*Re: Summary Report of Confirmatory Sampling at Deep Excavation Area  
BCP Site No. C915260  
1001 Main Street in Buffalo, New York*

Mr. Walia:

This correspondence provides a summary of the test pit investigation that was completed on April 14<sup>th</sup> and 15<sup>th</sup> at 1001 Main Street by C&S Engineers. The objective of the investigation was to assess final remedial excavation depths required in the area of the site where deep excavation of soil (approximately 40 feet total depth) was identified in the approved August 2012 Remedial Investigation/Interim Remedial Measures Work Plan (“IRM”). The IRM states the goal of the soil remediation is to meet the Commercial Use Soil Cleanup Objectives (“SCOs”).

### **SUBSURFACE INVESTIGATION**

As identified in the IRM work plan, the site is being excavated to a base elevation of 26 feet below ground surface (“BGS”). The IRM work plan identified an additional “deep excavation” area (in the area of the presumed source) on the western side of the site that was to extend to approximately 38 to 40 feet bgs.

To facilitate construction, several temporary sumps were installed to help dewater the deeper soils. During excavation for the sumps in the “deep excavation” area, running sands were encountered at approximately 32 to 34 feet of total depth, which created excavation integrity issues and raise concerns about the logistics required to complete the deep excavation required in the IRM.

To facilitate planning for the deep excavation activities, C&S decided to pre-sample areas at the IRM-prescribed depth to verify compliance with the Commercial Use SCO goal established in the IRM.

The soil samples were obtained using a track mounted excavator. Sample locations were based on the estimated deep excavation area and the 30x30 foot confirmatory sampling grid established in the IRM (Figure 1). The site grid in this area and the test pits excavated are as follows:

- East – west trending grids consisted of D grid (the northernmost grid) through J grid (the southernmost grid); and
- North – south trending grids consisted of #2 grid (the westernmost grid) through # 6 grid (the easternmost grid).

A total of 22 test pits were excavated as part of this investigation (Table 1): three test pits were excavated to 16 feet below the current ground surface (42 total feet bgs) and 21 were excavated to 14 feet below the current ground surface (40 total feet bgs), although in several cases the pits were closed prior to 14 feet due to running sands and hole integrity issues.

The breathing area and soils were continuously monitored for volatile organic compounds (VOCs) with a Minirae photo-ionization detector (PID).

Soil samples were collected at a depth 14 feet at each test pit where the test pit remained open long enough for sampling purposes, and at a depth of 16 feet at three locations. Soil samples from each sampled interval were also placed in plastic bags, sealed and then screened with a PID for the presence of VOCs. Soil types, odors, soil staining, the presence of groundwater and PID readings were noted at each test pit excavation and are described in Table 1.

### **FIELD OBSERVATIONS**

Medium brown fine sand with some silt and in some places red brown clay at depth was encountered in all of the test pits. However, in most of the test pits, stained and discolored soils were encountered at approximately six to eight feet below the present ground level. In many instances, black groundwater was also encountered within this zone, some of which may have contained weathered product.

Head space screening of bagged samples with a PID gave values ranging from 35.0 ppm at E -2, to 15,000 ppm at E – 6 and H – 2 and averaged 2151 ppm (Table 1).

Respective soil samples for analysis were collected directly from the excavator bucket and placed directly into pre-cleaned certified Terracore sample vials, placed on ice, and shipped to Test America daily for analysis of VOCs using Method 8260 on a 24 hour turnaround time. A total of 20 soil samples were submitted to the contract laboratory for analysis: seventeen representative soil samples from 14 feet below present ground surface and three representative soil samples from 16 feet below present ground surface.

### **ANALYTICAL RESULTS**

Confirmatory analytical results indicated the presence of VOCs benzene, ethylbenzene, toluene and xylenes in most samples. Comparison of the analytical results to Part 375 Commercial Use SCOs indicates that VOCs above the commercial SCO were present only at grid location H – 2. The 16 remaining locations contained VOCs below Commercial Use SCOS. Figure 1 shows the sample locations and areas that meet the required cleanup objectives. A data summary table is provided in Table 2 and the full laboratory reports are provided in Appendix A.

### **CONCLUSIONS**

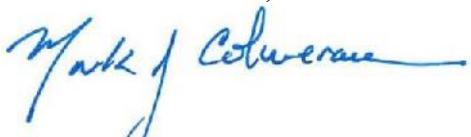

This test pit investigation of deep soils at the 1001 Main Street shows that 16 locations in the “deep excavation” area do not exceed the NYCRR Part 375 SCOs for commercial use at 40 feet below the original ground surface. We request concurrence of this conclusion and approval to

backfill the areas designated on Figure 1 once the remedial excavation depth of 40 feet bgs has been achieved.

Should you have any questions regarding this proposal or require additional information, please feel free to contact me at (716) 847-1630.

Sincerely,

C&S ENGINEERS, INC.

Mark Colmerauer  
Regional Environmental Service Manager

### Qualifiers

#### GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.

### Glossary

#### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

### Narrative

#### Job Narrative 480-36618-1

### Receipt

The samples were received on 4/18/2013 5:25 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.0° C.

### GC/MS VOA

Method(s) 8260B: The following sample(s) was diluted to bring the concentration of target analytes within the calibration range: H5 14' (480-36618-3). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The following samples were analyzed utilizing medium level techniques to bring the concentration of target analytes within the calibration range: E3 14' (480-36618-1), H5 14' (480-36618-3), J4 14' (480-36618-8). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The method blank for batch methylene chloride contained 113849 above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.

## Login Sample Receipt Checklist

Client: C&S Engineers, Inc.

Job Number: 480-36618-1

**Login Number:** 36618

**List Source:** TestAmerica Buffalo

**List Number:** 1

**Creator:** Janish, Carl

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	C+S
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

## Definitions/Glossary

Client: C&S Engineers, Inc.

Project/Site: 979-1001 Main St., Buffalo Brownfields

TestAmerica Job ID: 480-36716-1

### Qualifiers

#### GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.

### Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

%	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

## Case Narrative

Client: C&S Engineers, Inc.  
Project/Site: 979-1001 Main St., Buffalo Brownfields

TestAmerica Job ID: 480-36716-1

### Job ID: 480-36716-1

Laboratory: TestAmerica Buffalo

#### Narrative

##### Job Narrative 480-36716-1

#### Receipt

The samples were received on 4/19/2013 4:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.1° C.

#### GC/MS VOA

Method(s) 8260B: The following sample(s) was diluted to bring the concentration of target analytes within the calibration range: G2-1 14' (480-36716-1), H2-2 16' (480-36716-2). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The following sample(s) was diluted to bring the concentration of target analytes within the calibration range: H4 14' (480-36716-4). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The method blank for batch 114125 contained toluene and total xylenes above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8260B: The continuing calibration verification (CCV) for 1,1,2-trichloro-1,2,2,-trifluoroethane associated with batch 114196 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No other analytical or quality issues were noted.

## Login Sample Receipt Checklist

Client: C&S Engineers, Inc.

Job Number: 480-36716-1

**Login Number:** 36716

**List Source:** TestAmerica Buffalo

**List Number:** 1

**Creator:** Janish, Carl

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	C+S
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A
