NELAC REPORTING:

At the time of analysis the laboratory was in compliance with the current NELAC standards and held accreditation for all analyses performed unless noted by a qualifier. The labs accreditation numbers are listed below. The format and contents of the report meets all applicable NELAC standards except as noted in the narrative and shall not be reproduced except in full, without the written approval of the laboratory. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

CASE NARRATIVE

Mactec Engineering & Consulting
Lot #: C8J160331

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on October 16, 2008. The coolers were received within the proper temperature range.

The trip blank was not received for 10-14-08.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compound had the %D > 25% in the calibration verification standard CC6102008; but was within expected performance range for this compound: acetone 25.1%.

The following compound had the %D > 25% in the calibration verification standard CC6101808; but was within expected performance range for this compound: bromomethane 32.5% and 1,1,2-trichloro-1,2,2-trifluoroethane –28.4%.

Due to the concentration of compounds detected, several samples were analyzed at a dilution.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, several samples were analyzed at a dilution.

The 10X of sample EW-4-1008 had surrogate nitrobenznene-d5 recover outside of the cotnrol limits. The SOP allows for surrogates to recover outside of the control limits on diluted analyes.

Several samples had the surrogates diluted out.

Sample RFI-31-1008 had surrogate 2,4,6-tribromophenol recover outside of the control limits. This sample was analyzed at a 5X dilution. The SOP allows for surrogates to recover outside of the control limits on diluted analyes. Ths sample also had internal standard phenanthrene-d10 area count not meet criteria. This sample was analyzed twice with the internal standarda area count not meeting criteria confirming matrix interfernece. Only one set of data is reported.

GC/MS Semivolatiles (cont):
The method blank for batch 8295022 had phenanthrene detected between the MDL and the reporting limit. The result was flagged with a **"J"** qualifier. Any sample in this batch that had this compound detected had the result flagged with a "B" qualifier.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compounds had the %D > 25% in calibration verification standard S102408CC; but were within expected performance range for these compounds: 2-naphthylamine 41.2%, atrazine 30.0%, and benzaldehyde 45.0%.

The following compounds had the %D > 25% in calibration verification standard D1030080C1; but were within expected performance range for these compounds: benzoic acid 31.5%, butyl benzyl phthalate 25.1%, and pyrene 27.3%.

Metals:
Sample RFI-18-1008 was over the instruments linear range for calcium and required a dilution.

Several samples were over the instruments linear range for sodium and/or potassium and required a dilution.

Sample ICM-1001-1008 was analyzed at a 5X dilution for the 6010 analysis due to matrix.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample RFI-18-1008, calcium, iron, magnesium, manganese, and sodium recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

The matrix spike and matrix spike duplicate of sample RFI-18-1008 recovered outside of the control limits for potassium.

Metals (cont):
For the matrix spike and matrix spike duplicate of sample MW6-R-R-1008, iron recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
Samples EW-3-1008 and EW-4-1008 were analyzed at a dilution for cyanide.

Sample ICM-101-1008 was analyzed at a dilution for nitrate/nitrite.

Several samples were analyzed at a dilution for sulfate and/or chloride.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spike and matrix spike duplicate of sample RFI-25-1008 had the sulfate spike diluted out.
