EXECUTIVE SUMMARY

Niagara Transformer Corporation (the User) retained Golder Associates Inc. (Golder) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 1755 Dale Road, Cheektowaga, New York (the Subject Property). The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) in connection with the Subject Property, to the extent feasible, pursuant to the processes prescribed in the ASTM Practice E 1527 05 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM Standard), and the EPA Rule entitled, "Standards and Practices for All Appropriate Inquiries; Final Rule" (AAI Rule), 40 CFR Part 312, the Golder Proposal dated June 17, 2009 (the Proposal), and Golder's professional judgment.

This Summary is to be used only in conjunction with the attached Draft Report on the Phase I Environmental Site Assessment 1755 Dale Road (Subject Property) Cheektowaga, New York dated August 19, 2009 (the Report). All definitions used in this Summary have the same meanings as in the Report, and the use of this Summary is subject to the limitations and conditions contained in the Report. The Report shall govern in the event of any inconsistency between this Summary and the Report.

The Subject Property is located at 1755 Dale Road, Cheektowaga, NY. The property is located on the south side of the intersection of Dale Road and Anderson Road. The trapezoidal-shaped parcel is comprised of 3.07 acres of land. The section-block-lot (SBL) number for the Subject Property is 102.03-3-6.1.

This assessment has revealed two RECs in connection with the Subject Property:

- The known presence of PCB contaminated soils on the Subject Property.
- The potential for hazardous materials to be released from 55-gallon drums located on the Subject Property. The contents of the drums are unknown nor is it known for sure that the contents of any of the drums have been released. This assessment is based on the physical condition of the drums and the determination that liquid was present in some of the drums.

This assessment has revealed no evidence of Historical RECs in connection with the Subject Property.

This assessment has revealed one de minimis Condition in connection with the Subject Property:

A light oily sheen was observed in the standing water observed adjacent to and surrounding the decommissioned oil tank.

August 2009 i 093-89141-01

1.0 INTRODUCTION

1.1 Purpose

Niagara Transformer Corporation (the User) retained Golder Associates Inc. (Golder) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 1755 Dale Road, Cheektowaga, New York (the Subject Property). The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) in connection with the Subject Property, to the extent feasible, pursuant to the processes prescribed in the ASTM Practice E 1527 05 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM Standard), and the EPA Rule entitled, "Standards and Practices for All Appropriate Inquiries; Final Rule" (AAI Rule), 40 CFR Part 312, the Golder Proposal dated June 17, 2009 (the Proposal), and Golder's professional judgment. Golder representatives performed the Phase I ESA in conformance with these criteria.

The AAI Rule states that the ASTM Standard may be used to comply with the requirements of the AAI Rule, so whenever reference is made in this Report to the ASTM Standard, it shall include the AAI Rule.

The ASTM Standard defines RECs as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws."

1.2 Scope of Services

The scope of services for this ESA consisted of the following tasks:

Records Review

- Reviewing property information to confirm the legal description and location of the Subject Property. This information is included in Appendix A
- Reviewing environmental record sources including federal and state regulatory databases to identify facilities with past or current regulatory enforcement actions within applicable distances of the Subject Property as defined in the ASTM Standard. The regulatory database search report is presented in Appendix B
- Reviewing physical setting information sources to identify information about the geologic, hydrogeologic, hydrologic, and topographic conditions in the area of the Subject Property. The U.S. Geological Survey (USGS) 7.5-minute topographic map of the area of the Subject Property is shown on Figure 1.
- Reviewing historical record sources to identify past land use activities at the Subject Property and surrounding properties. Selected historical information obtained during performance of the Phase I ESA investigation is included in Appendix C.

Site Reconnaissance

Performing a visual inspection of the Subject Property and surrounding properties to identify potential sources of chemical and petroleum contamination such as aboveground storage tanks (ASTs), underground storage tanks (USTs), potential sources of polychlorinated biphenyls (PCBs), chemicals, and hazardous materials. Surficial evidence of potential RECs such as distressed vegetation, stained soils, and/or stained paving was also evaluated. Photographs recorded during the site reconnaissance are included in Appendix D.

<u>Interviews</u>

Interviewing available individuals with knowledge of current or historical use, storage, or disposal of potentially hazardous materials or other environmentally related activities on or adjacent to the Subject Property. User provided information is included in Appendix E.

Report Preparation

■ Preparing a report that documents the findings, opinions, and conclusions of the Phase I ESA investigation conducted at the Subject Property, and provides the supporting documentation and references for those findings, opinions, and conclusions (the Report). Resumes for the environmental professionals that performed the assessment and prepared this Phase I ESA Report are included in Appendix F.

1.3 Limitations and Exceptions

Golder performed our services in accordance with the following principles, which are an integral part of the ASTM Standard: (i) No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the Subject Property, and the ASTM Standard recognizes reasonable limits of time and cost; (ii) "all appropriate inquiry" does not mean an exhaustive assessment of a property. Golder performed this ESA in conformance with the ASTM Standard's principle of identifying a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information; (iii) not every property warrants the same level of assessment - the type of property subject to the assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry guided the appropriate level of assessment for this ESA; and (iv) ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors.

1.4 Special Terms and Conditions

No special terms and conditions are applicable to this ESA.

1.5 User Reliance

Golder has prepared this Report at the request of the User for the purpose identified by the User in Section 3.5. Use of the information contained in this Report by anyone other than User is permissible only with the prior written authorization to do so from Golder, and only under the conditions allowed by the ASTM Standard. Golder is not responsible for independent conclusions, opinions, or recommendations made by others or otherwise based on the findings presented in this Report.

2.0 PROPERTY DESCRIPTION

2.1 Location and Legal Description

The Subject Property is located at 1755 Dale Road, Cheektowaga, New York. The Subject Property is located on the south side of the intersection of Dale Road and Anderson Road. The trapezoidal-shaped parcel is comprised of 3.07 acres of land. The section-block-lot (SBL) number for the Subject Property is 102.03-3-6.1.

2.2 Site and Vicinity General Characteristics

The Subject Property is situated within a mixed industrial/commercial setting comprising a mixture of undeveloped commercial property, railroads, small and large commercial and industrial properties involved in a variety of activities including electrical transformer manufacturing, dairy processing, warehousing, and heavy rail traffic. The southern portion of the Subject Property is mostly wooded with dense undergrowth while the northern portion is mostly open grass land. The Subject Property is directly bordered by Dale Road to the north, Niagara Transformer Corporation to the west, CSX Railroad to the south, and an undeveloped parcel of land to the east also owned by Niagara Transformer Corp.

2.3 Current Use of the Subject Property

The Subject Property is currently undeveloped, and is used for staging four temporary storage containers located on the west side. According to Bob Fishlock, the Plant Manager of Niagara Transformer Corporation, these containers are used for temporary file storage only. A large decommissioned oil storage tank is also being stored on the Subject Property.

2.4 Descriptions of Structures, Roads, and Other Improvements on the Subject Property

The Subject Property is approximately 60% open grass lands with a gravel/soil fill material comprising most of the surface. The southern 40% of the Subject Property is heavily overgrown with large trees scattered throughout. There are also some trees at the north end bordering Dale Road. There is a gravel entranceway extending south from Dale Road into the property approximately 20 feet.

2.5 Current Use of the Adjoining Properties

The adjoining property uses are described below:

- North Dale Road immediately borders the Subject Property to the north, across which lies Upstate Niagara Cooperative, Inc., a dairy processing facility.
- East A vacant undeveloped land parcel lies adjacent to the east of the Subject Property and a large commercial warehouse is to the east of the vacant parcel.
- South A large, heavily traveled, rail corridor with multiple tracks directly borders the southern end of the Subject Property.
- West Niagara Transformer Corporation's manufacturing facility is directly to the west of the Subject Property at 1747 Dale Road. The manufacturing area was historically

impacted with polychlorinated biphenyls (PCBs) and subjected to an extensive remediation undertaken by the NYSDEC in 1996 and 1997. The Subject Property was not remediated as part of the 1747 Dale Road Property cleanup, however portions of the Subject Property were used for access and staging of remedial contractor equipment during the execution of the remediation.

3.0 USER PROVIDED INFORMATION

The ASTM Standard defines User as the party seeking to use Practice E 1527 to complete an ESA of the Subject Property. The ASTM Standard requires the User to provide certain information to the environmental professional. Golder has provided a User Questionnaire to Niagara Transformer Corporation to facilitate the transfer of this information to Golder. Mr. John Darby, President of Niagara Transformer Corporation completed the User Questionnaire on June 26, 2009. A copy of the completed User Questionnaire is included in Appendix E.

3.1 Environmental Cleanup Liens

Golder representatives asked the User about their knowledge of environmental cleanup liens against the Subject Property that are filed or recorded under federal, tribal, state or local law.

User responded that User had no knowledge of environmental cleanup liens. This was confirmed upon review of the August 4, 2009 Abstract of Title obtained from the Subject Property owner.

3.2 Activity and Use Limitations

Golder representatives asked the User about their knowledge of activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place on the Subject Property or have that been filed or recorded in a registry under federal, tribal, state or local law.

User responded that User had no information regarding activity or land use limitations.

3.3 Specialized Knowledge or Experience

Golder representatives asked the User if they had any specialized knowledge or experience related to the Subject Property or nearby properties.

User responded that the question does not apply to the User as the Subject Property has been vacant since their purchase of the Subject Property in 1983.

3.4 Relationship of the Purchase Price to the Fair Market Value

Golder representatives asked the User if the purchase price being paid for this property reasonably reflects the fair market value of the property.

User responded that the question was not applicable as the property is owned and is to be retained by the User.

3.5 Commonly Known or Reasonably Ascertainable Information

Golder representatives asked the User if they were aware of commonly known or reasonably ascertainable information about the Subject Property that would assist the environmental professional in

identifying conditions indicative of releases or threatened releases. Golder representatives asked the following questions:

- a) Do you know the past uses of the Subject Property?
 User responded that User has no knowledge of past uses of the Subject Property by previous owners.
- Do you know of specific chemicals that are present or once were present at the Subject Property?
 User responded that the User has knowledge of past PCBs detections on the Subject Property.
- Do you know of spills or other chemical releases that have taken place at the Subject Property?
 User responded that the User suspects contamination by the cleanup contractor from equipment staging and related activities present on the Subject Property, during the cleanup of 1747 Dale Road (Niagara Transformer Corporation) during 1996 through 1997.
- d) Do you know of any environmental cleanups that have taken place at the Subject Property?
 User responded that User had no information regarding these subjects

3.6 The Degree of Obviousness or the Presence of Contamination

Golder representatives asked the User if, based on User's knowledge and experience related to the Subject Property, there are any obvious indicators that point to the presence or likely presence of contamination at the Subject Property.

User responded that a soil investigation conducted in November 2007 verified the presence of surface PCB contamination in selected areas of the Subject Property.

3.7 Reason for Conducting ESA

User indicated that the ESA is being conducted to fulfill a stipulated requirement of the New York State Brownfield Cleanup Program (BCP) overseen by the NYSDEC. The ESA is one of the screening tools utilized by the NYSDEC to assess a site's eligibility for the BCP.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources, Federal and State

Golder retained Environmental Data Resources, Inc. (EDR) of Milford, Connecticut to perform an environmental regulatory database search of the general area of the Subject Property, which is presented in Appendix B. In accordance with the search requirements of ASTM E-1527-05 Standard, Golder representatives reviewed the federal and state regulatory agency records listed below to identify the use, generation, storage, treatment or disposal of hazardous substances or petroleum products, or release incidents of such materials that might impact the Subject Property. A summary of significant listings (Subject Property and adjacent properties with the potential to impact the Subject Property) presented in the environmental regulatory database report is presented in Table 1. The following is a listing of databases reviewed during the Phase I ESA.

Federal ASTM Standard Databases

Database	Approximate Minimum Search Distance	
Federal NPL (National Priorities List)	1.0 mile	
Federal delisted NPL site list	0.5 mile	
Federal Comprehensive Environmental	0.5 mile	
Response, Compensation and Liability		
Information System (CERCLIS) site list		
Federal CERCLIS-No Further Remedial	0.5 mile	
Action Planned (NFRAP) site list		
Federal Resource Conservation and	1.0 mile	
Recovery Act (RCRA) CORRACTS		
(Corrective Action Report) facilities list		
Federal RCRA non-CORRACTS Treatment	0.5 mile	
Storage and Disposal (TSD) facilities list		
Federal RCRA Generators list	Subject Property and adjoining	
	properties	
Federal Institutional Control/Engineering	Subject Property	
Control Registries		
Federal Emergency Response Notification	Subject Property	
System (ERNS) list		

State and Tribal ASTM Standard Databases

Database	Approximate Minimum Search Distance
State and tribal hazardous waste sites identified for investigation or remediation: NPL – equivalent sites	1.0 mile
State and tribal hazardous waste sites identified for investigation or remediation: CERCLIS – equivalent sites	0.5 mile

Database	Approximate Minimum Search Distance		
State and tribal landfill and/or solid waste disposal site list	0.5 mile		
State and tribal leaking storage tank lists	0.5 mile		
State and tribal registered storage tank lists	Subject Property and adjoining properties		
State and tribal Institutional Control/Engineering Control Registries	Subject Property		
State and tribal voluntary cleanup sites	0.5 mile		
State and tribal Brownfield sites	0.5 mile		

4.1.1 Subject Property Database Listing

The Subject Property is listed as a New York State Hazardous Waste Site (SHWS) (ID Number: S109416405) due to the presence of PCBs found in shallow soils during limited soil investigations performed in conjunction with remedial actions conducted on the adjacent 1747 Dale Road parcel in 1996 and 2004 and a more comprehensive PCB surficial soil investigation performed by Niagara Transformer in 2007. The Subject Property does not engage in the treatment, storage, or disposal of hazardous wastes or hazardous substances.

4.1.2 Off-Site Properties Database Listings

Off site properties which are listed on reviewed databases are included in Table 1 attached to this report.

There are three sites of note which may have the potential to have impacted the Subject Property.

The first site is the Niagara Transformer Corporation, the owner of the Subject Property and whose main operational facility lies immediately adjacent to the Subject Property. Niagara Transformer Corporation is listed on a number of databases including SHWS, NY Spills, CORRACTS, RCRA SQG, FINDS, MANIFEST, and CERCLIS. The only issues which were of initial concern related to numerous listing of spills on the NY Spills Database including:

- 04/10/1990 30 gallons of waste oil from poor drum storage which affected a local ditch on site. Clean up performed and incident closed out
- 5/23/1997 400 gallons of transformer oil spilled on to a parking lot due to a transformer being overfilled. The incident was closed out 08/13/99
- 7/28/2003 20 gallons of mineral oil spilled due to a break in the oil processing plant. Cleaned up and closed out 12/5/2003
- 03/20/1998 10 gallons of mineral oil spilled from a tanker. Cleaned up and incident closed out 11/09/98
- 5/2/2002 40 gallons of mineral oil spilled due to operator failing to shut off fill hose. Clean up performed and incident closed out 5/10/2002
- 7/29/2004 3 gallons of mineral oil due to leaky bushing on transformer. Clean up performed and incident closed out 7/30/2004

- 3/30/2005 2 gallons of mineral oil due to lose valve on transformer. Clean up performed and incident closed out 3/31/2005.
- 4/26/2006 3 gallons of mineral oil spilled due to 55 gallon drum tipping over. The spill was recorded as being contained. The incident is recorded as being closed out on 4/26/2006.
- 3/31/2007 2 gallons of diesel spilled in a car parked at Niagara Transformer Corporation. The NYS DEC classified it as a "nuisance spill" and closed it out on 4/3/2007.
- 5/31/2007 3 gallons of mineral oil spilled due to a cap being left open on a tanker. The spill was recorded as being immediately absorbed and none reached watercourses. The incident is recorded as being closed out.

A review of the information identified that the majority of spillages were low in volume and all incidents were closed out. Based on this information it is considered unlikely that significant impact to the Subject Properties has occurred.

The second site is the Rotary Company Inc. Site located at 1746 Dale Road, which lies immediately northwest and across Dale Road and is listed on a number of databases including the FINDS, CERC-NFRAP, MANIFEST and RCRA NonGen and the HSWDS due to its metal treatment and plating operations and associated waste generation activities. More importantly, it is listed on the Voluntary Cleanup Program (VCP) database as of 12/22/2000. The primary contaminants of concern at the site include trichloroethene and cis-1,2 dichloroethene. The site investigations performed in 1999 and 2000 indicated a plume of contaminated groundwater mounded beneath the metal preparation room, in the northwest corner of the building, extending to the west beneath a paved parking lot and to the south beneath the building. The groundwater flows to the south but it appeared that the down gradient edge of the contaminant plume was within the site boundary. A second, smaller and less concentrated hot spot of groundwater contamination was also found on the north side of the building. In situ treatment began in September 2005. Groundwater samples were collected every other month following the initial injection of a hydrogen-released compound. A report on the groundwater monitoring results was submitted in late April 2007. Remedial action objectives had been reached in two of the three monitored wells but concentrations of vinyl chloride and dichloroethene in the third well remain above groundwater quality standards. Discussions between Golder and the NYS DEC on 7/7/09 indicate that there remains some uncertainty as to the potential off-site impacts from the Rotary Inc Site on the Subject Property, however based on the concentration trends in groundwater monitoring wells on the Rotary Site and the known direction of groundwater flow, the degree of impact to the Subject Property, if any, is considered to be minimal.

The third site is the Upstate Farms Cooperative located at 1730 Dale Road, which lies immediately across Dale Road from the Subject Property and is listed on a number of databases including the Underground Storage Tank (UST) due to two tanks being in service and on the Historic UST (HIST UST) due to seven tanks being closed and removed, the Above ground storage tank (AST) due to three tanks being in service at the site (process chemicals acids and alkalis). It is also listed on other databases including the

FINDS, MANIFEST, HIST AST (Historic AST), LTANKS (Leaking Tanks), HIST LTANKS (Historic Leaking Tanks, NY Spills and RCRA-CESQG.

The only issues which were of initial concern related to numerous listing of spills on the NY Spills Database and LTanks database including:

NY Spills

- 11/6/2004 1 gallon of diesel spilled during delivery. Clean up and incident closed out 11/9/2004
- 8/17/2000 Oil contamination of ground identified during sewer excavation. Material removed and incident closed out 9/20/2000.

LTANKS

- 12/9/2000 Diesel spill due to tank overfill during delivery. Incident closed out 02/28/01
- 10/22/2004 < 1 quart diesel spilled during delivery and closed out same day.
- Two other incidents listed in 10/23/1987, 6/20/1996 where contaminated ground resulted due to tank placement and removal activities. Both of these incidents were closed out.

A review of the information identified that the majority of spillages were low in volume and all incidents were closed out. Based on this information it is considered unlikely that significant impact to the Subject Properties has occurred as a result of these activities.

4.2 Additional Environmental Record Sources

Golder reviewed the United States Environmental Protection Agency (USEPA) Enforcement & Compliance History Online (ECHO) database (www.epa.gov/echo) for properties adjacent to the Subject Property. Neither the Subject Property nor adjacent properties were identified in the database.

4.3 Physical Setting Sources

4.3.1 Sources Reviewed

The EDR database report was consulted for information about the geology, hydrology, and topography of the Subject Property.

4.3.2 General Topographic Setting of the Area

Land elevation at the Subject Property is approximately 655 feet above mean sea level. General topographic gradient is reported within the EDR Geocheck report as being to the south, which agrees with observations made during the site visit.

4.3.3 Geologic and Hydrogeologic Setting

The bedrock beneath the Subject Property is Paleozoic era, comprising a stratified sequence of the Middle Devonian series from the Devonian system. The EDR report states that the soil underlying the

Subject Property is classified as "Urban Land" soil. Information on depth to bedrock and groundwater are unknown.

The EDR report identifies that there are three Federal USGS groundwater wells to the east between ¼ and ½ mile of the Subject Property. Data associated with these wells provide no indication of groundwater levels or current or historic use. There are no public water supply wells in the area.

There are two oil/gas wells in the area but none lie within ¼ mile of the Subject Property.

4.3.4 Surface Water and Hydrologic Setting

No wetlands listed on the national wetlands inventory lies within the Subject Property. The closest national wetland lies approximately ¼ miles southwest of the Subject Property. There are no State wetlands in the area of the Subject Property.

4.4 Historical Use Information on the Subject Property

4.4.1 Subject Property Historical Use Summary

Title records for the Subject Property date back to 1917 when it was apparently owned by private individual(s). The Subject Property has been owned by various companies since 1920. There were structures and a railroad spurs on the Subject Property during the 1920's through the 1940's. According to the aerial photographs, the Subject Property has remained undeveloped and unused since 1958. It remained as such until there was evidence of vehicle traffic from the 1960's through to the late 1980's. The Subject Property has been owned by Niagara Transformer Corporation since 1983.

4.4.2 Standard Historical Records

The EDR report provided historical accounts of topography, Sanborn© maps, local street directories, and aerial photographs. Other historical information was gathered from discussions with contacts from Niagara Transformer Corporation and records researched from the Town of Cheektowaga.

4.4.2.1 Aerial Photographs Review

Golder representatives obtained historical aerial photographs from EDR for the years 1958, 1959, 1966, 1978, 1983, 1985, 1995, and 2006. Selected historical aerial photographs are provided in Appendix C. The following discussion summarizes observations from the review of these aerial photographs.

1958: The Subject Property was partially wooded and undeveloped. A large structure is on Niagara Transformer Corporation's property to the west and there are more buildings across Dale Road to the north.

1959: There appears to be no change to the Subject Property and the surrounding areas were relatively unchanged as well from the 1958 photograph.

1966: The Subject Property has no structures but it appears that there is evidence of vehicle traffic due to the presence of what appears to be an unpaved roadway along the eastern side of the Property. More structures have developed to the north as well.

1978: There appears to be much more evidence of vehicle traffic movement with unpaved roadways visible, covering much of the Subject Property. A large commercial structure was developed to the east of the Subject Property.

1983: There is still evidence of unpaved roadways throughout the Subject Property but it appears that vehicle use may be lower or halted as the roadways appear to be overgrown. There is also evidence of waste disposal, as there appear to be piles of unknown material on the Subject Property. Another large commercial building was developed bordering the vacant parcel to the east of the Subject Property.

1985: The resolution of the photograph was very poor. Unable to detect any changes to the Subject Property or surrounding area compared to the 1983 photograph.

1995: Almost all evidence of vehicle traffic/ unpaved roadways has gone. It appears that vegetation has overgrown the Subject Property. The surrounding areas were relatively unchanged from the 1983 photograph.

2006: The southern portion of the Subject Property appears to be heavily wooded while the northern portion appears to be grassland. The surrounding areas were relatively unchanged from the 1995 photograph.

4.4.2.2 Sanborn© Fire Insurance Map Review

Golder representatives obtained historical Sanborn© Fire Insurance Maps from EDR for the years 1924, 1939, 1949, and 1959. Copies of the historical Sanborn© maps are provided in Appendix C. The following discussion summarizes observations from the review of these Sanborn© maps.

1924: It appears that the Subject Property had two connected structures present, on the northeast corner of the site that are labeled as a dwelling. The 1924 map also shows railroad tracks running north-south across the Subject Property. A junkyard is also recorded, bordering the southern boundary of the Subject Property with two structures being present. An "air reduction plant" is present to the northwest, across Dale Road, comprising one large structure. The property bordering the west of the Subject Property has four structures. There is a green house, two hen houses, a store and a dwelling on the property.

1939: The Subject Property no longer has any structures present however the railroad tracks are still in place. The junk yard to the south is now labeled as a "Contractors Yard" and the "Air Reduction Plant" to the northwest no longer exists. The property bordering the west side of the Subject Property now has

eight structures, three of which are dwellings, two are car garages, one green house and one is a potting room.

1949: The Subject Property still has railroad tracks present, but railroad tracks are absent from adjoining properties suggesting the railroad line through this area has been terminated. More commercial/industrial buildings have been developed to the north of the site, and the "Contractors Yard" to the south no longer has any structures present and is no longer labeled as to its use.

1959: The view of the Subject Property is limited and only the far northern section of the Property is presented on the map. Niagara Transformer Corporation is now labeled on a single large structure which appears to have been erected on land to the west of the Subject Property. Many commercial and industrial properties are shown to the north of the Subject Property along Anderson Road including Rotary Co (steel and plastic special products manufacturing facility), office buildings, concrete manufacturing and product facilities.

4.4.2.3 Property Tax Files

Golder representatives obtained Subject Property Tax maps for Erie County SBL ID No. 102.03-3-6.1 from the Town of Cheektowaga Assessor's office. A copy is provided in Appendix A.

4.4.2.4 Recorded Land Title Records

Golder obtained and reviewed an abstract of title report dated August 4, 2009 from Ticor Title Insurance Company regarding the title history of the Subject Property. A copy of the document is provided in Appendix A. The following table provides a summary of the title documents reviewed.

Owner/Operator Name	Dates of Ownership/Occupancy	Notes	
Imogene Ray	?? to Feb. 15, 1917		
Perry E. Wurst and Besse Baker	Feb 15, 1917 to Jan.6, 1920		
Buffalo Steel Car Company, Inc.	Jan. 6, 1920 to Nov. 14, 1928		
General American Tank Car Corp.	Nov.14, 1928 to April 7, 1947	Changed name to General American Transportation Corp. on April 11, 1933	
Wiesner -Rapp Co., Inc.	April 7, 1947 to April 1, 1954		
Buffalo Envelope Co., Inc.	April 1, 1954 to May 15, 1959	Changed name to Michigan-Carroll Inc. on May 4, 1959	
Buffalo Envelope Co., Inc.	May 15, 1959 to June 18, 1965		
William G. Kistner and William E. Kistner	June 18, 1965 to March 10, 1980		
William E. Kistner	March 10, 1980 to May 27, 1983		

Owner/Operator Name	Dates of Ownership/Occupancy	Notes
Pontiac Firewood Corporation	May 27, 1983	No Certificate of Incorporation found for Pontiac Firewood Corp.
Niagara Transformer Corp.	May 27, 1983 to Present	

4.4.2.5 Historical Topographic Map Review

Golder representatives obtained historical USGS topographic quadrangle maps from EDR for the years 1901, 1946, 1948, 1950, and 1965. Copies of the historical topographic maps are provided in Appendix C. The following paragraphs summarize our observations from the review of these historical topographic maps.

1901: Map scale is not adequate for review of Subject Property features; however, no structures are depicted in the vicinity of the Subject Property.

1946: Three cemeteries and five structures appear to the west of the Subject Property. There are no structures depicted on the Subject Property

1948: The Subject Property and vicinity appear similar to the 1946 topographic map with exception of a few large structures to the north across Dale Road.

1950: The Subject Property and vicinity appear similar to the 1948 topographic map.

1965: The Subject Property appears similar to the 1950 topographic map. The property the west of the Subject Property has two large structures and there are many large structures to the north across Dale Road.

4.4.2.6 Local Street Directories

Golder representatives obtained local Street Directories from EDR for the years 1963, 1967, 1971, 1976, 1980, 1986, 1991, 1998, 2003, and 2008. Copies of selected Local Street Directories are provided in Appendix C. The following discussion summarizes observations from the review of the Local Street Directories.

Target Property:

1755 Dale Road Cheektowaga, NY 14225

Year	Uses	Source		
No Addresse	No Addresses Found			

Adjoining Properties

Surrounding Multiple Addresses Bowmansville, NY 14225

Some past and present companies surrounding the Subject Property include Niagara Transformer Corp., Rotary Co., Kistner Septic Tank, Kolk Manufacturing Co. Inc., and Davis Electrical Supply. The complete list of the surrounding street directory can be found in Appendix C.

4.4.2.7 Building Department Records

The parcel has not had permanent structures located on it for over fifty years and as such, no building information, permits or records associated with any former structures on the Subject Property are on file with Town of Cheektowaga Building Department

4.4.2.8 Zoning and Land Use Records

Golder contacted the town of Cheektowaga Building Department for the zoning information regarding the Subject Property. Information indicated that the Subject Property is zoned as M2, which is general manufacturing.

4.4.2.9 Other Historical Records

Spill records held by the NYSDEC on their spill database were reviewed, but provided little additional information to that provided by the EDR Geotech report.

Niagara Transformer, the owner of the Subject Property, provided Golder with a Site Plan that summarizes the location and sample results associated with a limited site soil investigation conducted primarily to assess PCB concentrations in shallow soils across the parcel. The records of this investigation consisted of one drawing and associated notes. The investigation was performed by Benchmark Environmental Engineering and Science, PLLC on behalf of Niagara Transformer and consisted of:

- Collection of forty (40) shallow (0-6 inches below ground surface) soil samples on a fifty foot grid interval spacing across the parcel (with the exception of the northwest and northeast corners of the Site) and analysis for total PCBs; and
- Advancement of seven (7) deeper (0-6 feet below ground surface) soil borings and collection of soil composite samples from each boring for analysis of total PCBs. The seven soil boring locations were selected primarily to assess subsurface soil conditions for foundation design purposes and were located in areas projected for excavation for building footers. Samples collected from these seven locations were analyzed for total PCBs, however as the samples were composited across the entire six foot boring depth, assignment of any detected PCB impacts to a particular depth is not feasible based on the sample collection method.

The results of the soil sampling investigation were transmitted to the NYSDEC and indicated that PCBs were detected at concentrations exceeding the 6 NYCRR Part 375 PCB Soil Cleanup Objectives for

restricted residential or commercial uses (i.e., greater than 1 part per million [ppm]) or restricted industrial use of the parcel (i.e., greater than 25 ppm). In particular, concentrations of PCBs at Surface Sample Locations 42 and 43 (approximately 20 feet east of the Site's western property line) were 1,060 and 443 ppm, respectively. These locations are located south of the staging area and sample locations associated with the 2004 IRM project. Seven other sample locations in the southwestern and central portions of the Site exceeded the Part 375 restricted industrial SCO. Lower detected concentrations (i.e., typically less than 5 ppm), however, were found to be widespread across the northern half of the Site.

4.5 Historical Use Information on Adjoining Properties

The following is a summary of historical use information for adjacent properties based on information obtained from the Subject Property visit, a review of historical topographic maps and previous ESA reports for the Subject Property:

North: The 1924 Sanborn© map indicates that two manufacturing companies (Carbo-Oxygen Co. and Buffalo Steel) with multiple railroad lines that run through, and to the north of, the Subject Property. The 1949 Sanborn© map shows an un-named contractor's equipment repair shop across Dale Road. From the 1950's on, the surrounding area to the north has become heavily developed with mixed commercial and industrial businesses.

<u>East</u>: The area east of the Subject Property remained undeveloped until the evidence on the aerial photographs from 1966 shows a commercial building being built. The 1983 aerial photograph shows a second building was built to the east the Subject Property.

<u>South</u>: The 1901 topographic map indicates that railroad tracks border the southern edge of the Subject Property as they do presently. The 1924 and 1939 Sanborn© maps indicate that there was a junkyard south of the Subject Property but due to the positioning of the property on the maps, it is unclear whether the junkyard was north or south of the railroads.

<u>West</u>: The 1924, 1939, and 1949 Sanborn© maps indicate that several structures existed on the property directly west of the Subject Property. The largest structures are labeled as "Green Ho" and "Hen Ho," possibly an indication of a farm with poultry production as well as dwellings and several auto garages. The 1959 Sanborn© map show Niagara Transformer Corporation as the tenant in the large structure to the west and beyond Niagara Transformer Corporation lie three cemeteries.

5.0 SITE RECONNAISSANCE

Golder representatives performed a visual assessment of the Subject Property to identify potential sources of chemical and petroleum contamination. Golder representatives assessed surficial evidence of potential impacts such as waste or refuse dumping, distressed vegetation, stained soils, and/or stained paving. Photographs recorded during the site assessment are presented in Appendix D.

5.1 Methodology and Limiting Conditions

Golder conducted a visual reconnaissance of the Subject Property on June 25, 2009. Golder was able to observe neighboring properties from the boundaries of the Subject Property or publically accessible roads. The southern portion of the Subject Property was heavily overgrown and wooded, limiting visibility and access while the northern portion was easily accessible open grass land. The conditions during the visit were dry, warm (70-75°F) and partly sunny.

5.2 General Site Setting

The Subject Property is located on Dale Road, a two lane road. The general area is comprised of commercial and industrial facilities with heavy rail traffic to the south, and very few residential properties. The surrounding land is mainly flat with elevation increasing towards the north.

5.2.1 Current Use of the Subject Property

The Subject Property is currently vacant and undeveloped with the exception of a stone pad with four large storage containers placed near the western border by the current owner, Niagara Transformer for use as temporary storage. An empty decommissioned horizontal bulk oil tank is also located on the southern portion of the Subject Property.

5.2.2 Past Use of the Subject Property

According to the early Sanborn® maps, railroad tracks potentially crossed the Subject Property (north to south). There was no evidence of rail tracks on the Subject Property that could be seen during the site walkthrough. The 1966 through 1985 aerial photographs show signs of vehicle paths/ unpaved roads covering portions of the Subject Property. This is consistent with the findings of Golder's site walkthrough based on observed piles of concrete, and other miscellaneous debris that had been dumped or scattered throughout the wooded portion of the Subject Property.

5.2.3 General Description of Structures

During Golder's walkthrough, there were the four large temporary storage containers on the western border of the Subject Property. According to Bob Fishlock of Niagara Transformer Corporation, these containers were installed approximately three years prior to the walkthrough for temporary file storage.

A large decommissioned oil storage tank on the Subject Property was formerly part of Niagara Transformer Corporation's old tank farm at 1747 Dale Road that was updated in 1996 as part of the

NYSDEC remedial program. The tank was removed from service, cleaned out and stored in its present location by the NYSDEC remedial contractor as part of the replacement program for the entire tank farm conducted under the NYSDEC remedial program. The tank was placed on a plastic liner with an earthen berm surrounding it. There was standing water next to the tank, on the plastic liner, with vegetation growing around it. A light oily sheen was visible on the water.

Multiple drums (approximately eight were observed, however an exact quantity could not be obtained due to very dense vegetative growth and partial burial of some drums) of unknown origin and content were piled in the middle of the southern portion of the site. Some of the barrels were full and some exhibited large holes resulting from deterioration in them. It was unclear if any of the drum contents had been released due to the heavy vegetative growth surrounding the barrels.

Other scattered debris and materials were observed in the wooded and grassy portions the site. Specifically, a clothes dryer, a pile of roofing shingles and scrap metal, scrap tires, and wood waste were visible during the walkthrough.

More detail can be seen on the photographs from the site visit in Appendix D.

5.2.4 Roads

Dale Road lies immediately along the northern boundary of the Subject Property. Several Rail road tracks lie along the southern boundary of the Subject Property. Dale Road is the only public access to the property.

5.2.5 Potable Water Supply

There is no potable water supplied to the Subject Property.

5.2.6 Sewage Disposal System

There is no sewage disposal system on the Subject Property.

5.3 Interior and Exterior Observations

Golder identified current or past uses likely to involve the use, treatment, storage, disposal or generation of hazardous substances or petroleum products, to the extent they were visually and/or physically observed during the Subject Property visit or identified from the interviews or the records review. The substances and approximate quantities, types of containers (if any) and storage conditions are discussed in the following subsections.

5.3.1 Storage Tanks

	Aboveground Storage Tanks						
No.	Tank	Content	Installation Date	Closure Date	Status		
ASTs	observed on the S	Subject Property.					
1	Approx. 5000 gallon	None	Unknown	NA	The tank was decommissioned from its location on 1747 Dale Road and is currently not in use. It is stored at this location.		

5.3.2 Odors

No strong, pungent and/or noxious odors were noted during the site walkthrough.

5.3.3 Pools of Liquid

There was a minor oily sheen noted in the standing water next to the decommissioned oil tank.

5.3.4 Drums

Approximately eight (8) 55-gallon drums were noted during the site walkthrough. Some had unidentified contents while others had large holes in them. They displayed signs of being highly weathered and corroded with no visible forms or identification of the materials within them.

5.3.5 Hazardous Substance and Petroleum Product Containers

No containers identified as containing hazardous substances or petroleum products were observed during the site walkthrough.

5.3.6 Unidentified Substance Containers

As previously stated, there were approximately eight 55 gallon drums reported during the site walkthrough. There were no identification labels or markings of any type due to the age and condition of the drums which might indicate the nature of the contents, if any.

5.3.7 Evidence of Polychlorinated Biphenyls

During the site walkthrough there was no evidence of PCB contamination. However, a previous soil investigation confirmed multiple locations where PCB contamination was detected in surface samples across the majority of the Subject Property. Niagara Transformer Corporation believes that the Subject Property contamination resulted from poor housekeeping and decontamination practices associated with the remedial contractor's storage and movement of vehicles and equipment between the Subject Property and the areas undergoing remediation on Niagara Transformer's 1747 Dale Road property in 1996 and 1997.

5.3.8 Heating/Cooling

There are no heating or cooling units on the Subject Property.

5.3.9 Stains or Corrosion

Golder observed no staining of or corrosion on the ground surface on the Subject Property in the areas visible for inspection. As previously noted, due to the presence of heavy vegetation in some areas of the Subject Property, the entire ground surface could not be observed.

5.3.10 Drains and Sumps

No drains or sumps were observed on the Subject Property by Golder in the areas inspected.

5.3.11 Pits, Ponds, or Lagoons

A pool of standing water with a light oily sheen was noted in the bermed area where the decommissioned oil tank is stored.

5.3.12 Stained Soil or Pavement

Golder observed no stained soil or pavement on the Subject Property in the areas inspected.

5.3.13 Stressed Vegetation

Golder did not observe any stressed vegetation on the Subject Property in the areas inspected.

5.3.14 Solid Waste Disposal

Golder observed piles of concrete slabs in various locations in the wooded portion of the Subject Property. There was also a pile of roofing shingle debris, stone, and scrap metal along with multiple piles of tires, 55-gallon drums (previously noted), a clothes dryer, and wood wastes scattered randomly across the Subject Property.

5.3.15 Waste Water

Process water is not generated on the Subject Property and there is no indication that any process water was ever generated at the site.

5.3.16 Wells

No wells were found on the Subject Property during the walkthrough.

5.3.17 Septic Systems

Golder did not observe any visible signs of a septic system on the Subject Property.

5.3.18 Other Interior and Exterior Observations

No other significant observations were made other than those detailed on the previous sections.

5.4 Off-Site Observations

The following two sections discuss the off-site observations, to the extent that the current uses of the adjoining properties were observable during the Subject Property reconnaissance, and were likely to indicate an REC in connection with the adjoining properties or the Subject Property.

5.4.1 Adjoining Properties

The adjoining parcel on the western border of the Subject Property is owned by Niagara Transformer Corporation. Niagara Transformer Corporation maintains and operates a large manufacturing / office building and a warehouse and oil storage tank farm on this adjoing property. To the east of the Subject Property lies a vacant parcel of approximately 1.5 acres that is also owned by Niagara Transformer. The south of the Subject Property is bordered by a railroad corridor containing multiple railroad tracks, and Dale Road immediately borders the northern edge of the Subject Property.

5.4.2 Other Surrounding Properties

To the east of the vacant parcel mentioned above lies a large commercial storage building last known to be operated by Prolift Inc. Directly across Dale Road lies Upstate Milk Cooperatives Inc.

6.0 INTERVIEWS

6.1 Overview

The purpose of interviews with past and present owners and occupants is to obtain information indicating RECs in connection with the Subject Property. Information obtained through these interviews is discussed in relevant sections of this Report.

6.2 Interview with Owners, Past Owners, Past Operators and Past Occupants

An interview was conducted with the current site manager acting as owner's representative and is described in section 6.3.

6.3 Interview with Site Manager

The plant manager of Niagara Transformer Corporation, Mr. Robert Fishlock, was interviewed by Aaron Lange of Golder on June 25, 2009. Relevant information from the interview is included in the appropriate sections above.

6.4 Interview with Occupants

The plant manager of Niagara Transformer Corporation, Mr. Bob Fishlock, was interviewed on June 25, 2009 regarding the storage containers on the Subject Property.

6.5 Interview with Local Government Officials

Dave Locey, the NYSDEC Project Manager for the 1996/1997 remedial action and follow-up remedial activities at the adjacent 1747 Dale Road property was interviewed by Patrick Martin of Golder on July 2 and July 9, 2009 by telephone, regarding potential sources of contamination to the Subject Property. These included the Rotary Company Inc. property at 1746 Dale Road (also referred to by the NYSDEC as the "ROCO LTD Site") and the remedial activities conducted at Niagara Transformer's 1747 Dale Road property

Mr. Locey provided Golder with copies of the ROCO LTD Site "Voluntary Cleanup Program Remedial Action Plan Report", March 2007 and supplemental groundwater monitoring data that indicates that offsite impacts from this site to the groundwater on the Subject Property, while feasible, are relatively remote based on recent monitoring well data and the inferred direction of groundwater flow from this site.

With respect to potential impacts to the Subject Property surface soils from the remedial work performed on the 1747 Dale Road property, Mr. Locey confirmed the use of the Subject Property as a staging and storage area for remedial contractor operations. He noted that although there had been some documentation of soil sampling and analysis being conducted upon the completion of Interim Remedial Measures activities, which revealed low levels of PCB contamination in surface soils, this data was relatively dated (i.e., greater than 10 years old). The November 2007 investigation on the Subject

Property voluntarily performed by Niagara Transformer was more extensive and representative of current contamination on the site relative to PCB impacts in surface soils (see Section 4.4.2.9).

Aaron Lange of Golder also spoke with a Town of Cheektowaga employee in the building department over the phone about the zoning of the Subject Property.

6.6 Interviews with Others

No other interviews were performed.

7.0 DISCUSSION

This section identifies the known or suspect RECs, historical RECs, and de minimis conditions identified during the assessment.

7.1 Findings and Opinions

Based on a review of available records, interviews conducted and site reconnaissance, it is believed that residual PCB contamination primarily to the upper 6 to 12 inches of soil/fill has occurred primarily as a result of the staging, storage and handling of equipment managed by the remedial contractors on the Subject Property during PCB remedial activities performed on the Niagara Transformer Corporation adjacent manufacturing property at 1747 Dale Road. The extent of impact was characterized in the soil/fill investigation performed in November 2007 by Niagara Transformer Corporation. The present degree of contamination was not verified.

The unmarked 55-gallon drums on the Subject Property may have potential for ground contamination. As previously mentioned though, the contents of the drums are still unknown.

7.1.1 Recognized Environmental Conditions

FINDING: Known PCB contamination of the Subject Property.

OPINION: This known contamination is considered a REC on the Subject Property. This Phase I ESA is being conducted to fulfill a requirement of the NYSDEC's Brownfield Cleanup Program to ultimately promote the cleanup and redevelopment of the Subject Property by Niagara Transformer Corporation. The goals of Niagara Transformer Corporation are to remediate the contaminated soil to meet the Soil Cleanup Objectives (SCOs) in 6NYCRR Part 375 that are identified as the most appropriate for the proposed redevelopment and end use of the Subject Property.

FINDING: The potential for contamination from the unmarked 55-gallon drums.

OPINION: Characterization of the contents of the drums and surrounding soils should be conducted to verify the potential REC.

7.1.2 Historical Recognized Environmental Conditions

An HREC is an environmental condition which, in the past, would have been considered an REC, but which may or may not be considered an REC currently. Golder's rationale for considering these environmental conditions as HRECs is based solely on the information stated herein. Designation as an HREC however, does not preclude the potential for the condition to affect the Subject Property.

FINDING: No evidence of historical activities which would give rise to a HREC was identified at the Subject Property.

7.1.3 De Minimis Conditions

De minimis conditions are not recognized environmental conditions. De minimis conditions generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

FINDING: A light oily sheen was observed in the stagnant water confined within the bermed area surrounding the decommissioned oil tank.

OPINION: Most likely due to small quantities of oil remaining on the exterior of the tank and fittings after cleaning/decommissioning. The quantity of petroleum contributing to the sheen, if present, would be considered de minimis based on field observations.

7.2 Additional Investigation

The November 2007 investigation conducted by Niagara Transformer for characterization of PCB impacts to the Subject Property was comprehensive in coverage of the site and appears to have thoroughly quantified PCB concentrations in the majority of the surficial soil/fill (i.e 0 to 6 inches). Based on Niagara Transformer's stated objective to enter into the NYSDEC Brownfield Cleanup Program, Niagara Transformer will be required to conduct a comprehensive assessment of all potential environmental impacts to the Subject Property by performing a supplemental Remedial Investigation (RI) to characterize site soils and groundwater for a full spectrum of potential environmental contaminants (i.e., VOCs, SVOCs, RCRA Metals, and PCBs). Therefore, as part of the planned RI for the BCP, it is recommended that sample locations be selected to characterize the soils in the vicinity of the abandoned drums and the decommissioned oil storage tank to assess their impact, if any, on the Subject Property.

7.3 Data Gaps

A Data Failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Some Data Failures may comprise Data Gaps. A Data Gap is defined as the lack of or inability to obtain information required by the ASTM Standard despite good faith efforts by the EP to gather such information. A significant data gap occurs when a data gap impacts the ability of the EP to identify RECs.

Golder representatives did not identify significant data gaps during this assessment.

8.0 CONCLUSIONS

Golder performed a Phase I ESA of the Subject Property located at 1755 Dale Road, Cheektowaga, NY in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, the ASTM Standard are described in the appropriate sections of this Report. This assessment has revealed two RECs in connection with the Subject Property:

- The known presence of PCB contaminated soils on the Subject Property.
- The potential for release of hazardous materials from the abandoned 55-gallon drums on the Subject Property. The contents of the full drums are unknown nor is it known for sure that any of their contents were released. This assessment is based on the physical condition of the drums and that residual liquids were observed in some of the drums.

This assessment has also revealed one de minimus condition in connection with the Subject Property:

■ A light oily sheen was observed in the standing water observed adjacent to and surrounding the decommissioned oil tank.

9.0 REFERENCES

The Report's author annotated the reference sources relied upon in preparing the Phase I ESA in the relevant sections of this Report.

10.0 QUALIFICATIONS AND SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Mr. Patrick Martin, P.E with over 20 years of professional experience accompanied by Mr. Aaron Lange conducted the site visit. Mr. Patrick Martin, P.E prepared this Report and Mr. David Wehn with over 18 years of professional experience served as the Quality Assurance/Quality Control (QA/QC) reviewer of the Report. Resumes for members of the project team are included in Appendix F.

"We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

A California corporation, for a valuable consideration to it paid, GUARANTEES to the record owners of an interest in or a specific lien upon the premises particularly described below on the date hereof and their successors in interest of record, that the SET-OUTS designated herein by marginal numbers One to 18 inclusive, are all the references affecting title to said premises, which appear upon

- (a) INDICES to records, papers, files and documents in the office of the CLERK of the COUNTY wherein said premises are situate, and
- (b) INDICES to wills and administration of decedent's estates in the office of the SURROGATE of the COUNTY wherein said premises are situate, and
- (c) INDICES to bankrupts in the office of CLERK of the UNITED STATES BANKRUPTCY COURT for the WESTERN DISTRICT OF NEW YORK

against the names of the parties appearing in the within abstract during the periods in which it appears there was a record interest in said premises under said names from February 15, 1917 to the date hereof, and upon

- (d) JUDGMENT DOCKETS for ten years last past, and
- (e) DOCKETS of FEDERAL LIENS for ten years and thirty days last past

against the names of the parties in such ownership in the office of the Clerk of the County wherein said premises are situate and the corporation GUARANTEES FURTHER that the SET-OUTS HEREIN are correct statements as to such records and indices.

(f) Inactive Hazardous Waste Disposal Site Registry Index maintained in the County Clerk's Office for the County in which the Subject Premises is located against the tax map parcel number of the section, block and lot number of the Subject Premises.

The Guaranty under this Certificate shall not be limited by time.

Dated this 4th day of August, 2009 and executed under seal.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

ERNST STEEL	1746 WALDEN AVE.	NNE 1/4 - 1/2 (0.299 mi.)	152	423

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2009 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NIAGARA TRANSFORMER CORPORATION	1747 DALE RD	WNW 0 - 1/8 (0.014 mi.)	A8	34

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 5 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 03/10/2009 has revealed that there are 3 SHWS sites within approximately 1 mile of the target property.

VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the VAPOR REOPENED list, as provided by EDR, and dated 02/11/2009 has revealed that there is 1 VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 03/10/2009 has revealed that there are 11 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 10 HIST LTANKS sites within approximately 0.5 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there

are 5 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 11/12/2008 has revealed that there are 12 RCRA-NonGen sites within approximately 0.25 miles of the target property.

HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 HSWDS site within approximately 0.5 miles of the target property.

Site Description: In late 2007, as part of a planned expansion, Niagara Transformer Corporation

(NTC) conducted an environmental assessment of a vacant lot located immediately east of its electrical transformer manufacturing facility on Dale Road, Cheektowaga. The manufacturing facility is listed on the NYS Registry of Inactive Hazardous Waste Sites as #915146. PCBs were detected in the surface soil of the vacant lot at concentrations as high as 1,060 parts per million (ppm). Groundwater sampled from the one shallow monitoring well installed as part of the assessment also contained PCBs, at a concentration of 6.8 parts per billion (ppb). The site is located approximately 1500 feet south of Walden Avenue and 1000 feet east of Interstate 90. The site is bounded on the west by a paved driveway and parking lot to the NTC manufacturing facility, Dale Road on the north, an active Conrail railroad switching yard on the south and a service/retail warehouse on the east. The ROCO Limited, Voluntary Cleanup Program site (#V00422) is located on the opposite side of Dale Road, to the

northwest of the site. The area surrounding the site is primarily commercial/light industrial; two residential properties are located

approximately 250 feet to the south-southeast of the site, on the opposite side of the railroad yard. The next nearest residential area is located approximately 1100 feet to the southwest of the site. The vacant lot is

comprised of two tax parcels, both of which were purchased by NTC in 1983. The westerly parcel was once owned by Kistner Concrete and was previously used for the storage of preformed concrete structures. There is no information currently

available regarding the past use of the easterly parcel.

Environmental Problems:

The site has a gradual slope to the south towards a surface water drainage ditch which lies between the site and railroad yard. The drainage ditch flows westward, past the Niagara Transformer site (#915146) through buried pipe. The surface water collects in a storm water retention pond, located approximately 11,00 feet west of the site. The retention pond drains to municipal storm sewers which discharge to the Buffalo River, approximately 3 miles southwest of the site. The contaminants of concern are the PCBs (Aroclor 1260) found in the surface and near surface soils; concentrations exceed the 50 ppm hazardous waste threshold. The detected concentrations ranged from 0.5 to 1,060 ppm, with the highest concentrations found near the westernperimeter of the site. PCBs were also detected in the groundwater at a concentration of 6.8 ppb, sampled from the one monitoring well installed on site, in the southwest corner of the property near the drainage ditch. The subsurface soils, profiled to a depth of 12 feet by the one monitoring well, included four feet of topsoil and fill (sand, gravel, weathered concrete, and brick) over reddish brown silt and sand with some clay. Investigations of the adjacent NTC site (#915146) suggest that the deeper site soils may consist of up to 40 or 50 feet of silty clay till and clay, separating two aguifers, both of which flow generally southward. The southern half of the site is wooded. The surface of the northern half is less

EDR ID Number

vegetated and moreopen; small areas are covered with crushed stone and occasionally used by NTC as a staging area for large shipping containers. The limited data available indicates that the upper, perched aquifer is contaminated with PCBs, which may be discharging to the surface drainage ditch. A significant threat exists from the high, hazardous waste levels of PCBs in the surface soils, and the unrestricted public access to the site. The high surficial soil contamination may also be a contributor to the contaminated surface water runoff observed at the adjacent Niagara Transformer site #915146.

Health Problems Assesment: Site access is not controlled and the potential exists for trespassers to be

exposed to contaminated surface soils. Exposures to contaminated groundwater via drinking water are not expected because public water serves the area and

there are no knownusers of well water in the vicinity.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Access to the site is restricted. Exposures via drinking water are not expected Assessment:

because the area is served by public water and there is no known use of groundwater in the immediate area. Direct contact with contaminated soil is unlikely unless thereis excavation of the paved parking and walking areas. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion into structures on or near the

site.

Env Problems: The primary contaminants of concern at the site include trichloroethene and cis

1,2 dichloroethene. The site investigation indicated a plume of contaminated

S105114396

groundwater mounded beneath the metal preparation room, in the northwest corner of the building, extending to the west beneath a paved parking lot and to the south beneath the building. The groundwater flows to the south but it appeared that the downgradient edge of the contaminant plume was within the site boundary. A second, smaller andless concentrated hot spot of groundwater contamination was also found on the north side of the building. In situ treatment began in September 2005. Groundwater samples were collected every other month following the initial injection of HRC. A report on the groundwater monitoring results was submitted in late April 2007; remedial action objectives had been reached in two of the three monitored wells but concentrations of vinyl chloride and dichloroethene in the third well remain high. Sulfate,iron and total organic carbon levels suggested that the HRC had not yet been fully expended. DEC agreed with the report's recommendation to postpone a second HRC injection pending the results of another six month groundwater monitoring progam. However, an evaluation will be made of the soil gas beneath the facility and the potential impacts to the indoor air assessed as part of that monitoring program.

Site Desc:

The site is located on the corner of Anderson and Dale Roads, in a commercial/industrial portion of the Town of Cheektowaga. The properties to the west and north of the site include an electrical supply store and a dairy product manufacturing and distribution center. The Niagara Transformer facility, a class 4 inactive hazardous waste site, lies to the south of the site across Dale Road. A cemetery is located to the southwest of the site. vacant and paved parking lots lie to the south east andeast respectively. A one-story 33,000 square foot cement block and cement on-grade building occupies most of the site with the exception of an asphalt-covered parking lot in the southeast corner and a few feet of asphalt and gravel-covered ground around the perimeter of the building. ROCO, Ltd., formerly Rotary Company, Inc., operated a metal and plastic manufacturing facility at the site from 1946 to 1994. The operations included metal preparation, finishing and precision sheet metal fabrication including shearing, punching, forming, welding, iron phosphate surface treatment, painting and silk screening, machining and heat treating and polishing. It is suspected that the solvents used in the metal working operations led to the chlorinated, volatile organic compound contamination evident on site. The building is being used as a product warehouse by the neighboring dairy product manufacturer. Site investigations completed to date include: a Phase I assessment (October 1998), a PhaseII assessment of the subsurface soils (October 1999), a supplemental Phase II investigation (March 2000), a Phase II assessment of the adjacent properties (July 2000), a VCP site investigation and feasibility study (March 2002) and a supplemental site investigation (October 2003). The March 2002 feasibility study recommended in-situ treatment of the groundwater and saturated soils, using a hydrogen-released compound (HRC) to enhance the natural degradation of the chlorinated contaminants. A pilot study of the HRC treatment was completed and reported in October 2003. The results indicated that a significant reduction in the site contamination could be achieved. The October report included a proposed plan for full scale in situ HRC treatment. The Remedial Action Plan was released for public comment in April 2004 and the plan was approved. The plan called for the injection of HRC into the soils at set locations followed by groundwater monitoring. The groundwater monitoring results indicate the treatment has been effective in reducing groundwater contamination. Soil vapor, ambient air and groundwater samples were collected in December 2007.

Other Pertinent Environmental Activity Identified at Site

Registry ID: 110000738934

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Updated By: **JXRIDER**

Site Description: The site is owned and operated by a manufacturer of electrical transformers. On

> site, there is an active manufacturing facility with a small storage building to the south of the main building. To the west is a cemetary, the south a railroad yard, the east a vacant lot and commercial buildings to the north. During the period of 1958 until the late 1970's it has been alleged that waste transformer oil containing polychlorinated biphenyls (PCB's) was routinely disposed on site to control dust inparking areas and to kill weeds along the site perimeter, south of the main building. In April 1990 an oily leachate seeping into a perimeter drainage ditch was found to contain approximately 60,000 ppm of PCB's. Immediately downstream, samples of sediment also contained

high levels of PCB's. Niagara Transformer performed the Remedial

Investigation/Feasibility Study (RI/FS) under an Order on Consent. The RI began in April 1991. The RI Report indicated that PCB contamination had migrated beyondthe sites perimeter drainage ditch. Elevated levels of PCB's were also found in the surface soil of the cemetery immediately adjacent to the site. The Record of Decision (ROD) was signed on December 30, 1993 and called for the

Direction Distance Elevation

EDR ID Number

excavation and off-site disposal of PCB contaminated soils and sediments. The State funded Remedial Design was conducted from March 1994 to September 1995. Remedial Construction began in 1996 and was completed in 1997. However, post remedial sampling found that the storm-water drainage system had been recontaminated with PCBs. Further investigation began in 1999. Based on the 1999 investigation, residual contamination present under the building was migrating via the storm drain system. As a result of the investigation an Interim Remedial Measure (IRM) was designed to divert on-site storm-water flow from the current storm drainage system. Construction of the IRM was completed in August 2004. In 2005, sampling of sediment and surface water indicated low concentrations of PCBs were leaving the site via the diverted storm-water. A study to be completed in 2008 will determine the exact surface/groundwater flow path(s) contributing to this contamination.

Environmental Problems:

The Remedial Action was effective in mitigating the immediate threat to the environment. Due to the limitations in excavation identified by the NYSDEC, PCBs, in concentrations above cleanup goals remain on site in subsurface soils, mainly under thebuilding. Additionally, PCBs in concentrations above cleanup goals remain off-site, in the adjacent cemetery and portions of the drainage ditches. Sediment sampling conducted in 2005, 2006 and 2007 confirmed that low-level PCBs are leaving the siteand entering the storm water retention pond west of the site. A surface/groundwater study is underway to identify the contributing flows so appropriate action can be taken.

Health Problems Assesment: Exposures via drinking water are not expected because groundwater is not used

as a drinking water source in the area. The remedial actions consisting of contaminated soil and sediment removal from on and off the site along with deed restrictions will reduce the potential for exposure.

> > TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

EDR ID Number

its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

> RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

> and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field

Was "JDC" 04/10/97: JDC ON SITE AND MET W/ EVAN CASEY, GREAT LAKES ENVIR, OBSERVED MINOR SHEEN IN TRENCH. NO SOURCE TO THE SHEEN WAS DETERMINED, SUSPECT OLD SPILLAGE MAY BE THE CAUSE. SEVERAL YARDS OF SOIL STAGED ON PLASTIC ON SITE HAD NO VISABLE CONTAMINATION. 4/11/97: WATER IN TRENCH PUMPED TO SEWER DRAIN THROUGH SORBENT MATERIAL, NO FREE PRODUCT OBSERVED. MET EARL LODER. EMERGENCY COORD. FOR CHTW. AND ADVISED HIM OF THE

CURRENTSTATUS, HE WILL DRIVE BY THE SITE OVER WEEKEND WHILE PUMP REMAINS ACTIVE. BOOM WAS ESTABLISHED AROUND STORM DRAINS AS A PERCAUTION. 4/14/97: JDC ON SITE AND MET W/ MR CASEY, NO NEW CONTAMINATION WAS ENCOUNTERED ALONG TRENCH LINE. SORBENT MATERIALS REMAIN IN PLACE AT THE SUMP PUMP AND STORM DRAIN. MINOR SHEEN WAS PRESENT IN THE TRENCH PUDDLES, AGAIN NO SOURCE HAS BEEN DETERMINED. WILL CONTINUE TO MONITOR SITE. 4/15/97: JDC ON SITE AND FOUND NO SHEEN OR FREE PRODUCT IN TRENCHED AND FOUNDATION AREAS. WILL CONTINUE TO MONITOR THRU THE WEEK. WHEN FOUNDATION IS COMPLETE WILL REQUEST FINAL SITE ENVIRONMENTAL REPORT. 3/10/98: RECEIVED FINAL DISPOSAL AND SAMPLING PACKAGE, FOUND INFORMATION SATISFACTORY. NO FURTHER ACTION REQUIRED, SITE

CLOSED.

Remarks: CALLER STATES THAT CONST. WAS BEING DONE ON SITE. WHILE DIGGING FOR A

FOUNDATION A SHEEN WAS NOTICED ON SOME WATER. POSS MIXTURE OF FUEL OIL AND GASOLINE. MR CASEY REQUEST CALL IN AM 04/10/97 ON PAGER OR HIS CELL PHONE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

MANIFEST

Direction Distance Elevation

tance EDR ID Number vation Site Database(s) EPA ID Number

PROLIFT INC (Continued) 1000363633

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D006 Waste name: CADMIUM

Waste code: D009
Waste name: MERCURY

Waste code: D016
Waste name: 2,4-D

Waste code: D018
Waste name: BENZENE

Waste code: D035

Waste name: METHYL ETHYL KETONE

Violation Status: No violations found

Registry ID: 110012216583

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

DEC Memo: 6/11/2008: RJJ TELECON SHAWN MITTLESHALDT,LCS,HE SAID THAT THEY

ENCOUNTERED SUBSURFACE PETROLEUM CONTAMINATION DURING A PHASE 2

ON THE PROPERTY, NEAR THE FORMER HYDRAULIC LIFTS...LCS WILL FORWARD ME THEIR REPORT. 7/7/2008: RECEIVED THE PHASE 2 REPORTFROM LCS, WHICH INDICATES SUBSURFACE PETROLEUM CONTAMINATION AT VARIOUS LOCATIONS ON THE PROPERTY...AFTER REVIEWING THIS REPORT, SAC SAID THAT REMEDIATION WILL BE NEEDED AT THESE AFFECTED AREAS...DRAFTED AND SENT A 'PRP' LETTER TO PROPERTY OWNERS. 9/2/2008: RECEIVED THE PROPOSED WORKPLAN FROM LABELLA ASSOCIATES...AFTER REVIEWING THIS PLAN, SAC SAID THAT

Direction Distance Elevation

Site Database(s) EPA ID Number

PAUL BATT BUICK (Continued)

1000273715

EDR ID Number

THIS IS ACCEPTABLE. 9/22/2008: DRAFTED AND SENT A LETTER TO PAUL SYLVESTRI, ATTORNEY TO UPSTATE NIAGARA COOPERATIVE, INC., STATING THAT WE APPROVE THE WORKPLAN. 10/7/2008: RJJ AT SITE AT 0930...LABELLA HAS STARTED THEIR REMEDIATION OF THE PROPERTY...TODAY, THEY WILL EXCAVATE THE SMALL AREA ON THE NORTHWEST CORNER OF THE PROPERTY...I WILL CHECK ON SITE LATTER TODAY...ALSO, YESTERDAY, THEY STARTED TO BREAK-OUT THE CONCRETE INSIDE THE BUILDING, WHERE THE HYDRAULIC LIFTS WERE...RJJ AT SITE AT 1400...LABELLA HAS FINISHED EXCAVATING OUTSIDE...THE EXCAVATION 15'X10'8' AND APPEARS TO HAVE NO VISIBLE SOIL STAINING OR ANY PERTOLEUM ODORS. 10/10/2008:RJJ AT SITE AT 1000...LABELLA IS CONTINUING TO EXCAVATE INSIDE THE BUILDING, WHERE THE HYDRAULIC LIFTS WERE... THEY WILL STAGE THE PETROLEUM CONTAMINATED ON-SITE, ON PLASTIC...THUS FAR, THEY HAVE EXCAVATED 200 TONS OF SOIL...IT APPEARS THAT MOST OF THEPETROLEUM CONTAMINATED SOIL IS ABOVE A DENSE CLAY LAYER 6'BFG, 10/14/2008; RJJ AT SITE AT 1000...LABELLA IS ALMOST FINISHED WITH THEIR EXCAVATING INSIDE THE BUILDING...THUS FAR THEY HAVE REMOVED/STAGED 300 TONS OF PETROLEUM CONTAMINATED SOIL...LABELLA WILL THEN OBTAIN THEIR CONFIRMATORY WALL/FLOOR SOIL SAMPLES. 10/17/2008: RJJ AT SITE AT 1000...LABELLA HAS FINISHED THEIR REMEDIATION ON THE PROPERTY AND HAVE STARTED TO BACKFILL THE EXCAVATION INSIDE THE BUILDING...THEY HAVE ALREADY OBTAINED ALL THEIR CONFIRMATORY SOIL SAMPLES AND THE CONTAMINATED SOIL IS STAGED ON SITE, ON PLASTIC, AWAITING DISPOSAL(300 TONS)...LABELLA WILL SEND ME THEIR FINAL REPORT. 11/24/2008: RECEIVED THE FINAL REPORT FROM LABELLA, WHICH INCLUDES THE DISPOSAL RECEIPTSFOR 463.07 TONS OF PETROLEUM IMPACTED SOIL TAKEN TO THE CHAFFEE LANDFILL AND ALL THE POST-EXCAVATION CONFIRMATORY ANALYTICAL FROM THE 3 AREAS...ONLY AREA 1(FORMER 2000K GASOLINE UST, THE NORTHWALL) INDICATE SLIGHT EXCEEDENCES OF OUR 'TAGM' VALUES...AFTER REVIEWING SPILL REPORT, SAC SAID THAT WE CAN MAKE THIS SITE 'INACTIVE'...DRAFTED AND SENT AN 'INACTIVE' LETTER TO PROPERTY OWNERS...SPILL CLOSED OUT.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Updated By: **MLDOSTER**

Site Description:

This site consists of the rear portions of properties located at 1746 and 1728 Walden Ave., which were part of the former Ernst Steel Corporation and are located at the north-west corner of Walden Ave. and Galleria Drive in the Town of Cheektowaga. Wastes such as metal shavings, iron oxide dust, paint sludge and machine cutting oil were disposed at this site. A Phase I investigation was completed in 1987. Samples collected in 1988 and 1990 by DEC have indicated total lead levels of up to 56,700 ppm and total chromium levels at up to 6,270 ppm in soils. A Consent Order (CO) was signed in May 1992 to conduct a removal action and site investigation. US Metal Source removed about 80 cubic yards of the contaminated soil and performed a site investigation. During this

investigation more contamination was discovered. A second Consent Order (CO) in June 1995 was executed to remediate the site under an Interim Remedial Measure (IRM). The IRM started during the summer of 1995 and consisted of the

excavation of contaminated soils and off-site disposal. The IRM was completed in summer 1996. The Record of Decision (ROD) indicating "No Further

Action" was signed in March 1997.

Environmental Problems: Paint sludge which contained high levels of lead and chromium and also failed

EP-Toxicity in some areas of the site have been removed from the site under an IRM. Groundwater has not been impacted. No known environmental problems remain

on site.

Health Problems Assesment: Samples of soil with paint waste that were taken in 1988 and 1990 by DEC

contain high levels of total lead and chromium. Additional investigation and sampling in 1992 found an additional estimated 11,000 tons of lead contaminated paint waste material of which 3,000 tons is characteristic hazardous waste. This waste was found just below the ground surface. The site was remediated by removing contaminated soil, constructing buildings and an the installation of an asphalt parking lot reduced thepotential for future direct contact exposure.

The area is served by public water.

Record Add: 11/18/1999 12:00:00 PM Record Upd: 2/2/2009 9:25:00 AM Updated By: **MLDOSTER**

Site Description:

Co., Inc. property at 1728 and 1722 Walden Ave., respectively. Delavan Industries used toluene for degreasing. Improper disposal of paint waste, solvents, kerosene and waste oils occurred on the site. Yellow pigments with a strong solvent odor were noted when sampling the soils. The groundwater also had a chemical sheen. The results showed 1,1,1 trichloroethane, toluene, ethyl benzene, kerosene, metals and semi-volatiles to be present in the disposal

The site was located on both Delavan Industries, Inc. and Benderson Development

area. An Order on Consent was signed for a Preliminary Site Assessment in 1990. Based on the findings of this event further work was conducted in 1991 and the results found widespread metals and solvent contamination. All contaminated soil was removed to the native clay in the disposal area. Lead in the soil was removed to below background levels. All contaminants were removed to below the

recommended cleanup levels in soils.

Environmental Problems: Contaminated soils at the site have been removed and replaced with clean

backfill. There are no environmental problems remaining at this site associated

with the disposal of hazardous waste.

Health Problems Assesment: Soil samples taken on the Benderson Property by the potentially responsible

party showed excessive concentrations of several volatile organic compounds, including toluene, kerosene and ethyl benzene. Ponded surface water samples taken by DEC in 1987showed the presence of kerosene and were ignitable. Although the site is located in an industrial/commercial area, some homes exist nearby, and there is no access restriction to the site. All residents use public water for drinking. There is no dataon groundwater quality from this site. The company removed contaminated soil in September 1992; therefore, the

potential for exposure to contaminants in soil at the spill area is not likely.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

VAPOR REOPENED: Vapor Intrustion Legacy Site List

"Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil.Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2006 Date Data Arrived at EDR: 12/11/2008 Date Made Active in Reports: 03/19/2009

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its

fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers Source: Department of Health Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Elevation: 657 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 42078-H7 BUFFALO NE, NY

Most Recent Revision: 1965

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

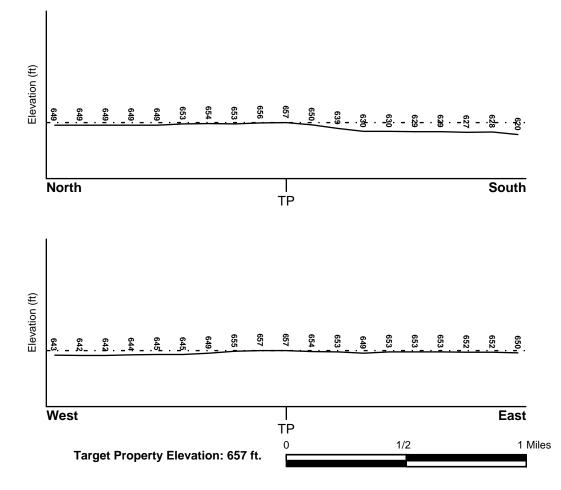

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION
MAP ID FROM TP GROUNDWATER FLOW
Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Not reported

Soil Drainage Class: Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Cazenovia

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

	Soil Layer Information							
	Boundary			Classi	fication	Saturated hydraulic		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6	
2	11 inches	31 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6	
3	31 inches	59 inches	gravelly silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6	

Soil Map ID: 3

Soil Component Name: Ovid

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 38 inches

	Soil Layer Information								
	Воц	ındary		Classification					
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	hydraulic conductivity micro m/sec	Soil Reaction (pH)		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4		
2	9 inches	20 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4		
3	20 inches	59 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4		

Soil Map ID: 4

Soil Component Name: Odessa

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. Certified Sanborn® Map Report Enhancements for 2009

The accompanying Certified Sanborn Map Report reflects a number of enhancements that make it easier for you to review these historical maps. EDR has digitally joined together the more than one million fire insurance maps from the Sanborn Library collection so that your target property is centered, making it easier for you to review adjoining properties. Here is a list of the new features:

- · Your target property is centered on each map. You can quickly locate your target property and view adjoining properties. Plus, adjoining properties are included more often, reducing your need to refer to additional maps.
- All maps are now displayed at a uniform scale. This makes it easier for you to view changes to the property over time.
- · We've increased coverage by adding thousands of new maps from 40 cities for years 1994-2007.
- · A new Map Key and Sheet Thumbnails let you reference sheet numbers, year and volume of original Sanborn Map panels used for this report.

For more information about the new enhancements to the Certified Sanborn Map Report, contact your EDR representative at 800-352-0050.

The EDR Historical Topographic Map Report

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

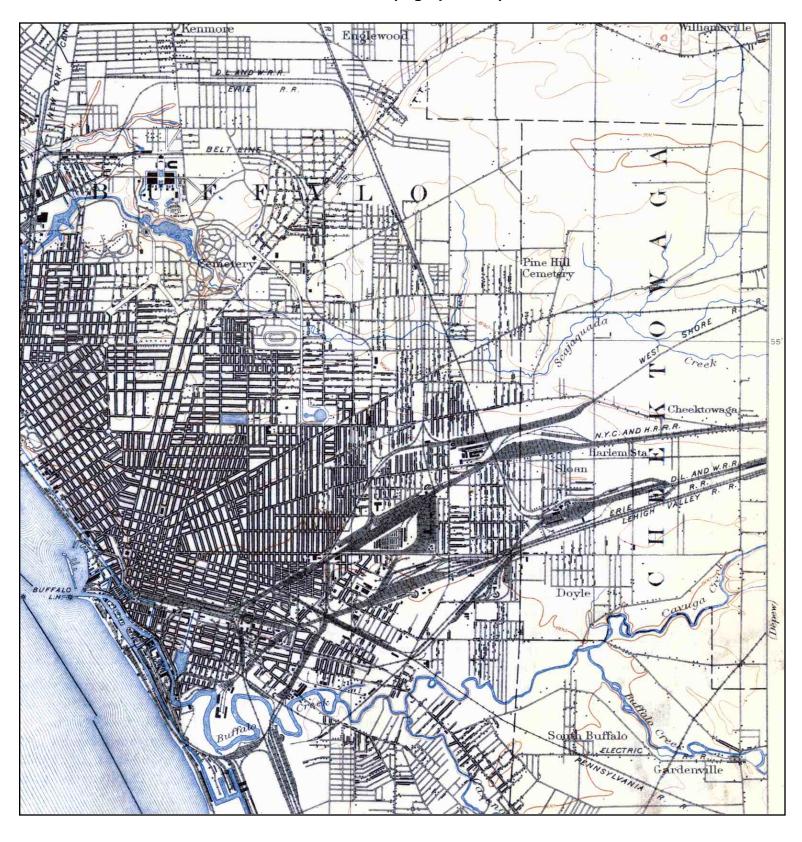

Thank you for your business.Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

2009 Enhancements to EDR City Directory Abstract

New for 2009, the EDR City Directory Abstract has been enhanced with additional information and features. These enhancements will make your city directory research process more efficient, flexible, and insightful than ever before. The enhancements will improve the options for selecting adjoining properties, and will speed up your review of the report.

City Directory Report. Three important enhancements have been made to the EDR City Directory Abstract:

- 1. *Executive Summary*. The report begins with an Executive Summary that lists the sources consulted in the preparation of the report. Where available, a parcel map is also provided within the report, showing the locations of properties researched.
- 2. *Page Images.* Where available, the actual page source images will be included in the Appendix, so that you can review them for information that may provide additional insight. EDR has copyright permission to include these images.
- 3. Findings Listed by Location. Another useful enhancement is that findings are now grouped by address. This will significantly reduce the time you need to review your abstracts. Findings are provided under each property address, listed in reverse chronological order and referencing the source for each entry.

Options for Selecting Adjoining Properties. Ensuring that the right adjoining property addresses are searched is one of the biggest challenges that environmental professionals face when conducting city directory historical research. EDR's new enhancements make it easier for you to meet this challenge. Now, when you place an order for the EDR City Directory Abstract, you have the following choices for determining which addresses should be researched.

- 1. You Select Addresses and EDR Selects Addresses. Use the "Add Another Address" feature to specify the addresses you want researched. Your selections will be supplemented by addresses selected by EDR researchers using our established research methods. Where available, a digital map will be shown, indicating property lines overlaid on a color aerial photo and their corresponding addresses. Simply use the address list below the map to check off which properties shown on the map you want to include. You may also select other addresses using the "Add Another Address" feature at the bottom of the list.
- 2. *EDR Selects Addresses.* Choose this method if you want EDR's researchers to select the addresses to be researched for you, using our established research methods.
- 3. You Select Addresses. Use this method for research based solely on the addresses you select or enter into the system.
- 4. Hold City Directory Research Option. If you choose to select your own adjoining addresses, you may pause production of your EDR City Directory Abstract report until you have had a chance to look at your other EDR reports and sources. Sources for property addresses include: your Certified Sanborn Map Report may show you the location of property addresses; the new EDR Property Tax Map Report may show the location of property addresses; and your field research can supplement these sources with additional address information. To use this capability, simply click "Hold City Directory research" box under "Other Options" at the bottom of the page. Once you have determined what addresses you want researched, go to your EDR Order Status page, select the EDR City Directory Abstract, and enter the addresses and submit for production.

Questions? Contact your EDR representative at 800-352-0050. For more information about all of EDR's 2009 report and service enhancements, visit www.edrnet.com/2009enhancements

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Photograph 9: 55 gallon drums in wooded portion of the Site

APPENDIX E
USER QUESTIONNAIRE

ASTM International Standard E 1527 – 05

User Questionnaire

The ASTM Standard requires the person commissioning a Phase I Environmental Site Assessment (the user) to provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state or local law?

No

2. Activity and land use limitations that are in place on the site or have that been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

No

3. Specialized knowledge or experience of the user (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Not applicable -property has been vacant since our purchase of it in 1983

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference have you considered whether the lower purchase price is because contamination is know or believed to be present at the property?

Not applicable – we are the owner of this property.

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- a) Do you know the past uses of the property?No, not by previous owners
- b) Do you know of specific chemicals that are present or once were present at the property? **Yes Polychlorinated biphenyls (PCBs)**
- c) Do you know of spills or other chemical releases that have taken place at the property? Yes -suspect contamination by contractor from equipment staging, and related activities during cleanup of 1747 Dale Rd. in 1996 -1997.
- d) Do you know of any environmental cleanups that have taken place at the property? No
- 6. The degree of obviousness or the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

Yes – soil investigation conducted in 2007 verifying the presence of surfical PCB contamination in selected areas of the property.

APPENDIX F RESUMES OF ENVIRONMENTAL PROFESSIONALS

Education

B.Sc. Chemical Engineering, Clarkson College of Technology, Potsdam, New York, 1983

Certifications

Professional Engineer, State of New York, License # 071014-1

Professional Engineer, State of Pennsylvania, License # PE060789

OSHA 1910.120 40-hour Health and Safety Training and Annual 8-hour Refresher Courses

Board Certified Environmental Engineer, certified in Water Supply/Wastewater

New York State Asbestos Inspector License – Annual Updates, 2004-present

Construction Documents Technologist

Golder Associates Inc. - Buffalo

Mr. Martin has more than 25 years experience in environmental engineering and process engineering working primarily in the industrial and manufacturing sector on a wide range of environmental compliance, design, energy and remediation projects. His particular focus has been in the area of industrial air permitting and compliance, hazardous waste and brownfields site investigation and cleanup, demolition and decommissioning, and RCRA facility closures.

Employment History

Golder Associates Inc. - Buffalo, New York

Senior Consultant (2009 to Present)

Mr. Martin's responsibilities include the management of environmental compliance programs focused on air permitting and compliance projects, investigation and cleanup of brownfields and hazardous waste sites, Resource Conservation and Recovery Act (RCRA) facility investigations and corrective actions, and alternative energy project siting and permitting. Additional duties include design oversight of industrial wastewater and remedial groundwater treatment systems as well as layout and design of chemical and petroleum bulk storage systems.

Benchmark Environmental Engineering & Science, PLLC – Buffalo, New York

Project Manager/Partner (1998 to 2009)

Responsible for the administrative and technical management of environmental projects including industrial air permitting and compliance; greenhouse gas inventories and impact analyses; demolition and decommissioning; brownfield redevelopment remedial investigations and cleanups, Resource Conservation and Recovery Act (RCRA) facility investigations and corrective action; and industrial wastewater treatment system permitting and design. Additional projects performed include management and implementation of an Interim Corrective Measure involving the dredging of 50,000 CY contaminated sediment and management of multiple chemical and petroleum bulk storage facility designs.

Malcolm Pirnie, Inc. – Orchard Park, New York

Associate, formerly Senior Project Engineer and Project Engineer (1987 to 1998)

Responsible for the administrative and technical management of the air practice group in the Buffalo Office which performed emissions inventories, prepared air permit applications, and provided regulatory compliance services in Western New York and Ohio. Additional duties included the consulting on and management of environmental projects including preparing permit applications, closure plans, and Corrective Measures Studies at RCRA-permitted facilities; industrial wastewater system design and construction oversight, water treatment pumping and storage facility design; groundwater remediation system design and operation.

Mesch Engineering, P.C. - Lockport, New York

Senior Chemical Process Engineer (1985 to 1987)

Responsible for the permitting, design and specification of industrial wastewater treatment, air pollution control equipment, industrial ventilation and hazardous waste storage and treatment facilities. Designed and specified heat exchange and process pumping systems for chemical process facilities.

RECRA Research, Inc. - Amherst, New York

Project Engineer, formerly Engineer (1983 to 1985)

Prepared comprehensive RCRA Part B applications for hazardous waste treatment, storage and disposal facilities in New York, Ohio, Louisiana, Texas and Puerto Rico. Prepared preliminary waste storage and treatment system designs and cost estimates at commercial waste management facilities and coordinated site planning and permitting.

PROJECT EXPERIENCE - AIR QUALITY

Lackawanna Clean Energy

Lackawanna, New York

Prepared an air permit application for one of the largest petcoke gasification facilities proposed in the United States. Detailed evaluation of all potential emission sources associated with both the materials handling and the gasification units was required. Evaluation and selection of best available control technology (BACT) was performed for each major emissions source. Negotiation of CO2 impacts and reduction strategies with State agencies was also performed in support of the application.

Confidential Scrap Processing Facility Frewsburg, New York

Proposed and successfully obtained a new Title V permit for one of the largest chlorinated solvent degreasing operations in New York State. The facility utilizes two trichloroethylene degreasers and is subject to the Subpart T MACT standards which resulted in complex permitting and compliance requirements. Mr. Martin worked with facility owner and equipment manufacture to optimize control features on a new degreasing machine design resulting in the reduction of overall solvent emissions and fully compliant with the T-MACT standard.

Cello-Pack Buffalo, New York

Prepared a Compliance Assurance Monitoring (CAM) Plan for a flexographic printing operation under an expedited schedule, in support of a Title V permit application for the facility. The CAM Plan required the development of detailed compliance protocols for monitoring and recordkeeping associated with operation of a catalytic oxidizer and VOC fugitive emissions from the printing presses.

Quebecor WorldDepew, New York

Prepared a Title V permit renewal submission on behalf of a printing facility that is a major facility for VOCs. The original permit contained over 125 permit compliance provisions that proved difficult for the facility to track and certify that compliance was maintained. A detailed review of these conditions identified numerous conditions that were redundant or no longer applicable to the facility. A pre-submittal meeting with the NYSDEC obtained their agreement on the elimination of a majority of these conditions. Subsequently, the streamlined permit was submitted with less than 90 permit conditions.

General Motors New York and Ohio Sites

Managed the air permitting of four General Motors facilities under their nationwide Title V permitting program. Responsibilities included coordination and implementation of a standardized emissions data collection and management system for all four facilities and interfacing with plant level environmental staff to identify data gaps, alternative operating scenarios and applicable requirements for completion of the permit applications.

Abraxis Pharmaceutical Products Grand Island, New York

Conducted a comprehensive air emissions inventory and prepared an air permit application for this pharmaceutical manufacturing operation engaged in the production of ointments and creams. The project also included the development of a small boiler fuel monitoring and reporting program to track fuel usage on an annual basis.

Organic Peroxides Manufacturing Facility Geneseo, New York

Conducted a comprehensive audit of air emission sources and performed an inventory and recalculation of hazardous stack discharges for a confidential industrial client. The results indicated that the client had been over-reporting SARA Title III discharges for one constituent by 80 percent and provided baseline information for future Title V permitting requirements.

Organic Peroxides and Specialty Chemicals Manufacturer Lockport, New York

Prepared the emissions inventory and Title V permit application for this specialty organic chemicals manufacturer. Specialized emissions calculation methodology obtained from the pharmaceutical industry were applied to this facility due to the highly unique and complex batch operations associated with this facility. As part of the project, an annual emission tracking program was developed to assist the client in accurately completing their annual reporting and certification compliance reports.

PROJECT EXPERIENCE - BROWNFIELDS

Bethlehem Steel Site Lackawanna, NY

Managed the brownfield investigation and remediation of a 31-acre parcel on the former Bethlehem Steel Site in Lackawanna, New York that was developed as a 20 MW wind energy farm under the New York State Brownfield Cleanup Program. Prepared Brownfield Program application and coordinated approval process, including remedial investigation work plan and interim remedial measures implementation for impacted soil/fill and groundwater.

Confidential Client Buffalo, New York

Prepared a New York State Brownfields application and Remedial Investigation Plan for a former dry cleaner site and adjacent impacted parcels proposed as the future site for a hotel and conference center complex. Negotiated investigation approach with the New York State Department of Environmental Conservation to maximize potential brownfields program incentives and managed the completion of the investigation and reporting of findings. Formulated a Remedial Work Plan approach for site cleanup that included a combination of soil vapor extraction and in-situ chemical oxidation using a proprietary hydrogen release compound.

PROJECT EXPERIENCE – CONTAMINATED LAND REMEDIATION

Brewer Street Site Rochester, New York Managed the remedial design and remedial construction of the Brewer Street site Voluntary Cleanup in Rochester, New York. During site remedial activities, provided full-time Resident Engineer/Construction Manager services. Remedial activities included construction of a cofferdam, excavation of impacted soil and sediment, pre-treatment of impacted groundwater and storm water collected during excavation activities, and site restoration.

LTV (Republic) Steel Buffalo, New York Assisted with the preparation of Voluntary Clean-up Plans for a former steel and coke manufacturing site. Responsibilities include evaluation of applicable remediation technologies or strategies for contaminated media treatment/disposal and preparation of cost estimates for implementation of recommended remedial alternatives.

Gowanda Electronics Gowanda, New York Managed the implementation of a Voluntary Clean-up Agreement at a former solvent disposal site. Duties include: the preparation of a quarterly progress report summarizing the operation and impact of a groundwater pre-treatment system; collection of pre-treatment system samples and groundwater elevation data; and providing technical assistance to maintain and operate pre-treatment system.

PROJECT EXPERIENCE - DEMOLITION AND DECOMMISSIONING

Bethlehem Steel Site Lackawanna, New York Managed the \$10 million decommissioning and demolition project at the former Bethlehem Steel Lackawanna coke plant site as part of a RCRA Corrective Measures program, including abatement of over 10,000 tons of asbestos containing materials and the removal/recycling of over 4,500 tons of coke plant tar wastes and byproducts. Provided coordination of all regulatory, project inspection and contractor oversight issues.

Confidential Manufacturing Client Buffalo, New York Project Manager for the decommissioning and demolition of a former transformer manufacturing facility encompassing approximately 150,000 square feet. Responsibilities included the sampling and characterization and coordinating disposal arrangements for a wide range of unknown solid/liquid wastes, including PCB containing transformers and equipment. An asbestos survey was performed and demolition plans and specifications were prepared with special provisions for site restoration with an emphasis on use of native vegetation adjacent to the Buffalo River.

PROJECT EXPERIENCE – HAZARDOUS MATERIALS

Elf Atochem, NA Geneseo, New York Prepared and negotiated approval of closure plans for RCRA regulated hazardous waste management units and managed field activities associated with the investigation, remediation and closure of hazardous waste storage tanks, impoundments and treatment units. Work included: soil and wipe sampling investigations to delineate the extent of contamination, solicitation and selection of qualified remediation contractors; and oversight/inspection of the remedial contractor activities.

PROJECT EXPERIENCE – ENVIRONMENTAL/PROCESS ENGINEERING

Summit Lubricants Batavia. New York Managed the design and installation of a VOC and SVOC pollution control system at a grease manufacturing facility to capture and recycle steam and light oils through a vacuum condenser system. An activated carbon system was used to polish trace odor-causing VOCs that remained in the discharge resulting in a greater than 99 percent removal efficiency.

Confidential
Pharmaceutical
Manufacturer
Grand Island, New York

Managed a wastewater treatment plant capacity evaluation and prepared a capacity evaluation report for a pharmaceutical manufacturer. As a result of the findings of the evaluation, client was able to increase its permitted daily average and maximum daily flow rates from its onsite wastewater treatment plant.

Former Bethlehem Steel Coke Plant Lackawanna, New York

Responsible for the upgrade and operational improvements to a 35 gallon per minute groundwater collection and treatment system that employed a shallow-tray air stripper and catalytic oxidizer at a former Coke Plant. Due to the organic loading rates and fouling characteristics of the groundwater, multiple process changes were required to adjust for organic and mineralized residue build-up in the piping systems and air stripper trays. Chemical additives were also evaluated and implemented to reduce foaming problems and reduce scaling resulting from oxidation.

Midwest Carbon Donora, Pennsylvania

Assisted in the design and specification of a wastewater pre-treatment process for a nitrous oxide manufacturer. Also coordinated related environmental permits with the Pennsylvania Department of Environmental Resources for this facility.

Carborundum Co. Niagara Falls, New York

Project Engineer for design of an experimental high temperature furnace system for Carborundum. This design included extensive analysis of high temperature materials for furnace construction and supporting calculations of heat transfer support systems. Final equipment speci-fication and procurement documents were prepared for the selected system.

Education

Post-M.Sc. Geochemistry/Hydrogeology, all but Ph.D. dissertation, Kent State University, Kent, Ohio, 1991

M.Sc. Geochemistry, Kent State University, Kent, Ohio, 1987

B.Sc. Geology, Magna Cum Laude, The Defiance College, Defiance, Ohio, 1983

Certifications

Certified Professional Geologist, American Institute of Professional Geologists (#10812)

OSHA 1910.120 40-hour Health and Safety Training and Annual 8-hour Refresher Courses

Certified Nuclear Density Gauge Operator, Troxler (#058704)

Golder Associates Inc. - Buffalo

Employment History

Golder Associates Inc. - Buffalo, New York

Associate and Office Manager (2008 to Present)

Appointed Associate in 2008. Office Manager and other current responsibilities and project work similar to descriptions below.

Golder Associates Inc. – Buffalo, New York

Senior Hydrogeologist/Office Manager (2005 to 2008)

Promoted to Office Manager of the Buffalo office. Directly responsible for office performance. Other current responsibilities and project work similar to Senior Project Hydrogeologist below.

Golder Associates Inc. - Buffalo, New York

Senior Project Hydrogeologist (2002 to 2005)

Project manager and primary client contact for multiple ongoing environmental investigation and remediation (RCRA program) projects at several facilities for a major chemical manufacturing firm, in addition to various individual similar projects at other facilities for other clients. Additional RCRA experience includes the overall project management for four Corrective Measures Studies (CMSs) for major chemical manufacturing firm. Other current responsibilities and project work similar to Project Hydrogeologist below.

Golder Associates Inc. - Buffalo, New York

Project Hydrogeologist (1998 to 2002)

Responsibilities included overall project management of environmental investigations and remedial projects at multiple hazardous waste facilities. These investigations involved the interpretation of geological, hydrogeological, and geochemical data to evaluate the subsurface conditions at these state and federally regulated facilities. Project work included preparation of investigation work plans; field crew and office staff management; geological, hydrogeological, and geochemical data interpretation; and final report preparation. Responsibilities also includes project management of Operations and Maintenance (O&M) and compliance monitoring activities at a closed municipal waste landfill and compliance monitoring activities at several other sites. Participated in the field work and geophysical interpretation of a research-driven project involving the evaluation of natural attenuation at a fractured-bedrock TCE-contaminated site. Also participated as an on-site team member for the treatment of an intertidal PAH-contaminated site near an old manufactured gas plant. Additional experience related to downhole geophysics includes thermalpulse borehole flowmeter, caliper log, downhole optical digital televiewer, cesium magnetometer, and cross-hole seismic tomography. Additional experience related to hydrogeology includes additional 2-D flow and contaminant transport modeling.

Golder Associates Inc. - Buffalo, New York

Hydrogeologist (1992 to 1998)

Acted as RCRA Facility Investigation (RFI) Investigation Manager and Site Health and Safety (H&S) Coordinator for an RFI at a local manufacturing facility and for an RI/FS at a closed manufacturing facility in North Carolina, as well as site geologist for many monitoring well installation/groundwater investigation/geophysical projects. Researched and submitted preliminary hydrogeologic characterization and siting criteria evaluation report for a new solid waste landfill. Assisted in hydrogeologic/hydraulic design (including 2D numerical and analytical flow modeling of groundwater extraction well/groundwater diversion trench hydraulic performance and specification of extraction equipment) for several groundwater diversion/extraction systems. Directed extraction well drilling/installation and/or quality assurance/quality control (QA/QC) inspection for three active groundwater extraction systems and performed extraction well drilling/installation and QA/QC inspection for other Golder offices/projects at several other systems. Conducted Phase I and Phase II Environmental Site Assessment (ESA) investigations at multiple locations in eastern US for large publisher as well as for several other projects (some involving performance of electromagnetic geophysical surveys). Additional field experience includes electromagnetic survey utilizing Geonics EM-31 and EM-61 survey instrument, borehole packer testing, downhole camera survey, rock coring, and QA/QC inspection of high density polyethylene (HDPE) liner and piping systems.

Compliance Solutions Inc. - Aurora, Ohio

Geologist (1991 to 1992)

Involved in, as part of a team, the hydrogeologic characterization of volatile organic compound (VOC)-contaminated aquifers/impacted municipal water supplies, operating and monitoring a landfill gas extraction system, and site characterizations for storm water discharge compliance. Field experience includes soil borings and soil sampling, monitoring well installations, water quality sampling, aquifer pump tests, and automatic computer aided drafting (AutoCAD).

Kent State University - Kent, Ohio

Teaching Assistant at M.S. and Ph.D. level (Student) (1984 to 1991)

Responsible for operation of ICPS and AAS laboratories including materials procurement, instrument maintenance, and analysis program development. Developed analysis methods for a broad variety of inorganic sample types including ash leachates, groundwaters, and silicates. Used energy-dispersive x-ray equipment and SEM to study garnet zoning and forensic evidence for Portage County prosecutor's office. Used automated electronic microprobe in dissertation work to study mineral chemical zoning.

Cleveland Museum of Natural History – Cleveland, Ohio Field Assistant (1984 to 1984)

Assisted in data acquisition and data interpretation for a project involving (primarily) an electromagnetic geophysical survey of prehistoric Indian earthworks, Ross and Scioto Counties, Ohio.

PROJECT EXPERIENCE – HYDROGEOLOGY

Modern Landfill Inc. Research and preparation of preliminary hydrogeologic characterization and

Model City, New York siting criteria report for a new solid waste landfill.

Countywide Landfill Conduction of aquifer packer testing and monitoring well installation for a landfill

Ohio expansion hydrogeologic investigation.

Ischua Landfill Hydrogeologic design of a ground water diversion/infiltration trench. Project

Ischua, New York manager for compliance monitoring at site.

Granville Solvents Hydrogeologic characterization of VOC-contaminated municipal water supply

Granville, Ohio aquifer.

PROJECT EXPERIENCE – ENVIRONMENTAL ASSESSMENT

Eastman Kodak Project management, direction of field crews, work plan preparation, and report Company preparation for multiple RCRA Facility Investigations and Corrective Measures

Rochester, New York Studies at Kodak Park. Project manager for a combined groundwater

compliance monitoring program for the Rochester facility and three other Kodak

facilities in NY, OH, and NJ.

Manufactured Gas **Plant**

Salem, Massachusetts

Team member for the treatment of an intertidal PAH-contaminated site near an old manufactured gas plant. Developed/operated (4-wheel-drive) tractor-based application equipment for the 5-year \$600,000 full-scale treatment of the coal tar and PAH-contaminated site.

Chemical

Manufacturing Facility

Charlotte, North Carolina

Coordination of Health and Safety program and manager of field investigations including soil/water sampling, well installation, soil gas surveying, hydraulic testing, environmental impact assessment, consideration of remedial alternatives, and report preparation.

Chemical **Manufacturing Facility**

Buffalo, New York

Coordination of Health and Safety program and manager of field investigation including soil/water sampling, well installation, hydraulic testing and report preparation.

CWM Chemical Services, LLC Model City, New York

Preparation of geologic cross-sections, isopach maps, well investigation reports, and organic compound fingerprint graphs for the final Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) report.

Textron Defence Systems

Wheatfield, New York

Direction of well drilling/installation and overall QA/QC inspection for two ground water extraction systems. Project manager for effectiveness (hydraulic and groundwater quality) monitoring for above two systems. Performed downhole geophysics and hydraulic testing for remedial technologies development group at the facility.

CWM Chemical Services, LLC

Direction of QA/QC inspection for a double-wall transfer piping system and an air-lift leachate pumping system at hazardous waste landfills.

Model City, New York

CWM Chemical Services, LLC Model City, New York Conduction of several test pit investigations and clay quality monitoring for clay sources required for landfill construction.
