable equipment. This will be done by washing all pumps, hoses, etc., with penetone and water. All visqueen, sorbent etc., will be placed into DOT containers for disposition. The

remaining wash waters will be transferred into containers for disposition at approved facilities after sampling and analysis.

While samples are being taken, all containers will be properly labeled and checked to be sure that they are properly closed and ready for shipment. The containers will then be taken to a staging area where they will be stored until they are ready to be delivered to an approved TSCA/RCRA disposal facility.

5.2 Contaminated Soil Area

There are two contaminated sludge piles located in the northeast corner of the Eastern Electric property. Pile #1 extends over onto an adjacent property. The second smaller pile lies between the Pile #1 and a block building at the rear of the property (refer to drawing C-2).

Target cleanup levels are determined to be 1 PPM for PCB's and 1 PPM total volatile organics. Field screening levels for volatile organics, as recorded by an organic vapor analyzer, will be 10 PPM.

5.2.1 Site Set Up

As stated before, for the spray booth area, the cleanup crew will establish a Hot zone, Support zone and a decontamination area for exit/entry. Pile #1 has been secured with a 7 foot high chainlink fence with 3 strands of barbed wire at the top. The fenced area measures 25 ft. X 25 ft. The taped Hot zone will encompass Pile #2, the fenced Pile #1, and an area sufficiently large enough to contain the excavation equipment and waste containers. The Decontamination area and Support zone will be established as previously described.

5.2.2 Materials Removal

A trackhoe (Catapillar 215 or equal) will be used for excavating the contaminated piles. The trackhoe will initially be positioned on the Eastern Electric side of Pile #1. Following removal of one side of the chainlink fence excavation will proceed. The excavation will include the piled material and 6 to 12 inches of soil beneath the pile. All excavated soil will be stored in a 20-yard rolloff box supplied by a licensed special waste hauler. The positioning of the trackhoe and the rolloff box relative to the two contaminated piles will be such to minimize travel by the trackhoe. The excavation will extend 4 to 8 feet beyond the limits of each pile.

Following excavation and sampling, the entire excavated area will be covered with Visqueen to prevent infiltration of

rainwater. Once laboratory test sample results are obtained (estimated to be less than 24 hours) the visqueen will be removed and the excavated area readied for either backfilling or additional excavation.

5.2.3 Contaminant Screening

Post excavation soil samples will be taken at several locations within the excavated area. Soils will be field screened for volatile organics. Screening will be done by filling a sample container with soil, sealing the container with aluminum foil and closing the lid. After five minutes, an organic vapor analyzer (OVA) probe will be inserted into the container through the foil and the headspace measurement recorded. If the soil sampling results indicate the presence of volatile organics greater than 10 PPM (headspace readings), additional soils will be excavated and the screening process repeated.

Field screening for PCB's is not proposed. Testing to within the target levels of 1 PPM, require the use of a portable (field) gas chromatograph (GC). This remediation project is not of sufficient size to economically justify the mobilization of the GC. Other field tests for PCB's (Clor-N-Oil Test Kit by Dexsil Corp.) do not have the sensitivity needed to confirm that acceptable target levels have been obtained. For these reasons soil samples will be collected following completion of the anticipated excavation and sent by overnight courier to Analytikem in Cherry Hill, New Jersey for quantification of PCB's. We anticipate 24-hour turn-around in obtaining the results. As described above, the excavation will be covered and secured while the testing is being performed.

Following completion of the excavation, the trackhoe will be decontaminated. Wash and rinse liquids will be contained in drums for proper disposal. Contaminated hand tools will either be decontaminated or disposed.

5.2.4 Sampling and Analytical Testing

All soil sampling and field screen testing will be conducted in accordance with procedures outlined in Appendix B. Screening samples for volatile organics will be taken at the surface within each 100 square feet of excavated area and 6 inches below the ground surface on four sides of Pile #1 excavation, and two sides of Pile #2 excavation. These samples will be tested with an OVA and if headspace concentrations are below 10 PPM then they will be shipped overnight to Analytikem Laboratory and tested for PCB & total volatile organic content. If the laboratory test results reveal concentrations that meet the target levels, then the screening samples results will be

submitted to NYDEC as confirmation of cleanup.

All Analytical testing methods will be conducted under EPA SW 846 Condition 2. The laboratory will submit reportables and deliverables specified in SW 846 section 1.5. Analytikem is currently approved by NYDOH and has submitted all documentation to NYDEC. They are currently awaiting a NYDEC audit. Analytikem's standard operating procedures are included in Appendix C.

The screening/confirmation procedures described above (section 5.2.3) will be repeated until the laboratory has confirmed that target levels have been attained. The target levels will be 1 PPM for PCB's and 1 PPM total volatile organics. If target levels can not be obtained following excavation within the secured fenced area of Pile #1 (25 ft. X 25 ft. area) or a 15 foot square area encompassing Pile #2, then remediation will be suspended. Future efforts will be directed by the plan agreed to by Westinghouse Electric and NYDEC. The agreement is as follows:

"In the event the target cleanup levels of 1PPM for PCB's and 1PPM for total volatile organics in the soil are not attained, NYDEC may determine whether or not a groundwater investigation is warranted. The purpose of the groundwater investigation would be to assess the effect upon groundwater quality of residual soil contamination resulting from the sludge piles. In making such a determination, the NYDEC will consider all relevant factors including the nature and quantity of residual contaminants, soil types, depth to groundwater, site or regional geology and hydrogeology, and groundwater quality and use in or around the site. Westinghouse may comment upon NYDEC's determination and NYDEC agrees to consider Westinghouse's comments. If the NYDEC determines that a groundwater investigation is required, NYDEC shall provide Westinghouse with a written explanation of the basis for its decision and Westinghouse shall perform a groundwater investigation. Westinghouse reserves all rights that it may have to challenge or contest NYDEC's determination on the grounds that consideration of the above referenced relevant factors does not justify a groundwater investigation or that the conditions as set forth in the Conditional Discharge have been otherwise fulfilled."

5.2.5 Backfilling

Following removal of contaminated soil to acceptable levels, the excavation will be backfilled. Several suppliers will be contacted to acquire backfill material. Remediation personnel will visit each potential borrow location and acquire backfill samples. Samples collected from the preferred supplier

(based on cost, availability and routing) will be analyzed for PCB's.

Once the backfill soil has been verified free of PCB's it will be trucked to the project site. There, it will be dumped in the excavation and spread and compacted with the trackhoe. Grass seed and mulch will be placed on the ground surface. The security fence will be removed and the site fencing restored in its original location.

6.0 Disposal of Waste & Reporting

All containers of waste water and sludge from the spray booth will be shipped to APTUS in Coffeetown, Kansas for ultimate disposal. Contaminated soil and sludge from the sludge piles are to be temporarily stored in the 20 yard rolloff box. Once excavation is complete the stored soil will be sampled and characterized for disposal at an approved facility. All containers of solids will be taken to either APTUS or a Chemical Waste Management facility in either Model City, New York or Emelle, Alabama. The selected location will depend on approval, transportation, and disposal costs and scheduling requirements. Results of the analytical protocol and data will be maintained on file and submitted to NYDEC. Upon completion of the site remediation a report concerning the activities and test results will be prepared.

7.0 Project Coordination

Following a tentative agreement with NYDEC for the execution of this work plan, Eastern Electric Apparatus and Penn Central will be notified of the plant to begin the remediation work. Penn Central has been informed of this project and has granted Westinghouse Electric a right of entry. This right was granted on 2-28-89 and extends either to completion of the work or 3-31-89, whichever occurs first. Therefore, a quick review and approval is necessary to operate under this access privilege.

Prior to actual remediation, cleanup personnel will meet to review Health and Safety plans and to inform Eastern Electric's Plant Manager of the remediation procedures and schedulings. Concurrently NYDEC will be notified as to when the remediation will begin and at the following stages:

1. After initial setup of staging areas, hot zones and support zones.

2. At the start and after cleaning of the sludge pit, but prior to reinstallation of the grates.
3. At the start of excavation of the outside sludge pile and upon completion of preliminary removal.

It should be noted that the entire remediation activity will take less than 5 work days. Once on the site, remediation crews will work continuous 8 to 10 hours each day with the exception of waiting for analytical test results. Even during this short shutdown period, other activities will be assigned to excavation personnel.

8.0 Specific Health & Safety Plan

A site specific safety and health plan has been developed for the Buffalo site. Preparation was done by Sonya Monjkowski, Industrial Hygienist and approved by Dr. Ronald G. Huggins, CIH #3003. A copy of the plan can be found in Appendix D.

9.0 Certification of New York P.E. Engineer

The services of Stan Schwartz of Westinghouse Environmental Services will be contacted to oversee cleanup activities at the Eastern Electric site. Mr. Schwartz is a licensed engineer in the state of New York. He will certify that all work is certification number is 12638.

Site Inspection & Sampling

November, 1988

Westinghouse/Haztech mobilized a crew to the Eastern Electric facility on November 10, 1988, to sample waste for disposal and assess the site for cleanup procedures. Upon arrival at the site, Haztech personnel surveyed (inspected) the two areas to be cleaned up.

The first area is the pit below a spray booth containing approximately 850 gallons of pumpable liquid and 5 cubic yards of sludge.

The second area is two sludge piles located in the northeast corner of Eastern Electric's property and an adjoining property. The pile consists of approximately 8 cubic yards of sludge.

Area 1 is a paint booth with the dimensions of 12 ft. X 12 ft., containing a bi-level pit beneath the floor. The first level was found to be 3 ft. wide X 12 ft. long X 9 ft. wide and the second level at 7 ft. wide X 12 ft. long X 7 ft. deep (refer to drawing C-1).

Area 2 consists of two soil piles located in the northeast corner of the property.

Pile #1 surface dimensions were identified as approximately 9 ft. wide X 13 ft. long. The pile is approximately 20 inches high and slopes down to about 6 inches high on the neighboring property (refer to drawing C-2 and C-3).

Pile #2 is located between the first pile and a block building. This pile had dimensions of 3 ft. wide X 4 ft. long X 11 ft. high.

These piles are located on approximately 6 inches of topsoil which is underlaid by coarse gravel and sand. The area was sampled in the following manner:

Pile #1 A grid 18 ft. wide X 24 ft. long (refer to drawing C-3) was laid out on 6 foot intervals. A composite sample was made of the pile. Then the area surrounding the pile was sampled approximately 3 feet out from the pile at 6 foot intervals lengthwise down the pile at a depths of 6 inches.

File #2 Two composite samples were taken. One composite (P2-1C) was taken 2 feet out at four locations around the pile to a depth of 6 inches to test for migration. The other composite (P2-C) was taken from the pile.

The Analytical test results of these samples are attached.

QA/QC

ENVIRONMENTAL SAMPLE METHODS

ENVIRONMENTAL SAMPLE METHODS

This document provides a summary of procedures employed by Westinghouse Environmental Services for collection and handling of environmental samples. Additional stepwise, media-specific protocols and procedures are included in the Westinghouse Environmental Services Standard Operating Procedures and are tailored to and included in site specific plans, as appropriate. All personnel who perform sampling are trained in all applicable Westinghouse Environmental Services and State and Federal requirements pertaining to sample collection, documentation and handling. All meters and probes utilized for the collection of field measurements will be in good repair and properly calibrated in accordance with the manufacturers specifications and Westinghouse protocols.

1.0 SAMPLE COLLECTION PROCEDURES

The exact procedures and equipment used for sampling will depend on the matrix sampled and analyses to be performed. The following are general procedures relevant to all sampling performed.

1.1 Sampling Container Preparation

All containers (regardless of age) used in the sampling of soils, ground water, surface water and sediment shall be cleaned according to the following EPA approved procedures.

Sample containers for organic analyses and metals will generally be cleaned using these sequential steps:

- a) Nonphosphate detergent/hot water wash
- b) Tap water rinse
- c) Distilled/deionized water rinse
- d) Acetone rinse
- e) Pesticide-grade hexance rinse

Containers for metal analyses may, with the approval of the Project Manager, be cleaned using these sequential steps:

- a) Nonphosphate detergent wash
- b) 1:1 Nitric acid rinse
- c) Potable water rinse
- d) 1:1 Hydrochloric acid rinse
- e) Potable water rinse
- f) Reagent grade water rinse

These procedures will not apply to manufacturer prepared sample containers or cartridges used to collect subsurface gas samples. Any containers that are provided for sampling use, in any media, that are certified clean from the manufacturer or laboratory performing the analyses, will be exempted from these cleaning requirements. All other containers shall be cleaned and certified clean through the laboratory providing the analytical services or containers. The container type and preservative requirements will follow the specifications of the laboratory QA/QC Plan and EPA Manual SW-846.

1.2 Decontamination Procedures

All field equipment used during sample collection that comes in contact with the sample has the potential to cause the introduction of contamination or to induce cross contamination shall be decontaminated prior to use. This procedure applies to augering and boring equipment, sample equipment, and field sampling instruments and probes.

Cleaning and decontamination procedures for all field sampling equipment and instrumentation will be conducted in a thorough and step-wise manner as indicated by the methods set forth for the media to be sampled. If necessary, specific areas to be utilized as contaminant reduction zones will be designated in a site specific health and safety plan. All rinse water will be contained or diverted in a manner which prevents contamination of surrounding areas. All rinsate will be collected in a compatible container and properly disposed of to prevent possible contamination to the borehole and/or adjacent areas. Clean, new, disposable latex gloves will be worn when handling sediment sampling equipment, ground-water sampling equipment and monitor well construction materials. All decontamination procedures will be documented on either the Field Report Form (Figure 1) or the Water Sampling Report Form (Figure 2) as appropriate.

Soil Sampling Decontamination

Cleaning and decontamination procedures for all soil sampling equipment will be conducted in a uniform manner. Any deviations from these procedures will be thoroughly documented on the Field Report Form. Decontamination will be conducted in accordance with the following procedures:

- a. Clean sediment sample equipment with potable water and phosphate-free laboratory detergent (Alconox or equivalent), using a brush, if necessary, to remove particulate mater and surface films.
- b. Rinse thoroughly with potable (tap) water.
- c. Rinse thoroughly with deionized water.

- d. Rinse thoroughly with isopropyl alcohol.
- e. Triple rinse with deionized water.
- f. Allow to air dry.
- g. Wrap with aluminum foil, if appropriate, to prevent contamination if equipment is to be stored or transported prior to immediate use.

For field sampling equipment utilized at sites with potential metals contamination, an alternative cleaning and decontamination procedure may be employed. Due to the nature of the work, complexity of the procedure and potential remoteness of some sites, this procedure will be used only when absolutely necessary and with the approval of the Project Manager. The alternative decontamination procedure for metals is as follows:

- a. Clean sediment sample equipment with potable water and phosphate-free laboratory detergent (Alconox or equivalent), using a brush if necessary, to remove particulate mater and surface films.
- b. Rinse thoroughly with 1:1 nitric acid/water solution.
- c. Rinse thorough with distilled water.
- d. Rinse thoroughly with 1:1 hydrochloric acid/water solution.
- e. Rinse thoroughly with distilled water.
- f. Allow to air dry (if applicable).

Ground-Water Sampling Equipment Decontamination

All ground-water sampling and monitoring equipment, including bailers,

pumps and lines, will be decontaminated prior to sampling in accordance with the following decontamination procedures:

- a. Rinse thoroughly with tap water.
- b. Wash with phosphate-free laboratory detergent (Alconox or equivalent).
- c. Rinse with deionized water.
- d. Rinse with isopropyl alcohol.
- e. triple rinse with deionized water.
- f. allow to air dry (if applicable).
- g. Wrap with aluminum foil, to prevent contamination if equipment is to be stored or transported prior to immediate use.
- h. Secure for transport in field vehicle (if applicable).

If decontamination is performed in the field, all rinse water will be contained in a manner which prevents the introduction of contamination to surrounding areas. As warranted based on site conditions, all rinsate will be collected in a compatible container and properly disposed of to prevent possible contamination of adjacent areas. Sampling personnel will avoid contacting bailers or pumps with the surrounding soils or unprotected hands. All bailers or pumps which have contacted any soil, unprotected hands, or anything which may contaminate the equipment will be decontaminated according to the above procedures.

Bottles will be cleaned prior to delivery to the field by the chemical laboratory. For safety reasons and to minimize contamination, preservatives may be added to the sample bottles prior to delivery to the site.

Sampling personnel will don new, laboratory quality disposable gloves. These gloves will be replaced as necessary during the well evacuation and sampling procedure and will always be changed between wells.

Field Analytical Instrument Decontamination

All probes serving analytical instruments used in the field (e.g., pH, and specific conductance meters) will be rinsed with deionized or distilled water prior to each use. Electric water level probes will be cleaned with laboratory grade soap and triple rinsed between wells. During soil sampling, equipment used for monitoring organic vapors (e.g., HNu and OVA) will be properly cleaned, according to manufacturer specification, prior to use.

1.3 Procedures to Prevent Cross Contamination

Personnel collecting soil, ground water, and air samples will take the following precautions to minimize sample contamination or cross-contamination between samples:

- o At a minimum, latex surgical gloves will be used while taking all samples, disposed of after equipment has been decontaminated, and a clean pair used for the next sample.
- o Sampling personnel will not touch the inside of the sampling container.

- o Sampling personnel will not walk over any areas where samples will be taken.
- o Only equipment that has been properly decontaminated will be used for environmental collection.

Immediately following the collection of the sample, the container will be sealed and the sample will be labeled and entered in the field log book. At this time, the Chain-of-Custody Form (Figure 3) will be completed to note the acquisition of the sample.

The sample will then be placed in the shipping container and preserved according to the directions of the laboratory and EPA manual SW-846 procedures.

1.4 Sample Identification and Labeling

Each sample shall be identified in the log book and on the sample container label. The sample label shall include the following information:

- o Date and time
- o Sample ID number
- o Project number
- o Sampler (name)
- o Sample location (and depth, if applicable)
- o Preservation
- o Matrix type

1.5 Field Quality Control Samples

The quantity and types of field quality control samples collected will depend on a variety of factors including: the sampling procedure, media sampled, regulatory classification of the site (i.e. RCRA/CERCLA), potential for cross contamination, and sensitivity of the analyses to be performed.

- o Duplicate samples are blind quality control samples which are duplicates of field samples. They will be collected and labeled as an additional environmental sample. Collection of the duplicate sample must be documented in the field log book. Analytical results of duplicate samples are compared to those of the original sample for final data verification.
- o Trip blanks are prepared by the contract laboratory, and are used to determine if analytical or equipment errors at the laboratory have caused false positive results. Analyses of trip blanks are generally performed for volatile organic samples only. The samples will be submitted blind to the laboratory in coolers containing volatile organic field samples. Trip blanks accompany the field samples during sampling, storage, and transportation to the laboratory. The containers will be filled with material appropriate to the media sampled, as follows:
 - When sampling soil or sediment, the samples will be filled with native soil free of contamination.

- When sampling ground water or surface water, they will contain deionized water.
 - When taking ambient air samples, unused filters or adsorptive media will be used.
- o Field blanks are quality control samples provided to determine whether ambient conditions may affect the quality of samples collected. Field Blanks will be taken as appropriate or as requested by the client, and will consist of materials appropriate to the media sampled, as follows:
- Background soils are used as field blanks when sampling soil or sediment.
 - Deionized water is used when analyzing ground water or surface water.
 - Background air samples are used during ambient air sampling.
- o Split samples are the same as duplicate samples, except that they are submitted to two or more different chemical laboratories. Split samples for volatile organic analyses will be grab samples as opposed to composite samples. When samples are split with an outside source or government agency, the split will be noted. If either party refuses a split sample, the refusal will be noted and signed by both parties.
- o Equipment blanks will be made by pouring laboratory grade deionized water over decontaminated sampling equipment prior to sampling to

determine the effectiveness of decontamination procedures. The samples will be submitted blind to the chemical laboratory for ground-water samples, equipment blanks are generally collected at least once during each sampling day, unless dedicated equipment is used or otherwise specified by the client.

2.0 DOCUMENTATION OF SAMPLING AND HANDLING PROCEDURES

Generally, several documentation methods are used simultaneously to provide complete, legally admissible records of sampling activities performed. Methods utilized include the recording of information in field log books, on sampling forms and field on a chain-of-custody form.

2.1 Field Log Book and Field Report Form

A bound field log book will be maintained by the field sampling team manager to provide a daily record of events. At the beginning of each entry, the following will be recorded:

- o Date
- o Time
- o Meteorological conditions
- o Field personnel present
- o Level of personal protection
- o List of on-site visitors and the level of personal protection
- o Signature of the person making the entry

Field log book entries will be in as much detail as necessary so that essential information is properly documented. All documentation in field books will be in ink. If an error is made, corrections will be made by crossing a line through the error and entering the correct information. Corrections will be dated and initialed. No entries will be obliterated or rendered unreadable.

If no map of sample locations is available prior to sampling, a simple drawing of the site (not to scale) will be included in the log book to provide an illustration of all sampling points.

The cover of each log book used will contain:

- o Person and organization to whom the book is assigned
- o Book number
- o Start date
- o End date

Entries in the log book will include at a minimum the following for each sample date:

- o Site identification
- o Location of sampling points
- o Description of sampling points
- o References to photographs (if applicable) and brief sketch of sampling points
- o Sample identification number

- o Number of samples taken
- o Time of sample collection
- o Reference to sample location map
- o Number of QA samples taken
- o Collectors' names
- o Field observations
- o Sample distribution (e.g., QA laboratory, split samples)
- o All field measurements made (e.g., pH, temperature, specific conductance)

Daily activities shall be summarized on the Field Report Form. If surface or ground-water are sampled, data will be recorded on the Water Sampling Report Form. These forms will be maintained in the project file. Data to be included on the form will include travel time, time at the site and a summary of activities, and observations. The Field Report Form may refer to the field log notebook for additional specific information.

2.2 Sample Chain-of Custody Record Form

In order to maintain an accurate record of sample collection, transport, analysis, and disposal, the following methodologies will be used:

- o Samples will be accompanied by a Chain-of-Custody Form at all times.
- o The Chain-of-Custody Form will be used by personnel responsible for

ensuring the integrity of samples from the time of collection until shipment to the laboratory.

- o The Chain-of-Custody Form will be signed by each individual who has the samples in his or her possession. Preparation of the Chain-of-Custody Form will be as follows:
- o The Chain-of-Custody Form will be initialed in the field by the person collecting the sample, for every sample. Every sample will be assigned a unique identification number, to be entered on the Chain-of-Custody Form. Up to 12 samples can be grouped for shipment using a single form.
- o The record will be completed in the field to indicate project, sampling team, etc.
- o If the person collecting the sample does not transport the samples to the laboratory or deliver the sample containers for shipment, the first block for "Relinquished by _____," "Received by _____" will be completed in the field.
- o The person transporting the samples to the laboratory or delivering them for shipment will sign the record form as "Relinquished by ____."
- o If the samples are shipped to the laboratory by commercial carrier, the Chain-of-Custody Form will be sealed in a watertight container, placed

in the shipping container, and the shipping container sealed prior to being given to the carrier.

- o If the samples are transported directly to the laboratory, the Chain-of-Custody Form will be kept in the possession of the person delivering the samples.
- o For samples shipped by commercial carrier, the waybill will serve as an extension of the chain-of-custody record between the final field custodian and receipt in the laboratory.
- o Upon receipt in the laboratory, the Sample Receiving Supervisor will open the shipping containers, compare the contents with the chain-of-custody record, ensure that document control information is accurate and complete, and sign and date the record. Any discrepancies will be noted on the Chain-of-Custody Form.
- o In the event of the discrepancies, the samples in question will be segregated from normal sample storage and the field personnel immediately notified.
- o The Chain-of-Custody Form is completed upon receipt of the samples by the analytical service. The completed Chain-of-Custody Form will be returned to the Project Manager and maintained in the project file.

3.0 SAMPLE PACKAGING

Samples collected must be handled and shipped in a manner that will protect against any detrimental effects on the samples or the environment due to breakage, leakage or spoilage. Sample handling procedures will be closely supervised and recorded to minimize the potential for loss, modification, or tampering during shipment to the analytical laboratory. Package labeling specification will depend on the type of materials being sent, and will be in accordance with Department of Transportation (DOT) regulations (49 CFR, Parts 171 through 177). Samples of hazardous materials will be stored and handled in accordance with all applicable Federal, State and Westinghouse corporate requirements.

Samples will be immediately placed in the sample cooler. Once the cooler is filled with samples, it will be locked and securely positioned in a sampling vehicle or other secure storage facility until the completion of the day's sampling activities. The following protocol will be used for packaging of samples:

- o Only waterproof metal or equivalent strength plastic ice chests and coolers will be used.
- o The volume level will be marked on each bottle with a grease pencil.
- o Strapping tape or custody seals will be placed around the lid of all sample containers except for volatile organic samples.

- o Samples will be packed properly for shipment so that bottles will not dislodge and/or break during shipment.
- o Approximately three inches of inert cushioning material will be placed in the bottom of the cooler.
- o The sample containers will be placed upright in the cooler in such a way that they do not touch and will not touch during shipment. In addition, all sample containers will be placed in clear, plastic, leak proof bags. Care will then be taken to ensure that sample labels are legible through the bag.
- o Additional inert packing material will be placed in the cooler to partially cover the sample containers. Freeze packs will be placed around, among, and on top of the sample containers.
- o Each cooler will be filled with additional cushioning materials to prevent movement of samples during shipment.
- o The Chain-of-Custody Form will be placed in a waterproof plastic bag and placed just under the lid of the cooler. Methodology of shipment, courier name(s), and other pertinent information will be recorded on the Chain-of-Custody Form.
- o If the cooler is equipped with a drain plug, it will be taped shut.

- o The lid will be secured with strapping tape at a minimum of two locations. No labels will be covered.
- o The completed shipping label will be attached to the top of the cooler.
- o "This Side Up" arrow labels will be placed on two sides of the cooler, and "Fragile" labels will be placed on all four sides.
- o Numbered and signed custody seals will be placed on the front right and back left of each cooler. These seals will be covered with clear tape.
- o Samples will be transported by courier in an approved, cooled shipping container, ensuring that the maximum holding times between sample collection and analysis will not be violated.
- o The weight limit of the shipper will be maintained.
- o All records pertaining to the shipment of a sample will be retained (freight bills, post office receipts, and bills of lading).
- o The packaged samples will meet all applicable DOT requirements prior to shipment.

ANALYTICAL TEST METHODS

ANALYTIKEM, INC.

Analytical Methodology

All analysis are performed in accordance with methodologies found in the following publications:

- Federal Register, Vol. 49, No. 209, October 26, 1984.
- Federal Register, Vol. 51, No. 114, June 13, 1986.
- Test Methods for Evaluating Solid Waste, USEPA, SW-846, Second Edition, July 1982.
- Test Methods for Evaluatin Solid Waste, USEPA, SW-846, Third Edition, November 1986.
- Standard Methods for the Examination of Water and Wastewater, American Public Health Association, 16th Edition, 1985.
- Methods for Chemical Analysis of Water and Wastes, EPA-600/4-79-020, USEPA, March 1983.
- Annual Book of ASTM Standards (1980 and 1983)
- OI Corporation Model 524C TOC Analyzer Manual, January 1983.

METHOD 8080

ORGANOCHLORINE PESTICIDES AND PCBs

1.0 SCOPE AND APPLICATION

1.1 Method 8080 is used to determine the concentration of various organochlorine pesticides and polychlorinated biphenyls (PCBs). Table 1 indicates compounds that may be determined by this method and lists the method detection limit for each compound in reagent water. Table 2 lists the practical quantitation limit (PQL) for other matrices.

2.0 SUMMARY OF METHOD

2.1 Method 8080 provides gas chromatographic conditions for the detection of ppb levels of certain organochlorine pesticides and PCBs. Prior to the use of this method, appropriate sample extraction techniques must be used. Both neat and diluted organic liquids (Method 3580, Waste Dilution) may be analyzed by direct injection. A 2- to 5- μ l sample is injected into a gas chromatograph (GC) using the solvent flush technique, and compounds in the GC effluent are detected by an electron capture detector (ECD) or a halogen-specific detector (HSD).

2.2 The sensitivity of Method 8080 usually depends on the level of interferences rather than on instrumental limitations. If interferences prevent detection of the analytes, Method 8080 may also be performed on samples that have undergone cleanup. Method 3620, Florisil Column Cleanup, by itself or followed by Method 3660, Sulfur Cleanup, may be used to eliminate interferences in the analysis.

3.0 INTERFERENCES

3.1 Refer to Methods 3500 (Section 3.5, in particular), 3600, and 8000.

3.2 Interferences by phthalate esters can pose a major problem in pesticide determinations when using the electron capture detector. These compounds generally appear in the chromatogram as large late-eluting peaks, especially in the 15% and 50% fractions from the Florisil cleanup. Common flexible plastics contain varying amounts of phthalates. These phthalates are easily extracted or leached from such materials during laboratory operations. Cross contamination of clean glassware routinely occurs when plastics are handled during extraction steps, especially when solvent-wetted surfaces are handled. Interferences from phthalates can best be minimized by avoiding contact with any plastic materials. Exhaustive cleanup of reagents and glassware may be required to eliminate background phthalate contamination. The contamination from phthalate esters can be completely eliminated with a microcoulometric or electrolytic conductivity detector.

TABLE 1. GAS CHROMATOGRAPHY OF PESTICIDES AND PCBs^a

Environmental Monitoring and Support Laboratory, Cincinnati, Ohio 45268.

e = Multiple peak response.

nd = not determined.

TABLE 2. DETERMINATION OF PRACTICAL QUANTITATION LIMITS (PQL) FOR VARIOUS MATRICES^a

Matrix	Factor ^b
Ground water	10
Low-level soil by sonication with GPC cleanup	670
High-level soil and sludges by sonication	10,000
Non-water miscible waste	100,000

^aSample PQLs are highly matrix-dependent. The PQLs listed herein are provided for guidance and may not always be achievable.

^bPQL = [Method detection limit (Table 1)] X [Factor (Table 2)]. For non-aqueous samples, the factor is on a wet-weight basis.

*MDL = 10 ppb for aqueous
MDL = 330 ppb for non-aq*

4.0 APPARATUS AND MATERIALS

4.1 Gas chromatograph:

4.1.1 Gas Chromatograph: Analytical system complete with gas chromatograph suitable for on-column injections and all required accessories, including detectors, column supplies, recorder, gases, and syringes. A data system for measuring peak heights and/or peak areas is recommended.

4.1.2 Columns:

4.1.2.1 Column 1: Supelcoport (100/120 mesh) coated with 1.5% SP-2250/1.95% SP-2401 packed in a 1.8-m x 4-mm I.D. glass column or equivalent.

4.1.2.2 Column 2: Supelcoport (100/120 mesh) coated with 3% OV-1 in a 1.8-m x 4-mm I.D. glass column or equivalent.

4.1.3 Detectors: Electron capture (ECD) or halogen specific (HSD) (i.e., electrolytic conductivity detector).

4.2 Kuderna-Danish (K-D) apparatus:

4.2.1 Concentrator tube: 10-mL, graduated (Kontes K-570050-1025 or equivalent). Ground-glass stopper is used to prevent evaporation of extracts

4.2.2 Evaporation flask: 500-mL (Kontes K-570001-500 or equivalent). Attach to concentrator tube with springs.

4.2.3 Snyder column: Three-ball macro (Kontes K-503000-0121 or equivalent).

4.2.4 Snyder column: Two-ball micro (Kontes K-569001-0219 or equivalent).

4.3 Boiling chips: Solvent extracted, approximately 10/40 mesh (silicon carbide or equivalent).

4.4 Water bath: Heated, with concentric ring cover, capable of temperature control ($\pm 5^{\circ}\text{C}$). The bath should be used in a hood.

4.5 Volumetric flasks: 10-, 50-, and 100-mL, ground-glass stopper.

4.6 Microsyringe: 10-uL.

4.7 Syringe: 5-mL.

4.8 Vials: Glass, 2-, 10-, and 20-mL capacity with Teflon-lined screw cap.

GAS CHROMATOGRAPHY/MASS SPECTROMETRY FOR VOLATILE ORGANICS

1.0 SCOPE AND APPLICATION

1.1 Method 8240 is used to determine volatile organic compounds in a variety of solid waste matrices. This method is applicable to nearly all types of samples, regardless of water content, including ground water, aqueous sludges, caustic liquors, acid liquors, waste solvents, oily wastes, mousses, tars, fibrous wastes, polymeric emulsions, filter cakes, spent carbons, spent catalysts, soils, and sediments.

1.2 Method 8240 can be used to quantify most volatile organic compounds that have boiling points below 200°C [vapor pressure is approximately equal to mm Hg @ 25°C] and that are insoluble or slightly soluble in water. Volatile water-soluble compounds can be included in this analytical technique, however, for the more soluble compounds, quantitation limits are approximately ten times higher because of poor purging efficiency. The method is also limited to compounds that elute as sharp peaks from a GC column packed with graphitized carbon lightly coated with a carbowax. Such compounds include low-molecular-weight halogenated hydrocarbons, aromatics, ketones, nitriles, acetates, acrylates, ethers, and sulfides. See Table 1 for a list of compounds, retention times, and their characteristic ions that have been evaluated on a purge-and-trap GC/MS system.

1.3 The practical quantitation limit (PQL) of Method 8240 for an individual compound is approximately 5 ug/kg (wet weight) for soil/sediment samples, 0.5 mg/kg (wet weight) for wastes, and 5 ug/L for ground water (see Table 2). PQLs will be proportionately higher for sample extracts and samples that require dilution or reduced sample size to avoid saturation of the detector.

1.4 Method 8240 is based upon a purge-and-trap, gas chromatographic/mass spectrometric (GC/MS) procedure. This method is restricted to use by, or under the supervision of, analysts experienced in the use of purge-and-trap systems and gas chromatograph/mass spectrometers, and skilled in the interpretation of mass spectra and their use as a quantitative tool.

1.5 To increase purging efficiencies of acrylonitrile and acrolein, refer to Methods 5030 and 8030 for proper purge-and-trap conditions.

2.0 SUMMARY OF METHOD

2.1 The volatile compounds are introduced into the gas chromatograph by the purge-and-trap method or by direct injection (in limited applications). The components are separated via the gas chromatograph and detected using a mass spectrometer, which is used to provide both qualitative and quantitative information. The chromatographic conditions, as well as typical mass spectrometer operating parameters, are given.

TABLE 1. RETENTION TIMES AND CHARACTERISTIC IONS FOR VOLATILE COMPOUNDS

Compound	Retention Time (min)	Primary Ion	Secondary Ion(s)
Acetone	--	43	58
Acrolein	--	56	55, 58
Acrylonitrile	--	53	52, 51

^aSample PQLs are highly matrix-dependent. The PQLs listed herein are provided for guidance and may not always be achievable. See the following information for further guidance on matrix-dependent PQLs.

^bPQLs listed for soil/sediment are based on wet weight. Normally data is reported on a dry weight basis; therefore, PQLs will be higher, based on the % moisture in each sample.

Other Matrices:

Factor¹

Water miscible liquid waste
High-level soil & sludges
Non-water miscible waste

50
125
500

¹PQL = [PQL for ground water (Table 2)] X [Factor]. For non-aqueous samples, the factor is on a wet-weight basis.

2.2 If the above sample introduction techniques are not applicable, a portion of the sample is dispersed in methanol to dissolve the volatile organic constituents. A portion of the methanolic solution is combined with water in a specially designed purging chamber. It is then analyzed by purge-and-trap GC/MS following the normal water method.

2.3 The purge-and-trap process: An inert gas is bubbled through the solution at ambient temperature, and the volatile components are efficiently transferred from the aqueous phase to the vapor phase. The vapor is swept through a sorbent column where the volatile components are trapped. After purging is completed, the sorbent column is heated and backflushed with inert gas to desorb the components onto a gas chromatographic column. The gas chromatographic column is heated to elute the components, which are detected with a mass spectrometer.

3.0 INTERFERENCES

3.1 Interferences purged or coextracted from the samples will vary considerably from source to source, depending upon the particular sample or extract being tested. The analytical system, however, should be checked to ensure freedom from interferences, under the analysis conditions, by analyzing method blanks.

3.2 Samples can be contaminated by diffusion of volatile organics (particularly methylene chloride and fluorocarbons) through the septum seal into the sample during shipment and storage. A field blank prepared from reagent water and carried through the sampling and handling protocol can serve as a check on such contamination.

3.3 Cross-contamination can occur whenever high-level and low-level samples are analyzed sequentially. Whenever an unusually concentrated sample is analyzed, it should be followed by the analysis of reagent water to check for cross-contamination. The purge-and-trap system may require extensive bake-out and cleaning after a high-level sample.

3.4 The laboratory where volatile analysis is performed should be completely free of solvents.

3.5 Impurities in the purge gas and from organic compounds out-gassing from the plumbing ahead of the trap account for the majority of contamination problems. The analytical system must be demonstrated to be free from contamination under the conditions of the analysis by running laboratory reagent blanks. The use of non-TFE plastic coating, non-TFE thread sealants, or flow controllers with rubber components in the purging device should be avoided.

4.0 APPARATUS AND MATERIALS

4.1 Microsyringes: 10- μ L, 25- μ L, 100- μ L, 250- μ L, 500- μ L, and 1,000 μ L. These syringes should be equipped with a 20-gauge (0.006-in I.D.) needle

PCB WATER METHOD

1. Pipette 10 ml of water into a culture tube.
2. Add 2.0 ml of trimethyl pentane and shake for 1-2 minutes on vortex mixer.
3. Let contents settle and remove an aliquot for analysis.
4. Transfer aliquot to culture tube containing sodium sulfate.
5. Inject 1-2 ul on G.C. with 3% ov-1 column and E.C.D.
6. If further clean-up is needed, add 1g florisisil to Aliquot and shake.
7. Reinject and dilute if necessary.
8. Run an EPA G.C. sample with every ten samples.
 - a. Inject 1 microliter of STD @ 12 ppm.
 - b. Inject 1 ul sample.

PCB SOIL METHOD

1. Weigh 3.0g of soil into a 40ml THM Bottle.
2. Add 30.0ml of Etoac and 5.0g Na₂SO₄ to bottle and shake.
3. Place bottle in Ultrasonic Bath and sonicate for 30 minutes.
4. Let contents settle and remove an aliquot for analysis.
5. Inject 1 - 2 ul on G.C with 3% ob-1 column and E.C.D.
6. If further clean-up is needed, add 1g florisil to Aliquot and shake.
7. Reinject and dilute, if necessary.
8. Run an EPA G.C. sample with every ten samples.
 - a. Inject 1 ul STD @ 12 ppm.
 - b. Inject 1 ul sample.

<u> </u> Dermatitis	<u>x</u> Nail discoloration	

Other Signs/Symptoms: Elevation in liver enzymes; long term exposure may result in liver
damage; chloracne most likely visible sign

Long Term Effects:
Expect carcin x human carcin teratogen mutagen sensitizer NA
Damage to: CNS liver x kidney skin x resp poss. blood formers possible

FIRST AID: flush eyes w/water x flush skin w/water wash skin x
to clean air x give oxygen x if not breathing, art. respir. x
her

ADDITIONAL INFORMATION:

Specific gravity (air=1): heavier than air lighter than air
Vapor pressure very, very low soluble: water other
Clearance
Reaction w/incompatibles

Reaches to particulates, extremely hard to vaporize at normal ambient temperatures
Reaction w/diesel fuel, inhalation exposure greatest

Index - Signs and symptoms

Diesel fuel

SUBSTANCE: Diesel fuel
Physical state: solid ☐ sludge ☐ liq. in container ☒ free liq. ☐ vapor ☒
on soil ☐ residue ☐ other ☐
Fire: combust ☒ flam ☐ pyrophoric ☐ shock sensit ☐ explos ☐
DNA ☐
Incompatibles: strong oxidizers (Cl, O-O's, etc) ☒ water ☐ air ☐
strong acids ☐ strong bases ☐ active metals ☐ heavy metals ☐
other ☐
Exposure limits: '87 TLV ☐ ppm or ☐ mg/m3 "SKIN" yes ☐ no ☐
PEL ☐ ppm or ☐ mg/m3 IDLH ☐ ppm ☐ mg/m3

Relative density (air=1): heavier than air ___ lighter than air ___
Vapor pressure 22mm Hg (high) soluble: water ___ other ___

Clearance ___

Mixture w/incompatibles ___

Boiling point 40°F

Decontamination

Wooden tools used on skin absorbing contaminants should be discarded. Remember to bag sensitive instruments before use. See the General Health and Safety Plan for possible decon layouts and list of skin absorbers.

Solution(s) to be used: detergent & water _____ Zep _____ Other: _____
Methanol _____ Isopropanol _____ Hexane _____ Radiac _____
Vory (for oil) _____ Penatone (for PCBs) ☒ Kerosene _____
LiQuinox (good for pumps) _____ Diluted HTH _____ Also pressure washer pit decon

Heavy Equipment: 1. pump 2. remove by hand remainder 3. sample 4. diesel wash
Decon Plan: Waterlaser ☒ 5. pressure wash w/penetone 6. pump remainder 7. sample again
Other: for backhoe removing contaminated soils in back yard

Special Training or Review of Training

According to OSHA's 1910.120, the following items as they apply to the project must be discussed before work begins:

- + Emergency procedures, evacuation routes, prevailing wind direction, signals, location of eye wash, 1st aid equipment
- + Medical assistance (location, maps, phone numbers)
- + The buddy system and its responsibilities
- + Safe work practices for this particular job
- + Symptoms and signs associated with the contaminants
- + Other properties of the contaminants (carcinogenic, flammable, etc.)
- + Confined space (hazards, safe work practices, the buddy system, etc.)
- + Decontamination (solutions, layout, etc.)
- + Appropriate PPE

Please check if these topics are also relevant and consequently need review:
Heat stress _____ Cold stress ☒ Odor thresholds _____ Confined space _____
Usual hazards _____ Handling shock sensitives _____ Drum Handling _____
Other: important to heighten awareness of frostbite, etc for outdoor work. rest/shelter must be made available should be dry and warm & preferably in clean zone.

Air Monitoring

Air Monitoring Equipment Needed:

☒ O₂ meter ☒ Explosimeter ☒
Sample pump ensemble: Dupont or Gillian pumps ☒ Media ☒ Tubing ☒ for PCB's
Passive dosimeters for organic vapors _____ Geiger counter _____
Detector tubes (useful for inorganics) types _____
Confined space: CO _____ H₂S _____

Other: _____

*Remember CONTINUOUS monitoring is necessary for confined spaces.
*** Be sure to calibrate and to attach log with air monitoring data. Send this information to H&S in Atlanta. Periodically contact H&S with results. If initial reconnaissance data is available, please attach results. If another company has air monitoring data, obtain a copy and attach to plan.

Other Air Monitoring Comments:

Please remember the protection factor for full face cartridge respirator is 50; for SAR is 2,000; for SCBA is 10,000. Multiply the protection factor x the TLV = maximum amount of contaminant in ppm allowed for that respirator. Exception: Switch to SAR or SCBA when levels are IDLH or when O₂ is 19.5% or less, or if working in confined space.

For example: full face cartridge respirator X TLV Acetic Acid
50 X 10ppm ≤ 500 ppm Acetic Acid
with that respirator.
(IDLH = 1000 ppm)

Hard hats must be worn for all excavation activities.
For when hazards are unknown, Level B protection is required.
In Level C, 2 hoods must be worn, on under respirator straps and one over the straps.
Change cartridges about every 1 hour or less during laser operations. Remind crew that the mist rapidly reduces

EPA Criteria for PPE; Total Organics; FOR UNKNOWNNS:

Level C 0-5ppm total organics above background
Level B 5-500 ppm total organics above background
Level A 500-1000 ppm total organics above background

Indicate the protection level expected to begin the job and what the criteria will be for a change in protection level. effectiveness of cartridge

Communication Procedures

Radio/Horn Blast/Siren/Other: _____ is the emergency signal to indicate that all personnel should leave the Exclusion Zone.

Hand Signals:

Hands on top of head = Need work assistance
 Hands around neck = Out of air, can't breathe
 Hands in U shape = In trouble or out of air
 Grip partner's wrist/
 hands around waist = Leave area immediately
 Thumbs up = Ok, I am all right, I understand Thumbs down = No, negative
 Blasts: 1 long horn blast = Evacuate 1 short blast = Attention
 2 blasts---Fire

Emergency Equipment: eyewash X shower _____ lifeline _____ harness _____ SCBA _____
 stretchers _____ emergency oxygen X first aid kit X PPE for the next level
 of protection _____ radios _____ telephones onsite airhorns X

Fire Extinguishers: A,B,C (Multiple purpose) X
 A (ordinary materials) _____ B (flammables and grease) _____
 C (electrical equipment) _____ D (combustible metals e.g. Mg, Na, K) _____

Other: _____

MEDICAL EMERGENCY & HEAT STRESS (NEW GENERAL PRIORITIES)

1. Survey Situation.
2. Call for help & EMT's.
Decide: rescue in 1 level higher or SCBA.
3. Rapidly survey victim and area for clues. Look for chem releases.
4. Do chin lift to open airway; watch or feel for chest rise and fall for 5+ seconds. No breathing = brain damage in 3 minutes.
5. If no breathing, move from area; perform artificial respiration - 2 full breaths and check pulse. If no, 1 breath every 5 seconds for 1 minute. If no pulse, do CPR if qualified, or call out for CPR & continue artificial respiration.
6. If breathing, move to decon.
Chin lift! Keep airway open.
If contaminants are life-threatening, do cursory decon. If not, CUT OUT of PPE!! Look for contamination.
If fire burns - roll on dirt or use blanket. Stop clothing from smouldering. Use STERILE solution if no sterile sheet. Cut off clothing except areas stuck to skin. AIRLIFT.

11. Speedily FLUSH contaminated eyes or skin for 15+ minutes.
12. If shock, put nothing in mouth; calm.
13. For heat/stress and no shock, give cool water, keep cool.
14. Never use ice nor buckets of water.
15. Sponge or wrap in wet sheet for stress but not thermal burns.
16. Do chin lift, recheck breathing
17. Do not hesitate to use _____ t.

Emergency Contacts

Post at Site, in many locations. Post map in vehicles likely to be used during an emergency.

CLEANING:

Chemical used _____
Is it compatible with material of container? Yes/No/NA
Is it compatible with substance in container? Yes/No/NA
Steam Clean - Yes/No/NA Water laser - Yes/No/NA
If yes, tank must be cool before entry.

prior to persons entering 5-7' pit to remove
remaindes of material after pumping

CONFINED SPACE ENTRY PERMIT
Page 2

AIR MONITORING/TESTING

Monitor breathing zone, high overhead, near hips/knees, and at the floor (many flammable gases are heavier or lighter than air). Test different levels; if levels are >10%, proceed with further testing, five minutes apart to be certain.

For atmospheres less than 20% of the LEL, use non-sparking tools.

If LEL is greater than 20%, or if oxygen levels are greater than 21.5% (normal=20.9), entry is FORBIDDEN until engineering controls are used to alter the atmosphere. If LEL is between 10% and 20%, altering the atmosphere is wise because conditions may change.

CONTINUOUS monitoring inside the space is critical.

Analytical Results from Eastern Electric

August 18, 1988

On August 12, 1988 our office received the analytical results for the samples taken at Eastern Electric Co. on 5/19/88. Six samples were taken consisting of sludge from a pile at the N.E. corner of the property and water and sludge from the steam cleaning pit inside. The results of the analyses are as follows:

Sludge Pile Sample: Four samples of the sludge pile were taken. All of the samples were analyzed for PCB's while only one was tested for volatile organics. The results confirmed that all samples contained >50 PPM PCB's which makes the sludge a hazardous waste. The volatile organics found were at low percentage levels. The oil and grease analyses also confirmed percentage levels of these substances.

Steam Cleaning Pit: Water and sludge samples were taken from the steam cleaning pit inside of the company. PCB's and volatile organics analyses were done on both samples. The sludge sample had PCB concentrations over the hazardous waste level while the water had trace amounts. The sludge also contained levels of oil and grease equal to the sludge sampled outside. The volatile organics found in the sludge were at levels lower than the outside sludge.

The specific gravity of the outside sludge samples was taken for purposes of gaining an approximate weight of sludge.

Average Specific Gravity = 1.90
Approximate Area Ft^3 = 236 Ft^3

$$\begin{array}{rcll} \text{Area } \text{Ft}^3 & \times & \frac{62.4 \text{ lb.}}{\text{Ft}^3} & \times \text{ Specific Gravity} = \text{lbs.} \\ 236 & \times & 62.4 & \times 1.90 = 27,980 \text{ lbs.} \\ & & & = \text{approximately 14 tons} \end{array}$$

Sampling at Eastern Electric Co.

June 6, 1988

1.) On May 19, 1988 Joe Sciascia and I met Attorney General Investigator Tim Cogolin at the Eastern Electric Co. located at 1132 Seneca Street, Buffalo, NY. The purpose of our visit was to sample a sludge pile behind the facility and sample a steam clean pit located inside of the company. The sludge pile, located at the northeast edge of property, was placed there by the Westinghouse Electric Corp. which was the previous owner of the property.

Upon arrival to the sampling site we met Eastern Electric Co. representatives Ed Crumback, Jerry Dysler and Pete Konita, the firm's attorney. They were present to view and photograph our sampling. Width and length measurements of the sludge pile were recorded at various points for determination of areal pile size. Hand augered cores were also taken to determine the depth of the sludge. This information is recorded on the attached sketch.

2.) HNU readings were taken in the bore holes where sludge thickness was taken. High readings were recorded in certain areas of the pile. Lower layers of the sludge were concentrated with liquids which caused a sheen on the sludge when compacted.

3.) Samples were taken at four random points in the pile. Information on the sampling measurements is on an attached chart. PCB's, oil and grease, and volatile organics will be analyzed for on these samples.

4.) Inside sampling of the steam clean pit was our last area of concern. A grate of the floor was taken out for ease of sampling. A wheaton sampler was used to lower the sample bottle into the water. The cap of the bottle was taken off at the bottom of the pit for collection of bottom layer of water.

The sludge from the pit was collected with a ponar dredge. The sludge had an odor of petroleum and was approximately 10" thick. PCB's and volatile organics analysis will be run on the water and sludge and an additional oil and grease test will be run on the sludge.

5.) The equipment used for sample collection was cleaned on site or disposed of if non-reuseable. The samples were stored and sent to the laboratory the following day.

6.) Duplicate samples were provided Eastern Electric Co. at their request. They provided some containers and we provided others - 40 ML septum and 1/2 gallon glass jug.

7.) Estimate volume of sludge to refusal of hand auger.

REPORT
REMOVAL OF CONTAMINATED SOIL
WESTINGHOUSE ELECTRIC CORPORATION
EASTERN ELECTRIC APPARATUS FACILITY
BUFFALO, NEW YORK

1.0 INTRODUCTION

This report summarizes contaminated soil removal operations at the Eastern Electric Apparatus Facility, 1132 Seneca Street, Buffalo, New York. The report and the work upon which it is based were performed under the responsible charge of Mr. Robert R. Blickwedehl, P.E. (State of New York), in accordance with Section 9.0 of the Work Plan "Certification of New York P.E. Engineer." The report is prepared pursuant to Amendment 1 to the Remediation Work Plan for the above referenced site, dated January 15, 1990. The report includes a certification that this portion of the work was done in accordance with Westinghouse Electric Corporation's prescribed Work Plan dated August 30, 1989.

Soil removal was one of two components of the limited remediation effort at the Eastern Electric Site. The other component involved decontamination of a spray pit. This activity is documented in Dames & Moore's report dated October 16, 1991, and entitled Spray Booth Area Decontamination and Sewer Evaluation.

Dames & Moore provided overall project management support for the soil removal project. The onsite observation was performed by Mr. J. Britt Quinby, Project Civil Engineer, under the responsible charge of Mr. Blickwedehl. Mr. Quinby and Mr. Blickwedehl also provided technical consultation during discussions and meetings with Mr. Thomas D. Johnson and Mr. E. Joseph Sciasca, P.E., of the NYSDEC. Copies of the curriculum Vitae for Messrs Quinby and Blickwedehl are included in Appendix D of this report.

Contaminated soil removal was performed in three phases. The first phase was performed in November of 1989, the second phase was in June, 1990, and the third in October 1990. Westinghouse Environmental & Geotechnical Services, Inc. (WEGS) of Toledo, Ohio performed the excavation and remedial work for the first phase, Buffalo Drilling, Inc. of Buffalo, New York performed drilling and sampling during Phase II, and Environmental Products and Services, Inc. of Buffalo, New York performed the soil removal of Phase III. Buffalo Drilling and Environmental Products and Services were subcontractors to Dames & Moore.

The technical content of the report is divided into six sections as follows:

1. A description of soil removal activities;
2. A summary of the quantities of soil removed and disposed of;
3. Photocopies of manifest and disposal documents;
4. A sketch showing soil sample locations;
5. Laboratory analysis of soil samples along with SW 846 Section 1.5 QA/QC reportables and deliverables package; and
6. Certification that the work was done in accordance with the approved work plan.

2.0 DESCRIPTION OF SOIL REMOVAL ACTIVITIES

The soil removal activities consisted of the removal of two piles of contaminated sludge, (referred to as pile #1 and pile #2), and the effected soil below and around them. The piles were located on the North East corner of the facility property and encompassed an area approximately 40 feet square, (reference Figure 1 and 2 in Appendix B).

2.1 PHASE I

On Friday, November 17, 1989, the area surrounding Pile #1 and #2 was separated into a Hot Zone, Support Zone and decontamination area for exit/entry. The Hot Zone encompassed Pile #1, Pile #2 and an area sufficiently large enough to contain the trackhoe and two 25-cubic yard roll-off boxes. A decontamination area and Support Zone was established just to the south of the site prior to the edge of the gravel parking lot.

Two sides of the newer chain link fence (the Southern and Western sides) and approximately 50 feet of the old chain link fence were temporarily removed. The trackhoe was then placed in the north-west corner of the area with the roll-off boxes to the south and to the west of Pile #1. This enabled the trackhoe to excavate contaminated soil and transfer it to roll-off boxes while being positioned in a "clean" area.

Prior to excavation the NYSDEC was notified. Mr. Johnson of the NYSDEC was on site during the excavation activities.

The trackhoe excavated Pile #2 first, then Pile #1. The contents of piles plus 6 to 8 inches of subsoil were removed. The horizontal excavation limits extended 4 to 8 feet out from each pile. One 25 c.y. rolloff box, lined with visqueen, was filled.

During excavation, water or saturated soil was encountered approximately 12 to 18 inches below the ground surface. This limited the depth of the excavation in accordance with the terms of the work plan which did not contain provisions to handle a wet excavation and the risk of potential spread of contamination. Therefore, nine (9) post excavation soil samples were taken above these saturated conditions at several locations as shown on Figure 1.0 in Appendix B of this report.

The samples were collected in accordance with the procedures outlined in Appendix B of the Work Plan. It was the intent of the field crew to do a headspace screening of each sample for volatile organics five minutes after the samples were collected, but due to a malfunctioning OVA, this was not possible. A field judgement was made by Mr. Quinby, and Messrs. Bowman and Alliman of WECS, to forward the samples to NUS without doing the headspace screening. This was based on the premise that even if the OVA readings were above the 10 ppm limit, further excavation would not be possible during this project phase due to the presence of water.

The samples were packaged and delivered by Mr. Alliman to NUS in Pittsburgh, Pennsylvania the next morning.

When excavation and sampling activities were completed for the day, both Pile #1 and Pile #2 excavated areas were covered with visqueen and the rolloff boxes covered and secured.

On Sunday the 19th, contaminated soil was transferred from the full rolloff box to a second empty rolloff. Bulk waste (visqueen and disposable personnel protective equipment) generated from the spray booth pit cleaning was also placed in the second rolloff. Both rolloff's were then covered and secured.

On Monday, November 20th the Westinghouse crew constructed a decontamination pad out of Hypalon which was elevated at the edges by an earthen berm. A high pressure water rinse was used to clean the entire trackhoe, including the under carriage, of all soil, sludge, and dust. The bucket of the trackhoe was the only part of the equipment that came into contact with PCB contaminated material. It was wiped clean with penetone prior to water rinsing. Rinse and wash water were collected on the decon pad and placed into 55 gallon drums.

That afternoon NUS called with the PCB and total volatile organic sample results from the first round of samples collected the previous Friday (see Table 1.0 for a summary of the results and Appendix C for a copy of the Lab Report and QA/QC package). Two sample locations showed results of PCB concentrations lower

than 1 ppm - #5 and #9. Also, except for 1,1-dichloroethane found in samples #2 and #7, the sample results for the volatile organics were under the 1 ppm target level.

Since the concentrations of PCB's in soil samples #2, #3, #4, #6, #7, #8 and #10 were all above 1 ppm, further excavation in these areas was needed. Mr. Joseph Sciasca of the NYSDEC was on site shortly after the sample results were available. A site meeting was held between Mr. Sciasca, Mr. Bowman of WECS, and Mssr's Quinby and Blickwedehl of Dames & Moore to determine how to proceed with the work under conditions involving saturated soil.

Mr. Sciasca suggested that the excavations continue under these "wet" conditions. He proposed that the confirmation samples of the soil under the piles be obtained using a core sampler. However, because this is below the water table, and would constitute a significant change from the original work plan, and since there was a possibility of contaminating clean underlying soil with water in the excavation and/or sampling holes, the determination was made to remove soil to only the depth that was at or close to saturated conditions. Therefore, WECS used shovels to remove an additional 2 to 3 inches of soil within the excavated areas.

That afternoon, November 21, 1989, a second round of soil sampling was performed (see Figure 1.0). The samples were again collected in accordance with Appendix B of the Work Plan. These samples were screened via a headspace measurement with an OVA. The results of this screening can be found in Table 2.0 provided at the end of this report. The samples were then packaged and shipped to NUS for analysis.

The contaminated soil area was then covered with visqueen, hazard tape was placed around the area, and a snow fence was erected to serve as a temporary barrier until the project could be completed. The same day WECS completed their demobilization activities and left the site. No further work could be done until the receipt of the second round of soil sample results.

The second round of sample results were available the week of December 16, 1989. Original sample point locations #2, #3, #4, #6, #7, #8, and #10 had been resampled and were relabeled #2P, #3P, #4P, #6P, #7P, #8P, and #10P respectively. The results are summarized in Table 1.0 and a copy of the Lab Report and QA/QC package can be found in Appendix C.

The concentrations of PCB's and the volatile organics in the second round of sampling did not meet the target clean up levels as outlined in the Work Plan. The concentrations of PCB's ranged from less than 2 ppm to 64 ppm, and the concentrations for some of the volatile organics were above the 1 ppm target level.

2.2 PHASE II

Since the confirmation soil sample results from the second round of sampling did not meet the target clean up levels as outlined in the Work Plan, and groundwater was encountered near the resultant surface of the excavated area, Amendment 1 to the Remediation Work Plan dated January 15, 1990 was developed by Dames & Moore. This amendment addressed procedures to be used in characterizing the depth to which contamination had penetrated the soil, (Phase II), and excavation of soil under saturated conditions, (Phase III). The plan was submitted to the NYSDEC on January 17, 1990 and subsequently approved on January 30, 1990.

On Monday, June 11, 1990, Buffalo Drilling Company, Inc., of Buffalo, New York, working under the direction of Dames & Moore, mobilized a track mounted drill rig to the site to sample the soil in the affected area. The samples were needed to characterize the extent of the contamination as outlined by Amendment 1. Continuous split spoon samples were taken at the six locations shown on Figure 2.0 in Appendix B. The samples extended from the bottom of the excavation surface (approximately 18" below original grade) to a depth of 6 feet. Sampling locations #22, #32, #42, #62, #72, and #102 taken from Pile 1 area and #82 taken from Pile 2 area correspond to sampling locations #2P, #3P, #4P, #6P, #7P, and #10P from Pile 1 area and sample #8P from Pile 2 area collected during sampling activities of November 1989. All soil sampling and handling procedures were in accordance with Amendment 1 to the Remediation Work Plan, dated January 15, 1990.

The soil samples were inspected in the field by Mr. Quinby and descriptions were logged. Field screening was performed on the upper two split spoon samples (0-2' and 2-4' samples) using an organic vapor analyzer (OVA) in accordance with Section 5.2.3, of the Work Plan. The concentrations of VOC's detected by the OVA ranged from 0 to 5 ppm for the series of samples collected from the upper 0 to 2 foot depths, (see Table 2.0 located at the end of this report). The split spoon samples collected from the 4 to 6' depth interval were used to visually classify the soils and make observations as to the soils general condition and make-up.

At the completion of the sampling effort, the borings were grouted and the drill rig and all associated equipment were decontaminated in accordance with Section 5.2 of the Work Plan.

Subsurface soils encountered during the sampling activities consisted of 12 to 24 inches of loose gravel, sandy gravel and cinders to sandy clay overlying stiff brown silty clay to clay. This dry stiff silty-clay to clay layer was identified down to a

depth of six feet and the borings did not penetrate beneath it. The upper gravel and sandy zones were moist, with decreasing moisture content with depth. The lower most split spoon samples collected at each location (4-6' in depth) appeared dry.

Field screening of these samples with an OVA revealed readings of less than 0.10 to 5 ppm, (see Table 2.0), analytical test results showed concentrations of the VOC's were below 55 parts per billion (ppb) (see Table 1.0). All PCB concentrations were below detection limits.

Analytical and field screening results were combined with boring logs to estimate the extent to which contaminated soil should be excavated and to identify potential problems in the underlying geological conditions which could impact Phase III remedial activities. Based on the available data, a minimum target excavation depth of 24 to 26 inches was established. Excavating to this depth would remove the upper granular soils and a few inches of the underlying silty-clay layer.

Mr. Tom Johnson of the NYSDEC was on site during the boring and sampling activities. He was also present during the head space analyses of the collected samples.

2.3 PHASE III

The information obtained during the Phase II characterization activities was used to establish the excavation depth and prepare contract documents for completion of the soil remediation effort. Environmental Products and Services (EPS) was subcontracted by Dames & Moore to complete the soil removal work at the site. NUS Laboratories was again used to perform the confirmation soil sample analyses.

On October 1, 1990, Mr. Jim Vreeland, Mr. Jim Barry, and Mr. John Scott of EPS were met on site by Mr. Quinby. They proceeded to establish the Hot Zone, Support Zone and decontamination area for exit/entry. These areas were the same as used during the excavation activities in November, 1989. Four 20 cubic yard rolloff boxes were delivered onsite the previous Friday and were positioned to the south of Pile #1 and to the east and south of Pile #2.

Prior to excavation Mr. Johnson of the NYSDEC was notified. He was onsite during excavation activities.

A backhoe was used to excavate Pile #1 and then Pile #2. The backhoe was maneuvered outside of the contaminated area with only the bucket contacting the contaminated soil being excavated. Little to no water was encountered during the excavation and approximately 90 cubic yards of soil was removed from the Pile #1 and Pile #2 areas and placed in rolloff containers.

When the desired depth of 24 to 26 inches below the excavated grade (42 to 44 inches below the original grade) was reached, seven confirmation soil samples were taken. The locations of these sample points corresponded to the previous locations of the characterization activities and of November 1989. They were labeled #23, #33, #43, #63, #73, #83, and #103 (see Figure 3.0 in Appendix B). Each sample was collected in accordance with the procedures outlined in Appendix B of the Work Plan. Again, headspace readings using an OVA were performed on each sample in the field. The headspace results were all below 10 ppm and are reported in Table 2.0 attached to this report.

At the request of Mr. Johnson, Mr. Quinby obtained four more soil samples from the perimeter of the excavated area of Pile #1. These samples were labeled North, South, East, and West. Headspace measurements were again performed in accordance with procedures outlined in the Work Plan. The results of these readings indicated nondetectable for all four samples, these results are also listed in Table 2.0.

Since all headspace readings from the confirmation samples were nondetectable or below 10 ppm, the samples were packaged for shipment to NUS. Included with the sample shipment were two additional samples one was of the backfill material and the other was of the topsoil. Both materials were to be used in restoration of the site.

When excavation and sampling activities were completed, both Pile #1 and Pile #2 excavated areas were covered with visqueen, rolloff boxes covered and secured, the equipment decontaminated as outlined by the Work Plan, and a snow fence erected around the excavated area.

Laboratory results of the confirmation samples were received by Dames & Moore on October 11, 1990. A copy of these results and the respective QA/QC package can be found in Appendix C. The concentration levels of PCB's and total volatile organics in the samples were all within the target cleanup levels outlined in the Work Plan.

Analysis of the backfill sample showed a 9 ppb concentration of benzene. Even though the work plan did not call for confirmation that the material be free of volatile organics, EPS was asked to obtain another sample from a different source and analyze the source for PCBs as reviewed by the Work Plan. A sample was obtained directly from a truck that delivered backfill to the site. It was tested for PCB's and the results were nondetectable. The results of the analysis of the topsoil sample initially provided by EPS were nondetectable for both volatile organics and PCB's. These analyses can be found in Appendix C, and are also tabulated in Table 1.0.

These analytical data were transmitted to Mr. Johnson on October 19, 1990 during a meeting held at the Dames & Moore office in Orchard Park, New York. Ms. Maryann Grotefend of Westinghouse Electric Corporation, and Mr. Quinby were also in attendance at the meeting, the purpose of which was to discuss the status of the project and relay the results of the confirmation sample analysis to Mr. Johnson.

2.4 SITE RESTORATION

With the required analytical data showing that the target cleanup levels for PCB's and volatile organics as outlined in the Work Plan have been met, a decision was made by Westinghouse and agreed to by NYSDEC to backfill the excavation and commence with site restoration.

On October 25, 1990 EPS backfilled the excavations and restored the area back to its original grade.

The Contract Laboratory Protocol (CLP) backup package for the lab results were not received until after the backfill had been placed. While reviewing the CLP package, Mr. Quinby discovered (as a result of a misunderstanding by the laboratory) the analyses performed on the confirmation soil sample for volatile organics had been performed using the TCLP extraction protocol, and not on an as received basis as was done on all previous samples. Even though the results from the TCLP extraction indicated extremely low to nondetectable concentrations of volatile organics, the decision was made to obtain another set of confirmation samples and redo the VOC analysis on an as received basis. This was needed to provide a consistent comparison to the November 1989 results using the same analytical procedures for the confirmation sample analyses both times.

On November 2, 1990 Mr. Quinby accompanied by Ms. Jane Staten of Dames & Moore obtained seven more soil samples. The samples were labeled #24, #34, #44, #64, #74, #84, and #104, and correspond to the previous soil sample points (see Figure 3.0 in Appendix D). Samples of the underlying native material were obtained by hand boring through the newly placed backfill material to the resultant level of the excavation. This interface was easily identified. The backfill is a well graded sandy loam material which is dark in color. The native material consisted of silty, sandy, clay, fairly consolidated and light in color. The samples were collected and headspace readings taken with an OVA in accordance with the Work Plan. The results of the headspace readings are listed in Table 2.0 attached to this report.

Headspace readings were nondetectable for all samples but one which was approximately 1 to 5 ppm. The samples were packaged and shipped to NUS for analysis. The volatiles were analyzed on an as received basis, consistent with the analysis performed on the samples from November, 1989.

Mr. Johnson, of the NYSDEC, was onsite during the resampling activities and collected two duplicate soil samples. Mr. Johnson packaged the samples and forwarded them to an independent lab as chosen by the NYSDEC.

Analytical results for the samples analyzed for Dames & Moore were available on November 13, 1990. All results were within the target cleanup levels and are listed in Table 1.0 located at the end of this report. The data and respective QA/QC package can be found in Appendix C.

Mr. Johnson informed Mr. Quinby on December 19, 1990 of the results from the analyses performed on the duplicate samples he had taken. They were consistent with the results obtained from NUS. A copy of these results can be found in Appendix C, and are summarized in Table 2.0.

On May 8, 1990, Environmental Products and Services completed the site restoration work by installing a chain link fence in the location where the original one had been previously removed in order to perform the soil excavation activities. They also placed seed and mulch over the affected area as required by Section 5.2.5 of the Work Plan.

3.0 CHARACTERISTICS AND DISPOSITION OF REMOVED SOIL

3.1 SOIL REMOVAL DURING THE NOVEMBER 1989 ACTIVITIES (PHASE I)

During the remedial activities of November, 1989 approximately 30 cubic yards of soil and debris were removed from the area in and around piles #1 and #2. The material was placed into two 30 cubic yard rolloff containers. A sample of the soil was obtained and forwarded to RECRA Environmental, Inc., (a New York State Certified laboratory), for TCLP extraction and a subsequent analysis for F-listed spent solvents (VOA's) to determine the soil's disposal status under 40 CFR Part 268, "Land Disposal Restrictions". The results of this analysis are provided in Appendix C and show a concentration of xylene which is above the limits imposed by the regulations for material that can be disposed in a permitted land disposal facility. Because of the elevated concentrations of xylene, the soil was considered an F listed waste, for which the Best Demonstrated Available Technology (BDAT) for disposal is incineration.

Since the material contained in the rolloff's needed to be incinerated, the sample analytical results and another sample of soil was forwarded to Aptus Inc., in Coffeyville, Kansas. Based on this information and their evaluation of the sample, approval was granted for incineration of the soil by Aptus. The two rolloff containers were then transported off site in route to Coffeyville on May 30, 1990.

The permitted hazardous waste carrier contracted by Westinghouse Electric Corp. to transport the material to Aptus was Buffalo Fuel Corp., of Niagara Falls, New York. The material arrived in Coffeyville on June 1, 1990, and copies of the hazardous waste manifests are provided in Appendix A. The material in one rolloff container was destroyed by Aptus on August 1, 1990, and a copy of the Certificate of Destruction has been provided in Appendix A. Due to time constraints during the trial burn, at Aptus, the remaining material could not be incinerated there and was transported to a Chemical Waste Management permitted facility in Chicago for incineration. However, prior to it's destruction the incinerator was shut down due to operational problems. Therefore, the rolloff was transported back to Aptus, and was destroyed the week of October 7, 1991. A copy of the manifests and Certificate of Destruction are included in Appendix A.

3.2 SOIL REMOVED DURING THE OCTOBER 1990 ACTIVITIES (PHASE III)

The material excavated during October, 1990 totaled approximately 90 cubic yards and was placed in four 25 cubic yard rolloffs. A composite sample was obtained from the rolloffs and forwarded to RECRA Environmental Laboratory for TCLP extraction and a subsequent analysis to determine it's disposal status in accordance with 40 CFR Part 268, (as was done for the for the material removed in November, 1989). The results of this analysis are presented in Appendix C and show very low to nondetectable concentrations of the F-listed solvent wastes (VOA's). Based on these results, and PCB concentrations of 64 ppm, the soil could be disposed in a permitted land disposal facility. This information along with a soil sample was forwarded to Chemical Waste Management, Inc.'s permitted landfill located in Model City New York, and was subsequently approved for disposal at this facility.

The rolloff containers remained on site during the time required to characterize the waste and obtain approval for disposal from Chemical Waste Management. During this time, the covers on the containers were damaged by vandalism and adverse weather. As a result of the damage some rain water collected in the rolloffs. Thus, removal and proper disposal of the water was required prior to the transport of the material to Model City. To determine if the water could be disposed of by discharging it

into the Buffalo Sanitary Sewer system, a composite sample of the water was collected and forwarded to RECRA Environmental, Inc. for analysis. Due to the presence of organics that were found in the TCLP extract and PCB concentration in the soil, the Buffalo Sewer Authority requested that the sample be analyzed for PCB's per 40 CFR Part 136, method 608. The results of this analysis showed a PCB concentration of 13 ppb. This was communicated to Mr. James Overholt of the Buffalo Sewer Authority. Based on the information furnished, approval was granted by the Sewer Authority to discharge the water in the rollofs into the sewer system. Copies of the water sample analytical results are provided in Appendix C; the letter from Mr. Overholt approving the discharge of the water into the sewer system is provided in Appendix A.

On Thursday March 28, 1991 Mr. Quinby meet a laborer from Environmental Products and Services at the Eastern Electric site to transfer soil contained in the two overfilled rollofs into a fifth one that had been delivered the preceding day, and to remove the water in the containers and discharge it into the sewer. Mr. Overholt met us on site and located the sewer inlet where the water was to be discharged. The soil and water transfer operations were completed that day and the pickup and transport of the containers to Model City was scheduled for the following day.

On Friday March 29, 1991 the permitted hazardous waste hauler contracted by Westinghouse Electric Corp., Tonawanda Tank Transport Service, Inc. picked up the five rollofs of material for transport to CWM in Model City, NY. However, due to scheduling problems, the containers were transported to, and staged at Tonawanda Tank's facility until the following Monday, (April 1, 1991) at which time Chemical Waste Management could accept the shipment at their Model City facility. Four of the rollofs were transported to Model City that Monday with the remaining one transported Tuesday April 2, 1991. Copies of the hazardous waste manifests used are provided in Appendix A.

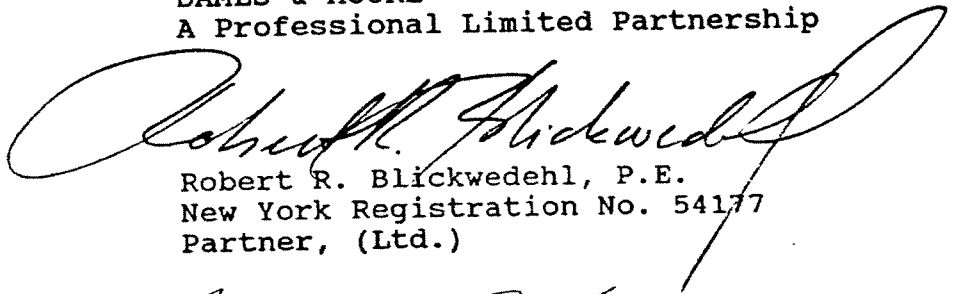

Table 3.0 attached to this report provides a listing of the quantity of material removed and disposed. It also provides the location, date, and method of disposal.

4.0 SUMMARY AND CONCLUSIONS

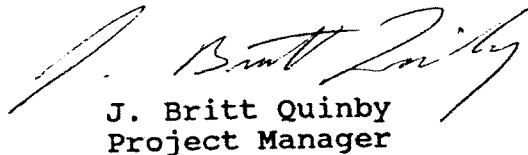

As described in the previous sections of this report, all exterior cleanup activities required by the Work Plan were completed in accordance with the methods specified in the Work Plan as amended. A certification document to this effect is attached to this report.

The activities documented in this report and those documented in Dames & Moore's report entitled Spray Booth Area Decontamination and Sewer Evaluation, dated December 13, 1990, fulfilled all remediation requirements cleanup objectives for the site.

Respectfully submitted,

CERTIFICATION OF COMPLETION

CONTAMINATED SOIL REMOVAL

Eastern Electric Apparatus Facility
1132 Seneca Street
Buffalo, New York

I hereby certify based on personal knowledge and belief that the soil removal work performed at the subject facility during the period of November 17, 1989, May 30, 1990, and March 28 and 29, 1991 was performed in accordance with the Approved Work Plan dated August 31, 1989, and addendum to the work plan dated January 15, 1990.

CERTIFIED MAIL

Maryann Grotenfend
Westinghouse Electric Corp.
Westinghouse Building
Gateway Center
Pittsburgh, PA 15222

Re: Eastern Electric Apparatus
1132 Seneca Street, Buffalo

Dear Ms. Grotenfend:

The August 30, 1989 revised remediation work plan for the above referenced facility has been reviewed. The proposal is considered acceptable. The analytical parameters and low level quantification limits for volatiles and PCBs contained in section 3 are required. Any deviations must receive the concurrence of this Department. EPA SW846 preservation procedures and handling chain of custody procedures must be strictly complied with and documented.

Notification of the work start schedule will be necessary for our office 7 calendar days prior to site work to allow for staff time scheduling. The work should be scheduled within 30 days of receipt of this letter. Mr. Thomas Johnson of this office will handle field oversight.

If you have any additional questions, please feel free to contact me at 716-847-4582.

Very truly yours,

E. Joseph Sciascia

**Re: Additional Environmental Evaluations
Fibreright Manufacturing Facility
1132 Seneca Street
Buffalo, New York
File; ETE-01-98**

Dear Mr. Bolubash:

In accordance with the authorization of Mr. Daniel Bolubash, President, Fibreright Manufacturing, Inc., dated July 24, 2001, Evergreen Testing & Environmental Services, Inc. (ETES) completed additional Environmental Evaluations at the former Westinghouse Electric Service facility located at 1132 Seneca Street, Buffalo New York.

An environmental sampling and subsurface exploration program was completed at the subject site on August 30 & 31, 2001 to address selected environmental concerns that were identified in a *Limited Site Data Review*, completed by Environmental Audits, Inc., dated May 8, 2001 and a *Phase II Soil Sampling Report*, completed by GaiaTech, Inc., dated January 10, 1999. Refer to Drawing No. 1 presented in Attachment A. These concerns focus on the potential presence of petroleum based and/or hazardous chemical compounds that may have been released in the areas of historic underground storage tank(s) (USTs) and former transformer storage/repair/loading areas. General sampling locations included the former underground storage tank area west of the existing manufacturing building, the former tank area in the vacant lot east of the existing manufacturing building (as indicated on Sanborn Maps) and areas of elevated PCB concentrations north of the manufacturing building, in the loading dock area and beneath the concrete floor slab of the existing building (as indicated in previous reports). The following paragraphs present details concerning this environmental sampling and investigation program. Limitations to this report are presented in Attachment B.

Geophysical (EM-61 Magnetometer) Survey

Historic records (City of Buffalo Building Permit Office and Sanborn Maps) indicated that gasoline storage tanks may have been present in the vacant lot, east of the existing manufacturing building, along a former railroad siding and east of a small building (old foundations visible) near Seneca Street. Based on this historic information a geophysical survey was completed by Barron & Associates, P.C., on July 31, 2001, in the vacant lot area near where the tanks may have been located. The geophysical survey consisted of utilizing a Geonics Model EM-61 magnetometer for the purpose of identifying the location of any magnetic anomalies which may be potentially associated with underground storage tanks (USTs). It should be noted that the geophysical survey was undertaken in the accessible areas. Heavily grassed areas and areas of surface obstructions (notably a gym/playground area) near the eastern portion of the survey area precluded the survey being completed in these areas.

Based on the results of the geophysical survey (refer to the detailed Geophysical Report presented in Attachment C) five (5) anomalies were identified in the survey area. The locations and potential sources of the anomalies are presented in the attached report. Based on field observations, it appears that in identified areas "A", "B", "D", and "E" the potential anomaly sources are concrete pads. Anomaly "C" appears to be in the area of the former railroad siding. Further subsurface investigations were completed in area "C" and the results are discussed in the following sections of this report

Geoprobe Field Explorations

Shallow subsurface Geoprobe explorations were completed on August 30 & 31, 2001 on the subject site to identify suspect shallow subsurface contamination. The shallow probe holes were advanced in the area of the former underground storage tank west of the existing manufacturing building, in the suspect area of former tanks (geophysical anomaly area "C") and in suspect PCB storage/repair/loading areas, north of the existing manufacturing building, in the loading dock area and beneath the concrete floor slab within the manufacturing building. Sampling locations were determined based on previous reports, field observations, the geophysical survey completed for this study, City of Buffalo records, Sanborn Maps and Hnu photoionization detector (PID) field measurements. Representative soil samples were collected near the former UST area, former tank area and PCB storage/repair/loading areas and submitted for analytical testing.

Thirty two (32) shallow Geoprobe holes (PH-1, PH-2, PH-3 [located near the former UST area west of the manufacturing building], PH-4 through PH-19 [located near reported PCB storage areas], PH-20, PH-21 and PH-26 [located in the loading dock area] PH-22, PH-23, PH-24 and PH-25 [located near the former tank area in the vacant lot east of the existing manufacturing building] and PH- 27 through PH-32 [located inside the existing manufacturing building]) were advanced in areas of environmental concern. The shallow probe holes were advanced by our subcontractor, Zebra Environmental Corp. (Zebra) using a truck-mounted Geoprobe unit. Refer to Drawing No. 2 presented in Attachment

A for probe hole locations. Generally, the probe holes were advanced to a depth of approximately six (6) to twelve (12) feet below ground surface to collect discrete grab samples of the shallow overburden soils. The samples were collected with Marco Core (MC) open samplers. These samplers are open tube design and measure approximately 2 inches outside diameter (OD) by about 48 inches long. The samplers are fitted with a removable cutting shoe and a clear acetate liner. A new acetate liner was used for each sampling interval. The removable cutting shoe and the outer steel samplers were decontaminated between each probe hole with a clean tap-water wash, Alconox soap wash and a double clean tap-water rinse. The location and depth of each Geoprobe hole was determined in the field by an ETES environmental geologist, based on subsurface conditions and PID measurements taken during the field explorations. Upon completion, each of the probe holes were backfilled with excess soil removed from the probe hole and patched with asphalt cold patch and/or concrete grout as necessary.

Generally, the soils encountered included miscellaneous fill materials ranging in depth from ground surface to a depth of about three (3) to five (5) feet below existing ground surface. The fill materials included brown sand, silt and clay mixed with concrete, bricks, cinders, crushed stone, wood, coal, ash, etc. The natural soils encountered beneath the fill materials included brown-gray moist mottled and layered silt and clay with trace to little fine sand. No groundwater and/or free standing water was encountered during Geoprobe investigations except in the probe holes completed in the area of the former USTs west of the building. Groundwater was measured in these probe holes at a depth of about 0.5 feet below ground surface at completion of the probe holes. The groundwater appears to be surface water and/or precipitation that has been trapped in the former tank pit excavation. Probe holes inside the building and loading areas were advanced through a concrete slab about three (3) to six (6) inches thick. About two (2) to four (4) feet of fill material was encountered beneath the concrete slab with the natural silt and clay soils beneath the fill.

The grab soil samples collected from each sampling location (probe hole) generally represented a continuous sample from the depth intervals of about 0 to 4 feet and 4 to 6 or 7 feet. Each grab soil sample recovered was screened in the field by an ETES environmental geologist using a PID to determine the presence of volatile organic compounds (VOCs). Organic vapor measurements were taken near the top of the probe hole and near soil samples as each sampler liner was cut open. None of the soil samples screened in the field for VOCs exhibited concentrations above background levels except for samples collected in the loading dock area and in several probe holes in the vacant lot area east of the building. In addition, no petroleum and/or chemical odors were noted during the Geoprobe explorations except for samples collected in the loading dock area and in several probe holes in the vacant lot area east of the building. For details refer to the probe hole Boring Logs presented in Attachment D.

Sample Collection, Analytical Testing and Results

Portions of the representative soil samples collected from the probe holes were removed from the sample liner and placed into pre-cleaned sample bottles provided by the

analytical laboratory. Portions of representative soil samples collected from the probe holes PH-1 and PH-2, located in the area of the former UST (west of the existing building), were removed from the sample liner, mixed in a pre-cleaned stainless steel mixing bowl and placed into pre-cleaned sample bottles provided by the analytical laboratory. A representative groundwater sample was collected from probe hole PH-2. The groundwater sample was collected by installing a temporary 3/4 inch PVC piezometer/screen at a depth of about five (5) feet below the water table and withdrawing a sample with 3/8 inch polyethylene tubing fitted with a stainless steel bottom check valve. The tubing was oscillated up and down to drive a column of water to the surface. The groundwater sample was placed into pre-cleaned sample bottles provided by the analytical laboratory. Upon preparation, the samples were preserved by cooling in the field and shipped to our subcontractor, Upstate Laboratories, Inc. (Upstate), Syracuse, New York for analytical testing. Chain-of-custody records were maintained throughout the sampling and shipping events.

The representative soil samples collected from PH-1 and PH-2 were composited and analyzed for the New York State Department of Environmental Conservation (NYSDEC) STARS List of volatile organic compounds (Test Method 8021) and semi-volatile organic compounds (Test Method 8270). The representative groundwater collected from probe hole PH-2 was analyzed for the New York State Department of Environmental Conservation (NYSDEC) STARS List of volatile organic compounds (Test Method 8021) and semi-volatile organic compounds (Test Method 8270). The representative soil samples collected from four (4) to eight (8) feet in probe hole PH-23 was also analyzed for the New York State Department of Environmental Conservation (NYSDEC) STARS List of volatile organic compounds (Test Method 8021) and semi-volatile organic compounds (Test Method 8270). Representative soil samples collected from PH-7 (from 0 to 4 feet) and PH-19 (from 0 to 4 feet) were analyzed for Target Compound List (TCL) of volatile (Test Method 8260) and semi-volatile compounds (Test Method 8270). Representative soil samples collected from PH-4 through PH-21 and PH-23 and PH-30 from depths of 0 to 4 feet and 4 to 7 feet were analyzed for PCBs (Test Method 8082). No soil samples were collected from probe holes PH-3, PH-22, PH-24, PH-25, PH-26, PH-27, PH-28, PH-29, PH-31 and PH-32 (PID measurements background) for analytical testing. Groundwater was only encountered during the probe hole explorations in probe holes PH-1 and PH-2 therefore, a groundwater sample was only collected from PH-2 for analytical testing.

Analytical Testing Results

The analytical testing results obtained for the soil samples collected were evaluated with respect to the NYSDEC STARS Memo #1, Petroleum-Contaminated Soil Guidance Policy, dated August, 1992 and NYSDEC's soil cleanup objectives to protect groundwater quality as identified in the TAGM Document HWR-94-4046, dated January 24, 1994. Refer to Attachment E for detailed analytical results.

PCB Testing Results

PCB analytical test results for the grab soil samples collected from the probe holes

indicated that total PCBs were detected at concentrations above the test method detection limit. The detected total PCB concentrations are summarized in Table 1 presented below:

Table 1
Summary of Analytical Test Results
Detected PCB Concentrations
August 30 & 31, 2001
Concentrations in mg/kg (parts per million)

Probe Hole No. and Depth (Sample ID No.)	Detected PCB Concentrations mg/kg	TAGM Soil Cleanup Objectives to Protect Groundwater mg/kg
PH-4, 4'-8'	1.2	10
PH-5, 0'-4'	0.36	10
PH-6, 4'-8'	0.14	10
PH-7, 0'-4'	13	10
PH-8, 0'-4'	7.6	10
PH-8, 4'-8'	0.20	10
PH-9, 4'-8'	0.13	10
PH-12, 0'-4'	0.88	10
PH-13, 0'-4'	0.38	10
PH-13, 4'-6'	3.4	10
PH-17, 0'-4'	0.69	10
PH-18, 4'-6'	17	10
PH-19, 0'-4'	4.1	10
PH-20, 0'-4'	3500*	10
PH-20, 4'-6'	8.4	10
PH-21, 4'-6'	0.66	10

* Concentrations above 50 mg/kg (parts per million) are considered hazardous waste.

Based on the analytical test results it appears that total PCB concentrations were detected above the NYSDEC TAGM cleanup objectives of 10 mg/kg (parts per million)

[ppm]) north of the existing manufacturing building (at two locations probe holes PH-7, [13 mg/kg] and PH-18, [17 mg/kg]) and in the loading dock area along the east side of the manufacturing building (probe hole PH-20, [3500 mg/kg]).

Due to the fact that the total PCB concentrations detected in the probe holes north of the manufacturing are below the TAGM cleanup objective of 10 mg/kg, except for two locations (probe holes PH-7 [13 mg/kg] and PH-18 [17 mg/kg]) it is unlikely that the total PCBs detected will have a significant environmental impact on the subject site.

It should be noted that the PCB concentration of 3500 mg/kg, detected in the soil sample collected from the loading dock area, is considered hazardous (detected concentration above 50 ppm) and should be reported to the New York State Department of Environmental Conservation (NYSDEC), Division of Hazardous Waste Remediation immediately. It is likely that the NYSDEC will require soil remediation beneath the concrete slab in the loading dock area. Remediation could include the excavation/removal/disposal of the impacted soil and groundwater beneath the concrete slab. Additional subsurface explorations and analytical testing may be required to determine possible migration outside the loading dock area. Since it appears that the trench drain in the loading dock area flows to the City of Buffalo combined sanitary/storm sewer system, sampling and analytical testing of the flow into the City of Buffalo sewer system may be required. Dye testing of the trench drain and the storm water catch basins should be done to verify the connection to the City of Buffalo system.

Former Underground Storage Tank Area West of the Building

The analytical test results of the soil samples collected indicates that one (1) volatile compound (naphthalene) and three (3) semi-volatile compounds (phenanthrene, pyrene and fluoranthene) were detected above the test method detection limit. The analytical test results of the groundwater sample collected also indicated that five (5) volatile compounds (benzene, toluene, m,p-xylene, o-xylene and naphthalene) were detected above the test method detection. However, the detected concentrations were NOT above the NYSDEC STARS guidance values and/or the TAGM clean-up objectives. Based on the results of the analytical testing, the PID field measurements, it does appear that the former underground petroleum storage tank area located west of the existing manufacturing building will have a significant impact on the environment at the subject site and/or adjacent properties.

Storage Areas North of the Existing Manufacturing Building

TCL volatile and semi-volatile organic analytical test results for the grab soil samples collected from probe holes PH-7 and PH-19, located north of the existing manufacturing building (PH-7) and near the concrete pad located about ninety (90) feet north of the existing building (PH-19) indicated that only two (2) volatile compounds (acetone and 2-butanone) and six (6) semi-volatile compounds (phenanthrene, pyrene, benzo (a) anthracene, chrysene, benzo (k) fluoranthene and benzo (a) pyrene) were detected above the test method detection limit in the soil sample collected from 0 to 4 feet in probe hole PH-7. Only acetone, detected at a concentration of 130 ug/kg and chrysene detected at a concentration 750 ug/kg were detected above the TAGM clean-up objectives of 110 ug/kg and 400 ug/kg, respectively. It is possible that the detected concentration of

acetone may be a result of laboratory contamination or spillage of acetone during past or present facility manufacturing. It is also possible that the detected chrysene concentrations may be a result of site history (i.e. incomplete burning of fossil fuels from railroad engines that used the sidings located north of the building). In any case, it is unlikely that the detected concentrations will have a significant environmental impact on the subject site.

Loading Dock Area

The analytical test results of the soil sample collected (probe hole PH-20) indicates that numerous volatile compounds were detected above the NYSDEC STARS guidance values (refer to Table 2). Based on the results of the analytical testing, the PID field measurements and the petroleum like odors noted during the probe hole advancement, the presence of petroleum impacted soil at the loading dock area should be reported to the New York State Department of Environmental Conservation, Region 8, Division of Spills Management Division.

Table 2
Summary of Analytical Test Results
Detected STARS List of Volatile Compounds
August 30 & 31, 2001
Concentrations in ug/kg (parts per billion)

Compounds	PH-20	NYSDEC STARS Guidance Values
m, p-xylene	150	100
n-propylbenzene	900	100
1,3,5-trimethylbenzene	590	100
n-butylbenzene	980	100
sec-butylbenzene	1100	100
t-butylbenzene	130	100
naphthalene	320	200

It should be noted that although the analytical test results for NYSDEC STARS List of volatile organic compounds indicate that the remaining volatiles compounds area below the test method detection limit, in some cases the test method detection limit is above the NYSDEC STARS Guidance values. Based on the analytical test results, it appears that the NYSDEC will require soil and/or trapped groundwater remediation beneath the concrete slab in the loading dock area. Remediation could include the excavation/removal/disposal of the impacted soil and groundwater beneath the concrete slab. Additional subsurface explorations and analytical testing may be required to determine possible migration outside the loading dock area.

Vacant Lot Area East of the Manufacturing Building (Possible Tanks)

The analytical test results of the soil sample collected (probe hole PH-23) indicates that several volatile compounds and no semi-volatiles compounds were detected above the NYSDEC STARS guidance values (refer to Table 3). Based on the results of the analytical testing, the PID field measurements and the petroleum like odors noted during the probe hole advancement, it appears that petroleum impacted soils are located near the probe holes in the vacant lot east of the manufacturing building. *Σ*

Table 3
Summary of Analytical Test Results
Detected STARS List of Volatile Compounds
August 30 & 31, 2001
Concentrations in ug/kg (parts per billion)

*PH-23
PH-24 +
PH-25*

Compounds	PH-23	NYSDEC STARS Guidance Values
ethylbenzene	1200	100
o-xylene	550	100
n-propylbenzene	320	100
n-butylbenzene	570	100

It should be noted that although the analytical test results for NYSDEC STARS List of volatile organic compounds indicate that the remaining volatiles compounds area below the test method detection limit, in some cases the test method detection limit is above the NYSDEC STARS Guidance values. Based on the analytical test results, it appears that the NYSDEC will require soil remediation in the area of the probe holes on the vacant property east of the manufacturing building. Remediation could include the excavation/removal/disposal of the impacted soil in the area of the probe holes. Additional subsurface explorations and analytical testing may be required to determine the lateral extent of the petroleum impacted soil.

Conclusions

Based on the scope of services completed, the relevant observations and findings are summarized below:

- o No chemical and/or petroleum like odors were noted during the collection of the soil samples in the area of probe holes PH-1, PH-2 and PH-3 (former underground storage tanks area west of the existing manufacturing building).
- o The representative soil samples collected from PH-1 and PH-2 were composited and analyzed for the New York State Department of Environmental Conservation (NYSDEC) STARS List of volatile organic compounds (Test Method 8021) and

semi-volatile organic compounds (Test Method 8270). The analytical test results indicated that no chemical compounds were detected above the test method detection limit. Therefore, it is unlikely that the former UST has a significant environmental impact on the subject site.

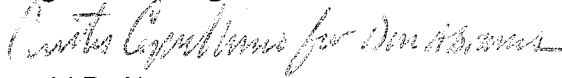

- o No chemical and/or petroleum like odors were noted during the collection of the soil samples in the area of probe holes PH-4 through PH-19 located north of the existing manufacturing building.
- o TCL volatile and semi-volatile organic analytical test results for the grab soil samples collected from probe holes PH-7 and PH-19, located north of the existing manufacturing building (PH-7) and near the concrete pad located about ninety (90) feet north of the existing building (PH-19) indicated that only two (2) volatile compounds (acetone and 2-butanone) and six (6) semi-volatile compounds (phenanthrene, pyrene, benzo (a) anthracene, chrysene, benzo (k) fluoranthene and benzo (a) pyrene) were detected above the test method detection limit in the soil sample collected from 0 to 4 feet in probe hole PH-7.
- o Only acetone, detected at a concentration of 130 ug/kg and chrysene detected at a concentration 750 ug/kg were detected above the TAGM clean-up objectives of 110 ug/kg and 400 ug/kg, respectively. It is possible that the detected concentration of acetone may be a result of laboratory contamination and/or minor spillage of acetone during past or present facility manufacturing. It is also possible that the detected chrysene concentrations may be a result of site history (i.e. numerous railroad sidings located north of the building).
- o Based on the analytical test results it appears that total PCB concentrations were detected above the NYSDEC TAGM cleanup objectives of 10 mg/kg north of the existing manufacturing building (at two locations probe holes PH-7 [13 mg/kg] and PH-18 [17 mg/kg]) and in the loading dock area (probe hole PH-20[3500 mg/kg]). It should be noted that the PCB concentration of 3500 mg/kg, detected in the soil sample collected from the loading dock area, is considered hazardous (detected concentration above 50 ppm) and should be reported to the New York State Department of Environmental Conservation (NYSDEC), Division of Hazardous Waste Remediation immediately. It is likely that the NYSDEC will require soil and perched groundwater remediation beneath the concrete slab in the loading dock area.
- o Some chemical and/or petroleum like odors were noted during the collection of the soil samples in the area of probe holes PH-20, PH-21 and PH-26 located in the loading dock area along the east side of the manufacturing building.
- o The analytical test results of the soil sample collected (probe hole PH-20) indicates that numerous volatile compounds were detected above the NYSDEC STARS guidance values. Based on the results of the analytical testing, the PID field measurements and the petroleum like odors noted during the probe hole advancement, the presence of petroleum impacted soil at the loading dock area

should be reported to the NYSDEC Conservation, Region 8, Division of Spills Management Division.

- o Some chemical and/or petroleum like odors were noted during the collection of the soil samples in the area of probe holes PH-23 and PH-24 located in the vacant lot area, east of the existing manufacturing building near reported tanks.
- o The analytical test results of the soil sample collected (probe hole PH-23) indicates that several volatile compounds and no semi-volatile compounds were detected above the NYSDEC STARS guidance values. It should be noted that although the analytical test results for NYSDEC STARS List of volatile organic compounds indicate that the remaining volatile compounds are below the test method detection limit, in some cases the test method detection limit is above the NYSDEC STARS Guidance values. Based on the analytical test results, it appears that the NYSDEC will require some soil remediation in the area of the probe holes on the vacant property east of the manufacturing building. Remediation could include the excavation/removal/disposal of the impacted soil in the area of the probe holes. Additional subsurface explorations and analytical testing may be required to determine the lateral extent of the petroleum impacted soil.

The information presented above should adequately describe the additional Environmental Evaluation completed at the subject site. If you have any questions regarding this letter report, please contact our office.

Respectively submitted,
Evergreen Testing & Environmental Services, Inc.

APPENDIX B

LIMITATIONS

ATTACHMENT B

Limitations

1. Evergreen Testing & Environmental Services, Inc. (ETES) completed this limited Environmental Evaluation in accordance with generally accepted current practices of other consultants undertaking similar studies. ETES observed that degree of care and skill generally exercised by other consultants under similar circumstances and conditions. ETES's findings and conclusions must be considered not as scientific certainties but as probabilities based on our professional judgment concerning the significance of the limited data gathered during the course of the investigation. Specifically, ETES does not and cannot represent that the site contains no hazardous material, petroleum products, or other latent conditions beyond that observed by ETES during this Environmental Evaluation.
2. The observations described in this report were made under conditions stated therein. The conclusions presented in the report were based solely upon the services described therein and not tasks and procedures beyond the scope of described services or the time and budgetary constraints imposed by the client.
3. In preparing this report, ETES has relied on certain information provided by other consultants the State, County and City officials and other parties referenced herein and on information contained in the files of state and local agencies made available to ETES at the time of the study.
4. Observations were made of the subject site and on adjacent sites as indicated within the report. Where access to portions of the site or the structures on adjacent sites were limited or unavailable, ETES renders no opinion as to the presence of hazardous materials in that portion of the site or adjacent structures.
5. Unless otherwise specified in the report, ETES did not complete testing or analyses to determine the presence or concentrations of hazardous chemicals compounds, petroleum products, asbestos or radon.
6. No specific attempt was made to check on the compliance of present or past owners or operators of the site with Federal, State, or Local laws and regulations, environmental or otherwise.

7. The generalized subsurface profiles described in the report text are intended to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized and have been developed by interpretations of widely spaced explorations and samples. Actual soil and rock transition are probably more gradual.
8. Groundwater level measurements have been made in the explorations and monitoring wells at the times and under conditions stated. It should be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature and other factors occurring from the time measurements were made.
9. It should be noted that fluctuations in the concentrations of chemical compounds may occur due to variations in groundwater levels due to changes in rainfall, temperature and other factors occurring at the time samples were collected.
10. This report has been prepared for the exclusive use of Fibreright Manufacturing, Inc. and designated agents for the specific application to the subject property in accordance with generally accepted engineering practice. No other warranty, expressed or implied, is made. The environmental concerns noted in this report, if any, are applicable to the current identified proposed usage of the property.

ATTN: Mr. Don Abrams

RE: **REPORT:** *Geophysical (EM-61 Magnetometer) Survey,
1132 Seneca Street, Buffalo, New York*

Barron & Associates, P.C. (B&A) has undertaken a preliminary geophysical survey for the above-referenced project site on July 31, 2001. The location and result of the geophysical survey are schematically presented on attached Figures #1 through #4.

The geophysical survey consisted of utilizing a Geonics Model EM-61 magnetometer for the purpose of identifying the location of any magnetic anomalies which may be potentially associated with underground storage tanks (USTs). It should be noted that the geophysical survey was undertaken in the accessible areas of the subject property. The eastern portion of the survey area is heavily grassed and some survey lines could not be undertaken due to this grass. In addition, surface obstructions, notably a gym (playground) set at the eastern portion of the survey area precluded the survey being undertaken in this area. Thus, no representations are made for areas at the fringes of the survey grid lines with respect to potential near-surface or subsurface anomalies.

Geophysical Investigation

A Geonics Model EM-61 magnetometer was utilized to undertake the geophysical survey of the accessible areas of the subject property. The EM-61 is a highly sensitive, two-antenna magnetometer, which is capable of detecting both ferrous (i.e., iron, steel) and non-ferrous (i.e., copper, aluminum) objects which may be associated with underground USTs, drums, etc. The recorded time-domain data does not distinguish between the ferrous and non-ferrous anomalies which were encountered, nor are any interpretations made as to the source or type of anomaly as part of this preliminary survey.

The survey was undertaken at the property by means of obtaining readings along a grid system with a typical five (5) foot spacing for each survey area. The survey grid origin point for each area is shown on the attached Figures # 1 and #3. All remaining survey lines are referenced to this origin point, and the magnetometer survey progressed generally northward from this origin point. The EM-61 was programmed to obtain total (i.e., bottom) and top (differential) magnetic readings every 0.63 feet along each of the respective grid lines. The magnetic readings were stored in a data logger during the field activities. Subsequently, the data was downloaded via a laptop computer, and the data was processed by means of a computer gridding program. The results of the EM-61 survey for the property consist of plan views (refer to Figures #1 and #3), and three-dimensional (3-D) views (refer to Figures #2 and #4) produced by means of gridding the bottom and differential magnetic data points with a modeling program known as QuikGrid™ Version 4.4 (2000).

Mr. Don Abrams
August 3, 2001
Page 2

EM-61 Survey Results

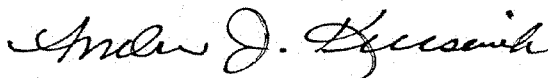

Based on the results of the EM-61 surveys, Figures #1 and #3 (plan views) and Figures #2 and #4 (3-D views), the presence of at least five (5) anomalies, some or all possibly associated with former underground storage tank (USTs), were identified for the subject property. The locations of the anomalies are referenced to the survey origin point, and the potential source of the anomalies are listed in the attached Table #1.

Conclusions and Recommendations

Barron & Associates, P.C. (B&A) has undertaken a Geophysical Survey of part of the currently undeveloped property at 1132 Seneca Street in Buffalo, New York. Based on the preliminary geophysical data, two (2) suspected anomalies have been identified for the subject property. A subsequent limited subsurface investigation is recommended for the subject property to verify the source of anomalies "C" and "E."

Thank you for the opportunity to assist you with this project. Please call the undersigned at your earliest convenience, if questions arise concerning this correspondence.

Yours truly,
BARRON & ASSOCIATES, P.C.

KEY PAGE

1 MATRIX INTERFERENCE PRECLUDES LOWER DETECTION LIMITS
2 MATRIX INTERFERENCE
3 PRESENT IN BLANK
4 ANALYSIS NOT PERFORMED BECAUSE OF INSUFFICIENT SAMPLE
5 THE PRESENCE OF OTHER TARGET ANALYTE(S) PRECLUDES LOWER DETECTION LIMITS
6 BLANK CORRECTED
7 HEAD SPACE PRESENT IN SAMPLE
8 QUANTITATION LIMIT IS GREATER THAN THE CALCULATED REGULATORY LEVEL. THE
9 QUANTITATION LIMIT THEREFORE BECOMES THE REGULATORY LEVEL.
10 THE OIL WAS TREATED AS A SOLID AND LEACHED WITH EXTRACTION FLUID
11 ADL(AVERAGE DETECTION LIMITS)
12 PQL(PRACTICAL QUANTITATION LIMITS)
13 SAMPLE ANALYZED OVER HOLDING TIME
14 DISSOLVED VALUE MAY BE HIGHER THAN TOTAL DUE TO CONTAMINATION FROM
15 THE FILTERING PROCEDURE
16 SAMPLED BY ULI
17 DISSOLVED VALUE MAY BE HIGHER THAN TOTAL; HOWEVER, THE VALUES ARE
18 WITHIN EXPERIMENTAL ERROR
19 AN INHIBITORY FACTOR WAS OBSERVED IN THIS ANALYSIS
20 PARAMETER NOT ANALYZED WITHIN 15 MINUTES OF SAMPLING
21 THE SERIAL DILUTION OF THIS SAMPLE SUGGESTS A POSSIBLE PHYSICAL AND/OR CHEMICAL
22 INTERFERENT IN THIS DETERMINATION. THE DATA MAY BE BIASED EITHER HIGH OR LOW.
23 CALCULATION BASED ON DRY WEIGHT
24 INDICATES AN ESTIMATED VALUE, DETECTED BUT BELOW THE PRACTICAL QUANTITATION
25 LIMITS
26 UG/KG AS REC.D / UG/KG DRY WT
27 MG/KG AS REC.D / MG/KG DRY WT
28 INSUFFICIENT SAMPLE PRECLUDES LOWER DETECTION LIMITS
29 SAMPLE DILUTED/BLANK CORRECTED
30 ND(NON-DETECTED)
31 MATRIX INTERFERENCE PRECLUDES LOWER DETECTION LIMITS/BLANK CORRECTED
32 SPIKE RECOVERY ABNORMALLY HIGH/LOW DUE TO MATRIX INTERFERENCE
33 POST-DIGESTION SPIKE FOR FURNACE AA ANALYSIS IS OUTSIDE OF CONTROL
34 LIMITS (85-115%); HOWEVER, THE SAMPLE CONCENTRATION IS BELOW THE PQL
35 ANALYZED BY METHOD OF STANDARD ADDITIONS
36 METHOD PERFORMANCE STUDY HAS NOT BEEN COMPLETED/ND(NON-DETECTED)
37 FIELD MEASURED PARAMETER TAKEN BY CLIENT
38 TARGET ANALYTE IS BIODEGRADED AND/OR ENVIRONMENTALLY WEATHERED
39 NON-POTABLE WATER SOURCE
40 VOLATILE ASP CODES
41 -----
42 (B)POSSIBLE/PROBABLE BLANK CONTAMINATION (D)ALL COMPOUNDS IDENTIFIED AT A
43 SECONDARY DILUTION FACTOR (J)DETECTED BELOW THE CRQL
44 THE HYDROCARBONS DETECTED IN THE SAMPLE DID NOT CROSS-MATCH WITH COMMON
45 PETROLEUM DISTILLATES
46 MATRIX INTERFERENCE CAUSING SPIKES TO RESULT IN LESS THAN 50.0% RECOVERY
47 MILLIGRAMS PER LITER (MG/L) / POUNDS (LBS) PER DAY
48 MILLIGRAMS PER LITER (MG/L) OF RESIDUAL CHLORINE (CL2) / POUNDS (LBS)
49 PER DAY OF CL2
50 MICROGRAMS PER LITER (UG/L) / POUNDS (LBS) PER DAY
51 MILLIGRAMS PER LITER (MG/L) LINEAR ALKYL SULFONATE (LAS) / POUNDS (LBS)
52 PER DAY LAS
53 RESULTS ARE REPORTED ON AN AS REC.D BASIS
54 THE SAMPLE WAS ANALYZED ON A TOTAL BASIS; THE TEST RESULT CAN BE COMPARED
55 TO THE TCLP REGULATORY CRITERIA BY DIVIDING THE TEST RESULT BY 20,
56 CREATING A THEORETICAL TCLP VALUE
57 METAL BY CONCENTRATION PROCEDURE
58 POSSIBLE CONTAMINATION FROM FIELD/LABORATORY

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1974 through 2006. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report includes results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers follows established procedures to:

- search for parcel information, legal description, and ownership based on client supplied address information;
- research indexes and title repositories;
- obtain a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument (title, parties involved, and description); and
- provide a copy of the deed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

Buffalo, New York 14203

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid
by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors
and assigns of the party of the second part forever.

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and
being in the

SEE SCHEDULE A ATTACHED HERETO

Subject to all covenants, easements and restrictions of record.

The Premises hereby conveyed are not substantially all of the assets of the
Party of the First Part.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting
the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and
rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted
unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the
said premises have been encumbered in any way whatever, except as aforesaid.
AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part
will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to
be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the
cost of the improvement before using any part of the total of the same for any other purpose.
The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

TO HAVE and to hold the premises herein granted unto the Grantee,
and assigns forever.

AND the Grantor covenants that it has not done or suffered anything whereby the
said premises have been encumbered in any way whatever.

THE Grantor, in compliance with Section 13 of the Lien Law, covenants that the
Grantor will receive the consideration for this conveyance and will hold the right to receive such
consideration as a trust fund to be applied first for the purpose of paying the cost of the
improvement and will apply the same first to the payment of the cost of the improvement before
using any part of the total of the same for any other purpose.

THE Grantor further covenants that this conveyance is not all or substantially all
of the assets of the Grantor.

IN WITNESS WHEREOF, the Grantor has caused these presents to be signed
by its duly authorized officer the day and year first above written.

SCHEDULE A

ALL THAT TRACT OR PARCEL OF LAND situate in the City of Buffalo, County of Erie, and State of New York, being part of Lots Nos. 27, 30, 31 and 34, Township 10, Range 8 of the Lovejoy and Emalie Survey of part of the Buffalo Creek Reservation and being that property of the former Western New York and Pennsylvania Railway (predecessor of American Premier Underwriters, Inc., formerly The Penn Central Corporation) and being further bounded and described according to a plan of survey made by Gerald T. Gertis, Licensed Land Surveyor No. 41547, dated September 2, 1977 and last revised January 22, 1988, as follows:

BEGINNING at a point on the northerly right of way line of Seneca Street, said point being 623.00 feet westerly along said right of way line from the westerly right of way line of Wasson Street and said point being the intersection of the westerly line of land of the City of Buffalo by Liber 7283 of Deeds at page 599 with the said northerly right of way line; thence westerly along said northerly right of way line of Seneca Street a measured distance of 164.60 feet, more or less, to a point at the easterly line of land appropriated by the New York Department of Transportation on March 22, 1988; thence northeasterly along said appropriation line, forming an interior angle of 90° for a measured distance of 5.98 feet to a point; thence northwesterly along a northerly line of said appropriation at an angle deflecting to the left of $80^{\circ} 28' 48''$ a distance of 489.75 feet, more or less, to an angle point on said appropriation line; thence continuing westerly along a northerly line of said appropriation at an angle deflecting to the left of $8^{\circ} 09' 05''$ a measured distance of 108.98 feet to a point in the west line of said Lot No. 34; thence northerly forming an interior angle of $90^{\circ} 54' 21''$ and along the west line of said Lot No. 34 a measured distance of 617.09 feet to a point of curvature; thence northeasterly and easterly on a curve to the right having a radius of 356.55 feet and a central angle of $89^{\circ} 45' 03''$, an arc length distance of 558.51 feet to a point of tangency, said point being on the northerly line of said Lot No. 34, also being the southerly line of the former Western New York and Pennsylvania Railroad; thence easterly along said southerly line and also the northerly lines of Lots Nos. 34, 31, 30 and 27, a measured distance of 1,269.98 feet to a point on the westerly right of way line of Babcock Street (66.00 feet wide); thence southerly along said right of way line at an interior angle of $90^{\circ} 02' 05''$, a measured distance of 183.54 feet to a point; thence westerly at an interior angle of $89^{\circ} 55' 10''$, a distance of 170.00 feet to the northwest corner of lands conveyed to the Boy's Club of Buffalo by Liber 7833 of Deeds at page 142; thence southerly at an exterior angle of $89^{\circ} 55' 10''$, a distance of 100.00 feet to a point; thence westerly at an interior angle of $89^{\circ} 55' 10''$, a distance of 180.00 feet to the northwest corner of lands conveyed to A. Broder Bag Company by Liber 8269 of Deeds at page 69; thence southerly at an exterior angle of $89^{\circ} 55' 10''$, a distance of 250.00 feet to a point; thence westerly, parallel with Seneca Street, at an interior angle of $89^{\circ} 55' 10''$ a measured distance 184.60 feet to a point; thence westerly at a measured exterior angle of $173^{\circ} 21' 42''$, a measured distance of 124.47 feet to a point; thence southwesterly at an interior angle of $100^{\circ} 08' 49''$, a distance of 157.58 feet to a point; thence northwesterly at an interior angle of $100^{\circ} 08' 49''$, a distance of 21.35 feet to a point; thence southwesterly on a curve to the left, having a radius of 206.678 feet and a central angle of $43^{\circ} 15' 35''$, an arc length distance of 156.05 feet to a point; thence southerly along the westerly line of the City of Buffalo by the aforementioned deed a distance of 310.00 feet to the place or point of beginning, forming an interior angle of $89^{\circ} 41' 32''$ from the first herein described northerly right of way line of Seneca Street.

EXCEPTING THEREOUT AND THEREFROM THAT 4.169 acre parcel of land conveyed by The Penn Central Corporation to the City of Buffalo Department of Public Works by Deed dated February 2, 1994 recorded in Liber 10867 of Deeds at page 4697, described as follows:

BEGINNING at a point in the north line of Seneca Street (66.00 feet wide) said point being the southwest corner of lands conveyed to the City of Buffalo by deed filed in the Erie County Clerk's Office in Liber 7285 at page 599, said point of beginning also described as being 623.00 feet west of the west line of Wasson Street (49.50 feet wide); thence west or along the north line of Seneca Street 45.00 feet to a point; thence northeasterly along a line forming an interior angle of 102° , a distance of 104.42 feet to a point of curve; thence northwesterly and along a curve to the left having a radius of 136.00 feet, an arc distance of 166.15 feet to a point of tangency; thence northwesterly along a line drawn tangent to the above described curve, a distance of 54.58 feet to a point, said point being 216.14 feet northeasterly of the north line of Seneca Street as measured along a line drawn perpendicularly to Seneca Street and through a

SCHEDULE A (Cont.)

point in the north line of Seneca Street which is 234.06 feet northwesterly of the point of beginning; thence northeasterly and along the above described perpendicular line, a distance of 484.00 feet to a point; thence southeasterly and parallel to Seneca Street, a distance of 430.84 feet to a point; thence southwesterly and along a line forming an interior angle of $90^{\circ} 18' 28''$ a distance of 193.58 feet, more or less, to a point of intersection with the northeast extension of the northwest boundary line of lands conveyed to the City of Buffalo by deed filed in Liber 7285 at page 599; thence westerly along said boundary line and its extension, a distance of 138.42 feet to an angle point in the boundary of Liber 7285 at page 599; thence northwesterly on a line forming an interior angle of $100^{\circ} 08' 49''$, said line being the northeast boundary line of land described in Liber 7285 at page 599, a distance of 21.35 feet to a point in a curve; thence southwesterly along a curve to the left (the above described line being radial to said curve) having a radius of 206.68 feet and an arc distance of 156.05 feet to a point; thence southwesterly along a line which is not tangent to the above described curve 310.00 feet on a direct line to the point of beginning.

ALSO EXCEPTING THEREOUT AND THEREFROM that 1,135 square foot parcel of land conveyed by The Penn Central Corporation to Consolidated Rail Corporation by deed dated November 15, 1984 recorded in Liber 9418 of Deeds at page 538, described as follows:

BEGINNING at a point in the westerly line of Outer Lot 34, distant 15 feet, measured southeastwardly at right angles from the center line of Granger's track connecting the Buffalo-Harrisburg Main Line with the Buffalo Creek Railroad, 221 feet more or less, measured along said westerly lot line, from the northwesterly corner of said Outer Lot 34; thence (1) northeasterly in a line curving to the right and parallel to said center line of track 81 feet to a point; thence (2) southeastwardly, radially to said center line of track 11 feet to a point; thence (3) southwestwardly in a straight line 109 feet more or less to a point in said westerly lot line distant 34 feet, measured southwestwardly along said lot line from the beginning point herein; thence (4) northeasterly, 34 feet, measured along said westerly lot line to the point of beginning.

EXCEPTING AND RESERVING TO THE GRANTOR the following:

ALL THAT TRACT OR PARCEL OF LAND situate in the City of Buffalo, County of Erie and State of New York, being part of Outer Lot Nos. 31 and 34, township 10, range 8 of the Lovejoy and Emalle Survey of part of the Buffalo Creek Reservation and being part of that property of the former Western New York and Pennsylvania Railway (predecessor of American Premier Underwriters, Inc., formerly The Penn Central Corporation) and being further bounded and described according to a plan of survey made by Gerald T. Gertis, Licensed Land Surveyor No. 41547, dated September 2, 1977 and last revised January 22, 1988, as follows:

BEGINNING at a point on the northeast line of land appropriated by the New York Department of Transportation on March 22, 1983, said land being known and designated as Map No. 39, Parcel No. 31, which point is 45.0 feet southerly of the intersection of said northeast line of said appropriated land with the west line of said Outer Lot No. 31 as measured along said northeast line; thence northeasterly along a line running at right angles to Seneca Street, 120.0 feet to a point; thence northwesterly parallel with Seneca Street, 300.0 feet to a point; thence southwesterly along a line running at right angles to Seneca Street, 71.25± feet to said northeast line of said appropriated land; thence southerly along said northeast line of said appropriated land, 307.50± feet to the point or place of beginning.

AND ALSO RESERVING TO THE GRANTOR, its successors and assigns, and easement and right of way over the premises hereby conveyed for the benefit of the above described parcel reserved by the Grantor, for vehicular and pedestrian access to and from Seneca Street, and through the premises hereby conveyed to adjacent lands of the Grantor.

AND THE GRANTOR hereby grants and releases unto the Grantee, its successors and assigns an easement and right of way over the above described parcel reserved by the Grantor, for the benefit of the premises hereby conveyed, for vehicular and pedestrian access over said parcel, for access to portions of the premises hereby conveyed, and for the installation, maintenance and repair of utility lines through said parcel to service the premises hereby conveyed.
