SDG NARRATIVE

Job#: A08-0899,A08-1004,A08-1078

Project#: NY5A9482
SDG#: 0899
Site Name: HONEYWELL BUFFALO COLOR

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A08-0899
Sample Cooler(s) were received at the following temperature(s); 2@2.0 °C
All samples were received in good condition.

A08-1004
Sample Cooler(s) were received at the following temperature(s); 4@3.0 °C
Samples RFI-25, ICM-102, ICM-103, EW2 and ICM-101 were received past the EPA-recommended holding time of 24 hours for Ferrous Iron by Method 3500D. The samples were analyzed as per instructions from the client/project manager. The sample results should be considered estimated values.

Three one liter glass amber volumes were received for sample ICM-101, one volume was received for sample ICM-104. Two of the times on the volumes for ICM-101 were congruent with the chain of custody, sampled at 1630. The third volume was sampled at 1800, it was therefore determined that this was the missing volume for ICM-104 which was also sampled at 1800. This was logged in as "B" volume as an extra precaution.

A08-1078
Sample Cooler(s) were received at the following temperature(s); 2@2.0 °C
Volatiles were listed on the COC for point RFI-20-0108 but no volatiles were received.

GC/MS Volatile Data

The recovery of the analytes Benzene and Chlorobenzene in the Matrix Spike and the analytes Benzene and Chlorobenzene in the Matrix Spike Duplicate of sample ICM-101-0108 exceeded quality control limits. The Relative Percent Difference (RPD) between the Matrix Spike and the Matrix Spike duplicate of sample ICM-101-0108 also exceeded quality control limits for the analytes Benzene and Chlorobenzene. The Matrix Spike Blank recoveries were compliant, so no corrective action was performed.

The analyte methylene chloride was detected in the dilutions for samples ICM-101-0108, EW2-0108, and RFI-22-0108. The dilution process involves additional manipulation of the sample, therefore, the sample detection for methylene chloride in the dilution may potentially be due to laboratory contamination and should be evaluated accordingly.

GC/MS Semivolatile Data

The Relative Percent Difference between the Matrix Spike Blank A8B0979701 and the Matrix Spike Blank Duplicate A8B0979702 exceeded quality control criteria for aniline, though all individual recoveries are compliant. No action required.

The spike recovery for Benzaldehyde was below the laboratory quality control limits in the Matrix Spike Blank A8B0979701 and Matrix Spike Duplicate Blank A8B979702 due to known interference from other compounds in the the full list spike. No corrective action was performed.

Surrogate concentration for 2,4,6-Tribromophenol was diluted below the linear range of the calibration curve in samples EW3-0108DL and surrogate concentration Phenol-D5 was diluted below the linear range of the calibration curve in sample EW4-0108DL.

The surrogate recovery for 2,4,6-Tribromophenol was above the method defined quality control limits for sample EW1-0108. Based on US EPA CLP National Functional Guidelines for Data Review, one surrogate in either fraction (base/neutral or acid fraction) may have a recovery outside of the control limit. All analytes associated with that surrogate should be considered biased high.

All surrogate concentrations were diluted below the linear range of the calibration curve in sample ICM-101-0108 DL.

Linear regression was used to calibrate analytes that were greater than 15% RSD in the initial calibrationa A7I0000910 and A7I0000923.

Linear regression was used to calibrate analytes that were greater than 15% RSD in the initial calibration A8I0000035.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

All samples were received past the EPA-recommended holding time for ferrous iron. The samples were analyzed as soon as possible by the laboratory, as requested by the client. The sample results should be considered estimated values.

The recovery of sample EW4-0108 Matrix Spike exhibited results below the quality control limits for Ferrous Iron. However, the LCS was acceptable.

The recovery of sample EW5-0108 Matrix Spike exhibited results above the quality control limits for Total Cyanide. However, the LCS was acceptable.

The recovery of sample RFI-20-0108 Matrix Spike exhibited results below the quality control limits for Ferrous Iron. However, the LCS was acceptable.

The recovery of sample RFI-20-0108 Matrix Spike exhibited results above the quality control limits for Sulfide. However, the LCS was acceptable.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

THE LEADER IN ENVIRONMENTAL TESTING

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
[1]	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
G	Indicates a value greater than or equal to the project reporting limit but less than the laboratory quantitation limit
*	Indicates the spike or duplicate analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

SDG NARRATIVE

Job#: A08-1190,A08-1248

Project#: NY5A9482
SDG#: 1190
Site Name: HONEYWELL BUFFALO COLOR

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A08-1190
Sample Cooler(s) were received at the following temperature(s); 3@5.5 °C
All samples were received in good condition.
A08-1248
Sample Cooler(s) were received at the following temperature(s); 3 @ 2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

The recovery of the analytes Bromoform and Dibromochloromethane in the Matrix Spike and the analyte Bromoform in the Matrix Spike Duplicate of sample RFI-43-0208 exceeded quality control limits. The Relative Percent Difference (RPD) between the Matrix Spike and the Matrix Spike duplicate of sample RFI-43-0208 also exceeded quality control limits for multiple analytes . The Matrix Spike Blank recoveries were compliant, so no corrective action was performed.

GC/MS Semivolatile Data

The spike recovery for Benzaldehyde was below the laboratory quality control limit in the Matrix Spike Blank A8B1020501 and the Matrix Spike Blank Duplicate A8B1020502 due to a known interference with other analytes in the full list spike mix. No corrective action was performed.

Metals Data

The recoveries of sample RFI-32-0108 Matrix Spike exhibited results above the quality control limits for Calcium and the Matrix Spike Duplicate exhibited results below the quality control limits for Calcium. The sample result is more than four times greater than the spike added. The RPD between sample RFI-32-0108 Matrix Spike and Matrix Spike Duplicate exceeded quality control criteria for Calcium, Magnesium, Manganese and Sodium. However, the LFB (A8B0997601) was acceptable.

Wet Chemistry Data

All samples were received past the EPA-recommended holding time for ferrous iron. The samples were analyzed as soon as possible by the laboratory, as requested by the client. The sample results should be considered estimated values.

The recovery of sample RFI-29-0108 Matrix Spike exhibited results below the quality control limits for Ferrous Iron. However, the LCS was acceptable.

The recovery of sample R-01-0108 Matrix Spike exhibited results above the quality control limits for Sulfide. However, the LCS was acceptable.

The recovery of sample RFI-31-0108 Matrix Spike exhibited results above the quality control limits for Total Cyanide. However, the LCS was acceptable.

The recovery of sample RFI-45-0208 Matrix Spike exhibited results above the quality control limits for FERROUS IRON. However, the LCS was acceptable.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

RFI-PZ18-0208	A8124806	Chloride	5.00	002

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

Client Sample ID	Lab Sample ID	Parameter (Inorganic)/Method (Organic)	Dilution	Code
RFI-PZ18-0208	A8124806	Ferrous Iron	5.00	008
RFI-PZ18-0208	A8124806	Sulfate	16.00	008
RFI-36-0208	A8124807	Chloride	5.00	002
RFI-36-0208	A8124807	Ferrous Iron	10.00	008
RFI-36-0208	A8124807	Sulfate	50.00	008
RFI-36-0208	A8124807MS	Chloride	5.00	002

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

THE LEADER IN ENVIRONMENTAL TESTING

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
[1]	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
G	Indicates a value greater than or equal to the project reporting limit but less than the laboratory quantitation limit
*	Indicates the spike or duplicate analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

Special Instructions/ Conditions of Receipt

Possible Hazard Identification
☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☒ Unknown

Sample Disposal
☐ Return To Client ☒ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required
☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☐ 14 Days ☐ 21 Days ☒ Other STANDARD

QC Requirements (Specify)

SDG NARRATIVE

Job#: A08-4346,A08-4431,A08-4515,A08-4547

Project#: NY5A9482
SDG#: 4346
Site Name: HONEYWELL BUFFALO COLOR

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A08-4346
Sample Cooler(s) were received at the following temperature(s); 3@4.4 °C
All samples were received in good condition.
A08-4431
Sample Cooler(s) were received at the following temperature(s); 4@4.4 °C
Although listed on the COC, no volume was received for VOA analysis for RFI-22, RFI-PZ-19 and RFI-45. No volume was received for point RFI-45.
A08-4515
Sample Cooler(s) were received at the following temperature(s); 5@2.0 °C
All samples were received in good condition.
A08-4547
Sample Cooler(s) were received at the following temperature(s); 2@4.4 °C
All samples were received in good condition.

GC/MS Volatile Data

The Matrix Spike Blank MSB93 (A8B1450001) was above control limits for the analyte Carbon Tetrachloride. However, since this target analyte was non-detect in the samples and the high recovery would yield a high bias, no further corrective action was necessary.

GC/MS Semivolatile Data

The spike recovery for the analyte N-nitrosodiphenylamine was above laboratory defined quality control limits in the Matrix Spike Blank (A8B1390304) and in the Matrix Spike Blank Duplicate (A8B1390305). Since the results were biased high and the analyte was not detected in the samples, no corrective action was performed.

The spike recovery for 4,6-Dinitro-2-methylphenol was below the laboratory quality control limits in the Matrix Spike Blank A8B1407301. Since the Matrix Spike Blank Duplicate A814070302 recovery was compliant, no corrective action was required.

The spike recovery for N-nitrosodiphenylamine was above the laboratory quality control limits in the Matrix Spike Blank Duplicate A8B1410802. Since the Matrix Spike Blank A8B1410801 recovery was compliant, no corrective action was required.

The spike recoveries for several analytes were above laboratory quality control limits in the Matrix Spike Blank (A8B1424004). Since the results were biased high and the analytes were not detected in the samples, no corrective action was performed.

All surrogate concentrations were diluted below the linear range of the initial calibration standard curve in sample ICM-101-0408 DL.

All surrogate concentrations were diluted below the linear range of the calibration curve in samples EW-3-0408 D2, EW-4-0408D2 and EW-5-0408 D2.

The surrogate recovery for 2,4,6-Tribromophenol was above the laboratory quality control limits for sample RFI-PZ-18-0408. Based on the laboratory SOP, one surrogate in each fraction (base/neutral or acid fraction) may have a recovery outside of the control limit with no corrective action necessary.

The surrogate recoveries for 2,4,6-Tribromophenol and p-Terphenyl-d14 were above the laboratory quality control limits for sample RFI-28-0408. Based on the laboratory SOP, one surrogate in each fraction (base/neutral or acid fraction) may have a recovery outside of the control limit with no corrective action necessary.

The surrogate recovery for 2,4,6-Tribromophenol was above the laboratory quality control limits for all of the samples, with the exception of sample FB-1-0408. Based on the laboratory SOP, one surrogate in either fraction (base/neutral or acid fraction) may have a recovery outside of the control limit with no corrective action necessary.

The surrogate recovery for p-Terphenyl was above the laboratory quality control limits for sample FB-1-0408. Based on the laboratory SOP, one surrogate in either fraction (base/neutral or acid fraction) may have a recovery outside of the control limit with no corrective action necessary.

The spike recoveries for several analytes were outside the laboratory quality control limits in the Matrix Spike RFI-17-0408 and Matrix Spike Duplicate RFI-17-0408. Since the Matrix Spike Blank (A8B1424004) recoveries were acceptable, no corrective action was required.

The Relative Percent Difference between the Matrix Spike RFI-17-0408 and the Matrix Spike Duplicate RFI-17-0408 exceeded quality control criteria for Benzo(b)fluoranthene and Caprolactum. No action required.

Metals Data

The recoveries of sample RFI-39-0408 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Calcium, Potassium (MS), and Sodium. The sample results were more than four times greater than the spike added. However, the LFB (A8B1401001) was acceptable.

The recoveries of sample RFI-45-0408 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Total Calcium (MS) and Total Manganese. The recovery of sample RFI-45-0408 Matrix Spike Duplicate exhibited a result below the quality control limit for Total Sodium. The sample results were more than four times greater than the spike added. The RPDs between sample RFI-45-0408 Matrix Spike and Matrix Spike Duplicate exceeded the quality control criteria for Total Calcium and Total Sodium. However, the LFB (A8B1412001) was acceptable.

The recoveries of sample RFI-17-0408 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Iron and Manganese. Sample matrix is suspect. However, the LFB (A8B1412101) was acceptable.

Digestate ICM-101-0408 required filtering prior to Metals analysis by Method 6010 due to the presence of particulate or sediment in the digestate.

Digestates EW-3-0408 and EW-4-0408 required filtering prior to Metals analysis by Method 6010 due to the presence of particulate or sediment in the digestate.

The Relative Percent Difference between sample RFI-17-0408 Matrix Spike and Matrix Spike Duplicate exceeded the quality control limit for Calcium, though all individual analyte recoveries were compliant.

Wet Chemistry Data

The recovery of sample RFI-16-0408 Matrix Spike exhibited results below the quality control limits for FERROUS IRON. However, the LCS was acceptable.

The recovery of sample ICM-101-0408 Matrix Spike exhibited results below the quality control limits for Sulfate. However, the LCS was acceptable.

The recovery of sample RFI-18-0408 Matrix Spike exhibited results below the quality control limits for Sulfate. However, the LCS was acceptable.

The recovery of sample RFI-22-0408 Matrix Spike exhibited results below the quality control limits for Sulfate. However, the LCS was acceptable.

The recovery of sample RFI-39-0408 Matrix Spike exhibited results above the quality control limits for Total Cyanide. However, the LCS was acceptable.

The recovery of sample R-01-0408 Matrix Spike exhibited results below the quality control limits for Ferrous Iron. However, the LCS was acceptable.

The recovery of sample RFI-45-0408 Matrix Spike exhibited results above the quality control limits for Total Cyanide. However, the LCS was acceptable.

The recovery of sample RFI-17-0408 Matrix Spike exhibited results above the quality control limits for Ferrous Iron. The recovery of sample RFI-17-0408 Matrix Spike Duplicate exhibited results above the quality control limits for Ferrous Iron. However, the LCS was acceptable.

The recovery of sample RFI-17-0408 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Total Cyanide. However, the LCS was acceptable.

The recovery of sample RFI-17-0408 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Sulfate. However, the LCS was acceptable.

Due to an extreme backlog, sample FB-1-0408 was analyzed for Chloride by method 4500-Cl E rather than method 300.0.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

THE LEADER IN ENVIRONMENTAL TESTING

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
[1]	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
G	Indicates a value greater than or equal to the project reporting limit but less than the laboratory quantitation limit
*	Indicates the spike or duplicate analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

Project#: NY5A9482
SDG#: 8945
Site Name: HONEYWELL BUFFALO COLOR

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A08-8945
Sample Cooler(s) were received at the following temperature(s); 5.0 °C
All samples were received in good condition.
A08-9022
Sample Cooler(s) were received at the following temperature(s); 3@2.0 °C
All samples were received in good condition.
A08-9106
Sample Cooler(s) were received at the following temperature(s); 2@2.0 °C
All samples were received in good condition.
A08-9129
Sample Cooler(s) were received at the following temperature(s); 4@6.0 °C
All samples were received in good condition.
A08-9197
Sample Cooler(s) were received at the following temperature(s); 4.5 °C
All samples were received in good condition.

GC/MS Volatile Data

The Matrix Spike and Matrix Spike Duplicate for sample EW-=3R-0708 was inadvertantly spiked with the 5 compound spike instead of the requested full compound spike. The error was not discovered until after the holding time had expired. All other QA criteria was followed and was acceptable.

The recovery of the analyte Chlorobenzene in the Matrix Spike and the Matrix Spike Duplicate of sample RFI-32-0708 exceeded quality control limits. The Relative Percent Difference (RPD) between the Matrix Spike and the Matrix Spike duplicate of sample RFI-32-0708 also exceeded quality control limits for the analyte Chlorobenzene. The Matrix Spike Blank recoveries were compliant, so no corrective action was performed.

GC/MS Semivolatile Data

The analyte Di-n-octyl phthalate was detected in the Method Blank A8B1975003 at a level above the laboratory reporting limit. According to EPA validation criteria, up to 5 times the reporting limit is acceptable for phthalate contamination. No further corrective action was performed.

The Relative Percent Difference between the Matrix Spike Blank A8B1967901 and the Matrix Spike Duplicate Blank A8B1967902 exceed quality control limits for 2-Methylnaphthalene, though all individual analyte recoveries are compliant.

The spike recovery for 2,2'-Oxybis(1-Chloropropane) was below the laboratory quality control limits in the Matrix Spike Blank Duplicate A8B1975002. Since the Matrix Spike Blank A8B1975001 recovery was compliant, no corrective action was required.

The surrogate recovery for p-Terphenyl-d14 was below the laboratory quality control limits for sample ICM-101-0708. Based on the laboratory SOP, one surrogate in either fraction (base/neutral or acid fraction) may have a recovery outside of the control limit.

The surrogate recoveries for several samples were outside the laboratory quality control limits. Based on the laboratory SOP, one surrogate in either fraction (base/neutral or acid fraction) may have a recovery outside of the control limit.

The surrogate recovery for 2,4,6-Tribromophenol was above the laboratory quality control limits for sample RFI-31-0708. Based on the laboratory SOP, one surrogate in either fraction (base/neutral or acid fraction) may have a recovery outside of the control limit.

The internal standard Phenanthrene-D1 was below the control limit for sample RFI-31-0708. However, the sample was re-analyzed with compliant results.

The Relative Percent Difference between the Matrix Spike Blank A8B1967901 and the Matrix Spike Blank Duplicate A8B1967902 exceeded quality control criteria for 2-Methylnaphthalene, though all individual recoveries are compliant. No action required.

The surrogate recoveries for 2-Fluorophenol in sample RFI-32-0708 and the recovery for Nitrobenzene-D5 in sample R-14-0708 were outside quality control limits. However, the chromatogram shows clear evidence of matrix interference and all other quality control samples met acceptance criteria. Therefore, no further corrective action was performed and the data is accepted.

The surrogate recovery for 2,4,6-Tribromophenol was above the laboratory quality control limits for sample RFI-PZ04S-0708. Based on the laboratory SOP, one surrogate in either fraction (base/neutral or acid fraction) may have a recovery outside of the control limit.

The recoveries of several analytes in sample EW-3R-0708 Matrix Spike and Matrix Spike Duplicate exceeded QC limits. The Matrix Spike Blank recoveries are compliant.

Metals Data

The recoveries of sample EW-3R-0708 Matrix Spike exhibited results above the quality control limits for Potassium and Sodium. The recoveries of sample EW-3R-0708 Matrix Spike Duplicate exhibited results below the quality control limits for Potassium and Sodium. The sample results were more than four times greater than the spike added. The RPDs between sample EW-3R-0708 Matrix Spike and Matrix Spike Duplicate exceeded the quality control criteria for Potassium and Sodium. However, the LFB (A8B1959001) was acceptable.

The Relative Percent Difference between the Matrix Spike and the Matrix Spike Duplicate exceeded the quality control limit for Sodium on sample RFI-29-0708, though all individual analyte recoveries were compliant.

Wet Chemistry Data

The recovery of sample EW-3R-0708 Matrix Spike Duplicate exhibited results below the quality control limits for Chloride. However, the LCS was acceptable.

The relative percent difference between the Matrix Spike and Matrix Spike Duplicate exceed quality control limits for Chloride on sample EW-3R-0708.

The recovery of sample RFI-35-0708 Matrix Spike exhibited results above the quality control limits for Total Cyanide. However, the LCS was acceptable.

The values obtained for Cyanide on samples ICM-101-0708 and RFI-24-0708 were inconsistent with historical trends. Distillation and analysis was performed a second time and the values were confirmed.

The recovery of sample EW-3R-0708 Matrix Spike exhibited results above the quality control limits for Sulfide. The recovery of sample EW-3R-0708 Matrix Spike Duplicate exhibited results above the quality control limits for Sulfide. However, the LCS was acceptable.

Results for sulfate could not be obtained by method D-516-90 for sample EW-3R-0708 due to sample color. Sample EW-3R-0708 was analyzed by method 300.0 for sulfate.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
[1]	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
G	Indicates a value greater than or equal to the project reporting limit but less than the laboratory quantitation limit
*	Indicates the spike or duplicate analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

November 4, 2008

NELAC REPORTING:

At the time of analysis the laboratory was in compliance with the current NELAC standards and held accreditation for all analyses performed unless noted by a qualifier. The labs accreditation numbers are listed below. The format and contents of the report meets all applicable NELAC standards except as noted in the narrative and shall not be reproduced except in full, without the written approval of the laboratory. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	TestAmerica
NFESC	NA	NAVY	X
US Dept of Agriculture	(#P330-07-00101)	Foreign Soil Import Permit	X
Arkansas	(#03-022-1)	WW	X

Florida – NELAC	(#E87660)	WW	X
		HW	X
Illinois – NELAC	(#200005)	WW	X
		HW	X
Kansas – NELAC	(#E-10350)	WW	X
		HW	X
Louisiana – NELAC	(#93200)	WW	X
		HW	X
New Hampshire – NELAC	(#203002)	WW	X
		--	--
New Jersey – NELAC	(PA-005)	WW	X
		HW	X
New York – NELAC	(#11182)	WW	X
		HW	X
North Carolina	(#434)	WW	X
		HW	X
Pennsylvania - NELAC	(#02-00416)	WW	X
		HW	X
South Carolina	(#89014001)	WW	X
		HW	X
Utah – NELAC	(STLP)	WW	X
		HW	X
West Virginia	(#142)	WW	X
		HW	X
Wisconsin	998027800	WW	X
		HW	X

The codes utilized for program types are described below:

HW Hazardous Waste certification
WW Non-potable Water and/or Wastewater certification
X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

Updated: 12/28/07 C:\Documents and Settings\derubeisn\My Documents\NELAC NARRATIVE Pttsburgh.doc

CASE NARRATIVE

Mactec Engineering & Consulting
Lot #: C8J180171

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on October 17, and 18, 2008. The coolers were received within the proper temperature range.

The chains of custody did not list sulfide analysis. The laboratory received sulfide bottles for the samples. This parameter was logged in.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concetration of target compounds detected, sample RFI-32-1008 was analyzed at a diluion.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compound had the %D > 25% in the calibration verification standard CC6102708; but was within expected performance range for this compound: acetone 35.6%.

GC/MS Semivolatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

Metals:
Sample RFI-39-1008 was over the instruments linear range for sodium and required a dilution.

Sample RFI-PZ-19-1008 was over the instruments linear range for iron and manganese and required a dilution. This sample was also analyzed at a dilution for cadmium, chromium, sodium, lead, antimony, selenium, thallium, vanadium, and zinc due to inter-element corrections associated with iron and manganese.

Metals (cont):
The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate, calcium recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
Samples RFI-39-1008 and RFI-PZ-19-1008 were analyzed at a dilution for chloride.

Several samples were analyzed at a dilution for sulfate.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spike and matrix spike duplicate of sample RFI-45-1008 had the sulfate spike diluted out.

METHODS SUMMARY

C8J180171

PARAMETER	ANALYTICAL METHOD	PREPARATION METHOD
Chloride	MCAWW 300.0A	MCAWW 300.0A
Cyanide, Total	SW846 9012A	SW846 9012A
Mercury in Liquid Waste (Manual Cold-Vapor)	SW846 7470A	SW846 7470A
Nitrate-Nitrite	MCAWW 353.2	MCAWW 353.2
Semivolatile Organics GCMS BNA 8270C	SW846 8270C	
Sulfate	MCAWW 300.0A	MCAWW 300.0A
Sulfides, Total 9030B/9034	SW846 9030B/903	SW846 9030B/903
Trace Inductively Coupled Plasma (ICP) Metals	SW846 6010B	SW846 3010A
Volatile Organics by GC/MS	SW846 8260B	SW846 5030B/826

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

	76 Styrene	104	Compound Not Detected.					
	77 Bromoform	173	Compound Not Detected.					
	78 Isopropylbenzene	105	Compound Not Detected.					
	79 Bromobenzene	156	Compound Not Detected.					
	83 1,1,2,2-Tetrachloroethane	83	Compound Not Detected.					
	84 1,2,3-Trichloropropane	110	Compound Not Detected.					
	86 1,3,5-Trimethylbenzene	105	Compound Not Detected.					
	88 1,2,4-Trimethylbenzene	105	Compound Not Detected.					
	90 4-Isopropyltoluene	119	Compound Not Detected.					
	91 1,3-Dichlorobenzene	146	12.388	12.383	(0.995)	29583	3.99896	0.7998
	93 1,4-Dichlorobenzene	146	12.473	12.468	(1.002)	155605	20.1866	4.037
	95 1,2-Dichlorobenzene	146	12.844	12.839	(1.032)	97496	13.7080	2.742
	96 1,2-Dibromo-3-chloropropane	157	Compound Not Detected.					
	97 1,2,4-Trichlorobenzene	180	Compound Not Detected.					
	101 1,1,2-trichlorotrifluoroethane	101	Compound Not Detected.					
	102 Methyl acetate	43	Compound Not Detected.					
	104 Cyclohexane	56	Compound Not Detected.					
	105 Methyl Cyclohexane	83	Compound Not Detected.					

Data File: \\pitsvr06\d\chem\hp6.i\6102708d.b\61027017.D

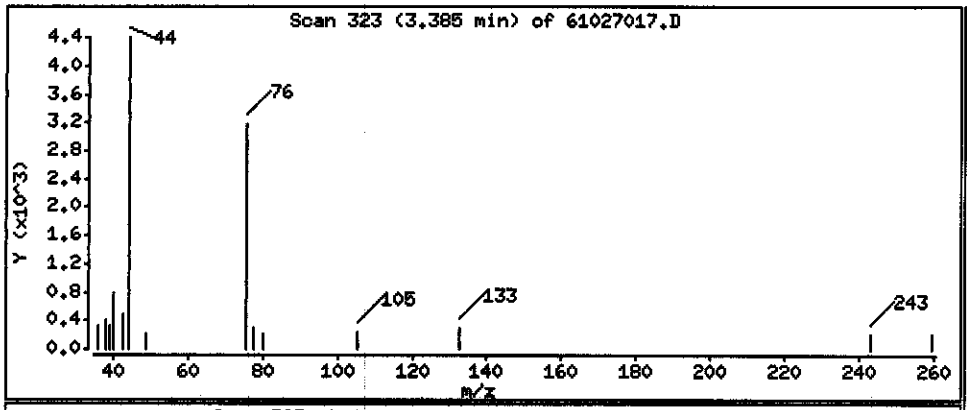
Date : 27-OCT-2008 15:43

Client ID: RFI-29-1008

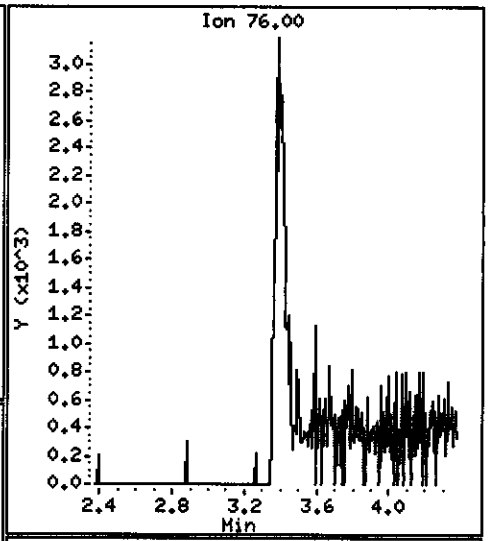
Instrument: hp6.i

Sample Info: C8J180171-010 5ml

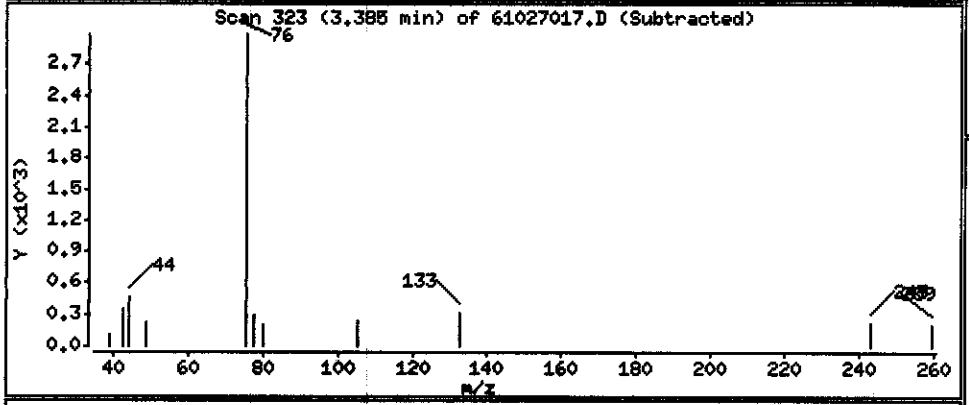
Purge Volume: 5.0



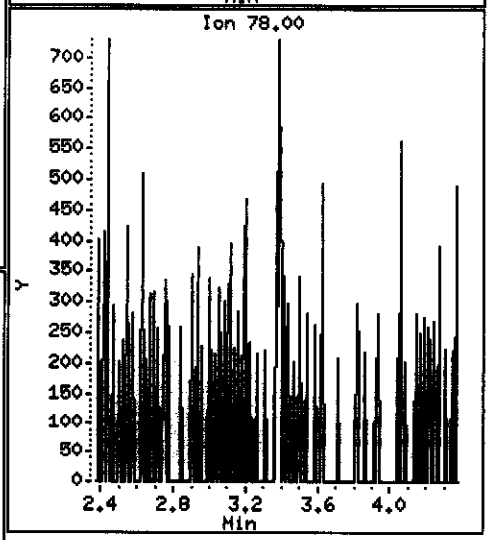
Operator: 001562



Column phase: DB 624



Column diameter: 0.20



15 Carbon Disulfide
