NYSDEC - REGION 9

JUL 16 2012

Subject: **2011 Periodic Review Report**
Buffalo Color Corporation Site Area C
Site No. C915231
Amec Project No. 3410110843

REL FOIL UNREL

Dear Mr. Szymanski:

Amec Environment & Infrastructure, Inc. (Amec) is submitting this Periodic Review Report (PRR) for the Buffalo Color Corporation Site Area C (Site) on behalf of South Buffalo Development LLC (SBD). The completed Site Management PRR Notice - Institutional and Engineering Controls Certification Form is provided herein as **Attachment A**, which includes a summary of institutional controls. A report titled "2011 Annual Operation, Maintenance, and Monitoring Report, Buffalo Color Corporation Area C" (OM&M Report), is included herein as **Attachment B**. The remainder of this document follows the outline presented in your May 4, 2012 letter.

EXECUTIVE SUMMARY

Site Summary

The primary remedial objectives at the Site were to eliminate the potential for direct contact with waste and impacted soils and sediments, and to eliminate the potential for impacted groundwater to discharge offsite. Remedial construction activities were completed in 2010. The key remedial actions for the Site included:

- Excavation and off-Site disposal of 10,527 CY (in-place volume) of volatile organic compound (VOC) contaminated soils from two locations on the northern side of Area C to accomplish mass removal of the source material;
- The addition of a bioremediation enhancement agent (Regenesis ORC-A) to the excavation backfill to promote the bioremediation of residual soil and groundwater contamination at the excavated areas;
- Utilization of an integrated Site-wide cover system consisting of a combination of a minimum one foot of imported clean soil and topsoil (seeded with native grasses) underlain by a demarcation layer consisting of a woven geotextile, existing/new pavement (asphalt or concrete), and/or existing buildings to prevent potential human exposure to remaining impacted Site soil; and

Mr. David Szymanski
New York State Department of Environmental Conservation
July 2012

- Abandonment/plugging of unused process sewers and installation of a new storm sewer infrastructure.

The Buffalo Color Corporation Area C Site is located at 229 Elk Street, in the southern portion of the City of Buffalo, Erie County, New York (see Appendix A in **Attachment B**).

Structures located on Area C include the former Buffalo Color powerhouse (208), boiler house (207), as well as the other structures shown on Appendix A in **Attachment B**. These structures have been cleared of asbestos and residual chemicals and are anticipated to be renovated for adaptive reuse.

The Site is part of the former Buffalo Color Corporation facility, which also included Areas A and B located beyond the rail spur to the south and Area E located across Lee Street to the east (see Appendix A in **Attachment B**). The surrounding area consists of industrial and residential properties.

The Buffalo Color Corporation Area C Site was founded as the Schoellkopf Aniline and Dye Company in 1879. The plant produced dyes and organic chemicals based primarily on aniline and various aniline derivatives. The company was reorganized into the National Aniline Chemical Company in 1916. It became one of five companies that merged to create Allied Chemical Corporation (Allied Chemical) in 1920. The existing dye-making facility and the right to produce certain dyes and intermediates were sold by Allied Chemical to BCC on July 1, 1977. At the time of the sale, the plant was divided into eight areas designated with the letters A, B, C, D, E, F, G, and H. BCC purchased the manufacturing areas A through E, while Allied Chemical retained the acid plant (sold to PVS Chemical, Inc. in 1981), the research and development facility on Area F, and the parking lots on Areas G (Elk Street) and H (Smith Street).

The remediation involved excavation and disposal of the wastes present on Site along with the addition of a bioremediation enhancement agent (Regenesis ORC-A) to the excavation backfill, a Site-wide soil cover was incorporated over the entire Site, and a new sewer system was installed to manage Site storm water.

During 2011, the following routine OM&M activities were completed in accordance with the December 2010 Site Management Plan (SMP) prepared by MACTEC Engineering and Consulting, Inc. (now Amec):

- Quarterly groundwater monitoring;
- Quarterly Site inspections; and
- Routine maintenance activities.

Effectiveness Monitoring

The cover system is intact with suitable vegetative cover, surface pavement, and concrete slabs. Sufficient time has not elapsed to determine if the bioremediation enhancement agent has begun to promote the bioremediation of residual soil and groundwater contamination.

*What is the basis
for this statement?*

Mr. David Szymanski
New York State Department of Environmental Conservation
July 2012

Compliance

The OM&M activities conducted in 2011 were performed in accordance with the SMP and as described in the attached OM&M Report.

Recommendations

Implementation of the activities specified in the SMP will continue in 2012, as described in the attached OM&M Report and in Section VI. E. of this letter.

SITE OVERVIEW

Site Location

The Site plan is illustrated on the figures included in **Attachment B** of the attached OM&M Report. The Site is an approximately 6.03-acre area bounded by Elk Street to the north, a rail spur and associated right-of-way to the south, Lee Street to the east, and railroad tracks to the west (see Figure 2 in **Attachment B**). Structures that remain on Area C include the former Buffalo Color powerhouse (208), boiler house (207), as well as the other structures shown on Figure 2 in **Attachment B**.

The Site remedy included excavation and disposal of the wastes containing elevated levels of VOCs from two locations in the northern portion of the Site along with the addition of a bioremediation enhancement agent (Regenesis ORC-A) to the excavation backfill; a Site-wide soil cover system consisting of a combination of 12 inches of clean soil seeded with native grasses, 12 inches of clean gravel, existing or new pavement (asphalt or concrete), and Site buildings to prevent human exposure to impacted soil/fill remaining at the Site; and a new sewer system to manage Site storm water and abandonment/plugging of unused process and storm sewers.

Chronology

Excavation of soils began in October 2010 and the backfilling was complete in November 2010. Final grading and a one-foot soil cover were placed by December 2010. Seeding was initiated in the growing season in 2011 and a follow-up seeding event was completed in October 2011. The storm sewer work was initiated in April 2011 and completed in June 2011. The Site-wide cover was concluded when paving of asphalt areas was completed in several stages in the summer of 2011.

EVALUATION OF REMEDY PERFORMANCE, EFFECTIVENESS, AND PROTECTIVENESS

The performance, effectiveness and protectiveness of the remedy is verified by ensuring that the cover system is intact as constructed.

- Ensuring the cover system is intact as constructed: Quarterly Site inspections are conducted that include monitoring of soil cover vegetation, ground inspections, and visual checks for evidence of erosion or subsidence. The results from the inspections

Mr. David Szymanski
New York State Department of Environmental Conservation
July 2012

indicate that the integrity of the cover system is sound (see the quarterly inspection reports included as Appendix D in the attached OM&M Report).

IC/EC PLAN COMPLIANCE REPORT

A separate IC/EC Plan has not been prepared. The status of Site engineering controls is discussed in the attached OM&M Report. Institutional controls for the Site include restriction of the land to commercial or industrial use.

MONITORING PLAN COMPLIANCE REPORT

A separate Monitoring Plan Compliance Report is not required for this Site. Monitoring requirements are addressed in the SMP.

OPERATION AND MAINTENANCE PLAN COMPLIANCE REPORT

Components of the OM&M Manual

Requirements of the SMP include the following:

- Quarterly Groundwater Sampling;
- Quarterly Site Inspections; and
- Maintenance Activities (annual mowing of soil cover, repair of pavement and concrete slab areas without vegetative cover, repair of areas showing erosion or subsidence, maintenance of storm water collection systems, etc).

Summary of OM&M Completed During 2011

Quarterly groundwater monitoring, quarterly Site inspections and other OM&M activities were completed in 2011 in accordance with the SMP. The following summarizes the activities completed:

- Quarterly groundwater sampling events were completed in March, June, September, and November 2011 and included collection of aqueous samples from seven monitoring wells for parameters described in the OM&M Manual. The results are summarized in the attached OM&M Report, and the analytical report is included in Appendix C of the OM&M report.
- Quarterly Site inspections were conducted as outlined in the OM&M Manual.
- Non-routine maintenance activities completed in 2011 included the following:
 - Initial seeding activities on soil cover areas – June 22, 2011
 - Follow-up seeding for areas disturbed during subsequent construction activities – October 4, 2011

Mr. David Szymanski
New York State Department of Environmental Conservation
July 2012

- Abandon monitoring well PS-05 and install replacement monitoring well PS-05A – September 15, 2011
- Installation of storm sewer system – April to June 2011
- Paving of surface areas – several occurrences throughout the summer months

Evaluation of Remedial Systems

During 2011, the systems effectively achieved the objectives of the remedial action, as described in the attached OM&M Report.

OM&M Deficiencies

In 2011 most of the monitoring points are fully functional; however, there are two damaged or destroyed monitoring points (MW-C01 and PS-05). These monitoring points were cleaned or replaced in 2010 and are currently functional.

2011

Conclusions and Recommendations

The following conclusions were developed based on the data collected during the 2011 OM&M period:

- Based on the results of the quarterly inspection reports, which verify that the integrity of the cover system is adequate and vegetation is established, the remedy remains protective for direct contact with impacted soils.
- Sufficient monitoring has not been performed to determine if a decreasing trend in groundwater constituents has been established based on the analytical results from the first year of quarterly groundwater sampling.

The following recommendations were developed based on the data collected during the 2011 OM&M period:

- Groundwater Monitoring – in conjunction with the Site inspections, groundwater samples will be collected on a quarterly basis from Site monitoring wells and piezometers. Groundwater monitoring will be completed in 2012 from the same monitoring points as in 2011 in accordance with the SMP. Groundwater monitoring results will be reported in the next annual PRR submittal.
- Groundwater constituents in groundwater will be reviewed to verify if a trend can be determined.
- Site inspections will continue on a quarterly basis during 2012 and any deficiencies handled in a timely manner.
- Routine OM&M activities should continue on an as-needed basis during 2012.

Mr. David Szymanski
New York State Department of Environmental Conservation
July 2012

- The next PRR submittal, to include the annual OM&M report, should be completed and submitted to NYSDEC by the end of the 1st quarter 2013.

OVERALL PRR CONCLUSIONS

Compliance

Activities completed during 2011 met each of the components of the SMP:

- Site cover system – The Site cover system is currently in place and in full compliance with the SMP. Seeding for the soil cover was not completed until the growing season, and areas that experienced additional construction activities were reseeded to meet SMP requirements. The surface pavements were completed to meet the SMP requirements. At-grade and basement slabs have been maintained to meet the SMP requirements.

Performance and Effectiveness of the Remedy

The condition of the cover system indicates that the remedy is performing effectively.

Future PRR Submittals

It is anticipated that the next PRR will be submitted by the end of the 1st quarter 2013.

CLOSING

Please contact Mr. Daniel Forlastro at (412) 279-6661 with any questions or comments on this submittal.

Sincerely,

AMEC Environment & Infrastructure, Inc.

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

- a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;
- b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and complete.

YES NO

2. If this site has an IC/EC Plan (or equivalent as required in the Decision Document), for each Institutional or Engineering control listed in Boxes 3 and/or 4, I certify by checking "YES" below that all of the following statements are true:

- (a) the Institutional Control and/or Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;
- (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;
- (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;
- (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and
- (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES NO

**IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and
DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.**

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

1.0 INTRODUCTION

South Buffalo Development LLC (SBD) entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in April 2009, to investigate and remediate the 6.03-acre Buffalo Color Corporation Area C Site (Site) located in the City of Buffalo, Erie County, New York. The Site was remediated to restricted commercial or industrial use and will be used for environmentally sustainable commercial/industrial buildings and open space. Following remediation, SBD is performing long-term operation, maintenance, and monitoring (OM&M) at the Site. Amec Environment & Infrastructure (Amec) has prepared this report on behalf of SBD to document the results of the OM&M activities performed. The activities described in this report were completed in accordance with the Site Management Plan (SMP) (Mactec, December 2010).

The primary remedial objectives at the Area C Site were to eliminate the potential for direct contact with waste and impacted soils and sediments, and to eliminate the potential for impacted groundwater to discharge offsite. The key remedial actions for the Site included:

- Excavation and off-Site disposal of 10,527 CY (in-place volume) of volatile organic compound (VOC) contaminated soils from two locations on the northern side of Area C to accomplish mass removal of the source material;
- The addition of a bioremediation enhancement agent (Regenesis ORC-A) to the excavation backfill to promote the bioremediation of residual soil and groundwater contamination at the excavated areas;
- Utilization of an integrated Site-wide cover system consisting of a combination of a minimum one foot of imported clean soil and topsoil (seeded with native grasses) underlain by a demarcation layer consisting of a woven geotextile, existing/new pavement (asphalt or concrete), and/or existing buildings to prevent potential human exposure to remaining impacted Site soil; and
- Abandonment/plugging of unused process sewers and installation of a new storm sewer infrastructure.

Remedial construction began in October 2010 and was completed in December 2010.

This annual report has been prepared to summarize the OM&M activities completed at the Site from January 1, 2011 through December 31, 2011. Figures showing the Site location and as-

built Site Plan are included as **Appendix A**. It is anticipated that the next annual OM&M report will be submitted by the end of the 1st quarter 2013.

1.1 PROJECT BACKGROUND AND SITE DESCRIPTION

The Buffalo Color Corporation Area C Site is located at 229 Elk Street, in the southern portion of the City of Buffalo, Erie County, New York (**Appendix A**). The Site is situated on a 6.03-acre area bounded by Elk Street to the north, a rail spur and associated right-of-way to the south, Lee Street to the east, and railroad tracks to the west (**Appendix A**). Structures located on Area C include the former Buffalo Color powerhouse (208), boiler house (207), as well as other structures. These structures have been cleared of asbestos and residual chemicals and are anticipated to be renovated for adaptive reuse. The Site is part of the former Buffalo Color Corporation facility, which also included Areas A and B located beyond the rail spur to the south and Area E located across Lee Street to the east. The surrounding area consists of industrial and residential properties.

The Buffalo Color Corporation Area C Site was founded as the Schoellkopf Aniline and Dye Company in 1879. The plant produced dyes and organic chemicals based primarily on aniline and various aniline derivatives. The company was reorganized into the National Aniline Chemical Company in 1916. It became one of five companies that merged to create Allied Chemical Corporation (Allied Chemical) in 1920. The existing dye-making facility and the right to produce certain dyes and intermediates were sold by Allied Chemical to Buffalo Color Corporation on July 1, 1977. At the time of the sale, the plant was divided into eight areas designated with the letters A, B, C, D, E, F, G, and H. BCC purchased the manufacturing areas A through E, while Allied Chemical retained the acid plant (sold to PVS Chemical, Inc. in 1981), the research and development facility on Area F, and the parking lots on Areas G (Elk Street) and H (Smith Street).

1.2 2011 OM&M ACTIVITIES

OM&M activities conducted at the Site in 2011 included quarterly groundwater monitoring, Site and cover inspections, and routine maintenance activities. These activities are described in detail in Section 2.0 of this report.

2.0 SUMMARY OF 2011 OM&M ACTIVITIES

The annual groundwater sampling and Site inspections were conducted by a representative of SBD. The following sections summarize the OM&M activities completed in 2011.

2.1 GROUNDWATER MONITORING

Groundwater samples were collected from Site monitoring wells on a quarterly basis in 2011 as shown in **Table 1**. Samples were collected by Amec and SBD in the 1st quarter 2011 and by a representative of SBD for the remaining three quarters. The monitoring well locations are shown on the Site Plan in **Appendix A**. Prior to sample collection, field data was collected and documented on field data records for each location and are included in **Appendix B**. The seven wells that were sampled during 2011 included MW-C01, MW-C04, PS-04, PS-05A (PS-05A was installed to replace PS-05 after it was destroyed), PS-06, RFI-20, and RFI-31. The samples were collected and analyzed for target compound list (TCL) VOCs by method 8260B, TCL semivolatile organic compounds (SVOCs) by method 8270C, and target analyte list (TAL) metals by method 6010B including mercury by methods 7470A and 7471A, in accordance with the Site Management Plan (SMP; Mactec, 2010). During sampling, if the turbidity in the sample could not be reduced to below 50 nephelometric turbidity units (NTUs), a dissolved metals sample was collected along with the total metals sample. The results of the sampling are discussed in Section 3.1.

During the sampling event, the depth to water and total well depth were gauged and recorded for each monitoring well prior to purging activities. Monitoring wells were purged and sampled using low-flow techniques, which includes monitoring field measurements such as pH, temperature, conductivity, dissolved oxygen, turbidity, and reduction potential for stabilization prior to sampling. A peristaltic pump with dedicated tubing was used to collect each sample. Quality control (QC) samples collected during each sampling event included a Matrix Spike (MS), Matrix Spike Duplicate (MSD), trip blank, and duplicate sample. A dissolved metals sample was collected for MW-C01 in the second quarter and RFI-31 and MW-C01 in the third quarter based on turbidity monitoring. Immediately upon completion of sample collection, groundwater samples were packed with ice in laboratory coolers and delivered to the laboratory via overnight courier. Chain-of-Custody procedures were followed per the SMP.

After results from the laboratory were received, the data underwent a Level 2 data validation.

Level 2 includes the following data checks and evaluations:

- A review of the data set narrative to identify any issues that the lab reported in the data deliverable;
- A check of sample integrity (sample collection, preservation, and holding times);
- An evaluation of basic QC measurements used to assess the accuracy and precision of data including QC blanks, laboratory control samples (LCS), MS/MSDs, surrogate recovery when applicable, and field or lab duplicate results; and
- A review of sample results, target compounds, and detection limits to verify that project analytical requirements are met.

2.2 SITE AND COVER INSPECTIONS

A Site-wide inspection and a soil cover inspection were completed quarterly by SBD on March 29, June 24, August 22, and December 30, 2011. The inspections were conducted in accordance with the SMP. The engineering controls (soil cover, surface pavements, and at-grade/basement concrete slabs), institutional controls (Site use), OM&M requirements, and Site records were inspected during each event. The results of the inspections are discussed in Section 3.2.

2.3 MAINTENANCE ACTIVITIES

Maintenance activities were performed by SBD on an as-needed basis throughout the year. The following is a summary of the non-routine maintenance activities completed at the Site during the 2011 calendar year:

- Initial seeding of soil cover – June 22nd
- Follow up seeding of soil cover – October 4th
- Reinstallation of monitoring well PS-05 – September 15th
- Installation of storm water sewer – April 4th through June 23rd
- Hard surface paving – September 5th through September 13th

2.4 2011 OM&M PROCEDURE MODIFICATIONS

Groundwater monitoring completed during the 2011 year was modified based on Site conditions as described in the following paragraphs.

During the initial Site groundwater sampling event in March of 2011, it was discovered that MW-C01 was full of debris from construction activities at the Site. Therefore, a groundwater sample was not collected during the first quarter. The monitoring well was cleaned out and was sampled during the subsequent groundwater sampling events.

During the second quarter groundwater sampling event on June 29th, monitoring well PS-04 was purged dry. Therefore, the well was not sampled in the second quarter.

PS-05 was destroyed by construction activities at the Site, presumably during the soil cover installation activities in December 2010. The monitoring well was properly abandoned and replacement well PS-05A was installed by SJB Services, Inc. prior to the third quarter sampling event.

3.0 RESULTS OF 2011 OM&M ACTIVITIES

As discussed previously, SBD completed the 2011 OM&M activities at the Site and the quarterly groundwater sampling. The following sections summarize the results of the OM&M activities.

3.1 GROUNDWATER SAMPLING

The analytical laboratory reports for the quarterly groundwater sampling events are provided on CD in **Appendix C**. The analytical results are summarized on **Table 2**. Data Validation reports are included in **Appendix D**.

Results from the first quarter groundwater sampling event indicated that VOCs, SVOCs, and metals exceeded the New York Water Quality Surface Waters and Groundwater Class GA (NY Class GA) standards. The constituents that exceeded the NY Class GA standards were 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, benzene, chlorobenzene, 2,4-dichlorophenol, 2,4-dimethylphenol, aniline, phenol, arsenic, iron, manganese, and sodium.

Results from the second quarter groundwater sampling event indicated VOCs, SVOCs, and metals exceeded the NY Class GA standards. The constituents that exceeded the NY Class GA standards include 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, benzene, chlorobenzene, 2,4-dimethylphenol, aniline, benzo(a)pyrene, arsenic, chromium, iron, lead, manganese, mercury, and sodium.

Results from the third quarter groundwater sampling event indicated VOCs, SVOCs, and metals exceeded the NY Class GA standards. The constituents that exceeded the NY Class GA standards include 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, benzene, chlorobenzene, 2,4-dimethylphenol, aniline, benzo(a)pyrene, arsenic, barium, chromium, iron, lead, manganese, mercury, and sodium.

Results from the fourth quarter groundwater sampling event indicated VOCs, SVOCs, and metals exceeded the NY Class GA standards. The constituents that exceeded the NY Class GA standards include 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, benzene, chlorobenzene, 2,4-dimethylphenol, aniline, benzo(a)pyrene, arsenic, iron, manganese, and sodium.

At this time, groundwater trends cannot be established due to the minimal amount of available analytical data and because insufficient time has elapsed for the bioremediation enhancement agent, ORC-A, to be effective at eliminating impact.

3.2 SITE INSPECTIONS

Quarterly Site-wide inspections and soil cover inspections were performed by SBD on March 29, June 24, August 22 and December 30, 2011. The inspections were conducted in accordance with the SMP. The engineering controls (soil cover, surface pavements, and at-grade/basement concrete slabs) and institutional controls (Site use) were visually inspected. Copies of the completed inspection checklists are provided in **Appendix E**.

A representative of the NYSDEC participated in the fourth quarter inspection.

3.2.1 March 29, 2011 Inspection

The soil cover and surface pavements were unacceptable during the inspection. The soil cover had light pooling in areas and was missing grass vegetation because the seeding had not been completed. The surface pavement areas had not been completed at the time. No runoff, erosion issues or animal burrows were observed during the inspection. At-grade and basement concrete slabs were acceptable. The Area C storm sewer installation was to be completed shortly after the inspection; the seeding activities were to be completed following the construction activities.

3.2.2 June 24, 2011 Inspection

The soil cover and surface pavements were unacceptable during the inspection. The soil cover had just been seeded following the last of the construction activities at the Site; however, not enough time had passed to allow for the grass to sufficiently grow. No soil erosion, settlement, or animal burrows were observed during the inspection. At-grade and basement concrete slabs were acceptable. The surface pavement areas had not been completed at the time.

3.2.3 August 22, 2011 Inspection

The integrity of the soil and vegetative cover were acceptable during the inspection. The surface pavements had been inspected by a NYSDEC representative and determined to be acceptable. No soil erosion, settlement, or animal burrows were observed during the

inspection. At-grade and basement concrete slabs were acceptable. The Area C storm sewer installation had just been completed prior to the inspections.

3.2.4 October 27, 2010 Inspection

The integrity of the soil and vegetative cover and surface pavements were acceptable during the inspection. No soil erosion, settlement, or animal burrows were observed during the inspection. At-grade and basement concrete slabs were acceptable. Area C structures were boarded to secure the structures.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The following conclusions were developed based on the data collected during the 2011 OM&M period:

- Based on the results of the quarterly inspection reports, which verify that the integrity of the soil cover is currently satisfactory and vegetation is established, the remedy remains protective for direct contact with impacted soils.
- Insufficient time has elapsed to determine if a decreasing trend in groundwater constituents has been established based on the analytical results from the first year of quarterly groundwater sampling.

The following recommendations were developed based on the data collected during the 2011 OM&M period:

- Groundwater Monitoring – in conjunction with the Site inspections, groundwater samples will be collected on a quarterly basis from Site monitoring wells and piezometers. Groundwater monitoring will be completed in 2012 from the same monitoring points as in 2011 in accordance with the SMP. Groundwater monitoring results will be reported in the next annual PRR submittal.
- Groundwater constituents in groundwater should be looked at to verify if a trend can be determined.
- Site inspections will continue on a quarterly basis during 2012 and any deficiencies handled in a timely manner.
- Routine OM&M activities will continue on an as-needed basis during 2012.
- The next PRR submittal, to include the annual OM&M report, will be completed and submitted to NYSDEC by the end of the 1st quarter 2013.

NY Standards consist of the Water Quality Standards Surface Waters and Groundwater (Table 1, cf. section 703.5)

Bold and highlighted cells indicate an exceedance of the NY Standards for Class GA groundwater

ug/L - micrograms per Liter

mg/L - milligrams per Liter

U - analyte was not detected above the reporting limit

E - result exceeded calibration range

B - Compund was found in the blank and sample

J - result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

* - LCS or LCSD exceeds the control limits

NY Standards consist of the Water Quality Standards Surface Water
Bold and highlighted cells indicate an exceedance of the NY Standard

ug/L - micrograms per Liter

mg/L - milligrams per Liter

U - analyte was not detected above the reporting limit

E - result exceeded calibration range

B - Compound was found in the blank and sample

J - result is less than the RL but greater than or equal to the MDL a

* - LCS or LCSD exceeds the control limits

NY Standards consist of the Water Quality Standards Surface Water
Bold and highlighted cells indicate an exceedance of the NY Standards

ug/L - micrograms per Liter

mg/L - milligrams per Liter

U - analyte was not detected above the reporting limit

E - result exceeded calibration range

B - Compound was found in the blank and sample

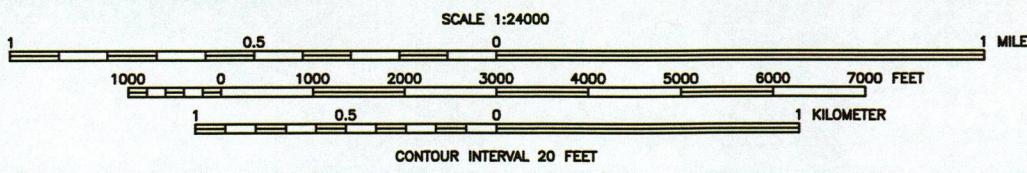

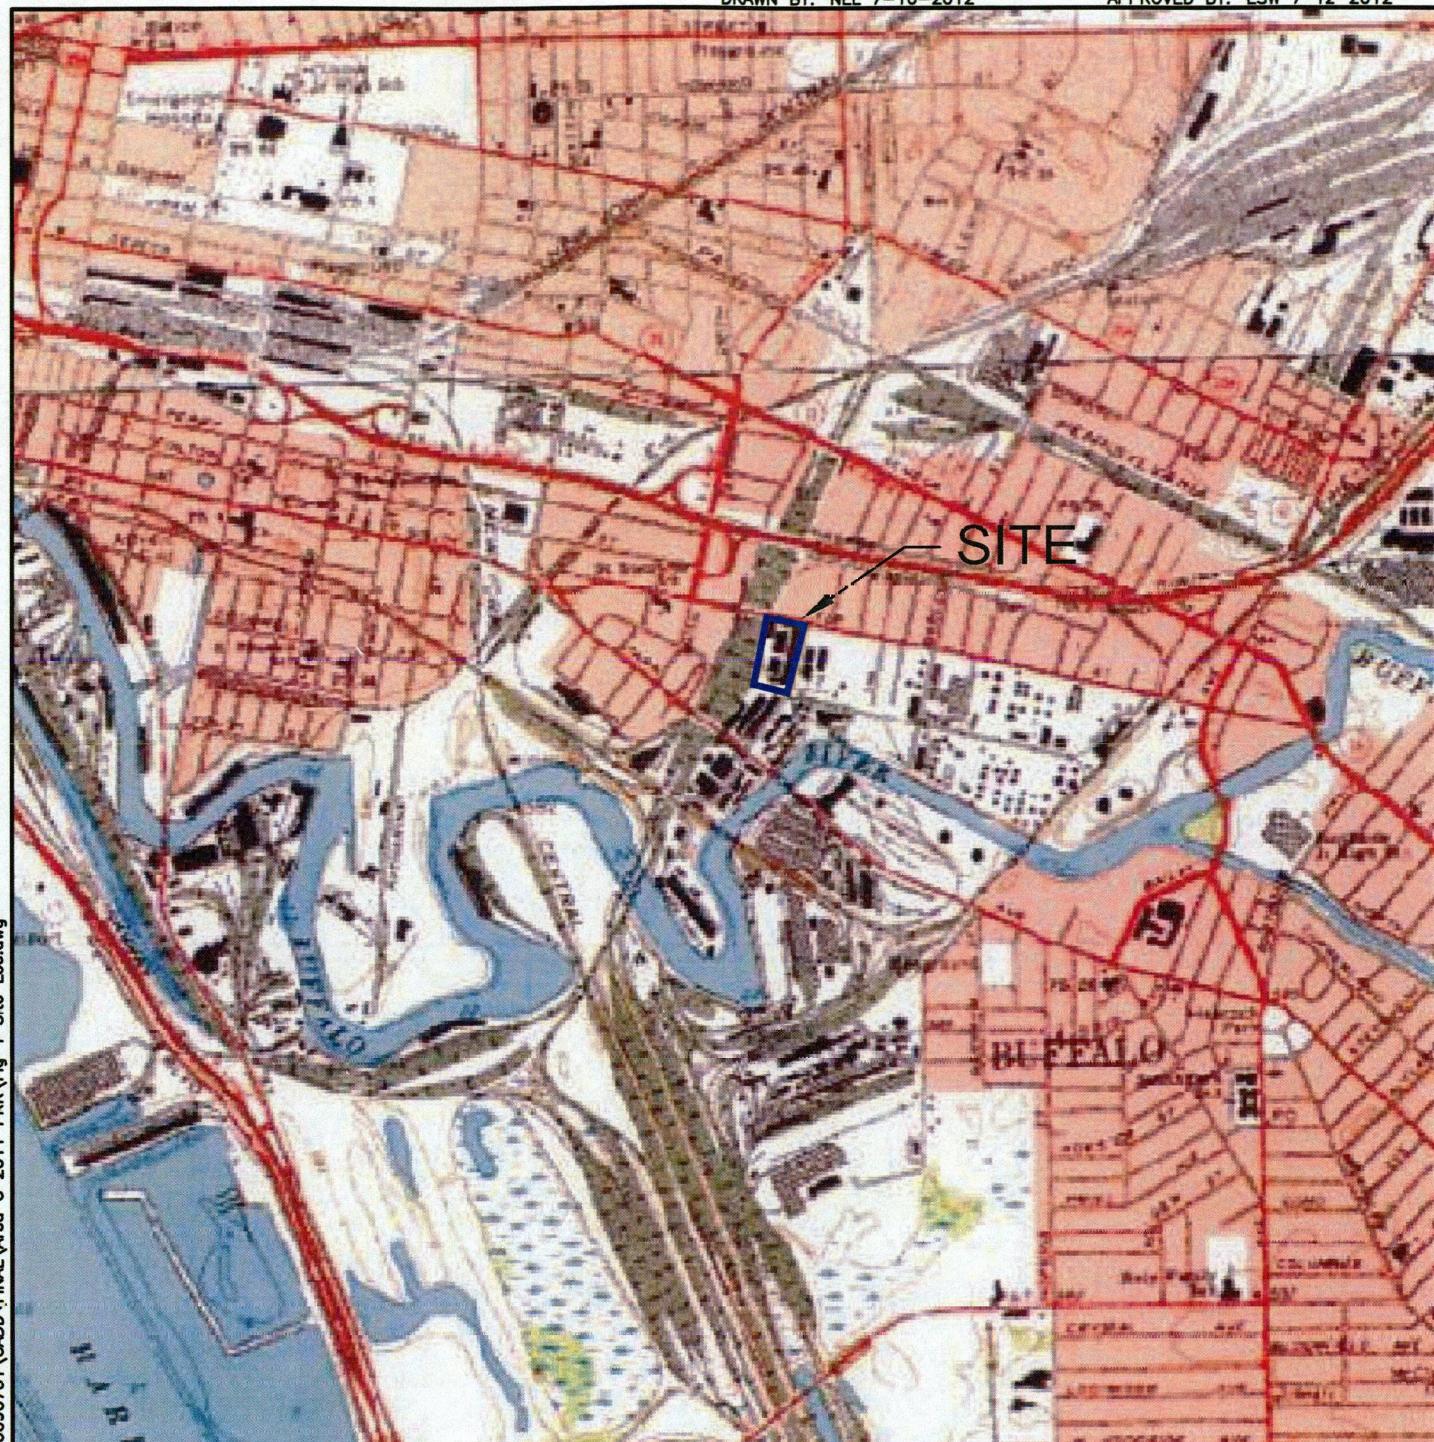

J - result is less than the RL but greater than or equal to the MDL a

* - LCS or LCSD exceeds the control limits

ENGINEERING AND INSTITUTIONAL CONTROLS

- Integrated cover system consist of 1 foot of soil /asphalt pavement/concrete pavement/building slabs
- Vapor mitigation/vapor intrusion evaluations must be carried out in new or re-occupied structures and or site redevelopment.
- Use of groundwater in the entire Easement Area is restricted without water quality treatment as may be required by the New York State Department of Health.
- Future intrusive activities must adhere to the Site Management Plan and associated Site Excavation Plan.
- Evaluation for potential vapor intrusion of any buildings is required.
- Agricultural use in the entire Easement Area is prohibited.

The limits of Integrated Cover System engineering control are approximate and are subject to change pending final construction documentation.

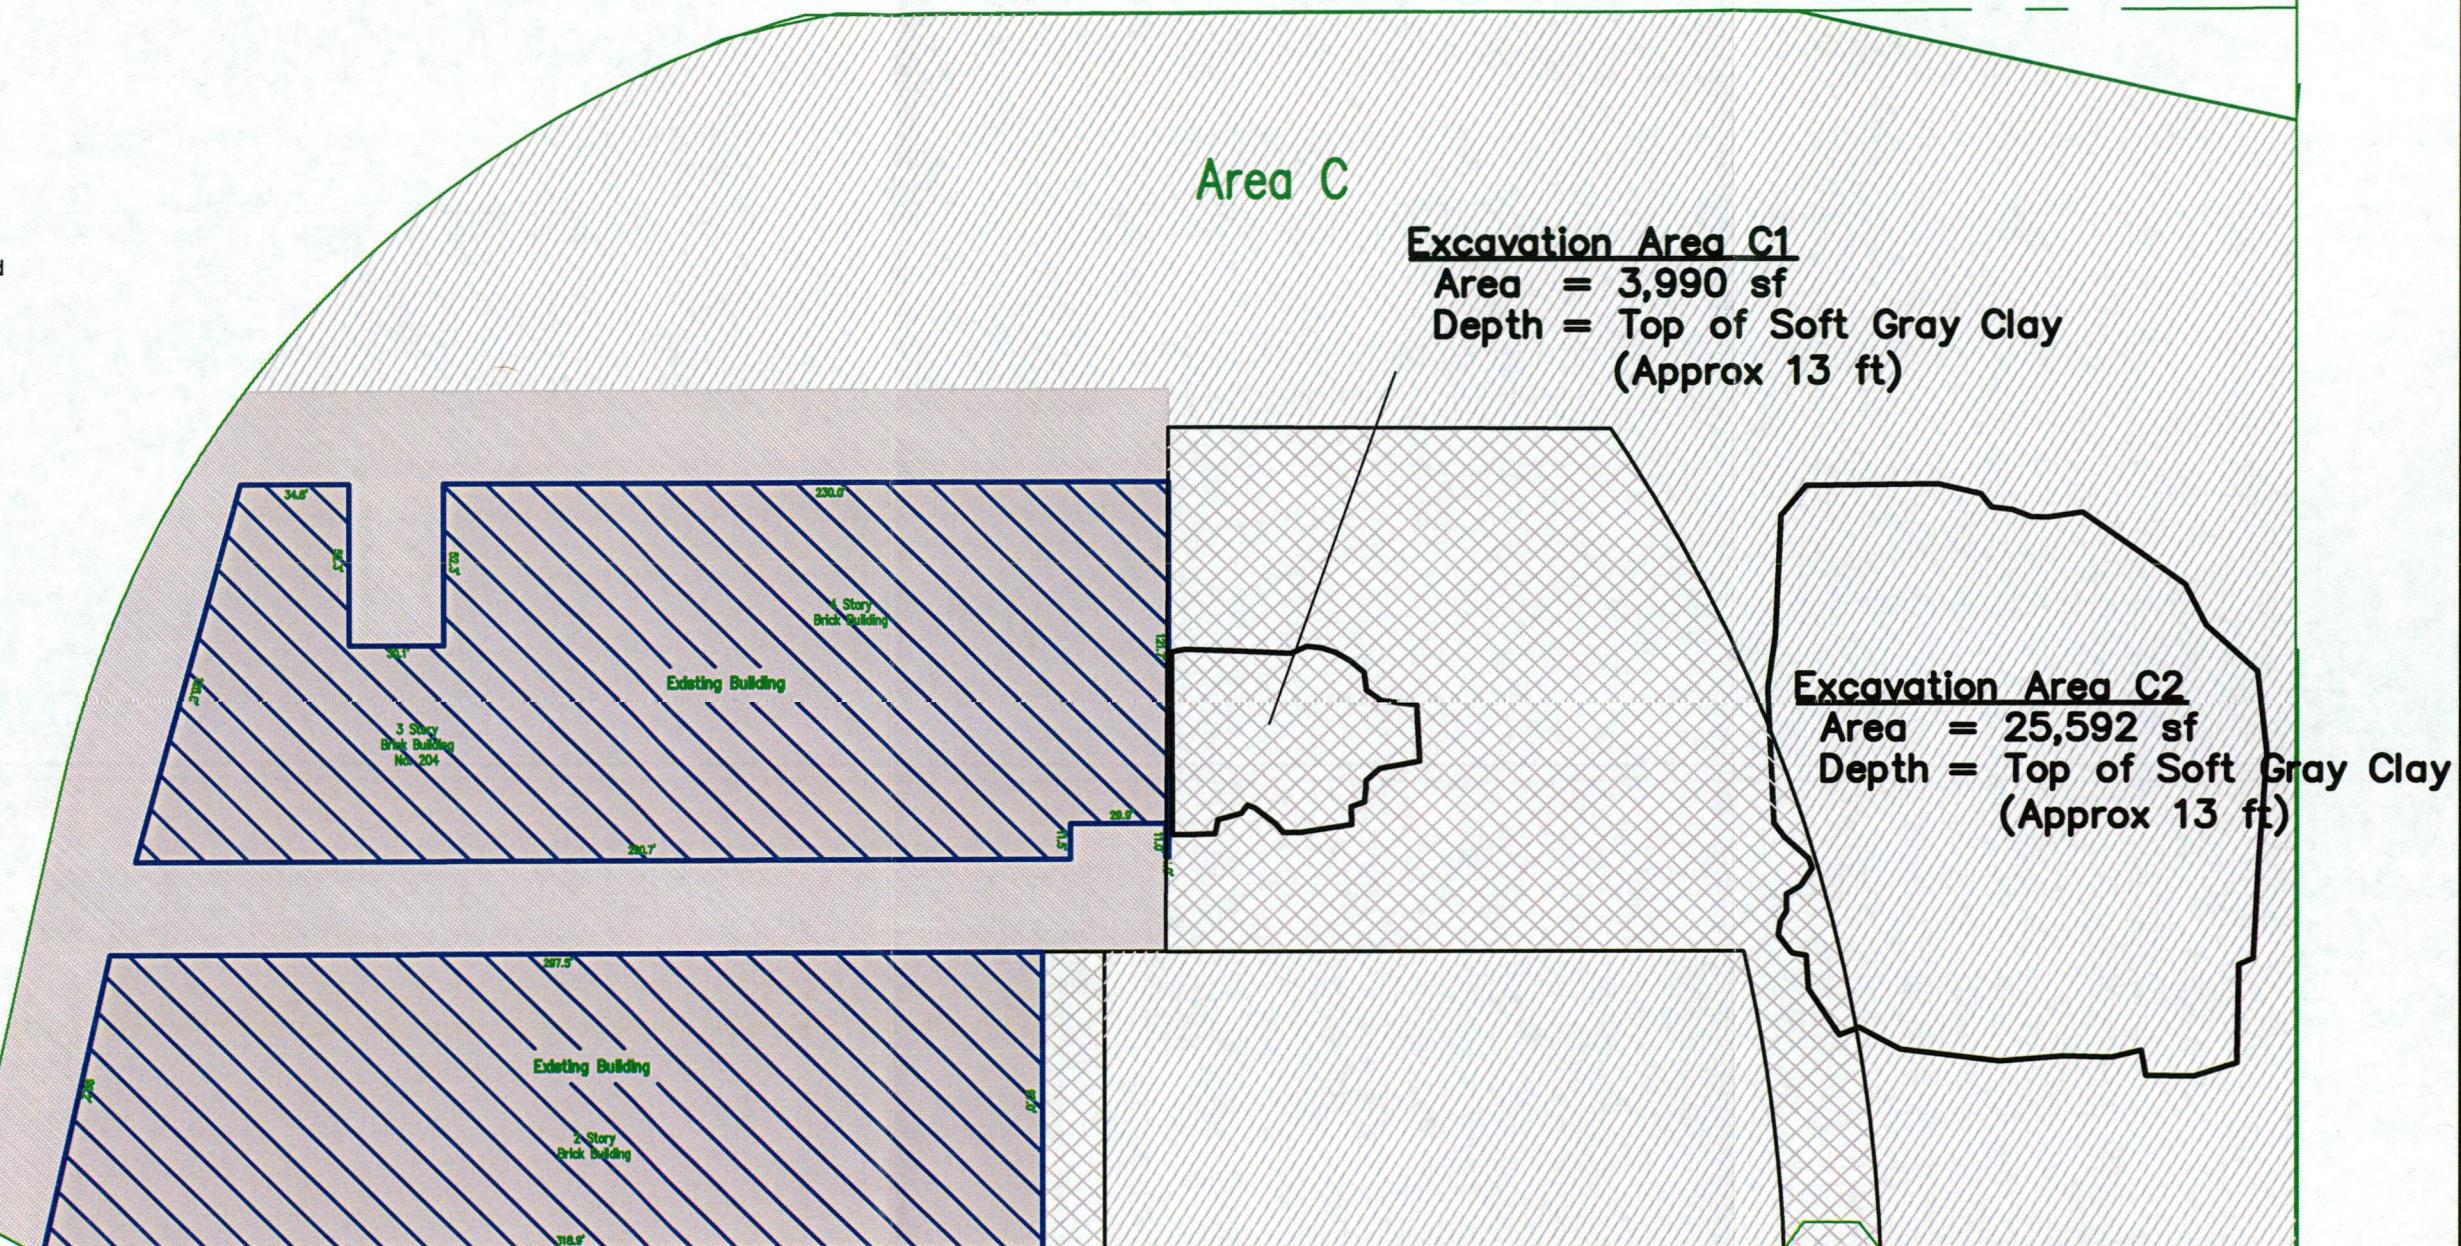

The Integrated Cover System engineering control are subject to change pending future redevelopment of the site. A current as-pull survey should be referenced for the documented limits of the Integrated Cover System.

The engineering and institutional controls for this Easement are set forth in the Site Management Plan (SMP). A copy of the SMP must be obtained by any party with an interest in the property. The SMP can be obtained from NYS Department of Environmental Conservation, Division of Environmental Remediation, Site Control Section, 625 Broadway, Albany, NY 12233." or at derweb@dec.state.ny.us

This property is subject to an Environmental Easement held by the New York State Department of Environmental Conservation pursuant to Title 36 of Article 71 of the New York Environmental Conservation Law.

UNPAVED AND PAVED TRENCH DETAIL

NOTE:

1. THE SITE HAS 12" OF CLEAN FILL ALREADY APPLIED. WHEN EXCAVATING FOR THE PIPE INSTALL, THE CLEAN FILL SHOULD BE EXCAVATED AND STOCK PILED SO IT CAN BE RE-USSED. THE STOCKPILE (STAGING AREA) WILL BE IN THE NW CORNER OF AREA B AS SHOWN ON SHEET G-2. IF THE GEOTEXTILE IS ENCOUNTERED, IT SHALL BE REPLACED.
2. SOIL MATERIAL BELOW THE 12" CLEAN FILL MAY BE CONTAMINATED AND MUST BE TESTED BEFORE USING AS BACKFILL.

APPENDIX C

Analytical Laboratory Reports (CD)

APPENDIX D

Data Validation Report

**DATA VALIDATION SUMMARY REPORT
2011 GROUNDWATER MONITORING
HONEYWELL - BUFFALO COLOR AREA C
BUFFALO, NEW YORK**

1.0 INTRODUCTION

Data validation was completed on groundwater samples collected from May 2011 through November 2011. Samples were analyzed by TestAmerica Laboratories in Buffalo, New York (TAL-Buffalo) and reported in data sets 480-2955, 480-6787, 480-10688, and 480-13191. A summary of samples included in this review is presented on Table 1. The following U.S. Environmental Protection Agency (USEPA) analytical methods (USEPA, 1996) were performed:

- Volatile organic compounds (VOCs) by USEPA Method SW846 8260B
- Semivolatile organic compounds (SVOCs) by USEPA Method SW846 8270C
- Metals by USEPA Method 6010B/7470A

Data validation was completed by the AMEC project chemist in accordance with the Honeywell Remediation program Level II data validation procedures described in the Quality Assurance Project Plan (QAPP) (MACTEC, 2006). Data validation was completed using general procedures in USEPA validation guidelines (USEPA, 2004; USEPA, 2008a; USEPA, 2008b). Laboratory quality control (QC) limits were used when assessing precision and accuracy.

An initial Level II data validation step was completed using the Locus Technology EIM system. The EIM system has a computerized data validation module that performs data validation for QC checks specified by Honeywell for Level II validation. Sample results and associated QC data were compared to laboratory limits. The EIM assigns validation reason codes to all results that are associated with QC measurements outside project QC goals, and the validation module applies data validation qualifiers to the final results. The data qualification actions are reviewed by the project chemist prior to accepting the final data.

During the Level II data validation the following data quality indicators were reviewed:

- Case Narrative
- Sample Collection and Holding Times
- QC Blanks
- Laboratory Control Samples (LCS)
- Matrix Spike/Matrix Spike Duplicates (MS/MSD)
- Laboratory and Field Duplicates
- Surrogate Spikes
- Reporting Limits
- Data Completeness
- Electronic Data Verification

Data qualifications were completed if necessary in accordance with the validation guidelines and professional judgment using the following qualifiers:

J = The reported concentration is considered an estimated value

U = The target compound was not detected above the reporting limit

UJ = The target compound was not detected and the reporting limit is considered to be estimated

A summary of qualification actions are presented on Table 2. Validation reason codes are associated with results that are qualified during validation. Final results are presented on Table 3.

2.0 DATA VALIDATION ACTIONS AND OBSERVATIONS

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the analytical method, validation guidelines, and quality assurance (QA) plan goals. Unless specified below, results are usable without qualification.

2.1 VOCs

QC Blanks

480-13191 – Chloroform was detected in the method blank associated with all samples at a concentration less than the reporting limit. Chloroform was detected below the reporting limit in associated samples BCC-AREAC-RFI-20-1111 and BCC-AREAC-PS-06-1111 and was qualified as not detected (U) at the reporting limit.

MS/MSD

480-10688 – The MS/MSD associated with sample BCC-AREAC-PS-06-0911 had percent recoveries less than the lower laboratory QC limit of 66 for bromoform (62/62), which may indicate low bias. Bromoform was not detected in sample BCC-AREAC-PS-06-0911 and was qualified as estimated (UJ).

480-13191 – The MS/MSD associated with sample BCC-AREAC-MW-C04-1111 had percent recoveries less than the lower laboratory QC limit of 66 for chlorobenzene (-134/-130), which may indicate low bias. The unspiked sample concentration of 390 µg/L was almost four times the spiking concentration of 100 µg/L. Based on professional judgment, the detection of chlorobenzene in sample BCC-AREAC-MW-C04-1111 was qualified as estimated (J)

Reporting Limits

480-2955 – Samples BCC-AREAC-RFI-20-0311, BCC-AREAC-MW-C04-0311, BCC-AREAC-RFI-31-0311, and BCC-AREAC-PS-06-0311 were analyzed at dilution due to high concentrations of target compounds or matrix interference. Reporting limits for target compounds that were not detected in the samples are elevated due to dilution.

480-6787 – Samples BCC-AREAC-MW-C04-0611 and BCC-AREAC-RFI-20-0611 were analyzed at dilution due to high concentrations of target compounds. Reporting limits for target compounds that were not detected in the samples are elevated due to dilution.

480-10688 – Samples BCC-AREAC-PS-06-0911, BCC-AREAC-PS-05A-0911, BCC-AREAC-RFI-31-0911, BCC-AREAC-RFI-31D-0911, and BCC-AREAC-MW-C01-0911 were analyzed at dilution due to high concentrations of target compounds or matrix interference. Reporting limits for target compounds that were not detected in the samples are elevated due to dilution.

480-13191 – Samples BCC-AREAC-MW-C01-1111, BCC-AREAC-RFI-31-1111, BCC-AREAC-MW-C04-1111, BCC-AREAC-RFI-20-1111, BCC-AREAC-RFI-20D-1111, BCC-AREAC-PS-05A-1111, and BCC-AREAC-PS-06-1111 were analyzed at dilution due to high concentrations of target compounds or matrix interference. Reporting limits for target compounds that were not detected in the samples are elevated due to dilution.

2.2 SVOCs

QC Blanks

480-2955 – Di-n-butyl phthalate was reported in the method blank associated with all samples at a concentration less than the reporting limit. Di-n-butyl phthalate was detected below the reporting limit in associated sample BCC-AREAC-PS-06-0311 and was qualified as not detected (U) at the reporting limit.

480-6787 – Di-n-butyl phthalate was reported in the method blank associated with all samples at a concentration less than the reporting limit. Di-n-butyl phthalate was detected below the reporting limit in associated samples BCC-AREAC-PS-06-0611, BCC-AREAC-RFI-31-0611, BCC-AREAC-RFI-31D-0611, and BCC-AREAC-MW-C01-0611 and was qualified as not detected (U) at the reporting limit.

LCS

480-13191 – The LCS associated with all samples had a percent recovery less than the lower laboratory QC limit of 30 for caprolactam (28), which may indicate low bias. Caprolactum was not detected in associated samples and reporting limits were qualified estimated (UJ).

MS/MSD

480-2955 – The MS/MSD associated with sample BCC-AREAC-RFI-31-0311 had percent recoveries below the lower laboratory QC limit of 69 for bis(2-ethylhexyl)phthalate (64/61), which may indicate low bias. Bis(2-ethylhexyl)phthalate was not detected in sample BCC-AREAC-RFI-31-0311 and the reporting limit was qualified as estimated (UJ).

Laboratory and Field Duplicates

480-10688 – The relative percent difference (RPD) between sample BCC-AREAC-RFI-31-0911 and its field duplicate BCC-AREAC-RFI-31D-0911 was outside the QC limit of 50 for 2,4-dichlorophenol (96). Results for 2,4-dichlorophenol in samples BCC-AREAC-RFI-31-0911 and BCC-AREAC-RFI-31D-0911 were qualified as estimated (J).

July 12, 2012

Reporting Limits

480-2955 – Samples BCC-AREAC-RFI-20-0311 and BCC-AREAC-RFI-31-0311 were analyzed at dilution due to high concentrations of target compounds or matrix interference. Reporting limits for target compounds that were not detected in the samples are elevated due to dilution.

480-10688 – Sample BCC-AREAC-PS-06-0911 was analyzed at dilution due to matrix interference. Reporting limits for target compounds that were not detected in the sample are elevated due to dilution.

2.3 Metals

No data quality issues were identified and results are interpreted to be usable as reported by the lab.

APPENDIX E

Site-wide and Soil Cover Inspection Forms

SOIL COVER INSPECTION CHECKLIST

Former Buffalo Color Facility, Area C, Buffalo, NY

Date: March 29th 2011
 Weather: Sunny and Cold
 Personnel (Organization): Andrew Madden (Ontario Specialty Contracting)

Instructions: Complete the checklist of evaluation items and then complete specific data items. Field measurements should be made with a cloth tape and noted on a Site plan. Estimated measurements shall be so noted. All field notes and documentation, including hand sketches, photographs, and notes made on the Site plan, should be attached to the completed checklist to further define conditions or problems.

EVALUATION ITEMS

CONDITION: (Check)

Action Required (Write NA if not applicable)	Acceptable	Not Acceptable	Yes	No	Remarks
1. Integrity of Soil Cover					
a. Runoff/Erosion Damage	✓			✓	None
b. Settlement		✓	✓		Light Pooling
c. Missing/Insufficient grass/vegetation		✓	✓		Hydro Seeding Scheduled
d. Animal Burrows	✓			✓	None
2. Surface Pavement					
a. Condition	✓				Hard cover finishing work scheduled
3. At-Grade/Basement Concrete Slabs (occupied structures)					
a. Condition	✓				None

SPECIFIC DATA ITEMS (Write NA if not applicable)

Area(s): N/A

1. Approximate size in feet area(s) (List separately)

a) _____ by _____
 b) _____ by _____
 c) _____ by _____

2. Deepest point of area(s) (e.g. erosion/damage) measured from the adjacent surface (List separately)

a) _____ feet
 b) _____ feet
 c) _____ feet

SOIL COVER INSPECTION CHECKLIST (CONTINUED)
Former Buffalo Color Facility, Area C, Buffalo, NY

3. Attach a hand sketch or photograph to the attached Site plan showing the location(s) of the area(s). Identify each area by using the letter a, b, c, etc. from Question 1.

N/A

4. Approximate size in feet of any settlement area within the area(s). (List separately.)

a) _____ by _____
b) _____ by _____
c) _____ by _____

5. Approximate size and location of animal burrows. (Attach a sketch showing approximate locations.)

N/A

6. Approximate depth of settlement area(s) measured from the adjacent surface. (List separately.)

a) _____ feet
b) _____ feet
c) _____ feet

7. Attach a hand sketch or photograph to the attached Site plan showing the location of the settlement area(s). Identify each area by using the letter a, b, or c, etc. from Question 6.

N/A

8. Approximate size and depth of eroded area(s).

a) _____ feet
b) _____ feet
c) _____ feet

9. Attach a sketch or photograph to the attached Site plan showing location of any eroded area(s).

N/A

Signature of Inspector(s)

Attachments

Yes No

Other Comments:

The Area C storm sewer installation is scheduled for the following week and will be followed by site wide landscaping and finishing activities. This will include renewed grading of clay cap, soil cover with hydro seeding and resealing / replacement of concrete and asphalt cover areas.

SOIL COVER INSPECTION CHECKLIST

Former Buffalo Color Facility, Area C, Buffalo, NY

Date: June 24th 2011
Weather: Cloudy and cold
Personnel (Organization): Andrew Madden (Ontario Specialty Contracting)

Instructions: Complete the checklist of evaluation items and then complete specific data items. Field measurements should be made with a cloth tape and noted on a Site plan. Estimated measurements shall be so noted. All field notes and documentation, including hand sketches, photographs, and notes made on the Site plan, should be attached to the completed checklist to further define conditions or problems.
